Rev. Hugh O'Donnell, C.S.C., president of Notre Dame, announced in April a long-range development and building program, which was actively supplemented later in the year by announcement of a \$1,000,000 bequest for economic development and a \$1,000,000 gift for chemistry and chemical engineering. Annual alumni giving and other individual gifts raised the 1945 total income substantially.

Gardiner Howland Shaw, diplomat and penologist, was the 63rd Laetare medalist. The Associate Board of Lay Trustees observed the 25th anniversary of its founding. A new dean of engineering, Karl Schoenherr, was announced. Frank Leahy returned as director of athletics after service in the navy. Offices of student personnel and vocational counselling were instituted on the campus to supplement the work done by advisors in student residence halls. The university continued on the three 16-week semester program, with 283 degrees being awarded in the February, June and November special convocations.

(For statistics of enrolment, faculty, library volumes, etc., see UNIVERSITIES AND COLLEGES.) (J. E. AR.)

**Nova Scotia.** One of the maritime provinces of Canada, Nova Scotia entered the union in 1867. The area is 21,428 sq.mi.; the population, 577,962 (1941 census). The capital is Halifax (70,488); other cities are Sydney (28,305), and Glace Bay (25,147). Local administration is in the hands of a provincial parliament composed of a lieutenant governor, executive council and legislative assembly of 30 members. Nova Scotia is represented at Ottawa by 12 members of the house of commons and 10 senators.

**History.**—During 1945, the chief political event in provincial circles was the general election held in October. The Liberal administration, which was returned in 1941, swept the province, winning 28 of the 30 seats in the assembly; the Co-operative Commonwealth Federation party, 2. In the course of the autumn, Angus Macdonald succeeded A. S. Macmillan as leader of the Liberal party. At the dominion general elections (June 11), the Liberals captured 9, the Progressive Conservative party 2, and the Co-operative Commonwealth Federation party 1 of the seats in the Ottawa parliament. Other events of note were the disastrous V-E day demonstrations in Halifax, and the great fire at the naval arsenal near Halifax on July 18, when about 100 persons were injured.

**Education.**—For the school session 1941-42, enrolment in all educational institutions was 143,162; revenues of provincially controlled schools in 1943 was \$4,724,817. The universities of Nova Scotia are, King's Dalhousie (Halifax), Acadia (Wolfville), St. François Xavier (Antigonish).

**Agriculture and Industries.**—During 1945, coal production was 3,815,736 tons, for the period, Sept. 1944-Sept. 1945. In 1943, the value of coal production was \$27,121,861. The estimated gross value of farm production was \$47,912,000 (1944); farm income, \$26,600,000. In 1945, the value of field crops was \$20,660,000 (1944, \$21,998,000). In 1944, the value of the fisheries was \$23,662,055.

**Nursing, War.** On Jan. 6, 1945, with military demands for graduate nurses at their wartime peak, the president of the United States, in his message to congress, rec-

ommended a draft of registered nurses.

Voluntary enlistments, recruited by the army and navy nurse corps with the help of the American Red Cross, had not proved sufficient to meet the unprecedented needs of total war. Members of the U.S. cadet nurse corps studying in 1,100 schools of nursing throughout the U.S., had released many thousands of graduates for military service and had prevented the collapse of nursing service on the civilian home front. But the corps was still in its infancy insofar as producing graduates was concerned.

In March, the first bill ever designed to draft women in the United States was passed by the house of representatives and introduced in the senate. (H.R. 2277, an act "to amend the Selective Training and Service act of 1940.")

A spectacular increase in army and navy nurse corps enlistments was precipitated by conviction of need in the president's message and in the subsequent nurse draft hearings in the house military affairs committee. At the same time, a survey of cadet nurses revealed that 85% intended to go into military service upon graduation, although their pledge gave them a choice to remain in either military or essential civilian nursing for the duration of the war. Because of this magnificent response, the progress of the spring military campaigns in Europe and the victorious end of the war, the draft bill was withdrawn. The Japanese surrender in August cancelled all recruiting of graduate nurses for the military and of student nurses for the cadet nurse corps. For the second consecutive year, the corps had exceeded its quota, 60,000 new student nurses by June 30. In accordance with the recommendations of the president and congress, Oct. 15, 1945, was set as the final date for new admissions; total corps strength on that day was 117,000. The Bolton Nurse Training act (June 1943), which established the corps under the administration of the U.S. public health service, provided that these cadet nurses would be carried through to graduation on federal scholarships.

As of June 30, 65,216 graduates (27% of the total number of active professional nurses in the United States) were serving with the armed forces, on land, on sea and in the air, stationed at installations in continental United States and in all theatres of operation. This figure plus the tens of thousands who applied but were not assigned represented a larger number of war-service volunteers than any other U.S. profession. Graduate nurses held commissions in the army nurse corps, the navy nurse corps and the public health service commissioned corps, which was declared a duration military service in July 1945.

While military demands decreased, nursing needs increased in the three civilian federal services (Veterans' administration, public health service and Indian bureau) and in civilian non-federal hospitals and public health agencies. The principal sources of nursepower to meet this need included: graduates released from the military (25,000 from the army, 2,000 from the navy, by Jan. 1, 1946); graduates of the cadet nurse corps (approximately 14,000, July 1-Dec. 31, 1945); senior cadet members of the corps (approximately 8,000, July 1-Dec. 31, 1945).

During the national emergency, graduates and students serving on the civilian home front assumed tremendous responsibilities. Students rendered 80% of the nursing service in hospitals with schools of nursing. Senior cadets in federal hospitals, non-federal general and special hospitals and public health agencies gave service almost equal to that of graduates. Graduates were pressed to take on extra duties, particularly in educational and administrative positions, for which they were not adequately prepared. To remedy this latter situation, the Bolton act, in addition to providing federal scholarships for cadet nurses, furnished federal funds for advanced study for graduates. Where these nurses could not be spared from their jobs to take com-

plete postgraduate preparation, a series of on-the-job courses was brought to the hospital. From July 1, 1943, to Oct. 15, 1945, approximately 15,000 graduates had received federal aid for advanced study.

The shortage of nursing and nonnursing personnel in hospitals in the U.S. remained acute after the surrender of Japan. As of September, 23% had closed beds, many had closed wards and operating rooms. And the public need for hospital care was greater than ever before. Between 1940 and 1944, the daily average hospital census increased from 1,026,171 to 1,299,474; births increased 705,484. If all military nurses could have been released immediately, and if all had returned to civilian nursing at once, the domestic problem could have been solved. This, obviously, could not happen. Sick and wounded service men and women continued to need nursing care. Demobilization takes time. Following their release from military service, army and navy nurses were entitled to long-needed rests; some decided not to return to active professional jobs.

For devotion to duty during the war, 962 army and navy nurses had received awards and citations by Sept. 1945:

Army	Navy
1 Distinguished Service Medal	1 Legion of Merit
2 Distinguished Flying Crosses (one posthumous)	13 Bronze Star Medals
4 Silver Stars	12 Presidential Unit Citations
12 Legion of Merit	42 Unit Citations
5 Soldiers Medals	21 Individual Commendations
332 Bronze Stars (one with Oak Leaf Cluster)	
354 Air Medals	
103 Citations	
60 Purple Hearts (15 posthumous, one with Oak Leaf Cluster)

**Nuts.** Pecan production in 1945 in the United States was estimated at 141,533,000 lb. compared with 140,165,000 lb. produced in 1944 and an average of 97,346,000 lb. in 1934-43. Of the total harvested in 1945, 63,446,000 lb. were of improved varieties and 78,087,000 lb. wild or seedling kinds. The Texas crop was 25% below 1944 due mainly to hurricane damage in August.

U.S. Production of Pecans by States, 1945 and 1944

State	Improved Varieties		Wild Varieties	
	1945 lb.	1944 lb.	1945 lb.	1944 lb.
Georgia	30,954,000	28,140,000	5,896,000	5,360,000
Alabama	7,216,000	7,885,000	1,804,000	1,615,000
Texas	3,870,000	5,400,000	38,380,000	39,600,000
Mississippi	3,300,000	4,980,000	2,700,000	3,320,000
South Carolina	2,961,000	2,132,000	443,000	468,000
North Carolina	2,504,000	2,070,000	310,000	230,000
Florida	2,371,000	2,856,000	1,863,000	2,244,000
Louisiana	1,840,000	3,744,000	7,360,000	10,656,000
Oklahoma	1,000,000	1,400,000	20,000,000	12,600,000
Arkansas	882,000	504,000	4,018,000	3,696,000
Missouri	60,000	25,000	1,800,000	750,000
Illinois	21,000	10,000	1,029,000	480,000

Walnut production in 1945 was estimated at 68,000 tons, slightly less than the 1944 crop but 18% above the ten-year average. In California the crop was only slightly less than the record production of 1941. Oregon had a crop somewhat smaller than 1944.

The almond crop, which is produced almost wholly in California, was estimated at 23,100 tons, the largest on record. This compares with 21,000 tons produced in 1944 and 13,700 tons in 1934-43.

The filbert crop, produced in Oregon and Washington was estimated at 4,920 tons which was 24% smaller than the 1944 production of 6,460 tons but above the average of 1934-43. In Oregon the older orchards yielded poorly and the 1944 total was only 4,300 tons compared with 5,600 tons produced in 1944. Dry weather reduced the Washington crop. (See also COCO-NUTS; PEANUTS.) **Oats.** In the United States the 1945 crop of oats was the top record crop of grains of the year. Oat production was estimated by the U.S. department of agriculture at 1,583,650,000 bu. which exceeded the previous record of 1920 by 139,000,000 bu. This crop was 30% above the 1944 crop of 1,166,392,000 bu. and nearly 50% above the average of 1,068,000,000 bu. of 1934-43. The acreage was increased nearly 8% to 41,950,000. Yields were phenomenal at 37.8 bu. per ac. compared with 29.6 as the average of 1934-43. The record yields were harvested in

**Ohio.** A north central state of the United States, popularly known as the "Buckeye state." Area, 41,222 sq.mi., including 100 sq.mi. of water; pop. (1940) 6,907,612, of whom 2,294,626 were rural and 4,612,986 urban; native white 6,047,265, foreign-born white 519,266, Negro 339,461, other races 1,620. Capital, Columbus (306,087). Other cities of more than 100,000 were Cleveland (878,336), Cincinnati (455,610), Toledo (282,349), Akron (244,791), Dayton (210,718), Youngstown (167,720) and Canton (108,401). On July 1, 1944, the bureau of the census estimated the population of the state at 6,836,667.

**History.**—Gov. Frank J. Lausche, a Democrat, took the oath of office Jan. 8, 1945, and announced that there would be no wholesale firing of Republicans from the state pay roll. Among the appointments he made were: John M. Hodson of Williams county as director of agriculture; Perry T. Ford of Columbus as director of highways; Herbert D. Defenbacher of Columbus as finance director; Frazier Reams of Toledo as director of welfare and James W. Huffman of Columbus as director of com-

merce. When U.S. Senator Harold H. Burton was appointed to the U.S. supreme court, Huffman was appointed by Gov. Lausche to replace Burton in the senate. Then Robert L. Moulton was named director of commerce. Other important state officers were: George D. Nye (D), lieutenant governor; Edward J. Hummel (R), secretary of state; Joseph T. Ferguson (D), auditor; Don H. Ebright (R), treasurer; Hugh S. Jenkins (R), attorney general.

The general assembly met in continuous session from Jan. 1, 1945, to July 19. Its outstanding accomplishments were: passage over Gov. Lausche's veto of a bill to increase the state contribution to local school districts; re-enactment of the liquid fuel, cigarette and utility excise taxes; advancement of the primary election and filing dates to enable members of the armed forces to participate in Ohio elections; granting of salary increases amounting to about \$5,000,000 a year; and establishing of library survey and code revision commissions. A brief special session of the general assembly was called Sept. 5 at which unemployment compensation benefits were increased from a maximum of \$16 a week for 18 weeks to \$21 a week for 22 weeks. The state administration was able to make substantial progress in 1945 in providing housing for the mentally sick and in adding to and developing state parks and forests.

**Education.**—In 1945 Ohio had 3,502 elementary schools with an enrolment of 699,773 and a teaching staff of 21,176; 1,122 secondary schools with an enrolment of 336,352 and a teaching staff of 14,584; and 120 junior high schools (grades 7, 8 and 9) with an enrolment of 77,455 and a teaching staff of 2,700. The state superintendent of public instruction in 1945 was Clyde Hisson.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The average number of recipients of general relief in Ohio in 1945 was 11,350 and total relief granted was \$3,906,484. The average number receiving aid for the aged was 118,319 at a total cost of \$42,672,344; aid to dependent children, 7,465 cases at a total cost of \$4,943,367; aid to the blind, 3,034 cases at a total cost of \$989,530; 794,961 weeks of unemployment were compensated during the first eleven months of the year at a net cost of \$14,710,416.

Ohio had nine hospitals for the insane with approximately 20,500 inmates, four institutions for the feeble-minded with approximately 5,850 inmates, four penal institutions with an average population in 1945 of 6,678 and two industrial schools with an average population of 1,288.

Total cost of operating and maintaining the state's welfare institutions in 1945 was approximately \$13,290,000.

**Communication.**—Ohio had 86,737 mi. of highways in 1945 outside municipalities. Of this total, 16,158 mi. were classified as state, 28,639 mi. as county and 41,940 mi. as township. In addition there were 2,286 mi. of state highway extensions inside of municipalities. Expenditures on the state highway system in 1945 were \$33,098,605.

The state had 8,870 mi. of railroads, 141 airports and landing fields, 1,595 mi. of airways within its boundaries and 1,740,000 telephones.

**Banking and Finance.**—There were 440 state and private banks in Ohio with deposits (Sept. 29, 1945) of \$3,810,735,009 and resources of \$4,054,973,566. There were 241 active national banks in the state with deposits (June 30, 1945) of \$3,014,308,000 and resources of \$3,201,731,000. State-chartered savings and loan associations numbered 513 with total resources (June 30, 1945) of \$860,971,033. There were 125 federal savings and loan associations with total assets (estimated as of Dec. 31, 1945) of \$427,917,460.

The state budget for the 1945-46 biennium was \$391,499,969. At the close of 1945 the state surplus was approximately \$115,-

000,000.

**Agriculture.**—The total acreage harvested in Ohio in 1945 was 10,844,000; in 1944, 10,898,000. Total value of the crops in the state in 1944 was \$434,997,000. Cash receipts from farm marketing in Ohio for the first nine months of 1945 were \$527,545,000 as compared with \$534,417,000 in the same period of 1944. The estimated total of cash receipts for all of 1945 was \$600,000,000.

The Ohio farmers were handicapped by unusual weather conditions. An exceptionally warm March was followed by a cold, wet spring. August brought a drought and October heavy rains, all of which reduced crop production. Nevertheless, the Ohio wheat crop set a new high record, acreage yields were exceptionally good in corn and potatoes, and popcorn production was three times that of 1944. Imported Bahamian labour and the use of German and Italian prisoners of war on farms and in canneries eased the manpower shortage.

Table I.—Leading Agricultural Products of Ohio, 1945 and 1944

Crop	1945	1944
Corn, bu. . . . .	176,913,000	142,956,000
Wheat, bu. . . . .	60,993,000	46,805,000
Oats, bu. . . . .	53,210,000	37,224,000
Soybeans, bu. . . . .	20,072,000	21,796,000
Rye, bu. . . . .	558,000	608,000
Barley, bu. . . . .	630,000	475,000
Potatoes, bu. . . . .	7,130,000	5,810,000
Apples, bu. . . . .	984,000	5,395,000
Tame hay, tons . . . . .	3,473,000	3,293,000
Tobacco, lb. . . . .	21,274,000	25,347,000
Buckwheat, bu. . . . .	306,000	294,000
Sugar beets, tons . . . . .	32,000	17,000
Grapes, tons . . . . .	6,400	24,400

**Manufacturing.**—The total value of manufactures in Ohio in 1939 was \$4,584,665,659; total employment, 686,089; total wages and salaries paid, \$1,033,426,673.

**Mineral Production.**—The total value of mineral production in Ohio in 1944, exclusive of pig iron, was \$190,967,000. In 1943

Table II.—Principal Mineral Products of Ohio, 1944 and 1943

Mineral	Value, 1944	Value, 1943
Pig iron . . . . .	\$294,265,267	\$299,483,340
Bituminous coal . . . . .	89,941,000	78,009,123
Clay and clay products . . . . .	13,340,809	16,615,431
Cement . . . . .	5,957,819	8,798,964
Lime . . . . .	11,876,409	12,001,684
Natural gas . . . . .	25,286,000	27,255,000
Petroleum . . . . .	6,720,000	6,810,000
Salt . . . . .	4,076,481	3,824,508
Sand and gravel . . . . .	8,866,549	10,003,339
Stone . . . . .	15,292,705	15,598,542

the comparable figure was \$189,422,000. Intensive development of strip mining was responsible for the increased coal production. (P. By.)

**Ohio State University.** An institution of higher education at Columbus, Ohio. Formally established as a land-grant institution in 1870, it opened its doors on Sept. 17, 1873, to a student body of 17. The university admits both women and men. It has ten colleges: agriculture, arts and sciences, commerce and administration, dentistry, education, engineering, law, medicine, pharmacy and veterinary medicine; a graduate school; and eight special schools: aviation, fine and applied arts, home economics, journalism, music, nursing, optometry and social administration. Graduate work is offered through the doctor of philosophy degree. Special curricula in 1945 prepared students for work in naval science, dental hygiene, international relations, medical technology, occupational therapy, and rehabilitation of the handicapped. Latest additions to the physical plant were a 400-acre airport and a research laboratory. The university operates on a four-quarter plan, enabling most students to complete their studies in three calendar years. (For statistics of enrolment, faculty, etc., see UNIVERSITIES AND COLLEGES.) (H. L. B.)

**Oil:** see PETROLEUM.

**Oils and Fats, Vegetable and Animal:** see VEGETABLE OILS AND ANIMAL FATS.

**Okamura, Yasuji** (1884- ), Japanese army officer, was born in May at Tokyo. A graduate of the military academy, 1905, and a student of the military staff college, he became adviser to Sun Chuang-fang, Chinese military and political figure who rose to power in the 1920s. He also served as chief of military history compilation and chief of the military research department of the general staff office and later as vice chief of staff of the Kwantung army. An aggressive member of Japan's army clique, Okamura was behind most of the manoeuvres that led to the invasion of Manchuria in 1931 and the excision of that territory, as well as the northern Chinese territories, from the body of China proper in the ensuing years. Okamura, who had been commander in chief of Japanese forces in north China, replaced Shunroku Hata as commander in chief of all Japanese armies in China on Nov. 22, 1944. Okamura formally surrendered his forces, variously estimated as upwards of 1,000,000 men, to Gen. Ho Ying-chin, supreme commander of Chinese ground forces, on Sept. 9, 1945. The arrest of Okamura as the No. 1 war criminal of Japanese forces in China was demanded by Chinese communists, Dec. 6.

**Okinawa.** Largest single island and seat of Japanese administration of the Ryukyu archipelago, a chain of islands in the north Pacific located between 24° and 30° N. and 123° and 130° E. The northernmost of the Ryukyus is 80 mi. S. of Kyushu, the southernmost 73 mi. N.E. of Formosa. The archipelago is divided into three main groups of islands, of which the northern is called Oshima shoto, the central Okinawa gunto and the southern Sakishima retto.

**History.**—Okinawa, up to 1945 a little known island, seldom visited by foreigners, came into prominence when it became the scene of the last and bloodiest great land battle fought between Japanese and U.S. forces in the Pacific. Following the capture of Iwo Jima (*q.v.*) a U.S. naval force under the command of Adm. Richmond Kelly Turner landed the new 10th army, under command of Gen. Simon Bolivar Buckner, on the western coast of Okinawa. Contrary to previous practice, there was little or no

Japanese resistance on the beaches. The mountainous northern part of the island was overrun by a marine corps with little difficulty.

But a Japanese army of more than 100,000 men entrenched itself in an arc of pine-covered hills from the towns of Nawa (the capital) and Shuri in the west to Yonabaru in the east. During the month of May the armies practically fought each other to a standstill, the U.S. forces gaining only about 5 mi. against the strongest defensive system they had encountered in the Pacific war, a system based on caves, tunnels and artillery and mortar positions.

One of the main objectives, Sugarloaf hill, changed hands ten times in bitter hand-to-hand fighting.

Finally the tenacious Japanese resistance was broken. Marine and army units fought their way into Shuri castle, located on a steep coral cliff, and took possession of the charred ruins of Nawa. The main Japanese defense line was pierced on June 1. However, 18 days of further fighting were required before the remnants of the Japanese forces were destroyed. Adm. Chester Nimitz announced the complete capture of the island on June 21.

Losses among U.S. forces were 11,260 dead and missing, 33,769 wounded. A revised figure, including nonbattle casualties, placed the total number at 79,507. Among the dead was Gen. Buckner, mortally wounded by the fragment of an exploding shell as he watched mopping up operations from a rock on June 18. Japanese losses were more than 98,000 killed and about 4,500 prisoners. The number of prisoners, unusually large in view of the Japanese military tradition of dying without thought of surrender, might be attributed partly to an elaborate campaign to stimulate surrender through radio broadcasts and showing of pamphlets by U.S. psychological warfare units, partly to a growing Japanese realization that their cause was hopelessly lost. The marine Lt. Gen. Roy S. Geiger quoted a captured Japanese captain as saying:

"So overwhelming is the equipment and fighting spirit of the Americans that any Japanese who thinks he has a chance to win the war is just a fool."

Located 400 mi. from Kyushu and 1,100 mi. from Tokyo, Okinawa was designed to be a take-off point for the final invasion of the Japanese home islands. This invasion was made unnecessary by the Japanese surrender in August. (*See* WORLD WAR II.) (W. H. CH.)

ON V-E DAY, U.S. troops in Okinawa close to the front lines stood quietly in the rain to hear of the victory in Europe, and then returned to battle

**Oklahoma.** A west south-central state, admitted as the 46th state Nov. 16, 1907. Popular name "Sooner state," from the term "sooner" applied to those who entered and staked claims sooner than the law allowed when the first public lands in the Indian territory were opened by the run for homesteads, April 22, 1889. Area, 69,283 sq.mi., including water surface, of which 265 sq.mi. are in artificial lakes. Population, 2,336,434 (1940), of which approximately 62% were rural. Approximately 87% were white, 7% Negro, 4% Indian, 2% foreign born. On July 1, 1944, the bureau of census estimated the civilian population of Oklahoma at 2,064,679. Oklahoma City (1940 census) (204,424), the capital, and Tulsa (142,157) are the two largest cities.

**History.**—In 1945 the chief state executive officers (elected Nov. 1942, for the four-year term) were: Robert S. Kerr, governor; James E. Berry, lieutenant governor; Frank C. Carter, secretary of state; C. C. Childers, auditor; A. S. J. Shaw, treasurer; Mac Q. Williamson, attorney general; A. L. Crable, state superintendent of public instruction; John Rogers, state examiner and inspector; W. A. Pat Murphy, commissioner of labour; Mabel Bassett, commissioner of charities and corrections; Jesse G. Read, commissioner of insurance; Robert H. Brown, chief mine inspector; Joe C. Scott, president state board of agriculture. One of the reforms advocated by many students of government in Oklahoma is a change in the state constitution which would reduce the number of state-wide elected, executive officers.

**Education.**—The total enrolment in Oklahoma public schools for the term 1944-45 approximated that of the previous term (1943-44) when there was reported 506,244 pupils in the state, with 17,236 teachers, including 150,707 pupils in 825 high schools, maintained at a cost to the state of \$34,684,384.44. State institutions of higher learning included a university (Norman), a state agricultural and mechanical college (Stillwater), a college for women (Chickasha), an agricultural and mechanical college (Goodwell), a Negro university (Langston), an institute of technology (Weatherford), and five colleges primarily for teacher training (Ada, Alva, Durant, Edmond, Tahlequah). There were 17 two-year junior colleges, recognized by the state board of education, including five state-supported, district junior colleges and one military academy. There were six senior colleges and three junior colleges with church affiliations.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In Dec. 1945, the department of public welfare reported for that month, 81,956 persons receiving old age assistance; 16,306 families receiving aid for 39,668 dependent children; 1,898 blind persons receiving aid. Oklahoma's interest in public health was evident when the 20th session of the state legislature passed 17 laws pertaining to the promotion of health. Significant among these were laws requiring blood tests for syphilis of applicants for marriage licences and of pregnant women. State-supported hospitals, eleemosynary, penal and reformatory institutions were (Jan. 1946) two tuberculosis sanatoriums, seven hospitals (including mental), one orphans' home, three schools for deaf and blind, one penitentiary, one sub-penitentiary, one reformatory, four schools of correction.

**Communications.**—Oklahoma spent in the period from 1919 to 1945 (ending June 30) the sum of \$203,586,025 on the improvement of approximately 10,000 mi. of highways. Total road mileage in Oklahoma was 100,858 mi. in 1945. Railroad, steam and electric mileage totalled 6,315 mi.

**Agriculture.**—Floods followed by dry weather reduced crop production in 1945. The approximate total of gross income to farmers from 35 crops in Oklahoma was \$273,430,000. The state department of agriculture in its report Jan. 1945 estimated value of livestock on farms at \$193,108,000.

Leading Agricultural Products of Oklahoma, 1945 and 1944

Crop	1945	1944
Wheat, bu. . . . .	70,917,000	85,914,000
Corn, bu. . . . .	26,268,000	32,958,000
Oats, bu. . . . .	19,855,000	27,569,000
Broomcorn, tons . . . . .	10,500	20,400
Grain sorghums (forage and silo), tons . . . . .	1,652,000	2,267,000
Grain sorghums, bu. . . . .	7,371,000	12,915,000
All hay, tons . . . . .	1,979,000	1,989,000
Cotton, bales . . . . .	295,000	640,000

**Manufacturing.**—Total pay rolls for covered employment in Oklahoma for 1944-45, ending in Sept., was \$222,792,706, with a monthly average of 97,916 persons employed. In addition to the manufacture of petroleum by-products, the manufactured products from glass sands in Oklahoma were making a big industry in the state.

**Mineral Production.**—The total value of minerals, including petroleum, coal, zinc, lead, gypsum and others, produced for the year up to Dec. 1944, was \$253,284,000. Latest available figures for the year ending Nov. 1945 reported the production of 138,282,759 bbl. of petroleum in Oklahoma. (M. H. W.)

**Ontario.** One of the two central provinces of Canada, Ontario was admitted to the union in 1867. The area is 412,582 sq.mi.; the population, 3,787,655 (1941 census), of which about 62% is urban. The chief cities are Toronto, the provincial capital (667,457); Hamilton (166,337); Ottawa (154,951); Windsor (105,311). Local administration is in the hands of a provincial parliament composed of a lieutenant governor, an executive council, and a legislative assembly of 90 members. Ontario is represented at Ottawa by 82 members in the house of commons and 24 senators. The lieutenant governor in 1945 was Albert Matthews, the provincial premier, G. A. Drew.

**History.**—On June 4, 1945, a provincial general election was held. The Progressive Conservative government of George A. Drew was sustained with an even greater majority than it had in the elections of 1943. As a result of the 1945 elections, current party standing was as follows: Pro. Con. 66; Liberal 11; C.C.F. 8; Labour Progressive 2; Liberal Labour 3. At the dominion general elections (June 11), Ontario returned 48 Progressive Conservatives and 34 Liberals.

**Education.**—The total enrolment of all educational institutions during the period 1941-42 was 730,098. The total revenue of provincially controlled schools in 1943 was \$51,444,653. The University of Toronto, with its seat at Toronto, is the provincial university.

**Communications.**—According to the 1944 official returns (the latest available in 1945), Ontario had 56,439 mi. of surfaced road, and 16,562 mi. of earth road. The number of motor vehicles of all kinds registered in 1943 was 691,615.

**Agriculture.**—In 1944, the estimated gross value of agricultural production was \$620,333,000. Farm income in the same period was placed at \$410,000,000. In 1945, the estimated value of all field crops was \$230,264,000 (1944, \$219,237,000). For the first 50 weeks of 1945, inspected slaughterings were as follows: cattle 449,366; calves 143,646; hogs 1,435,029; sheep 329,254. Production of wheat for 1945 was estimated to be 20,655,000 bu. The flue-cured tobacco crop was estimated to be approximately 70,000,000 lb. (1944, 82,595,000 lb.); that of burley tobacco 10,450,000 lb. Production of honey was placed at 25% below normal. The yield of apples, peaches, cherries, plums

and fruit in general was light.

**Manufacturing and Mining.**—In 1944, the total value of mineral production was \$209,349,689. Iron mining continued at Steep Rock, the ore being sent out via Duluth until the completion of the necessary loading installations at Canadian ports. During 1944, 132,800 bbl. of crude oil were produced.

**Oppenheimer, J. Robert** (1904– ), U.S. physicist and scientist, was born April 22 in New York city. He was graduated from Harvard university, Cambridge, Mass., in 1925, studied at Cambridge university, England, until 1926 and then at Göttingen university, Germany, where he received his Ph.D. degree, 1927. He became a professor of physics at the University of California, Berkeley, Calif., and the California Institute of Technology, Pasadena, Calif., in 1929. During World War II, the U.S. government placed Dr. Oppenheimer in charge of a special laboratory for development and construction of the atomic bomb at Los Alamos, 20 miles from Santa Fe, N.M. He arrived at the laboratory in March 1943 to start work on the atomic weapon. Henry L. Stimson, then secretary of war, declared in his statement of Aug. 6, 1945, that the development of the bomb itself was "largely due to his (Dr. Oppenheimer's) genius." In addition to his duties as chief of the atomic bomb laboratory, he was a member of a four-man advisory group of leading U.S. scientists that worked with a government interim committee on the establishment of postwar organizations to direct and control the use of atomic energy. Dr. Oppenheimer, testifying before congressional committees seeking information on the atomic bomb, declared (Oct. 17, 1945) that within 10 to 20 years, atomic weapons would be "cheap" and that the U.S. would be particularly vulnerable to attack. Oppenheimer also rejected the navy's contention that the atomic bomb would not seriously affect naval warfare and said (Dec. 5) that an atomic depth charge would be more effective than a surface explosion and that the cost of the future atomic bombs would be only a fraction of their cost in 1945.

**Oranges:** see FRUIT.

**Oregon.** A Pacific northwest state of the U.S.A., admitted to the union Feb. 14, 1859, the 33rd state. Area, 96,981 sq.mi., including 631 sq.mi. of water; pop. (1940) 1,089,684. On July 1, 1944, the bureau of the census estimated the civilian population of the state at 1,214,226. Capital, Salem (1940 census) (30,908); chief city, Portland (305,394). Governor in 1945, Earl Snell. Secretary of state, Robert S. Farrell, Jr.

**History.**—Six large shipyards in the Portland-Vancouver (Washington) metropolitan area turned out 232 sea-going ships in 1945. While this figure represented a considerable reduction from the total of 397 turned out in 1944, the rate of delivery up to the end of World War II was nearly equal to that for the previous year. It was estimated that in the first part of 1945 nearly 130,000 workers were employed in all the Oregon (and Vancouver) shipyards and in closely allied trades. This represented a slight increase in personnel over the previous year.

After the end of hostilities ship production was greatly reduced and in Dec. 1945 it was estimated that there were fewer than 25,000 people working in Oregon yards, including those in Vancouver. A majority of those released from shipbuilding remained resident in the area. During the four-year war construc-

tion period 1,174 ocean vessels were built in Portland and vicinity, with total pay roll outlays amounting to \$1,088,000,000.

Toward the end of 1945 a large part of the lumber industry in Oregon was stopped by strikes. At least two important Oregon lumber producing companies announced that they had closed down for good, due to the shortage of standing timber. In July and August there were unusually severe forest fires in the so-called Tillamook burn area in northwest Oregon, the scene of a devastating fire in 1933.

In midsummer of 1945 it was announced that Portland had been the principal shipping port for lend-lease goods to Russia and that cargo valued at about \$750,000,000 had moved out of the Columbia river in this activity.

The 1945 session of the Oregon legislature appropriated \$40,616,150 as compared with \$24,164,706 in 1943. Most of the increase was for new buildings and permanent improvements at state institutions and for the state system of higher education. At a special election held June 22, 1945, voters ratified the acts of the legislature in respect of these buildings and improvements. A bill to levy state taxes on cigarettes for added income for public schools failed of popular support.

On Nov. 12, 1945, James W. Mott (R), representative in congress from Oregon's 1st district from March 1933, died in Washington, D.C., after a short illness. Governor Earl Snell called a special election to be held Jan. 11, 1946, to elect a successor. Walter A. Norblad (R), of Astoria, was elected.

On May 5, 1945, a small party of picnickers from Lakeview, Ore., found a strange object on the ground near Bly. Some of the children examined the contrivance, which turned out to be a Japanese bomb carried into the country by a balloon. It exploded, killing one woman and five children. The six were the only known casualties by enemy attack in continental United States during World War II.

The city of Portland celebrated the centenary of its founding in 1845 by appropriate exercises and by placing a memorial tablet on a massive boulder near the waterfront. In 1945 the Portland baseball team won the Pacific coast pennant for the first time after 1936.

Despite the letup in shipbuilding activity in Portland, housing conditions remained acute and commercial office space became practically nonexistent. Housing conditions at the smaller cities and towns were equally bad, especially in those places with institutions for higher education.

The Oregon state highway commission in 1945 tentatively adopted a three-year postwar highway construction program calling for an expenditure of \$35,000,000. In addition, the federal government adopted a program calling for about \$5,000,000 for forest highways and similar roads on federal lands in Oregon. At the end of 1945 the state authorities had several of the new projects under construction or under contract.

**Education.**—During the school year 1943-44 there were 226,020 pupils in public schools, including 54,687 in high schools. There were 8,024 teachers. For the school year of 1943-44 the value of school properties, including buildings, grounds and equipment, was \$74,057,365. The superintendent of public instruction, an elective office, was held in 1945 by Rex Putnam.

**Communication.**—As of Dec. 31, 1945, there were 4,806 mi. of primary highways in Oregon, of which 4,612 mi. were improved with various types of surfacing. Expenditures by the state highway commission for 1945 amounted to \$9,928,101, of which \$1,680,914 was for bond redemption and bond interest. As of Dec. 31, 1943, there were 3,629 mi. of steam railways, not including second main track, sidings, etc.

**Finance.**—As of Dec. 1, 1945, Oregon's state gross bonded debt was \$18,517,590, against which there were sinking funds and other applicable assets amounting to \$15,581,391, leaving a

balance of debt of \$2,936,199.

**Agriculture.**—Total cash income of Oregon farmers in 1944 was \$289,714,000, of which \$9,269,000 represented government

*Principal Agricultural Products of Oregon, 1945 and 1944*

Crop	1945 (est.)	1944
Corn, bu. . . . .	1,384,000	1,484,000
Oats, bu. . . . .	7,818,000	10,828,000
Barley, bu. . . . .	6,402,000	7,142,000
All wheat, bu. . . . .	20,889,000	23,105,000

payments. This cash income figure did not include income from certain specialty crops. (L. A. MCA.)

**Osmeña, Sergio** (1878- ), president of the Philippines, studied at the University of Santo Tomas, P.I. He was admitted to the bar, 1903. After serving in various positions of importance in the island government, he became vice-president of the Philippine commonwealth, 1935. Osmeña fled the Philippines, Feb. 20, 1942, when Japanese forces were overrunning his country, and followed President Manuel Quezon to Washington, where the latter set up a government-in-exile. After the death of Quezon, Osmeña was sworn in as president of the commonwealth, Aug. 1, 1944. A few hours after U.S. troops invaded Leyte Island, Oct. 20, 1944, Osmeña stepped ashore and subsequently set up his provisional headquarters at Tacloban. With regard to Philippines-U.S. relations, Osmeña said that while he visualized the Philippines as an independent nation, he stressed that he was "absolutely in favour" of allowing the U.S. to maintain military and naval bases in the islands. Osmeña followed Gen. MacArthur into Manila and swore in a new cabinet of eight members, March 8, 1945. On May 4, he conferred with Pres. Truman, who told Osmeña that he endorsed Pres. Roosevelt's policy of speeding Philippine independence.

**OSRD:** see SCIENTIFIC RESEARCH AND DEVELOPMENT, OFFICE OF.

**Osteopathy.** Osteopathic colleges, along with all others in the field of science, in the U.S., suffered, in 1945, from the fact that, during the later months of hostilities and after, preprofessional college students were not exempted or deferred in the draft. The total number of students in osteopathic colleges changed but little with the end of World War II, but the return of veterans and the release of pressure for the production of war materials in order to free men and women from work in defense plants began to have its effect and was expected to play a real part in the future.

The financial situation of the colleges was unique. They were never the beneficiaries of tax funds directly in support of their teaching functions as was the case with such a large proportion of colleges giving the M.D. degree. They had not approached great philanthropists with the idea of being made beneficiaries of foundations or large grants. From Dec. 1942 more than \$1,000,000 were pledged and most collected, almost entirely, from the alumni of the osteopathic colleges. All of the colleges, at the end of 1945, contemplated presenting their case to the laity for additional funds for the future. Release of building controls and the easing of restrictions relating to the purchase of equipment led to a considerable forward surge in the organization and building of osteopathic hospitals.

The number of hospitals approved for intern training was increased from 51 in 1944 to 56 at the end of 1945. The number of hospitals on the register of the American Osteopathic association in 1945 was 101, not including those listed for intern training. (R. G. HU.)

**Ostland:** see UNION OF SOVIET SOCIALIST REPUBLICS.

**Osubka-Morawski, Edward Boleslaw** (1904?- ), Polish government official, was a member of the "P.P.S." (the Polish Socialist party) before the outbreak of World War II. He had been associated with the Warsaw housing co-operative and was active, although not widely known, in the co-operative movement. In 1943, Osubka-Morawski left the P.P.S. to join a more leftist faction, the R.P.P.S. (the Polish Socialist Workers party) and published an underground paper during the German occupation. Later, he left for Moscow and on July 23, 1944, he became head of the Polish Committee of National Liberation, the organization set up to administer the areas of Poland freed by the Red army. He was selected as premier of the Polish Provisional government (Dec. 31, 1944) and was retained in that post in the permanent government formally installed in Warsaw (June 28, 1945). An advocate of government ownership of all industry of "national importance," he favoured encouragement of private enterprise in the new Poland but asserted that all production and distribution should be regulated by the government. With regard to land reform, he was categorically committed to the abolition of all large estates in Poland, except for land owned by the church. On the question of the national elections, Osubka-Morawski, in the late winter of 1945, agreed with his conservative vice-premier, Stanislaw Mikolajczyk, that the balloting should not be held before the end of 1946 and that the choice should not be limited to a single list of candidates. However, other members of his government were vigorous champions of an earlier election and the single list.

**Ottawa.** The capital of Canada is on the Ottawa river, in the province of Ontario. The city covers 5,295 ac. In common with other urban centres, the population of Ottawa showed a substantial increase. Based upon local estimates, the population during 1945 was 224,826, or 195,223 living in the city and 29,603 in the suburbs. In 1941, the census placed the population at 154,951. The extensive beautification of the city engaged much attention as a war memorial project in 1945, the national government extending its aid for this purpose. The houses of parliament occupy a conspicuous position overlooking the Ottawa river. Other notable public buildings are the Royal Canadian Art gallery, the Supreme Court building, the Parliamentary library, the Public Archives, the Royal Mint, and Rideau hall, the residence of the governor-general. Although primarily an administrative centre, Ottawa possesses some 205 industries, the chief connected with lumbering and wood products. L'Université d'Ottawa has its seat there, and was in 1945 the only officially bilingual university in Canada. (J. I. C.)

## Oumansky, Constantine Alexandrovich

(1902-1945), Russian diplomat, was born in Nikolaev in the Ukraine. He joined the Communist party at the age of 17 and later became a newspaperman with Tass, the official Russian news agency, covering Vienna, Rome and Paris. He entered the Russian diplomatic service in 1931, rising to the post of director of the press department in the commissariat of foreign affairs. In 1936 he was appointed counsellor in the Russian embassy in Washington and was named ambassador to the U.S. in 1939. His reception among the Washington diplomatic corps was courteous but cool because the soviet union had, prior to his appointment, signed a pact with the nazis. After the latter invaded Russia in 1941, the barriers were let down and Oumansky was accorded a more gracious welcome. In Nov. 1941 Oumansky was succeeded by Maxim M. Litvinov and returned to Russia to become director-general of Tass. He returned to the western hemisphere in June 1943 as ambassador extraordinary and plenipotentiary to

## 550 OUTDOOR ADVERTISING—PACIFIC ISLANDS, BRITISH

Mexico. A skilful statesman, he succeeded in renewing diplomatic relations with a number of Latin American countries. In 1944 he was named concurrently soviet minister to Costa Rica. It was during the start of an intended visit to Costa Rica that the ambassador as well as Mrs. Oumansky and three members of his staff were killed; the plane on which they were aboard crashed in flames just outside the Mexico City airport a few minutes after its take-off Jan. 25.

**OWMR:** see WAR MOBILIZATION AND RECONVERSION, OFFICE OF.

**Oxford and Asquith, Margot,** COUNTESS OF (1864?-1945), British writer, the daughter of Sir Charles Tennant, was born near the Scottish border. Her early childhood was spent near Edinburgh. Later, she went to London where she made a reputation as a brilliant and witty member of British society. Her friends included the country's literary and political great, of whom she wrote in an intimate, gossiping vein. In 1894, she was married to Herbert H. Asquith, then home secretary. In 1908, when he became liberal prime minister, Lady Oxford took up her new duties as hostess of No. 10 Downing street. During the next eight years she enriched her fund of behind the scenes anecdotes concerning Britain's most prominent statesmen. Eleven British prime ministers were thus portrayed in her last book, *Off the Record* (1944). Her memoirs, published in 1928, mentioned prominent personalities of the Victorian, Edwardian and Georgian eras. She also wrote *More Memories* (1933) and edited *Myself When Young* (1938). Her daughter, Princess Elizabeth Bibesco, who died in April 1945 in Bucharest, was also a well-known writer. Lady Oxford died at her London home, July 28. See *Encyclopædia Britannica*.

**Oxford University.** The academic year 1944-45, which began with 2,562 undergraduates in residence, ended with 2,333. About 59% of the men matriculating were below the age of 18½, the percentage in the previous year having been about 76%. When the war in Europe was seen to be drawing to its close the finishing touches were given to a program which had already been agreed upon in principle with the ministry of works for the release of requisitioned buildings to the extent required for the university population in 1945-46. At the end of July 1945, the government decided to demobilize about 1,000 men and women who held open scholarships or comparable awards in arts subjects, and the program of releases suddenly had to be extended. The examination system was overhauled and temporary modifications made to meet the needs of ex-service candidates.

During the year a professorship of colonial economic affairs was established for seven years in the first instance, through the generosity of the United Africa company. A new faculty of agriculture and forestry was created. Both the biological

sciences and social studies were to be represented on the faculty board. The problems of production and marketing would thus both find their places in the work of the faculty.

Interesting benefactions included an annuity from Stanley Brookes, in memory of his daughter, of £1,500 a year for seven years to enable the university to establish a fellowship for the study of the biochemical factors influencing organic mental disorders. The government grant was increased by £120,000 for the ensuing year.

Sir Arthur Salter and Sir Alan Herbert were elected burgesses of the university at the general election.

The following heads of colleges and professors were elected: Sir Frederick Ogilvie as principal of Jesus; the rev. J. H. S. Wild as master of University; A. H. Smith as warden of New college; B. H. Sumner as warden of All Souls; J. R. R. Tolkien, Merton professor of English language and literature; G. E. Blackman, Sibthorpe professor of rural economy; B. D. Merritt, George Eastman visiting professor; Dr. A. C. Hardy, Linacre professor of zoology and comparative anatomy; S. Kononov, professor of Russian; Dr. R. W. Seton-Watson, professor of Czechoslovak studies.

On Oct. 25, 1945, the university conferred the honorary degree of D.C.L., in recognition of their eminent services during World War II, upon General Dwight Eisenhower, John Winant, General Mark Clark, Professor Max Huber, Lt. Gen. Sir Bernard Freyberg, V.C., Jan Hofmeyr, the earl of Gowrie, Admiral of the Fleet Sir John Tovey, Field Marshal Lord Alan Brooke, Field Marshal Sir Bernard Montgomery and Marshal of the Royal Air Force Sir Arthur Tedder.

**Pacific Islands, British.** The British Pacific islands are territories of the British empire in the Pacific ocean, of which certain statistics are given in the accompanying table. See BRITISH EMPIRE for population, capital towns, status and governors.

**History.**—With the end of the war in the Pacific, conditions in the islands returned to normal. The development of air communications brought about tangible results in the shape of improved health, and also emphasized the strategic importance of the islands.

The Colonial Development and Welfare act, 1945, allocated £1,000,000 (£1=403.5 cents U.S.) to Fiji and £800,000 to the Western Pacific for the next ten years. (See also SOLOMON ISLANDS; WORLD WAR II.)

\*Canton and Enderbury Islands, in the Phoenix group, are shared with the U.S.A. under the Anglo-American pact, Aug. 10, 1938.

**Pacific Islands, French.** The latest statistics available in 1945 for this French colony were: area (Society, Tuamotu, Tubuai and Marquesas islands) 1,545 sq.mi.; pop. (est. Dec. 31, 1939) 45,000 (whites, c. 3,700). Chief town: Papeete (in Tahiti), cap. 8,460. Governor (1945) Col. Georges Orselli.

**Finance.**—Local budget (est. 1939) \$690,000.

**Trade.**—(1941): imports \$111,000; exports \$260,000. Roads (1937): Tahiti 48 mi.; Raiatea 19 mi. Shipping (1938) cleared, 162,927 net tons.

**Production.**—Export (1941): copra 15,000 short tons; natural phosphates 212,000 short tons. (See also SOLOMON ISLANDS.)

**Pacific Islands, Mandated.** The former German possessions in the western Pacific comprise part of New Guinea with adjacent archipelagos, Western Samoa, the Marshall, Caroline, Palau and Ladrone, or Marianas islands, and the islet of Nauru. Statistics for these territories are given in the accompanying table. For capital towns and governors of New Guinea, Western Samoa and Nauru, see BRITISH EMPIRE. After the Japanese entry into World War II in 1941, these islands became the scene of hostilities, for which see WORLD WAR II. (See also NEW GUINEA.)

Mandated Pacific Islands

Territory and Area sq. mi.	Population and Status	Principal Products (short tons)	Imports and exports (000's omitted)	Revenue and Expenditure (000's omitted)

**Pacific Islands, U.S.** In addition to such large island possessions in the Pacific as Hawaii, the Aleutians, American Samoa and Guam (the latter occupied by the Japanese in 1941 and retaken by U.S. forces in 1944) the United States possesses a dozen tiny islands in the Pacific, negligible in size and economic value, but important, both in peace and in war, from the standpoint of aviation and naval security. Increasing interest was shown in these formerly neglected islets in the later 1930s, as air flights across the Pacific were organized on a regular commercial basis and as the threat of war with Japan became more evident.

**Midway and Kure (Ocean) Islands.**—The Midway Islands are a group in the North Pacific, 1,200 mi. northwest of the Hawaiian Islands. Area of the group: 28 sq.mi. Pop. (1936) 118. Midway consists of two low-lying islands, Sand (area 850 ac.) and Eastern (328 ac.). These are surrounded by a coral reef five miles in diameter and by numerous islets. Sand and Eastern islands are little more than sand-spits, but they acquired importance, first, as the site of a trans-Pacific cable station (installed 1903), second, as a stopping point on the Pan American Airways route from San Francisco to the Philippines via Hawaii, Midway, Wake and Guam (inaugurated 1935), third, as an important U.S. air and naval station in the war against Japan. One of the first big Japanese defeats was sustained in a three-day battle in the neighbourhood of Midway, fought June 4-6, 1942.

Midway was discovered by a Captain N. C. Brooks in 1859 and was first known as Brooks Island. The name was later changed to Midway, because of the group's position in the mid-

Pacific, 2,800 mi. from California and 2,200 mi. from Japan. It was formally declared a U.S. possession in 1867. Kure (Ocean) Island is a coral reef 14.7 mi. in circumference, lying 56 mi. northwest of Midway. It was placed under the control of the navy department by an executive order of Feb. 1936.

**Wake Island.**—Wake Island, famous as the scene of a gallant last-stand defense by a garrison of a few hundred U.S. marines against a greatly superior Japanese attacking force in Dec. 1941, consists of three islets, Wake, Peale and Wilkes, and is located in the North Pacific, 2,130 mi. due west of Honolulu. The total land area of the islets is about 2,600 ac. (4 sq.mi.), Wake, the largest, being about 2 sq.mi. It was formally annexed to the United States on Jan. 17, 1899. For many years it was neglected and uninhabited, except for occasional visits of Japanese bird-hunters; but it was placed under U.S. navy department jurisdiction in 1934 and later contained an air station, a hotel for air travellers and quarters for a small garrison of marines. It was discovered by the British ship, "Prince William Henry," in 1796.

**Johnston Island.**—Johnston Island consists of two islets on an eight-mile reef, located 600 mi. southwest of Hawaii. It was discovered by the British naval vessel "Cornwallis" in 1807 and named after the vessel's captain, Charles James Johnston. Competing U.S. guano interests lent some activity to this barren

sand bar in the '50s and '60s of the 19th century. The final U.S. assertion of claim to the island was an executive order of June 29, 1929, placing the island under the control and jurisdiction of the department of agriculture as a refuge for native birds. An appropriation of \$1,150,000 was provided by congress for the construction of seaplane facilities.

**Kingman Island.**—Kingman reef, 150 ft. long by 120 ft. wide

at high tide, is the smallest land area in the world over which the United States claims sovereignty. The reef is about 8 mi. long and 5 mi. wide, counting in submerged shoals. Two other tiny islets in the reef appear at low tide. The strategic importance of this desolate reef lies in the fact that it is the only possible seaplane base between Honolulu (1,067 mi. to the N.) and Pago Pago, in American Samoa (9.v.), 1,797 mi. to the S.W.

**Palmyra Island.**—A U-shaped atoll, with its 53 islets containing an area of about 500 ac., located 960 mi. S.W. of Hawaii. Its possession was disputed for a time between the United States and the kingdom of Hawaii; it was specifically mentioned when the U.S. annexed Hawaii in 1898; but sporadic British claims to the possession of the island were put forward later. It is a possible air base on the route from Hawaii to New Zealand.

**Swains Island.**—A coral atoll, one sq.mi. in area, pop. 150, of Polynesian race, formally brought under the jurisdiction of American Samoa in 1925 after remaining for a time under the patriarchal rule of a U.S. whaling captain named Eli Jennings, who had himself accepted as a local chief, and his descendants.

**Howland, Jarvis and Baker Islands.**—Baker and Howland Islands are small coral atolls, located where the international date line crosses the equator. Jarvis Island is 1,150 mi. further E. and slightly below the equator. Rectangular Baker Island is 1 mi. long and 1,500 yd. wide, elongated Howland Island is 2 mi. long and 750 yd. wide. Both were discovered by U.S. whaling captains early in the 19th century. Jarvis Island, a bare coral plateau, 1.8 mi. long and 1.3 mi. wide, was discovered in 1821.

These islands were "colonized" by students of a Hawaiian boys' school in 1935 and placed under the jurisdiction of the department of the interior in 1936. Radio and aerological stations were established there.

**Canton and Enderbury Islands.**—Geographically part of the Phoenix group and located 1,850 mi. S.S.W. of Hawaii, Canton (area 8.5 sq.mi.) and Enderbury (2.5 sq.mi.) figured in a prolonged dispute as to ownership between the U.S. and the British empire. Aviation experts consider Canton an excellent base for seaplanes and Enderbury suitable for land planes. The dispute was settled on Aug. 11, 1938, when the United States and British governments jointly announced an arrangement for "the use in common" of the islands, "for purposes connected with international aviation and communication."

(See also GUAM; HAWAII; PHILIPPINES; SAMOA, AMERICAN.)  
(W.H.CH.)

**Pacifism.** With the abrupt termination of World War II, demobilization became one of the major concerns of conscientious objectors and pacifist organizations in the United States. One group of C.O.s, those who were classified as 1AO in the draft and accepted noncombatant service in the medical corps of the army, were discharged at the same rate as combatants. They and their dependents were entitled to the same privileges as the excombatants.

Those C.O.s who could not conscientiously accept any service in the armed forces and who had been assigned to Civilian Public Service camps and units were not so fortunate. The

best available estimates were that as of Dec. 31, 1945, about 50% of the men in the armed forces would have been demobilized as against 12% of C.P.S. men. The rate of discharge was, however, being accelerated and it was expected that by the end of March 1946, the figure for the latter would be approximately 60%.

At the end of 1945 there were still from 3,000 to 6,000 objectors to war and conscription, the exact figure depending upon the classification used, in the federal prisons. During World War II these men were denied parole on terms available to ordinary law offenders. Parole was granted in a limited number of cases for work in hospitals and subject to the stipulation that parolees might receive maintenance plus no more than \$50 per month wages. There were indications that the department of justice and the U.S. board of parole were inaugurating a policy of permitting C.O.s the same right as other prisoners to find their own jobs and to receive the going rate of pay. If this policy were adopted, it would in a short time reduce materially the number of imprisoned C.O.s.

This by itself would not, however, solve the problems of men who had been or were in prison for conscience' sake. These men are legally felons.

In many if not all states this would bar them from such professions as law, medicine and dentistry. Some church and civic groups had by 1945 accordingly joined the pacifist or-

A SMOKE-JUMPER of the Civilian Public Service in northwestern U.S. drops into a forest fire area to combat the flames. Conscientious objectors served in this highly dangerous work in 1945. Note the apparent rip in the chute; it is a slot used by the jumper for steering

ganizations in a movement to secure an executive amnesty—i.e., commutation of sentence with full restoration of civil rights—for those remaining in prison and restoration of civil rights for those who had completed their sentences.

The prevailing attitude toward pacifists remained tolerant, or even friendly, and free from hysteria. During 1945 the daily press and the magazines gave increasing space to important experiments in control of jaundice, poliomyelitis, typhus and hookworm and other such projects in which C.O.s served as "guinea pigs" or research assistants.

Pacifist organizations continued to be concerned throughout 1945 about the threat of peacetime universal military training or conscription. After the discovery and use of the atomic bomb, they joined with many nonpacifist individuals and organizations in placing increasing emphasis upon an attempt to secure abolition of national military establishments and of conscription by international agreement as the only effective means to provide "security in the atomic age."

Among pacifists there was a fairly sharp difference of opinion as to what provision for C.O.s ought to be asked or accepted if peacetime conscription should be enacted. There was a growing conviction that conscription and the consequent inevitable militarization of U.S. youth would be an intolerable evil, heralding the advent of totalitarianism, even if seemingly generous provision were made for C.O.s; and that all energies should therefore be devoted to an uncompromising effort to abolish the institution.

Pacifists were in the main highly critical of certain features of the United Nations charter adopted at San Francisco, Calif., such as the veto power in the hands of the big nations; and were disposed to emphasize the danger that the United Nations organization would serve as a camouflage for a "peace" based on the precarious foundation of a military alliance of victor powers.

Pacifists in the U.S. re-established contact with surviving pacifists not only in France and Switzerland but in Czechoslovakia, Germany, the Low Countries and Scandinavia. It appeared that religious pacifists in these lands earned general respect for a position which combined steadfast refusal to collaborate with foreign or native dictators and considerable material and spiritual aid to Jews and to the resistance forces with an equally steadfast refusal to resort to hate and violence. Both governments and churches were calling them to responsible positions in the work of reconstruction.

Pacifist agencies in the U.S., such as the American Friends Service committee, the Brethren Service committee and the Mennonite Central committee, had already made substantial beginnings with relief work, supplementing the utterly inadequate public provision, in war-stricken European countries. Plans to re-establish contact with pacifist forces in oriental countries had also been made.

There was a general feeling among pacifists that the advent of the atomic bomb had made abolition of war a matter of extreme urgency, that it would result in greatly increasing the number of individual pacifists and would also lead large numbers of nonpacifists to join in vigorous efforts during the following five decisive years (1946-50) to secure the establishment of genuine international organization, whether by amending and strengthening the United Nations organization or by some other means.

**Painting.** When assaying the weight of the artistic endeavours of any one year, a definite trend in art cannot be easily charted. However, accounts of public taste and predilections are often clearly enough marked to be easily discerned. These predilections in 1945 seemed to have been in the direction of the expressionistic, abstract, primitive, exotic and baroque in art, rather than toward the classic. This was borne out by the choice of prize-winning paintings and by the works which, during the year, made their way into public collections. A rather striking fact was the comparatively large number of paintings of nonobjective orientation, a trend which had been, generally speaking, dormant in Europe for several decades, but had become revitalized in the United States. It was also noteworthy that, within the confines of a nonobjective ornamentation, the painters produced works of excellence far surpassing the efforts of most of the European pioneers. Especially interesting paintings were produced by Walter Quirt, Kurt Roesch, Bradley Walker Tomlin, Byron Browne and a score of others. In contrast to the creative capacity of the younger painters, the older veterans, such as Morris Kantor and Fernand Léger sought refuge in worn-out formulas and repetitious clichés.

With World War II ended, a survey of its effect on the art production of U.S. painters could be made. A number of artists served as official war correspondents and some were engaged in reporting for *Life* magazine and for the Abbott laboratories. There were many others staying at home whose work nevertheless mirrored the distant cataclysm. As could have been expected from past experience, the particular kind of emotion under which the artists labour—the aesthetic emotion—eclipsed their preoccupation with the tragic events. This emotion, it would seem, was the directive and the real preoccupation whether the theme were a battle-torn inferno or a peaceful still life. Out of a great mass of war pictures no climactic performances could be cited. But, besides straight pictorial reporting, a number of works emerged which would probably retain validity on purely artistic grounds. Such were the paintings of the correspondents Aaron Bohrod, Howard Cook, Frede Vidar, David Fredenthal, Barse Miller. Excellent illustrations of army and navy medicine for the Abbott laboratories were done by Joseph Hirsch, Lawrence Beall Smith, Howard Baer and others.

There was a heightened interest in the art of drawing, shown by the many exhibitions in 1945 such as the first Drawing Biennial of the Los Angeles (Calif.) Museum, the show of drawings by Hilaire Degas, and the graphic contributions to various shows by Pavel Tchelitchew, Rico Lebrun, Marshall Glasier, Georges Rouault and Paul Cadmus.

Commercial art galleries offered unusually varied and interesting exhibitions. Significant among them were two first shows by the Negro painters, Jacob Lawrence and Romare Bearden, the first representing a primitive and, at the same time, highly sophisticated style, and the second patterned on various abstract manners skillfully and intelligently assimilated. An expressionism peculiarly American but of Nordic origin was revealed in the shows held by B. J. O. Nordfeldt and Everett Spruce of Texas. Julio de Diego made a fine contribution with his very personal brand of decorative fantasia; and Walter Stuempfig, Jr., with extraordinary effects, revealed himself as a full-blown modern Philadelphia Guardi. Stimulating exhibitions were held by John Heliker and Nahum Tschabassov. The fantastic fairytale world of the latter, kindred in conception to that of Marc Chagall, showed an obvious artistic superiority of the Russo-American over the Russo-French painter. As a special event, notice should be taken of the first exhibition of the 22-year-old David Aronson of Boston. Out of various exploits ranging from the art of Byzantium to that of Chaim Soutine, Aronson created in encaustic (taught to him by Karl Zerbe, who was the first

Below: "SENTIMENTAL MOMENT" by Philip Guston was awarded first prize at the Carnegie Institute's exhibit of "Painting in the U.S., 1945." The awards were announced on Oct. 11, 1945

Right: "BETWEEN TRAINS" by T/4 Robert Niles, Jr., was awarded the first prize in oils in the National Army Arts contest, exhibited at the National gallery, Washington, D.C., during the summer of 1945

Above: PAINTING BY RICHARD PREYER, 17, of the Woodberry Forest school, Va., which was awarded first prize in oils at the National Scholastic Art Awards exhibition. Sponsored by *Scholastic Magazines*, the exhibit of high school art was held at the Carnegie Institute from May 13 to June 3, 1945

to revive and develop this ancient technique) expressionistic works of great persuasion, audacity and technical resourcefulness rarely encountered in such a young painter. There was a Salvador Dali exhibit accompanied by the customary fanfare and spectacular public relations strategy. His work had lost nothing of its elegant eloquence. On the negative side of the ledger Max Weber's eclecticism, Marc Chagall's vacuous theatricalisms and Yasuo Kuniyoshi's superficial sophistications failed to convince.

As usual, official honours and prizes in 1945 were bestowed bountifully and often equivocally. On several occasions strong protests were heard from various quarters at some of the juries' verdicts. The first prize of the Carnegie institute went to Phillip Guston for the not particularly outstanding "Sentimental Moments." Guston made considerable impression in the course of the year with his first one-man show in New York city, where he displayed taste, technical proficiency and a remarkable capacity to organize designs of great complexity. The second prize went to George Grosz for "The Survivor," a beautifully realized fantasy echoing the ravages of war. The year 1945 was the year of the Corcoran Biennial in Washington where a minor stir was created over the mal-chosen, trivial caricature "Strip-Tease in New Jersey" by Reginald Marsh, which was the prize-winning painting. The decision of the jury which selected Kenneth Hayes Miller's tasteless "Reverie" for top honour at the annual show of the Art Institute of Chicago was also badly received. The personal taste of the jurors, however, was not reflected in the rest of the exhibition, which, hand-picked by the institute's director, touched a high level. Another major national exhibition was that of the Pennsylvania academy, with Abraham Rattner's "Kiosk" as a meritorious choice for the first prize.

A happy thought brought together a collection named "Four Hundred Years of Landscape Painting" in the Brooklyn museum. In the absence of celebrated, glamorous show pieces, intimate paintings by Joachim Patinir, Piero di Cosimo and Hercules Seghers shared space with Joseph Mallord Turner, Jean Baptiste Corot, Vincent van Gogh, Paul Cézanne and a few contemporaries, the old masters showing on the whole marked superiority over the moderns. Equally delightful was the "Hudson River-School" exhibition assembled by the Art Institute of Chicago and also shown at the Whitney museum. The Whitney Annual had a large proportion of well-chosen nonobjective works, but the collection as a whole suffered from the inclusion of too many trivia. On the other hand, due to a liberal policy, the exhibit of the National academy was on a much more animated level than usual, Guy Pène du Bois winning top honours. Other major exhibitions were held at the Institute of Modern Art in Boston, Mass.; the Wisconsin annual (first prize going deservedly to Marshall Glasier); the local show at the Art Institute of Chicago (the Logan prize going to Aaron Bohrod for "Joan of Arc in Montebourgh"). Regional shows were held in practically every state of the union, and numerous travelling exhibitions were in constant circulation throughout the country. All of this amounts to impressive evidence of tremendous public interest in painting far surpassing that of previous years.

A major art event in 1945 was the forming of an unusually comprehensive and well-chosen collection by the *Encyclopaedia Britannica*, comprising more than 140 paintings by American artists. It was first shown in April at the Art Institute of Chicago and then in New York city at Rockefeller Center, and it aroused uncommon interest. The collection later started on a nation-wide tour.

Three large retrospective exhibitions were held in New York city's Museum of Modern Art: Pieter Mondriaan's rigid and frigid patterns in oil colour; Stuart Davis' work of about 30

years, most of his characteristic paintings closely approaching the realm of applied art; and Georges Rouault's work spanning almost half a century. An unusually rich collection of this artist's graphic work revealed sustained power and sensibility. Some of his late oil paintings, although not equal to the work in black and white, attained a rare alliance of the emotional and the decorative. Another retrospective show was given to Wassily Kandinsky at the Museum of Non-Objective Paintings in New York city.

Industry was to the fore again as a generous art patron. The ill-arranged Pepsi-Cola competition was conspicuous for generally inferior contributions, among the exceptions being the third, fourth and fifth prize winners, Gregorio Prestopino, Mark Tobey and Zoltan Sepeszy, respectively. A project of rather large scope was the commissioning of 16 artists by the Standard Oil Company of New Jersey for a series of paintings depicting "The Story of Oil." Probably because of the freedom given to the artists, an unusually high level was reached in these paintings. Other industrial commissions were those of the Upjohn Collection of Contemporary American Paintings and the Ohrbach collection, which had for its theme New York city subjects.

Not enough attention by half was given to an event of great magnitude—the cleaning of a number of masterpieces which revealed an undreamed-of beauty in paintings which had become yellowed or blackened. The restorer, William Suhr, succeeded in freeing Giovanni Bellini's "Saint Francis in Ecstasy" (Frick collection) from layers of decaying varnish, thus bringing again to light the colouristic splendour of the picture, which is probably unsurpassed by any other Renaissance painting. After the removal of dirt and grime from the surface of the paintings, the portraits of Frans Snyders and his wife by Sir Anthony Van Dyck, which previously one would not have given a second look, showed Van Dyck's great mastery. The large Jean Fragonard (Frick) panels gained immeasurably by skilful and intelligent cleaning, and, after the revelation of the heretofore unsuspected colours, a new light was cast on the importance of this artist as a precursor of atmospheric painting. The François Bouchers (restored by Gaston Lévi) commanded a new interest. El Greco's "View of Toledo" (Metropolitan Museum of Art), cleaned by Murray Pease, gained in brilliance. Vittorio Carpaccio's "Meditation on the Passion" (Metropolitan), formerly an inconspicuous painting, emerged after its restoration as a masterpiece of overwhelming beauty.

After four years of isolation, insight into the artistic fortunes of Hitler Germany and Occupied France was at last disclosed in 1945. In both cases these fortunes were at a low ebb. The official art of Germany was revealed as an enfeebled academism more commonplace and sentimental even than that of the Hohenzollern era. The younger French generation seemed to have drifted into a modernistic academy labouring over formulas of several previous decades which, although they might have been strong at one time, appeared tenuous and faded. (See also SCULPTURE.)

(FR. T.)

**Paints and Varnishes.** Records indicated that paint production in the United States during the year 1945 should approximate the record year of 1944 of some \$690,000,000. Military paints of course continued to receive primary attention during the first half of the year. The raw material shortages continued to plague the industry even for military finishes. Reconversion problems within the industry primarily dealt with reformulation of products so as to utilize the previously restricted raw materials in civilian coatings. Toward the close of the year, phthalic alkyd resins, chrome pigments, aluminum and other previously restricted pigments were available for civilian work.

Vegetable oils, glycerin, rosin, titanium and a few other items were still short of demand and subject to various controls. The U.S. government's program on the planting of increased acreage to flax received considerable popularity and was quite successful.

During the year it was announced that phthalic anhydride production facilities had been increased and the annual U.S. rate could be expected to approach 190,000,000 lb. per year. Synthetic xylene of the petroleum industry was used for phthalic production as well as the traditional naphthalene. As a result, phthalic prices were reduced and the trend to synthetic products was hastened at the expense of rosin materials, especially since rosin advanced in price.

Sales figures showed that during World War II, the percentage of national income in the U.S. spent for paint production dropped to .45%; whereas the previous average of 1935-41 was .63%.

In paints the inclusion of insecticides, such as gammexane (gamma isomer of benzene hexachloride) and the popular DDT (dichloro-diphenyl-trichloroethane), was the subject of much work and literature and, it was thought, undoubtedly would result in the offering of paints with insecticidal value.

In the field of solvents, petroleum, xylol and toluol became readily available in large volumes at lower prices. Some of the new varnish raw materials included a line of driers known as "octoates." Certain improved catalyzed heat bodying oils were offered to the trade. Pentaerythritol resins continued to gain in popularity, being offered in a wide variety of modification.

(A. B. Ho.)

**Palaeontology.** As in previous war years research in palaeontology was curtailed in 1945 because many active research men participated in military activities. This was especially true in the old world. Despite the war, however, much important work was accomplished during 1945.

Perhaps of the broadest general interest was the renewed activity on studies concerning the mechanics of evolution. New work on this problem, started by geneticists and workers on recent groups, spread to palaeontology. Dr. George Gaylord Simpson of the American Museum of Natural History published a most important book very late in 1944 on *Tempo and Mode in Evolution*. In this book he made the first serious effort to synthesize information derived from both genetics and palaeontology as related to the "how and why" of evolution. Dr. Bruce L. Clark published a paper on "Problems of Speciation and Correlation as Applied to Mollusks of the Marine Cenozoic." With this start important work on the basis of evolution seemed certain to follow.

Probably the most important single book published in 1945 was *The Principles of Classification and a Classification of Mammals*, by Dr. George G. Simpson. The book contains a complete classification of the Mammalia including all known genera, living and extinct. The part of the book dealing with the principles of classification covers the important phases of good taxonomic procedure and should be of value to all biologists. Another important section of the book is a review of mammal classification with a discussion of the many controversial points.

In vertebrate palaeontology probably the most important faunal report was that by Dr. W. B. Scott on *The Mammalia of the Duchesne River Oligocene*. This fauna is of particular interest because it fills the gap that existed between the Uinta Eocene and Chadron Oligocene. There remained considerable controversy as to with which epoch the Duchesne river beds should best be included.

Two significant invertebrate faunal reports appeared. One was by Dr. B. L. Clark and Dr. A. S. Campbell on the radiolarian faunal assemblage from the Kreyenhagen shales of the San Joaquin valley, Calif. This is a continuation of other similar

studies made by the same authors on other radiolarian faunas of California. Dr. Stanley Smith published an extensive report on the Upper Devonian corals of the Mackenzie river region of Canada.

The only extensive morphological research, results of which were published in 1945, was by Prof. Erik von Stensiö, of Stockholm, on the heads of certain arthrodires.

Among other research published were the following: Birger Böhlin discussed Jurassic mammals and their significance with respect to the origin of mammalian molar teeth. Dr. C. L. Camp reported on the morphology of a new skull of *Prolacerta* from the Triassic of South Africa. Dr. C. W. Gilmore and Dr. G. L. Jepsen described a new amphisbaenid lizard from the Eocene of North America. A new camel from the Pleistocene of Kansas was described by E. S. Riggs. An important review of the late Paleocene and early Eocene Mammalia faunas was published by Dr. F. B. Van Houten.

The *Journal of Paleontology* published some 35 short reports concerning a variety of subjects in invertebrate palaeontology.

Field work in palaeontology was curtailed even more than research because of wartime shortages. Brief expeditions were conducted by several U.S. institutions. Dr. R. A. Stirton, of the University of California, conducted an expedition to Colombia, South America, and made the discovery of an important new fossil vertebrate locality. Nearly all knowledge of the unique extinct life of South America comes from Argentina, at the southern, temperate end of that continent. Dr. Stirton's discovery of an extensive fossil field of Miocene age in Colombia was particularly important to students of South American fossil mammals.

The end of 1945 saw the return of many palaeontologists who were in war services, and for the first time after 1941 the Paleontological Society of America and the Society of Vertebrate Paleontology held general meetings.

**Palestine.** Palestine lies on the western edge of Asia, and is bounded on the west by the Mediterranean, on the southwest by Egypt, on the south by the Gulf of 'Aqaba, on the east by Trans-Jordan, on the northeast by Syria and on the north by the Lebanon. Area 10,100 sq.mi.; pop. (est. 1945) 1,750,000. Chief towns: (pop. est. 1944): Jerusalem (cap. 155,314); Haifa (125,498); Jaffa (93,443); Tel Aviv (155,277). High commissioner, Field Marshal Viscount Gort, succeeded in Nov. 1945 by Lt. Gen. Sir Alan Gordon Cunningham; languages: English, Arabic, Hebrew; religions: (1944) Mohammedan 1,061,277; Jewish 528,702; Christian 135,547.

**History.**—In Palestine, and for those interested in Palestine, 1945 was a year of growing expectancy. The end of World War II, the victory of the Labour party in the British elections, the plan for a system of international trusteeship adopted at San Francisco, Calif., and the impending exhaustion of the immigration certificates provided under the White Paper of 1939, all suggested that a fresh statement of British policy was inevitable.

The interested parties took up their positions in advance. In March, the independent Arab states signed the constitution of an Arab league, with an annex in which they declared that, the independence of Palestine having been acknowledged in the covenant of the League of Nations, it should participate as an

Arab country in the activities of the league. Until its independence was fully effective, the council of the league would itself select a Palestinian Arab to participate in its work. The choice fell on Musa al-Alami.

At a world Zionist conference held in London during August approval was given to the demands of the Jewish agency for an immediate decision that Palestine should be established as a Jewish state, and for an international loan to be used for the transfer of the first 1,000,000 immigrants and for the economic development of the country. Dr. Chaim Weizmann subsequently announced that the Jewish agency had also demanded an immediate instalment of 100,000 immigration permits and had begun in August to refuse the monthly quotas of 1,500 offered by the British government in accordance with their existing policy. At about the same time advantage was being taken of the conditions created by the cessation of hostilities in Europe to organize a flow of illegal immigrants into Palestine. The efforts of the British authorities to check this traffic led, in October, to one or two clashes between troops and Jewish para-military formations. The latter were continuing to accumulate weapons and ammunition, and the former were being reinforced. The Jewish formations carried out widespread sabotage, particularly of the railways, on the night of Nov. 1.

The attitude of the United States to the problem aroused almost as much interest as did the intentions of the British government. In February President Roosevelt, on his way home from Yalta, met Ibn Sa'ud, with whom he subsequently exchanged letters on the subject of Palestine. The president assured the king of the desire of the United States government that no change should be made in the basic situation in Palestine without full consultation of both Jews and Arabs (*see also under ARABIA*). In August President Truman, after revealing that he had discussed the question with Churchill and Attlee at Potsdam, declared that he favoured the entry into Palestine of as large a number of Jews as was consistent with the maintenance of peace in that country. He was not prepared to send U.S. troops to keep the peace there. He envisaged consultation with Great Britain and the Arab states. In the following month it was made known that the president, after receiving a report from Earl Harrison on the condition of displaced persons in Germany, had written to Attlee requesting the admission of the Jews among them—estimated at from 60,000 to 100,000—into Palestine. The administration was under constant pressure from the U.S. Zionists, and certain of its declarations evoked strong protests from the Arab states. Finally, on Nov. 13 it was announced that the British and U.S. governments had agreed to set up a joint committee of inquiry, charged with making recommendations both on the problems of Palestine and on measures for improving the situation of the Jews in Europe, either by remedial action in European countries or by emigration to countries outside Europe. The British government declared that they hoped that the committee's report would facilitate arrangements for placing Palestine under trusteeship. They also announced their intention of consulting the Arabs on the continuance of Jewish immigration while the committee's report was being prepared and considered, and stressed the importance of consultation with the parties concerned at every stage in the development of the new policy.

The death of the Moslem mayor of Jerusalem in Oct. 1944 had reopened the conflict between the Arab and Jewish communities for control over the municipality. The government proposed in March 1945 that the mayoralty should rotate, being held in turn by a Moslem, a Jew and a Christian (the last not necessarily an Arab). When the Arabs rejected this compromise and the Jews gave it only a conditional acceptance, the municipal council was replaced by a temporary commission of British offi-

cials and a commission was appointed to inquire into the problem. The Greek patriarch of Jerusalem was visited in June by the Russian patriarch Alexei. On Nov. 2, 1945, it was announced in London that Field Marshal Viscount Gort had resigned as high commissioner of Palestine because of ill health, and on Nov. 8 Lt. Gen. Sir Alan Gordon Cunningham was appointed to succeed him in that post.

**Education.**—(1941-42): Arab public system maintained by government, 404 schools (12 with secondary sections), 56,558 scholars; Moslem schools, private 177 (2 with secondary sections), with 14,751 scholars; Jewish public schools 442 (including 5 training colleges and 26 secondary, 6 trade and vocational schools), with 62,655 scholars; Jewish private schools 309, with 23,971 scholars; Christian schools 189, with 25,619 scholars; Hebrew university, Jerusalem, 132 teachers, 657 students.

**Banking and Finance.**—Revenue and expenditure (est. 1943-44): revenue \$34,936,000; expenditure (1943-44) \$61,223,760; public debt (March 31, 1943) \$14,508,000; currency in circulation (Nov. 30, 1944) \$165,230,000; exchange rate £P1=£1 sterling=403.5 cents U.S.

**Trade and Communication.**—Overseas trade (merchandise): (est. 1945) imports \$112,840,000; exports \$44,330,000. Communications and transport: roads (1939) all weather 1,451 mi.; seasonable 985 mi.; railways (1942) broad gauge 302 mi.; narrow (Hedjaz ry.) 111 mi.; airways (1942): passengers 6,740, mail 53.4 short tons; shipping (1939) entered 1,857 vessels; 4,370,085 net tons; (1942) 1,061 vessels, 1,455,471 net tons. (Dec. 31, 1942) motor vehicles licensed: 5,659 private cars, 1,283 public cars, 1,289 buses; 4,357 trucks and vans, 2,262 cycles; 25 tractors; wireless receiving set licences (April 30, 1945) 57,749; telephone subscribers (June 30, 1945) 22,833.

**Agriculture and Mineral Production.**—Production 1943 (in short tons): potash (exports 1939) \$1,533,000; citrus fruits (exports 1941-42) 15,730; barley (1943-44) 45,726; wheat (1943-44) 63,334; olive oil (1943) 1,089; wine 1,135,200 gal.; maize 2,750; tobacco 1,410; potatoes 16,100; sesamum (1943-44) 7,041.

**Palmyra Island:** *see* PACIFIC ISLANDS, U.S.

**Panamá.** A republic of Central America, nearest to South America. It is bisected by the Canal Zone, which is leased to the United States. Area: 28,575 sq.mi.; pop. (1940 census): 631,549 (not including the Canal Zone, which had a pop. of 51,827). The capital is Panamá city (111,893); other cities are Colón (44,393), David (9,222), Chitré (4,790), Santiago (4,253). Presidents in 1945: Dr. Ricardo Adolfo de la Guardia and Dr. Enrique A. Jiménez (provisional).

**History.**—Following disturbances in the last days of 1944, President de la Guardia suspended the constitution and the legislature and on Jan. 9, 1945, announced that government would be in the hands of the cabinet until a new national assembly could be elected in May. The election was carried out quietly on May 6, with a six-party coalition backing the administration, winning 39 of 51 seats. On June 11, President de la Guardia declared a political amnesty, and on June 15 resigned his post. The national assembly had already elected the former ambassador to the U.S., Enrique A. Jiménez, as provisional president and he was installed the same day.

The national assembly also had power to establish a new constitution and turned immediately to consideration of a draft document; the new constitution was not completed during 1945. A new ministry of labour, social welfare and public health was created June 30. Some controversy took place during the year over a proposal to include in the constitution a provision limiting commercial activity to nationals only.

A FLOATING DRY DOCK, too wide for the Panama canal, was upended and floated through on its beam end in 1945; an operation devised by the U.S. Naval Civil Engineer corps

Some opposition to the government was evidenced in occasional incidents throughout 1945. In August the government authorized the return of former President Arnulfo Arias who had left the country in 1941 because of opposition to his policies. He was arrested on Oct. 29 and charged with inciting rebellion, but was released on bail. On Dec. 22 he was again taken into custody, with a number of his followers, under suspicion of participation in an extensive conspiracy against the government. Several persons were reportedly killed or injured in an attack on a Colón police station. President Jiménez earlier (Nov. 8) had been granted all powers necessary to suppress subversive activity.

In the field of foreign affairs the national assembly late in June 1945 approved establishment of diplomatic relations with the soviet union, and severance with the Franco regime of Spain. In September the Spanish Republican government-in-exile was granted recognition. Ratification of the United Nations charter was deposited in Washington, D.C., on Nov. 13. Panamá's quota to the United Nations Relief and Rehabilitation administration was \$400,000, to be paid in three cash instalments. The government cancelled axis trade-marks and patents in April, and wartime passport and visa restrictions were lifted Dec. 17. Gasoline rationing ended Nov. 1.

Panamá in 1945 continued plans for an extensive public works program. Bond issues totalling about \$20,000,000 in value were authorized to finance the building of an international airport, a national tuberculosis hospital, a new manual arts school and a university city, and for repair and rehabilitation works of various types. The financial condition of the republic was generally sound throughout the year, although the cost of living remained high and some shortages, notably in rice and sugar, were felt.

**Education.**—In 1942 Panamá had 670 primary schools with

an enrolment of 74,039; 29 intermediate schools, enrolment 8,407; a national university with 857 students. In the budget for the 1945-46 fiscal year education was allotted 5,140,000 balboas.

**Finance.**—The monetary unit is the balboa, maintained at par with the U.S. dollar. Receipts for the biennium ended Dec. 31, 1944, amounted to 54,836,215 balboas (1940-42: 39,931,500 balboas); expenditures, 47,756,506 balboas (1940-42: 39,392,600 balboas). Surplus for the biennium was estimated at about 8,000,000 balboas. Government income for the first half of 1945 amounted to 13,042,000 balboas, expenditures to 16,342,600 balboas. Total payments on the internal debt for the first half of 1945 amounted to 1,256,000 balboas, and on the external debt 1,819,000 balboas.

**Trade and Resources.**—Imports for the first half of 1945 were valued at 19,741,815 balboas (first six months of 1944: 17,507,256 balboas), and exports 1,802,415 balboas (first half of 1944: 1,178,033 balboas). Imports from the U.S. were valued at 13,145,184 balboas; Mexico 1,445,117 balboas; Argentina 1,270,927 balboas. Sugar output for the crop year ended March 31, 1945, amounted to 93,000 quintals. Rice production (1944) was estimated at 1,016,680 quintals (1943: 1,356,892 quintals); cocoa exports 1,454,950 kg. (1943: 2,789,103 kg.). Abacá exports for the first half of 1945 amounted to 6,027,627 lb., and banana exports to 790,719 stems. The coffee crop for 1945 was estimated at only 12,000 quintals, 5,000 quintals less than the estimate for 1944. Rubber production for the first half of 1945 amounted to 393,014 lb. (2,269 lb. salvage rubber).

**Communications.**—Railway mileage in 1942 was 396 mi.; highway mileage about 750 mi. Good air service by three lines linked Panamá city with the outside world. Completion was planned in 1946 of a national airport to cost more than \$7,000,000, with bids already advertised. (See also CENTRAL AMERICA.)

FILMS.—*Central America* (Encyclopædia Britannica Films Inc.). (D. Rd.)

**Pan-American Highway:** see ROADS AND HIGHWAYS.

**Pan American Union.** The Pan American union is the international organization of the 21 American republics, created in 1890 to promote closer political, economic, juridical, social and cultural relations among them. Headquarters: Washington, D.C.; director general in 1945, Dr. L. S. Rowe; assistant director, Dr. Pedro de Alba.

At the Inter-American Conference on Problems of War and Peace held at Mexico City from Feb. 21 to March 8, 1945, provision was made for a reorganization of the inter-American system. For the first time the governing board of the Pan American union was entrusted with political powers when it was authorized to take action "on every matter that affects the effective functioning of the inter-American system and the solidarity and general welfare of the American republics." The resolution further provided that the governing board should be composed of special representatives appointed by the governments and specifically precluded the appointment of members of the diplomatic corps in Washington. Subsequently, however, the application of this particular feature was suspended until it could receive further study. The conference also agreed that the chairman of the board should be elected annually and should not be eligible for immediate re-election. On Dec. 5 the representative of Brazil, Carlos Martins, was elected chairman in place of Secretary of State James F. Byrnes; at the same time Celso R. Velázquez, of Paraguay, was elected vice chairman. A complete plan of reorganization of the system was to be prepared by the governing board and submitted to the Ninth International Conference of American States which was scheduled to meet at Bogotá, Colombia, in 1946.

Another significant result of the Mexico City conference was the Act of Chapultepec, which was a guarantee of the territorial integrity and the political independence and sovereignty of each state by all the other signatory states. The act was a provisional agreement to operate only for the period of World War II. It had been planned to hold a conference at Rio de Janeiro beginning Oct. 20 to draw up a permanent treaty embodying the principles of the act, but the unwillingness of the United States to participate in such a conference with representatives of the existing Argentine government caused the meeting to be postponed.

The Argentine situation and the position of Argentina in relation to the other members of the inter-American community, continued to create much uncertainty throughout the year 1945. Argentina was not invited to the Mexico City conference, but the Argentine question was thoroughly discussed and a resolution adopted inviting Argentina to orient its international policy with that of the other American republics. Shortly after the meeting Argentina declared war against Germany and Japan and the Argentine representative in Mexico signed the final act of the conference, following which normal diplomatic relations were resumed with Argentina by the other nations of the continent.

Toward the end of the year the situation took another unfavourable turn when the United States refused to participate with Argentina in the projected inter-American mutual assistance conference. In November, also, the minister of foreign affairs of Uruguay suggested a limitation on the doctrine of non-intervention and advanced the possibility of collective intervention to assure respect for certain fundamental rights and the fulfilment of freely contracted international obligations. The proposal was formulated in general terms but was generally construed as aimed at Argentina.

The position of the inter-American system in relation to the United Nations organization occupied a prominent place in the

discussions at the San Francisco conference, where a strong desire was manifested by the Latin American delegations for a maximum degree of autonomy in the settlement of disputes and the preservation of peace in the western hemisphere. As finally adopted the charter recognizes the right of any group of states to enter into agreements for self-defense and to repel acts of aggression pending action by the security council, and places upon regional agencies primary responsibility for the pacific settlement of disputes. (See also ARGENTINA; INTER-AMERICAN CONFERENCE ON PROBLEMS OF WAR AND PEACE; INTER-AMERICAN DEFENSE BOARD; UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION.) (L. S. Ro.)

**Paper and Pulp Industry.** A shortage of paper supply characterized the pulp and paper industry in the United States during 1945 even though production was about 3,000,000 short tons greater than 1940. With the end of World War II some relief was experienced in the wood pulp supply, with 600,000 short tons arriving during the last half of the year. Although the labour supply in the mills became adequate, the woods labour situation was not good and would be further handicapped for some time due to the removal of prisoners of war. This was expected to keep the paper market tight for several months in 1946. Although government requirements for paper were drastically reduced, the inventories throughout the U.S. were nearly exhausted and would require some time to be satisfied. At the same time there was a huge export demand since the U.S., Canada, and Sweden were the only nations in 1945 capable of exporting paper. Neither Great Britain nor France, former large suppliers were in a position to enter the paper export market. There was considerable speculative buying in anticipation of increases in the price ceilings. Paper and paperboard production in 1946 was expected to total about 18,000,000 short tons. This would be an increase of about 600,000 short tons more than 1945.

Table I.—U.S. Paper Production Capacity for 1944

Kind of paper	Short tons

industry was stimulated late in 1945 by receiving an increase of \$6 per ton more than the previous ceiling. In net value of production the paper industry led the list of Canadian peacetime industries. It passed the sawmill industry in 1920, and held the lead until 1942 when it was overtaken by the war industries. Newsprint constituted more than 75% of the paper production.

**United Kingdom.**—Statistics relative to paper production in the United Kingdom were not released up to the close of 1945. The latest export statistics showed that 508,529 cwt. of papers

and boards were exported in nine months of 1945. Newspapers were limited to four pages, consuming 23% of prewar newsprint use. Straw, old papers and a small amount of Canadian wood pulp were the principal raw materials.

(R. G. M.)

**Papua:** see BRITISH EMPIRE; NEW GUINEA; PACIFIC ISLANDS, BRITISH.

**Paraguay.** A landlocked republic in south-central South America. Area 154,165 sq.mi.; pop. 1,108,040. Racially the people are a homogeneous blend of Spanish, Portuguese and Italian stocks, with a good deal of Guarani Indian blood, discernible especially in the remote thinly populated regions. Official language: Spanish. The Guarani tongue has survived more than the blood, but is secondary and recessive. The capital and chief centre is Asunción, pop. (est. Dec. 31, 1943) 126,280 (Greater Asunción, 186,875). Other cities: Villarrica, 30,176; Concepción, 16,007; Encarnación, 15,610. The official religion is Roman Catholicism. President in 1945: Gen. (Marshal) Higinió Morínigo.

**History.**—In power from Sept. 7, 1940, Gen. Morínigo in 1945 found few effective elements of opposition, and his cabinet became almost wholly military when the minister of finance went into exile after advocating greater expenditures for civilian functions such as education. Negotiations with Argentina looking toward a customs union of the two countries gave no definite result during the year; and on the other hand, the highway planned by former President Estigarribia to connect Paraguay with Brazil also remained far from completed. Paraguay's relations with these two powerful neighbours were affected by its attitude favouring the United Nations, and likewise by its economic and geographic vinculations with the River Plate basin. Negotiations with the United States for a Hull trade agreement continued during 1945.

**Education.**—There were some 60,000 pupils in the elementary schools, estimated at 2,000. In the absence of official data, it may be said that while the great majority of the people are literate, the actual use of reading and writing is very slight in a good many areas. The University of Paraguay, founded at Asunción in 1888, had 11 faculties and 1,200 students; and a number of normal and agricultural schools, as well as a national junior college, were active.

**Defense.**—An efficient army of more than 8,000 is maintained. As the Paraguay river is the country's life-line, a fairly modern navy of some 1,500 men is also maintained. The Paraguayan air corps received instruction from a United States army air mission in 1945. The Paraguayan army war college had the assistance of a United States army instruction mission, which had been preceded by Argentine and French missions. The share of the national budget devoted to defense was variously calculated at from 39% to 53%.

**Finance.**—The Paraguayan currency unit is the guarani, which in 1945 was equal to 32.4 U.S. cents. The official Bank of Paraguay has a monetary department which performs central banking functions, a banking department for ordinary commercial banking, and a mortgage and savings department. The government also operates an agricultural bank with many diversified functions relating to co-operative purchase of farm equipment, farm price stabilization, farm loans and credits, and produce grading. No United States bank operated in Paraguay in 1945, but the (British) Bank of London and South America

continued its well-established and extensive services. The Bank of the Argentine Nation, opened in 1943, continued a fairly rapid expansion, and the Bank of Brazil in 1945 expanded on a smaller scale the branch which it opened at Asunción in 1942. Commercial loan rates ranged around 8%.

**Trade and Communication.**—The foreign trade figures for 1944 (announced in mid-1945), showed exports valued at (U.S.) \$13,700,000 and imports valued at \$12,957,000. The leading exports were canned beef (\$3,099,000), quebracho tannic extract (\$1,772,000), raw cotton (\$1,680,000), salt hides (\$1,594,000), logs, tobacco, vegetable oils, petitgrain (perfume base) and yerba maté. The leading imports were textiles, foodstuffs, manufactures of metal, vehicles and boats, minerals and fuels, machinery, paints, soaps and chemicals. In 1945, as during previous war years, the Allied purchasing commissions made direct contracts for canned meat, cotton, hides and tannic extract. The United Kingdom, which received beef and cotton, and the United States, which received hides and tannic extract, thus figured as destinations equally important with Argentina for Paraguay's exports; while Uruguay purchased substantial quantities of tobacco and hides, and Brazil remained negligible as a customer. As sources of imports into Paraguay, the course of the war increased the importance of Brazil and the United States, while diminishing that of the United Kingdom, Germany and France, but left Argentina easily leading the field.

Progress was made in 1945 on the construction of the railway which was to enter northeastern Paraguay from western central Brazil. Local road-building continued in southeastern Paraguay, but the through highway from central Paraguay to the Brazilian border, surveyed by U.S. engineers in the autumn of 1944, was not commenced. The principal development in air lines in 1945 was the attempt to maintain local air connections between Asunción and northern Paraguay, as well as the Gran Chaco, by a domestic Línea Aérea de Transporte Nacional (L.A.T.N.) under the aeronautics bureau of the ministry of defense.

A land-line telegraph cable connects Paraguay with Buenos Aires. The International Telephones company (Swedish-Argentine-Paraguayan) had in 1945 524 mi. of telephone circuits, with 33 exchanges, and served 3,596 subscribers. The principal international radio services are furnished by Radiovia (U.S. in part) and Citradio (formerly German-Argentine); but the Paraguayan National Telegraph offers radio communication direct with Uruguay and Brazil, while a Mackay Radio connection with New York is managed by Radiovia.

While the river traffic is largely monopolized by an Argentine steamship company, believed to have British affiliations, the Brazilian governmental line, Serviço de Navegação da Bacia do Prata, in 1945 continued effectively its scheduled voyages via Montevideo and Asunción to Corumbá, Brazil.

**Agriculture.**—Paraguay is predominantly a cattle country, and its ratio of population to cattle (1,000,000 to 3,000,000) was once the highest in the world. The principal field crop is mandioca, which is used in place of the breadstuffs whose production the climate does not favour. Bananas and citrus fruits are grown and consumed on a large scale. Sugar cane is likewise widespread, although the 16,000 tons of sugar estimated for 1945 was consumed locally. The ordinary Paraguayan farmer, as distinct from the large-scale cattle raiser, depends upon cotton for his cash crop. The 1945 cotton crop was curtailed by unfavourable weather and pests, however; the last estimate being 29,762 short tons as compared with 51,256 short tons in 1944. A U.S. agricultural mission began tapering off its activities in Paraguay in 1945.

**Manufactures.**—Paraguayan official estimates include the production of canned meat and quebracho tannic extract in the figures for manufacturing, and on this basis the share constituted in Paraguay's total output of wealth by manufactures in 1943 was 38% (the total output being \$56,000,000). Aside from the two industries named, the manufactures of the country are rather small, but have shown steady growth. U.S. experts in 1945 professed the view that Paraguay could become a substantial producer of oils.

**Forestry.**—There are some 23,500,000 acres of forests in that portion of Paraguay which lies east of the Paraguay river, and the exports of logs and plywood are in most years valued at more than \$1,000,000.

**Mineral Products.**—Paraguay's mineral deposits are small, except for manganese in the northeast in inaccessible regions. The outstanding mineral development of the year 1945 was the conclusion of a contract between the Paraguayan government and a U.S. petroleum company for exploration

and experimental exploitation of oilfields believed to exist in the western Chaco near the Bolivian oilfields. (W. Ft.)

## Parents and Teachers, National Congress of.

The National Congress of Parents and Teachers, popularly known as the P.T.A., was founded in 1897 as the National Congress of Mothers. In 1945 its membership was composed of nearly 3,500,000 parents, teachers and other interested persons, of whom more than 900,000 were men. These members were organized into 25,000 local parent-teacher associations, functioning in each of the 48 states, the District of Columbia and Hawaii.

The P.T.A. recognizes no social, economic, political, cultural or religious distinctions among its membership. Anyone can join who is concerned with the best interests of children and pledges himself to work toward the five long-established objects of the organization: "to promote the welfare of children and youth in home, school, church, and community; to raise the standards of home life; to secure adequate laws for the care and protection of children and youth; to bring into closer relation the home and the school, that parents and teachers may co-operate intelligently in the training of the child; and to develop between educators and the general public such united efforts as will secure for every child the highest advantages in physical, mental, social, and spiritual education."

Guided by its theme, "All Children Are Our Children," the national congress has always worked unceasingly for world peace and world fellowship. Recognition of the practical effectiveness of this activity came in April 1945 when the congress was asked by the department of state to send a consultant to the U.S. delegation at the San Francisco conference.

The national congress maintains an extensive publications program, including its official monthly magazine, the *National Parent-Teacher*, and a monthly newsheet, the *National Congress Bulletin*. Among the many other individual publications are the books *Community Life in a Democracy*; *The Parent-Teacher Organization: Its Origins and Development*; and *Schools for Democracy*.

Special projects of the congress include its widely known summer round-up of the children, the community school lunch, the traffic safety education project, parent education study courses, and the nation-wide weekly radio program, *The Baxters*. In these and many other phases of its work the organization co-operated closely with national, state and civic organizations and agencies having similar aims and interests.

The office of the National Congress of Parents and Teachers in 1945 was at 600 South Michigan Boulevard, Chicago 5, Ill. (M. A. Hs.)

**Paris.** Capital and largest city of France, pop. (1936) 2,829,746; of greater Paris, including the belt of suburban factory towns, 4,962,967. The year 1945 was one of continued privations and slow recovery for the French capital.

During the first months after the liberation of Paris from the Germans on Aug. 25, 1944, communication with other parts of France was difficult and irregular. The prosecution of World War II demanded all the energies of the government headed by Gen. Charles de Gaulle. The German surrender in May 1945 removed the pressure of war and the authority of the government was gradually extended to the whole country.

Life in Paris, however, remained bare and austere, with little of the epicurean comfort for which the city was noted in pre-war times. Food rations remained meagre and prices of meals in restaurants were astronomically high, measured in terms of the official rate of 50 francs to the dollar. Late in Dec. 1945

this rate was written down to approximately 120 francs to the dollar on the eve of the inauguration of the Bretton Woods scheme for an International bank and an International Monetary fund.

Rationing of bread, always a staple of French diet, was lifted temporarily in the latter part of 1945, but had to be reimposed at the end of the year.

A severe shortage of coal made Paris homes bleakly uncomfortable in the colder months and hindered the resumption of industrial production.

Paris was the scene of the trial of many Frenchmen who were accused of collaboration with the Germans. The two most prominent figures in these trials were Marshal Henri Philippe Petain, former chief of state in the Vichy regime, and Pierre Laval, former prime minister in that government.

The trial of Petain led to a death sentence; but Gen. de Gaulle commuted this to life imprisonment in a fortress for the aged hero of World War I. Laval's trial was marked by some unseemly brawls and in this case the capital sentence was carried out. Laval failed in an attempt to commit suicide. The high tide of the purge of collaborationists was apparently passed during 1945 and Gen. de Gaulle threw his influence against indiscriminate revenge and proscription.

Parliamentary life in Paris was resumed after a national election was held for a constituent assembly. Three parties, the Communists, the Socialists and the Popular Republican movement, emerged with almost equal strength from this election, while the Radical Socialist party and political groupings of the

right came out very much weakened.

A parliamentary crisis was threatened because De Gaulle proposed to resign rather than give the Communists one of the three key ministries to which they felt entitled because of their voting strength.

These ministries were war, foreign affairs and the interior, which carried control of the police. A compromise was worked out, however, the Communists receiving a subordinate department in the war ministry and also several of the economic ministries. The cabinet remained a coalition of the three leading parties.

Paris was stirred by an antivice crusade launched by a woman member of the city council, Mme. Marthe Richard. She called for the closing of the city's 178 legalized houses of prostitution, and the police prefect, Charles Luizet, declared that this would be done within three months.

The hotel and local transportation systems in Paris remained difficult. Many hotels were taken over for the use of government departments and U.S. military organizations. The metro, or subway, remained the chief means of transportation, although some buses reappeared. Taxicabs were restricted to the use of persons in the most essential occupations, such as physicians, because of the shortage of gasoline. The difficulties of life in Paris for visiting U.S. businessmen were eased by the opening of a special hotel, the California, for transient guests, with the co-operation of the U.S. embassy and the military authorities.

**Parliament, Houses of.** An eventful parliamentary year in 1945 saw the ending of the 37th parliament of the United Kingdom and of the coalition government formed in 1940 by Winston Churchill. This fell through the withdrawal of its Labour party members and those Liberal ministers who followed Sir Archibald Sinclair. On May 29 Churchill faced the commons afresh with a "caretaker" government which, mainly Conservative, also included ministers from the National Liberal wing, led by Ernest Brown and others, like Sir John Anderson (chancellor of the exchequer), without party allegiance. Parliament was then dissolved by the king on June 15. It had first met on Nov. 25, 1935, and its life, protracted by annual enactments, was the fourth longest in history.

The new parliament was elected under the provisions of a Redistribution of Seats act, passed in 1944, enlarging the membership from 615 to 640. Polling was on an interim register, also compiled under a wartime act, enabling electors serving in the forces overseas to vote by post or proxy. Most constituencies voted on July 5, but for 23 another act postponed the date in special circumstances. Counting, deferred until July 26, showed that the Labour party had won a clear majority over all others combined. Final classification among the parties was (with figures for the former parliament in brackets): Labour 393 (164); Conservative 198 (368); Independents 14 (23); Liberal National 13 (26); Liberal 12 (18); Independent Labour party 3 (3); National 2 (4); Communist 2 (1); Commonwealth 1 (3); Irish Nationalist 2 (2). The two last-named had refrained from attending the last house, but took their seats in the new. The National Labour party with five seats in the old house submitted no candidates and the solitary Scottish Nationalist was defeated. More than half the members of the new house (345) were new to parliament. Of the 23 women elected 20 were of the Labour party, and one each, Conservative, Liberal and Independent.

Churchill resigned on July 26 and Clement Attlee formed a Labour government on strictly party lines. The small cabinet of wartime was replaced by one of 20, with 12 other ministers holding cabinet rank without being members of it. No appointments were made to the wartime offices of minister resident overseas, of which toward the end of the coalition there had been four. The ministry of aircraft production was merged in that of supply, but the ministries of civil aviation and of national insurance, both new creations within the year, were retained. So was the post of minister of state and the ministries of food, fuel and power, information, and town and country planning, all established in wartime. As lord president of the council Herbert Morrison was charged with the leadership of the house of commons.

In Churchill's resignation honours list four Conservative M.P.'s with the three chiefs of the services staffs were made peers and in Attlee's government Sir William Jowitt (lord chancellor) and F. W. Pethick-Lawrence (secretary for India) also received baronies. Lord Addison, advanced to a viscounty, became leader of the upper house. The new house of commons meeting on Aug. 1 re-elected Colonel Clifton-Brown as speaker, but later restored Major James Milner to the chairmanship of committees and elected H. Beaumont as deputy chairman.

On Aug. 15 the king opened the 38th parliament in state. The date corresponded with the announcement of the surrender of Japan and restoration of peace throughout the world. Less than nine months before, the king, on Nov. 29, 1944, had opened the ninth session of the preceding parliament. On both occasions he was accompanied by the queen but the two ceremonies were sharply contrasted. The first—unannounced in advance for security reasons—took place in the small temporary house of lords used after the commons chamber had been wrecked by bombs.

For the opening of the new parliament the thrones were re-erected in the lords' own chamber, while the commons assembled after more than a century in St. Stephen's hall. Their majesties again rode to parliament through acclaiming crowds, but in an open landau instead of the gilded state coach and without the crowns and robes of royalty. On Aug. 21, the king and queen again attended parliament in state to receive from both houses, in the presence of representatives of the dominions, the empire and the United Nations, addresses of congratulation on victory.

A second budget within 12 months was introduced on Oct. 23, but in the new parliament, and by the new chancellor, Hugh Dalton. Most of the changes in taxation announced would become effective only from the following financial year and might be modified by the ordinary budget for that year.

Seven additional baronies were conferred on Oct. 24 "as a wholly exceptional measure of state policy designed to increase the representation of the government in the house of lords." With two peerages conferred shortly before they raised the number of Labour peers to 30. (See also CABINET MEMBERS; GOVERNMENT DEPARTMENTS AND BUREAUS.) (L. DU.)

**Parrado y Garcia, Augustin** (1872— ), Cardinal archbishop of Granada, was born at Fuentes de Saldana, province of Valladolid, Spain, on Oct. 5. Ordained in 1895, he was professor of Latin, literature and theology at the Valladolid seminary until named chancellor of the diocese of Astorga and Salamanca. He was consecrated bishop of Palencia in 1925 and nine years later elevated to the metropolitan see of Granada.

Celebrating his golden jubilee to the priesthood in Oct. 1945, Archbishop Parrado was accorded nation-wide homage. He presided at a recent Episcopal conference of the ecclesiastical province of Granada, and on Dec. 23, 1945, was nominated to the Sacred College of Cardinals by Pius XII. He was created and proclaimed a cardinal at consistory on Feb. 18, 1946.

**Parri, Ferruccio** (1890?— ), Italian statesman and politician, was born in Turin. A school-teacher during World War I, Parri joined the army when Italy entered that war. He was wounded four times and received four decorations for heroism. After the war, he became assistant editor of the liberal newspaper, *Corriere della Sera*, but resigned in 1925 after its editor-in-chief had been replaced by a fascist. He opposed the Mussolini dictatorship and joined an underground antifascist organization. Parri was kept under continual surveillance by Mussolini's police and he spent a number of years in Italian prisons for his revolutionary activities. Following the Allied landings in Italy (Sept. 1943), Parri headed a well organized Italian partisan group that effectively battled the Germans in north Italy. He helped to establish the Action party, a mildly leftist group, and on June 17, 1945, Parri was designated to form a cabinet. His government contained representatives of the six major Italian parties. However, as real power was still vested in the Allied military government, Parri's political authority was restricted. He pleaded (July 13) for a revision of the armistice terms, asserting that an effective "moral and material" reconstruction of Italy was not possible without such revision. He also deplored (Sept. 26) the failure of the London conference of foreign ministers to settle the Italian peace issue and said it was hampering Italy's rehabilitation. In the late fall of 1945, the conservative parties in the government engineered a crisis that resulted in Parri's ouster (Nov. 24) and his replacement as premier by Alcide de Gasperi.

**Partridge, Sir Bernard** (1861–1945), British artist, was born Oct. 11, in London. Chief

## 564 PATCH, ALEXANDER M., JR.—PATTON, GEORGE S., JR.

cartoonist for *Punch* for the last 35 years of his life, Sir Bernard's artistic talents extended into the fields of architecture, stained-glass designing, press and book illustrations and painting. He had an established reputation as a political cartoonist and he lampooned world celebrities from Queen Victoria to Franklin D. Roosevelt, Churchill, Stalin, Hitler and Mussolini. His black-and-white delineations were conservative and minutely detailed and preserved their strong Victorian character throughout. He died at his home in London, Aug. 9. (See *Encyclopædia Britannica*.)

**Patch, Alexander McCarrell, Jr.** (1889-1945), U.S. army officer, was born Nov. 23, at Ft. Huachuca, Ariz., the son of an army officer. He was graduated from West Point in 1913 and was commissioned a second lieutenant. During World War I, he saw active duty in France and on his return to the U.S. he became a member of the faculty at Staunton Military academy, Virginia, 1920-24. He attended the Command and General Staff school, 1924-25. Promoted to the rank of major general in March 1942, Patch was placed in command of operations on Guadalcanal, Jan. 1943, when army troops relieved marines on the island. By Feb. 10, the Japanese had been driven from Guadalcanal. Patch then moved to the European theatre of war and on March 21, 1944, was given command of the 7th army. On Aug. 16, the 7th army invaded southern France. Two days later Patch was named for promotion to the rank of lieutenant general. His forces established contact with Patton's 3rd army north of Dijon, Sept. 11, and joined the general assault on the reich. In 1945 the 7th army drove northward through the Vosges and the Siegfried line, over the Rhine and into Austria. Patch was replaced as head of the 7th army in June 1945 by Lt. Gen. Wade H. Haislip, and returned to the United States where he was given command (July 7) of the 4th army with headquarters at Fort Sam Houston, Tex. On Oct. 8 it was announced that he had been named head of a special board designed to study the size and requirements of the army of the postwar era. He died of pneumonia in San Antonio, Tex., Nov. 21.

**Patents.** In the 12 months ending on Nov. 30, 1945, the number of applications filed in the U.S. for patents on mechanisms, chemical compositions, designs; etc., and for reissues was 74,007, or 15,372 more than in the equivalent period of 1943-44, and exceeded the total in any, corresponding time during several preceding years. In the same interval there were filed 15,301 applications for the registration of trade-marks. This increase in applications reflected a revival of interest and activity in the field of invention following the return of peace.

Patents granted in the calendar year 1945 for mechanical inventions, chemical compositions, etc., were 25,702, a considerable decrease. The number of trade-marks registered in the same 12 months was 7,493.

Both the income and the expenses of the patent office mounted in the fiscal period ended June 30, 1945. Receipts were \$4,128,122, or \$381,587.23 above those in the preceding 12 months. Expenditures were \$5,041,186.58, as against \$4,858,850.79 in 1943-44.

There was inaugurated in June 1945 a public register of patents whose owners are willing to sell or license to others the use of their inventions, etc. Many patentees took advantage of this service, which is administered by the office.

(C. W. O.)

**Patrick, Edwin Daviess** (1894-1945), U.S. army officer, was born Jan. 11 in Tell City, Ind. He attended the universities of Indiana, 1912-15, and

Michigan, 1915-16. Commissioned a 2nd lieutenant in the U.S. army in 1917, he served on the Mexican border, 1917-18, with the A.E.F. in France during World War I and with the army of occupation after the armistice. Maj. Gen. Patrick saw duty in China in the late 1920s and was attached to the staff of the commanding general in the South Pacific from Dec. 1942 to June 1943. He then became chief of staff of the 6th army in the South Pacific and Southwest Pacific areas. He was commanding the 6th division in the battle of Luzon when he was wounded by machine-gun fire. Gen. Patrick died shortly afterwards, according to a war department announcement, March 15.

**Patten, George William (Gilbert)** (1866-1945), U.S. author, who also wrote under the pen name of Burt L. Standish, was born Oct. 25 at Corinna, Me. At one time, he hoped to be a preacher; at the age of 17, however, he sold his first story and later had a brief try at newspaper work. He went to New York, worked for publishers of dime novels and in 1896 he began to write a series for boys. Patten created Frank Merriwell, a hero whose name was as commonly known in the decorous early 1900s as Superman in the 1940s. The Merriwell books vied with the Nick Carters and Horatio Algiers in popularity. A prolific writer, Patten once declared that he had written a weekly dime novel, averaging 20,000 words, for his publishers for 986 weeks. The Frank Merriwell series totalled 208 books and the Dick Merriwells filled another 245 volumes. In addition Patten turned out nearly 500 other books. While some 125,000,000 copies of his books were sold, the author himself worked on a straight salary; the most he ever received was \$150 weekly. The interest in the Merriwell books waned with the advent of gangster fiction and the radio and were replaced by the superheroes of the contemporary comic books. Patten died in Vista, Calif., Jan. 16.

**Patterson, Robert Porter** (1891- ), U.S. government official, was born Feb. 12 in Glens Falls, N.Y. He was graduated from Union college, 1912, took his law degree from Harvard, 1915, and practised law in New York city. He saw military action in the Mexican campaign, 1916, and in World War I, during which he rose to the rank of major and was awarded the D.S.C. Patterson was appointed judge of the U.S. district court for the southern New York district, 1930, and became judge of the U.S. circuit court of appeals, 1939. He resigned his seat on the bench in July 1940 to accept an appointment as assistant secretary of war and five months later became undersecretary of war. Following Stimson's resignation, Sept. 18, 1945, Pres. Truman named Patterson as his successor as secretary of war. On Oct. 17 Patterson proposed creation of a single department of national defense headed by a cabinet officer with authority over the army, air and navy. This proposal, while almost universally supported by ground and air force officers, was opposed by the great majority of naval men.

**Patton, George Smith, Jr.** (1885-1945), U.S. army officer, was born Nov. 11 in San Gabriel, Calif. He was graduated from West Point, 1909, began his army career as cavalry lieutenant, 1913, and was aide-de-camp to General Pershing in Mexico, 1916-17, and in England, 1917. An expert on mechanized warfare, he was made a tank brigade commander in July 1940. On April 4, 1941, he was promoted to major general and two weeks later he was made commander of the 2nd armoured division. Soon after Pearl Harbor, he was made corps commander in charge of both the 1st and 2nd armoured divisions and organized the desert training centre at Indio, Calif. Patton was commanding general of the western task force during the U.S. operations in Africa in Nov.

1942, and handled the landing of U.S. forces on the western coast of Africa. He was promoted to the rank of lieutenant general in March 1943, and led U.S. forces in the Tunisian and Sicilian campaigns. In both operations, Patton displayed boldness and daring and emerged as a colourful figure. He had several sobriquets, the most popular of which was "Old Blood and Guts." Patton had a short temper which frequently landed him in "incidents," and during the Sicilian campaign he fell into temporary disgrace for striking a shell-shocked soldier. Patton, reprimanded by Gen. Eisenhower, later apologized to all present at the episode. Eisenhower later placed Patton in command of the U.S. 3rd army which, during the fighting in France and Germany in 1944 and 1945, distinguished itself with charging tank drives that broke through German lines. In the Ardennes battle, Patton helped to contain the German counterattack and to rescue the isolated garrison at Bastogne. His forces were whipping their way through Bavaria and western Austria when the war ended. Patton was nominated by Pres. Truman, April 17, 1945, to the rank of four-star general. In September, Patton minimized the slowness with which the de-nazification program was being carried out; he likened the nazi party to the losers in an election between Democrats and Republicans back home. Eisenhower removed Patton from command of the 3rd army and as military governor of Bavaria on Oct. 7, and put him in charge of the U.S. 15th army, whose function was to compile a tactical history of the war. Patton was seriously injured in an auto accident near Mannheim on Dec. 9, and he died at a 7th army headquarters station hospital at Heidelberg, Dec. 21.

Peaches: see FRUIT.

**Peanuts.** The 1945 peanut crop of the United States was estimated at 2,174,300,000 lb. by the U.S. department of agriculture, which was an all-time record, 6% above 1944 and more than 50% above the ten-year average of 1,478,000,000 lb. The acreage in 1944 was 3,238,000 or about 3% above the 3,150,000 harvested in 1944; the prewar average for 1934-43 was 2,080,000 ac. Yields were slightly higher, 672 lb. per ac. in 1945 compared with 670 lb. in 1944 and an average of 728 lb. The total acreage of peanuts grown for all purposes including both pig feed and nuts for harvest was about 4,000,000 ac. in 1945, the same as in 1944 and about double the average 1935-39.

The yield of peanuts picked and threshed in North Carolina was 1,125 lb. per ac., Virginia 1,100 lb. and Tennessee 825 lb. Weather was favourable for digging and picking in this area. In Alabama and Georgia, leading peanut states of the southeast, yields were lower than usual and below the record. In Texas and Oklahoma yields were 450 lb. and 520 lb. respectively, lower than usual.

Peanut prices were stable through the year at about the same level as in 1944, or \$8.20 per 100 lb. In the fall of 1945 this represented 96% to 99% of parity. Peanuts sold as nuts were expected to be supported, but peanuts for oil might meet sharp competition following the war and prices were beginning to decline at the end of 1945. The amount of peanut oil used in manufacture reached a high total of 81,905,000 lb. in 1941, then declined to 61,249,000 in 1944 and remained about the same amount in 1945.

(J. C. Ms.)

U.S. Production of Peanuts by States, 1945 and 1944

State	1945 lb.	1944 lb.	State	1945 lb.	1944 lb.

**Peat.** The chief use of peat in the United States is as a soil conditioner, an abundant supply of coal making it unnecessary as a fuel. Previous production had to compete with imported material, and was never large, but during World War II imports were restricted, and domestic production increased temporarily to 86,503 short tons in 1941, followed by a decline to 60,002 tons in 1943 and 57,987 tons in 1944.

Peat production in Canada declined from 64,360 tons in 1943 to 63,149 tons in 1944.

**Pendergast, Thomas Joseph** (1872-1945), U.S. politician, was born July 22 in St. Joseph, Mo. Pendergast went to Kansas City in 1893 where he learned the rudiments of municipal politics from precinct captains. An astute pupil, he was rewarded for his vote-getting ability with the post of street commissioner in 1900. Soon Pendergast's power spread, and by 1916 he became political "boss" of Kansas City's Democrats, a position he held for almost 25 uninterrupted years. He created a powerful political machine that not only exerted predominant influence in the city but in the state as well. At Democratic national conventions, as controller of Missouri's bloc of votes, he participated in many "behind-the-scenes" parleys that determined the choice of presidential nominees. Without his endorsement, Democratic aspirants for low or high office in Missouri stood little chance of being elected and he was castigated by his political foes as a ruthless leader of a corrupt political machine that had made Kansas City a hotbed of vice and crime. Pendergast was toppled from his throne as "boss," not by his political opponents, but by the U.S. government, which found him guilty of evading payment of income taxes on \$443,550. This sum allegedly included a \$315,000 bribe he had received from some fire-insurance companies for favouring their side in a rate-increase dispute. Pendergast was sentenced to federal prison, May 1939, serving a year and a day. He died in Kansas City, Jan. 26.

**Penicillin:** see AGRICULTURAL RESEARCH ADMINISTRATION; CHEMOTHERAPY; DENTISTRY; DERMATOLOGY; MEDICINE; SURGERY; UROLOGY.

**Pennsylvania.** A middle Atlantic state and one of the original 13 states of the union, popularly known as the "Keystone state." Area, 45,333 sq.mi., including 288 sq.mi. of inland water; pop. (1940) 9,900,180, of whom 8,453,729 were native-born white, 973,260 foreign-born white and 470,172 Negroes. The urban population in 1940 numbered 6,586,877 and the rural 3,313,303. Capital, Harrisburg (83,893). Cities with a larger population: Philadelphia (1,931,334); Pittsburgh (671,659); Allentown (96,904); Wilkes-Barre (86,236). The Pennsylvania State Planning board estimated the state's total population, including its citizens in military service, as 10,146,952, as of Aug. 1, 1943; U.S. census estimate (July 1, 1944), 9,247,088.

**History.**—Among the most important achievements of the state government in 1945 was the passage of various acts implementing Governor Edward Martin's recommendation for the conservation of the state's resources and the development of a postwar program of public works. Legislation was passed forbidding the dumping of industrial waste and sewage into the streams of the state.

Appropriations were granted for the development and protection of the water, mineral, soil and forest resources of the commonwealth and for the improvement of state parks. An extensive program of state highway and institutional construction was also authorized.

Appropriations provided assistance in the preparation of plans for local public works and for the planning and construction of airports. The legislature granted public school teachers a permanent increase in pay, making Pennsylvania's salary schedule the highest of any state, and set up a new system of physical examinations for all school children. Unemployment compensation benefits were liberalized, while contributions to the compensation fund were reduced for those whose employment records were stable.

By 1945 nearly 1,200,000 Pennsylvanians had seen military service, almost one-eighth of the total population. Estimated casualties of the war from Pennsylvania were 80,000, including 20,000 killed. Throughout the period of the war the commonwealth produced more than 31% of the nation's coal, coke and steel requirements. Latest figures on government contracts showed that the state stood seventh in over-all war production, sixth in communication equipment, fourth in shipbuilding, third in ordnance and first in expansion of industrial facilities.

The civilian defense corps organized April 23, 1941, which at one time included 1,600,000 citizens, was demobilized Oct. 15.

The principal officers in 1945 included: Edward Martin, governor; John C. Bell, lieutenant governor; James H. Duff, attorney general; William S. Livengood, Jr., secretary of internal affairs; G. Harold Wagner, auditor general; Ramsey S. Black, state treasurer; and George W. Maxey, chief justice.

**Education.**—The latest figures available showed an enrolment of 1,573,307 pupils in the public schools in 1943-1944, including 35,755 in the kindergarten, 962,227 in the elementary and 575,325 in the secondary schools, with 35,622 teachers in the elementary schools and 24,525 in the secondary. Approximately \$221,897,021 was spent for the support of the system.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—An appropriation of \$88,220,000 was made for public assistance for the biennium ending May 31, 1947. During 1945, relief was provided for an average of 83,000 old-age assistance cases, 23,000 cases receiving aid to dependent children, 19,000 general assistance cases and 13,000 blind pensioners. The state maintains eight penal and correctional institutions for the support of which a biennial appropriation of \$10,100,000 was made for 1945-47. In addition, it owns and operates ten medical and surgical hospitals, which received an appropriation of \$4,250,000; four institutions for the feeble-minded and epileptic, \$5,350,000; eighteen mental hospitals, \$30,750,000; it contributed \$9,154,000 for the aid of privately operated hospitals and homes.

**Communication.**—Of the approximately 100,000 mi. of highways in 1945, 40,673 mi. were in the state highway system. Included in this mileage were 663 mi. in the cities and 2,140 mi. in the boroughs. As of Nov. 30, 1945, 34,368 mi. were of improved type, 6,305 mi. unimproved. In addition there were 160 mi. of superhighway operated by the Pennsylvania Turnpike commission. At the close of 1945 there were 193 licensed public airports.

**Banking and Finance.**—In 1945 there were 375 state banks, including 8 savings banks, with assets of \$5,452,685,069, and total deposits of \$4,882,601,954; 872 building and loan associations with assets of \$322,308,146, as of Dec. 31, 1944; and 665 national banks with assets of \$6,087,964,000, demand deposits of \$2,655,859,000 and time deposits of \$1,379,339,000.

Appropriations for the biennium ending May 31, 1947, were \$579,800,000. The estimated receipts from taxation were \$560,500,000. The gross debt Nov. 30, 1945, was \$87,688,000, which securities in the sinking fund reduced to a net of \$50,419,000.

**Agriculture.**—The total farm income for 1944 was \$611,432,000, including \$29,508,000 received from the federal government.

Table I.—Leading Crops of Pennsylvania, 1945 and 1944

Crop	Production 1945	Acreage 1945	Production 1944
Corn, bu. . . . .	59,576,000	1,354,000	53,580,000
Wheat, bu. . . . .	20,194,000	940,000	20,288,000
Oats, bu. . . . .	24,583,000	806,000	23,912,000
Barley, bu. . . . .	3,150,000	90,000	2,632,000
Buckwheat, bu. . . . .	2,016,000	109,000	2,940,000
Tame Hay, tons . . . . .	3,444,000	2,233,000	3,216,000
Tobacco, lb. . . . .	52,724,000	35,600	52,893,000
Potatoes, bu. . . . .	16,724,000	148,000	19,140,000
Apples, bu. . . . .	2,470,000	...	9,100,000
Peaches, bu. . . . .	1,222,000	...	1,886,000

**Manufacturing.**—In 1943 there were 15,373 manufacturing establishments in the state employing 1,648,630 persons to whom \$3,625,521,700 were paid in wages and salaries. The capital invested was \$3,905,491,100 and the value of the goods produced was \$13,263,392,500.

Table II.—Principal Industries of Pennsylvania, 1943 and 1940

Industry	Value of Products	
	1943	1940
Metals . . . . .	\$7,093,398,700	\$2,944,848,400
Textiles . . . . .	1,302,289,600	795,457,200
Food . . . . .	1,224,878,000	740,801,600
Chemicals . . . . .	878,796,000	518,062,300
Paper and printing . . . . .	501,019,200	372,074,400
Leather . . . . .	315,581,700	174,963,900
Tobacco products . . . . .	120,841,300	92,272,300
Lumber and its remanufacturing . . . . .	123,138,900	79,733,100

Table III.—Principal Mineral Products of Pennsylvania, 1944 and 1943

Important Mineral Products	Value	
	1944	1943
Bituminous coal . . . . .	\$464,256,000	\$397,634,020
Anthracite . . . . .	354,582,884	306,816,018
Pig iron . . . . .	397,395,665	399,568,279

Natural gas M cubic feet . . . . .	45,080,000	45,272,000
Cement . . . . .	20,689,765	27,907,236
Stone . . . . .	22,516,282	23,566,298

**Mineral Production.**—The value of the principal mineral products of the state in 1944 and 1943 is shown in Table III. (E. MN.)

**Pennsylvania, University of.** An institution of higher learning at Philadelphia, Pa. In 1945, the chief aim of the university was the reconversion of its facilities and operation toward peacetime programs. Two new laboratories were started—in the Towne Scientific school, the Thermodynamic Research laboratory with the active support of the navy department, bureau of ships; and, in the Moore school, a new laboratory of electronics and electrical machinery. Development of laboratories for the physics department and for the medical and veterinary schools was projected. For the women students, a social centre, gymnasium, and playing fields were provided.

To enable the university to assist the country in catching up the lag in undergraduate and graduate education due to World War II, alumni and friends undertook in the fall of 1945 the raising of a reconversion fund of \$500,000. The chief objectives of this program were: Providing for the return of 350 faculty members and 3,000 students from war service and the addition of other distinguished scholars and teachers for the faculty; giving the right of way back to fundamental research; revising curricula to take advantage of what was learned from accelerated education; and establishing a faculty retirement fund.

(For statistics of enrolment, faculty, endowment, library volumes, etc., see UNIVERSITIES AND COLLEGES.)

**Perón, Juan Domingo** (1896?— ), Argentine army officer and politician, was born in southern Argentina, the son of a rancher. He received a military education and taught for a period in military schools. While travelling in Europe in 1941 he was impressed by the

trappings of fascism; on his return to Argentina he launched a vigorous crusade for "spiritual renovation" and became one of the leaders of the G.O.U. (Grupo de Oficiales Unidos), a clique of nationalistic young army officers which was instrumental in the coup d'état that overthrew the regime of Pres. Ramón S. Castillo, June 4, 1943. When Gen. Edelmiro Farrell became president in Feb. 1944, he promptly raised Perón to the war ministry and then to the vice-presidency and submitted obediently to the latter's "suggestions." Argentina's growing nationalistic trends under Perón's pro-fascist guidance were sharply and bluntly criticized by both U.S. Secretary of State Hull and President Roosevelt in 1944. In 1945, Perón consolidated his grip on the government, despite a short-lived army coup, staged Oct. 9, which ousted him from power for a two-week period. On his return, Perón was more strongly entrenched than ever, although he declined a cabinet post in order to campaign for the presidency. In order to win labour support for his candidacy, the "Perón" cabinet ordered employers to pay their workers a wage increase and a year-end bonus. The employers protested and on Jan. 14, 1946, staged a three-day lockout which virtually paralyzed all commerce and industry in the country.

**Peru.** A west coast republic in South America, bounded by Ecuador and Colombia on the north, Brazil and Bolivia on the east, Chile on the south and the Pacific on the west. Area 482,133 sq.mi.; pop. (1940 census) 7,023,111; (pop. est., 1943) 7,395,687. The population is estimated as 52.9% white and mestizo and 45.9% Indian, but more than 51% normally speak Indian languages. The capital is Lima (pop., 1940 census, 533,645); other important cities are Callao, the port of Lima (84,438), Arequipa (79,185), Cusco (45,158), Trujillo (38,961), Iquitos (34,231), Chiclayo (32,646) and Huancayo (28,679). Presidents in 1945: Manuel Prado y Ugarteche until July 28, José Luis Bustamante y Rivero thereafter.

**History.**—The principal event of 1945 was the presidential election, June 10, alleged to be the first free election in several decades. Maj. Gen. Eloy G. Ureta, ex-inspector general of the army, announced his candidacy March 16, and on March 19 the candidacy of José Bustamante Rivero, ambassador to Bolivia,

was launched by the *Frente Democrático Nacional*, anti-administration coalition with the long-suppressed *Alianza Popular Revolucionaria Americana* (A.P.R.A.) as its chief component; the latter group was later legalized as the *Partido del Pueblo*. Various Aprista exiles, including the well known Luis Alberto Sánchez and Manuel Seoane, returned to Peru May 8 after amnesty had been granted. The election was held as scheduled, without serious disorder, with a large vote cast. Final results gave Bustamante 305,590 to 150,720 for Ureta. Democratic elements hailed the election as one of an increasing number of instances in Latin America in which the candidate of the "outs" triumphed. Bustamante was inaugurated July 28. The government on Feb. 12 acknowledged a state of belligerency with Germany and Japan; Peru signed the United Nations pact Feb. 14. The United Nations charter was ratified Oct. 15. A serious flood Jan. 17 killed an estimated 169 persons. The government on March 18 frustrated a revolutionary plot at the Ancón air base north of Lima. Ex-president Oscar Benavides died at Lima on July 2. Foreign office announcements in Feb. and March indicated the end of the long-standing boundary dispute with Ecuador; presidents of the two countries exchanged letters July 17 regarding the settlement. The chamber of deputies on Aug. 6 approved a diplomatic break with Spain and urged establishment of relations with the U.S.S.R. A political crisis in early October resulted in the choice of a complete new cabinet on Oct. 5.

**Education and Religion.**—A total of 6,059 primary schools enrolled 688,377 in 1942, 74 intermediate schools enrolled 99,325 and five universities enrolled 5,033. Literacy was estimated in 1944 at 42%. Roman Catholicism is the predominant religion. Pope Pius XII on Jan. 12 created three new Peruvian dioceses and on Dec. 23 announced the elevation of Giovanni Guevara, archbishop of Lima, to be Peru's first cardinal. A government decree Jan. 6 required all non-Catholic religious activities to be held privately inside their respective churches.

**Finance.**—The monetary unit is the sol, valued in Dec. 1945 at 15.38 cents (U.S.). The 1946 budget totalled 648,703,447 soles, an increase of 102,156,780 soles more than that of 1945. The public debt, largely in default, was regularized by announcement on Aug. 27 of plans to resume servicing. Finance Minister Montero Bernalles on Oct. 24 introduced three bills aimed at controlling inflation, restoring foreign and domestic credit and reforming the functions of the Central Reserve bank. Peru's nine banks reported combined assets Jan. 1, 1945, of 1,255,900,000 soles. Commercial bank deposits on that date were 1,005,700,000 soles. A system of exchange, export and import controls was begun Jan. 24.

**Trade and Communications.**—Foreign trade in 1944 totalled 2,408,761 metric tons valued at 1,061,759,328 soles as against 2,588,282 metric tons valued at 637,208,765 soles in 1939. The U.S. ranked first as a supplier (53.9% in 1944) and as a destination for exports (35.5% in 1944). Principal imports by value in 1944 were foodstuffs, machinery and motor vehicles, iron and steel products and chemicals and pharmaceuticals; principal exports were sugar, petroleum and products, copper bars and concentrates and cotton. Imports in the first nine months of 1945 were valued at 399,961,045 soles and exports at 454,963,537 soles. Volume of imports and exports in the first half of 1945 was respectively

A TIN PLANT at Oroya, Peru, where the metal is produced electrolytically

209,524 and 907,140 metric tons as against 208,191 and 922,989 metric tons in the same period of 1944.

On Jan. 1, 1945, highway mileage totalled 18,480 of which 7,260 mi. were hard-surfaced; the Pan-American highway had a total Peruvian length of 1,818 mi. Railway mileage was 2,764. Panagra, Cia. de Aviación Faucett and a government company, Línea Aérea Nacional, operated domestic and international air lines. Vehicle registration Jan. 1, 1945, included 15,774 automobiles, 12,269 trucks and 1,278 buses.

**Resources.**—Cotton, sugar and rice were the important crops; their 1944 production was estimated at 66,700, 402,000 and 89,700 metric tons respectively. Production of crude petroleum in 1944 was 14,385,900 bbl.; copper, lead and zinc production was respectively 32,700, 52,500 and 50,800 metric tons. U.S. purchases of metals and minerals were cut back considerably in 1945. Livestock population was estimated to include 13,750,000 sheep, 2,500,000 cattle and 490,000 horses.

**Pétain, Henri Philippe** (1856– ), French soldier and statesman. See *Encyclopædia Britannica* for his biography. He was French ambassador to Spain after Franco's triumph in the civil war, from early 1939 to May 18, 1940. On June 16, 1940, he succeeded Paul Reynaud as premier, and, ignoring those cabinet members who wanted to continue the war against Germany from the colonies, he signed an armistice, June 22. He moved his government to Vichy on July 2, and assumed dictatorial powers July 10, 1940. In succeeding months he submitted largely to German dictates on the administration of France. In April 1942 he ousted Darlan from his government and reinstated Pierre Laval, who derived his authority directly from Pétain. Thenceforth, Vichy's policy seldom deviated from German wishes. Pétain broke off relations with the U.S. after the invasion of French North Africa, Nov. 8, 1942, and on Nov. 18 he empowered Laval to make laws and decrees on his own authority. Pétain strove to win over the French masses to support his totalitarian conception of government, but with little success. On D-day, June 6, 1944, he broadcast an appeal to the French people to refrain from actions which would bring "tragic reprisals" and urged them not to listen to "outside voices." The German radio reported Sept. 30 that Pétain had fled to Germany.

Pétain entered Switzerland in April 1945. He voluntarily returned to France, April 26, to stand trial and was arrested at the border. After a long and spectacular trial in a Paris court, he was found guilty on Aug. 15, on charges of intelligence with the enemy, and was sentenced to death. Gen. de Gaulle commuted this sentence to life imprisonment, Aug. 17.

**Peter II** (1923– ), king of Yugoslavia, was born Sept. 6, in Belgrade, the son of Alexander I of the house of Karagjorgjevitich. When Alexander was slain in Marseilles in 1934, Peter succeeded to the throne and a regency headed by Alexander's brother, Prince Paul, was set up to rule until Peter reached his majority. Paul and the pro-axis government were ousted when the army revolted against signature of an axis pact, March 25, 1941, and Peter was placed on the throne. The boy king's government refused to honour the treaty; as a result Hitler's wehrmacht invaded Yugoslavia, crushing its army in a fortnight. Peter and his government fled, and a Yugoslav government-in-exile was set up in London. The rise of Marshal Tito's partisan movement in Yugoslavia was attacked by Peter and his government, until the Allies discovered that Tito enjoyed overwhelming popularity among his own countrymen, and decided to support the partisan movement. Thereupon Peter's position became precarious. He was violently opposed to coming to terms with the Tito regime, but was persuaded, Feb. 12, 1945, to permit the royal delegates to proceed to Belgrade and participate in the formation of a single government under a regency. Tito, however, declared Aug. 7, that a monarchy was "incompatible" with a democracy in Yugoslavia. Peter countered by disowning his three regents and assailed Tito for hav-

ing proclaimed a dictatorship. However, on Nov. 29, the Yugoslav constituent assembly proclaimed a republic and abolished the monarchy. Peter refused to accept the decision, but the United States and Great Britain recognized the new Yugoslav republic, Dec. 22, thus writing off his regime.

**Petit de Julleville, Pietro** (1876– ), Cardinal archbishop of Rouen, France, was born at Digione on Nov. 22, son of the celebrated French literature historian, Louis Petit de Julleville. He was ordained in 1903, and served as superior of the Diocesan college near Paris. He was cited for courage under fire while serving as chaplain in World War I, and was seriously gassed.

Elevated to rank of bishop in 1927, he was named archbishop of Rouen and primate of Normandy in 1936. He remained with a few inhabitants of the city during the German invasions of 1940, and ordered his priests to leave their parishes only after the last inhabitant had departed. He remained steadfastly in his residence at the foot of the cathedral as the edifice was under continual bombardment, and when his residence was later ransacked, the archbishop moved to a little room in the Faubourg convent.

On Dec. 23, 1945, an announcement was released to the effect that he had been nominated by Pius XII to the Sacred College of Cardinals. He was created and proclaimed cardinal at consistory Feb. 18, 1946.

**Petroleum.** With the collapse and unconditional surrender of Germany and Japan and subsequent military revelations, the vital part played by petroleum in assuring Allied victory became increasingly evident. That petroleum was to hold a place of strategic importance in postwar counsels followed as a matter of course.

At one time the advance of Gen. Patton's 3rd army in France was slowed because gasoline could not keep up with his tanks. But, with the United Nations, such delays were temporary. Twenty oil and gasoline pipe lines were laid from England across the channel to France and others followed close on the heels of all advancing armies, even across the Rhine. The sources of supply remained adequate and the long sea supply lines were made increasingly safe from raiding enemy submarines.

With Germany and Japan it was different.

Destruction of enemy oil facilities, a vital factor in United States air victories over Germany and Japan, is one lesson that should be remembered in planning the strategy of any future war, according to Gen. H. H. Arnold, commanding general of the U.S. army air forces.

Systematic bombing of Germany's oil and transportation facilities is credited in his report with greatly reducing the force of the nazi Ardennes offensive, launched Jan. 1, 1945, and generally with destroying the German will to resist.

TOTAL WORLD PRODUCTION OF PETROLEUM and output of the three principal producing countries, as compiled by *The Mineral Industry*

Destruction of oil facilities proved equally effective in the war against Japan, the report makes clear, stating that prior to V-J day, "Japanese home island rates of production of petroleum products had been reduced to 65% of requirements at the July 1945 monthly rate of consumption."

World War II air attacks had at least temporarily put out of operation 100% of Japan's high-grade lubricating oil capacity. While the Japanese had a considerable surplus of refining capacity at the end of the war, B-29 attacks during 1945 against 11 of the largest and most modern refineries in the home island had, nevertheless, rendered these refineries useless. Japan's inability to ship oil from the southern areas had also given it a large excess oil storage capacity, but air attacks reduced that capacity by nearly 6,000,000 barrels.

At the annual meeting of the American Petroleum institute in Nov. 1945, Ralph K. Davies, deputy petroleum administrator, read the following letter written by members of the Army-Navy Petroleum board (Adm. F. J. Home, Gen. Brehon Somervell, Adm. John H. Cassady and Gen. Edward M. Powers) acknowledging the accomplishment of the U.S. oil industry in furnishing 90% of the oil requirements of the United Nations:

The Army-Navy Petroleum Board extends to you and through you to the entire staff of the Petroleum Administration for War and the entire American petroleum industry its deep appreciation and admiration for the superb contribution which has been made to the victory of the United Nations by providing in full and on time the vast flood of petroleum products required by the Armed Forces during World War II.

The fulfillment of this gigantic task was without question one of the great industrial accomplishments in the history of warfare. The urgent demands of the Army and the Navy for unprecedented volumes of aviation gasolines, motor gasoline, diesel oil, fuel oils, lubricants and countless other petroleum products vital to victory were unending and often appeared impossible of fulfillment.

It is a very special tribute, therefore, that at no time did the Services lack for oil in the proper quantities, in the proper kinds and at the proper places. Because of the resourcefulness, untiring and unceasing efforts, and outstanding accomplishments of the Petroleum Administration for War and the petroleum industry, not a single operation was delayed or impeded because of a lack of petroleum products. No Government agency and no branch of American industry achieved a prouder war record.

Yours must be a deep satisfaction in the knowledge that your agency and the petroleum industry have made so outstanding a contribution to the victory of the United Nations, a contribution fully and gratefully recognized by the Armed Forces.

A summary of accomplishments by the petroleum industry during the war follows:

Drilled in the U.S. a total of 13,400 wildcat wells—more than in any like period in prewar history.

Produced 5,800,000,000 bbl. of crude oil domestically—one-fifth of all the oil ever produced in the U.S. Another 750,000,000 bbl. came from U.S. properties abroad.

Refinery crude runs at home and abroad were increased to 5,071,000 bbl. per day—31% above the prewar high. Production of 100 octane aviation gasoline was increased more than 1,600%.

Nearly \$1,000,000,000 worth of new refining facilities were built in the U.S. In addition, roughly \$260,000,000 was spent for refining expansion abroad.

Produced in the U.S. more than 13,000,000,000 cu.ft. of natural gas, equivalent in heat value to more than 2,000,000,000 bbl. of oil.

Pipe lines built, relaid and reversed would reach from New York to Yokohama via the sea route through Suez and Singapore.

Tank car movements to the east coast were expanded from 5,000 bbl. per day to more than 1,000,000 bbl. at the peak.

Despite all losses, the U.S. tanker fleet was increased four and one-half times in total tonnage.

The two "Big Inch" pipe lines, built from inland Texas oil fields and refineries to the Atlantic coast as emergency war car-

IRANIAN WOMEN scooping up oil for home use at the Masjid-i-Sulaiman field. The land is so rich in oil that puddles such as this one are formed by seepage to the surface

TESTING a new safety high octane gasoline developed in 1945. Safe-T-Fuel poured within an inch of open flame, failed to ignite while regular aviation gasoline caught fire immediately. The new fuel was expected to reduce casualties from fire in the event of accidental ignition

riers, delivered to the Atlantic seaboard up to Sept. 1, 1945, a total of more than 368,000,000 bbl. of petroleum and refined products. This had a decided bearing on the successful conclusion of the war against the axis. As compared with the expense of shipping an equivalent volume by tank car the pipe lines returned in freight savings to the government not only their original building cost but also all operating expenses involved and, in addition, a margin of more than \$156,000,000.

The end of World War II caused various countries to take inventory as to their position with respect to oil resources. In the U.S. a senate committee investigating petroleum resources, of which Senator Joseph C. O'Mahoney was chairman, was to attempt to define a national oil policy for the U.S. The U.S. industry was aware of the probability that the country would increasingly become a greater importer of foreign petroleum and urged strong diplomatic support in the activities of U.S. companies in foreign countries.

A report to the senate committee brought out that at the end of 1939 11 U.S. oil companies had total assets employed in foreign countries of nearly \$2,500,000,000; net assets of \$1,700,000,000 and a net worth of foreign investment of about \$1,300,000,000. These companies represented 93% of the total net worth of the investment of all U.S. oil companies in foreign countries. The figures also indicate that 29% of the combined net worth of these same 11 companies in 1939 (totalling about \$4,400,000,000) was invested in foreign operations. Investment data was incomplete for some foreign countries for the years 1940-44 because of war conditions. However, the incomplete figures for 1944 show total assets employed of \$2,300,000,000.

The accumulative amount invested abroad up to the end of 1944, plus all amounts written off or revalued after the end of 1918, shows the grand total amount of total assets employed of nearly \$3,200,000,000; net assets of \$2,200,000,000 and a net worth of investment of \$1,700,000,000.

Considerable interest attached to the position of the U.S., Great Britain and Russia in relation to petroleum reserves. The U.S., which had in 1945 a per capita oil consumption 30 times greater than the rest of the world, was in a reasonably strong position if the total reserves of the western hemisphere

were considered. Great Britain was strong in relation to her share with the Dutch in the middle east and East Indies, as well as in the western hemisphere. Although Russia's position was strong because of large domestic production and reserves, she could be expected to evidence more active interest in acquiring middle eastern reserves outside its borders. In fact, the potential area of conflict over control of petroleum reserves lay primarily in the middle east.

Total world oil reserves were estimated in 1945 at nearly 64,000,000,000 bbl. with the U.S. given 20,000,000,000.

According to the report to the senate committee the total foreign oil reserves controlled by U.S. companies amounted to 17,400,000,000 bbl. Jan. 1, 1945. The reserves of the British-Dutch group in countries other than the U.S. totalled 17,300,000,000 bbl. Proportionately, the position of the U.S. amounted to 46.3% vs. 46.0% for the British-Dutch interests. If Russia were included, the position of the U.S. and Dutch group was about 40% each. The remaining 20% or 8,700,000,000 bbl. was owned by all other foreign interests. Included in this group were the government company-operated reserves in Argentina, Bolivia, Mexico and Russia, amounting to 6,500,000,000 bbl. or nearly 75% of the "remaining" classification.

It was estimated that on Jan. 1, 1945, the reserves in the western hemisphere, excluding U.S., totalled 8,900,000,000 bbl. In the eastern hemisphere, exclusive of Russia, the U.S. companies owned reserves totalling 11,600,000,000 bbl., a 40% share. The British-Dutch group owned 15,000,000,000 bbl. or nearly 53% of the total reserves in the eastern hemisphere and all other companies owned about 2,000,000,000 bbl. or 7% of the total reserve.

The near and middle east combination of countries contained a proved reserve of 26,800,000,000 bbl. or about 70% of the total foreign reserve outside of Russia.

It was obvious the U.S., Britain and Russia had to reach an accord on world oil policy if confusion and conflict were to be prevented. At any rate, a start had been made for such accord in the Anglo-American oil agreement which after its first promulgation in Aug. 1944 hit many snags, finally to be re-drafted and reapproved by British and U.S. conference participants late in 1945. The agreement in the form of a treaty was to be placed before the senate for ratification in 1946. It was prepared as a model for multilateral oil treaties with the principal producing and consuming countries of the world.

Probably the most dramatic illustration of the contribution of research in the petroleum industry to the war effort was in the case of 100 octane aviation gasoline. Prior to the start of World War II, output was about 40,000 bbl. per day. When the war ended output was at the rate of more than 500,000 bbl. per day. The petroleum industry, by furnishing large quantities of butadiene, aided in the establishment of a synthetic rubber industry in the U.S.

Spurred by the needs of war, new discoveries were made. Crude oil was revealed as a veritable treasure house, a source from which more than 500,000 of all known organic chemicals can be produced. The first peacetime benefit was expected to come in improved aviation and motor fuels.

Petroleum derivatives, to mention but a few, included medicinal, fertilizers, insecticides, dyes, alcohols, plastics, plant growth stimulants and fruit ripeners and DDT. (See also BUSINESS REVIEW.)

(L. M. F.)

**Philadelphia.** Philadelphia is the third largest city of the United States, and although the 1940 census gave the population as 1,931,334, it was estimated in 1945 at 2,100,000. Mayor: Bernard Samuel (1944-48).

Some of the major objectives of the City Planning commis-

sion of the city of Philadelphia in 1945 were: completion of the sewage collection and treatment program; completion of the water works rehabilitation program; active continuance of the city-state program of highway construction; city projects related to the removal of the Chinese Wall and attending subway extensions and other access highway construction; and improvement of airports.

Under the constitution of Pennsylvania, the 1945 general debt limit of the city of Philadelphia, based on 10% of the assessed valuation of taxable real and personal property, was about \$306,000,000. The net debt in 1945, after deducting the assets in the sinking funds and excluding debt invested in the self-supporting water facilities and the Frankford Elevated, was approximately \$289,000,000. There was available, therefore, power to incur \$17,000,000 of new debt for general purposes in addition to any indebtedness incurred for self-supporting projects, not chargeable against the general borrowing power. The sum of \$18,000,000 was already authorized for water improvements, of which authorization \$7,000,000 had been issued and \$11,000,000 could be issued as required. About \$4,000,000 of the amount provided had been spent and more than \$14,000,000 was available for the completion of this project.

The city budget for 1946 called for a total expenditure of \$89,942,908.27, broken down as follows: public safety, \$21,570,345; public works and city planning commission, \$16,305,689.50; public health and welfare, \$10,070,784.74; civil rights and benefits, \$9,008,803.20; city and county administration, \$7,009,927; to pay for interest and retirement of city investments, \$24,142,358.83; pensions and workmen's compensation, \$1,835,000. It should be noted that the city budget did not include the cost of operation of the board of public education, which was a separate entity. The board's budget for 1946 was about \$33,000,000. (B. SA.)

**Philately.** There was a flood of issues of enemy and enemy-occupied lands which became legal to collect after the close of hostilities. Avid collectors snapped up many issues—but what price and what ones were official?

No answer was forthcoming. The annual issue of *Scott's Catalogue* (the last word for most U.S. and Canadian philatelists) offered no light. But in Dec. 1945, announcement was made of a forthcoming Scott listing of all issues, with illustrations, but without prices. Meanwhile, the prices had been dropping abysmally on such material as more and more came to hand.

**Prices.**—With this exception, the stamp market maintained a level price keel during the first days of "reconversion." There were plenty of forecasts that when the take-home pay of collectors dropped, so would the demand, and to a certain extent this was borne out, but the general trend of good material was to keep its wartime value.

**New Issues.**—The U.S. had a "field day"—if a year can be called a day—in 1945, with ten stamps issued and one on the boards for issue early in 1946 as part of a series begun in 1945. This latter was the 5-cent value of the Roosevelt Memorial series, the 1-, 2- and 3-cent values of which were issued following the president's death. At the opening of the San Francisco Conference of the United Nations, a 5-cent United Nations stamp was put on sale and more than 1,000,000 copies were bought the first day. A hurried last-minute change added the name of Franklin D. Roosevelt, the author of the phrase that was simply and chastely presented—"Toward United Nations."

Not so happy in design were the "Armed Forces" stamps—four 3-cent values in honour of the marines, army, navy and coast guard. The first and last of these did have a design that merited better presentation than the colours vouchsafed them. The marines stamp, printed in "marine green," was a graphic

presentation of a news photograph taken on Iwo Jima, when the flag was raised, under fire, on Mount Suribachi, in the first invasion of Japanese soil in the war. The army stamp, in olive drab, depicted the liberating forces under the Arc de Triomphe in Paris. The navy stamp, in baby blue instead of navy blue, drew howls of artistic protest at a disorganized mass of heads crowned with Navy white caps. The dark green of the coast guard stamp masked the good design of two landing craft leaving a transport.

The surprise stamp of the year, that honouring Alfred E. Smith, once governor of New York and defeated candidate for the presidency, seemed clearly a political gesture. The centenary of the republic of Texas was marked with a stamp showing the star in the American flag that symbolizes Texas joined to the "Lone Star" that was the insigne of the Texan republic.

**Other Issues.**—Many nations produced mourning stamps in honor of the president of the United States, Franklin D. Roosevelt. But it remained for Brazil to produce the first Victory stamp—or, better, Victory issue—which was ready for issuance on V-E day!

Brazil also issued a set to commemorate the Brazilian troops fighting in Europe.

The United States issued two more "A.M.G." sets for the military governments in Germany and Austria. The former of these was first produced in Washington, but later emissions were printed in Germany, possibly from duplicate plates, and present marked differences of paper and perforation. The Russians issued a set in Berlin, utilizing the heraldic bear of Berlin in the designs, which misled many commentators who saw in the heraldry a "threat" of the Russian bear!

The passing of extraterritoriality in China, by the voluntary abrogation of century-old treaty rights possessed by various western nations, was celebrated with an issue of Chinese stamps. The liberation of Luxembourg was signaled by a series of four stamps, thanking, in their own languages, France, Britain, Russia and the U.S.A.

Switzerland's annual "pro-Juventute" issue of semi-postal stamps paid philatelic homage, this time to the famed Basle "dove" stamps of a century ago. The annual "Health" stamps of New Zealand were bi-coloured presentments of the Peter Pan statue in Kensington park, London.

Perhaps the low points of the year were the multiplicity of issues, rather speculatively controlled, by Mexico, and the Greenland stamps—a new issue for a limited population that had yet to see the older issues.

**Literature.**—The immense collection of material that served as a source for C. F. Dendy-Marshall's famed *History of the British Post Office* (1926) was put on sale at auction in London late in 1945, and many early books and documents were once more put in circulation. The American library of W. R. Ricketts was auctioned in New York during 1945, but not until the Collectors Club of New York had its choice of material to fill gaps.

The 1946 edition of *Scott's Catalogue* (published in 1945) contained more than 110,000 listed items.

**Other Events.**—The collection of the president of the United States, Franklin D. Roosevelt, was to be "in the market," it was announced. The stamps were to be sold at auction early in 1946.

An auction of donations of stamps and philatelic material for the American Red Cross realized more than \$50,000.

Alvin Meissner, head designer of the bureau of printing and engraving of the U.S. treasury department, retired upon reaching the age of 70 years. His first design of a postage stamp was the Lindbergh airmail stamp of 1927, and in his 18 years of service he co-operated in many others. (M. HA.)

## Philippines, Commonwealth of the.

The commonwealth of the Philippine Islands comprises the archipelago of the same name ceded by Spain to the United States in the treaty of Paris, 1898. The chain of approximately 7,100 islands falls between north latitudes 4° 21' and 21° 10' and between east longitudes 116° and 127°. Lying about 800 mi. off the east coast of Asia, the islands of the Philippines stretch from Formosa on the north to Borneo on the south.

By regular steamship routes, Manila is 631 nautical miles southeast of Hong Kong, 1,757 mi. southwest of Yokohama, 1,370 mi. northeast of Singapore, 4,838 mi. west of Honolulu and 6,929 mi. southwest of San Francisco.

The total area is 115,600 sq.mi. The last official census, 1939, gave the population as 16,000,313, including the following non-Filipino nationalities: Chinese 117,487; Japanese 29,057; Americans (U.S., exclusive of armed forces) 8,709; Spanish 4,627; Germans 1,149; British 1,053. Calculated on previous rates of increase without allowance for the effects of war and invasion, the population at end of 1944 should have been somewhat in excess of 17,900,000. Principal religions according to census of 1939: Roman Catholic, 12,603,365; Aglipayan (Independent Philippine Catholic), 1,573,608; Mohammedan, 677,903; Protestant, 378,361. In addition about 680,000 were pagans following various animistic cults. The principal cities and their populations were: Manila, the political and commercial capital on the northern large island of Luzon, 623,492 (not including several large suburbs); Cebu, 146,817; Iloilo, 90,480; Legaspi, 41,468.

Apparently in view of its quasi-dominion character and approaching independence the commonwealth government was accorded in 1942 the status of a United Nation and participated in all conferences held by the United Nations. In Sept. 1945, President Sergio Osmeña signed the document ratifying adherence of the Philippine commonwealth to the United Nations charter, the first document of this kind to have been ratified formally by the Philippine government. The commonwealth government joined the United States as a member of the Far Eastern Advisory commission which held its first meeting in Washington on Oct. 30.

ADVANCING on the Wawa dam in Luzon, U.S. troops of the 38th infantry division follow a tank-led attack along the Marikina river bed. Occupation of the dam in May 1945 ended six weeks of vicious fighting

From Sept. 16, 1942, to Sept. 14, 1945, the authority of the high commissioner was vested in Harold L. Ickes, secretary of the interior. On that date, upon confirmation by the senate of the appointment of Paul V. McNutt as United States high commissioner to the Philippine Islands, the functions, powers and duties of that office were re-transferred to the high commissioner by executive order. McNutt had previously served as high commissioner from Feb. 1937 to July 1939.

**History.**—The outstanding event of 1945 was the liberation of the Philippines, which General MacArthur announced on July 5. U.S. forces made their major landing in Lingayen gulf north of Manila on Jan. 9; their first troops entered Manila on Feb. 3; before the month was over they had recaptured Bataan, Cavite and Corregidor. In March and April all large prison camps on Luzon were liberated and landings were made at several southern ports.

**Re-establishment of the Commonwealth Government.**—From the time of the first landing on Leyte it was General MacArthur's policy to turn over to the government headed by Pres. Osmeña civil administration of local affairs as the areas were liberated. On Feb. 27, following the recapture of the capital city of Manila, but before enemy resistance had completely ceased, Pres. Osmeña took over the civil functions of the commonwealth government, and on March 8 inducted into office the members of his new cabinet. By midsummer General MacArthur announced the Philippine campaigns as virtually closed. On Sept. 1 he stated his command would discontinue further participation in Philippine civilian administration and that all areas of the archipelago had been restored to the commonwealth government.

The congress did not assemble in 1942, 1943 or 1944 because of the Japanese invasion. On June 9, 1945, Pres. Osmeña called the first Philippine congress into its first 30-day special session. Of the 98 representatives elected in 1941, 70 were present: 11 had lost their lives during the war and the remainder were detained under suspicion of collaboration. Of the 24 senators, 2 had died and 7 were under detention. Manuel A. Roxas was chosen president of the senate and José Lulueta speaker of the house.

**General Conditions.**—In May, by authority of a joint resolution of the U.S. senate, Senator Millard E. Tydings headed a mission to Manila to investigate conditions. On his return he presented to the senate a picture of dire distress. For the most part, the large cities and many of the towns and villages were in ruins; the devastation in Manila was city-wide; tens of thousands of persons were without food, clothes, housing or medicine; light, water and communication systems were almost totally destroyed; all transportation by boat between the islands, as well as by rail, bus and truck lines, was nonexistent. Most bridges were destroyed. There was no sugar crop; many sugar mills and other industrial plants were wholly or partly destroyed; there was a shortage of primitive farming implements and of seeds and plant stock. From 10% to 15% of the buildings in the Philippines were destroyed and possibly another 10% were damaged. The population of carabaos, the universal work animal of the Filipino farmer, was greatly diminished. The food situation was tragic; the people were almost solely dependent upon the United States army for the necessities of life. In Manila alone the United States army fed 600,000 persons. Finances were in a chaotic condition due to the various currencies in use. The Japanese, during their three and one-half years of occupation, had printed billions of dollars of worthless paper money which was widely circulated and used for all business purposes. This condition was accentuated by the issuance of millions of pesos through guerrilla organizations to maintain fighting units so vital to the ultimate success of the U.S. The issuance of this currency was authorized by the United States

U.S. RANGERS and Filipino guerrillas who made a daring raid on Cabanatuan prison to rescue 513 prisoners of war on Jan. 30, 1945. Most of the prisoners were survivors of Corregidor and the infamous Bataan "death march"

army. After the fall of Manila, the Philippine National bank was empowered to issue local currency within certain limits. In addition, the U.S. armed forces brought with them the "victory pesos" with which to pay United States troops, Filipino labour, etc. The whole system of taxation and revenue was destroyed. There had been no import or export revenue coming to the Philippines during enemy occupation: the government had functioned on worthless Japanese currency. The Philippine government's only funds were in the United States.

Agrarian unrest, which existed before the Japanese invasion, continued to be a serious problem. Thousands of share croppers organized some years earlier to demand a more equitable division of the product of their labour. During the war they organized a guerrilla army which reportedly did good work against the enemy, but they did not disband and constituted a special problem which threatened the stability of government.

**Rehabilitation.**—Much was done by both federal and commonwealth officials to alleviate the worst aspects of distress. To meet immediate needs, a temporary banking division of the treasury was set up in May with capital transferred from commonwealth funds held in the United States. Before the end of 1945 it was closed as no longer necessary. As each area was liberated, the army provided free distribution or sale at ceiling prices of essential goods and foodstuffs through civil affairs units later turned over to the commonwealth government. On instructions from President Harry S. Truman, U.S. engineers were drawn from the army, the navy and the Federal Works agency

and sent to the islands to determine the extent of the damage to roads, bridges and port facilities and to lay plans for their restoration. The War Damage corporation also conducted a survey of damages. Transportation facilities improved. The War Shipping administration allotted shipping space of 8,000 tons a month for June–August and 30,000 tons a month thereafter. Under its sponsorship several U.S. steamship lines were designated to handle shipping out of Pacific coast ports. The first civilian ship bringing commercial cargo to the Philippines arrived in Manila late in August. September marked the first commercial export of U.S. textiles to the Philippines after Pearl Harbor, consisting of 6,000,000 linear yards of cotton goods allocated by the Foreign Economic administration. Interisland transportation improved with the operation of additional boats. The United States Maritime commission approved the transfer of 16 coastwise vessels to Philippine registry but there was need for a much larger fleet. The first civilian boat left Manila for Iloilo in June; efforts were made to run such trips at least every ten days and to maintain monthly schedules between Manila and Mindanao ports. Traffic was restored on the Pasig river running through the city of Manila. The metropolitan service was organized in July to take over about 250 trucks and buses. At the end of July the Manila railroad was handling an average of 800 civilian passengers and 96 tons of civilian traffic a day between Manila and San Fernando, La Union. Arrangements were made in October for resumption of air transportation service. Late in August the motor vehicles registered totalled 7,023, an increase during the month of 1,000 vehicles.

In response to a request from Pres. Osmeña, the United Na-

tions Relief and Rehabilitation administration set aside a provisional fund of \$1,000,000 for emergency relief supplies for distribution in the islands. President Truman reported that by June 30 approximately \$600,000 had been spent for wheat, evaporated milk and medical supplies. In July an office of the U.N.R.R.A. was opened in Manila in expectation of the arrival of approximately 4,000 tons of flour.

As the year closed, the islands' economic problems were on their way to solution. Trade was slowly recovering. The businessmen were moving ahead, organizing their facilities to aid in the exportation of items shipped in prewar days. The FEA sent a mission to the Philippines to arrange for the procurement of strategic commodities, such as copra, fibres and sugar, and to assist the commonwealth government in re-establishing private trade between the islands and the United States, and took measures to make it possible for United States exporters to help supply Philippine civilian needs. In October a shipment of 2,000,000 lb. of Manila hemp arrived in the United States—the first substantial shipment of the fibre after 1941. The largest of Manila's cordage factories resumed operations on June 1.

The National Development company was authorized to resume operations and granted a credit of \$2,250,000 for loans to sugar planters. The National Power corporation was re-established. In October the National Coconut corporation, another prewar government agency, was revived to engage in the purchase of copra throughout the islands. At least one company was prepared to start production of coconut oil for the manufacture of soap. Of the eight desiccated-coconut factories in the islands before the war, all of the larger ones were completely destroyed; only two were in condition to operate. One of the principal cigar manufacturers started bringing tobacco to Manila and engaging cigarmakers. The insurance business was rapidly being revitalized. Living costs in Manila jumped to eight times greater than in prewar days. Official ceiling prices were established for a variety of goods, but black market sales were patronized. Most retail prices declined during August in anticipation of the arrival of civilian imports and the possibility that army surplus products might be available.

The Philippine congress dealt particularly with economic and rehabilitation problems. Its early legislation included an act to rehabilitate the Philippine National bank. That bank and four others reopened for business. The congress amended existing laws governing the use of the exchange standard fund so that

about \$25,000,000 could be released for general expenditures.<sup>1</sup> It authorized negotiations for the establishment of air, naval and military bases for United States occupancy; it appropriated funds for operation of the government for the fiscal year ending June 30, 1946, and for the immediate payment of salaries and allowances of deceased Filipino members of the United States forces, including duly recognized guerrilla organizations. It passed a bill setting up a people's court to try those suspected of collaboration with the Japanese. Several hundred persons so accused, who had been taken into custody by United States army authorities, were turned over to the Philippine government. The first important collaboration trial was held in July. Legislation included authority for the establishment of an office of foreign relations.

Several bills were introduced during the 79th session of the United States congress to assist the Filipinos to get on their feet. One bill would make available to the treasury of the Philippine Islands, Philippine funds accumulated in the United States treasury from the processing tax on Philippine imports; one would permit 50,000 members of the Philippine Scouts to be taken into the regular army for occupation tasks in the Pacific; another was designed to make the Foreign Claims act applicable to the Philippines. Congress gave active consideration to the adjustment of the two most pressing problems confronting the Philippines. Those problems were the question of the payment of damages as a result of the war and the question of the post-independence trade relations with the United States. Legislation was introduced which, if enacted, was expected to go far toward bringing about a restoration of normal economic conditions.

The president of the United States took account of the heroic and loyal conduct of the Filipinos during the war and showed his sympathetic interest by outlining a program of assistance. He sent directives to the heads of various federal government departments and agencies to continue their assistance to the commonwealth government and to submit recommendations as to necessary steps which should be taken to improve conditions.

Pres. Truman clarified the question of the date upon which Philippine independence might be expected, by stating that he did not intend to consider advancing the proclamation of Philippine independence to a date earlier than July 4, 1946, until the necessary program for rehabilitation had been worked out and there had been a determination of the fundamental problems involved in mutual relationship with the U.S. after independence. (See also JAPAN; WORLD WAR II.) (R. R. E.)

RECONSTRUCTION of Manila, once modern capital of the Philippines, was under way in 1945 with the help of U.S. army engineers. Below, a bridge was being constructed to replace the destroyed Santa Cruz bridge over the Pasig river

**Philosophy.** The end of the six years of World War II did not bring serenity. To western thinking and philosophy it brought, instead, the beginning of a great fear, fear for civilization, fear for existence itself. What the moral consequences of the atomic bomb eventually might be few were prepared to say; for the present, however, a kind of fear, unknown among western peoples since the doomsday forecasts of the first millennium, captured the minds of most persons. Into periodicals and sermons—books come later—crowded the terrors, hopes, schemings, accusations and the philosophic and ethical questionings of a culture that had revealed dramatically in a few explosive hours what seemed to be the instrument of its own destruction. Implicit in most of these outpourings was the deep distrust of men as agents fit to create a world suited to human living. This unformulated questioning, doubt and fear was the main philosophical tendency of 1945. Needless to say there was much evidence besides the atomic bomb to sup-

<sup>1</sup> All acts affecting the currency are subject to approval by the president of the United States.

port it.

Some books, religiously more sensitive to the deep forces of destruction developing in men and their society, predicted this mood of fear before it came. Renewed concern with Sören Aaby Kierkegaard, Danish mystic of the 19th century, a forgotten voice now needed as the emotional climate changed, or the anthology of world mysticism, *The Perennial Philosophy*, prepared with a running commentary by Aldous Huxley, fit this pattern. Others struggled, with more common sense and skill perhaps, but with no more success, to bend the types of thinking by which these destructive instruments had been produced to a more humane conclusion. *Naturalism and the Human Spirit*, edited by Yervant H. Krikorian, is a series of important essays defining the philosophy of naturalism, and discriminating between the different methods and applications of scientific thought. The natural, says this book, is whatever man encounters in whatever way. Naturalism is continuity of analysis, i.e., the application of scientific methods to analysis in every field. Thus truth is found. *The Moral Theory of Evolutionary Naturalism*, by William F. Quillian, Jr., is also relevant here. Other books less interested in the human consequences of the new science than in understanding its logic and method are *Philosophic Foundations of Quantum Mechanics*, by Hans Reichenbach, a defense of a causality in science, and *O sentido da nova lógica (The Meaning of the New Logic)*, by Willard Van Orman Quine.

Some philosophers turned their attention to the social and cultural complex in which these disturbing events occurred. Thus Ralph Barton Perry in *Puritanism and Democracy* presents what is called a personal and national confession of faith. It is a faith in moral liberalism and in the individualism that is basic in both democracy and puritanism. Neither institutional nor corporate beings but only human beings live, and in them must lie our values. *Are Men Equal?* by Henry Alonzo Myers, presents a systematic, historical analysis of the idea of equality in American thought. Equality in the Declaration of Independence, Emerson, Hawthorne, Melville, Whitman, equality in the slave controversy of the Civil War, equality from 1865 to 1941 under Darwinian evolution, industrial capitalism, socialism is discussed. In the individual's sense of his own intrinsic value is the source of the idea of equality. From this it is extended by association and sympathy to others. *The Authoritarian Attempt to Capture Education*, papers by John Dewey, Sidney Hook, A. E. Murphy and others from the second conference on scientific spirit and the democratic faith, goes more directly to the problem. A more important book, *Foundations of the Social Sciences*, by Otto Neurath, is the first contribution to the second volume of the *International Encyclopaedia of Unified Science*.

Other philosophers turned their attention to the nature of man himself and his culture. *An Essay on Man*, by Ernst Cassirer, is a rewriting in English of his *Philosophy of Symbolic Forms*. It is shorter than its German antecedent but is clearer and stronger. It makes a closer linkage of the different concepts of symbolic form. For Cassirer philosophy is identical with the theory of culture. There are many modes and structures of order, of which the method of science is only one. Language, myth, religion, art—all are cultural creations of man. In these different manifestations of his creativity man's self is absorbed. Thus the post-Kantian philosopher, for whom the thing in itself becomes the infinite project, replies to the naturalist's exclusive emphasis on scientific method. He admits, however, that the modes and manifestations of man's creative culture do not have a common denominator or the continuity of method required by the naturalists.

*Ethics and Language*, by Charles L. Stevenson, is a study of

descriptive meaning and emotive meaning in ethical methodology. *Mission of the University*, by José Ortega y Gasset, demands a student-centred university and a philosophy-centred university as the only way to recover our academic culture from the current professionalism of approach. *The Appeal to Immediate Experience*, by Robert D. Mack, is an analysis of sense data, as discussed by Francis Herbert Bradley, Alfred North Whitehead and John Dewey, leading to a functionalist concept of sense data as contrasted to the spectator theory. *The Philosophy of Bertrand Russell*, edited by Paul A. Schilpp, mentioned briefly among books of the year 1944, deserves this second notice because of its current importance in summarizing and interpreting this great man's work. Russell's long awaited *History of Western Philosophy* became available in the autumn of 1945. Its emphasis on the connection of philosophy with the political and social circumstances of the western world might help to give the teaching of philosophy a new and much needed reorientation. It is written with Russell's usual charm, unpretentiousness and common sense. Above all it puts philosophy once more back into human life. (B. B.)

**Phoenix Islands:** see PACIFIC ISLANDS, BRITISH.

**Phosphates.** Mine production of phosphate rock in the United States declined from 6,014,363 short tons in 1943 to 5,824,002 tons in 1944, but sales increased from 5,741,379 tons to 6,021,840 tons. The excess of sales over production cut stocks from 1,962,000 tons to 1,374,000 tons. Offsetting the decreased tonnage in 1944, the grade was better, and the phosphoric acid content increased from 1,804,561 tons to 1,874,723 tons. In the first half of 1945 production increased to 3,106,761 tons, with sales of 2,945,229 tons, containing 945,096 tons of phosphoric acid. Exports increased from 400,971 tons in 1943 to 490,709 tons in 1944, as compared with a peak of 1,354,025 tons in 1936. With the reopening of foreign markets after World War II, exports were expected to increase materially, but at the same time domestic consumption might decrease somewhat from the war level, which was above normal.

No 1944 data was received from important producing countries outside of the United States, but 1943 output was reported as follows, in short tons, with the 1939 outputs given in parentheses for comparison: Algeria 84,655 (496,000); Tunisia 368,919 (1,794,466); French Morocco 899,374 (1,877,207); Egypt 347,852 (603,557). (G. A. Ro.)

**Photography.** During the last few months of World War II the military production of photographs ran into the millions each month. The United States army air forces alone were producing more than 20,000,000 photographs a month in their reconnaissance missions. Even the repairing of damaged warships was speeded up by more than 25% in repair time by the use of microfilms of original blueprints, speeded by air to the repair centres.

Photographic engineering promised to be a new industry accelerated by war demands. This field included the use of high-speed cameras for recording muscular reactions, ballistics experiments, strain tests to determine the weak points in new machinery and in the field of new industrial designs. From 2,000 to 8,000 photographs per second could be recorded with these high-speed cameras. Then by projecting at normal speed, time itself was slowed down so that engineers could analyze and investigate actions which moved too rapidly for the human eye to register. By the use of black-and-white, colour and X-ray films opportunities were opened to practically every industrial, engineering and medical field. This meant new job opportunities for photographers and technicians trained for this type of photo-

PHOTOGRAPH of two ladies entering the Metropolitan opera house, by Arthur Fellig, N.Y. news photographer known by the pseudonym of Weegee. It is included in his *Naked City*, comprising scenes of Manhattan, which was published in 1945

graphic work.

Special mention should be given to the 30,000 or 40,000 photographers of all the Allied Powers who covered the greatest photographic assignment in history. These photographers included some of the most experienced workers from the U.S., England, U.S.S.R., France, Canada, China, Australia and many other Allied countries. The whole progress of the war was faithfully recorded for strategic use on the battle fronts or for release through thousands of newspapers all over the world.

In the field of photographic-lens manufacturing, notable advances were made in England and the U.S. Formerly these countries were dependent upon Germany for some of the finest optical products. However, the lens manufacturers were able to produce products which not only matched some of the best continental lenses but in many cases showed superior qualities, especially with the use of the new rare-element glass. A 48-in., f/6.3, monster lens for aerial photography was announced in May 1945 by the U.S. air forces and the Eastman Kodak company. This lens had a thermostatically controlled electrical warming device in the mount for use in the cold upper regions. Without the use of this heating device the lens would shrink enough at low temperatures to throw it out of focus. The sharp

definition of this lens, together with accompanying filters to eliminate atmospheric haze, could clearly reveal objects five miles below.

One of the most effective military and commercial instruments was expected to be a special camera of advanced design for use in photographing radar images, developed by the Fairchild Camera and Instrument corporation in New York city. Radar images permitted military planes to travel over enemy territory at night or through heavy clouds and find their mark without ever seeing the ground with the naked eye. This product was known as the Fairchild automatic radar recording camera, and consisted of five units: camera, magazine, beamsplitter, adapter casting and control box. The complete camera installation was tied in with the radar circuit, and the camera itself mounted on top of the radar's oscilloscope. The unit was so arranged that the operator could observe the luminous picture of the terrain on the radar scope, while simultaneously the camera photographed it for continuous, permanent record.

While the original purpose of the radar camera was largely military in intent, it was far from limited to that field. Radar-record photography could

be applied to give radar maps of world-wide air line routes and as an aid in determining safe navigable paths. It could be a supplement to the training of radar operators. The camera could also be used for various specialized adaptations for installation in a plane to photograph a group of instruments during a performance flight. It could be used on board ships or in industrial plants to provide an irrefutable record of the performance of some object or instrument.

The U.S. public health service (navy department) was conducting the biggest offensive yet undertaken against tuberculosis. Authorities said there were at least 1,500,000 tubercular cases in the U.S. alone. During 1945 a new automatic 70-mm. fluororecord camera was introduced by the Fairchild Camera and Instrument corporation for installation in Roentgen ray devices. This camera was built for mass photography of the public, to catch incipient cases of tuberculosis which could be cured without drugs, and at the same time round up the many persons who were in the advanced stages of the disease.

The Canadian National Research council together with the Fairchild Camera and Instrument corporation developed a high-speed ophthalmic camera for the royal Canadian air force to photograph pilots' eyes to determine vitamin deficiencies. The resulting photographs show the conjunctival blood vessels of the eye in sharp detail. The photographing light mounted on the camera flashed at a speed of 1/15,000 sec. and did not produce

any afterimage in the eye as when ordinary flashbulbs were used. At the time of exposure the lens was automatically stopped down to  $f/80$  or even  $f/120$ , thus creating a greater depth of field and ensuring all-over sharpness in the final  $2\frac{1}{4} \times 2\frac{1}{4}$  in. negative.

A new type motion picture film known as Colorpak was announced at the end of 1945 by Ansco. This colour film was produced to provide a special taking medium from which duplicate colour prints could be made in quantity. Maximum quality was more essential in the duplicate print than in the original. Therefore Colorpak had considerably softer gradation than was normal for a reversible colour film. It was also balanced so that pictures made on it had a bluish cast which was found to yield better quality in the duplicates. Fundamentally, Ansco Colorpak is quite similar to the regular Ansco colour film and the layer arrangement is the same.

In the field of aerial photography the Folmer Graflex corporation improved the design and performance of important between-the-lens shutters used with 6-in. wide angle objectives to cover  $9 \times 9$ -in. negatives. The total open time of the shutters was reduced to 2.5 milliseconds and the shutter life extended to more than 10,000 cycles without appreciable change in its performance. The rate at which pictures could be taken was speeded up from the former rate of more than 3 sec. down to  $1\frac{1}{4}$  sec. per cycle. Radio interference previously radiated by these assemblies was effectively eliminated. These advances contributed materially to the successful military use of these cameras.

In general the camera design trends were definitely aimed at longer life, extended temperature range of satisfactory operation, greater precision in shutter and lens performance and lighter weight without sacrificing serviceability. The ravages of tropical exposure were met with new fungus resistant materials and finishes as well as special methods of packaging photographic equipment and supplies intended for shipment, storage and use in such areas.

New Graflex grid shutters for the army air forces permitted the taking of instantaneous night photographs at altitudes up to 30,000 ft. This was accomplished in synchronism with the illumination from an improved flash bomb, the shutter being fully opened 10 milliseconds after the beginning of the flash. The associated electrical circuits were synchronized with the bomb illumination so that the camera and shutter were only caused to operate by the photocell reception of light from the flash bomb. This effectively minimized the chances of false exposures being triggered off by flying over flak, fires or searchlights.

Built-in mechanical flash synchronization for between-the-lens shutters, pioneered by the Ilex Optical company, was further developed by the Wollensak Optical company introducing their high-speed Rapax shutters and the Folmer Graflex corporation, announcing the Graphex-synchronized shutter. These synchronized shutters can be used with all popular flashbulbs including the high-speed devices flashing up to  $1/30,000$  sec.

During 1945 the Eastman Kodak company placed on the market a number of new chemical products for photography such as: Kodak Dektol, a long-life paper or film developer; Kodak Microdol, a new improved fine-grain developer; Kodak Versatol, a new liquid all-round developer for films, plates and papers; Kodak Selectol, a clear working developer for professional papers; Kodak Antical, a sequestering agent for prevention of scum and sludge formation in photographic developers; Kodak Rapid Liquid Fixer (with hardener) and Kodak Universal MQ Developer; also Kodak Anti-foam, a clear, colourless liquid for prevention of foaming of photographic solutions.

To gain knowledge about the behaviour of rockets during the

early part of their flight some form of high-speed camera was essential. To meet this need the Bell Telephone laboratories and Dr. C. N. Hickman, at the request of the National Defense Research committee, perfected the Ribbon-Frame camera. The camera uses a standard No. 122 film, which is  $3\frac{1}{4}$  in. wide and 35 in. long. The film is carried past a .15-in. slit, and each frame is thus .15 in. high and  $3\frac{1}{4}$  in. wide. More than 200 frames may be taken on a single film. The exposure time is adjustable from .0001 to .0006 sec. A dial on the outside of the camera indicates the amount of unused film, and where the number of frames taken per set is small, several sets may be taken on the same film. As the rocket or shell is fired the clutch button is pressed, thus connecting the film roll to the drive and a set of exposures are made in rapid sequence.

**Microphotography.**—For the greater part of 1945 microphotography was employed at an accelerated rate in the prosecution of the war. Blueprint specifications were reproduced in quantity in order to have complete sets of plans available for the use of repair crews at advance bases. Records and communications, intelligence and other uses, continued. The termination of the war in Europe and later in the east brought an abrupt shift of emphasis. Many wartime projects were curtailed or eliminated. The equipment, however, was diverted to new projects designed to solve some of the problems created by the coming of peace. Vast quantities of field records were microfilmed for preservation and for transfer to the U.S. Similarly, captured documents were reproduced in order to provide copies for the Allied Powers and to permit detailed surveys of enemy technical progress to be made.

In the U.S. cancellation and termination of war contracts motivated the establishment of the Office of Contract Settlement. Microphotography was recognized as an important medium for the preservation of contractual records of all types, and the office issued on Jan. 24, 1945, detailed specifications for the reproduction of contractors records on microfilm.

One of the most spectacular wartime applications of microphotography was the use of V-mail and its corollary, the official mail service. The basic technical processes were 16- and 35-mm. microfilm and paper prints, all made on automatic machines, either in full or reduced size. There were two essentially interdependent services, the army service and that of the navy and marine corps.

Academic applications and uses of microphotography received less emphasis during 1945 by reason of a shortage of equipment, supplies and trained personnel. Limited service continued and several large projects of reproducing newspapers, archival documents and material in foreign countries registered considerable progress. The most interesting academic development during the year was the emergence of the microcard theory as applied to scholarly, scientific and academic microphotography. The Microcard envisages the reproduction of from 100 to 500 pages of text, comprising all or a substantial portion of a complete book, on the back of a conventional library card. The microcard would be filed in a library catalogue and an enquirer would remove the card and consult it on special reading equipment as though it were the original text. The theory was still being debated, and some experimental work was being undertaken. Coupled with the microcard came an equal interest in reduced facsimile, which was not microphotography but rather a type of miniature photocopying or even offset printing for edition publication.

One of the interesting and perhaps most significant bypaths in microphotography during 1945 was the formation of Projected Books, Inc. This nonprofit organization had for its objective the development and application of a new method whereby patients in hospitals might read. A special power-driven microfilm projector was developed that projected a greatly enlarged image of a printed page on the ceiling of a hospital ward or on a special screen. The machine is noiseless in operation and the controls are arranged so that pressure by a finger, a toe or even an elbow will advance and retract a page on the reading screen. Several magazine and book publishers permitted the reproduction of their publications for this purpose. Tests clearly demonstrated the beneficial effects of this method of therapy for wounded soldiers, who might read educational or recreational material at will. The organization planned to place a number of these readers and quantities of material on microfilm in all of the large military and civilian hospitals.

**Motion Picture Project and Film Storage.**—The Library of Congress set up a motion picture project early in the year as a pilot project to plan the library's future motion picture activities. Among the areas of interest that were to be explored were: the preservation of films, the problem of selection, the problem of arrangement and the problem of service. Plans were under way for the construction of a film servicing building and vaults to accommodate the film collections of the Library of Congress, the national archives and other government agencies. The collections which the library hoped to obtain would be world-wide in scope and would include training film and other factual expository productions, purely factual film such as the newsreel and photoplays. John G. Bradley, Director Motion Picture Project, stated that the Library of Congress proposed to give a service on motion picture film in general paralleling that rendered on books and manuscripts. It was to organize reference material for consultation, to provide screening facilities for searchers, make film available on an interlibrary loan basis and furnish footage for new productions from film not protected by copyright or otherwise restricted.

**Pictorial Photography.**—During 1945 the war left its imprint on pictorial photography. Sensitized paper and film were extremely scarce and in some localities practically unobtainable by the amateur until the fourth quarter, yet camera clubs and salons continued to function and to flourish.

Groups in various countries held their salons for the first time after the start of World War II. Approximately 62 international as well as

hundreds of local salons were opened to the public. The largest number of photographic entries were received by such well established exhibitions as those of Los Angeles, Baltimore, Rochester, Philadelphia, Chicago, Pittsburgh, St. Louis, Boston, Toledo, San Francisco, Detroit, the Photographic Society of America and Royal (London). Approximately 750 pictorialists had prints accepted in two or more salons as compared with 2,276 in 1938-39. An average of 235 prints were hung in each salon, a figure which had remained fairly constant from 1935.

One of the largest photographic exhibitions ever held in the U.S. was displayed at the Rochester (N.Y.) Museum of Arts and Science in November by the Photographic Society of America with entries in pictorial, colour, nature, technical, camera club, press and historical sections. At the society's annual meeting, Charles B. Phelps, Jr., was installed as president and honorary fellowships, the highest U.S. honour a photographer can receive, were bestowed on Frank Roy Fraprie of Boston and Captain Edward J. Steichen, U.S.N.R. (retired), of Washington, D.C.

Leading pictorialists during the season, according to the *American Annual*, were John R. Hogan of Philadelphia, Pa. with 173 prints in 49 salons, Frank R. Fraprie of Boston, Mass. with 137 acceptances in 51 salons and Kenneth Cook of Elkhart, Ind., with 135 prints on exhibition in 44 shows.

A trend toward glossy, realistic and straight prints was noted with large prints, 14×17 in. and 16×20 in., dominating the salons. Two-thirds of the prints submitted to the Rochester salon in March and 235 of the 245 accepted were 14×17 or larger. Few new or original subjects were displayed; snow scenes and cats continued in popularity.

The Photographic Society of America inaugurated postal portfolios of pictorial photographs in 1945, a feature long prominent in British pictorialism. It was thought probable that these would have a marked influence on pictorial photography in later years.

The outstanding development during 1945 was the tremendous increase in interest in colour slides of the 2×2-in. size. Many new camera clubs were organized with programs devoted exclusively to this interest. There were 12 exhibitions held, the majority for the first time. The number of entries far exceeded those of a pictorial nature. The Chicago International Color Slide Salon, for example, received 3,800 slides from 665 contributors.

The principal exhibition of the year at the Museum of Modern Art in New York was, "Paul Strand: Photographs 1915-1945." This exhibition was accompanied by a monograph reproducing 27 of the photographs and with a critical biographical essay by Nancy Newhall. The exhibition inaugurated a series of exhibitions presenting the chief 20th-century photographers. Other exhibitions were: "Manzanar: Photographs and Text by Ansel Adams of Loyal Japanese-American Relocation Center"; "French Photographs: Daguerre to Atget" assembled from private and public collections in the U.S. and in France; and several small exhibitions selected from the museum collection. Several loan exhibitions were prepared to meet special demands from schools, colleges and various photographic societies.

Announcement was made in October of the Museum of Modern Art Photographic fellowship to be awarded in 1946. This was to consist of \$1,000 for the realization of a project in creative photography or research in allied fields. (See also MOTION PICTURES; NEWSPAPERS AND MAGAZINES; X-RAY.) (W. D. MN.)

**Three-Dimensional Photography.**—Three-dimensional or stereoscopic pictures differ from conventional two-dimensional pictures in that they convey directly the perception of depth in addition to the height and width of two-dimensional photographs in the scenes which they present. The art of three-dimensional photography involves two general operations. Two pictures, usually photographs, are first made of the scene from two different viewpoints corresponding to the positions of the human eyes' normal vision. These two pictures, called stereographs, are presented in such a way that the left-hand stereograph is shown to the observer's left eye and the right-hand to his right. As in everyday vision, the brain fuses the slightly different flat views into a convincing impression of three-dimensional space.

**Military Uses.**—Three-dimensional pictures taken from the air were in wide use in all armies in World War II. The stereographs were usually obtained by successive exposures in a standard camera, the travel of the aircraft providing the necessary distance between viewpoints. This displacement, for aerial stereographs, is frequently as great as 2 mi., as contrasted with the normal two and three-quarter in. of the human interocular distance; it produces striking relief even in bushes and other low-lying objects which appear perfectly flat when viewed by an observer in the air. This accentuation of depth proved of great value for the penetration of camouflage and the detection and identification of minute ground detail.

Three-dimensional aerial photographs were of special importance to the Allies in the later stages of the air war in the detection of "buzz-bomb" and V-2 rocket launching sites, in the precise determination of bomb damage and in the identification of factories, bridges, radar installations and other bombing targets. Stereoscopes of the Wheatstone type, fitted with magnifying attachments, were used for viewing these reconnaissance stereographs.

Three-dimensional aerial views made by the vectograph process (see below) had been in wide use for planning ground force operations and for instructing troops before combat. Easier to view than any previous types, these vectographs appeared as photographically precise replicas of the ground to be attacked, with every cliff and valley in full relief and with the smallest ditches and vegetation, enemy works and other essential detail appearing as they would in perfect miniature models. During 1945, it was disclosed that large numbers of vectographs were used in preparing the assault on the Normandy beaches and in later operations in Europe and in the Pacific. After World War II, investigation revealed that there had been no developments similar to vectography either in Germany or in Japan, but that the German army had set up elaborate facilities for the construction of miniature models to be used for the same purposes.

In a number of war-training devices, three-dimensional pictures were used to present quickly and realistically such complex subjects as celestial

navigation, aircraft manoeuvres and the construction of weapons.

**Peacetime Developments.**—Two new 35-mm. stereoscopic twin-lens cameras, designed for popular use, were announced late in 1945, the Stereo-Realist and the Haneel Tri-Vision. Manufacturers also offered several new viewing devices, compact modern versions of the lens-type stereoscope in which the two pictures are viewed through simple lenses which allow the eyes to look straight ahead at the magnified stereographs.

In the press, there appeared further reports from Moscow of a new system, credited to S. P. Ivanov, for presenting three-dimensional motion pictures without requiring the audience to wear spectacles. Film, with a double row of images, side by side, was projected on a screen of 2,000 finely cut and matched pieces of mirror-glass.

Great technical and popular interest centred on the three-dimensional vectograph and the new medium, freed from wartime restrictions and priorities, was already in limited use for teaching and commercial purposes. Vectographs, the invention of E. H. Land and J. Mahler, are somewhat similar in general appearance to ordinary photographs. Each print, however, actually consists of two superimposed light-polarizing pictures. The viewing device is a simple polarizing spectacle. Slides may be projected in standard, single-lens projectors. By the end of 1945 two processing plants were in operation, the optical profession was using special vectographs for correcting faulty seeing habits, manufacturers were using the medium for presenting their products, scientists for recording three-dimensional views of microscope specimens and the first civilian textbook to carry a vectograph illustration, *Descriptive Geometry* by E. S. Watts and J. R. Rule, was announced for publication in early 1946.

## Physical Medicine and Occupational Therapy for the Wounded.

The year 1945 showed continued progress in the development of physical medicine. World War II, with its thousands of physical and mental casualties, gave great impetus to the development of physical and occupational therapy. Formerly the objective of physical medicine was limited to the restoration of function of injured parts. The experience of the war showed that usually the whole man is affected adversely when one part of his body is disabled for more than a brief period. This adverse effect often is mental as well as physical. Consequently, the field of physical medicine was expanded into rehabilitation. H. E. Griffiths stated that, "Rehabilitation is treatment, but it is not the treatment of a disease or injury, but the treatment of the individual suffering from the disease or injury."

Perhaps the most spectacular results were obtained in the rehabilitation of paraplegics. Formerly these unfortunates were doomed to lives of total invalidism, often a very short life. They are now walking, with the help of braces to be sure, free from distressing trophic sores and undergoing vocational rehabilitation to make them self-supporting to a greater or lesser degree. Among no other class of physical injuries is the necessity for mental, as well as physical, rehabilitation so clear. Almost invariably these patients have surrendered to despair before they reach the hospitals in which their rehabilitation can be begun. The most difficult step in their treatment is the initial step of arousing a will to improve.

The war stimulated interest in the surgery and rehabilitation of hands. Too often chiefs of service relegated the care of injuries of the hand to junior assistants with little experience. Now the obvious fact having been recognized that, next to the brain, the hand is the most important part of the body in earning a livelihood for the majority of people, experienced surgeons have devoted much attention to injuries of this part. Since the degree of restoration of function depends in part upon the early application of physical and occupational therapy, an exception was made, in cases of injury of the hand, to the general rule in the European theatre of operations of the United

Above: A NAVY VETERAN earning money with his hands. The U.S. navy contracted with a number of industrial firms to train and employ hospitalized men in soldering, assembling, cutting, turning, peening, etc. Work in 1945 was done in the hospital occupational therapy shops or at the bedside

Upper right: CONTESTANTS in a one-armed golf tournament played by convalescents of the Deshon General Hospital at Butler, Pa., during 1945

Right: EXERCISE, sun and air were considered the best therapy for veterans recovering from plastic surgery, burns and other injuries at the hospital where these men were convalescing

Lower right: LEGLESS convalescents at Veterans Hospital, Forest Glen, Md., were relearning to drive with specially equipped cars in 1945

States army that no primary closures of battle wounds would be done. Whenever possible, in this theatre, wounds of the hand were closed at once to hasten healing so that physical and occupational therapy could be started at the earliest possible moment. The plentiful blood supply of the hand, and the liberal use of penicillin, minimized the danger of infection.

In this connection, there was an increasing trend toward the substitution of productive work for the more or less diversional occupations in the field of occupational therapy. Tools normally used by men were being substituted for looms and other appliances of fancy work. Opportunity was being taken to increase the patient's proficiency in his own vocation, or of teaching him another useful vocation. During World War II, when the patient was to be returned for further military duty, military skills were stressed in his rehabilitation. Instead of weaving rugs or making bead bags, the injured soldier disassembled and re-assembled aeroplane motors, machine guns or radio equipment. Special exercises often were given in the gun turrets of aeroplanes or with rifles and bayonets. The objective was to return the patient not only physically fit but also a more competent soldier.

With the return of peace, the same principle must govern the rehabilitation of the disabled veteran. Here, however, is injected an additional problem, that of the rehabilitation of the permanently disabled, because the permanently disabled are not retained indefinitely in the military services. These cases fall into two classes—those less disabled who can be rehabilitated to the point of living and earning in a normal environment; and those severely disabled who, while able to earn, will always require a special environment in which to live.

An example of the first class of such cases is the healed or arrested case of tuberculosis whose previous occupation is incompatible with his future health. A most important part of his treatment is learning a new and a healthier occupation. This is distinctly a medical responsibility—a part of treatment. For what does it profit to cure a disease without, insofar as possible, preventing its recurrence?

In the second class fall many of the paraplegics, the hemiplegics and even of the chronic psychotics. It is indefensible that such cases, even though requiring institutional care, should be denied the opportunity of doing productive work. For those who cannot go out to work, work must be brought. In several hospitals, patients were paid for work done as a part of their rehabilitation. Arrangements were made with neighbouring industry to furnish the work. This was a hopeful experiment and promised to assist in the solution of the problem of the permanently disabled who would require some degree of hospital care throughout their life.

Progress was made in the training of amputees in the use of artificial limbs. While the general standard of prosthetic devices was not yet satisfactory, some of the difficulties of the users were obviated by better training in the use of their aids.

Physical medicine received great assistance during 1945 from the Baruch Committee on Physical Medicine. This committee established and endowed fellowships and made numerous grants for teaching and research in physical medicine.

The medical service of the Veterans' administration organized a division of reconditioning which was to co-ordinate physical medicine, occupational therapy and general physical and vocational rehabilitation. (See also PSYCHIATRY.)

**Physics.** **General.**—Most people realize that the atomic bomb (*q.v.*) changed the pattern of warfare; some regard it as a potent agent for peace; a few boldly proclaim that a new age has been born. Wherever the truth lies, the use of the bomb in Japan focused popular interest on science, and especially upon physics, as never before. It is therefore important to point out that the bomb was not a discovery resulting from desperate work during the years 1940-45, but rather a natural and rapid development of earlier scientific discoveries. From 1890 on, important discoveries in atomic physics were made every decade, each one a triumph of the human intellect; but they were not understood, and therefore not appreciated, by the layman. During the closing months of 1945, it is to be regretted that the destructive aspects of atomic energy were overemphasized in public statements and that its great possibilities for peaceful commercial purposes were kept in the background.

The rapid pace at which former scientific discoveries were developed into new weapons in the years 1939-45 had two unfortunate results. First, the amount of pure scientific research accomplished in the world after the start of hostilities in 1939 had been very small, so that development was in danger of outrunning discovery, and sooner or later technical progress had to await further research in pure science upon which it might build. Second, the gigantic organizations built up for the purpose of fostering rapid technological development could not be disbanded immediately. Consequently large numbers of scientists, taken from their academic researches to tackle problems of immediate practical value would not return very soon to their former situations. Some would never return, for the financial rewards of pure science are seldom as alluring as those of its industrial application. It seemed likely, indeed, that there would be a shortage, in institutions of learning, of men and women competent to train the increasing numbers of scientists-to-be and to carry on fundamental research. Thus the critical, wartime dearth of physicists was expected to continue for nearly a decade.

Some measures were taken to combat these trends. Various agencies were offering grants in aids of research in pure science to encourage the return to academic life of men who left their posts for urgent war assignments. Others instituted scholarships and fellowships to open the way for the further education and training of young scientists whose studies were interrupted by the war. Legislation was before congress in the form of the Kilgore and Magnuson bills, to give federal aid to science. The relative merits of these two bills were being much discussed among professional physicists.

**The Nucleus.**—In 1925, at the time of Lord Rutherford's early experiments on atomic disintegration, the only known elementary particles were the electron and the proton. A catalogue of the elementary particles in 1945 demonstrated what progress was made in the intervening years. The neutron, discovered in 1932, and the proton are regarded as the fundamental particles, of which all nuclei are composed. Because they can be created from radiation, positive and negative electrons share a less permanent position. Mesotrons, about 180 times as massive as electrons, occur in cosmic rays, but have only a transient existence. Uncharged particles, the neutretto and the neutrino, have been useful in some theoretical nuclear calculations, though without adequate support on the experimental side. The experimental evidence for the neutrino is, however, much better than for the neutretto. There must now be added to this list the low-mass mesotron, about 20 times as heavy as the electron. M. Schein, at the University of Chicago, found these particles, charged, in cosmic rays, while Gerhart Groetzinger, P. Gerald Kruger and Lloyd Smith detected a neutral radiation more

penetrating than neutrons in water or gamma rays in lead. This neutral radiation, produced from the Illinois cyclotron by a beam of deuterons hitting the target, was detected by Geiger-Müller counters 4 metres away. The counters were blanketed by thick layers of various materials which are known to absorb neutrons and gamma rays. Yet a residual ionization was definitely present. The simplest explanation of the observations was that the radiation consisted of uncharged low-mass mesotrons.

The creation of material from radiation, a process whose counterpart is so brilliantly illustrated by the atomic bomb, received added confirmation in the experiments of W. E. Ogle and P. G. Kruger. During a study of the gamma rays emitted in the decay of radioactive sodium to magnesium they found two very satisfactory examples of pair production in the field of an electron. Pair production can occur only in the field of a third particle which must be present to balance the momenta of the reacting entities. Pair production has been found frequently associated with a heavy nuclear particle, but has been poorly supported by experiment in association with an electron. According to F. Perrin, the minimum energy of a gamma ray which can create an electron-positron pair in the field of an electron is 2,040,000 electron volts. Since radioactive sodium gives off a gamma ray of energy 2,600,000 electron volts, there is enough for the production of a pair, with some left over to give well defined tracks. Since the electron in whose field the pair production occurs has to carry away momentum, three tracks should appear in the cloud chamber photographs. Two superb examples of such triplets were found by Ogle and Kruger, whose measurements of the tracks confirmed Perrin's prediction of the threshold value, 2,040,000 electron volts, within a few per cent.

After a wartime period of intentional suppression, a few articles were being published giving new information on the subject of fission. From Niels Bohr's laboratory in Copenhagen, N. O. Lassen sent a report to the *Physical Review* concerning the state of ionization of the fragments of the uranium atom as they fly apart. He made measurements of their charges by bending them in the magnetic field of the cyclotron which itself produced the neutrons necessary to accomplish the disintegration. It might be guessed that the violence of the nuclear explosion would leave the fragments in a very high state of excitation. Lassen found that, if krypton were taken as representative of the lighter fragments, then the krypton atom was stripped of 20 of its normal complement of 36 electrons; and that barium, frequently taken as typical of the heavier fragments, lacked 22 of its normal complement of 56. Such high states of ionization are not found in any other laboratory experiments, but correspond to temperatures such as are found in the interior of stars. Furthermore, the numbers 20 and 22 just quoted must be taken as approximate only, for undoubtedly the flying fragments gain and lose electrons along their paths. In support of this statement, it will be recalled that P. Kapitza showed, as long ago as 1925, that even alpha particles exhibit the same behaviour.

Although uranium and plutonium were the only elements from which nuclear energy could in 1945 be released in large amounts, it was to be expected that other more common elements would be similarly useful when more is known about their nuclei. Edwin M. McMillan's proposed synchrotron might possibly open the way toward the new knowledge. The synchrotron, still in the designing-room stage, is a combination of E. O. Lawrence's cyclotron and Donald W. Kerst's betatron. With it, McMillan believed that accelerated heavy particles in the 1,000,000,000-volt range may be produced. The laboratory limit in 1945 was less than 100,000,000 volts.

With the story of the atomic bomb in mind, and the large

scale production of the new elements neptunium (93) and plutonium (94), scientists were scarcely surprised to hear that two more transuranic elements, numbered 95 and 96, had been manufactured on a laboratory scale by G. T. Seaborg. Though the quantities produced were minute, enough was learned of their properties to prove that traces of them exist in naturally-occurring radioactive ores.

**Cosmic Rays.**—As the emphasis in this review indicates, the focus of scientific attention in 1945 was in nuclear problems. An indirect attack can be made from the study of cosmic rays which include particles (uncontrolled, to be sure) with energies of thousands of millions of electron volts. The origin of the rays was still a matter of debate. R. A. Millikan, H. V. Neher and W. H. Pickering found time to analyze the records of ionization obtained in 1940 by high free-balloon flights at various places in the U.S. and Canada. The results, they believed, supported the theory, advanced by them in 1942, that cosmic rays arise in interstellar space from the annihilation of atoms of helium, carbon, oxygen, nitrogen and silicon sparsely distributed there. Such an origin must produce primary rays with a discontinuous energy spectrum, whose existence is borne out by the rapid increase in cosmic ray intensity which occurs at certain definite geomagnetic latitudes. The magnetic field of the earth acts as a gigantic analyzer of the rays.

This point of view should not be taken as the only explanation of the observed effects. For example, S. Kusaka calculated the intensity of cosmic radiation to be expected at various latitudes on the assumption of a special, but reasonable, continuous energy spectrum of the primary rays. His calculations showed that the expected intensity of the rays would everywhere agree with the intensity actually observed by Millikan, Neher and Pickering. Apparently the methods of measurement in 1945 were scarcely selective enough to distinguish between the two theories.

In any one locality, the intensity of cosmic rays is very irregular, from instant to instant. This variation is due partly to the occurrence of showers of particles, which step up the local ionization manifold. The simultaneity of the shower particles is so marked that there is no doubt that all the particles are triggered off by one master act, which, in view of the large energy involved, must be nuclear. Lloyd G. Lewis measured these bursts of ionization simultaneously in two large chambers separated by a metre or more, at various altitudes, with a view to finding out if the showers were narrow bundles of particles, or widely spreading cones. His measurements showed that the high density region of a shower was usually of comparatively small extent. From such observations it must be concluded either that the showers do not travel very far, or that their component particles travel in almost parallel lines. The former alternative seemed the more reasonable, and it was thus established that these showers must "originate far below the top of the atmosphere, which means that they must be started by high energy electrons or photons of secondary origin. A possible process which could produce electrons at great depths below the top of the atmosphere is the disintegration of a mesotron of very short mean life." The existence of such mesotrons was proposed in Christian Moller and L. Rosenfeld's theory of nuclear forces. Here the emphasis is on the secondary nature of showers. Primary cosmic rays coming from outer space are not directly responsible for them.

**Miscellaneous Topics.**—Other subjects which may interest the reader with a liking for experimental work are Kathleen Lonsdale's work on the perfection of crystals, G. A. Bowden's on the mechanism of lubrication, C. F. Kettering and J. Scott's on the  $e/m$  ratio of the carriers of electricity in metals and M. L. Pool's on the use of the Cauchois spectrograph in experi-

ments on artificial radioactivity. On the theoretical side notable contributions to physics are E. A. Milne's developments of his kinematical theory of relativity, Paul Kirkpatrick and Lucile Wiedmann's contributions to the theory of production of X-rays, and various papers on nuclear theory.

**BIBLIOGRAPHY.**—The indexes of *Nature*, vols. 155 and 156, and of *The Physical Review*, vols. 67 and 68 form reliable starting points for further reading.

**FILMS.**—*Electrodynamics; Electrons; Electrostatics* (Encyclopædia Britannica Films Inc.). (T. H. O.)

**Physiology.** **Negative Pressures from Ciliary Action.**—A. C. Hilding demonstrated that ciliary action in the respiratory tract is able to move mucus plugs in such a manner that the plugs act as a piston. Negative pressures as high as 60 mm. of H<sub>2</sub>O behind the mucus plug could be produced in the sinuses of the dog by this mechanism. Formerly it had been taught that the negative pressure developing behind an obstruction in a bronchus or bronchiole, causing collapse of a portion of the lung, was due entirely to the absorption of the trapped gases.

**Cardiac Output in Man.**—Opportunity for accurate calculation of cardiac output in man arose from the technique of obtaining mixed venous blood by threading a catheter through an arm vein into the right ventricle of the heart. By comparing the oxygen content of arterial blood, obtained by arterial puncture, with that of the mixed venous blood, the arteriovenous oxygen difference may be calculated directly instead of by the conventional method which derives this value by calculation from the rate of absorption of a gas such as acetylene. By this new method average values of the order of 3.2 litres per square metre per minute were obtained, this being about 1 litre per minute greater than the values obtained by the gas absorption method.

**Dental Caries.**—The saliva of persons without dental caries was shown to contain enzymes which deaminate amino acids. This enzyme was deficient in the saliva from the mouths of persons with caries. It had been shown that the ammonia formed by this process is capable, even in dilute solution, of inhibiting the growth of *Lactobacillus acidophilus* and also of preventing fermentation of glucose by saliva. *Lactobacillus acidophilus* was shown to be notably absent from the mouths of patients who had no active caries.

**Emotions and Body Temperature.**—N. Kleitman performed extensive studies of body temperature on two young ladies who attended motion picture shows frequently. A very significant increase in the mean body temperature occurred during attendance at the "movies" in both cases.

**Human Vision.**—Careful studies by G. Wald revealed that persons in whom the lens has been removed from the eye were able to see objects clearly in ultraviolet light to which the person with intact ocular lenses was almost completely insensitive. In the normal individual the lens absorbs almost all of the light in the ultra-violet portion of the spectrum so that very little of it reaches the retina.

**Colour Vision.**—The older theories of colour vision were entirely revised through electrophysiological studies of the action potentials of optic nerve fibres. It was shown that the retina contains "dominators" responsible for the white sensation and at least six or seven "modulators" which are responsible for colour sensations.

**Central Nervous System.**—It was known that the bulbar portion of the brain stem has an excitatory influence on motor activity. It was shown that this part of the brain can also produce a very pronounced general inhibitory effect.

**Acidification of Urine.**—The kidney is capable of excreting large quantities of acid; however, the mechanism whereby this

is accomplished was obscure until recently (1945). The research of R. F. Pitts revealed that the acidification of urine does not depend upon reabsorption of phosphate or upon filtration of carbonic acid as was previously suggested. The acidification of the urine takes place in the distal portion of the renal tubule and is now believed to be effected by the intracellular formation of hydrogen ions from carbonic acid formed by the carbonic anhydrase known to be present in these cells. The hydrogen ions are exchanged for sodium ions of the glomerular filtrate across the cell membrane.

**Revival of Organisms.**—V. Negovsky and his coworkers revived dogs after a state of clinical death (cessation of respiration and cardiac arrest) had been present as long as eight minutes. Some of these animals died soon after revival, others survived indefinitely. Revival was accomplished by the use of a perfusion pump to replace the action of the heart, artificial respiration and stimulant drugs.

**Recovery from Malnutrition.**—Controlled studies of prisoners of war from German prison camps showed that in cases of uncomplicated malnutrition recovery was rapid and complete when the subjects were placed upon a liberal, complete diet. The more severe cases which were unable to tolerate sufficient food orally to allow recovery were greatly aided by the use of intravenous solutions including blood plasma and whole blood.

**Placental Transmission of Phosphate.**—By the use of radioactively "tagged" phosphorus molecules G. Hevesy was able to trace the persistence of these original phosphorus atoms through three generations of mice. The concentration of radioactive phosphate in the granddaughter mice was found to be six-tenths of 1% of what it had been in their mothers. Of the radioactive phosphorus present at birth, 40% was still present at the age of three months.

**Muscle Physiology.**—A previously unknown protein from muscle, called "actin," was described by A. de Szent-Gyorgyi and H. Staub. This substance manifests contraction when placed in an extract of muscle tissue. Myosin, the previously described muscle protein, is dispersed in particles which are attached to the actin filaments in a spiral pattern which much resembles a winding staircase, the actin particles forming its axis and the myosin particles its steps. When the muscle contracts the complete system assumes the shape of a corkscrew. Muscular contraction is believed to be due to combination of actin with myosin and conversely relaxation is accounted for by dissociation of these two proteins. These processes are normally controlled by the concentration of potassium and of adenosintriphosphate in the muscle.

**Physiologic Effects of Radar.**—The ultra-high-frequency radio waves used in radar transmission were alleged to be able to produce mild headache in humans exposed to them. Furthermore, it was suggested that they also interfere with the ability of homing pigeons to find their way home.

**Pittsburgh.** The end of World War II in 1945 brought relatively minor problems of reconversion to Pittsburgh. Production in the previous year reached an all-time peak, but the bulk came from plants readily adaptable to peacetime activity.

During the war population increased little above 671,659, as enumerated in 1940. This was slightly less than one-half the population of Allegheny county. City area was approximately 54.3 sq.mi., and county area 747 sq.mi.

The monthly production index of the Bureau of Business Research of the University of Pittsburgh averaged 170% of the 1935-39 average or 11% below 1944. In the first 11 months steel operations were 81% of capacity as compared with 92% in the preceding corresponding period. Production of bituminous coal, historically important in the region, was estimated to be 11% below that of 1944. Approximately one-fourth of the national bituminous coal output comes from Pennsylvania, chiefly from southwestern Pennsylvania.

Employed persons in the 11-county Pittsburgh district, as reported by the *Pittsburgh Business Review* for 11 months, numbered 118% of the 1939 average, 9% less than in 1944. The review estimated 515,000 employed persons in Allegheny county, about 55% of the district total. Pay rolls for 11 months averaged 198% of 1939, a decline of 11% in the year.

Retail trade in Allegheny county was 5% above 1944, and department store sales increased 12%. Dollar volume was 60% higher than for 1939, or approximately \$835,000,000.

Late in the year Pittsburgh and Allegheny county turned to development programs long in preparation. The governor of Pennsylvania announced readiness of the commonwealth to finance, with federal aid, the major share of a \$57,000,000 program of public works in the district. Included were a parkway extension of highway routes 22 and 30 into and through the city from east to west at a cost of \$23,000,000, and a memorial park commemorating Fort Duquesne and Fort Pitt at the confluence of the Allegheny and Monongahela rivers. The Allegheny Conference on Community Development carried on an extensive program of community studies. Encouraging progress was made in attacks on long-time problems of smoke control and stream pollution. A community trust, named the Pittsburgh foundation, was established.

David L. Lawrence was elected 47th mayor, the fourth Democrat to hold that office, succeeding Cornelius D. Scully.

(C. F. Ls.)

**Pius XII** (1876- ), the 262nd successor of St. Peter in the see of Rome, was elected by the cardinals in conclave on his 63rd birthday, March 2, 1939, and was crowned as pope on March 12. (For details of his early life, see *Encyclopaedia Britannica*.)

Relief of war victims continued to be a matter of grave concern to the pope during 1945. From his relief fund he contributed 5,000,000 lire for the people of Sicily and 200,000 francs for Lithuanian refugees. The pope praised the work of the United Nations Relief and Rehabilitation administration, and on July 10 received in audience Herbert Lehman and other officials of U.N.R.R.A. In November he expressed appreciation of the charity of Catholics in the United States in aiding war-torn nations.

On Dec. 1, receiving a group of Jewish refugees from German concentration camps, the pope stressed the fact that the Vatican must stand aloof from disputes about territory but re-

mains steadfastly opposed to persecution. The Jews of Italy again thanked the pope for the self-sacrificing aid given during the war. When received in private audience on Nov. 26, Prof. Eugene Zolli, former Grand Rabbi of Rome and in 1945 of the staff of Rome university, presented the pope with a copy of his book on anti-Semitism. Several months earlier the pope had vigorously condemned the idolatry of absolute nationalism and racism. Writing to the hierarchy of Czechoslovakia he advised the people to shun hate and to exercise their newly regained freedom in a spirit of love.

In May the pope appealed for universal prayer that the war might quickly end. Previously he had urged peace without oppression and justice for the small and medium nations. After the German surrender the pope publicly thanked God for the war's end and took the occasion to plead for a better world and to ask all people to dedicate themselves ardently to the work of reconstruction. In June it was revealed that the pope had defied Mussolini to jail him for repeated peace pleas.

During 1945 the pope granted an extraordinary number of public and private audiences. On March 31, thousands of troops were received in a general audience commemorating the first Easter celebration after the liberation of Rome. To visiting Allied physicians the pope spoke of the duties of their high mission, and to athletes he pointed out the opportunities for character formation in athletics rightly used. Several committees of U.S. congressmen and senators visiting Europe were received in audience. Addressing the congressional committee on postwar economics on Sept. 28, the pope declared it was encouraging that statesmen and heads of labour were coming to realize more and more clearly that these problems could not adequately be solved without enlisting the help of religion. Conferring with U.S. film executives in July, the pope outlined the moral duties of movie producers.

In September, of visiting radio executives he asked that they curb the abuses of the radio. On Sept. 13 the pope conferred in private audience with Gen. Dwight D. Eisenhower on European conditions.

On the occasion of President Roosevelt's death the pope expressed his sorrow, paying a tribute to the statesmanship of the president.

A number of papal statements in 1945 touched on moral aspects of reconstruction. Addressing a delegation from the Catholic Workers association on March 11, the pope promised labour his support. Indicating that new forms of socialization might be expected, he warned that difficulties of labour and management must be solved in the general interest of the community. In a message to the National Catholic Action congress in Rome on April 28 the pope forbade endorsement of social theories or systems prohibited by the church. At the opening of the Sacred Roman Rota on Oct. 2 he explained the differences between the judicial powers of the church and those of civil government and rejected authoritarian and totalitarian concepts of the state. On Oct. 21 the pope spoke of the social and political duties of women and impressed on them the obligation of taking active part in public affairs, especially by intelligent use of the ballot. On Dec. 13, the fourth centenary of the Council of Trent, he recalled that the church has a source of unity which resists all attacks upon it.

In his Christmas message, the pope spoke of the supernatural quality of the church which was his justification for appointing cardinals from every continent and from many nations. The conditions of a true and lasting peace he declared to be collaboration and good will among all; elimination of artificial censorship, of prejudice and one-sided opinions, and destruction of the totalitarian state. (See also ROMAN CATHOLIC CHURCH; VATICAN CITY STATE.)

(J. LAF.)

**Plague, Bubonic and Pneumonic.** Small outbreaks of plague, single cases or a number, appearing from time to time throughout the year 1945 were reported from 30 countries or states of Africa, Asia, Asia Minor, North and South America, Europe and Oceania.

At Dakar, French West Africa, the U.S. military authorities resorted to spraying and dusting dwellings and public buildings with DDT (dichloro-diphenyl-trichloroethane) for the suppression of fleas in the control of an epidemic in which there were 567 cases with 91% mortality. However, the application of the compound was made during the decline of the epidemic, and though the number of fleas was reduced, its value as a control measure was undetermined.

During an outbreak at Tengchung, Yunnan, China, 102 cases with 23 deaths occurred between Oct. 1944 and Jan. 1945. The highest incidence was among children and young adults, but the highest case mortality rate (50%) occurred among those more than 40 years of age. Sixty-nine of the patients had had one to four prophylactic inoculations. Ten of these died, while among 29 uninoculated there were 12 deaths.

Studies were made in the laboratory to evaluate the relative importance of four different species of fleas in the transmission of plague. The measure of vector efficiency was taken to be a numerical value representing the average number of transmissions effected by an individual flea of any species. This numerical value was the product of three "potentials": infection potential, vector potential and transmission potential; or, the percentage which became infected, subsequently infectious and the frequency with which they transmitted the infection. Trials of individual fleas were made of *Ctenocephalis felis*, *Hoplopsyllus anomalus*, *Xenopsylla cheopis* (Indian rat flea) and *Dipentulus montanus* whose hosts are ground squirrels of the genus *Citellus*. It was concluded that the efficiency of *D. montanus* was about twice that of *X. cheopis* (0.84 to 0.43) which was accepted as the most efficient vector.

Penicillin was tested for its therapeutic value in plague in guinea pigs, and found not effective under the conditions of the experiments. The animals were inoculated by either of three routes, subcutaneously, intramuscularly or intraperitoneally, and the drug was administered by either of the latter two. Divided doses of 1,000 or more units were repeated during the period of treatment which was initiated either before, simultaneously or after inoculation in different groups. The respective number of units given the three groups were 1,000 to 3,000; 4,000 to 18,400; and 1,000 to 300,000.

Field trials of sulfadiazine and sulfathiazole in the treatment of cases suggest that sulfadiazine is the drug of choice, and a schedule of treatment seemed to be in process of adoption. An initial dose of 4.0 gm. is followed by doses of 1.5 gm. to 2.0 gm. every four hours until the fever subsides. The maintenance of a blood level of 10 to 20 mgm. per 100 cc. of blood is used as a guide to dosage. When the fever has returned to a normal level 0.5 gm. are given every four hours for 10 to 15 days. The results of a test in which each drug was administered to one half of 180 patients, with strict alternation as they were admitted, were 78% survivals under sulfadiazine and 66% under sulfathiazole. If those who were moribund upon admission were excluded the rates of survival were 88% and 79%. Among 169 patients previously admitted and treated with iodine preparations there were 47% who survived. Other trials on fewer patients and without such systematic control also indicated that this drug is of greater value than those previously used.

**Plastics Industry.** The end of 1945 found the plastics industry in the U.S. vastly extended in productive facilities, manufacturing capacities and similarly advanced in engineering techniques and technical achievements.

Some indication of its remarkable growth during World War II is the War Production board report made in the fall of 1945, which showed a 325% increase in the 1944 dollar volume of plastics and synthetic resins over 1939. Compared with the \$71,900,000 evaluation for 1939, the 1944 estimate was \$332,000,000. The total production for 1944 amounted to 784,137,000 lb. or 20% more than in 1943. Of this figure, 404,105,000 lb. were of the so-called coal-tar derivation, while 380,032,000 lb. were of the noncoal tar (noncyclic origin). In addition, more than 80,000,000 lb. of cellulose base plastics were used.

In 1944, protective coatings led all other uses of synthetic resins, production of this use amounting to 293,000,000 lb. The second largest individual use of resins in 1944 was for moulding and casting which consumed about 120,000,000 lb.

No exact statistics were available for 1945 but the rate of production of all forms of plastics at the end of World War II was said to be approximately 900,000,000 lb. per year, with an increase of 300,000,000 lb. anticipated for 1946.

In addition to its physical growth, the plastics industry was enlarging its range of utility, particularly improving the engineering and construction qualities of its materials in 1945.

**Materials.**—Because of wartime restrictions on new plant facilities and preoccupation of engineering staffs with capacity production of established products through V-J day, and in the immediate reconversion period thereafter, there was only one strictly newcomer in the plastics family during 1945. The commercial production of cellulose propionate (Forticel) was announced late in the year. This plastic became available at a competitive price as a result of the development of a new process for making propionic acid from cheap hydrocarbons obtained from natural gases and petroleum. Its uses in the form of moulded products, sheets and films were expected to parallel those of other cellulosic plastics. Lower moisture sensitivity and a greater inherent plasticity endow this material with better dimensional stability than cellulose acetate plastic.

Developments in other cellulosic plastics included a flame-resistant composition, thermoplastic laminates and carboxymethyl cellulose.

The outstanding qualities of polyethylene as a high-frequency dielectric as well as its physical and chemical properties kept this material in the limelight. A new development was the production of polyethylene film for packaging the antimalarial mepacrine. Its water and fungal resistance, flexibility over a wide-temperature range and heat-sealability are important attributes for this job.

Of special significance was the release from its wartime secret status of information regarding improved transparent plastics for optical purposes. A plastic lens, made from polystyrene

and cyclohexyl methacrylate, was manufactured for use in military cameras and sighting equipment. A new allyl ester resin (Kriston) was introduced which provides a thermosetting plastic of excellent clarity and a refractive index of 1.5483 at 28°C., which is higher than that of most optical glass. Shrinkage on polymerization is very low for this material, ranging from 3.25 to 4%. Other factors to wider usefulness for transparents were improvements for moulding transparent methacrylate parts and the development of two protective coatings for clear methacrylate windshield sheet stock.

The silicone polymers continued to grow and silicone rubber gaskets were used on searchlights and on the turbo-superchargers in B-29 bombers. The heat-resistance of the material was emphasized in the proposed application of enamels made from silicone resins for baked coatings on ranges, radiators, heat exhaust pipes and stacks. Treatment of textiles, mirrors, windshields, wallpaper, etc., with organosilicon compounds rendered their surfaces water-repellent.

Melamine resins were used in a number of new and interesting applications. Decorative sheets which could be applied to laminates at pressures as low as 250 lb. per square inch were manufactured. Panel boards prepared by bonding glass fabric with melamine resin were developed to provide navy ships with a fire- and arc-resistant laminate of high impact strength.

Naturally occurring phenolic compounds present in lignites received consideration as a source of insulating materials. Another source of complex phenolic products from natural material was lignin which was investigated very extensively as a raw material for the manufacture of plastics. Lignocelluloses occurring in agricultural wastes were also used in the preparation of moulding compounds.

Other natural resins and plastics studied during 1945 included cashew nutshell liquid, sugar and sugar by-products and rosin esters. Keratin was used as a modifier for phenolic plastics.

Wood pulp as a reinforcing filler in the formation of tough plastics received considerable attention. Wood itself, with its cellular structure relatively undisturbed, became an important addition to the reinforcing elements used in the plastics field. In the impregnation and moulding of solid wood to final form for use as brush backs, knife handles, knobs, etc., the inherent natural beauty of the wood is retained and resistance to water, acids, alkalis and heat is imparted. The laminated type of moulded wood was widely employed for fan blades, aeroplane propellers and the like. The status of wood as a construction material for aircraft was also of interest to the plastics industry because of the predominant role of synthetic resins as bonding and coating agents.

Other types of reinforcing materials such as paper, cotton and glass fabrics continued to improve but there was marked activity in the development of synthetic core materials (foamed plastic) for sandwich type structures. Interest in this field was stimulated by the army air force tests of a sandwich fuselage structure which proved to be 50% stronger than the standard metal section. In addition to aircraft parts these plastic foams and sandwich materials had possible outlets in lightweight furniture, refrigerators, stoves and household insulation.

Important industrial developments in German plastics during World War II were disclosed to U.S. industry as a result of investigations by government-sponsored technical teams. Several new types of plastic which were not manufactured in the U.S. were revealed, namely, polyurethanes, polyvinyl ethers and polyethyleneimine, as well as many different types of copolymers of vinyl chloride, styrene and acrylic esters.

**Cellophane.**—During World War II cellophane was required to assume an important role in fulfilling the requirements of a functional protective wrap for critical material in war plants

and battle areas and was used as an electrical insulating and identification material, in addition to its normal function of protecting essential civilian foodstuffs, tobacco and drugs.

Essentially regenerated cellulose in sheet form, combined with a carefully regulated proportion of softening or plasticizing agent, cellophane can be made moistureproof and even flameproof. Cellophane is transparent, colourless, slow-burning and hygroscopic, or water-wettable. The latter factor makes it possible to use the film for products having high fat content but it also results in a film that will not resist moisture unless coated to impart that property. The moistureproof film was most widely used and, by varying the lacquer coating, it was possible to produce film having high or low moistureproofness and with or without heat-sealing properties.

While cellophane was the most widely used of the transparent films, new plastic films like polyethylene and polyvinyl alcohol were gaining in importance in 1945 and additional uses were also being developed for cellulosic and vinyl films each of which had special properties that made it suitable for specific requirements.

**Processing and Machinery.**—Strict wartime controls up to V-E day limited the postwar research and developmental efforts of the processing and equipment manufacturing branches of the plastics industry, but in spite of such handicaps engineering and technological progress was steady.

Startling results were obtained by "hy-speed" plunger moulding which offers a mechanism to injection mould, successfully thermosetting materials at a very fast rate of speed and with the use of high-frequency preheating, a pressure type transfer mould and a hydraulic press with an auxiliary downward acting plunger.

Low pressure and contact pressure moulding and laminating continued to predominate in the plastics picture as research and engineering brought out improved resins, developed better reinforcements and more efficient techniques.

Improvements in equipment and methods were seen also in the conventional moulding fields. A plastic moulding machine which combines two types of moulding in one frame, was introduced. It makes possible the application of a combination of injection and compression moulding techniques to thermoplastic moulding, and retains all of the advantages of injection moulding without losing the high pressure on the material that is characteristic of compression.

The moulding of hollow articles by blowing a plastic material into the desired shape (blow moulding) underwent radical changes and opened many possible markets for plastics in the container and ornament trades.

Electronic preheating continued to gain in importance as an adjunct to compression moulding, being used to process approximately 40% of phenolic moulding compounds. Efforts were made to adapt radio-frequency heating to injection moulding machine heaters and a special electrically heated steam generator to service individual compression presses was introduced.

An innovation was frictional welding of thermoplastics. This method heats thermoplastics for welding parts together by rubbing the two pieces together at high surface speeds and quickly applying a pressure of about 300 lb. per square inch for a few seconds.

**Heat Sealing.**—There was considerable experimentation with the heat sealing of plastic films and plastic-coated materials in the fabrication of raincoats, umbrellas, waterproof covers, shower curtains, etc. This method of sealing was well established in the packaging field and was used to weld thermoplastic films which melt or become sticky at temperatures ranging from about 150°–300° F.

The two common types of heat-sealing material were the

lacquer type and the hot-melt type; the former being employed as a heat-sealing agent coated in minute quantities on a film which was not in itself heat-sealable, while the latter were highly oriented films which were joined together under heat and pressure into a watertight, wrinkleproof seal.

The simplest type of heat-sealing machine was the reciprocating or jaw type which in essence comprises two heated metal plates which clamp together. Then, there were rotary sealers which utilized heated rollers through which the material passes on thin endless steel belts which convey the film through heating and cooling zones under pressure. A new rotary type was developed for heat-sealing highly oriented thermoplastic films which have a high softening point.

Other methods of applying heat to certain sealable films made use of high-frequency generators. Generation of heat the electronic way made possible uniform heating throughout the mass of material—ideal for heat-sealing.

**Applications.**—The last year of World War II and the subsequent lifting of censorship rulings turned the spotlight on numerous plastic parts hitherto kept secret by the armed forces. Notable among these were the proximity fuse, rockets, M-74 incendiary bombs, plastic armour for vests and curtains to provide protection against flak, the T-44 frangible bullet and the No. 77 smoke grenade.

There were no disclosures regarding plastic parts used in the construction of the atomic bomb. A comprehensive account was given of the important function of low-pressure moulded plastic radomes in radar, one of the many uses for plastics in radar.

Plastics were also used for insulation on radio equipment, ogives for navy projectiles, impregnation of map paper to produce high-wet-strength paper, desalter bags, melamine trays and tableware.

Another sidelight of the war was the increasing use of plastics by the medical profession for instruments, surgical dressings and prosthetic devices. It was suggested that the technique used for contact moulding resin-impregnated glass fibre ducts for the B-29 might well be applied to produce artificial limbs.

The reconversion to civilian applications was not expected to be too difficult for plastics and its impact was already evident in almost every industry. Many revolutionary changes in textiles were resulting from the use of plastics for synthetic fibres, impregnation and surface treatments of fibres and film coatings on fabrics. The shoe industry was taking millions of pairs of plastic soles annually.

The automotive, boat and building industry were all expected to use large quantities of plastics.

**Industry Projects.**—Of special interest to the plastics industry and its customers was the classification of moulding materials published by the Society of the Plastics Industry. Contributing to the adoption of simple terminology and of recognized standards for plastics, this tabulation presented in chart form, information regarding the principal properties of standard moulding compounds.

Another volume with a similar purpose was the revised comprehensive volume of technical data on plastics published by the Plastics Materials Manufacturers' association which gives an authoritative listing of the properties of all commercial plastics for moulding, laminating, calendaring and extrusion.

were restricted except for ruthenium and palladium. All restrictions were removed in Aug. 1945. (G. A. Ro.)

**Pla y Deniel, Enrico** (1876– ), cardinal archbishop of Toledo and primate of Spain, was born at Barcelona, Spain, on Dec. 17. Ordained at Rome in 1900, he was professor in the seminary of Barcelona until consecrated bishop of Avila in 1918. He was transferred to the diocese of Salamanca in 1935, and elevated to the primate see of Toledo in 1941.

Archbishop Pla y Deniel had been active in the field of social welfare and betterment of the working classes. Under the republic he was subjected to adverse demonstrations, but on the other hand the president, a socialist, publicly declared his admiration for the then bishop of Avila. He is the author of numerous pastorals which, coming from the ordinary of the primate see, attracted considerable attention outside Spain. This is particularly true of his "Thanksgiving" pastoral on the end of World War II, issued in May 1945.

He was named to the College of Cardinals in an announcement of Dec. 23, 1945, and was created and proclaimed cardinal at consistory on Feb. 18, 1946.

**Pneumonia.** During 1945, the incidence and mortality from pneumonia continued its general downward trend. As the year closed, however, there was evidence of the

occurrence of outbreaks of influenza in various parts of the United States and in Europe. This may be reflected in an upward trend in the pneumonia rates for the latter part of 1945 since such a rise usually accompanies outbreaks of influenza. In most areas where the influenza was studied, it proved to be due to the influenza B virus.

In therapy, penicillin occupied the prominent role with regard to the management of cases of pneumonia due to bacteria which are susceptible to that agent, namely pneumococcus, streptococcus and staphylococcus. The influenza bacillus and Friedländer's bacillus which are responsible for a small number of cases are not affected by penicillin so that they still require intensive treatment with the sulfonamide drugs. The latter have also been used frequently in conjunction with penicillin in the treatment of the coccal infections. During 1945 penicillin was still given almost entirely by injection, although evidence was accumulating that cases of pneumococcal pneumonia may respond favourably to treatment with large doses given by mouth under special conditions. Infections with organisms like the staphylococcus which are less susceptible to penicillin require doses that are too large to be effective when given orally, at least with the preparations that became available during 1945.

Evidence has also accumulated which suggests that pneumonia due to penicillin-susceptible bacteria and other lung infections of a more subacute or chronic type may respond favourably to treatment with penicillin given by inhalation. This involves inhalation of a vapour produced by the passage of a stream of oxygen through a concentrated solution of penicillin. Appreciable amounts of penicillin were found to be absorbed from the lung when it was given in this manner. In addition, it was shown by many workers that a large percentage of cases of empyema, one of the most frequent complications of bacterial pneumonia, can be cured by local and systemic treatment with penicillin. Operative procedures which usually entailed the resection of a rib for open drainage and were formerly required to cure these cases may thus be avoided in the majority of patients.

The search continued for the causative agent of the vast number of cases which have gone under the designation "primary atypical pneumonia, aetiology unknown," or commonly called "virus pneumonia." In a review of the status of this subject at the end of 1944, Major John H. Dingle, director of the commission on acute respiratory diseases of the United States army, stated that "no work has yet been reported, and confirmed by other investigators in the field, which describes the isolation in animals of an agent clearly related immunologically to the human disease." Two significant contributions to this subject, however, were published during 1945.

One of them was by members of the commission on acute respiratory diseases. Using untreated and filtered sputums or throat washings, these workers induced illnesses of varying severity in human volunteers that were in every way similar to the cases of atypical pneumonia which had been encountered in the army. The inoculated material was obtained from cases which had been produced in a previous similar experiment. The materials for the latter had been obtained directly from patients in army hospitals.

The second series of studies was reported by workers in California. They transmitted a filtrable virus from certain cases of primary atypical pneumonia to developing chick embryos by amniotic inoculation of bacteriologically sterile lung tissue or filtered sputum. The infected chick embryo tissue produced pulmonary lesions in cotton rats and hamsters similar to those which were produced in these animals by inoculation of infected human materials. The chick material was specifically neutralized by convalescent sera from patients, but not by their acute-phase sera. Passages in cotton rats and hamsters were complicated by infections with spontaneous viruses originating in the animals. In two-thirds of the patients with a diagnosis of primary atypical pneumonia, they succeeded in demonstrating a significant rise in neutralizing antibodies for this virus. One-half of the cases showing such a rise also developed cold agglutinins and agglutinins for indifferent streptococci such as had previously been described in similar cases. Pneumonia caused by pneumococci or by the viruses of influenza or psittacosis did not develop antibodies for the new virus.

Viruses similar to psittacosis and occurring in birds, especially pigeons, also continued to arouse interest. An outbreak of ornithosis similar to that which was described in New York city in 1943 was also studied in a pigeon platoon in the U.S. army. A virus was isolated from the tissues and from visceral lesions of infected birds. This virus produced intranuclear inclusions of the herpetic type and secondary inflammatory reactions. The virus was pathogenic for pigeons and embryonated hens' eggs, but was avirulent for rabbits, guinea pigs and mice. It was smaller and

immunologically different than the psittacosis virus. Both this virus and the psittacosis virus were found to be aetiologically significant in the epizootic, either the one, the other or both being found in different birds.

A small number of cases of human disease presumed to be cases of ornithosis were described in Philadelphia, Pa., late in 1944. They occurred mostly among pigeon breeders or persons who had more than ordinary exposure to such birds. Although viruses were not isolated from any of these cases, considerable sentiment was aroused among the local population in favour of destroying the stray pigeons in that city and in some other cities. There seemed to be no justification, however, for such a move. Proved cases of human disease transmitted from street pigeons are extremely rare, in contrast to the large numbers of cases of virus pneumonia which have been studied and found not to be caused by the pigeon virus. Furthermore, most of the proved cases of ornithosis have had a history of definite exposure to pigeons, usually occupational in character. The killing of stray pigeons would not eliminate the disease from the pigeon lofts of private breeders and it is the latter which have constituted the largest source of the proved cases that have been reported up to the end of 1945.

**Poland.** A republic in northeastern Europe, invaded by the Germans and partitioned by Germany and the U.S.S.R. in 1939; the whole of Poland was conquered by Germany in 1941 after the outbreak of the German-Russian War. The country was finally liberated in January 1945. Area (Sept. 1, 1939) c. 150,820 sq.mi.; pop. (official est. Jan. 1, 1939, including Teschen) 35,100,000. Capital: Warsaw (1,289,000). Other chief cities: Lodz (672,000); Lwow (Lemberg) (318,000); Poznan (Posen) (272,000); Cracow (259,000); Wilno (Vilnius) (209,000). Acting president (1945): Boleslaw Bierut, chairman of national home council (provisional parliament); prime minister: Edward Osobka-Morawski.

**History.**—From Dec. 31, 1944, Poland had two governments—one in Lublin, sponsored by the U.S.S.R. and dominated by the Communist party, and another in London, recognized by the United States and Great Britain. To find a way out of this deadlock Prime Minister Churchill, President Roosevelt and Marshal Stalin decided at the Crimea conference (Feb. 11, 1945) that there should be created a "Polish provisional government of national unity" and the Lublin administration (later transferred to Warsaw) should be reorganized to include "other Polish democratic leaders from within Poland and from abroad." The three powers jointly engaged that "free and unfettered elections on the basis of universal suffrage and secret ballot" should be held as soon as possible. After four months of diplomatic discussion between Moscow, London and Washington about the exact interpretation of the Crimea decision, a Polish round table conference met in Moscow on June 17 to discuss the formation of a new Polish government. Among the leaders from within Poland and from abroad attending the conference were Stanislaw Mikolajczyk, former prime minister of the Polish government in London, and Wladyslaw Kiernik (sent to Moscow by the aged Peasant leader Wincenty Witos), representing the Polish Peasant party, which after Nov. 29, 1944, remained outside the Polish government in London. On June 28 the composition of the gov-

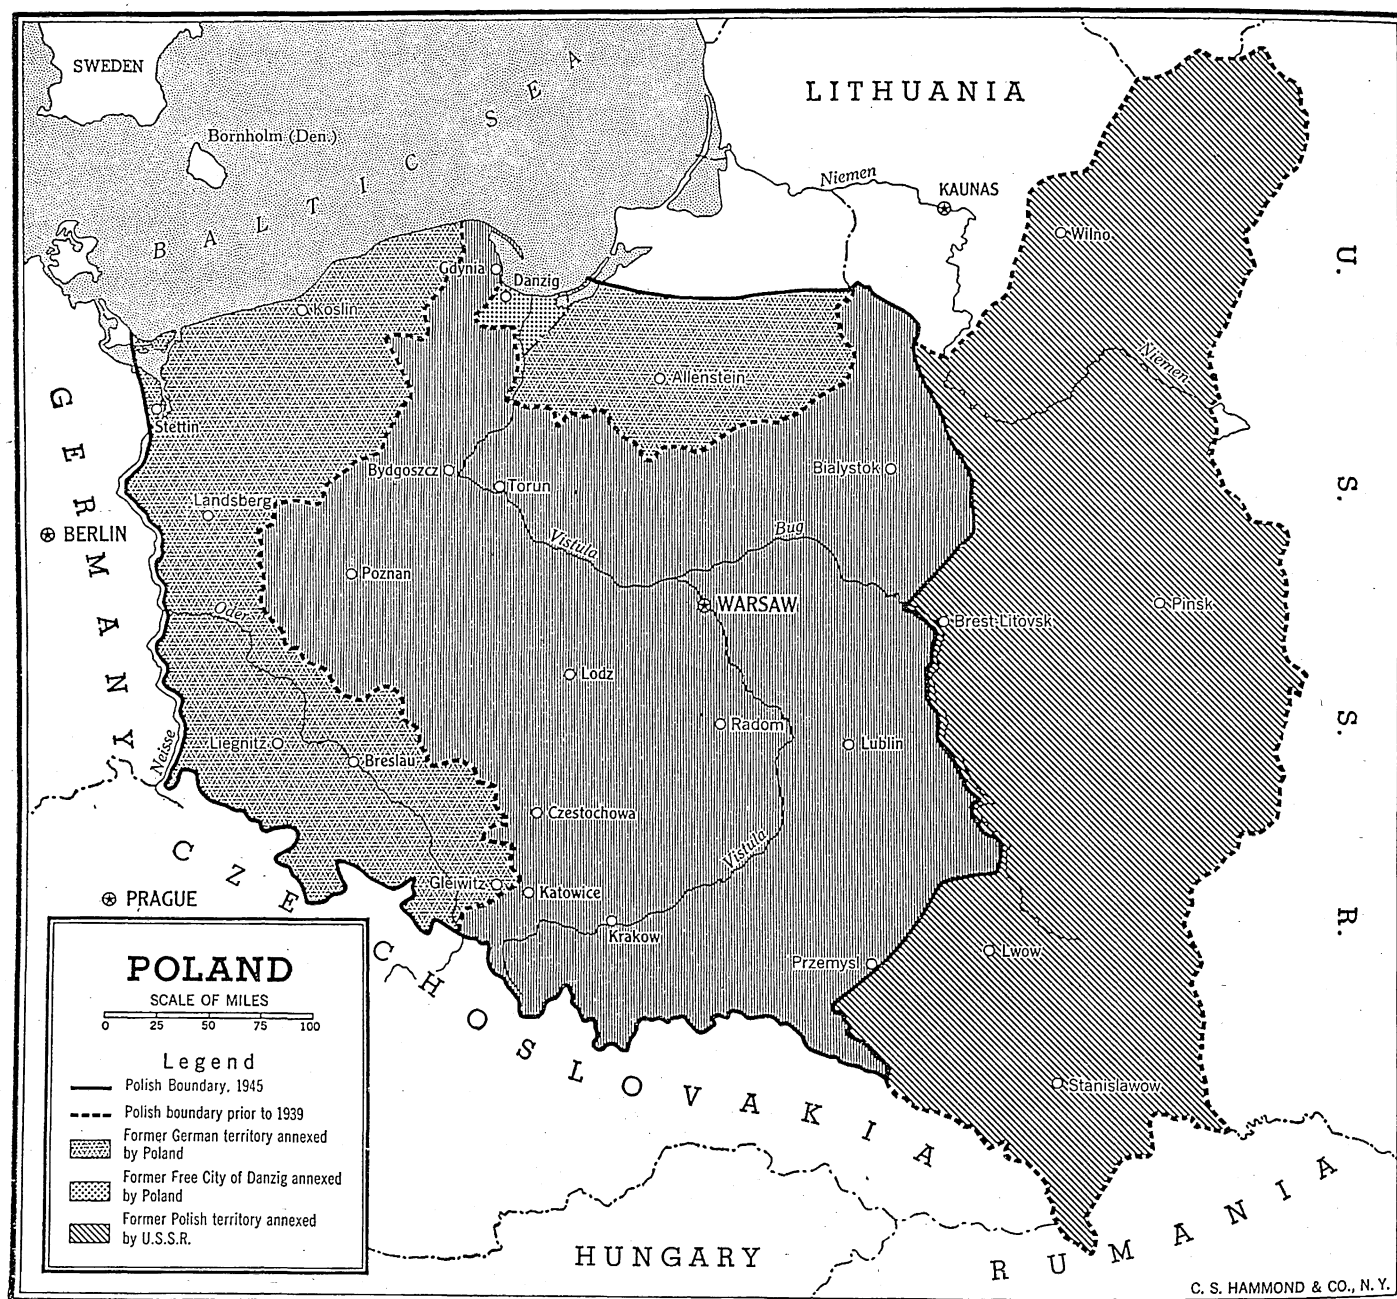

ernment was announced in Warsaw. It showed that the soviet interpretation of the Crimea declaration prevailed. The U.S.S.R. had always maintained that the "Polish government of national unity" should not be an entirely new one, including representatives of existing Polish parties and representative national Polish figures, but that the existing Warsaw administration should be enlarged. Of the 21 members of the cabinet, only five were newcomers, the most important being M. Mikolajczyk, who became second deputy premier and minister of agriculture. Edward Osobka-Morawski, leader of a split Socialist group, remained prime minister.

On June 26, 1945, the Polish government in London, with Tomasz Arciszewski as prime minister, handed to all the governments of the United Nations, except the U.S.S.R., a note protesting against the new government as "illegal," declaring that they would hand over authority solely to a government formed on free Polish soil and which reflected the will of the people, as expressed in free elections. On June 29 Wladyslaw Raczewicz, president of the Polish republic, in a message to the Polish people said that he remained at his post but was ready to hand over office to a successor, "chosen by the nation in democratic elec-

tions, free from violence and threats of any kind."

On July 5 the British and the U.S. governments recognized the Polish provisional government of national unity and withdrew recognition from the government in London. An interim treasury committee was appointed to liquidate the affairs of the London Polish government. Great Britain sent Victor Frederick William Cavendish Bentinck as ambassador to Warsaw and the United States appointed Arthur Bliss Lane as its ambassador. On Oct. 17 Henryk Strasburger presented his letters of credence as new Polish ambassador in Great Britain. In November Oskar Lange, professor at the University of Chicago, who had renounced his U.S. citizenship and resumed his Polish nationality, was appointed Polish ambassador to the U.S.

While the Moscow round table conference was meeting, 16 leaders of the Polish underground were tried before a soviet court on a charge of "organizing terrorist and sabotage acts and of maintaining clandestine wireless stations in the rear of the Red army." Major General Leopold Okulicki, last commander in chief of the Polish home army, was on June 21 sentenced to ten years' imprisonment; Jan Stanislaw Jankowski, deputy prime minister of the Polish government in London and its delegate-

BLOWN-UP PHOTOGRAPH of a wall drawing by a Polish patriot. The photograph was taken during the German occupation of Warsaw and obtained from a member of the underground movement in 1945

general in Poland, to eight years' imprisonment; other leaders received terms of imprisonment varying from four months to five years. Three of the accused were acquitted. In November three of the defendants in the Moscow trial were freed by the Russians and returned to Poland. They were Kazimierz Puzak, of the Socialist party, condemned to 18 months' imprisonment; Kazimierz Baginski, of the Peasant party, condemned to 12 months, and Aleksander Zwierzynski, of the National party, condemned to 8 months.

On Nov. 3 the praesidium of the national council of the homeland (provisional parliament) decided that the following six political parties should be allowed in Poland: the Polish Workers' (Communist) party led by Boleslaw Bierut and Wladyslaw Gomolka; the Polish Socialist party led by Edward Osobka-Morawski and Jozef Cyrankiewicz; the Peasant party led by Wladyslaw Kowalski, the Polish Peasant party led by Stanislaw Mikolajczyk (elected as chairman in place of Wincenty Witos who died in Cracow on Oct. 31 at the age of 71); the Democratic party led by Wincenty Rzymowski and Leon Chajn, and the Labour (Christian-Democrat) party led by Karol Popiel and Zygmunt Felczak. The above decision meant also the stopping of the legalization of the National party led by Aleksander Zwierzynski and Stanislaw Jasiukowicz (sentenced to five years' imprisonment at the Moscow trial) and of the Polish Social-Democratic party led by Zygmunt Zulawski and claiming to represent the real Socialist movement.

Prior to the formation of the Polish provisional government of national unity, Marshal Joseph Stalin, chairman of the council of people's commissars of the U.S.S.R., and M. Osobka-

Morawski, chairman of the council of ministers and minister for foreign affairs of the Polish republic, signed in Moscow, on April 21, a treaty of friendship, mutual assistance and postwar collaboration.

On Aug. 2, 1945, in Berlin, Prime Minister Clement Attlee, President Truman and Generalissimo Stalin published a statement establishing a new *de facto* western frontier of Poland along the rivers Oder and Lausitzer Neisse. On Aug. 16 Vyacheslav Molotov, soviet foreign commissar, and M. Osobka-Morawski signed in Moscow a treaty on the delimitation of the soviet-Polish frontier under which the U.S.S.R. ceded to Poland two small areas east of the so-called Curzon line, one about 50 mi. northeast of Lwow and one in the Bialowieza forest. Under these agreements Poland was shifted westward. In the east it lost 69,860 sq.mi. with 10,772,000 inhabitants, including approximately 3,900,000 Poles; in the west (if the new frontier were recognized by the peace conference) it stood to gain 38,986 sq.mi., which before the war had a population of 8,621,000, including 1,000,000 Poles.

*Repatriation of the Poles.*—There were 989,545 civilian displaced persons and some 150,000 former prisoners of war in western Europe on Oct. 1, 1945. The repatriation of the Poles began only on Oct. 15 on rather a small scale of 3,000 daily. No compulsion was used and up to the end of October about 60% of the displaced persons had expressed their readiness to return.

As to the Polish armed forces, at the instance and with the co-operation of the British authorities, a referendum was held among them to ascertain the number of those wishing to return to Poland immediately. Out of a total of more than 215,000 persons, 37,250 (17.3%) from all areas and units declared themselves ready to return at once.

*Poland's Part in Victory.*—The Polish armies in the west and east played an active part in the operations which resulted in victory in Europe. In the west the 1st Polish armoured division commanded by General Stanislaw Maczek, operating with the Canadian 1st army, reached Wilhelmshaven, Germany, on May 6, 1945, after a brilliant campaign, which started at Falaise, France, on Aug. 15, 1944, and during which the division took more than 13,000 prisoners. In Italy the 2nd Polish

army corps commanded by General Wladyslaw Anders, fighting with the British 8th army, participated in the taking of Bologna on April 21 following a 12-day battle in which the Poles lost 2,000 in killed alone. On the eastern front ten Polish divisions grouped in two Polish armies fought in the army groups of Marshals Georgi K. Zhukov and Ivan S. Konev.

Ten Polish air force fighter squadrons, operating from Great Britain from Aug. 1940 until May 8, 1945, shot down a total of 754<sup>3</sup>/<sub>4</sub> enemy aircraft. Top-scorer of the Polish fighter pilots was Major Stanislaw Skalski, with 19<sup>3</sup>/<sub>4</sub> victories to his credit. Four bomber squadrons took part in 1,468 operations, making a total of 11,681 sorties. They dropped more than 32,000,000 lb. of bombs and mines. During this period, the Polish air force operating from Great Britain lost 1,968 officers, noncommissioned officers and men. The Polish navy lost during the war 1 cruiser, 4 destroyers, 1 mine layer, 2 submarines and 15 smaller craft; a total of 23 ships with an aggregate tonnage of more than 30,000 tons.

A comprehensive analysis of military and civilian casualties suffered by Poland from the outbreak of World War II compiled by the Polish military headquarters in London showed that roughly 10,000,000 people, or more than 28% of the country's prewar population, had been killed, wounded, taken prisoner, deported or sent to concentration camps. Army, navy and air force casualties were estimated at 1,045,000, including 218,400 killed.

**Banking and Finance.**—(In thousands of \$): Revenue (est. 1939-40) 455,400; expenditure (est. 1939-40) 466,219; public debt (March 31, 1939) 995,689; gold reserve (Aug. 31, 1939) 83,062. Bank notes in circulation (Aug. 31, 1939) 361,820. Exchange rate (Aug. 1939) 1 zloty = 18.75 U.S. cents.

**Trade and Communication.**—Foreign trade (in thousands of \$): imports, merchandise (1938) 243,675; exports, merchandise (1938) 222,075. Communications: roads (1937) 36,689 mi.; railways, main lines (1937) 11,223 mi.; shipping (July 1, 1939) 63 vessels, totalling 121,630 tons gross.

**Agriculture, Mineral Production, Manufacturing.**—(In short tons) (1939): wheat 2,502,200; barley 1,631,400; rye 8,411,000; oats 3,174,600; (1938) maize 139,100; potatoes 38,093,500; beet sugar 426,600; coal 42,002,000; petroleum 558,900; pig iron and ferroalloys 1,067,000; steel 1,720,400.

**Pole Vaulting:** see TRACK AND FIELD SPORTS.

**Police.** The sixth and final year of World War II intensified the blackout on police operations. In part this was due to the military occupation of axis countries and their satellites, and in part to an understandable decline in police reports from the powers which still exercised control over their civil police establishments.

Police in countries in or near the theatres of war continued to serve virtually as military aides on the home front. For example, the metropolitan police of London reported 640 air raid alerts during 1944, and increasing police activity with the introduction of the V-1 and V-2 flying bombs.

The close of the war brought few immediate changes in police problems or in police dispositions to meet them, although the quick termination of gasoline rationing in the United States brought response in terms of traffic congestion and highway accidents. In all countries the most pressing questions clustered around basic problems of police manpower, and the ways and means for returning it to peacetime duties. Auxiliary police organizations, set up in many parts of the world to cope with actual or anticipated attack from the air, dwindled away and some were disbanded. This necessary redeployment of civil aides found many police forces ill-prepared to take over impending postwar activities. There was consequent widespread agitation for increases in numerical strength, but little evidence of increased precautions to assure an improved quality of police recruiting.

On April 30, 1945, municipal police forces in the U.S. showed a further decline in numerical strength. The comparisons appearing in Table I serve, however, to emphasize the minor degree of average decline.

Table I.—Numerical Strength of U.S. Municipal Police Forces, 1941-45

(Number per 1,000 inhabitants)					
Population groups of cities					
	1941	1942	1943	1944	1945
Group I—Over 250,000 . . . . .	2.12	2.13	2.07	2.02	1.94
Group II—100,000 to 250,000 . . . . .	1.45	1.50	1.47	1.45	1.42
Group III—50,000 to 100,000 . . . . .	1.37	1.46	1.40	1.36	1.35
Group IV—25,000 to 50,000 . . . . .	1.23	1.29	1.24	1.21	1.22

Special interest attaches to the geographic distribution of police, as arranged by population groups of cities in Table II. It

is there apparent that not only geographic location but size of city may have some influence on the numerical strength of a local police establishment. In general the largest quotas of police were found in the northeastern sector of the U.S., while the decline in police ratios in step with declining size also was too striking to be missed.

Table II.—Geographic Distribution of the Numerical Strength of U.S. Municipal Police Forces, Arranged by Population Groups, 1945

Geographic divisions	(Number per 1,000 inhabitants)				General Ratio
	Group I over 250,000	Group II 100,000 to 250,000	Group III 50,000 to 100,000	Group IV 25,000 to 50,000	
New England . . . . .	2.58	1.87	1.61	1.45	1.85
Middle Atlantic . . . . .	2.15	1.56	1.51	1.33	1.96
East North Central . . . . .	1.84	1.11	1.27	1.03	1.55
West North Central . . . . .	1.68	1.07	0.95	0.91	1.37
South Atlantic . . . . .	2.14	1.42	1.31	1.37	1.67
East South Central . . . . .	1.09	1.21	1.32	1.26	1.18
West South Central . . . . .	1.31	1.28	1.19	1.11	1.25
Mountain . . . . .	1.34	1.16	1.28	1.03	1.21
Pacific . . . . .	1.80	1.59	1.36	1.34	1.68
Average . . . . .	1.94	1.42	1.35	1.22	1.68

Such averages illuminate the general situation, but do not of course reflect the condition in any given community, and there were many of these, both large and small, where the manpower loss was quite substantial. This was particularly true of U.S. state police organizations, which continued to operate at manpower levels that were far below the prewar average. Early return of police in the military services represents the most obvious and the soundest approach to a restoration of numerical strength, but as the year 1945 ended it seemed unlikely that the efforts of police administrators to secure preferential treatment in the military discharge of police officers would succeed.

With police equipment everywhere heavily deteriorated due to deferred maintenance and replacement, police systems throughout the world were busily engaged in appraising the prospects for securing surplus but serviceable military equipment that might prove adaptable to police requirements. Various types of motor equipment and of firearms were particularly in demand, while the possible future use of the so-called "walkie-talkie" radio sets inspired wide but inconclusive speculation in police circles.

Police effectiveness as measured by the percentage of reported crimes that are cleared by arrest showed no marked changes from prior levels. Table III presents the situation in U.S. cities.

Table III.—Per Cent of Crimes Cleared by Arrest in United States Cities 1941-44

Offenses	1941	1942	1943	1944
Murder and non-negligent manslaughter . . . . .	88.1	90.6	90.5	90.8
Negligent manslaughter . . . . .	86.6	86.1	84.0	81.5
Rape . . . . .	76.2	81.2	74.0	74.8
Robbery . . . . .	40.4	43.3	38.1	38.7
Aggravated assault . . . . .	75.0	80.5	73.7	75.7
Burglary; breaking or entering . . . . .	32.0	31.5	30.7	31.6
Larceny (except auto theft) . . . . .	22.7	25.0	24.1	23.6
Auto theft . . . . .	24.4	24.6	26.5	24.4

Notable, as always, was the small proportion of clearances of crimes against property. Since these, taken together, represent about 95% of all reportable offenses, the continuing failure to solve a larger proportion might well be a factor contributing to the high crime rates which prevailed in the U.S.

The first postwar congress of the International Association of Chiefs of Police was held at Miami Beach, Fla., during Dec. 1945. Brigadier D. C. Draper of Toronto, Canada, presided. Greatest single concern of the membership, as reflected in the papers read and discussed, was the extent and character of the traffic problem beginning to emerge. In general the sessions served to emphasize the increasing awareness of police administrators of the existence of many problems that are common to them all. The state and provincial section of the association continued to display special acuteness in this regard, and carried

on its own program of discussions which were supplementary to those of the general association. The next congress of the association was scheduled to be held in Mexico City in 1946. (See also CRIME; FEDERAL BUREAU OF INVESTIGATION; KIDNAPPING; SECRET SERVICE, U.S.)

**BIBLIOGRAPHY.**—*Uniform Crime Reports* (quarterly) for 1941, and (semiannually) for 1942, 1943, 1944 and the first half of 1945 (Federal Bureau of Investigation, Washington, D.C.); *Municipal Year Book, 1945* (International City Managers' Association, Chicago); *Report of the Commissioner of Police of the Metropolis for the Year 1944* (London, 1945); *The Police Yearbook, 1944* (International Association of Chiefs of Police, Washington, 1945). **Political Parties, U.S.:** see COMMUNISM; DEMOCRATIC PARTY; ELECTIONS; REPUBLICAN PARTY; SOCIALISM.

**Polo.** After the end of World War II, the United States Polo association made plans for the revival of the sport. These plans included the resumption of large-scale polo, with special emphasis on low goal polo events in 1946 to encourage and develop younger players, who had not taken up the sport because of the game's virtual standstill through the war years.

There was also the possibility of visits by Mexican and Argentine teams to stimulate interest in the game and provide new ponies to the badly depleted U.S. supply. A good start had been made in 1945 toward returning polo to its prewar popularity, and the officers of the governing body of the sport felt that the game would thrive and grow in the years ahead. Florida and California staged their first formal polo in four years at the end of 1945. (R. F. K.)

**Portugal.** A republic of western Europe, forming part of the Iberian peninsula and bounded on the N. and E. by Spain and on the S. and W. by the Atlantic ocean. Area (including Azores and Madeira), 35,424 sq.mi.; pop. (census Dec. 12, 1940), 7,722,152. Chief towns: Lisbon (cap. 709,179);

Oporto (262,309). President: Gen. Antonio Oscar de Fragoço Carmona; premier in 1945: Dr. Antonio de Oliveira Salazar; language: Portuguese; religion: Christian (mainly Roman Catholic).

**History.**—The last months of World War II in Europe witnessed some striking contrasts in Portugal. In Jan. 1945 the Luft-Hansa was accelerating its services between Germany and the peninsula. Soon afterward, Germans were reported to be busily transferring their money into tangible assets. But, immediately after V-E day, the Portuguese government closed the German legation and consulates and sequestered all German property, whether or not owned by the reich, claiming to be the first neutral government to have seized German private property.

The budget for the year 1945 showed a surplus of £1,250,000, which compared with an estimated surplus of only £9,000. After the defeat of Germany, textile mills received numerous orders from the United States for the liberated countries and from France for North Africa. In other respects, too, trade improved. But the cost of living remained very high; many kinds of food were unobtainable; and the influx of workers into the large towns had caused a serious housing shortage and stimulated the construction of housing estates which was progressing rapidly.

At the end of September it was announced that the national assembly was to be dissolved and general elections held on Nov. 18. The press censorship was relaxed and new political parties were to be allowed so long as their programs came within the framework of the existing regime, but a widespread opposition desire for the postponement of the elections by six months and the reopening of the electoral register was disregarded. During October opposition to Dr. Salazar developed considerably and numerous meetings were prohibited by the government.

Opposition to Dr. Salazar therefore took the form of a boycott of the elections, and the only candidates presented were from the government's party, União Nacional. The result was therefore a foregone conclusion. The government subsequently claimed to have had the support of two-thirds of the electorate but at the beginning of Dec. 1945 no exact figures had been given. (E. A. P.)

**Education.**—Elementary (1942-43) schools 7,714, scholars 542,925; secondary schools 42, scholars 15,346; universities 3, students 9,927.

**Banking and Finance.**—Revenue, ordinary (est. 1945) \$109,445,000; expenditure, ordinary (est. 1945) \$109,326,000; public debt (Dec. 31, 1944) \$404,820,000; notes in circulation (May 30, 1945) \$304,971,300; gold reserve (May 30, 1945) \$56,699,800; exchange rate (average 1945) 1 escudo=4.002 cents U.S.

**Trade and Communication.**—External trade 1944 (merchandise): imports \$156,812,000; exports \$126,652,800. Communications and transport (1945): roads, first- and second-class 9,180 mi.; railways, open to traffic, 2,191 mi.; motor vehicles licensed (1944): cars 47,469; motor-cycles 4,604; cycles 141,872; shipping (Jan. 1, 1943): 315,534 gross tons.

**Agriculture and Other Production.**—Production 1943 (in short tons): wheat 324,747; maize 370,635; wine 370,000,000 gal.; coal 578,900; rye 108,880; oats 77,227; rice (1939) 81,440; barley 52,710; potatoes 980,512; olive oil 96,791; sea fisheries (excluding cod fishing) 270,525. tano, paid a visit to Africa in the summer of 1945. Mails and other communications between Portugal and its colonies were being improved and Mozambique was to have a complete system of radio communication, the contract for which was being placed with a British firm. An exhibition of colonial construction publicized the notable work being done throughout the empire in the building of roads, bridges, harbours, schools, churches and hospitals. Ten decrees made important changes in the colonial health services and created a department of colonial organization.

(E. A. P.)

**Portuguese West Africa:** *see* PORTUGUESE COLONIAL EMPIRE.

**Post Office.** The audited revenues of the post office department for the fiscal year 1945, as stated in the records of the comptroller general of the United States, amounted to \$1,314,240,132.07. This was the highest in postal history and \$201,362,957.75 higher than in 1944, which was the next highest.

There was also reported to the treasury department the items stated in the act of June 9, 1930, indicating the estimated postage that would have been collected if the services had been on a regular pay basis, in the case of penalty and franked mail, free-in-county mail, differentials in second-class mail matter and free matter for the blind. These amounted to \$116,198,782.00.

The expenses of the department for the fiscal year as audited amounted to \$1,145,101,184.42, of which amount \$33,851,525.19 was on account of prior years. There was \$40,348,383.77 unpaid on account of the 1945 fiscal year. This left a total expense for the fiscal year 1945 of \$1,151,598,043.00 resulting in a gross operating surplus on an accrual basis of \$162,642,089.07.

Effective March 27, 1942, free mail privileges were granted to members of the armed forces. It was estimated that 1,100,000,000 pieces of first-class mail were mailed during the fiscal

year 1945 by U.S. soldiers and sailors. The revenue which would have been derived from this mail at the rate of 3 cents apiece would have amounted to \$33,000,000.

The tremendous increase in the volume of mail handled by the post office department for other branches of the government had been a matter of concern to congress and the department for a number of years. Thousands of tons of forms, pamphlets, circulars and supplies were being sent by government departments and establishments free of postage under the "penalty privilege." In order to control and limit the use of the penalty mail privilege, congress passed the "penalty mail law," effective July 1, 1944, which provided that departments and agencies (except the war, navy and post office departments) account for all matter bearing the penalty indicia and pay into the treasury as miscellaneous receipts, and not as postal revenue, the cost of handling such matter. The records disclosed that during the fiscal year ended June 30, 1945, there were mailed free 1,908,629,519 pieces, weighing 310,152,295 lb., a decrease of 286,956,796 pieces and an increase of 5,745,875 lb. from the fiscal year 1944.

The intensive bond and stamp sales program, inaugurated May 1, 1941, in co-operation with the treasury department, was greatly expanded after U.S. entry into the war. On June 30, 1945, war savings stamps were on sale at 41,792 post offices. Sales from July 1, 1944, to June 30, 1945, amounted to \$275,531,131.10.

From March 1, 1935, when the U.S. savings bonds were placed on sale at post offices to June 30, 1944, there were sold through the postal service 116,152,021 bonds, having a sale value of \$7,363,975,950. During the fiscal year ended June 30, 1945, 28,719,147 bonds, having a sale value of \$1,180,198,331.25 were sold. At the close of 1945 bonds were on sale at 25,380 post offices, including 1,342 branches and stations, a net increase of 1,086 over the preceding year.

Through the 41,792 post offices and 3,402 stations being conducted under contract agreement, as well as 1,946 classified stations and branches, there were received, transported and delivered 37,900,000,000 pieces of mail matter during the fiscal year, having a weight of 3,700,000 tons, representing an increase over the previous fiscal year of 3,900,000,000 pieces of mail and 200,000 tons.

On June 30, 1945, there were 3,402 stations being conducted under contract agreement. The average cost per contract unit was \$697, and the total cost of operation during the fiscal year amounted to \$2,372,265, whereas the receipts from the sale of stamps at these contract stations amounted to \$49,469,136 during the calendar year 1944.

During the fiscal year, city delivery service was established in 152 additional cities, thereby increasing to 3,884 the number of cities in which this service was in operation. Of this number, 119 were changed from village delivery to city delivery service. Village delivery was in operation at 240 post offices.

**Postmasters.**—During the fiscal year there were made 2,572 presidential appointments of postmasters at offices with salaries of \$1,100 to \$12,000. Fourth-class postmasters were commissioned to 1,878 offices during the year as vacancies occurred through various causes.

**Dead Letters.**—During 1945, 14,144,856 letters were impossible of delivery, a decrease of more than 8.56% from the previous year. This number was due mainly to the large number of incorrectly addressed letters for the military and naval forces and for civilians who moved incident to changes in location due to war work. A total of 2,655,919 letters were returned to the senders, of which 368,854 were found to contain valuable enclosures; 78,143 of them contained money, amounting to \$193,974. There were also 633,947 unclaimed parcels

MAILMEN on the jungle trails of Luzon made deliveries to the U.S. armed forces early in 1945, accompanied by armed guards and Filipino guerrillas

U.S. ARMY POSTAL unit, composed of Negro WAC officers and Negro enlisted women, arriving for overseas duty in England during Feb. 1945. The unit was to handle the army postal directory service for the entire European theatre

and articles found loose in the mails. These parcels were sold at public auction and \$180,413 realized.

*Air Mail.*—On June 30, 1945, there were 56,849 mi. of domestic air mail routes, an increase of 7,367 mi. over June 30, 1944. During 1945 four new domestic air mail routes were established.

The air mail service, established as one of the most vital postal services, owing to the need it filled in connection with the wartime demand for speed, handled a volume of mail approximating a 46% increase in pound-miles over 1944.

*Rural Delivery.*—The rural delivery routes in operation on June 30, 1945, required a total daily travel of 1,435,059 mi. by rural carriers in providing service to approximately 29,508,497 patrons. The policy of consolidation of rural routes to absorb vacancies was continued. Operation of the rural delivery service resulted in an expenditure of \$107,046,080 for the fiscal year as compared with \$104,676,676 for the previous year, an increase of \$2,369,404 over 1944. The amounts saved through consolidation of routes were utilized to establish new routes and provide extension of existing routes. Thereby 6,584 more miles were covered by rural carriers at the close of the fiscal year 1945 than in 1944. Rural delivery service was transferred from the jurisdiction of the second assistant postmaster general to the first assistant postmaster general on July 1, 1942, to co-ordinate it better with other delivery services.

*Postal Savings.*—The postal savings system continued to merit a widespread public demand for its services; the depositors numbered 3,921,937 for 1945, an increase of 12% from the preceding year. The balance due depositors represented by outstanding certificates of deposit was \$2,659,444,420, an increase of \$625,431,442 or about 30.7%. In addition, there was held in trust for depositors accrued interest of \$72,363,396, and unclaimed deposits of \$130,541, making a total of \$2,731,938,357.

At the end of the year, postal savings certificates were on sale at 7,162 depositories, including 888 branches and stations, but savings stamps were on sale at all post offices and practically all branches and stations.

*Buildings.*—During the fiscal year ended June 30, 1945, the post office department operated 3,261 government-owned buildings. Owing to the war and the cessation of the public building

program, no new buildings were completed during the fiscal year. Through reassignments of space within these buildings, agencies of the government which were occupying or had intended to occupy commercial quarters were accommodated, with a saving of \$55,037.14.

Expiring leases numbering 897 were renewed in the year 1945. Where necessary to meet increased service needs, larger quarters and superior facilities were obtained, and in other cases necessary improvements were secured in the occupied quarters. The square foot cost of renewing leases was increased from 70 cents in 1944 to 88.7 cents in 1945. One hundred and forty-six new leases were made, including 95 for offices previously occupying space on a monthly rental basis, the new contracts providing improved quarters and in many instances complete new equipment. (I. Gg.)

*Great Britain.*—The 1945-46 budget estimate of expenditure—\$500,146,500—was \$3,582,200 above the 1944-45 figure, additional war expenditure for both years being met from votes of credit. The revenue estimate—\$459,252,500—was \$6,963,200 above the 1944-45 figure. For both years the revenue estimates included war surcharges on tariffs but excluded the value of services for government departments, and also wireless licence revenue, which was accounted for separately. Commercial accounts remained suspended to save work. Savings had continued to increase during the year 1944, although the general rate of increase slackened. On Dec. 31, 1944, the balances held by depositors in the post office savings bank amounted to \$6,013,003,800, the number of depositors' accounts having risen to more than 19,000,000. Holdings of government stock on the post office register numbered 3,400,000, totalling \$361,231,700. These figures included 2,400,000 holdings of 3% defense bonds totalling \$2,883,067,200. The number of investors in National Savings certificates rose to 18,500,000 with a total holding of \$5,904,340,900 (excluding interest).

The war resulted in a large increase in the number of persons entitled to receive pensions and services allowances through the post office. About 12,000,000 separate payments were made in this connection at local post offices each week, and the total of the sums paid during the year was more than \$2,334,500,000. There were also about 200,000 payments weekly in respect to billetees.

Some slight curtailment of delivery and collection services was necessary in the London area; otherwise the restricted wartime postal services were maintained throughout the year; but from Oct. 1, 1945, a beginning was made to restore prewar facilities. In consequence of the successful warfare against enemy submarines the number of losses of surface mails at sea was reduced.

Postal facilities for communicating with forces and merchant navy personnel overseas were considerably developed. By the middle of the year all letters up to 1 oz. in weight, prepaid 1½d. in the outward direction and free of postage in the homeward direction, were being conveyed by air between the United Kingdom and forces in almost all areas. Reduced air mail rates for letters exceeding 1 oz. in weight were introduced concurrently. These arrangements resulted in a great decrease in the number of letters sent by the airgraph service, and the service was ended on July 31. Following the close of hostilities the air mail service was restored to many of the liberated countries. The 6d. air letter service remained available for civilian addresses in British empire countries and certain foreign countries in Africa and Asia.

Telephone and telegraph services were carried on in the face of increasing difficulties, chiefly arising from continued growth in the volume of traffic, and many European telegraph services which had been suspended during the war were reopened. The

handling of increasing traffic with limited staff and plant inevitably affected the quality of the service given to the public but there was no breakdown at any time. The requirements of the fighting and defensive services necessarily had a prior claim and invariably were fully and promptly met.

The volume of postal traffic in general remained below the prewar level, mainly by the reduction in circular advertising, but wartime work at public counters combined with pressure in the telegraph and telephone services required additional staff, and the total staff employed on July 1 exceeded 303,000, including more than 143,000 women. Of the members of the prewar staff 73,000 (including about 2,800 women) were serving with the forces and nearly 4,000 were on loan to other departments. (See also PHILATELY; PHOTOGRAPHY.) (S. R. C.)

**Postwar Planning:** see RECONSTRUCTION PLANNING.

**Potash.** The potash industry of the United States made a new record high in 1944, for the 11th successive year. Output increased from 739,141 short tons of contained  $K_2O$  in 1943 to 834,568 tons in 1944, while the corresponding sales rose from 732,151 tons to 817,892 tons. During 1939-42 inclusive sales were in excess of production, and stocks declined almost to the vanishing point, but were improved slightly in 1943 and 1944.

The only European producer from which late data was received was Spain, where the gross output increased from 484,639 short tons in 1943 to 753,452 tons in 1944, with  $K_2O$  contents of 78,264 tons and 141,100 tons respectively. French plants were expected to resume operation as soon as fuel, power and transportation were available. Working of the German mines was hampered by the same difficulties. Polish mines were reported to have been flooded, and would be out of commission indefinitely. (See also FERTILIZERS.) (G. A. Ro.)

**Potatoes.** The 1945 potato crop in the United States was estimated by the U.S. department of agriculture at 430,773,000 bu. compared with 379,436,000 bu. produced in 1944 and the previous record crop of 464,900,000 bu. in 1943 and a ten-year average of 375,091,000 bu. 1934-43. The total potato acreage was 2,846,000 compared with 2,910,000 in 1944 and a prewar average of 3,036,000 1934-43. The yield of 150.6 bu. per ac. was a new high compared with the previous record of 139.6 bu. in 1943 and 130.4 bu. in 1944. The ten-year average 1934-43 was 124 bu. per ac. Yields were particularly high in the 18 surplus late potato states, 167.2 bu. per ac. compared with the previous record of 161.1 bu. per ac. in 1943. These 18 states produced almost 300,000,000 bu. of the total crop. Maine production was about 52,785,000 bu. or about 500,000 bu. more than in 1944 but below the record of 73,000,000 bu. in 1943. Idaho was second with 44,220,000 bu. compared with 39,100,000 bu. in 1944. The large late crop and the reduction in military requirements made large supplies available to civilians. Consumption was considerably above the 126 lb. per capita of 1944. Ceiling prices were suspended in September and the price support program was increased. Loans on stored potatoes and government purchases were both used; during August alone the government purchased almost 2,000,000 bu. to be used in school lunches, canning and starchmaking, storage and livestock feeding. Few potatoes were imported from Canada compared with the 9,000,000 bu. imported in 1944 because of the abundant U.S. supplies. Larger quantities of dehydrated potatoes were used for relief purposes in Europe.

**Sweet Potatoes.**—A crop of 67,275,000 bu. of sweet potatoes was harvested in 1945 compared with 71,651,000 bu. in 1944 and an average of 67,039,000 bu. 1934-43. The acreage was about 7% below 1944 at 712,000 but above the average of

BRITISH ARMY TRUCKS carrying potatoes to the hungry population of Berlin in 1945. Each of these trucks brought 8 tons of the German-grown potatoes from Brunswick

797,000 of 1934-43. The reduced acreage was offset by higher yields in 1945 which averaged 94.5 bu. compared with 92.9 bu. in 1944 and an average of 84.2 bu. 1934-43. Prices for sweet potatoes were relatively high through 1945 as for the two preceding crops. The per capita civilian supply was about 21 lb. in 1944 and 1945 compared with 23.3 lb. prewar consumption. Prices were supported and remained at near ceiling levels until late in 1945. These supporting measures were expected to continue through 1946 at 90% of parity which in the fall of 1945 represented about \$2.20 per bu. to producers. Heavy shipments after harvest resulted in lower prices. The government made large purchases of the Virginia crop for relief purposes. After November, loans on cured potatoes was the principal means of

Table I.—U.S. Production of Potatoes by States, 1945 and 1944

price support. For U.S. No. 1 grade the loan rate for November to January was \$1.50 per bu. These loans bore 3% interest and were payable not later than April 15, 1946, or by delivery of the sweet potatoes. (See also VEGETABLES.) (J. C. Ms.)

**Potsdam Conference:** see BERLIN CONFERENCE.

**Poultry.** The number of poultry on United States farms passed the high peak in 1944 and declined sharply. On Jan. 1, 1945, the U.S. department of agriculture estimated that there were 511,130,000 head on farms compared with 576,440,000 head a year earlier, a drop of 11%, though still 18% above the ten-year, 1934-43, average of 433,638,000 head. During 1945 the numbers began to increase and numbers of chickens raised regained a large part of the losses of the year before bringing the total poultry meat output up nearly to requirements. The number of breeding stock left on farms at the beginning of 1945 was estimated to be near to the number of a year earlier.

The total production of poultry meat reached a high total of about 3,575,000,000 lb. in 1945, which was only exceeded in 1943 when 3,800,000,000 lb. were produced. While hatching of chicks began late in 1945, the demand was so active that by July there were 11% more young chicks on farms than a year earlier. Late hatchings reached new high levels. During the first eight months of 1945 hatchings were 23% above 1944. The production of commercial broilers accounted for a larger part of the total chicken meat than in former years—23% in 1945 compared with about 17% during the previous four years and 10% or less before World War II. This broiler production was not included in the "farm production" estimates and was a new commercial development of the previous ten years.

Egg production in 1945 was estimated by the U.S. department of agriculture at 5,050,000,000 doz. compared with 5,305,000,000 doz. in 1944 and an average of 3,335,000,000 doz. 1935-39. The number of laying hens increased during 1945 by about 10% which indicated larger egg production in 1946 unless prices should decline sharply. Late in 1945 the need for eggs for export began to decline and the military requirements also fell off with a consequent sharp decline in egg prices. The storage of eggs was below normal, however, during the spring period of heavy production and stocks on Oct. 1, 1945, were the lowest in three decades amounting to only 2,000,000 cases of which about 1,000,000 cases were government stocks.

Prices of eggs ranged higher during 1945 than a year earlier, until late in the year when the war demand dropped off. The price was expected to be supported at not less than 90% of parity for two years after the official end of the war emergency. Civilian consumption of eggs was higher in 1945—about 390 eggs per capita—than in any previous year.

Changes in the handling of poultry products began to exert an important influence on the industry. The increased consumption of broilers in frozen form, encouraged by the widespread use of freezing cabinets and the popularity of canned boned chicken, were important factors. The amount of chicken meat inspected for canning increased from 94,700,000 lb. in 1944 to 163,000,000 lb. in 1945. On the other hand the civilian use of dried eggs was not favourable and this industry began to decline late in 1945. Lower grades of eggs were used chiefly

for drying. The scientific advances in the raising of poultry advanced markedly during World War II with better disease control and feeding. Both farm flocks and small home flocks gave better results.

The popularity of turkey meat led to a rapid and continued increase in turkey production. While the number on farms on Jan. 1, 1945, showed a slight decline from 1944, the number of breeder hens was larger which resulted in an increase of about 20% in the turkey output of 1945 over 1944 and 85% more than in the prewar period. In 1945 a total of 44,200,000 turkeys was raised compared with 20,800,000 in 1935 and 17,400,000 in 1930. They returned about 10% of the total receipts from the sale of poultry products. Other fowl, ducks, geese, etc., showed little change and did not amount to an important part of the total poultry production. (See also EGGS.)

FILMS.—*Poultry on the Farm* (Encyclopædia Britannica Films Inc.). (J. C. Ms.)

**Power Engineering.** Diesel Engines.—Although the Diesel engine was invented during the latter part of the 19th century, and has long been one of the most efficient of all thermal prime movers, it has only recently begun to experience a tremendous increase in popularity. Proof of the sudden upsurge in popularity of the Diesel engine may be drawn from a statement made by a well qualified navy spokesman. He said that while at the end of World War I only 150,000 h.p. of Diesel engines were in use by the navy, by 1944 this figure had grown to more than 12,000,000 h.p. an increase of 8,000%.

During World War II, Diesel engines were used to power many of the smaller surface craft, as well as submarines. Landing barges, transports and various small attack vessels, as well as larger escort vessels employed in convoy work used Diesels. The submarine has always been a prime application; here the necessity for a self-contained prime mover having small space requirements and high efficiency has been admirably met by the Diesel engine.

One of the most noticeable trends in the Diesel field has been the intense activity on the part of all manufacturers in the direction of supercharging the engine. Supercharging consists of supplying air to the engine at a pressure higher than atmospheric. Since the power developed is dependent to a large extent on the "breathing capacity" of the engine, the use of higher pressure air permits the output of the engine to be increased. The Büchi system of supercharging the four-stroke cycle engine has become popular; so popular, in fact, that it was used on almost all large four-cycle engines in 1945. The Büchi supercharger which is, in reality, a centrifugal blower driven by an exhaust gas turbine was being manufactured in the U.S. under licence from Dr. Alfred J. Büchi, the inventor. The usual Büchi supercharged Diesel operates with inlet air at a pressure of from 5 lb. to 7 lb. per sq.in. higher than atmospheric. This increase in air pressure normally results in about 40% increase in the power output of a given size of engine.

One prominent European manufacturer of Diesel engines has been exploiting what is known as "high supercharging." In reality, high supercharging is an intermediate step between the Büchi system and the "power gas" process. The latter arrangement uses a supercharger, or compressor, which requires all of the engine's power to drive it. Thus there is no net power output from the engine and supercharger; the engine exhaust, however, is at several atmospheres pressure and high temperature. The exhaust of the engine is then used to drive an independent gas turbine, which produces all of the net output. Although in 1945 no Diesel engine with either high supercharge or operating on the power gas cycle was on the market, there

ENGINE for jet-propelled planes, details of which were released in 1945 by the U.S.A.A.F. This is a rear view, with the exhaust assembly removed to show the turbine, the one moving part. Air is compressed, forced into the combustion chambers which ring the engine, mixed with kerosene, and burned at more than 1,500° F. The hot gases pass through the turbine wheel, thus driving the compressor, and out through the jet exhaust.

was unquestionably considerable activity in the United States pointed toward the development of such machines.

The Diesel has reigned supreme in the locomotive field for some time. This is due primarily to its eminent suitability as a switching locomotive. In 1938, about four times as many Diesel locomotives as steam locomotives were purchased in the United States. From that year on, more Diesels than steam locomotives were purchased in each succeeding year.

While the use of the Diesel engine in aviation appeared to be more desirable than in previous years, it had not in 1945 achieved widespread usage. Aircraft engines operating on the Diesel cycle have been in use from the late '20s, when one of the earliest radial engines was built. By far the greater proportion of modern aircraft were powered by gasoline engines.

Another development which strictly ought not to be classified under Diesel engines became more active in the field of reciprocating internal combustion engines. While engineers have long known about the Pescara free-piston engine, little attention has been given to it. R. de Pescara originally invented and developed his free-piston device as an air compressor, in which opposed pistons, equipped with larger compressor pistons at their outboard ends, oscillate in a closed cylinder. The oscillations occur at the natural frequency of the elastic system comprising the piston and the elastic fluid (air or gases) in the cylinder. No crankshaft is required for this type of machine, which is one of its chief advantages. Since no crankshaft is used, there can be no net power output by the machine, the output being hot compressed combustion gases. With the sudden revival of interest in the gas turbine, the free-piston compressor has gained a new lease on life. The compressed air produced by the compressor may be used to supercharge the Diesel cylinder, and the exhaust from the combustion space used to drive a gas turbine. There was considerable activity in Great Britain in this direction, and it was understood that engines had actually been built. It was known that Germany conducted experimentation with this type of prime mover, and it was highly probable that experimentation had taken place in the United States. The chief virtue of such a prime mover is the high thermal efficiencies which have been predicted for it, in many cases well over 40%, which exceeds the normal 30% to 35% characteristic of the Diesel engine.

**Gas Turbines.**—The imminence of successful commercial gas turbines prompted all manufacturers to conduct extensive experimentation directed toward the development of such a unit. These activities, during wartime, were sponsored in many cases by government agencies with a view by these agencies to the obtaining of a new power plant useful in war activity. It is well known, for example, that the jet propulsion so commonly discussed in the daily press is, in essence, a gas turbine plant. Gas turbines may also be applied to the driving of ships, locomotives, tanks, etc. They may be used for the production of electrical energy in central stations, and for the production of both process heat and power in industrial plants.

All of the larger manufacturers of steam turbines have become interested in the gas turbine problem. At least two of these manufacturers have been interested primarily in the production of gas turbine units for aircraft propulsion. Two and probably more manufacturers have produced power plants suitable for the production of electrical energy.

Other manufacturers announced their intention of constructing a locomotive powered with a gas turbine power plant. It was anticipated that these locomotives would be rated at approximately 5,000 h.p.

One European manufacturer operated successfully a 4,000 kw. plant, and another a 2,000 kw. plant. The 2,000 kw. plant is of considerable interest, because it is not built in accordance with the usual precepts of gas turbine practice. Actually, it should not be called a gas turbine at all, a more proper nomenclature being "aerodynamic" turbine, since the working fluid is pure air. This plant, which was operated at a public demonstration for the first time during the year 1945, employs compressors of the axial flow type to feed compressed air at 330 lb. per square inch pressure through a regenerative heater heated by the exhaust air from the turbine. The compressed air leaving the regenerator is taken to a separate tubular oil-fired heater, in which it is heated to a temperature between 1,200° and 1,300° F. This air, after producing power in a high and low pressure turbine for driving the compressors and a generator respectively, is taken to the heat recovery device (regenerator) and then to a precooler. The precooler cools the air to approximately atmospheric temperature before it is returned to the suction side of the compressors for recycling in the process. The thermal efficiency of this plant is more than 30%, based on the lower heating value of the fuel. Its outstanding features are its stated ability to burn coal (because of the indirect transfer of heat to the working fluid), its unique governing system in which the load is controlled by control of the quantity and pressure of air in the system, and its excellent efficiency at partial load.

The burning of coal in a gas turbine power plant is one of the great ambitions of all builders of gas turbines.

**Steam Turbines.**—One trend noticeable in the steam turbine field has been the trend toward the purchase of 3,600 r.p.m. steam turbines rather than the 1,800 r.p.m. type which was earlier a favourite. Use of the higher speed machines makes for lighter foundations and simpler installations, and for a given rating yields a higher efficiency. Turbines of 3,600 r.p.m. have been built in capacities as high as 100,000 kw., and several units of this rating were in successful operation in 1945. For capacities larger than this, it is still necessary that units be built to operate at 1,800 r.p.m. Use of the higher speed permits turbines to be designed with smaller casing diameters, thus enabling the designer to use higher pressures and temperatures than in the older and larger types. This fact alone is sufficient incentive for the use of the higher speed.

Examination of the steam conditions for which steam turbines had been purchased throughout the previous 25 years indicated a consistent trend in the direction of both higher pressures and higher temperatures. In 1945 a 76,500 kw. turbine was in operation in the United States at 2,300 lb. pressure designed for an initial temperature of 940° F. with reheat of steam, extracted from the exhaust of the high pressure turbine at about 400 lb., to a temperature of 900° F. This unit achieved a thermal efficiency of about 34% from coal pile to switchboard for a period of six months' operation. Other units were in operation in the neighbourhood of 2,000 lb. per sq.in. pressure, and one unit was put in service which was designed for a temperature of 1,000° F. No commercial steam turbine had been designed in 1945 for a higher temperature.

The American Society of Mechanical Engineers and the American In-

stitute of Electrical Engineers co-operated during 1945 in the specification of so-called "standard" units. These units have nameplate ratings, in megawatts, of 11.5, 15, 20, 30, 40 and 60. Standard initial steam conditions are 600 lb. G-825° F. for units up to and including 15,000 kw. The 20,000 kw. and 30,000 kw. units have standard steam conditions of 850 lb. G-900° F. and the 40,000 and 60,000 kw. units have steam conditions of either 850 lb. G-900° F. or 1,250 lb. G-950° F.

It is significant to note that in the standards tentatively proposed by these societies to the industry, all turbines have hydrogen-cooled generators in ratings of 20,000 kw. and larger, and all machines are 3,600 r.p.m. The hydrogen-cooled generator is of importance to the utility industry, both because of its higher efficiency, and because of its longer life. The higher efficiency results from operation of the generator in a medium of very low density, which reduces the windage losses. The longer life results from the operation of the unit in a reducing atmosphere, preventing oxidation of the insulation and corona difficulties.

The use of the steam turbine in naval vessels is well known. By far the greater proportion of the larger naval vessels during World War II were powered by geared turbines, superior in performance, according to reports, to all of the foreign power units. In many cases, because of the shortage of gear manufacturing facilities, it was necessary to resort to a more expensive, heavier, but somewhat more flexible construction, in which electric drive was used. In this arrangement the turbines drive generators, which supply electric power to propulsion motors that drive the propellers.

**Gasoline Engines.**—Since automobile engines were not manufactured during World War II, the most important developments in the gasoline engine have taken place in aircraft applications. According to one eminent authority, in 1905 the average aircraft engine weighed about 4 lb. per h.p. By the end of the late 1930s the weight of aircraft engines had become relatively well established at about 1.1 lb. per h.p., with approximately 800 h.p. maximum sizes. By the end of the war the 2,000 h.p. engine was an established reality. Intense developmental work was going on in the larger sizes and it is certain that if the war had continued much longer, there would soon have been engines as large as 4,000 h.p. in a single unit. While the twin-row radial-cooled engine has been extremely successful, it is logical to expect that four rows, or even possibly six rows of cylinders may eventually be used. Powers in the neighbourhood of 200 h.p. per cylinder have been common.

At the stage of development in 1945 the liquid-cooled engine seemed to have the edge so far as weight was concerned. Most liquid-cooled engines in the range of 1,500 h.p. and higher weigh about 1.0 lb. per h.p., while the air-cooled engines in the same power range weigh approximately 1.2 lb. per h.p. At the lower powers, which would probably be used in commercial planes for private owners, the air-cooled engine seemed, according to the evidence, to be considerably lighter than the liquid-cooled engine.

An outstanding feature of all aircraft engines used in World War II was the extensive use of supercharging. Fortunately at the time of entrance by the United States into the war, the country was well along the way to universal use of a satisfactory turbosupercharged engine. In this type the supercharger is driven by exhaust gases from the engine. This method of supercharging permits sea level power of the engine to be maintained to at least 30,000 ft. altitude. Even at 40,000 ft. altitude the engine will develop approximately one-half or more of its rated sea level power. All of this is accomplished by compression of the rarefied air to approximately sea level densities, by the supercharger, which increases the "breathing capacity" of the engine.

**Rocket and Jet Propulsion.**—One of the most astounding facts of the war was the emergence of the rocket from the realm of a child's Fourth of July plaything, and of the jet propulsion turbine from the realm of impracticability into a field of great military usefulness. Rockets are distinguished from jet propulsion primarily by the fact that they carry their own oxygen. The fuel consumption is very high. As a result flights in rocket powered planes are of short duration. Rockets have been used, for example, in the German ME-163, designed as an interceptor plane, and having a very short duration of flight. Japanese suicide planes are reputed to have used rockets for a five minute flight after leaving the mother ship. The accomplishments of the United States G.I.'s with the well known "bazooka" are already well recorded in stories of the war. No more effective antitank gun was designed than the rocket-firing bazooka. Rocket-firing aircraft were used which could carry as much devastating power as an entire broadside from a naval cruiser.

Jet propulsion power plants for aeroplanes are especially important because they promise to permit aeroplanes to travel at speeds approaching the velocity of sound. While at such speeds the efficiency of the usual propeller begins to fall off rapidly, the efficiency of the jet in a jet propelled plane is just coming into its own. Furthermore, the higher the speed, the higher is the efficiency of the jet. Thus the final drive efficiency is better, but the power plant itself must also be considered. The actual thermal efficiency is lower than conventional engines, but jet propulsion engines use kerosene, a fuel which is not only much cheaper than high octane gasoline, but also less dangerous to handle. They have the characteristic of thriving on cold air, so that they perform much more efficiently at high altitudes, although there is a considerable decrease in the power output, because of the decreased density. Since the jet propelled plane uses a gas turbine and compressor, both of which are rotating devices, the absence of vibration is almost complete. The engine is particularly suited to the high speed of aircraft, because it can make use of the pressure created by the forward rush of the plane to help compress the air which it breathes and exhausts out the jet to create a propulsive force.

Because the development of jet propulsion remained shrouded in secrecy during wartime, many of the developments which were carried on were not known by the public in 1945. (J. K. Sv.)

**Rockets.**—It was disclosed in 1945 that the first rocket bomb on England fell at Chiswick, London, on the evening of Sept. 8, 1944; the last fell at Orpington, Kent, at 4.54 P.M. on March 27, 1945. Altogether, 1,050 rockets reached Great Britain, the highest monthly figure being 71 in the month of February and the highest daily figure being 17. Total casualties amounted to 2,754 killed and 6,523 seriously injured.

While aircraft interception and precision fire by radar-controlled batteries were effective in the case of the jet-propelled pilotless V-1s only the

final overrunning of the Dutch sites by the Canadian army in March 1945 provided the answer to the V-2s. Many were destroyed in production, in transport and on the sites, by air attack. Many failed to reach Great Britain through technical faults. Target accuracy gave no greater precision than the 2,000 sq.mi. of Greater London.

In launching, the rockets were poised vertically on their fins on a concrete platform. The turbines, driven by superheated steam produced by mixing concentrated hydrogen-peroxide and calcium-permanganate solution, were started up, operating the pumps which drove the liquid oxygen and alcohol into the combustion chamber. By remote control, this explosive mixture was then ignited electrically and the rocket rose vertically.

The mixture continued to burn violently and the products of the combustion, expelled as very hot gases through the jets, created a thrust of about 26 tons. Gyroscopic mechanism tilted the rocket, in its upward rush, through an angle of 45°, one minute after launching. Simultaneously, the fuel supply was cut off either by radio or by automatic control. The rocket was then travelling at 3,000 m.p.h., more than four times faster than the speed of sound. Its range was about 200 mi. and the time between "touch-off" and the explosion, by impact of the war head, was less than 5 minutes. Although, since it was racking ahead of its sound waves, the rocket was inaudible in transit, it was visible as a glowing, meteorlike object, heated to incandescence by the friction of the atmosphere.

When the Allies entered Germany, they found 800 ft. under the Kohnstein mountains, near Nordhausen, a subterranean factory where the Germans were preparing the transatlantic rockets which, they claimed, would have a range of 3,000 mi., and which, within six months, would have been launched against America.

While the Allies used short-range rocket projectiles in sea, land and air battles, they did not employ long-range rocket bombs during the war. Such weapons, however, were in production and exceeded in range, accuracy and destructive power the German V-2s. (P. R. Cr.)

**Precious Stones:** see GEMS AND PRECIOUS STONES.

**Presbyterian Church.** The Reformed Churches holding the Presbyterian system within the United States of America were 12 in number in 1945 and included 18,406 ministers, 18,568 churches and 4,003,769 communicant members. Their adherents numbered approximately 8,000,000. Outside of continental United States they had, in 1942, 2,148 American missionaries, 13,958 national workers and 240,528 communicant members, in 21 countries. At the end of 1945 the process of replacement of missionaries and other war-displaced workers was still in progress.

Preparations for restoration at home and abroad formed the dominant feature of the life of the churches in 1945. Many millions of dollars were being contributed for postwar reconstruction and enlargement of missionary activities in the United States and throughout the world, and for extension of the churches' normal denominational and interdenominational enterprises. The Presbyterian Church in the United States of America took steps for establishing an official national weekly newspaper for circulation among its members. Negotiations for organic union of several of the churches proceeded with increased effectiveness, particularly between the Presbyterian Church in the United States of America and the Presbyterian Church in the United States (Southern).

**Europe.**—During the latter half of 1945 the churches of the continent were facing the numerous problems of reconstruction. Because the churches holding the Presbyterian system were still suffering from shock, by the close of 1945 few definite facts of their progress were available, but it was known that most of them were energetically reassembling their material and spiritual forces.

The Reformed Churches in Holland experienced a marked growth in life and interest during World War II. Some congregations doubled and trebled their attendance. Unity of purpose for postwar years was evidenced by the calling of an interim synod to meet not later than early 1946, to determine a new church order. This gathering when held would be the first genuinely representative synod of the Netherlands Reformed Church after the Synod of Dordrecht met in 1618.

A significant meeting held in Aug. 1945, at Treysa, Germany, approved a provisional new order for the Evangelical Churches of Germany. It unanimously appointed a provisional council of the Evangelical Church in Germany, consisting of

three laymen and nine clergymen. In a vigorous declaration the assemblage announced that the resurrected church had adopted the principle of a freely chosen unity as opposed to state centralization, and it directed the provisional council to proceed at once to unite and set to work the active forces of the church. During World War II the church had gained increased popular prestige by proving itself sturdy enough to carry on its work and maintain its principles in spite of nazi attempts at suppression.

Assembling at Paris in June 1945, the National Synod of the Reformed Church of France addressed a vigorous message to the pastors and members. After condemning "the indifferent standard of social life in France . . . perverted by an immorality which does not even bother to render hypocritical homage to virtue," the message called on all its people to "work and faith," in performance of "heroic and outstanding duties."

Following the expulsion of the German forces, the Waldensian Church in Italy made considerable progress in repairs on church edifices and hospitals, appointment of pastors, and resumption of normal church activities. Throughout the war church life had continued with little interruption.

With most of its buildings damaged by war, the Reformed Church of Hungary, according to its new weekly magazine *Elet es Jövő*, found that its "most important work today is to remove the ruins." The periodical adds: "The World Council of Churches has drawn up a detailed plan for church reconstruction." A similar ecumenical consciousness was prevalent in Czechoslovakia, where the Evangelical Church of Czech Brethren reported that its supreme tragedy in the war was a realization of degradation of ideals and of separation from intercourse with the other churches of Europe.

In Switzerland the churches represented in the Swiss Federation of Churches were taking an active part in the ecumenical reconstruction work in Europe being directed by the Geneva headquarters of the World Council of Churches. Their declared purpose was to join with the Christian forces of the world in a united work in behalf of all churches that had suffered under German aggression. (See also CHURCH MEMBERSHIP.)

(W. B. Pu.)

## Presidents, Sovereigns and Rulers.

The following list includes the names of those holding chief positions in their countries at the beginning of 1946.

Country	Name and Office	Accession
Afghanistan . . .	Mohammad Zaher, Shah . . . . .	1933
Albania . . . .	Enver Hoxha, Prime Minister . . . . .	1944
Arabia, Saudi . .	Abdul Aziz ibn Abdur-Rahman al Faisal Al Saud, King . . . . .	1926
Argentina . . . .	Edelmiro J. Farrell, President . . . . .	1944
Australia . . . .	Duke of Gloucester, Governor General . . . . .	1945
	Joseph B. Chifley, Prime Minister . . . . .	1945
Austria . . . . .	Karl Renner, President . . . . .	1945
	Leopold Figl, Chancellor . . . . .	1945
Belgium . . . . .	Leopold III, King (in exile) . . . . .	1934
	Prince Charles, Regent . . . . .	1944
	Achille van Acker, Premier . . . . .	1945
Bolivia . . . . .	Lieut. Col. Gualberto Villarroel, President . . . . .	1943
Brazil . . . . .	José Linhares, President <sup>1</sup> . . . . .	1945
Bulgaria . . . . .	Simeon II, King (Regency) . . . . .	1943
	Kimon Georgiev, Premier . . . . .	1944

**Preysing, Conrad von** (1880— ), cardinal archbishop of Berlin, was born at the castle Kronwinkel in the archdiocese of Munich, Germany, on Aug. 30, of royal parentage. He attended Munich and Wuerzburg universities, but abandoned a diplomatic career in 1908 for the priesthood.

He was educated for priesthood by Jesuits at Innsbruck, Austria; was ordained in 1912, elevated to bishopric in 1932 while serving as canon of the cathedral and transferred from the see of Eichstaett to the see of Berlin in 1935.

An outstanding figure during World War II, he consistently and fearlessly condemned naziism's creed and misdeeds. He issued a far-reaching courageous pastoral letter in 1943 denouncing racialism and the totalitarian state. This document won world-wide acclaim. He was named to the Sacred College of Cardinals by Pope Pius XII on Dec. 23, 1945, and was created and proclaimed cardinal on Feb. 18, 1946.

**Price Administration, Office of.** The Office of Price Administration is the U.S. government agency empowered by act of congress in 1942 to stabilize prices of goods and services, as well as residential rentals. Congress gave OPA authority to continue these controls until June 1946 in voting extension of the Price Control and Stabilization acts without fundamental changes. Also empowered by presidential directive to ration essential commodities made scarce by the war, OPA had brought this program to a virtual conclusion as the year ended.

During 1945, OPA prepared to deal with pricing problems that would arise during the immediate postwar period. At the same time the agency continued to improve its existing controls to prevent unnecessary rises in the cost of living. OPA's success in accomplishing the latter task may be judged from the rise during the first 11 months of 1945 of only 1.7% in the U.S. bureau of labour statistics index of consumer prices for moderate income families for large cities. From May 1943, when the effects of President Roosevelt's hold-the-line order were first felt, these prices had risen only 3.3%, and from the outbreak of World War II in 1939, they had risen 31%. These figures were in sharp contrast with increases in the cost of living during World War I, when prices rose 62% from July 1914 to Nov. 1918, and 108% to July 1920, the six-year period corresponding to the duration of World War II.

Two particularly pressing problems confronting OPA during 1945 were the severely depleted supply of meat available for rationing and a scarcity of moderately priced clothing.

Moving to solve the meat problem, OPA, at the direction of the Office of Economic Stabilization (later becoming the Office of Stabilization Administration), placed a system of ceilings on live cattle to meet packer protests that processing margins, despite subsidy payments, were being reduced below cost by rising cattle prices. The OPA also launched a 10-point program to encourage increased feeding of beef cattle; raise margins for meat processors, and improve the distribution of beef and pork.

Clothing prices continued to rise largely because of the dis-

appearance of low-priced goods as manufacturers channelled production into high-priced garments. To combat the situation, OPA issued maximum average price orders covering garment manufacturers and rayon and woollen mills. These orders required each producer by balancing deliveries of higher priced goods with low price lines to maintain an average price for his deliveries during each quarter at or below his average price for the same products in the base period, usually 1943. Adjustments were made from time to time to fit the program to existing fabric supply conditions. A companion program by the Civilian Production administration channelled production of textiles to manufacturers of certain popular priced essential garments. For most low-priced cotton apparel, OPA established dollar-and-cents prices and required manufacturers to affix the retail ceiling price to each garment.

The postwar pricing problems confronting OPA fell into two categories: First, to establish prices for consumer goods which had been entirely or largely off the market because of wartime restrictions; and second, to provide adjustments in ceiling prices for manufacturers of other goods who were finding it difficult to continue production at existing price levels.

The special pricing formula for reconverting industries worked out in the spring of 1945 took into account the legal increases in prices of materials and in basic wage rate schedules of factory employees, occurring after 1941, when many consumer durable goods, like automobiles, washing machines and vacuum cleaners, had begun to disappear from the market. In addition to these cost increases, OPA allowed for the same profit margins before income taxes as during a normal peacetime period, usually 1936-39.

An individual price adjustment program provided virtually automatic pricing for about two-thirds of all reconverting firms. To accelerate action, authority was delegated to OPA field offices to act upon more than 90% of the applications for individual adjustments, and the manufacturer's proposed ceilings were permitted to become effective within 15 days, if no word to the

"MIDSUMMER NIGHT'S DREAM!" Talburt, drawing for the Scripps-Howard Newspaper Alliance, pictured the U.S. citizen anticipating the end of price control, rationing and shortages, after V-J day in 1945

contrary were received from OPA. Individual adjustment provisions for producers whose anticipated gross annual sales were less than \$200,000 were made simpler than for larger manufacturers. Where prospective sales volume was less than \$50,000 annually, the provisions were even more liberal, since these small manufacturers could least afford delays in getting into peacetime production. New producers of consumer durable goods with anticipated annual sales volume up to \$100,000 were also given simple and liberal rules to get starting prices. Individual price adjustments were also provided for manufacturers whose products had remained on the market during all or most of the war period if their over-all operations showed a loss.

To speed transition to a peacetime economy, OPA's policy was to release a commodity from price control as soon as it appeared probable that balanced demand and supply would keep prices from rising. It was also authorized to remove from control commodities which were insignificant in business or living costs. However, the large accumulation of liquid savings, the abnormal volume of currency in circulation, and the magnitude of government spending, together with the huge reservoir of unsatisfied consumer demand, exercised continued inflationary pressure on prices. The OPA was thus compelled to retain firm controls over prices of most foods, clothing, fuels, consumer durable goods and other cost-of-living items, as well as on most industrial raw materials needed in manufacture and construction.

Upward pressures on residential rent ceilings throughout 1945 continued because of an almost nation-wide housing shortage. By the close of the year it had been possible to drop controls in a relatively few areas where war activities, such as military training camps and schools, had ceased. The rent control program held rents virtually stable for several years and kept the total rise from Aug. 1939 to less than 4%.

Reduced military demand, releasing large stores of supplies to the civilian population, made it possible for OPA to end its rationing programs for all but sugar and rubber tires before the close of November. Rationing of processed foods, gasoline, fuel oil and stoves was terminated immediately after the Japanese surrender, and rubber footwear, canned milk and cheese, automobiles, shoes, and meats, fats and oils in the following two months. Rationing of rubber tires was ended at midnight Dec. 31, leaving sugar the sole remaining commodity subject to ration control. (See also CANADA, DOMINION OF; PRICES; WAR PRODUCTION, U.S.) (C. Bs.)

**Prices.** Prices During World Wars I and II.—During the six years from the invasion of Poland to the surrender of Japan, prices in primary markets in the U.S. rose 40.9%, compared with the 103% increase that occurred during World War I. From Sept. 1939 through Aug. 1945, the principal price increases occurred in farm products which rose 108%; foods, 58%; textile products, 47%; building materials, 31.5%; metals and metal products, 12.3%. The index of raw materials, which weighted price movements of farm products heavily, rose 74.9%, while that for semi-manufactured and manufactured products gained 28%. Although textiles rose 158% and chemicals 128% in World War I, these same commodities were held to an increase of 47% and 28% respectively during the six years of World War II. Farm products from July 1914 to Nov. 1918 rose 111%, compared with the 108% from Sept. 1939 to Aug. 1945, but the price increases in other major product groups were appreciably less than during World War I, primarily because of more effective price controls.

Prices of fruits and vegetables, oils and fats, cattle feed and several less important farm products more than doubled during World War II. Increases of 50% to 100% occurred for livestock, poultry, dairy products, other foods, hides and

skins, cotton goods and lumber. Structural steel prices which had remained relatively unchanged from 1939 to 1945 rose 151% during World War I. Agricultural implements, farm machinery, iron and steel and cement prices showed less than a 10% increase during World War II. The postwar inflation of 1920 had relatively few parallels after Aug. 14 except for such items as jewellery, juke boxes, theatre admissions, furs, coconut and citrus fruits.

On May 11, 1945, the price administrator announced the post-war aim of maintaining controls only where necessary to retain prices at their 1942 levels, and that the ceilings of prices would be gradually lifted as the danger of inflation disappeared. The Office of War Mobilization and Reconversion announced on May 8 that the second phase of the war had begun and that since shortages persisted in food, clothing and shelter, and cutbacks in war production threw 1,500,000 workers out of employment, price control, rationing and wage and manpower controls were to be continued until the end of the war. On May 10 the War Production board revoked 73 orders limiting the production of manufactured civilian products and on May 16 the board revoked controls on 1,200 common civilian items, permitting their manufacture but not releasing such materials as iron and steel needed for their processing. No such gradual step-down of war production and relaxation of price controls took place after World War I as was experienced between the end of the war in Europe and the surrender of Japan.

**Prices at the End of World War II.**—At the end of Aug. 1945, the general level of wholesale prices was 40% above the prewar level. Prices received by farmers had reached a new wartime peak after the June and July advances and were about 7% higher than for the summer of 1944, and approximately 125% higher than during the summer of 1939. Wholesale prices of industrial goods had risen after May and by August were somewhat higher than in any other period after the early part of 1943, when price stabilization measures were augmented and made more effective. Ceiling prices for coal, coke, steel, cotton goods, building materials and finished manufactured products (especially clothing and house furnishings) were raised. Many of the products which had experienced the most rapid wartime increases in prices were those in the highly competitive, low-wage industries, where producers had taken advantage of delayed price controls. Postwar prices of services were much higher than before the war, except rents and public utility rates, and such regulated prices as bus fares, electric power, telephone

Fig. 1.—WHOLESALE PRICES IN THE UNITED KINGDOM AND THE UNITED STATES, 1934-45. (Sources: United Kingdom—Board of Trade, converted to 1926 base; United States—Bureau of Labor Statistics.) War conditions in the United Kingdom made many price quotations nominal; undoubtedly the index for that country understates the price rise after Aug. 1939

and telegraph rates which had shown relatively little change during the war, except for those increases caused by federal excise taxes.

Although urban rents had been rigorously controlled, the prices of housing properties had advanced sharply. Construction of new housing facilities had been expected to take considerable time, costs of building materials and labour had risen about one-third during the war, lumber prices had grown about 70%, while the prices of brick, cement, paints, heating equipment and building supplies had moved upwards despite rigid rent controls. Likewise, food price controls did not prevent advances in the prices of agricultural lands: in July they were reported 57% above the 1935-39 average for the U.S. as a whole, with increases varying from 20% in Massachusetts and 22% in North and South Dakota to 103% in South Carolina and 104% in Kentucky.

**Price Controls.**—During the first quarter of 1945, the Office of Price Administration had developed plans for postwar price controls designed to restore 1942 prices, with certain adjustments permissible under a formula adopted by that office. At the end of the second quarter, price adjustment claims were pending in many industries. The president called for, and congress in June assented to, the continuation of the price control legislation for another year. At the hearings of the house banking and currency committee, farm group opposition developed, especially to price control practices and to the Commodity Credit corporation policies designed to lower farm prices.

Normal forces of supply and demand were out of balance when the war ended in August. The daily retail price index of the 28 basic commodities compiled by the department of labour ascended to the highest point of the entire war period during October, when none of the individual basic prices was below the quotations for the week prior to Aug. 14. Those in charge of price controls feared that extensive relaxation of price ceilings would stimulate speculation and inflation rather than bring forth adequate supplies. The policy was adopted whereby credit expansion necessary to enlarge production was fostered, but the use of credit to further speculative purchases of goods and securities or property, or which would aggravate business and consumer demands for the already short supplies, was checked. Prices of cotton, grains and most farm products increased somewhat from the middle of September to mid-October following the decreases of the preceding six-week period. Prices of most industrial products continued at federal maximum price levels.

Although farm prices continued above parity, the government continued the price support program by purchase and loan guarantees for wheat, cotton, potatoes, peanuts, soybeans and flaxseed, chiefly because earlier legislation had provided for the maintenance of a farm price floor at 90% of parity prices for a greater number of farm products for a two-year period following cessation of hostilities. Moreover, export subsidies had gone into effect in Nov. 1944 for cotton and wheat. Official estimates reported that if farm subsidies had been terminated at the end of the war, the price of milk would have risen by 1.3 cents a quart, bread by 1 cent a loaf, cheese by 4.8 cents per pound, pork by 4.4 cents a pound, prunes by 4.2 cents per pound and 10 lb. of flour would have advanced the consumers' price by 8.8 cents. The subsidy supplement to price controls during the year had placed greater consumer burdens upon taxpayers.

Certain inflationary factors during the year had placed a severe strain on price controls: (1) mounting demands for relaxation of wartime price controls; (2) growing demands for higher wages backed up by strikes that raised costs and reduced supplies; (3) decreasing physical production which index

"THIS WAR IS STILL TO BE WON!" Werner of the *Chicago Sun* emphasized the necessity of maintaining price controls in the U.S. after the close of World War II in 1945

dropped from a February high of 236 to 172 by September; (4) drawing upon wartime savings by consumers that raised retail sales in September 6% higher than August, and about 12% higher in December than in the same month of 1944; (5) lending to foreign countries to enable purchases of already scarce supplies of food, clothing, fuel and strategic metals; (6) reducing reserve requirements against deposits in the federal reserve banks and their note issues from 35% and 40% respectively to 25% in gold certificates; (7) enabling federal reserve banks to hold merely direct obligations of the United States as collateral for note issues; (8) reducing income taxes on individual incomes for 12,000,000 taxpayers; (9) raising income payments to military personnel, increasing dependents' allowance and mustering out payments; (10) growing supplies of money in circulation, and deposits in banks that reflected declines in the purchasing power of the dollar as shown in Table I.

To offset the depressing effects of demobilization unemploy-

ment on prices, on Aug. 18, the president by executive order directed that higher wages be paid and existing prices maintained, and that a labour-management conference be called in November to work out details of the order. A report of the Office of War Mobilization and Reconversion stated that wages might increase on the average 24% without affecting the prices paid by ultimate consumers since business would gain 45% by postwar reduction in overtime pay, 9.5% by elimination of one-half of wartime upgrading and similar wage increases and 10% by repeal of the excess profits tax, so that wage increases would not compel increases in price ceilings. The National Association of Manufacturers replied, calling upon congress to repeal all price controls by Feb. 15, 1946, as a prerequisite to free collective bargaining.

Federal fiscal operations exerted powerful influences upon 1945 price trends. Monthly federal spending had dropped from \$9,640,000,000 in June to \$6,610,000,000 in September. Revenues collected in June had reached \$5,910,000,000 and were held at \$5,190,000,000 in September, thereby reducing the inflationary gap to the lowest quarterly payment level after 1942. The monthly trends in the inflationary effects of federal expenditures and the deflationary effects of taxes for the years 1944 and 1945 are shown in Table II.

U.S. Department of Commerce, Survey of Current Business.

Decreases in federal taxes exerted inflationary pressures on prices. Under the provisions of the Tax Transition act, about 12,000,000 individual income taxpayers were relieved of income tax payments for 1946, by making the surtax exemptions applicable to the normal tax. Moreover, congress had lowered the surtax rate in each bracket 3% so that all individual income taxpayers had gained. With the abolition of the corporate excess profits and the declared value excess profits taxes and the lowering of the combined normal and surtax rates on corporate incomes from 40% to 38%, as well as the provision for the rapid repayment of excess profits tax credits, the tax reduction exerted inflationary pressures on the general level of prices. The federal deficit for 1945 had been \$53,600,000,000 and the tax reduction measure created prospects for fiscal 1946 of a deficit of about \$30,000,000,000, both of which strengthened inflationary pressures. During the first three quarters, the federal government had spent about \$74,500,000,000 of which about \$37,900,000,000 had been repaid as taxes, and, after allowing about \$9,000,000,000 for depreciation, other reserves and undistributed profits, about \$27,000,000,000 net had been added to the disposable incomes to individuals.

Retail Prices.—From the beginning of 1945 until V-E day, the index number of retail prices of the department of commerce remained almost stationary at 139 (1935-39=100). Between January and September, the retail price of anthracite coal rose from 98 to 106; food from 136 to 139; fruits and vegetables from 168 to 172; while substantially small increases

were shown for dairy products, cereals, meats, wearing apparel, house furnishings and piece goods. Food prices rose 2.8% during the first quarter, 3.8% during the second quarter and became the source of widespread consumer complaints against the rising costs of living during the second half of the year. The bureau of labour statistics reported that between Aug. 1939 and June 1945, farm products had risen 113.8% and food prices generally about 60%. In April, the primary markets for livestock and poultry products reached the peak of 136.4% of 1926 prices, the highest level ever recorded by that bureau.

Wholesale Prices.—The combined index (889 commodity prices) revealed that wholesale prices in January stood at 104.9% of 1926 prices, slowly advanced until June to 106.1% and then gradually declined to 105.2% in September. Then followed a reversal in price trends and in November, the wholesale prices reached 106.7%, the highest level in 20 years. The bureau of labour statistics explained that the change came about chiefly because of "continued advances in the prices of agricultural commodities." The wholesale markets price index of farm products had risen from 127 in October to 132 by the close of November, while the range of wholesale prices for commodities other than farm products had ranged from 99.1 in January to 99.8 for September. The purchasing power of the 1935-39 dollar as measured by wholesale prices in September had fallen to 76.5 cents, while measured by the prices received by farmers, had sunk to 54.1 cents, and had dropped to 71.6 cents when measured by retail food prices, so that the 1945 dollar was placed in its most favourable light when viewed from the perspective of wholesale prices.

Cost of Living.—Between the opening and the end of the war in Europe, the cost of living, measured by prices of consumer goods in primary markets, showed an increase of 30.8%: the cost of food had risen 50.9%; clothing, 45%; house furnishings, 45%; fuel, electricity and ice, 12.8%; rent, 3.8%; and miscellaneous living costs 23.5%. Retail prices of living essentials rose at the rate of 1.2% for the second half of the year. With the expansion of liquid assets in the hands of buyers, price controls became more difficult, and in May the OPA increased the mill prices of 14 basic steel products, raised the ceiling prices of coal to cover higher wage concessions and three days after V-E day announced its plan of "selective reconversion to a peacetime economy during the war with Japan" by bringing civilian goods back on the markets at 1942 prices. This policy aroused widespread dissatisfaction among producers because of the industrial inability to cover 1945 costs by 1942 prices. Approximately 125 price schedules were abandoned between V-E day and the end of June, but basic price controls were retained for automobiles, refrigerators, stoves, farm machinery and radios.

Many lines of men's apparel were depleted by September. Although the housing cost index remained relatively stable, and rent controls indexes were held constant, the housing shortage became more realistic than shown in the data in Table III. Rumours of numerous black

Fig. 2.—RETAIL PRICES IN THE UNITED KINGDOM AND THE UNITED STATES, 1934-45. (Sources: Cost of living indexes. Ministry of Labour, converted to 1935-39 base for the United Kingdom; Bureau of Labor Statistics for index of consumer prices.) Because of the war, the retail price increase shown for the United Kingdom is understated, and to a lesser extent for the United States

market arrangements also vitiated the conclusiveness of the governmental indexes set forth in Table III.

The real burden of the costs of living for 1945 did not appear in the relative stability of the indexes shown in Table III, since the incomes that consumers had available to meet those costs did not remain stable, but declined, as shown in Table IV.

Income payments fell from 242 in January to 229 in September; factory pay rolls dropped precipitously from 335 in January to 257 in August; factory employment also continued its downward trend from 163 in January to 123 in September. Although heroic efforts were taken by industry and government to stabilize living costs, much less success was attained in the maintenance of monthly incomes. These data are summarized in Table IV. (See also AGRICULTURE; BUSINESS REVIEW; CONSUMER CREDIT; INCOME AND PRODUCT, U.S.; PRICE ADMINISTRATION; OFFICE OF; STOCKS AND BONDS; WAGES AND HOURS; and articles on individual commodities.)

(E. H. HE.)

**Primary Education:** see EDUCATION.

**Prince Edward Island.** The smallest of the Canadian provinces, Prince Edward Island lies in the Gulf of St. Lawrence. The island is 130 mi. long and has an average width of 21 mi. The population was 95,047 (1941 census), and predominantly rural. The largest centre is Charlottetown, the provincial capital.

**History.**—Throughout 1945, the Liberal administration of T. Walter Jones continued in office. On Dec. 19, by-elections were held in Prince county, the Liberals carrying one constituency; the Progressive Conservatives the other. Party standing in the assembly remained as formerly, Liberals 20; Progressive Conservatives 10. At the dominion general elections (June 11), three Liberals and one Progressive Conservative were returned to the Ottawa parliament.

**Education.**—For the school session, 1941-42, enrolment in all educational institutions was 19,544; the total revenue of all provincially controlled schools in 1943 was \$539,527. The two chief educational institutions of the island are Prince of Wales college and St. Dunstan's university, both situated at Charlottetown.

**Agriculture and Industry.**—In 1944 the estimated gross value of agricultural production was \$27,240,000; income of farmers, \$13,800,000. In 1943 the value of fur production was \$1,588,037. In 1945 the value of field crops was \$18,755,000 (1944, \$18,248,000). Thus Prince Edward Island was one of the three areas in which field crops showed an increased value during 1945. In 1944 the value of the fisheries was \$1,762,000.

FILMS.—*Maritime Provinces* (Encyclopædia Britannica Films Inc.). (J. I. C.)

**Princeton University.** An institution of higher learning at Princeton, N.J. By the end of 1945, its 199th year, Princeton university was returning to the ways of peace, and, as its major contribution to postwar education, was formulating, on an international scale, plans for its bi-centennial celebration. It announced for its 200th year, 1946-47, a series of conferences at which scholars of many countries would exchange and debate ideas in all fields of learning.

For its own undergraduates, Princeton adopted during the year a postwar plan of study which provided improved integration of the elements of formal education. With the gradual return of undergraduates from war service, its program for servicemen went into operation.

As 1945 drew to a close, Princeton added to its permanent installations a naval reserve officers training corps unit. Only this and the long-standing army R.O.T.C. unit remained of the 12 special military schools which had trained 20,000 uniformed men during World War II.

Two major building projects awaited availability of materials: the \$4,000,000 Harvey S. Firestone Memorial library, uniquely planned to provide physical facilities for the postwar plan of study; and the \$1,500,000 Herbert L. Dillon gymnasium, a re-

placement for the 40-year-old structure destroyed by fire in 1944.

(For statistics of enrolment, faculty, library volumes, etc., see UNIVERSITIES AND COLLEGES.) (H. W. Do.)

**Principe:** see PORTUGUESE COLONIAL EMPIRE.

**Printing.** Most dramatic graphic arts development during the year of 1945 was demonstrated by the *Chicago Tribune* when it published a full-colour, full-page illustration of the Big Three—Roosevelt, Churchill and Stalin. Colour separations for making the printing plates were sent from Europe by radio.

Transmission is practically the same as for one-colour continuous tone (photograph) or line copy sent by wire or through the air. Such one-colour pictures were commonplace in newspapers.

Space does not permit detailed description of mechanism or method of sending either one or full-colour pictures. To produce from a one-colour print on the drum of the sending mechanism the equivalent of the primary colour separation prints heretofore used, a colour disk is set between a scanning eye and a photoelectric cell. These prints are received by a triple electro-optical recording unit in contact with a cylinder of triple length holding three undeveloped negatives. Positives are received and are developed in the order sent. Assembling them into a picture is no different than making an ordinary colour print of a photograph.

No manufacturer predicted early revolutionary changes in presses, universally regarded as the key printing-plant machine, but all announced refinements. One builder of offset presses said numerous innovations were developed during World War II while supplying machines for armed forces. One such was the installation of four form rollers on a machine, the size of which had not heretofore been thought to require that many. It was asserted that quality of product improved. Another press builder announced a colour-convertible newspaper press. Colour printing equipment may be handily added where and when it is required. The respected inventor of the really revolutionary type of press (one operating without paper contacting plate and by ink "jumping" from plate to paper by electrostatic or electromagnetic action) applied electronics, and called his machine—not as yet in production—an Electronograph press.

It was generally believed that all makers of typesetting machines, as well as others, were working on a photo-composing machine. At the close of the year there were seemingly justified rumours that one such outfit would be officially announced in the near future. For presses which require plates—those for doing offset and gravure—such equipment would make type and slugs of type required only for relief printing.

Infra-red equipment for drying printing inks was established. A new use—burning in top enamel on photoengraved plates—was developed. When the plate is put into the infra-red oven, the operator turns on an automatic time switch which turns lamps off at the proper time, in approximately 5 min. This infra-red oven supplants a hand method, and does the work both better and faster. More and more graphic arts operations were being made automatic or semi-automatic.

The so-called Kromolite process was subject to wide use and, so, was important. It represents a method for automatically dropping out high-light areas of photoengravings. (J. L. F.)

**Printing Office, U.S. Government.** The office was established by congress in 1860 and was in continuous operation from that time. In addition to doing all of the printing and binding

ordered for congress, the office executes all the printing and binding required by the various executive and judicial departments, all independent establishments, and emergency war agencies of the U.S. government.

The total area occupied by the government printing office proper in 1944 was 1,396,973 sq.ft. or 32.1 ac. In addition, the office occupied seven warehouses in various sections of the U.S. covering 125,237 sq.ft. of floor space or 2.9 ac. During the fiscal year 1945 it was necessary to place orders with outside contractors for printing in the amount of \$28,116,779.65, as the government printing office was unable to handle the volume of printing necessary in connection with the war. The value of the office buildings in 1945 was \$9,634,825; machinery and equipment \$6,598,293; making the total value of the plant \$16,233,118. At the close of the fiscal year 1945, there were 6,914 employees on the rolls with a pay roll of approximately \$20,000,000. The office made charges for 1,045,739,990 copies of publications of all classes. This total included 6,966,725 copies of the *Congressional Record*, 5,976,886 copies of the *Federal Register*, 3,632,330 copies of specifications of patents, trademarks, designs, etc., and 309,212 copies of the patent office *Official Gazette* and annual indexes. The number of postal cards printed amounted to 2,386,933,000 and money orders 300,696,304. The stores division and warehouses handled 6,314 carloads of paper weighing 292,110,941 lb. The division of public documents mailed out 166,748,939 publications and forms; its receipts from the sale of government publications during the year amounted to \$2,180,476.66. The total charges made to congress and all other government agencies during the fiscal year were \$77,528,513.47.

(A. E. Gl.)

## Priorities and Allocations.

In the secret development of the atomic bomb, the U.S. War Production board acted as arbiter when overriding priorities for the Manhattan District project (its camouflage title) collided head on with programs for weapons of proven value that were urgently needed on the battle front. The hidden conflicts over this secret project were felt on several occasions in virtually all of the WPB industry divisions, when producers' order boards were being disrupted and carefully timed program deadlines set back by Manhattan District demands for scarce materials and equipment.

Many WPB divisions aided the completion of the Manhattan District project. In virtually all scheduling, programming and allocation of materials, component parts and end products, the project received 100% of its stated requirements. Uranium supplies and uses were carefully controlled through the miscellaneous minerals division and by allocation of all imported uranium. The Urgency Priority committee gave it top priority from the start, and it appeared at the head of every issue of the National Production Urgency List, which determined priority in local labour referrals. In total, these measures speeded by months the success of the first atomic bombing of Japan, and helped bring the war to an early conclusion.

**Removal of War Controls.**—On Sept. 30, 1945, the War Production board removed two broad wartime controls: In the transition from war to peace production the hitherto prevailing priorities system was replaced by a new, much simplified system and the Controlled Materials plan was cancelled. By Oct. 31, the board had in force only about 55 of a peak total of 650 orders and schedules over materials and supplies. It had taken general action to help industry by stepping up production, as follows:

1. Ordered its field staff to give special attention to enforcing compliance with the board's inventory controls. These controls were intended to assure that scarce materials be not immobilized in excess inventories, but would be used in current production.

2. Revised and simplified its priorities system. Priorities were being used to break "bottlenecks" in key reconversion production, and to expand the production of scarce essential items, such as low-cost textiles.

3. Gave free rein to industrial construction and took off highway construction controls; also, lifted controls on repair work and alterations of the transportation systems of the United States, and ordered revocation of construction order L-41, as of Oct. 15. The board ordered its field staff to give "spot" assistance to industrial expansions.

Meanwhile the board was aiding all other agencies concerned in acting to expand production. For example, not enough bricks and other clay products were being made to meet the needs of the important and expanding construction industry. The board accordingly had its field representatives visit plants and determine their requirements, giving priorities for needed machinery and equipment, while the Office of Price Administration granted a general increase in prices, and the U.S. Employment service "spotlighted" the brick industry in job referrals. Production, as a result, picked up, while the government watched developments closely in case of need for additional action.

**Civilian Production Administration.**—On Oct. 4, 1945, when the president announced the dissolution of the War Production board (effective Nov. 3), he ordered the establishment in its place of the Civilian Production administration. This new body took over and carried forward the remaining WPB functions and controls that would be required for the period of reconversion, as laid down by federal statutes and executive orders of the president. As announced by J. D. Small, the new administrator, these transferred functions were to be utilized to "further a swift, orderly transition from wartime production to a maximum peacetime production in industry, free from wartime government controls, with due regard for the stability of prices and costs." Thereafter its five bureaus were to handle, respectively, industrial operations, priorities, field operations, international supply, and demobilization of the former WPB functions which were to be closed out, or in certain cases transferred to other agencies. Meanwhile it continued compliance activities during the remainder of 1945, in order to prevent possible violators of remaining orders from taking unfair advantage over the majority of law-abiding business concerns.

The new CPA proceeded to expand production of materials which were in short supply and to limit their use until sufficient for the needs of civilian industry. It restricted the accumulation of inventories, thus guarding against speculation, hoarding and unbalanced distribution of materials which would curtail total production. It further extended priorities assistance to break bottlenecks which threatened to impede the reconversion process, and allocated scarce materials or facilities needed for production of low-priced items in forwarding the price-stabilization program. Finally, it facilitated fulfilment of the United Nations relief and other export programs.

With powers conferred under the general policies established by the director of war mobilization and reconversion, the administrator proceeded to liquidate the functions delegated by the president to the CPA as deemed by him in the public interest. At the same time the president lodged with the director of the bureau of the budget authority to effect terminations and transfers to other government agencies when the CPA should be abolished. (See also BUSINESS REVIEW; PRICE ADMINISTRATION, OFFICE OF; WAR PRODUCTION, U.S.; WAR PRODUCTION BOARD.)

(J. A. K.)

## Prisoners of War and Displaced Persons.

Before the end of World War II in 1945 the population of war prisoner camps was estimated at 4,000,000 men. Definite figures were not available because no information was given regarding the number of prisoners held by the U.S.S.R. or the number of Russian prisoners taken by Germany. Similarly, no information was available regarding Japanese or Chinese held by each other. Allied prisoners in Germany, exclusive of Russians, totalled 1,800,000; held by Japan 145,000. The 765,000 French held as war prisoners in Germany was the largest single group. Other large groups in Germany included 550,000 Italians, 200,000 British (United Kingdom and empire), 125,000 Yugoslavs and 90,000 Americans. The principal groups held by the Japanese were 108,000 British (United Kingdom and empire), 22,000 Dutch and 15,000 Americans.

Axis prisoners held by the Allies, other than those in the soviet union, were reported to include 630,000 Germans, 428,500 Italians and 11,600 Japanese. Italians were held as prisoners by both axis and Allied powers.

During the early months of 1945, the condition of prisoners of war held by Germany in Europe rapidly deteriorated. The Allied bombings disrupted internal transportation necessary for the shipment of relief supplies; the rations of the German military and civilian populations were curtailed with a corresponding effect upon the diet of their captives; and the disorganization precedent to total defeat was reflected in the maladministration of the camps. Many of the camps were hurriedly moved before the advancing Allied armies and prisoners were marched

Above: RUSSIAN PRISONERS of war liberated in Germany by troops of the U.S. 9th army in the spring of 1945

Right: BOWED AND SILENT, Japanese inmates of a prisoner of war camp on Guam listened to the news of Japan's unconditional surrender in Aug. 1945

Below, left: ALLIED PRISONERS interned at Yokohama waved excitedly at a low-flying navy plane shortly before their liberation in 1945

Below, right: GERMAN EX-SOLDIERS leaving Vienna, Austria, under Russian guard in Aug. 1945, to labour on reconstruction projects in the U.S.S.R.

GERMAN PRISONERS of war watching a U.S. signal corps film in 1945, in which victims of nazi concentration camps were exhumed for identification by German civilians. The men were photographed without their knowledge, by previously placed remote action cameras

to new locations. One group of prisoners from Oflag 64, in Poland, marched westward more than 400 mi. before liberation by the Allies.

An outstanding service to these prisoners was performed by the International Red Cross committee in the distribution of food packages and other relief supplies by means of special truck convoys substituted when rail transportation became impossible. Trucks provided by the U.S. and British Red Cross societies were assembled in Switzerland and Sweden and safe-conduct arrangements were made with Germany by the committee. Food parcels furnished by the Allied governments and Red Cross societies were carried to isolated camps and to wandering groups of prisoners throughout Germany in the final weeks of the European phase of World War II without molestation by the hungry civilians or the disorganized German military forces and with only slight casualties from Allied aerial activity. These same trucks and supplies were used to bring food and medicines to the survivors of liberated concentration camps.

The International Red Cross committee maintained delegations in the belligerent countries, with the exception of the soviet union which had not adhered to the 1929 Geneva Prisoners of War convention. These delegations reported on prison conditions and arranged for relief in the months preceding the end of the war. They assisted in the succeeding repatriation. The Young Men's Christian association and other voluntary agencies continued their efforts to supply recreational, educational and religious supplies for the prisoners of both sides until the armistice.

The repatriation of Allied prisoners in Europe and the far east was rapid. Planes were used by the Allied military forces in both areas to bring relief supplies to the liberated prisoners and to carry the liberated to rear areas where rapid transportation home was available. Allied prisoners overtaken by the Russian forces were repatriated through Odessa. Supplies of food and medicines were dropped from planes to isolated camps in the far east following the Japanese surrender. Messages from home collected by the American, British, Canadian, Australian and Netherlands Red Cross societies were delivered shortly after liberation to prisoners in the far east. U.S. army and navy facilities were used to repatriate Allied prisoners liberated in the far east. Some came out through the Philippines, some through

Okinawa and others through India.

Repatriation of axis prisoners held by the Allies proceeded slowly pending agreement among the Allies regarding the numbers which could be reabsorbed in axis countries and determination of policy regarding the use of prisoners for labour in Allied areas. Final plans for repatriation of axis prisoners was expected to be incorporated in peace treaties, but all axis prisoners in the U.S. were scheduled for repatriation by April 1946. By the end of 1945, 75,000 Germans and 25,000 Italians had left the U.S. Approximately 3,000 hospitalized Japanese prisoners had been returned to Japan by Dec. 1945, the remaining 3,500 were to be transferred to Hawaii early in 1946.

In Dec. 1945 the Nobel Peace prize for 1944 was awarded to the International Red Cross committee in recognition of the committee's work on behalf of prisoners of war.

**Displaced Persons.**—The term "displaced persons" as used during 1945 applied to persons of foreign nationality found in territories liberated or occupied by Allied forces. They consisted of United Nations displaced persons and ex-enemy displaced persons depending upon their nationality. Persons of enemy nationality and stateless persons who because of race, religion or political activity had been held in German concentration camps were described as "persecuted persons" and given special assistance by the Allies.

Approximately 6,400,000 United Nations displaced persons and persecuted persons were uncovered by the Allies in Germany and Austria. The military authorities assumed responsibility for their care and repatriation. In accordance with agreements made with their various governments and with transportation arranged by the military more than 5,000,000 had been repatriated in 1945. The 1,000,000 remaining at the end of the year consisted principally of Poles, Yugoslavs and Balts who objected to being returned to their countries, and Jews either stateless or of ex-enemy nationality. Their number was increased near the end of the year by the return to the U.S. and British occupation zones in Germany of persons once repatriated to the eastern European countries.

In the emergency period following V-E day, American Red Cross civilian relief workers assisted the military in the organization of centres and services for displaced persons. The United Nations Relief and Rehabilitation administration (U.N.R.R.A.) was later requested by the military to furnish teams to operate displaced persons assembly centres in Germany and Austria. The military, however, continued to have responsibility for repatriation movements, the furnishing of basic supplies and for

security measures. By Dec. 1945, U.N.R.R.A. was operating 350 assembly centres in Germany and Austria and had employed 5,000 persons for this work. U.N.R.R.A. responsibility for camp operations included health and welfare activities with remedial and preventive medical services, educational and recreational facilities and assistance in locating missing relatives. Under arrangements made by U.N.R.R.A., location bureaus were established in various Allied countries and a central tracing bureau at Frankfurt, Germany, in an effort to speed the reuniting of families. The International Red Cross committee, the national Red Cross societies and other social agencies collaborated in these efforts. Many voluntary agencies furnished personnel and supplies to assist displaced persons in co-operation with U.N.R.R.A. Among the U.S. agencies were included the Friends' Service committee, Joint Distribution committee, National Catholic Welfare conference and Young Men's Christian association, as well as relief groups interested in specific nationalities.

Some of the Jewish displaced persons of ex-enemy and stateless nationality classified as persecuted persons received asylum outside of Central Europe. Ten thousand persons from the Bergen-Belsen camp were received by Sweden and 1,000 orphans from the Buchenwald camp were taken to Great Britain. The problem of 100,000 such persons was still unsolved at the end of the year.

In the middle east U.N.R.R.A. continued to operate the camps for refugees previously transferred to that organization by the Middle East Refugee and Relief administration—a British organization. In 1944 when the transfer was made these camps housed 40,000 refugees, principally Greeks, Poles and Yugoslavs. During 1945 U.N.R.R.A. repatriated 20,000 Yugoslavs and 6,000 Greeks from the middle east camps.

By the end of 1945 no reliable over-all estimates were available regarding the number of displaced persons in the far east. An U.N.R.R.A. mission was in that area at the request of the military authorities to study the problem. The military government of Japan and Korea began the repatriation of Japanese from Korea and Koreans from Japan but only a small part of each group had been moved by the end of the year. U.N.R.R.A. developed plans for a displaced persons headquarters in Shanghai, China. (See also FEDERAL BUREAU OF INVESTIGATION; INTERNATIONAL LAW; RED CROSS; REFUGEES.) (P. E. R.)

**Prisons.** Reports issued during the latter part of 1945 revealed that inmates of United States state prisons manufactured, after Pearl Harbor, almost \$60,000,000 worth of matériel for the armed forces. That included steel navy pontoons, submarine and cargo nets, uniforms, mattresses, parachute cords, packing boxes for ammunition and rifles, stretchers, shirts, barrage balloons, camouflage nettings and ropes of all kinds. The federal institutions produced in excess of \$65,000,000 worth of war matériel. In addition, various penal farms raised a considerable amount of produce (meats, vegetables and fruits). Other reports revealed that thousands of inmates gave blood to the Red Cross blood banks, and some acted as "guinea pigs" to the cause of science.

With the termination of World War II against the axis, the matter of penal industries became an important problem for administrators. When war matériel was no longer required, the question arose: What can inmates now produce? Idleness is hardly conducive to the rehabilitation of inmates. Consequently, every effort was made to place penal industries on a firm peacetime foundation. The most practical way to create inmate jobs was to have institutions produce food, clothing and other articles for state institutions (e.g., hospitals, asylums, etc.) under what is known as the state use system. And there should also be ex-

change of products between states.

Because of the war and the consequent restricted use of materials, no new buildings were erected in the prisons. In many, however, educational facilities continued to be extended—particularly in vocational fields—to prepare inmates for useful work within the prisons or upon their release.

On July 8, 1945, Robert P. Patterson, then undersecretary of war, issued a report which showed that in 1944 only about 18,000 soldiers were convicted by general courts-martial. And in 1945, only 33,519 were imprisoned in the United States or overseas. Every attempt was made to rehabilitate those men, the aim of the army's program being "to restore to honorable status in the army all prisoners, who give evidence of their fitness for further service, and to provide, for those to be discharged because of unfitness, a program of educational vocational training which will help them to meet their obligations as citizens."

With the exception of England, no information was available about prisons in Europe. In England, inmates continued to aid in the war effort until victory was won. They produced considerable matériel and worked on both institutional and private farms, from which no escapes were reported. (See also CHILD WELFARE; CRIME.) (L. E. L.)

## Prizes of 1945. Literary Prizes.—The literary prizes for the year 1945 were as follows:

AMERICAN ACADEMY OF ARTS AND LETTERS.—The WILLIAM DEAN HOWELLS MEDAL for the most distinguished work of American fiction published during the previous five years to Booth Tarkington. The poetry prize of \$1,000 and the medal of the AWARD OF MERIT to W. H. Auden. Six literature awards of \$1,000 each, of the Academy and the National Institute of Arts and Letters, to Kenneth Fearing, Feike Feikema, Norman Rosten, Jean Stafford, Marguerite Young and Alexander Greendale. National Institute AWARD FOR DISTINGUISHED SERVICE, \$1,000 to Dr. Richard Beer-Hoffman.

ANISFIELD-WOLF AWARDS (*Saturday Review of Literature*) for the best books on the subject of race relations. Two awards annually. The amount may vary from \$500 to \$1,500. To Gwethalyn Graham for her novel *Earth and High Heaven* (Lippincott) and to Gunnar Myrdal for *An American Dilemma: The Negro Problem and Modern Democracy* (Harper).

JAMES TAIT BLACK MEMORIAL AWARD (British) to Cicely V. Wedgwood for *William the Silent, 1533-1584* (Yale).

JOHN BURROUGHS ASSOCIATION BRONZE MEDAL for a "literary work in the field so eminently occupied during his life by John Burroughs" to Rutherford Platt for *This Green World* (Dodd).

NICHOLAS MURRAY BUTLER GOLD MEDAL (Columbia university) to George Santayana for *Realms of Being* (Scribner). SILVER MEDAL to Sidney Hook, professor of philosophy at New York university, New York, N.Y., for writings on educational theory (John Day).

CANADIAN NOVEL PRIZE, \$1,000 to John Macdonald for *Darkly the River Flows* (Coward-McCann).

CANADIAN GOVERNOR-GENERAL'S AWARDS, four silver medals for the best books by Canadian authors in fiction, poetry, creative nonfiction and academic nonfiction. To Gwethalyn Graham for *Earth and High Heaven* (Lippincott); to Dorothy Livesay for her verse *Day and Night* (Bruce Humphries); to Dorothy Duncan for *Partner in Three Worlds*, a biography of Jan Rieger, a Czech (Harper); to Edgar McInnis for *The War: Fourth Year* (Oxford).

CAREY-THOMAS AWARD for creative publishing to E. P. Dutton and Company, Inc. for the works of Van Wyck Brooks.

GEORGE WASHINGTON CARVER MEMORIAL AWARD, \$2,500 for Mrs. Palmer's *Honey*, a work on the importance of the Negro, by Fannie Cook (Doubleday).

COMMONWEALTH CLUB OF CALIFORNIA.—GOLD MEDAL FOR GENERAL LITERATURE to Sally Carrighar for *One Day on Beetle Rock* (Knopf); GOLD MEDAL FOR SCHOLARSHIP AND RESEARCH to Thomas Bailey for *Woodrow Wilson and the Lost Peace* (Macmillan); SILVER MEDALS to Edwin V. Westrate for *Forward Observer* (Dutton); Donald Hough for *Captain Retread* (Norton); Will Durant for *Caesar and Christ* (Simon); SILVER MEDAL for the best book of poetry to Kenneth Rexroth for *The Phoenix and the Tortoise* (New Directions); for the best juvenile to Howard Pease for *Thunderbolt House* (Doubleday).

DODD, MEAD PRIZES.—RED BADGE DETECTIVE STORY PRIZE, \$1,000 to Elinor Chamberlain for *Appointment in Manila*; INTERCOLLEGIATE LITERARY FELLOWSHIP prizes to Karon Kehoe for *City in The Sun*; to Constance Beresford-Howe for *The Unreasoning Heart*, \$1,200 each.

DOUBLEDAY, DORAN NOVEL PRIZE, \$20,000 to Elizabeth Metzger Howard for *Before the Sun Goes Down*; NEW WRITERS CONTEST PRIZE, \$4,000, to Charles Andrews Fenton for *But We Had Fun*.

FEMINA-VIE HEUREUSE PRIZE, 5,000 francs awarded to the *Editions de Minuit* (Midnight editions), 21 clandestine booklets published in France during the occupation. The prize was refused.

JOHN SIMON GUGGENHEIM MEMORIAL FOUNDATION FELLOWSHIPS.—Among the 96 fellowships awarded are the following: To Major Hodding

Carter for a book on the West Florida republic; Corporal Stanley J. Kunitz for poetry; Jerre Mangione for a work on the reconstruction of Sicily; Lieutenant Commander Laurance Thompson for a biography of Robert Frost; Marianne Moore; Theodore Roethke; Jean Stafford Lowell; Robert Pick.

GONCOURT PRIZE, 5,000 francs to Elsa Triolet for her collection of stories, *The First Blow Costs Two Hundred Francs*, the first work by a woman ever to win the prize.

O. HENRY MEMORIAL AWARD PRIZE STORIES, \$300 to Walter Van Tilburg Clark for "The Wind and the Snow of Winter" (*Yale Review*); \$200 to Irwin Shaw for "Gunners' Passage" (*New Yorker*); \$100 to Ben Hur Lampman for "Old Bill Bent to Drink" (*Atlantic Monthly*); \$100 to Captain Laurence Critchell for a first-published story, "Flesh and Blood" (*Atlantic Monthly*).

AVERY HOPWOOD FICTION AWARDS, to William Kehoe for *A Sweep of Dusk* (Dutton); to Rene Kuhn for *34 Charlton* (Appleton-Century); to Fynette Rowe for *The Chapin Sisters* (Current Books, Inc.).

HOUGHTON MIFFLIN LIFE IN AMERICA AWARD, \$2,500 to Wallace Stegner and the editors of *Look for One Nation* (picture book); \$2,500 to Lora Wood Hughes for *No Time For Tears*. HOUGHTON MIFFLIN FELLOWSHIPS, \$1,000 to Elizabeth Bishop for *North and South* (poetry); \$2,400 to Ann Petry for *The Street*, a novel about Harlem; \$2,400 to Beatrice Griffith for a study of Mexicans in the United States.

THOMAS JEFFERSON SOUTHERN AWARD, \$2,500 to Ben Lucien Burman for his novel, *Rooster Crows For Day* (Dutton).

ALFRED A. KNOPF LITERARY FELLOWSHIPS, \$5,000 each to Dr. Richard Hofstadter for his proposed book, *Men and Ideas in American Politics*, and Dr. R. Carlyle Buley to work on his history, *The Old Northwest, 1815-1840*.

LEAGUE TO SUPPORT POETRY, prize selection, *Brief Enterprise* by Alice Monks Mears (Dutton).

LIMITED EDITIONS CLUB GOLD MEDAL, to E. B. White for *One Man's Meat* (Harper).

MACMILLAN CENTENARY AWARDS for books by members of the armed forces of the United Nations in honour of the firm's 100th anniversary. \$2,500 each to Sergeant Josiah E. Greene for his novel, *Not in Our Stars* and Staff Sergeant Spencer Logan for *Democracy Needs the Negro*. Awards in England of £500 each to Captain George C. Greenfield for his novel *Desert Episode* and to Lieutenant John Davies for *Lower Deck*. Awards of £100 to Sergeant C. R. Livingstone, Major H. Montgomery Hyde and Flying Officer Dobson.

METRO-GOLDWYN-MAYER ANNUAL NOVEL AWARD, \$175,000 maximum, contingent upon sales, to Elizabeth Metzger Howard for *Before The Sun Goes Down* (Doubleday).

NEW YORK DRAMA CRITICS AWARD, to Tennessee Williams for *The Glass Menagerie* (Random House).

W. W. NORTON AND COMPANY MEDICAL AWARD, to Carl A. L. Binger, M.D. for *The Doctor's Job* (Norton).

SATURDAY REVIEW OF LITERATURE AWARD for distinguished service to American literature, to the Council on Books in Wartime for its *Armed Services Editions*.

EUGENE E. SAXTON MEMORIAL FELLOWSHIP founded by Harper and Brothers, to Richard Plant.

SHELLEY MEMORIAL AWARD (Poetry Society of America) to E. E. Cummings.

CONSTANCE LINDSAY SKINNER AWARD (Women's National Book association) to Lillian Smith, author of *Strange Fruit* (Reynal).

SOUTHERN AUTHOR'S AWARD, to Hodding Carter for *The Winds of Fear* (Farrar).

STANFORD UNIVERSITY DRAMATISTS' ALLIANCE.—THE STEVENS AWARD to Geneva Harrison for *The Daylight Grows*; the ETHEREGE AWARD to Sergeants Malvin Wald and Walter Doniger for *Father Was President*; the ALDEN AWARD to James Broughton for *Summer Fury*.

TWENTIETH CENTURY-FOX FILM CORPORATION FELLOWSHIPS.—Five fiction awards of \$1,500 each to Corporal Len Zinberg for *Golden Time*; Commander W. J. Lederer for *A Thing of Life*; Fletcher Markle for *There Was a Young Man*; Lieutenant Martin A. Dibner for *Journey For Jason*; Lieutenant E. Shippen Geer for *Overture to War*.

Children's Books.—CALDECOTT MEDAL for the most distinguished picture book to Elizabeth Orton Jones for her illustrations of *Prayer For a Child* by Rachel Field (Macmillan).

DOWNNEY MEDAL for the finest American children's book written in the Catholic tradition to Mairin Cregan for her *Rathina* (Macmillan).

JULIA ELLSWORTH FORD FOUNDATION, \$1,250 to Nancy Barnes for *The Wonderful Year* (Messner).

JUNIOR SCHOLASTIC GOLD SEALS, to Martha Mann for *Nathan Hale, Patriot* (Dodd, Mead) and to Cornelia Spencer for *The Land of the Chinese People* (Lippincott).

HERALD TRIBUNE SPRING BOOK FESTIVAL, \$200 each to Norma Cohn for *Little People in a Big Country* (Oxford); to Ruth Brindze for *Gulf Stream* (Vanguard); to Elizabeth Janet Gray for *Sandy* (Viking).

JOHN NEWBERY MEDAL to Robert Lawson for his *Rabbit Hill* (Viking).

PARENTS' MAGAZINE MEDAL for the year's most outstanding book for parents to George K. Pratt, M.D. for *Soldier to Civilian* (Whittlesey).

YOUNG READER'S CHOICE AWARD (Pacific Northwest Library association) *Snow Treasure* by Marie McSwigan.

Pulitzer Prizes.—The Pulitzer prizes in journalism and letters were endowed by Joseph Pulitzer, publisher of the *New York World*, and are awarded annually by the trustees of Columbia university on recommendation of the advisory board of the graduate school of journalism. In 1945 awards were made in 15 classifications as follows: \$500 novel award to John Hersey for *A Bell for Adano* (Knopf); \$500 drama award to Mary Chase for *Harvey*; \$500 history award to Stephen Bonsal for *Unfinished Business* (Doubleday); \$500 biography award to Russel Blaine Nye for *George Bancroft: Brahmin Rebel* (Knopf); \$500 poetry award to Karl Jay Shapiro for *V-Letter and Other Poems* (Reynal); \$500 music award to Aaron Copland; \$500 for meritorious public service to the *Detroit Free Press*; \$500 for distinguished editorial writing to George W. Potter of the *Providence Journal-Bulletin*; \$500 for distinguished correspondence to Harold V. (Hal) Boyle; \$500 for a distinguished example of a car-

toonist's work to Bill Mauldin; \$500 for news photography to Joe Rosenthal; \$500 each for telegraphic reporting (national) to James B. Reston; (international) to Mark S. Watson; (local) to Jack S. McDowell; special citation to the cartographers of the American press whose maps of the war fronts have helped notably to clarify and increase public information.

Nobel Prizes.—The Nobel prizes are five in number and are awarded annually. No awards were made for the years 1940, 1941 and 1942.

The 1945 literature award was made by the Swedish academy to Gabriela Mistral, whose real name is Lucila Godoy, a Chilean poet, teacher and diplomat, and the first Latin-American author to win the award. She served as Chilean consul in Petropolis 1940-45 and was formerly a teacher in the United States at Middlebury college, Middlebury, Vt., and at Barnard college, New York city.

The award of the 1945 peace prize was made by the Norwegian parliament to Cordell Hull, secretary of state in the Franklin D. Roosevelt cabinet, 1933-44.

The physics prize went to Professor Wolfgang Pauli of Vienna; the chemistry prize to Artturi Wirtanen of Finland; the medicine and physiology prize was divided among three scientists: Sir Alexander Fleming (English), discoverer of penicillin, and Dr. Ernest Boris Chain (British citizen) and Sir Howard Walter Florey (English), who developed penicillin into a lifesaving remedy.

**Protestant Episcopal Church.** In 1945 the life and work of the Episcopal Church was deeply influenced by the three great events which affected the life of the United States and the world: first, the ending of World War II; second, the efforts for the establishment of world peace; and last, but not least, the unleashing of atomic energy, the effects of which were only vaguely realized.

Many of the clergy who had served as chaplains resumed their regular work in the church, and there were indications that a considerable number of the young men who had been in military service would offer themselves as candidates for holy orders.

The statistics for the year showed some encouraging increases. The number of clergy in 1945 was 6,449, the largest on record. The total number of baptisms during the year was 86,410, the largest ever recorded in one year. The confirmations reported were 68,868, an increase of 5,109 over 1944. The total number of church members (baptized persons) was 2,269,962, and the total number of communicants was 1,568,152, both these items showing increases over 1944. Contributions for all purposes increased by \$7,052,029 over 1944, reaching a total of \$46,170,035. During 1945 the Episcopal Church launched a great special appeal for a fund to strengthen the religious work in the missionary fields, especially those which had been devastated by the war. This effort was in progress and it was hoped that this fund for reconstruction and advance would reach a sum of not less than \$10,000,000. (See also CHURCH MEMBERSHIP.)

**Psychiatry.** The chief topics under consideration in 1945 were the treatment of the acute mental casualties incident to active participation in battle and the problem of rehabilitation, particularly the integration of the psychoneurotic soldier into civilian life.

Narcosynthesis.—The use of drugs, given intravenously, as a means of inducing a state of narcosis, received wide recognition. R. R. Grinker and J. P. Spiegel augmented their previous reports on the value of sodium pentothal as a narcotizing agent and referred to their extensive experience, both in actual battle zones and also in hospitals and rehabilitation centres in the

United States. They treated members of the U.S. army air forces who were suffering from severe and moderate anxiety states. Sodium pentothal was given to combat fliers. Its intravenous use proved to be both a diagnostic tool and a therapeutic agent. The authors reported that under narcosis they, as observers, were able to gain from their patients a clear view of the intensity of anxiety, the degree of regression, the strength of dependent trend, the super ego attitude, and the dynamic relation of all these factors to each other. The repressed emotional situation was often clearly exposed in the narcotic state but simple exposure did not achieve synthesis. The material revealed was frequently lost when the individual was aroused from the effect of the pentothal and no change in his emotionally disturbed state had occurred. Narcosynthesis, according to R. R. Grinker and J. P. Spiegel, in this instance cannot result in any systematic improvement in the patient. This use of sodium pentothal for this purpose corresponds to the sodium amytal "interview" known as narcoanalysis and long used in civilian psychiatry, the benefits resulting almost entirely from the knowledge the therapists gain concerning the patient's concealed difficulties. Therapeutic gains only accrued after the use of sodium pentothal when the repressed painful or traumatic events and the anxieties and hostilities connected with them were not only exposed but accepted by the flier's ego. He then was able to live with them in an economical and realistic fashion, giving up the neurotic compromise which had resulted in his symptoms. This is the process which Grinker and Spiegel call narcosynthesis, in contradistinction to narcoanalysis. It was believed that this method may have use in the treatment of civilian neurosis. If only used as a diagnostic tool, the method should be of great help to psychiatrists in understanding the problems with which they have to deal. Psychiatrists used the amytal interview successfully and proved its value in the recovery of forgotten or painful experiences or conflicts.

"A.W.O.L.ism."—M. S. Guttmacher and F. A. Stewart pointed out that absence without official leave is one of the most serious behaviour maladjustments with which armies have to deal. The authors examined a series of men who were charged with A.W.O.L. at a training centre in the U.S. army and compared them with another group consisting of men referred to the same centre without A.W.O.L. as the reason for investigation. In general, the A.W.O.L. group had a much lower intelligence level and at least two-thirds of the men were psychiatrically abnormal. One-third were diagnosed as psychopaths, and a high percentage had a history of head injury, bed-wetting, alcoholism, criminalism or previous mental disorder. These same men also gave a story of truancy in school and the frequent quitting of jobs at work and over half of the men had previous convictions in civilian courts. "A.W.O.L.ers" came from the heedless, irresponsible parts of the population and many had failed to meet social and communal responsibilities in the past. In meeting this problem, the authors suggested that the psychopaths, which formed the bulk of the group, did not respond to ordinary persuasive reasoning or the usual reward and punishment. The psychiatrists reported that the expenditure of time and energy in trying to train this group was not worthwhile. On the other hand, men without a psychiatric disorder needed special handling and were treated by education and by assignment to a job, in an attempt to raise morale, consistent with the soldier's capabilities and civilian experience. "A.W.O.L.ism" in an army can never be eliminated entirely, but by careful handling on a sound psychiatric basis Guttmacher and Stewart believe that much of it can be reduced to a minimum.

**Rehabilitation.**—About 45% of the medical discharges from the armed forces in 1945 were for neuropsychiatric disabilities. To rehabilitate thoroughly this large group of individuals, there

were not enough psychiatrists nor were there adequate facilities to give this type of soldier all the treatment the medical profession would like to provide. On the other hand, there was observed a distinct aversion in the mind of the veteran for psychiatric treatment, and the problem for this reason was not quite as large as the actual figures of men discharged for neuropsychiatric disability implied. Treatment, to be successful, must be based on the individual relationship existing between doctor and patient, and the task, therefore, will fall to the civilian physicians for they are the men who know these patients best and are familiar with the facilities of the communities in which they live. It is with the group who carry the diagnosis of psychoneurosis that most trouble is likely to occur. In some cases, employers have refused to accept men with this diagnosis, although it is quite clear that such a diagnosis carries with it no adverse implication concerning that person's re-employability in industry. Of all the men rejected for military service many of them went back into civilian life in a successful manner.

There was a growing feeling, moreover, that the term psychoneurosis had been used with greater frequency than justifiable in medical diagnosis. Many patients with fears, anxieties and mild depressions were labelled psychoneurotic. In most cases, these symptoms were only of a temporary nature and due to a maladjustment which was readily righted. Modern psychiatry tended, therefore, to make diagnosis such as simple adult maladjustment. It was thought that the label psychoneurosis is often unjustified and indeed may be even dangerous as it tended, in the mind of the person so labelled and in the minds of others, to distinguish and to separate him from the rest of the supposedly normal world.

The psychiatric casualties of the war were roughly divided into two groups: Those suffering from previous difficulties and integrations, and those who break down due to intolerable circumstances but who were normal before the circumstances were evoked. The prognosis is very much better for the second group.

Reports indicated that there were many obstacles in the way of the veteran before he could be successfully reoriented into civilian life. Often a patient's family exerted a powerful influence on the man, and the personal life of the soldier at home offered a fertile field for anxiety. There may have been excessive fear of his wife's fidelity while he was away, or the anxiety about the children recognizing their father as the paternal parent, some children never having seen the father at all. The veteran's wife, moreover, may have been working during the war receiving an excellent salary, sometimes greater than the veteran's compensation. How this matter should be solved was another source of anxiety. Rehabilitation clinics should be distinct community affairs in which employers are an integral part. Once the veteran feels that the community is behind him, he will seek advice from the rehabilitation centre. It was hoped that industry would avoid the mistakes often made when it worked on a basis that the individual must be fit for all duties or for none at all. This was often a marked psychological barrier for the returning veteran. This attitude, however, gradually changed with the times, particularly due to the infiltration of psychiatrists and psychiatric teaching in industry during 1945. It was quite clear that some of the most efficient workers in any industry have partial handicaps but these are circumvented by applying the man's assets in other ways and minimizing his liabilities.

Much more important, moreover, was the attitude that some industrialists took in regard to the man discharged for a neuropsychiatric disability. The veteran often found it impossible to gain employment because the misunderstanding in regard to his disability led the industrialist to reject him. Much

of this was overcome by certain farsighted industrialists. One company kept in touch with about 5,000 employees who were in military service. Thus, when the man returned and sought his old employment, there was a basis for understanding even if the man had been discharged on psychiatric grounds. It was found that the group comprising battle-incurred disability discharges and men discharged as unfit for service because of some slight mental or physical disability did not prove to be much of a problem as far as rehabilitation was concerned. Those men, however, who were discharged because they were temperamentally unsuited for service were found to be emotionally unstable and this characteristic was not acquired in the service, but it was inherent in the man. This same man was a problem before the war, and as a veteran, he was more of a problem than ever because he took advantage of being classified as a veteran. He wanted preferential regard. He was a misfit and had been a misfit even before he entered the service.

A certain amount of sound literature was produced to aid the veteran, the employer and the public as well as the general medical profession in helping the returned service man and woman. Particularly to be recommended are: *The Shaping of Psychiatry by War* (1945), by John Rawlings Rees; *When He Comes Back and If He Comes Back Nervous* (1944), by Thomas A. C. Rennie and Luther E. Woodward; *Soldier to Civilian* (1944), by George K. Pratt.

Attempts at organization of the rehabilitation problem among industrial workers was established in Great Britain by the National Council for Rehabilitation. A centre was set up at Roffey Park subsidized by various progressive firms, employers and interested benefactors. Various governmental agencies gave approval including the ministry of health. The centre proved a success in making available appropriate treatment for patients with various symptoms of subhealth including industrial fatigue, depression, anxiety states and other forms of disability. The program was carefully graded according to patients' capacities and special attention paid to principles of practice of wholesome feeding habits and social activities. A follow-up study of 600 patients six months after discharge showed that more than 80% were in good health and doing full-time work.

**Civilian Rehabilitation.**—Observations were made in occupied Holland, in liberated France, Belgium and other parts of Holland which convinced A. M. Meerloo that the people needed rest and must be handled with patience, for nearly all were slightly neurotic or psychopathic. The principal psychopathic attitudes found were a general mental paralysis, intent suspicion and increased aggressiveness. Gradually, as the people got better food, more rest and adapted themselves to more normal society, the normal reaction came back. They talked less about themselves, anxiety symptoms disappeared and their minds became more active as they became absorbed in the more important problems of the times. Among the young, the aftereffects lasted longer than among the older people whose characters were already formed before the war. Terror, fear and exhaustion continued to make themselves felt for a long time. The problems of mental hygiene and the psychological recovery of the masses surpassed in difficulty many other problems.

**Shock Therapy.**—A vast amount of knowledge accumulated on the subject of shock therapy, a subject being studied in all civilized countries in the world. New material was added which tended to change the points of view without minimizing the value of this type of treatment in psychiatry. It was believed that shock therapy had a definite place in the practice of psychiatry. The greatest advantage of the insulin method seemed to be in its effect on schizophrenia while the convulsive therapy methods were found to be the applications of choice in the affective condition.

**Man's Frontal Lobes.**—The function of the two large frontal lobes of man's brain has long been a topic of investigation and of speculation. It was almost universally thought that removal of these lobes by a surgical procedure would produce serious psychological defects in the patient and, indeed, many reports appeared in the medical literature to this effect. One of them, which was widely quoted as the patient was carefully studied both before and after the operation, was the case of a 16-year-old boy who sustained a fracture of the skull which destroyed both frontal lobes of his brain. A report in 1940 indicated that the boy, who had suffered from severe epileptic attacks and irresponsibility for ten years, had shown considerable recovery a year after operation. Prior to the removal of both frontal lobes, the patient was childish, violent, stubborn and destructive and had a gross defect of memory and ordinary judgment. There were periods, however, of normal responsiveness and a restrained behaviour. The patient was re-examined by D. O. Hebb, six years later. In 1945, his relatives were sure that the patient was normal in every way and independent testimony from three residents of the village

in Nova Scotia where the patient lived indicated that there was nothing wrong with the patient's behaviour. The patient was able to join the Canadian army in Feb. 1942. A psychiatric examination failed to reveal any defect in this man, and it was not until he had an epileptic attack, ten months after enlistment, that it was felt he should be discharged. The patient continued to have infrequent epileptic attacks but made a good social and economic adjustment. He showed some defect in planning for the distant future but this defect was not clearly shown to be due to brain destruction. No defect of foresight for the immediate future was noted. (See also **PSYCHOLOGY**.)

**Psychology.** Psychology as an academic discipline and as an applied profession was in the process of transformation as a result of World War II. The most general aspect of the change was the nullification of the divorce between the self-centred psychological laboratory, with its emphasis upon the cult of pure science, and the world of practical human problems. Laboratory psychology in its pursuit of scientific rigour had been so steeped in the traditional methodology of an elementaristic psycho-physics that its approach to psychological processes was often artifactual. The same atomistic philosophy carried over to many applied psychologists who tended to ignore the significant dimensions of their problems for the item-reliability approach of the psychometrician. The vacuum created by the lack of an adequate experimental psychology was filled by the work of practitioners, psychiatrists and social scientists. The importance of making popular psychology scientific and scientific psychology fertile did receive attention before World War II but it took the mobilization of resources toward a common goal to achieve major progress in this direction. Specifically, World War II affected psychology in three ways:

(1) In place of its concentration upon man's responses to isolated aspects of his inanimate environment, the laboratory studied man's adaptation to machines. Many of the OSRD (Office of Scientific Research and Development) projects in psychology during World War II were concerned with fitting machines to men, i.e., finding out how instruments and equipment for planes, tanks and ships could be constructed for maximum efficient use by their human operators. This type of research could be readily applied both to industrial production and to consumer use of products. Psychologists returning to universities were co-operating with private industry to develop such

TWO-OUNCE PACKETS of salt, like this, were dropped on Burmese villages, where salt was dangerously scarce in 1945, at the suggestion of the OWI's branch of psychological warfare

human engineering. The navy department in its research laboratories was maintaining a special section headed by psychologists to ensure that in addition to having the best equipment mechanically it would also have the most useful apparatus psychologically. The importance of this development was that the laboratory would study the human being not as a bundle of unrelated reflexes and sense organs but as an integrated functioning organism in the perception and manipulation of his world.

(2) The evaluation of personality, formerly restricted to the measurement of single traits in artificial situations, was increasingly taking into account the total person in life situations. The major impetus here came from the Office of Strategic Services which called in some of the leading psychologists and psychiatrists of the U.S. to aid in the selection and training of agents for intelligence and undercover work. These experts collaborating in assessment schools devised crucial situations in which candidates could be observed and evaluated. Candidates, for example, upon reporting to assessment camps had to live there for several days under assumed identities with complete loss of social status and with no knowledge of the extent to which the problem-situations were staged. British psychologists also departed from the atomism of psychometric testing in working out procedures for the selection of non-nazi Germans for administrative posts in Germany. Through long clinical interviewing of German prisoners of war, of known degrees of nazi identification, the British scientists found that the significant personal core of nazism was a matter of authoritarian character structure. From the detailed psychiatric interview key questions were selected, most of them indirect in nature, which searched into the educational philosophy and the everyday values of the subject. These questions comprised a short, practical test which was employed by the British occupying forces.

(3) Problems of human relationships, difficult if not impossible for laboratory experimentation, were being studied through field methods which utilized adequate scientific controls. The opinion polls had stimulated the idea of field research for ascertaining popular feeling and thinking, but under the urgency of war needs, field methods were evolved to observe and record human reactions at the deeper levels of motivation and behaviour. The leadership in this development came from the Program Surveys division of the U.S. department of agriculture under the directorship of R. Likert. This division, set up to study administrative problems at the grass-roots level, was used by OWI, OPA, WPB and the U.S. treasury department to find out how well war programs were functioning. The division improved sampling procedures, developed depth interviewing to get at motivational factors, constructed its studies with experimental design on the basis of psychological hypotheses and conducted supplementary check studies directed toward key informants and behaviour records.

Perhaps the best example of the application of field methods in social-psychological research was the work of the morale division of the U.S. Strategic Bombing Survey. President Roosevelt in the fall of 1944 directed the secretary of war to set up a survey in the secretary's office to evaluate the effects of strategic bombing upon the German war effort. Social psychologists were recruited for a morale division of the survey to determine how the capacity and the will of the German people to resist was affected by bombing. Preliminary studies were made in the spring of 1945 of captured German civilian mail, of German prisoners of war, of French escapees and of civilians in captured German towns. For purposes of the final study, conducted in June and July 1945, Germany was divided into city groups on the basis of bomb tonnage, from unbombed towns to heavily bombed cities. Cross-sections of the populations were inter-

AT THE SUGGESTION of U.S. military intelligence, balloon-held streamers announcing the Japanese surrender were dropped over the Sierra Madre range of Luzon in Aug. 1945; they brought many remaining Japanese out of hiding to surrender

viewed in these areas, house destruction and other physical damage was recorded, official German records including the famous *Stimmungsberichte* were consulted and displaced Russians, Poles and Italians were questioned. Since the extent of bombing was already established, the interview schedule with German civilians did not ask directly about bombing but inquired into the many aspects of morale. Relative level of morale in different areas could then be related to degree of bombing without being affected by a certain amount of absolute distortion in answers. The results showed little confirmation of the belief that bombing strengthens morale. The German will to win was seriously depressed by the heavy air attacks and the majority of civilians were ready to accept surrender long before the end. They remained in the war because of the repressive nazi controls and because of the lack of revolutionary initiative among the German people. The nazis also countered the adverse morale effects of bombing with excellent air raid shelters and a well organized system of relief and evacuation. Some 350,000 German civilians were killed and about twice that number injured by air attacks—a smaller casualty rate in relation to bomb tonnage than that of England. The findings indicated, moreover, that continued heavy bombing does not bring successive decrements of morale. Under repeated bombings people became wholly concerned with the problems of fox-hole existence and grew politically apathetic. Hence they showed no active resistance to the regime in power. German industrial morale also declined under bombing but production was maintained for a long time by nazi penalties, rewards and countermeasures. By the fall of 1944, however, bad cracks appeared in the structure and in a few months the collapse was complete.

In general, psychology emerged from World War II with a growing realization that while as a young science it lacked the formidable body of proved fact of physics and chemistry, it

possessed the methods to obtain answers to important problems if given the opportunity and the resources. In this connection should be noted the move of social psychologists to start research on the number one world problem, the preservation of peace. The Society for the Psychological Study of Social Issues devoted its third yearbook under the editorship of G. Murphy to the assembling of research findings and psychological thinking on maintaining peace.

Research in the interest of the war effort followed two organizational patterns: (1) operational research carried on directly by a military or governmental agency and (2) the farming out of projects to individuals and institutions under the aegis of the OSRD, the N.R.C. (National Research Council) or the National Defense Research Committee. The committee on the Selection and Training of Aircraft Pilots of the N.R.C. was an outstanding example of the second pattern. This committee stimulated, supervised and partially supported experimentation at 40 universities and centres for a five-year period under grants from the Civil Aeronautics Administration amounting to about \$900,000. Many of the tests employed by the army and navy for the selection and classification of pilot candidates were either developed by or in collaboration with the committee. For example, the biographical inventory which served as one of basic instruments in cadet selection in the navy was the immediate outcome of the committee's Purdue project. Likewise the psychomotor tests employed by the army air forces, especially the rotary pursuit test, grew out of co-operation between university and army research. In the training of pilots, moreover, the committee showed the casual nature of flight instruction and aided in the development of courses in flight instruction, in flight manuals, in the use of a standard flight and in a general systematizing of pilot instruction in the air and on the ground. Its studies, indicating that fatal accidents are associated with stalls growing out of turns at low altitudes, emphasized a shift in training from precision entries and execution of stalls and spins to extended practise in slow flying and other procedures making for training in the avoidance of and immediate recovery from the stall.

Within the armed services themselves psychological research centred about the selection and classification of men, their training for specific assignments, their morale and the salvaging of psychological casualties. Instances of the type of work done follow. An answer to malingering on mental tests was devised by H. Goldstein on the assumption that the malingerer does not follow the same pattern of error as the bona fide failure. The assumption was applied specifically to constructing a malingering key for the army's visual classification test but the method can be applied to most psychological tests. The broader aspects of malingering were studied by navy psychologists who found a distinctive pattern of performance on the Rorschach test associated with illness and incapacity. Malingerers showed a low total number of responses, a complete failure to respond to some plates, a slow reaction time and a striking difference between performance on the Rorschach and other tests.

Validation, the most difficult problem in personality testing, was successfully met in one army special training centre by modifying and combining into one test of maladjustment the Bell inventory, the paranoia and hypochondria subtests of the Minnesota Multiphasic Personality inventory and a specific army adjustment scale. This instrument was validated against actual success in the training centre and gave predictive value beyond that of the aptitude tests. Another validation procedure for personality testing involved the use of the pattern or profile of responses to the Bernreuter inventory rather than the total item score on the traits it seeks to measure. Pattern analysis differentiated a random or normal group of men in the air forces

from the men diagnosed as psychoneurotic or constitutionally psychopathic.

In treating combat neuroses, drugs were used extensively by military psychiatrists to reduce the time necessary for the uncovering of unconscious pathogenic material and the production of abreactions. Narcosynthesis through the use of sodium pentothal was preferred in the air forces to shock therapy (insulin or electric) or to narcosis (continued sleep treatment). Continuous sleep induced by sodium amytal did not permit sufficient activity of the ego to produce synthesis of dissociated ideas and emotions.

As World War II drew to a close the nature of the psychological work in the services shifted from job analysis and personnel classification to design of training procedures, to an evaluation of U.S. and enemy methods of warfare, to clinical psychology and to separation counselling. A preview of veteran adjustment problems can be seen in the kind and extent of maladjustment in the army. About one-half of all discharges before V-J day were due to mental defects. In returning to civilian life this group was expected to be a greater problem than before, because they might not find their way back to the type of simple environment to which many of them had adapted. In the case of the psychoneurotic and the psychopath there was also the prospect of the intensification of the disorder both because of maladjustment in the army and of the dislocation in trying to adjust once more to civilian life. In these cases as well as in cases of war neuroses and combat fatigue the whole problem is circularly re-enforced by the labelling of discharges as abnormal. To give the veteran insight into his own problems of adjustment the emergency committee of the N.R.C. published *Psychology for the Returning Serviceman*. This volume though popular in presentation was prepared by experts, under the editorship of I. Child and M. Van de Water, and covers both the problems common to all servicemen and the particular needs of special groups as, for example, those who suffered casualty or combat shock.

**Public Health Engineering.** **Water Supply.**—Experiments with the application of fluorides to public water supply for protection of certain age groups against dental caries were extended in 1945. The most important addition to this large-scale effort to avoid serious disabilities in young children was in the application of sodium fluoride to the public water supply of Grand Rapids, Mich., with a population of about 165,000. The experiment was expected to continue over a period of at least ten years and was started on Jan. 25, 1945.

In order to establish a dental base line for evaluating the results of this large-scale undertaking, 30,000 Grand Rapids school children were examined. Several thousand school children were to be examined annually to determine the variations from the beginning of the experiment.

The city of Muskegon, Mich., with a population of about

48,000, was to serve as the control community, since it too obtains its water supply from Lake Michigan. From 6,000 to 8,000 children were examined in this community.

These large-scale efforts included control operations in Kingston and Newburgh in New York state and Brantford, Ontario, in Canada.

Important evidence of peculiar epidemics associated with water supply transmission was developed during 1945. Epidemics of infectious hepatitis were studied in the United States and elsewhere, which appeared to have had their origin in sewage polluted waters. For the most part, these epidemics were attributed to gross sewage pollution primarily of unprotected underground waters. Heavy chlorination of water appears to give adequate protection against the virus of this disease. Little or no additional evidence was at hand to link the occurrence of poliomyelitis cases with the potable water supplies generally in use.

The heavily polluted underground waters appeared to be incriminated also in the deaths of infants. Cyanosis due to methaemoglobinaemia may occur in infants with gastrointestinal disturbances who receive boiled water which comes from poorly constructed dug or drilled farmyard wells with defective casings. The water may contain large amounts of nitrate compounds which, when ingested, are converted by bacterial action to nitrites. The nitrite ion is absorbed and oxidizes haemoglobin to methaemoglobin.

Apparently the condition was not rare in 1945 and investigators believed that ample opportunity for frequent occurrence of the cyanosis existed.

Real progress was made in better understanding of the mechanism of the action of chlorine and its compound in bacterial disinfection.

In field operation, where high organic contents and high bacterial concentrations are frequently encountered, important substitute materials were developed during 1945. Success was being obtained with the triiodides, particularly triglycine hydrotriiodide, in which elemental iodine is the active agent. The compound was prepared in the form of stable, quickly dissolving tablets, liberating some 7.5 p.p.m. of elemental iodine in a quart of water.

Synthetic ion-exchange resins were being steadily improved for the treatment of water supply so that large-scale central demineralization units, particularly in industrial plants, supplied a purer water at a lower cost than formerly available. Reductions of the chemical constituents of water, approaching the concentrations of highly distilled waters, were practically attainable.

**Insect Control.**—DDT, or dichloro-diphenyl-trichloroethane, continued to hold the stage as one of the "miracle compounds" of World War II. Its use was extended through the world in the control of flies, mosquitoes, lice and other insects, with marked reductions in malaria, typhus, bubonic plague and dengue fever.

Its application by means of aeroplane dispersion and by spraying on the walls of houses extended the successful use of this material with constantly diminishing costs. The methods adjusted to local requirements by means of entomological control were expected to result in reducing materially and economically insect-borne diseases throughout the world.

Dimethyl phthalate, a liquid insect repellent, was very successful against mosquitoes and mites ("chiggers"), when applied to the skin and to the clothes.

**Rodenticides.**—Rodents as reservoirs of diseases affecting man and as predatory animals have resisted control for centuries. War-created shortages of chemicals familiar as rodenticides actually favoured the development of substitute or improved chemical compounds for these purposes. Two effective materials developed during the war might supersede the more conventional ones of the past. They are "1080," or sodium fluoroacetate, and "antú," or alpha-naphthyl-thio-urea. Both compounds are highly toxic, stable, dependable and acceptable to rats and perhaps to most other rodents.

**Air Sanitation.**—Studies were continued in army, navy and civilian installations to answer two major questions in this new field of environmental sanitation: (a) where and under what conditions is droplet infection sufficiently important to warrant control, and (b) what methods are most effective and most economical? The conclusions to be anticipated from these studies "may well open the way to a new field of environmental sanitation of major importance to human health and welfare."

**Public Opinion Surveys.** **Elections.**—During 1945, their tenth year of operation, public opinion surveys offered further evidence of the accuracy of representative sampling methods by predicting the outcome of elections in Canada, Britain, France and Denmark within an average margin of error of 1½%. Despite the presence of from three to five major parties along with a scattering of minor parties in each of these elections, and despite the difficulties imposed by postwar conditions, the maximum deviation of survey from actual figures was in no case more than 3%. But the fact that the Labour party sweep in the British elections took most journalists by surprise indicated that opinion surveying had yet to win acceptance in its most publicized and most conspicuously successful activity.

**New Organizations.**—Following the example of the Svenska Gallup Institutet, which had been operating after 1943, newspapers and magazines in the three other Scandinavian countries sponsored surveying organizations in 1945: the Dansk Gallup Institut, the Suomen Gallup Oy and the Norwegian Institute of Public Opinion.

The formation of International Public Opinion Research, Inc., of New York city, to investigate public opinion in South American countries was announced by Elmo Roper, conductor of the *Fortune* survey, and Joshua B. Powers, newspaper representative. Preliminary reports were made to corporate sponsors in the U.S.

The trend toward local surveys in the U.S., noted in 1944, was continued with the establishment of a District of Columbia poll by the *Washington Post* and the announcement of plans to resume and expand a Texas poll discontinued at the outbreak of war.

**Basic Findings.**—In a book, *The People's Choice*, Paul Lazarsfeld, Bernard Berelson and Hazel Gaudet reported the results of an intensive, continuing study of the effect of political propaganda and discussion on the people of Erie county, Ohio. The field work had been done in 1940 under the direction of Elmo Roper and Elmo C. Wilson. Among the conclusions reached by the authors were these: political propaganda has little or no direct influence on votes, except that it "gets the vote out"; "leadership" in a large society is created anew in every small social group and therefore seldom flows "from the top down."

In Oct. 1945 the *Fortune* survey published a summary of its four-year findings on the influence of information on opinion. It demonstrated that well-informed people reach definite opinions more readily than do uninformed people, and that the opinions reached by the well-informed are more moderate in

character. The uninformed tend to go to extremes. A close relationship between the amount of current affairs information possessed by people and the amount of formal education they had completed was also established.

**Occupied Countries.**—Elmo C. Wilson recorded very wide shifts in the attitude of German prisoners of the U.S. army toward the Nazi party after the prisoners had been shown pictures of German concentration camps.

Guided by Rensis Likert of the U.S. department of agriculture, the morale division of the U.S. Strategic Bombing survey conducted several thousand interviews with German citizens and with displaced persons in the occupation zones of the U.S. and British armies. Using an "open interview" method, which permitted statistical tabulation but preserved free individual response, interrogators sought to trace the decline of faith in Hitler, in the Nazi party, and in German victory; the rise of clandestine radio listening; the direct effects of bombing; the morale differences between much-bombed and little-bombed areas. By the end of 1945 a similar study had been completed in Japan, with American-born Japanese as interrogators. It was expected that both studies would be published early in 1946.

The public opinion survey section of the Japanese board of information was abolished by occupation authorities on the ground that it was a device for introducing officials into private homes and editorial offices in order that they might discover and coerce opinion—hence it was a continuation of forbidden "thought control" activities. Many hastily improvised surveys of Japanese public opinion were prepared by Japanese individuals for sale to foreign press representatives.

**The Atomic Bomb.**—From the dropping of the first atomic bombs in August until the end of 1945 both the American Institute of Public Opinion, under the direction of Dr. George Gallup, and the National Opinion Research centre, under the direction of Harry Field, continuously probed U.S. opinion on the bomb and its control. Both surveyors reported an extraordinarily high and continuously maintained interest in the bomb even after it had ceased to dominate the newspaper headlines. U.S. opinion favoured measures for international control of atomic fission, but hesitated to give up the secret of making the bomb. Nevertheless most people in the U.S. believed that other nations would discover the secret for themselves in four or five years. Reluctance to share the secret seemed to hinge on uncertainty concerning effective controls and hope that the U.S. would maintain an advantage in atomic science. U.S. negotiators at international meetings on the atomic bomb seemed to be following the line of their public opinion at home. (R. Wd.)

**Public Roads Administration:** see FEDERAL WORKS AGENCY; ROADS AND HIGHWAYS.

**Public Utilities.** A summary of the events important for public utilities in the United States during the year 1945 may well divide the year into two segments: the three-quarters interval ending in September during which the dominant note continued to be public utility operation in the interests of the war effort and their control by war agencies, especially by the Office of War Utilities of the War Production board; the remainder segment is the quarter year interval during which war control practically reached the vanishing point.

The year began with a brownout order by War Mobilization Director James F. Byrnes to save coal, followed by a WPB order forbidding the use of electric energy for nonessential advertising and ornamental lighting. By May 1945, as war contract terminations and cutbacks grew, the gradual revocation of orders controlling the production and use of power, water, gas and communication services once more permitted the resumption

of these services for unrestricted civilian supply. In the main only travel and communications restrictions remained with telephone service subject to a revised system of priority ratings that emphasized reconversion needs.

Despite the opposition of about 80% of the water users in the Colorado river watershed, notably the city of Los Angeles and other southern California cities and irrigated areas, the Foreign Relations committee approved the Mexican Water treaty 18 to 4 in February. It was later ratified by the senate with 11 reservations by a vote 76 to 10. The treaty provided for the construction of a series of multiple purpose dams in the lower and boundary section of the Rio Grande river, together with auxiliary flood protection works by a joint boundary commission. Electric power produced from the flood waters thus conserved would be divided equally between the two countries. Since two thirds of the water supplied would come from Mexican sources, while the treaty accorded the annual use of at least 350,000 ac.ft. of the same for irrigation purposes in Texas, the unequal distribution of irrigation water in the lower reaches of the Rio Grande near Brownsville was balanced off by the concession of 750,000 ac.ft. additional guaranteed supply to Mexico out of the water stored back of Boulder dam. This supply would be delivered to Mexico at the border through the All-American canal supplying the Imperial valley of California or through diversion works in the lower river itself. Californians were willing to concede the use of 750,000 ac.ft. based upon prior use on Mexican lands, but regarded the additional quantity as a good-will concession to Mexico in the interests of hemisphere solidarity but at the expense of and in violation of implied agreements with U.S. contract users.

For the first time after the depression of the early 1930s electric power output registered a decline. While the generator capacity grew to almost 50,000,000 kw. with a net increase for the year of 712,000 kw., there was a significant decline over the increases in capacity recorded for the previous war years. The total output, however, declined from 231,000,000,000 kw.hr. to 222,000,000,000. The decline was due to decreased sales to the large energy users engaged in war production. On the bright side of the picture it is necessary to record, however, that the output from hydro plants increased because 1945 was a good water year. Moreover, the availability of surplus power brought increased sales to other users, new customers aggregating 851,000 and an over-all increase of almost \$60,000,000 in revenues.

Construction activities were held down by the shortage of labour and materials. But there was no shortage of planning for future activities. In Dec. 1944 President Roosevelt signed a Flood Control bill which looked forward to the development of river systems with incidental irrigation, navigation, soil erosion control and electric power benefits, estimated to equal the \$1,500,000,000 to be expended by the government upon these projects. This legislation brought to a head the controversy over Senator James E. Murray's bill providing for a Missouri Valley authority, analogous in its provisions to the TVA. Reintroduced in January the bill caused vehement differences before congressional committees and elsewhere over the question whether these conservational activities should be in the hands either of autonomous federal corporations or of the traditional old-line agencies like the army engineers or the interior department's bureau of reclamation. A related question was involved in the legislation passed toward the close of the year giving the president broad powers to reorganize and condense the governmental administrative machinery. Under the plan as adopted the reorganization would become automatically effective in 60 days unless vetoed by both houses of congress. The public utility interest in the matter was that such agencies as TVA,

the Federal Communications commission and the Federal Power commission might find that they had lost the independent status which they hitherto enjoyed.

Another long-standing issue of public policy was reaching its final solution toward the close of the year as the U.S. supreme court began hearings on the constitutionality of the so-called "death sentence" clause of the Public Utility Holding Company act of 1935. The North American Co. appealed the divestment order of the Securities and Exchange commission by virtue of which it would retain only its electric utility holdings in and around St. Louis, Mo.

It might well be that the most significant event of 1945 for all power producing utilities was the successful release of atomic power at Alamogordo, N.M. (See also ATOMIC BOMB; DAMS; ELECTRICAL INDUSTRIES; LAW; RURAL ELECTRIFICATION; TENNESSEE VALLEY AUTHORITY.) (M. G. G.)

**Publishing (Book):** see BOOK PUBLISHING.

**Puerto Rico.** A United States insular dependency in the West Indies; area, 3,423 sq.mi.; pop., 1943 est. 2,037,255 (1940 census: 1,869,255). Whites comprised 76.2%, Negroes, 23.8%. The chief cities (with 1943 estimated populations) are San Juan, the capital (185,879); Ponce (67,423); Mayagüez (53,216); Caguas (25,300); Arecibo (26,184); Río Piedras (21,537). Languages: Spanish and English; religion: predominantly Roman Catholic. Governor in 1945: Rexford Guy Tugwell.

**History.**—Various proposals for a change in Puerto Rico's political status, long a subject of agitation in the territory, were made during 1945. The most significant event, however, was the statement by President Truman in his Oct. 16 message to congress when he urged that Puerto Ricans be permitted to vote upon whatever proposal or proposals for a change of status congress was prepared to enact into law. Alternatives under discussion, as listed by the president, included granting to Puerto Rico the right to elect its own governor and to enjoy more self-government, statehood, complete independence and a dominion form of status.

Economic conditions continued relatively good in the territory during 1945. Seasonal unemployment increased in the fall, following the harvesting of the sugar crop. At the year's end, many former servicemen and civilian workers who had been employed on the mainland were beginning to return to the territory, bringing the threat of greater unemployment as well as the loss of substantial earnings which had formerly been remitted to the island.

At the end of the year, the valid awaiting assignment load reached 194,943 registrants which, together with 19,733 persons working on emergency projects on June 30, 1945, showed that a total of 214,676 persons still were in need of employment. The average number of persons employed in the War Emergency program during the fiscal year 1944-45 was 31,612. Of that number, 25,540, or more than four-fifths, were unskilled labourers. The largest number of workers was used in projects for the construction of highways, roads and streets, about 17,001 being employed in that work.

Prices continued to rise parallel to those on the mainland, although they were under strict control. Part of the rise was attributed to the extreme shortages of many goods, shipments of which had been cut off during the war years. Shipping was much easier, however, and all cargo controls to the island were abandoned in July.

**Education.**—A total of 341,511, or 53.31% of the population of Puerto Rico between the ages of 6 and 18 was enrolled in public and private day schools in 1945. The grand enrolment in public schools and private day, vocational, evening and adult schools was 355,872, which represented an

increase of 7.36% over that of the preceding year.

In the public day schools, the enrolment was 330,870, an increase of 21,275, or 6.87% over that of 1944. The total number of teachers, principals and assistant superintendents in the public schools was 8,062, of whom 53.17% were normal or college graduates.

Expenditures for public educational purposes totalled \$18,789,256, and for private schools an estimated \$931,931.

**Finance.**—The monetary unit is the United States dollar. Bank deposits in July 1945 were \$255,700,000, debits were \$296,000,000 and loans were \$53,000,000. Island income was estimated at \$409,700,000 in 1944.

Revenues in the fiscal year 1945 totalled \$123,121,700, of which \$79,502,500 was received in the general fund and \$43,619,200 in special funds. The greatest single source of revenue was the tax on rum, which produced \$37,724,700. Disbursements during the fiscal year 1945 were \$108,248,513, leaving a balance in the treasury of \$136,605,381. Bonded indebtedness was increased 6.61% during the fiscal year 1945 from \$12,254,000 to \$13,064,513. Municipal debt stood at \$15,756,747 on June 30, 1945, as compared with \$16,571,000 at the end of the preceding fiscal year.

Funds were appropriated for the budget for the fiscal year 1946 as follows: operating expenses \$35,953,036; public debt \$192,762; special relief (W.E.P.) \$8,732,000; contributions to public service enterprises \$80,266,745; capital improvements \$22,229,315; or a total of \$147,373,858.

**Trade and Communication.**—During 1944 shipping to and from Puerto Rico was, for the most part, free from wartime restrictions, and both imports and exports increased substantially in dollar value over those of the preceding calendar year.

In 1944, Puerto Rico imported goods from the United States valued at approximately \$120,099,206, an increase of \$33,079,409 over similar imports in the calendar year 1943. Exports to the United States from the island in 1944 were valued at \$123,747,071, as compared with shipments worth \$99,226,148 in 1943.

Daily air service with the United States, Panamá and the Virgin Islands increased during the year. About two-thirds of Puerto Rico's air traffic was with the United States and the Virgin Islands. During the first half of the year 1944, air travel on Puerto Rican routes totalled 22,775 passengers.

Internal communication was provided by 387 mi. of railway and by 1,487 mi. of main highway, supplemented by local and military roads. Radio-telephone and cable service connected Puerto Rico with the United States and other countries. There also were six radio broadcasting stations and six newspapers in operation on the island.

**Agriculture.**—Agriculture is the principal economic pursuit in Puerto Rico, with 1,022,278 ac. of its 1,200,000 tillable acres of land under cultivation. Fertilizer is important to successful agriculture, and although its importation was restricted after the outbreak of World War II, better shipping conditions brought the supply up to normal during the year 1945. Most important products in 1945 were: sugar 963,775 short tons; tobacco 37,226,500 field weight; coffee 30,455,600 lb.; cotton 1,693,900 lb.; pineapples, 550,000 crates; coconuts 21,000,000 nuts (est.); vegetables, rice, corn and beans for local consumption.

Sales of forest products in the fiscal year amounted to \$6,329.99, the demand being chiefly for posts, cordwood for charcoal making, fuel wood and stakes.

Livestock (census 1940) totalled: 51,494 work and 112,585 other cattle, and 22,709 horses, mules and donkeys.

The Puerto Rico Agricultural company was created by an act of the legislature in 1945 to encourage the maximum development of the agricultural resources of Puerto Rico.

**Manufacturing.**—Manufacturing was confined to goods for domestic consumption with a few noteworthy exceptions. Production of rum during the first eight months of 1945 totalled 17,752,350 gal. Needlework, the production of which is second only to sugar in Puerto Rican economy, was shipped to the United States in the value of \$12,235,539 in the first seven months of 1945. In 1944, the dollar value of needlework exported to the mainland was \$19,936,255. The island produced an estimated 144,105,240 cigars in the fiscal year 1945, an increase of 25,914,597 over the cigar production of 1943.

A glass container factory operated by the Puerto Rico Glass corporation started production early in 1945, and a building for a paperboard mill neared completion at the end of the fiscal year. Machinery and engineering services were contracted for to construct a wallboard plant and a clay products plant. Pilot plants were established during 1945 for silk culture, textile design, basketry, furniture and handiwork novelties.

The Puerto Rico Development company, established by the territorial legislature in 1942 to promote the industrial development of the territory, initiated in 1945 an "Aid to Industrial Development" program.

**Purdue University.** Indiana's link in the great chain of land-grant colleges and universities was established formally May 6, 1869, when the Indiana general assembly accepted \$200,000 in cash and 150 ac. of land from John Purdue and other citizens of Lafayette, Ind. Prior to World War II, Purdue had the largest enrolment in engineering

of any university in the U.S. and during the war was devoted largely to the training of men for the armed services, civilian enrolment dropping to less than 1,500 students at one time, from a high of 7,121. With the end of the fighting, enrolment began to mount and at the Nov. 1945 term was back to almost 6,000, including about 1,600 returning veterans. Indications for the March term were for more than 7,500 students.

On June 30, 1945, Dr. Edward C. Elliott retired as president, and Dr. A. A. Potter, dean of the engineering schools, was named acting president, holding this post until Frederick L. Hovde, who headed the rocket bomb development program in the United States, assumed this post early in Jan. 1946. The university's department of aeronautical engineering was organized as a separate school in the engineering group and offered a new degree in air transportation. The university offered a degree in agricultural engineering, and another in naval science as a result of establishment of a naval R.O.T.C. on the campus. Schools of the university in 1945 were: agriculture, science, home economics, pharmacy and the following in engineering: civil and engineering mechanics; electrical; aeronautical; mechanical; chemical and metallurgical. Degrees also were offered in education and applied psychology; in trade and industrial education, in physical education and engineering law. (For statistics on enrolment, faculty, library volumes, etc., see UNIVERSITIES AND COLLEGES.)

**Pyle, Ernest Taylor** (1900-1945), U.S. newspaperman, was born Aug. 3, on a farm near Dana, Ind. He studied journalism at Indiana university and quit a few months before his graduation to become a reporter for a small town newspaper. He was copy editor for the *Washington Daily News*, 1923-26, and aviation editor for the Scripps-Howard papers from 1928 to 1932, but wearying of editing, he acquired a roving assignment and his daily experiences furnished him material for a column which appeared in 200 newspapers. His simple human touch won a wide following and thousands of readers shared in the restless wanderlust of the writer. When World War II started, he went to England and his vivid eye-witness descriptions of how Londoners were enduring the German air blitz established his reputation as one of the foremost American war correspondents. From England he went to North Africa where he lived in foxholes and ate and slept with the ordinary soldier. His columns, interpreting in simple, everyday language the fears, the hurts and the loneliness of the soldiers, established a link between the G.I. and his family back home. His coverage of the campaigns in North Africa, Sicily, Italy and France brought him the Pulitzer prize in 1944 and several other newspaper awards. Fighting men looked upon him as their friend and officers regarded him as a great morale-booster. In the fall of 1944, he apologetically withdrew from the war front to return home for a rest. Compilations of his columns appeared in book form: the first, *Ernie Pyle in England* (1941), was followed by two best sellers, *Here Is Your War* (1943) and *Brave Men* (1944). After a brief stay in the United States, Pyle, compelled by a sense of duty, returned to the war theatre—this time the Pacific. He went to Iwo Island, moved on to Okinawa with the marines and then to nearby Ie Island. There, at a point where all enemy opposition seemingly had been overcome, he was killed by Japanese machine-gun fire, April 18.

**Pyrite.** The production of pyrite in the United States decreased from 898,670 short tons in 1943 to 883,154 tons in 1944 but the sulphur content increased from 367,556 tons to 372,691 tons. Imports decreased from 287,065 tons to 202,455 tons, mostly from Canada. Imports declined after 1939,

and Spain, the source of 92% of the 1937 imports, contributed only 8% in 1944.

Spain produced 563,634 short tons in 1944, as compared with 971,302 tons in 1943, with Great Britain as the heaviest buyer. Unofficial figures put the Norwegian output at 1,129,817 short tons in 1939, 840,305 tons in 1940, 1,052,202 tons in 1941, 910,967 tons in 1942, and 882,731 tons in 1943. The sulphur content of pyrite exported from Canada decreased from 104,509 short tons in 1943 to 90,836 tons in 1944. (See also SULPHUR.) (G. A. Ro.)

**Quakers:** see FRIENDS, RELIGIOUS SOCIETY OF.

**Quebec.** One of the central provinces of Canada, Quebec was admitted to the union in 1867. The area is 594,534 sq.mi.; the population, 3,331,882 (1941 census), of which 65% is urban. The chief cities are: Quebec, the provincial capital (150,757); Montreal (903,007); Trois Rivières (42,007); Sherbrooke (35,956); Hull (32,947). Local administration is in the hands of a provincial parliament composed of a lieutenant governor, executive council, legislative council, and legislative assembly of 91 members. Quebec is represented at Ottawa by 65 members of the house of commons and 24 senators. The lieutenant governor in 1945 was Sir Eugene Fiset; the premier, Maurice Duplessis.

**History.**—The chief political event in provincial circles was the by-election in Beauce, Nov. 22. The government candidate (*L'Union Nationale*) was successful. This increased the *L'Union Nationale* lead in the assembly by one seat. Standing in the assembly following the Beauce election was as follows: *L'Union Nationale* 49; Liberals 37; *Bloc Populaire Canadien* 3; Independents 2. In the national elections on June 11, 1945, Quebec returned to Ottawa the following numbers for the dominion parliament: Liberals 52; Progressive Conservative 1; Independent Progressive Conservative 1; Independent Liberals 8; Labour Progressive 1; *Bloc Populaire Canadien* 2.

**Education.**—The total enrolment in all educational institutions in the period 1941-42 was 695,000. The total revenues of provincially controlled schools in 1943 was \$28,799,798. The chief universities of the province were Laval (Quebec), l'Université de Montréal (Montreal), McGill university (Montreal) and the University of Bishop's college (Lennoxville).

**Agriculture.**—The total value of all agricultural production in 1944 was \$624,608,000; farm income \$593,300,000. In 1945, the value of field crops was \$161,776,000 (1944 \$164,983,000). During 1945 the inspected slaughtering of livestock was as follows: cattle 236,822; calves 340,274; hogs 810,726; sheep 301,823. The preceding figures on slaughtering include the maritime provinces as well. Tobacco production was 4,016,250 lb.; cigar leaf 2,453,000 lb. The run of maple sap was 40% below normal. The production of honey was also below average.

**Mining.**—In 1944, the total value of mineral production was \$90,844,295. Included in this were, asbestos 420,800 tons, valued at \$21,594,787, and copper 110,568,297 lb., valued at \$13,270,596.

**Manufacturing.**—Pulp and paper, and the smelting and refining of nonferrous metals, represent the largest items of Quebec's industrial output. In 1943, Quebec manufactured more than one-third of all the chemical and allied products made in Canada, with a value of \$264,525,244. Employees numbered 67,672, distributed among 299 factories. There were also in Quebec 72 of the nation's 224 leather footwear factories. According to a survey made early in 1944, Quebec possessed more than 52%, or 8,459,000 h.p., of Canada's water power.

**FILMS.**—*Industrial Provinces* (Encyclopædia Britannica Films Inc.) (J. I. C.)

**Queensland.** A state of the Australian commonwealth lying in the northeast and occupying 670,500 sq.mi.; pop. (est. Dec. 31, 1943) 1,065,414. Chief cities (pop. Dec. 31, 1943): Brisbane, cap., 370,500; (Dec. 31, 1940) Rockhampton 35,500; Townsville 31,450. Governor: Sir Leslie Orme Wilson.

**History.**—The premier, F. A. Cooper, in 1945 visited the United Kingdom, returning via Canada and the United States, E. M. Hanlon acting as premier during his absence. While abroad he met leading British industrialists and discussed the postwar potentialities of Queensland for industrial expansion, stating in London that Queensland was capable of supporting a population of 20,000,000. To meet the possibility of a labour surplus arising as a result of the release of servicemen, the state government had a works program of \$76,800,000 ready to put into operation. It was to provide not only for the adequate development of the state, but also for the rehabilitation of servicemen.

**Education.**—In 1941: schools 1,898; scholars 178,893.

**Finance.**—Revenue (1943-44) \$92,698,000; expenditure (1943-44) \$92,333,000. Debts outstanding (June 30, 1944) \$413,373,000. (Conversion rate: £A1=\$3.2 U.S.)

**Communication.**—Roads (1940) 125,095 mi.; railways (June 30, 1944) 6,497 mi. Motor vehicles licensed (March 31, 1945): cars 68,963; commercial vehicles 52,907; cycles 6,192. Wireless receiving set licences (June 1944) 180,090.

**Agriculture, Manufacturing, Mineral Production.**—Production (in short tons) 1943-44: sugar cane 700,000; wheat 152,640; maize 135,360; gold (1939) 145,667 fine oz.; silver (1942) 3,100,000 oz.; coal (1942) 1,913,000. Industry, manufacturing (1942-43): factories 2,641; employees 64,292; gross value of output \$275,883,000; unemployment (trade union returns), Feb. 1945, 0.5%. (W. D. MA.)

**Quicksilver:** see MERCURY.

**Quisling, Vidkun Abraham** (1887-1945), Norwegian politician, was born July 18 at Fyrisdal, Norway, and was trained from his youth for a political career. After passing the Norwegian college examinations, 1911, he entered the army, was commissioned as a captain and promoted to a major of field artillery. He pursued a diplomatic career, as military attaché at Petrograd, 1918-19, and Helsinki, 1919-21. In May 1933, four months after Adolf Hitler became chancellor of Germany, Quisling formed the *Nasjonal Samling*, a Norwegian fascist party. He assisted the German invasion of Norway by using his authority as an army officer to delay mobilization and surrender certain key positions and by urging his countrymen not to resist the nazis. A grateful fuhrer rewarded Quisling for his aid by making him on Sept. 25, 1940, fuhrer of Norway. His task, the German occupation forces proclaimed, was to "reconstruct" his country in conformance with nazi principles. Quisling, who became prime minister in Feb. 1942, was never able to command the respect of the Norwegians, and in an effort to force their obedience he instituted increasingly severe measures. Repression, however, only served to heighten resistance to his regime. Toward the last days of the war in Europe, his rule tottered and on May 9, 1945, two days after Germany's collapse, Quisling and six of his cabinet members were arrested by Norwegian resistance authorities and he was arraigned promptly for trial. He was tried on charges of treason before an Oslo court in sessions that lasted from Aug. 20 through Sept. 10, during which the puppet leader denied the treason charges and contended he was the "saviour" of Norway. The seven-man trial court found Quisling guilty on Sept. 10 on many counts including murder,

treason and theft and sentenced him to die before a firing squad. The man whose name, during World War II, had become a synonym for traitor, was executed Oct. 24 and his body was cremated immediately thereafter.

**Racing and Races:** see DOG RACING; HORSE RACING; TRACK AND FIELD SPORTS.

**Radar.** The first release of reasonably full information on the use of radio methods of locating ships and aeroplanes came on Aug. 15, 1945, when a detailed account was issued both in Great Britain and the United States. This was followed by papers in the technical press giving details of specific sets (e.g., a description of the SCR-584, one of the most versatile of radar sets, in *Electronics*, vol. 18, No. 11, p. 104 and No. 12, p. 104).

The word "radar," coined in the United States from "radio detection and ranging," came into general use, even in England, where it was first referred to as "radiolocation." Basically, it consists in transmitting a radio pulse, lasting on the order of a few millionths of a second and receiving the reflection of this pulse as it echoes back from an aeroplane or ship. The amount of energy reflected is a very small fraction of that emitted, and it is greatly attenuated on the return journey; thus, a high degree of sensitivity and amplification is necessary to utilize it. Usually the receiver and transmitter share a common antenna. The length of each pulse is considerably less than the time required for it to travel to the target and return, and the transmitter is silent until after the echo is received. Then the next pulse is radiated. Another advantage of the pulse method is that it is possible to use momentarily, peak power much higher than if the signal were continuous.

The distance, or "range," of an object is determined by the elapsed time between the transmission of the pulse and the reception of the echo. Radio waves, like light, travel at a speed of approximately 186,000 miles per second or about 328 yards each millionth of a second. For an object 1,000 yards away the waves must travel out and back, taking about six millionths of a second. Development of means to measure such short intervals was one of the technical triumphs of radar, for time can be measured to an accuracy of about one-thirtieth of a millionth

RECORDING the information received by radar on a plotting board, aboard a U.S. carrier during a strike against the Japanese in 1945

A. Wave impulse is sent out by the plane.

B. Wave precedes plane at the speed of light.

C. Wave hits object and bounces back.

D. Wave rebounds in all directions from the object.

E. Echo-wave has returned with the speed of light and is received by the cathode-ray tube in the plane, and another wave impulse has been sent out by the plane.

RADAR operates on the principles that very short radio waves can be directed in a beam, like light, and that such waves bounce back from solid objects. Rebounding wave impulses form images on a cathode-ray tube, as in television, indicating the direction, distance and height of an object. Radar was used during 1945 by ships as well as planes, in both defensive and offensive operations, for navigation through fog, darkness or unfamiliar areas, and to detect the position of enemy objects

of a second, corresponding to five or ten yards in range.

Various means are used to display the radar's data, usually on the face of a cathode ray tube such as that in a television receiver on which the picture appears. In the widely used "A" type of presentation the electron beam traces a horizontal, luminous line. A vertical "pip" appears in the line at the left to indicate the transmitted pulse. When an echo is received there is another and smaller pip farther to the right at a distance from the first which is proportional to the time required for its return. Thus, the range can be read from the distance between the pips.

Direction is obtained by using radio waves which are very short, perhaps only a few centimetres in length. With an antenna at the focus of a parabolic reflector a few feet in diameter, these waves can be focused in a beam much like the light beam from a searchlight. As it sweeps around the horizon, the echo comes only when it is directed toward a target and the direction, or "bearing," is indicated.

Another type of presentation, known as P.P.I. for "plan position indicator," can be used with such a directed beam. Synchronized with the movement of the antenna is a luminous radial line moving clockwise on the face of the tube. An echo causes a brightening of this line at a point whose distance from the centre is proportional to the range. Usually the glowing material in the tube is one in which luminescence persists for a few seconds until the line sweeps around again. The result is essentially a circular map of the area with the radar set at the centre. Reflecting objects are shown at their correct position and distance.

Carried on planes, the P.P.I. was used for bombing through clouds. A land area reflects the beam diffusely and some of the energy returns to the set. Water acts more like a mirror and although the pulse is reflected, it is not sent back to the radar except from straight below. Details of shore lines, rivers, ships, bridges, lakes and other features can be identified. This method of bombing through overcast, known as B.T.O., was first used by the 8th air force in a raid over Germany on Nov. 3, 1943.

The peacetime usefulness of such equipment is obvious, for it will aid flying in completely cloudy weather. A radar equipped with the P.P.I. scope is also useful for marine navigation in bad weather, in revealing other ships and shore features. One large manufacturer announced a simplified radar set of this kind for commercial vessels.

Closely related to radar is Loran, for "long range navigation," which was developed in 1941-42 at the radiation laboratory of the Massachusetts Institute of Technology, Cambridge, Mass., principal centre of radar research. Its principles are similar to those of an independently developed British system. On the shore there is a pair of stations a number of miles apart. One is a master, the other a slave. The master station sends out a pulse; the slave station receives it and immediately and automatically sends out its own pulse.

On a ship equipped for Loran both pulses are received and on a scope the difference between the times of their arrival is indicated, and the relative distance from the two stations is shown. This places the ship on a hyperbolic curve connecting all the points which are at the same relative distance from the stations. Then if the signals from another pair of stations are received, the ship is located on another curve, and the intersection of the two curves marks the ship's position, with an accuracy as great as that from celestial observations.

Unlike the corresponding British system, which uses short waves that do not travel much beyond the visible horizon, Loran uses long waves similar to those employed in communication, and operates as much as 1,000 mi. from the stations. During the war a Loran network was established covering a large

RADAR ANTENNAE atop a U.S. carrier are shown outlined against the sky. Radar fire control directs the fire of the 5-inch anti-aircraft batteries in the foreground, and fighter director radar guides the carrier's planes to enemy targets

part of the navigable oceans of the world. Special charts, on which were drawn the hyperbolic curves of equal relative distance, were prepared to facilitate use of the Loran system. It can be used by ships and also by aircraft.

Since an enemy and a friendly plane reflect radio waves alike, an important adjunct to radar was I.F.F., for "identification, friend or foe." A special slave transmitter on the plane when interrogated by radar automatically sends back a coded pulse on another frequency. When a plane was located and did not return the correct answer upon interrogation it was assumed to be an enemy. Radio beacons of the same general sort have been widely used. In this case the responding transmitter is on the ground.

A radar pulse from a ship or plane causes it to send back the characteristic signal so it serves a function similar to that of the flash from a lighthouse.

Radar sets have been made in a wide variety of sizes and functions. Some ship-borne sets consist of many tons of elaborate equipment. Near the other end of the scale is a "tail warning" set for fighter planes. This weighs but a few pounds, and simply rings a bell or flashes a light in the pilot's compartment when another plane approaches from the rear. Still smaller and simpler is the "proximity fuse," essentially a radar set. This was placed in a bomb or shell so that it would explode when it came near its target, no actual contact being required.

It appeared in 1945 that radar would not work on an automobile or a locomotive to warn of the approach of other ground vehicles, because of all the reflections from buildings and other structures, but it did offer many peacetime applications for marine and air use.

But the most important results of this wartime work were expected to be indirect since many electronic problems have

been solved which can be applied elsewhere in the large but still growing field of electronics. (J. Sto.)

**Radar Countermeasures.** When, on Feb. 11, 1942, the German battle cruisers "Gneisenau" and "Scharnhorst" escaped from the harbour of Brest, where they had been bottled up by the British, radar might have detected them even through the protecting fog had not the Germans "jammed" the British radar. As a result, both in Great Britain and the United States, consideration began to be given to the subject of radar countermeasures referred to as R.C.M. Because the British were then at war, the problem was more urgent for them, and extensive work was started, but preliminary investigations were also made in the U.S. After Pearl Harbor, U.S. activities were accelerated, resulting, at the end of 1942, in the organization of division 15 of the National Defense Research committee.

Although the work of the division included countermeasures against many kinds of electronic equipment used by the enemy, about two-thirds of the \$31,000,000 expended by the division went into radar countermeasures. The centre of this work was the Radio Research laboratory at Harvard university, Cambridge, Mass. However, a great deal of work, particularly in the design and construction of new electronic tubes, was done in other laboratories, both industrial and university, under contract.

Radar depends on the return from a distant plane or ship of a radio echo which is very much weaker than the original signal, so the latter must have tremendous strength. A radar set is continually advertising its presence, and any radio receiver, tuned to its frequency, can detect it from a distance far beyond the greatest range at which the radar itself is effective. Once detected, its direction can be found with radio direction finders. A third weakness of radar is the low intensity of the echo. A sound echo returned from a cliff is many times weaker than the original shout, and another man, shouting continuously, could easily drown it out. Similarly a radio "shout" sent out continually from another transmitter can drown out, or "jam," the radar receiver. This jamming transmitter does not need to compete in power with the original radar transmitter. It merely has to be powerful enough to cover up the returning echo.

There is, however, one important difference between a radar and a jamming transmitter. The former operates in brief pulses and can be pushed to peak power much higher than that at which it will operate steadily. The jammer must counter many radars, with pulses coming at any time, so it can have no rest periods. It is a short-wave broadcasting station and its program is "random noise," which may be heard as a hiss on a loud speaker attached to a properly tuned receiver. On the radar scope, with "A" type of presentation (see article RADAR) this "noise" looks like many fine blades of grass moving about in random fashion. These may completely cover the vertical spikes which reveal a plane or ship. With P.P.I. (plan position indicators) presentation it appears as a general brightening of certain areas of the screen, also covering up the wanted reflections.

A simple but very effective countermeasure against radar takes advantage of the fact that it is unable to distinguish the nature of a small object. Thin, metallic strips, cut to a length proportional to the radar waves, resonate to the signal and send back a remarkably strong echo. Several thousand such strips, which were known by the code name of "window," weigh a total of less than 2 oz. When allowed to fall freely through the air, they will return an echo equivalent to that from a bomber.

Window was first used by the R.A.F. in a raid on Hamburg in July 1943. It was dropped from the leading planes and was so effective that losses were only a small fraction of those sustained on previous raids. Later long ribbons of foil, called "rope," were

used, particularly in the Pacific. They were dropped with a small parachute to retard their fall and also gave false echoes. Perhaps an enemy radar operator could recognize window or rope from the fact that they did not show as much movement as real planes. Nevertheless, when the air was thoroughly saturated the material would still act as an electronic "smoke screen" through which many planes could fly without detection.

Though window was widely used and had the virtue of simplicity, even more effective was "electronic" jamming—broadcasting a noise-modulated signal from a special transmitter. One electronic jammer, known as "carpet," designed in 1942 at the Radio Research laboratory, was used to overcome the German Wurzburg radars used to aim their anti-aircraft guns. Early in World War II these had been standardized in a few types, as Hitler had expected a short war and had decided that further research to improve them was unnecessary. When, after two years, German research was resumed they had such a large investment in the Wurzburg system that they devoted their major technical efforts to trying to make it work despite Allied countermeasures, rather than in developing a new system which would have been less susceptible. German documents found after the invasion testify to the effectiveness of the countermeasures which made possible the heavy bombing of their cities.

A special problem arose in connection with the Lichtenstein radar used by the German night fighters against the British bombers in 1942. Jammers could not be used on the bombers themselves, for then the enemy could more easily locate them, by direction finders. It was decided to set up a jammer in England, with power a thousandfold greater than any previously attained in the frequency range involved. Because of the huge parabolic antenna in the experimental model, it was designated as "Tuba." A tube, called the resonatron, perfected by Dr. D. H. Sloan at the Westinghouse Research laboratories under division 15 auspices, was utilized to provide the required power, which was comparable with the most powerful U.S. broadcasting stations (50,000 watts) but of a frequency 500 times as high. The equipment was ordered by the British under lend-lease and in June 1944, the complete installation, which could be carried in seven army trucks, was in operation in England. Later two more equipments were ordered.

One of the most important electronic tubes used in countermeasures work was the magnetron, originally invented by Dr. Albert W. Hull of the General Electric Research laboratory. The passage of current takes place in a strong magnetic field. On the basis of further work, particularly in England, Dr. Hull and his associates produced a complete line of high-powered magnetrons. These covered a wide range of frequencies and, like tubes developed in other industrial laboratories, were put into countermeasures systems at the Radio Research laboratory. Some of these were used effectively against radar-guided Japanese torpedo bombers which appeared in Oct. 1944, with devastating results to U.S. fleet units.

Although radar has a number of peacetime applications, radio countermeasures as such have little utility except in war. However, the techniques devised were expected to be useful in future radio developments, such as frequency modulation broadcasting, television and radio relay transmission. (J. Stro.)

**Radio. Industrial Developments.**—Radio manufacturing broke all volume records during 1945, but it was all in the war category. Such hitherto secret radio-electronic weapons as radar and the radio proximity fuse, which proved so potent in the winning of World War II, were among the products of the radio laboratories and factories during 1945, which rolled up an aggregate estimated value of nearly \$5,000,000,000. With the war's termination, there were substantial cutbacks, but scarcity

of materials, delay in allocations for new broadcast services and labour impasses converged to stall civilian manufacture of radio receivers and transmitters, as well as related electronic devices.

Freezes on civilian production were lifted even before V-J day, but manufacturers were unable to place products on the market before the year ended beyond a thin trickle of display models for dealers. The total number of radio receiving sets in use at the end of 1945 was approximately 56,000,000—a decrease of about 1,000,000 as compared with the preceding year. The number of homes with radio sets, however, increased to approximately 34,000,000—a million ahead of the preceding year. This increase was attributed to the availability of spare parts and tubes in 1945, permitting activation of receivers which were "dead" during the preceding war years when such parts were virtually unobtainable.

Of the aggregate number of sets in use, automobile receivers represented some 6,000,000. The total number of civilian sets manufactured during 1945 was a mere 500,000 (as compared with the peak of 13,000,000 in 1941). Civilian tubes manufactured aggregated some 30,000,000, valued at \$35,000,000.

The total investment in the radio manufacturing industry as of Jan. 1, 1946, was estimated at \$350,000,000, representing no change from the preceding year. Taking into account cutbacks on government military contracts, the annual gross revenue was computed at \$3,000,000,000. The average number of employees for the year retained by the 1,200 manufacturers was 350,000, with an annual pay roll of \$750,000,000. The latter figures compared with 530,000 employees with an annual payroll of \$1,200,000,000 for 1944. Radio distributors, dealers and other retail establishments represented on Jan. 1, 1946, a total investment of \$280,000,000, with an annual gross revenue of \$200,000,000 and with 100,000 employees who drew \$150,000,000. These figures represented no change from either 1943 or 1944.

Aside from military requirements, there were no exports of radio transmitting or receiving equipment during 1945. Military figures had not yet been released. It was known, however, that vast stock piles of surplus equipment, particularly transmitting apparatus used for all modes of military communication, existed abroad and would be disposed of as surplus. There were some exports of receivers and transmitters to Latin American countries, as well as to the United Nations, on a lend-lease basis, but the number and value remained unpublished.

Military installations in both the European and Pacific war theatres were gradually being dismantled, although regular broadcast service was being maintained for occupation forces in all theatres. With the demobilization of the expeditionary establishments, however, only sufficient radio service to service U.S. troops remaining abroad would be retained.

On Jan. 1, 1946, there were 940 standard broadcast stations in operation (not including 64 under construction) as against 919 a year earlier. The Federal Communications commission (FCC), however, had pending some 250 applications for new standard broadcast stations and the likelihood was that the number of stations in operation, including those holding construction permits, would probably eclipse 1,200 before the year ended.

All told, it was estimated that there would be as many as 2,000 broadcast stations—amplitude modulation (AM), frequency modulation (FM) and television—by the end of 1946. As the year ended, the FCC had granted approximately 250 new FM stations in all sections of the country. Most of these would begin operation, it was predicted, before midyear, 1946, with several hundred others to be authorized by that time and to undertake construction. Television, it was felt, would be slower in starting because of the expense entailed in construction and because of the limited number of facilities. With only five sta-

tions in operation prior to the war on a regular commercial basis, experts felt that probably as many as 50 stations would be on the air or would near completion during the ensuing year.

Allocations were settled toward the end of 1945, with FM moved to the 100 megacycle (mc.) area over the objection of many of the engineering pioneers, including Dr. Edwin H. Armstrong, FM inventor.

Television was placed on a dual system, with frequencies for low-definition video service assigned in the "downstairs" area around 50 mc., but with provision made for high-definition and possibly colour television in the upper reaches of the spectrum where virtually unlimited expansion could occur. Broadcasters generally, however, looked to 1946 as the most critical year in their quarter-century of history. In addition to ordinary items of overhead, which were increasing in tempo with other industry, they were faced with the responsibility of developing both FM and television.

**FM.**—Modifying previous estimates, radio authorities forecast construction of between 2,000 and 3,000 FM stations within five years after the war. As 1945 ended, there were some 60 FM stations authorized to operate, aside from the 250 conditional grants (on Jan. 21, 1946 the number totalled 279).

Before the war-imposed freezes on equipment, approximately 500,000 FM receivers were sold to the public, representing a \$30,000,000 investment. Cost of FM transmitters, according to a government survey conducted by the senate small business committee in collaboration with the FCC, indicated average cost for installation of six major items of broadcast equipment for a 250-watt FM station of \$9,508; for a 1,000-watt station of \$14,758; a 3,000-watt station, \$17,858; 10,000-watt station, \$27,308; and a 50,000-watt "high power" station, \$80,558. The items for each class of station include transmitter, antenna (excluding supporting structure), control console, remote pickup, turntable and monitor.

**Television.**—See TELEVISION.

**Facsimile.**—This mode of record transmission by radio, similar to wirephoto or radiophoto, remained the "sleeper" during 1945. Used with great success on the battlefields, the full story of facsimile was not unfolded as the year ended, particularly as to its wartime applications. It was thought, however, that the new year would see the emergence of facsimile by radio on something more than an experimental basis. Newspaper pages were being produced in laboratory tests at the rate of more than a foot a minute, and colour processes also were evolved. Facsimile functions on a very narrow band (two kilocycles) and the service can be "multiplexed" on FM channels without disturbing the FM transmission.

**Commercial Broadcasting.**—During 1945 commercial broadcasting continued to reflect the unprecedentedly high level of national income and employment which was evidenced in all industries in spite of reconversion. Total net time sales (representing gross billings less frequency and promotional discounts) reached an aggregate of approximately \$311,000,000—a new all-time high, but far less than the relative net gains made during preceding years.

Estimates made by *Broadcasting Magazine* indicated that revenues from the sale of time increased 7.4% over the 1944 level, as compared with a 26.8% gain in the 1943-44 period and a 19.6% gain during the period 1932-43.

Approximately \$55,000,000 was spent by advertisers for talent and programs on their own account—at least \$5,000,000 more than the preceding year. Of the aggregate network billings, food and food beverages, drugs and toilet goods and cigars and tobacco represented roughly two-thirds of the aggregate income. Network billings, however, were only fractionally ahead of the preceding year, because of loss of revenue during the

political campaigns, as well as losses entailed by cancellation of all commercial programs for such radio epochs as V-E day, the death of Pres. Roosevelt and V-J day. Practically all commercial sponsorship was jettisoned by the networks for these extraordinary news events, which required rebates to sponsors for their talent commitments.

The latter half of 1945 saw widespread experiments in programming by most of the networks and by many stations to buoy structures which programming and production officials thought might sag because of the war's end and the tapering off of war news listening. With average listening per receiver about four-and-one-half-hours per day, program builders sought to devise means of enlarging the audience through program innovations and recasting of schedules. Audience participation programs were inaugurated in the afternoon on one network. Another began a popular orchestra and glee club—Fred Waring—in the early forenoon and found that it had attracted a new audience, since ratings for competitive programs, such as so-called "soap operas," did not diminish.

News broadcasts maintained their relatively high position despite the absence of reports from the war fronts. Individual stations began placing emphasis on local news and found sponsors readily available. A trend toward stricter application of commercial standards, particularly in connection with spot announcements, developed during the year, with the National Association of Broadcasters (N.A.B.) urging all stations voluntarily to reduce commercial credits by approximately 15% in all types of programs.

A number of stations decided to eliminate "middle commercials" from news programs altogether. These commercials were labelled "plug-uglies" by the *St. Louis Post-Dispatch*, which itself operates radio station KSD. Transcribed musical spots or "singing commercials" likewise appeared to taper off as a result of both station management and some listener disapproval.

Fresh from his 1944 conquest of forcing major recording companies to capitulate to his requirements for royalties on production of phonograph records and transcriptions, James C. Petrillo, president of the American Federation of Musicians (A.F.M.), unleashed a series of new ukases against radio in 1945. These included:

- (1) A ban against performance on television by union members until the international headquarters of A.F.M. decided on employment requirements.
- (2) A ukase against dual performance on FM stations of musical programs for AM networks or stations, unless a full standby orchestra (or a separate orchestra) is retained.
- (3) A prohibition against broadcasts of musical programs in the U.S. from abroad, effective Dec. 31, 1945.

As 1945 ended, nothing further had been done by the A.F.M. head about his pronouncements, but the N.A.B. regarded him as their number one adversary in 1946. Chairman Clarence F. Lea, of the house Interstate and Foreign Commerce committee, had introduced a bill (HR-5117) to prevent the musicians' union from using "coercive practices affecting broadcasting."

During 1945, radio continued its close collaboration with the government in clearing war messages. Even with the war's termination, voluntary contribution of time to governmental agencies was continued. During 1944, according to final figures, stations, networks and advertisers contributed \$162,000,000 in time and talent for such war messages, as against \$103,000,000 the preceding year. All such programs were cleared through the War Advertising council while the conflict was on. When the war ended, the council continued functioning as the Advertising council on a voluntary basis.

There were two changes on the seven-man FCC during 1945. On March 14 Charles R. Denny, 33-year-old general counsel, was elevated to a commissionership, to succeed T. A. M. Craven, who resigned following six years of service to re-enter the broadcasting industry. Rosel H. Hyde, assistant general

counsel, was elevated to the general counselship. William Henry Wills, former governor of Vermont, on June 13 was named by Pres. Truman to succeed former Governor Norman S. Case, of Rhode Island, for a seven-year term. Governor Case, who was a candidate for reappointment, terminated 11 years of service and entered private law practice in Washington.

**Revenue and Finance.**—During 1944 (1945 figures were not available by Jan. 1946) the broadcasting industry continued to reflect the high level of wartime prosperity, as well as the year-to-year improvement which had been typical of radio. Gross time sales in 1944 totalled \$391,887,000, as compared with \$307,191,000 for the preceding year, or 20.8% greater than 1943. Net time sales, after deduction of commissions and promotional discounts, aggregated \$285,100,000 in 1944, or a gain of approximately 25% over 1943.

Rough preliminary estimates placed the 1945 gross revenue at approximately \$420,000,000, with the net time sales figure at approximately \$311,000,000. If estimated talent expenditures by advertisers, as well as receipts from sale of talent and similar sources, are taken into account, the 1945 net expenditures for radio advertising probably totalled approximately \$385,000,000.

Table I.—Radio Advertising Revenue, 1944 and 1943

	1944	1943
Major and regional network advertising revenue . . .	\$129,369,501	\$104,645,685
National "spot" advertising* . . . . .	73,312,899	59,352,170
Local advertising† . . . . .	84,960,347	64,104,309
Total . . . . .	\$287,642,747	\$228,102,164

\*Advertising by nation-wide distributors placed over individual stations (as opposed to chain, or network, advertising).

†Advertising placed by local advertisers over the individual stations in their market areas.

The figures in Table II are based on returns received (Jan. 1945) by the FCC from 875 standard broadcast stations, the regional and national networks, including key stations of the major networks, and 23 managed and operated stations. They are not projected to cover the entire roster of 950-odd stations, leaving about 75 which did not supply usable reports.

Table II.—Revenue and Expenses of Radio Industry in 1944

	1944	Pct. change over 1943
Station revenue:		
Sale of time to major and regional chains . . . . .	\$47,539,778	19.8
Sale of time to national spot advertisers . . . . .	73,312,899	23.5
Sale of time to local advertisers . . . . .	84,960,347	32.6
Total sale of station time . . . . .	\$205,813,024	26.2
Network revenue:		
Revenue retained after paying affiliated stations . . . . .	81,829,723	26.0
Total industry time sales . . . . .	\$287,642,747	26.1
Deduct commission to advertising agencies . . . . .	41,303,215	27.5
Total industry net time sales . . . . .	\$246,339,532	25.9
Incidental revenue . . . . .	28,959,079	47.6
Total net industry revenues . . . . .	\$275,298,611	27.9
Expenses:		
Total deductions . . . . .	\$185,025,760	24.3
Broadcast service income (total revenue in excess of expenses before taxes) . . . . .	\$ 90,272,851	35.8

While the improvement in 1944 revenues over 1943 was substantial—approximately \$90,000,000 as against \$66,000,000—a substantial portion of the increase was siphoned off in excess profits taxes, according to reliable industry estimates. FCC compilations do not cover net income after taxes, because of the many variable factors introduced in radio resulting from diversity of ownership and lack of uniformity in accounting methods. Moreover, total broadcast expenses rose from approximately \$150,000,000 in 1943 to more than \$185,000,000 in 1944.

During 1944 gains were general within all portions of the broadcasting medium. National network net time sales increased an estimated 21% as compared with a 19% boost during the preceding year. Regional networks advanced approximately 35%. National and regional nonnetwork (spot) business rose approximately 26%, while local volume increased about 28%. All classes of stations benefited from the increased

business, with smaller outlets experiencing the greatest gain, because of a lack of availabilities on top-rated stations in most of the major markets.

Regional stations experienced a 30% increase in national and regional spot business, while volume on local stations rose about 45%. More than three-fourths of all national and regional spot was placed on clear channel and regional stations, while local stations accounted for the remaining one-fourth.

**Profit.**—In 1944 the average total revenues from the sale of time (less payments to networks and stations) was \$232,326 as compared with \$186,568—a gain of nearly 25%. This increase compared with approximately 14.5% over 1942. Net revenues from the sale of time averaged \$209,270 in 1944 as against \$168,239 for each of the stations audited in 1943—again a gain of approximately 25%. The average broadcast expenses of the composite station were \$144,275 in 1944 as against \$123,689 in 1943, or nearly 17%. In 1943, the increased expenses as compared with the preceding year were only 3.75%. Broadcast income (revenues less expenses before federal income tax) averaged \$80,266 in 1944, as against \$55,981 the preceding year, or a 43.38% increase. This was approximately the same as for the preceding year.

**Industry Assets.**—The tangible property of the broadcasting industry remained relatively unchanged during 1945 because of the freeze on new construction during World War II. While this freeze was thawed slightly in May 1945 and lifted entirely the following August, only nominal installation and construction operations got under way during 1945. The snail-like pace toward reconversion in radio, plus the uncertainty as to allocations, contributed to the virtual standstill in new construction during the entire year. Trade estimates were that there were only 500,000 civilian sets manufactured during 1945, having a value of approximately \$20,000,000. Tubes for civilian use manufactured aggregated 30,000,000, with a value of \$35,000,000 for an aggregate of \$105,000,000 for reception equipment during the entire year. Radio set repairs and services during the year entailed expenditures by listeners of approximately \$60,000,000, according to trade sources, while radio parts and supplies, exclusive of replacement tubes, totalled \$70,000,000.

The public's investment in radio receiving sets in use, estimated at 56,000,000, was \$3,500,000,000—virtually no change from the preceding year.

The tangible property of the broadcasting industry, showing original and depreciated costs for broadcast stations and associated equipment, had a composition as shown in Table III prepared by the FCC.

Table III.—Composition of Tangible Property of Radio Industry in 1944

	865 stations	Major networks	Regional networks	Total
Original cost . . . . .	\$68,466,362	\$14,418,690	\$112,598	\$82,997,650
Depreciated cost . . . . .	34,050,431	6,433,298	68,544	40,552,273

**Programming.**—**Network Commercial Programs.**—The 15 most popular network programs as of Dec. 1, 1945, compared with those of 1944 were<sup>1</sup>:

1945	1944
1. Bob Hope	1. Bob Hope
2. Fibber McGee & Molly	2. Fibber McGee & Molly
3. Red Skelton	3. Bing Crosby
4. Charlie McCarthy	4. Charlie McCarthy
5. Jack Benny	5. Joan Davis—Jack Haley
6. Screen Guild Players	6. Walter Winchell
7. Radio Theatre	7. Radio Theatre
8. Walter Winchell	8. Abbott and Costello
9. Mr. District Attorney	9. Mr. District Attorney
10. Fred Allen	10. Eddie Cantor
11. Eddie Cantor	11. Jack Benny

<sup>1</sup>These ratings are supplied through the courtesy of C. E. Hooper Inc., creator of the Hooper Audience Analysis Ratings and are copyrighted by the company.

12. Take It or Leave It
13. Truth or Consequences
14. Abbott and Costello
15. Amos 'n' Andy

12. Screen Guild Players
13. Hildegard
14. Kay Kyser
15. Your Hit Parade

The ten top daytime leaders as of Dec. 1945 compared with the preceding year, reported by Hooper, were as follows:

- 1945
1. When A Girl Marries
  2. Portia Faces Life
  3. Ma Perkins
  4. Breakfast in Hollywood (Kellogg)
  5. Romance of Helen Trent
  6. Pepper Young's Family
  7. Young Widder Brown
  8. Breakfast in Hollywood (P. & G.)
  9. Our Gal Sunday
  10. Stella Dallas

- 1944
1. When a Girl Marries
  2. Aunt Jenny
  3. Life Can Be Beautiful
  4. Ma Perkins
  5. Romance of Helen Trent
  6. Kate Smith Speaks
  7. Big Sister
  8. Portia Faces Life
  9. Stella Dallas
  10. Young Widder Brown

The year of victory saw the final entry in wartime radio audience measurements. Both V-E day and V-J day lifted listening to highest peaks after the declaration of war on Dec. 8, 1941. The peak audiences reached on both victory days by coincidence were identical—63.1% of all receiving sets in use—according to the Hooper survey. On D-day the previous year, the audience totalled 53%, and on the night of the 1944 elections 56.6%.

The fall of 1945 saw the greatest influx of new programs in radio history. This turnover reflected the change to a peacetime advertising perspective, the influx of new program ideas and the return from war pursuits of many old radio favourites. According to the Cooperative Analysis of Broadcasting (C.A.B.), radio's major fact-finding body in the field of program ratings, there were 80 new programs rated in the new fall reports.

New programs that found popularity among radio listeners in 1945 included the "Danny Kaye Show," "Meet Me at Parky's," "Theatre Guild of the Air," "Teen-timers Show," "Request Performance," "Powderbox Theatre," "His Honor the Barber," "This Is Your FBI," "Beulah" and "Textron Theatre."

Returning radio veterans were headed by Fred Allen, who immediately jumped into sixth place among the top nighttime leaders. Red Skelton's return from the army in December brought him a prompt rating, with C.A.B. reports showing him in seventh place among nighttime leaders.

**Network Programs by Types.**—The general composition of network evening programming, based on latest available information, appears in Table IV.

**Talent Costs.**—As in previous years, there was no accurate data computed covering aggregate talent costs of network commercial programs. Rough trade estimates covering the 1944-45 period indicated approximately \$50,000,000 for nighttime programs and some \$10,000,000 for daytime programs, as against \$45,000,000 and \$10,000,000 respectively the preceding year.

National Association of

Table IV.—General Composition of Network Evening Programs

Type of program	1945 % of time on the air	1944 % of time on the air
Drama, serial drama . . . . .	23.4	27.8
Audience participation . . . . .	10.0	13.2
Variety . . . . .	27.8	17.9
Commentators, news and talks . . . . .	17.9	17.5
Popular music . . . . .	10.0	13.0
Familiar music . . . . .	4.0	5.2
Classical, semiclassical music . . . . .	4.9	3.0
Children's programs . . . . .	1.7	2.1

Date supplied by the Cooperative Analysis of Broadcasting.  
Note: Each program type has been allotted the number of hours which all programs in that type represent. The tabulation is based on the table of program types. 15-minute programs broadcast 5 times a week have been considered as 1 1/4 hours per week for the number of weeks investigated, 15-minute programs 3 times a week 3/4 hour, etc.

**Broadcasters.**—The N.A.B., trade association for the broadcasting industry, underwent a top-level reorganization in October. Associate Justice Justin Miller, of the U.S. court of appeals for the District of Columbia, was elected president of the association by its board of directors under a five-year contract at \$50,000 per year. He succeeded J. Harold Ryan, of Toledo, who served for more than a year as interim president until the organization selected a permanent head. Named executive vice-president of the N.A.B. was A. D. (Jess) Willard, former general manager of WBT, Charlotte, N.C. With a membership representing substantially two-thirds of all stations in the U.S., the association toward the end of 1945 merged with FM Broadcasters Inc., a trade group formed three years earlier to foster development of FM. Steps were being taken as the year ended for the fusion of Television Broadcasters association with N.A.B., to form a confederation of trade groups in the broadcasting field and in related operations. Functioning alongside the N.A.B. but as a separate entity was Broadcast Music Inc. (B.M.I.), which was created six years earlier to give battle to the American Society of Composers, Authors and Publishers, that made certain

MAYOR FIORELLO LaGUARDIA broadcasting the "funnies" over WNYC in July 1945, when a newspaper deliverers' strike deprived New Yorkers of their favourite comic strips

demands on radio for royalties on music performed. B.M.I. stock is owned entirely by active broadcasters.

Also functioning in the interests of broadcasters, advertisers and advertising agencies but as a separate entity was the Broadcast Measurement bureau (B.M.B.), created to perfect a plan to establish radio's own audience measuring stick. With the vast majority of stations and all of the radio networks supporting this venture, B.M.B. was prepared early in 1946 to launch its first nation-wide postcard questionnaire survey of the listening audience to determine radio "circulation."

**Censorship.**—Voluntary censorship of radio, invoked with the war's advent, was ended in the European theatre with V-E day in May and was terminated entirely with V-J day in August, according to prearranged plan. Byron Price, executive editor of the Associated Press (A.P.), who became the wartime censor, told his staff that his office would be the first to close with the war's end. He kept his promise.

With the formal proclamation of V-E day by Pres. Truman on May 8 voluntary censorship provisions governing program types were dropped. A new Code of Wartime Practices covering radio issued shortly thereafter embodied sweeping revisions. With V-J day, voluntary censorship of news ended entirely and Price subsequently closed the office. Toward the end of 1945 he resigned his A.P. post to become vice-president of the Motion Picture Producers and Distributors of America, in charge of Hollywood activities.

**Networks.**—A new transcontinental network—Associated Broadcasting Corp.—announced beginning of operations on Sept. 16 under the direction of Leonard A. Versluis, owner of a station in Grand Rapids, Mich. The network leased lines from the American Telephone and Telegraph Co. and affiliated with stations from coast to coast but operated in red ink for the balance of 1945.

Subsequently Associated Broadcasting Corp. changed its name to "Associated Broadcasting System," using the network symbol "ABS." That came after the American Broadcasting Co., formerly the Blue Network Co., made an arrangement to acquire the "ABC" designation. The latter then dropped the Blue name altogether and became ABC.

All four old-line networks showed substantial progress during 1945. Chester J. LaRoche, who served as vice-president and directing head of ABC, resigned and became senior partner in the advertising agency firm of LaRoche & Ellis. Mark Woods, president of ABC for several years, resumed policy direction of the network. Columbia Broadcasting system in early Jan. 1946 announced a realignment of top executives. William S. Paley, president, who served overseas as chief of radio psychological warfare under Gen. Eisenhower, became chairman of the board. Paul W. Kesten, executive vice-president and operating head, was elevated to the vice-chairmanship. Frank Stanton, 38-year-old vice-president and general manager, was elected president.

**House Investigation.**—Finis was written to the stormy house inquiry into the FCC in early 1945. The house select committee ended its hectic two-year life by giving the commission a clean bill of health, but with recommendations for sweeping revision of the Communications act. Much of the heat which engendered the inquiry was removed with the resignation of FCC Chairman James Lawrence Fly to enter private law practice, and the appointment of Paul A. Porter, publicity director of the Democratic National committee during Pres. Roosevelt's fourth term campaign, as the new chairman.

**Musical Property.**—All was not serene on the radio music front during 1945. While radio's troubles with the "copyright owners" of former years appeared to be well under control, the A.F.M. and its president, James C. Petrillo, were constantly in the limelight and the headlines. He blocked the use of live mu-

sicians on television until such time as he determined that issue. He lost his battle on unionizing all "platter turners" at radio stations—the men who doubled in brass by operating controls and flipping the records on turntables. An independent union, National Association of Broadcast Engineers & Technicians, licked him on that.

**Employment.**—Radio's weekly pay roll in 1945 increased slightly more than 8% over the preceding year—this in spite of wartime wage restrictions imposed by the government. The average broadcasting salary for the industry's 29,405 full-time employees was \$65.40 as compared with \$60.52 paid in 1944 to 26,688 employees.

An analysis made by the FCC covering the typical broadcast week of Oct. 14, 1945, disclosed that radio more than maintained its standard of high compensation as compared with other professions and pursuits. The 29,405 employees at 876 stations, nine networks (five major and four regional) compared with 26,688 employees in 1944 and 24,515 in 1943.

The average salary for full-time employees in 1945, exclusive of executives, was \$57.97 weekly, as compared with \$53.85 the preceding year. While no comparable figures were available for other industries in 1945, the motion picture industry of California in 1944 had an average weekly wage of \$74.74, exclusive of executives and professionals. In the same month newspapers and periodicals reported an average wage, exclusive of executives, of \$49.96.

Station employees in executive capacities earned the following averages in Oct. 1945 according to the FCC data:

General managerial, \$159.36; technical, \$79.86; program, \$82.02; commercial, \$128.73; publicity, \$86.56; other, \$90.15. The average executive salary for all stations was \$115.35 weekly. The average for all stations, including networks, for the typical week was \$112.63. Network (and key station) executive personnel averaged \$208.57 weekly.

Nonexecutive employees of the 866 standard stations (including the ten key stations of major networks that reported) had average salaries as follows:

Technical—research and development, \$78.32; operating, \$56.92; other, \$44.19. Program—production, \$56.75; writers, \$43.50; announcers, \$56.80; staff musicians, \$62.22; other artists, \$64.24; other, \$44.86. Commercial—outside salesmen, \$102.29; promotion and merchandising, \$49.81; other, \$41.61.

For the networks and key stations, nonexecutives averaged these salaries: Technical—research and development, \$103.47; operating, \$75.58; other, \$32.80. Program—production, \$70.87; writers, \$76.67; announcers, \$75.08; staff musicians, \$139.69; other artists, \$90.71; other, \$57.73. Commercial—outside salesmen, \$137.77; promotion and merchandising, \$59.70; other, \$38.25.

**Subscription Radio.**—Subscription radio, proposing a non-advertising broadcast service by FM, wherein the subscriber would pay a regular rental fee for program service, faded from the picture in Sept. 1945. William Benton, president and founder, announced the suspension coincident with his assumption of office as assistant secretary of state. He felt that his government position was in conflict with his private venture, which sought assignment of three FM channels for his service in New York. Moreover, the FCC had not indicated any disposition to authorize the service, evidently feeling that it was not broadcasting, but by its very designation would be restricted only to those listeners who paid a fee.

**Stratovision.**—Newest innovation of 1945 was a revolutionary plan announced by Westinghouse whereby airborne transmitters would relay television, FM and other broadcast services by interlacing transmission from plane to plane, flying anchored courses at 30,000 feet. The FCC authorized tests of

the plan, with results to be reported during 1946.

**Radio in the Western Hemisphere.**—With the end of World War II, new activity among North American nations in radio was evidenced. First signs of activity south of the U.S. developed with the announcement by Emilio Azcarraga, owner of the most important radio stations in Mexico City, that he planned to build a one-million watt standard broadcast station which would beam its signals toward the U.S. The highest powered station in the world, so far as the records go, was the 500,000-watt Radio Moscow. This mammoth station had 20 times the output of the biggest stations in the U.S.

Cuba also served notice on the North American nations signatory to the so-called Havana treaty that it desired assignments on at least 20 additional standard broadcast channels allocated to the North American continent. This resulted in the calling of an informal engineering conference in Washington in February to consider Cuban demands and also to work out plans for an extension of the five-year Havana treaty agreement (North American Regional Broadcasting agreement), which would expire by its own terms on March 29, 1946. Canada, Mexico, Cuba, Haiti, Dominican Republic, Bahamas and Newfoundland are signatories to this treaty. The agreement was entered because standard broadcast channels (550 to 1600 kc.) have a continental interference range and the same standards of engineering practice must be observed to avoid jamming of transmitted signals.

**World Conferences.**—All during 1945 preparations were being made under the aegis of the state department for international and inter-American conferences on use of the radio spectrum. One preparatory session was held in Rio de Janeiro in Sept. 1945 but this dealt almost entirely with common carrier, telegraph and safety-of-life-at-sea apparatus of radio service. A second was held in Bermuda in November, participated in by British dominions and the U.S., having to do with international radiotelegraphic and telephonic traffic and rates.

**U.S. Foreign Broadcasts.**—One of the knottiest problems confronting the administration as the year ended was that of continuing international shortwave broadcasting to all corners of the world. During wartime this was the function of the Office of War Information (OWI) and the Office of Inter-American Affairs, supplemented by home-to-troops broadcasts sponsored by the armed forces. These operations were taken over with the abolition of these war agencies by the state department and placed under the immediate direction of William Benton, assistant secretary of state. High powered transmitters with their signals beamed to all peoples were established under OWI direction during the war, but with the technical operation vested in private licensees. Programming, however, was handled by the government as part of the over-all psychological warfare campaign. Privately owned facilities employed on these operations were leased to the government during the war.

Whether the stations, some 36 in number, should be turned over to private operators or whether some variation of the wartime plan should be continued was the problem which plagued the government as the year ended.

The government, under its modified peacetime plan, was transmitting 66 program hours a day in 21 languages over 36 broadcast stations in the U.S. and relay stations in Algiers, Germany, London, Saipan, Honolulu and Manila. It appeared likely in mid-January of 1946 that a committee of newspaper executives and state department officials would be named to attempt to work out the problem. The issue boiled down to whether democratic concepts as to free flow of news could be maintained if the government programmed shortwave stations, weighed against the admitted desirability of retaining a "Voice of Amer-

ica" which built up such a following throughout the world during the arduous war years. (S. Tr.)

**Scientific Developments.**—The end of World War II made it possible to disclose publicly many of the scientific developments in radio which played a major role in winning the war. During the latter months of 1945 many of the research and engineering organizations in the radio industry were converting their activities from military projects to peacetime objectives. Some of the technical problems to which the industry could devote its efforts were highlighted by the FCC's frequency allocation report of June 27, 1945, in which frequencies above 30 mc. were assigned to many new as well as existing services. The assignment of a ten mc. band between 460 and 470 mc. for "Citizens Radio" was expected to provide ample opportunity for the exercise of technical ingenuity in developing a new communication service for the public.

**Industrial Applications of Radio Frequency Power.**—During 1945 the use of radio frequency power as an industrial tool became firmly established. One industrial application of radio frequency power which aroused considerable technical interest was in the dehydration of penicillin.

In order to retain the potency of penicillin it is necessary to dry the product thoroughly before storage or shipment. It was originally dried with the penicillin solution in a frozen condition and in a vacuum. The drying process required approximately 24 hours. The radio frequency method developed for dehydrating penicillin involved evaporating the water from the liquid penicillin in a vacuum. The boiling point was maintained at approximately 50° F. by controlling the vacuum and a radio frequency generator was utilized to supply the energy necessary for vaporization. This method reduced the drying time to less than 30 minutes and did not adversely affect the potency of the material. The cost of the electronic drying equipment and maintenance was only a fraction of the cost of the equipment previously used.

**Military Radio Equipment.**—(See RADAR; RADAR COUNTER-MEASURES.)

**Radio Relay Systems.**—In 1945 the Western Union company in co-operation with the Radio Corporation of America (RCA) established an experimental super-high-frequency radio relay system between New York and Philadelphia. Tests on the experimental system provided the experience required for planning a proposed nation-wide radio relay system. This system will utilize radio microwaves transmitted from towers spaced approximately 30 miles apart. The relay stations will be entirely automatic and unattended. Each circuit will provide a larger number of channels than were available in 1945 for the handling of telegraph traffic and can also be used to transmit telephone calls, high-speed facsimile and to operate automatic typewriters and business machines at widely separated points.

Western Union applied to the FCC for permission to establish experimental radio relay systems between New York and Washington, New York and Pittsburgh and Washington and Pittsburgh. The system to be employed between these cities would provide radio beams in each direction. Each beam could provide as many as 270 multiplex circuits.

The American Telephone and Telegraph company was installing a radio relay system between New York and Boston. This system was to be capable of carrying simultaneously a large number of telephone conversations as well as television programs and other special services. (See TELEVISION.)

**Tubes.**—*Image Orthicon.*—A new camera tube, the Image Orthicon, announced by the RCA laboratories, was expected to do much to overcome one of the serious limitations confronting the television broadcaster for it will make it possible to televise scenes under very unfavourable light conditions. The new pickup tube was reported to be at least 100 times more sensitive than

conventional camera tubes. Another advantage of the Image Orthicon is its ability to accommodate a much greater range in light intensity than was possible with the standard Orthicon.

The Image Orthicon resembles a large tubular flashlight in size and appearance. The tube has an over-all length of approximately 15 inches and a maximum diameter of three inches.

The improved sensitivity of the Image Orthicon over the pre-war Orthicon is attributed to the addition of an electron image section which permits greater photoelectric sensitivity and an electron multiplier section which greatly amplifies the relatively weak video signals which are obtained when the target is scanned. The electron multiplier section consists of a series of targets or dynodes each of which provides amplification by means of secondary electronic emission.

**Kinescopes.**—The brightness and contrast of television images were materially improved by a recent development in cathode ray tubes. In the new tubes a very thin smooth film of aluminum is deposited on the back of the fluorescent screen. The aluminum film, which must be thin enough to be penetrated by the electron beam, acts as a mirror and causes all the light produced by the fluorescent material to be emitted from the face of the tube. In conventional tubes much of the light from the inner surface of the fluorescent material is reflected about inside the tube and either lost or diffused over the screen area causing a reduction in contrast.

**Magnetrons.**—Radar transmitters operating on frequencies above 500 mc used cavity magnetrons as their source of high-frequency power. One of the outstanding characteristics of this type of tube was its high efficiency. During the war cavity magnetrons for many radar applications were developed. The peak power output of these tubes when pulse modulated ranged from a few watts to megawatts.

**Velocity Modulated Tubes.**—The capabilities and limitations of velocity modulated tubes were extensively investigated for radar applications. Microwave radar receivers operated on the superheterodyne principle and one of the major problems encountered in their design was to obtain a satisfactory heterodyne oscillator. Velocity modulated tubes provided the solution to this problem in receivers operating above 1000 mc. (See also ADVERTISING; FEDERAL COMMUNICATIONS COMMISSION.)

(B. E. Sd.; G. L. Bs.)

**Great Britain.**—In Feb. 1945 the BBC prepared for peace by convening in London a commonwealth broadcasting conference of all the broadcasting organizations of the British empire. Victory in Europe was followed by completely new broadcasting schedules for ten days. Peace made possible the re-allocation of wave-lengths and the start of peacetime broadcasting. On July 29 the home and light programs, independent of each other, and competing for the tastes of British listeners, were instituted and the regional stations resumed their independent program activity. A third national program was planned for the spring of 1946. This was to cater for minority interests and would not be bound by fixed points, such as news bulletins, so that the whole of a promenade concert or an important play might be given without interruption. The three programs, in the view of the BBC's director-general, W. J. Haley, would give British listeners the most comprehensive service in the world.

**The Radio Industry.**—From 1940 to mid-1945 the energies of the British radio industry were devoted entirely to research, development and production of radio and radar equipment, components and valves for use by the services in the radio war. For this purpose the capacity of the industry was expanded some two-and-one-half times above its prewar size. With the return of peace the industry began its reconversion to the production of civilian equipment—a reconversion which had to be carefully planned and regulated if the transition period was to be smoothly passed.

By the end of June 1945 plans were made and approved by the government for the production of nearly 1,000,000 civilian broadcast receiving sets during the following 12 months, and action to implement these plans was initiated. Of this total some 400,000 sets were for export in support of the drive for the re-establishment of export trade. In addition, the manufacture of components and valves for maintenance purposes in Britain and overseas was resumed on a substantial scale. Planning for the manufacture of television receivers was well advanced and the industry would produce television sets in line with the re-establishment of the television service and its expansion to the provinces in accordance with the recommendations of the Hankey committee. Attention was being devoted also to the application of electronic science to peacetime uses, and the production of equipment for this purpose was proceeding.

(R. P. Be.)

**Scientific Aspects of Radio.**—The year was characterized in radio science not so much by outstanding immediate progress as by the partial lifting of the veil which had been drawn over all development for military use after 1939 and earlier. First place must be given to the great upward extension in frequency range resulting primarily from the success of a research group at the University of Birmingham in developing a practical form of the cavity magnetron. This enabled adequate power to be developed at frequencies which, before the war, would have been regarded as "speculative in the extreme." In contrast, however, with the behaviour of the conventional thermionic tube, which had always been amenable to theoretical interpretation in detail, the magnetron with the added complication of a magnetic field had so far shown much less respect for theory than might have been expected. The clearing up of discrepancies under more leisurely conditions might be expected to lead to further advances in this field.

The diversion into radio research generally of some of the best brains in physical science led to the discovery of many new possibilities in circuit design. Most of these had their origin in the fundamental need of radar equipment for accurate timing. The measurement of target range to within ten yards by radar methods, which was officially quoted, implies a timing accuracy of about one-thirtieth of a millionth of a second. The developments toward the end of 1945 illustrated possible applications. The first was the demonstration in November by a British commercial firm of one-channel television in which sound transmissions were sandwiched, both at transmitter and receiver, into the minute fraction of time between successive scanings of the televised picture. The second was in the timing of the new world air speed record set up in England during the same month. The broad effect was, however, more important. Radio designers were impelled from technical to scientific thinking, the effect of which must be felt throughout electronic engineering. In the more limited field of radio navigation there was in 1945 an unresolved conflict between the rival methods of pulse technique and timing by phase difference.

In radio propagation, the use of available information on daily, seasonal and 11-year cycles of change in the ionosphere, in all cases associated with the sun, as a guide to the choice of frequencies on long-distance communications and broadcasting services, begun somewhat cautiously in the ten years before the war, was developed in 1945 to the point of precise and scientific prediction. Much information was accumulated also on anomalous local propagation at high-frequencies, at first round the British Isles, later under widely varied climatic conditions. It was shown that anomalous propagation may be associated with inversion of both the normal temperature and normal humidity gradients in the atmosphere, but that the latter factor was the more important. Meteorological correlations were worked out to a considerable extent and might prove important.

Finally, although uses of the cathode ray tube fall largely outside the scope of this article, it must be recorded that wartime radar needs led to considerable advances both in manufacture and technique of employment. Among these the introduction by the British of a rotating time base to give a direct radar indication of position was outstanding.

**FILMS.**—*Receiving Radio Messages; Sending Radio Messages; Vacuum Tubes* (Encyclopædia Britannica Films Inc.).

**Radio Detection:** see RADAR.

**Radiology.** Two significant dates in the history of radiology were commemorated in 1945, the anniversary of the birth of Wilhelm Konrad von Roentgen 100 years before and the 50th anniversary of the discovery of Roentgen rays. (See X-RAY.)

Renewed interest was shown in the diagnosis of intracranial lesions by angiography with thorium dioxide as the contrast medium. The inhalation of pure graphite dust was shown to produce pulmonary fibrosis indistinguishable on the roentgenogram from silicosis. Studies in a series of soldiers demonstrated that spontaneous pneumothorax is not infrequent between the ages of 20 and 30 after mild exercise and is usually of no pathological significance. An exhaustive study of the Roentgen appearance of pulmonary collapse and the technique of its demonstration was presented. The value of roentgenograms of the hands in the diagnosis of several diseases was demonstrated.

Asceptic necrosis of the skull appearing from 5 to 12 years after irradiation treatment to pituitary tumours was reported. Degenerative changes in the brain were demonstrated following large doses of Roentgen rays. Encouraging reports appeared on the treatment of irradiation ulcers with alpha ray ointment.

A device was invented for recording the movements of the heart or other moving organs by means of a fluoroscope and a multiplier photoelectric tube which promised to be useful in physiological studies as well as diagnostic procedures. Valuable information regarding the technical factors affecting the quality of roentgenograms appeared.

**Radium.** The World War II demand for vanadium made it possible to recover appreciable amounts of the associated radium from the ores produced in the United States. No statistics were reported, but output declined in 1944, with the drop in demand for vanadium. Consumption of radium in luminous paint for watch and instrument dials and other war applications was 40 grams in 1942, 75 grams in 1943 and 50 grams in 1944. Imports reached a record high of 101.290 grams in 1944, as compared with 90.755 grams in 1943, all from Canada.

The Canadian radium mine and refinery worked full time in 1944 as a crown operation. No output was reported, but the plant is estimated to have an annual capacity of 80 to 100 grams.

The refinery at Oolen, Belgium, for treatment of the Belgian Congo ores, was found to be intact after the German surrender.

**Railroad Retirement Act:** see SOCIAL SECURITY.

**Railroads.** From the railroad viewpoint the year 1945 in the United States was divided into three periods in which the transportation demands had distinct differences. During the first period, from January to May, World War II was at its highest intensity in Germany and Italy and large-scale operations were under way on and around the Pacific islands. Troops and supplies were moved in large volume to ports of embarkation on both the Atlantic and Pacific. In the second

period of three months between V-E day and V-J day the transportation pattern was changed by a reversal from outward to inward movement through the Atlantic ports and an intensification of outward movement through the Pacific ports as the tempo of the war against Japan was accelerated. This eased the strain on the eastern railroads but brought heavy additional loads on the transcontinental lines. The third period, following the surrender of Japan, was one in which the processes of demobilization and conversion from war to peace were begun on a large scale and the preponderance of traffic through the Pacific ports was reversed from outward to inward movement.

In both the first and second periods the service furnished by the railroads was of the same high quality and adequacy which brought praise from the military authorities in 1943 and 1944 although the overload on the western railroads in the second period occasionally resulted in slight congestion and delay. The only serious blemish on the railroad record occurred toward the close of the year when the number of veterans returning to the Pacific ports was greater than the railroads could handle expeditiously from those ports over the long distances to separation centres in the central, southern and eastern states. The delay, which was especially unfortunate in preventing many veterans from spending Christmas and New Year's at home, was due to an underestimate by the military planners as to when and in what numbers the men would be returned, and to a shortage in passenger cars, particularly in sleepers. During the war the railroads had been unable to obtain priorities for materials needed for additional passenger cars and the delivery of a large number of sleepers constructed specifically for troop movement had been delayed by labour troubles in the plant furnishing the mattresses. In lieu of sleepers, coaches were used by a substantial proportion of the soldiers, but the number available was inadequate notwithstanding the transfer of about 2,000 from eastern railroads. Civilian use of sleepers had been drastically curtailed in July by restricting their use to runs in excess of 450 mi. Thereafter more than 75% of all sleepers were assigned exclusively to military traffic.

The magnitude of the demobilization task performed by the railroads is indicated by the fact that between V-E day and Dec. 28 the army turned 4,645,000 soldiers back to civilian life. Practically all of these men were moved by rail from the ports or army posts within the United States to staging areas, then to separation centres, and then to their homes. About 90% of all military freight and 97% of military personnel in organized par-

FRENCH railroad workers restoring the communication lines so urgently needed for industrial recovery in France during 1945

ties were carried by rail.

In total freight traffic, both military and civilian, the volume in 1945, measured in ton-miles, was 8% less than in 1944. The estimate for 1945 was 680,000,000,000; the actual in 1944 was 737,000,000,000. The effects of the termination of war, first in Germany and next in Japan, are indicated by a separate comparison of the three periods mentioned in the first paragraph of this article. Compared with the same months of 1944 the decrease in ton-miles in Jan.-May 1945 was 1.5%. In the months of June-August the decrease was 4.6%, and in September-December it was 18.3%. The passenger miles of 1945 were about 91,000,000,000, approximately 5% less than in 1944, but because of demobilization of military personnel the pattern differed from that of freight in the three periods of the year. The decrease in the first period was 8.7%; in the second period 5.1%; and in the third period 0.4%.

The net financial results of railroad operation in 1945 are not cheerful reading for stockholders. They are herein estimated on the basis of the complete figures for the first ten months of the year. The operating revenues in 1945 were about 3% less than those of 1944 but the operating expenses (because of higher wages and increased prices for materials) were about 5% more, and the net railway operating income (the amount available for interest charges, dividends and other appropriations) was about 11% less. The net income after fixed charges was about 13% less than in 1944, 34% less than in 1943 and 36% less than in 1942.

Net Financial Results of Railroad Operation, 1942-45

Item (in millions)	1945*	1944	1943	1942
Operating revenues . . . . .	\$9,146	9,437	9,055	7,466
Operating expenses . . . . .	6,620	6,282	5,657	4,601
Tax accruals . . . . .	1,377	1,846	1,849	1,199
Net railway operating income . . . . .	983	1,106	1,360	1,485
Net income . . . . .	579	667	873	902
Return on investment . . . . .	3.52%	3.97%	4.92%	5.50%

\*Year ended Oct. 31, 1945. From *Railway Age*, Jan. 5, 1946.

While the net income declined steadily after 1942, notwithstanding the large increases in gross revenues, the cash position of the railroads at the close of the war period was much better than in 1941. A substantial part of the charges to operating expenses were because of depreciation and amortization of expenditures for war facilities; they were not cash expenditures. A large portion of available cash was used for the retirement of debt, and in the revised financial organization of roads which emerged from bankruptcy there were even greater reductions in interest bearing securities. Up to Sept. 30, 1945, under reorganization plans approved by the Interstate Commerce commission for 32 railroads reorganized or in process of reorganization, the funded debt was or would be reduced from \$4,300,521,178 to \$1,833,543,264, and the annual fixed charges cut from \$148,865,539 to \$40,113,369.

At the close of the year 75 railroads with 41,154 mi. of road, 10,833 mi. less than on Jan. 1, 1945, were in receivership or trusteeship, a carry-over from depression years. This reduction in bankrupt mileage was accounted for almost entirely by the discharge from trusteeship of the Chicago, Milwaukee, St. Paul and Pacific. The promise for 1946 was that the reorganization of several other important railroads would soon be completed.

The miles of railroad abandoned in 1945 because of unprofitable operation was 412, a figure lower than in any year after 1927. In the 12-year period up to Dec. 31, 1943, abandonments aggregated almost 20,000 mi., an annual average of 1,667. Additions to railroad mileage by new construction in 1945 were negligible—65 mi.

Substantial progress was made in 1945 in extension and modernization of signals. Automatic signals were installed on 1,791 additional road miles, and on 28 railroads additional sections,

aggregating 1,658 mi. of road, were equipped with centralized train control. Considerable progress was made in installations of wireless communication with moving trains and yard locomotives. The gross capital expenditures for all additions and betterments to line and equipment in 1945 were approximately \$500,000,000, a figure slightly lower than in 1944.

Railroad service was free from general strikes during the year but the railroad unions were among the first in the postwar period to demand substantial wage increases and changes in making agreements. The proceedings of negotiation and mediation were in progress during the last three months of the year but no agreement was in sight on Jan. 1, 1946. A jurisdictional dispute between the enginemen and firemen on the Illinois Central railroad led to the calling of a strike, to become effective on Aug. 24, by the firemen, who refused to accept the decision of a fact-finding board, but the strike was averted by federal seizure of the railroad on Aug. 23. At the close of the year the property was still in the hands of the government and was technically operated by the Office of Defense Transportation. As a practical matter, however, it was a "token" seizure and the railroad was operated as usual by its own officers, with nominal oversight by ODT pending settlement of the interunion controversy.

The manpower shortage, so serious in 1944, continued but during the late months of 1945, when ex-servicemen began to return to railroad service and the volume of freight traffic diminished, the shortage became less critical. The average number of employees in 1945 was 1,422,000. The comparable number in 1944 was 1,414,776.

The result of a suit brought by the department of justice in 1940 against Pullman, Inc., was a district court decision in 1944 that common ownership and control of car-building activities and the ownership and operation of Pullman cars under contractual arrangement with the railroads was a violation of the anti-trust law. The Pullman company was offered the choice of giving up one of its two activities and it chose to continue as a car builder. Its cars and operating organization were offered for sale to the railroads collectively. Following continued court hearings, at which the department of justice opposed sale to the railroads and favoured disposal to one of three nonrailroad organizations which had made bids, the court, in Dec. 1945, approved the sale to the railroads with stipulations to ensure free competition in car building. If the decision would not be reversed on appeal to higher courts, the sleeping car service would continue about as in previous years. The pooled operation of the sleepers to meet seasonal demands in different sections of the country would be administered by a railroad-owned organization instead of by the Pullman company although a few individual railroads might elect to own and operate their own sleeping cars, renting extra cars from the pool as might be required.

The decision of the Interstate Commerce commission on May 15, 1945, finding that the class rates in southern, southwestern and western trunk line territories were unreasonably high, and ordering a 10% reduction in those territories with a corresponding increase in class rates in official (east and northeast) territory, coupled with an order requiring uniform classification of freight for class rate purposes throughout the entire U.S., was an outstanding event in the history of rate regulation. It was the culmination of several years' activity of the southern governors to bring about "mile-for-mile" uniformity in rates applicable to freight moving under class rates. The scales of class rates, prescribed by the commission several years before, were higher per mile in the south and west than in the north, the difference being justified at the time by higher ton-mile costs in the south and west. Afterward the differences in cost were narrowed. In ordering a 10% decrease in class rates in the south and west and an increase of 10% on class rates in the north, the commission's

objective was to equalize between southern and northern producers and merchants the burden of transportation cost on freight which moved under class rates but no consideration was given to the commodity or exceptional rates (lower than class rates) under which about 98% of the total tonnage moves on southern railroads. The commodity rate scale in the south was lower than in the north. The change in class rates was to have become effective on Aug. 30, 1945, but the effective date was put forward to Jan. 1, 1946. On Dec. 13, 1945, the governors of New York and eight other northeastern states sought an injunction to restrain the commission from enforcing its order and on Dec. 21 a three-judge federal court granted a temporary injunction. Further court proceedings were to follow and in the meantime the commission temporarily suspended its order, pending decision as to whether the injunction would be made permanent. (See also BUSINESS REVIEW; INTERSTATE COMMERCE COMMISSION; NATIONAL MEDIATION BOARD.)

(W. J. C.)

**Great Britain.**—The immense profit gained by the government from the control agreement with the British company-owned railways and the London Passenger Transport board is revealed by the publication in 1945 of the surplus in excess of the fixed government rental, of more than £47,000,000 in 1944, bringing the total after 1940 to £176,000,000. The advent to power of a Labour government foreshadowed a policy of nationalization, or the formation of some public transport board. Wages rates were materially increased by an agreement reached in August and this would reduce the 1945 surplus.

The repair of the World War II damage demanded first priority and London transport had nearly 60,000 windows to be replaced in its vehicles alone, while during the war the London Midland and Scottish railway had 254 passenger cars and 1,250 freight wagons destroyed. New equipment orders included 800 passenger cars for the L.M.S., 250 being completed within three months after V-E day, while new Great Western railway cars were fitted with fluorescent lighting, and on the London and North Eastern railway new standard designs included cross-vestibules to ease loading and the limitation to six seats per compartment in the third class. All-metal mineral wagons of 16 tons capacity were a feature of the L.M.S. new construction with a tare weight of less than 8 tons, while some new steam locomotive designs had already appeared after V-E day, notably a 4-6-0 2-cylinder type (No. 1,000) on the G.W.R., using the high pressure of 280 lb. per sq.in., also a 2-6-4 tank design (No. 9,000) on the L.N.E.R. with 225-lb. pressure and a 32,000-lb. tractive effort—this was the most powerful locomotive of its class in Great Britain. This railway published its locomotive replacement program of 2,000 units to be carried out in ten years, and equipped certain steam locomotives with electric lighting, which previously had not been standard British practice. The Southern railway, in spite of its extensive electrified mileage, turned out in July the prototype of its new "West Country" class of 3-cylinder "Pacifics" (4-6-2) which were all to be named after famous cities and towns of the west country. These streamlined locomotives, of which 70 were to be constructed, work at a pressure of 280 lb. per sq.in. and, with an axle load of 18½ tons, are a lighter version of the "Merchant Navy" class.

As a precautionary measure the G.W.R. equipped some of its heavy freight engines with oil fuel apparatus in place of coal, an exceptional event for a line earning much of its revenue from the carriage of coal which it also exports from its South Wales ports, for instance, Cardiff and Newport. Though station reconstruction hardly began in 1945, much planning was completed and the L.N.E.R. placed in service a notable design of signal cabin, which had been designed on standard lines of brick construction with a canopy to avoid glare, sliding windows and con-

tinuous glazing. The abandonment of blackout conditions on trains and at stations, and later the improved train services and the re-introduction of the first dining cars in October, marked the first sign of a return to peacetime conditions for the traveller. Unfortunately September witnessed one of the worst railway accidents in modern British history, when an L.M.S. Scottish express was derailed near Boxmoor with 42 fatalities.

During 1945 the British railways published their scheme of projected air line operations within the country and to serve continental European capitals.

**Continental Europe.**—The railway situation in many European countries was still very indistinct in the closing months of 1945 and was likely to remain so until the census of equipment had been taken, projected for Jan. 1946. One most encouraging feature was the energy exemplified in France, where the National railways had repaired, with U.S. and British help, nearly all the main lines by July, though using temporary bridges on which speed was very restricted. That same month witnessed the re-opening of the Paris-Basle service. Since but a year earlier working was impossible on 11,185 mi. out of a total of 24,233 route miles, and 2,400 bridges, arches, viaducts, etc., had been demolished or badly damaged, the speed of reconstruction was noteworthy. Other war damage consisted in the obstruction of 43 tunnels, while 10,000 pairs of switches and 571 signal cabins were destroyed; also 115 large stations and 24 classification yards had been seriously damaged, as well as 74 large locomotive depots and 20 substations on electrified mileage. Of 16,000 locomotives in 1938 only 6,000 were serviceable in Jan. 1945, but more than 8,000 were expected to be available in Jan. 1946. The freight wagon total fell from 478,000 in 1938 to 228,000 in Jan. 1945, of which only 152,000 were serviceable. Besides in the repair of war damage progress was being made with the electrification of the great main line artery from Paris to Lyons.

The Belgian National railways presented a similar picture with more than 1,000 locomotives and 65,000 wagons lost, also 154 signal cabins and 403 bridges destroyed. In the Netherlands the situation was even worse with 70% of bridges, 50% of locomotives and 20% of stations destroyed or lost. The Danish state railways had virtually repaired all war damage by Dec. 1945, but Norway had still much to accomplish and was very short of equipment and motive power, while in the south the Italian state railways still remained with many routes out of service, and Greece was left with but 31 locomotives available in May 1945 out of 220 in 1938.

It was known that the German railway became disorganized in Jan. 1945, the paralysis beginning west of the Rhine and spreading eastward owing to Allied bombing and the closing in of the Allied armies; coal stocks in the Ruhr could not be cleared and the resulting shortage of locomotive coal was one of the causes of the final disintegration. The German rail network for control purposes was divided into four zones—U.S., British, French and Russian—and no data were made public; only essential military and civil traffic was being handled. No information was available as to the U.S.S.R. railways, but it was known that rail communication was established between Moscow and Königsberg in July 1945 and the 5-ft. U.S.S.R. gauge had been carried west to the Vistula. Polish railway mileage in 1945 was 14,656 mi. as compared with 12,493 in 1938.

Concerning neutral countries, Portugal built its first steam locomotive and Switzerland placed new electric locomotives on the Berne-Lötschberg-Simplon, and the federal railways continued widening a difficult section of the Gotthard route and electrified further lines in the Payerne and Eglisau areas. The Swedish state railways had 2,858 mi. electrified with further lines under conversion and 80% of the total traffic was

electrically hauled. Sweden built steam locomotives for export to the Netherlands.

**Asia.**—April 1945 marked the taking over by the Indian government of the last important broad or metre gauge company-operated line in that country, namely, the Dibrui-Sadiya line in Assam, thus completing a policy continuing over many decades. Further 2-8-2 type locomotives were imported from Canada, thereby easing the shortage of motive power on the North Western railway—the complete order was for 400. In August the U.S.S.R. jointly with China took over the South Manchurian and erstwhile Chinese Eastern railways. Known as the China-Changchun railway agreement, the instrument of change provided for ownership by China with administration by a joint Chinese-soviet board.

**Africa.**—In Sept. 1945 the Jibuti-Addis Ababa railway was handed back to its former French ownership, but the main railway progress to be recorded in Africa relates to the South African railways and harbours administration, which made public its £30,000,000 postwar reconstruction program embracing the rebuilding of Johannesburg, Durban, Pretoria and other large stations, as well as continuing the policy of electrification. Other items included large-scale replacement of locomotives and equipment and further elimination of grade crossings on which more than £1,500,000 had been expended in the previous 16 years.

**Canada.**—Both the Canadian National and the Canadian Pacific systems continued to be hard pressed to handle the peak passenger traffic still offering and arising in part from the return of servicemen. The C.N.R. new central station, Montreal, opened in July 1943, handled 6,500,000 passengers in its first year, with a record of 27,448 for one single day. The C.P.R. in 1945 placed in service the first Canadian boxcar with an aluminum body, thereby effecting a saving of 9% in tare weight.

**Australia.**—The most outstanding event was the publication in April of the report by Sir Harold Clapp on gauge unification. This recommended standardization on the 4 ft. 8½ in. gauge and would require the conversion of much of the 5 ft. 3 in. gauge lines in Victoria and South Australia, as well as the widening of many 3 ft. 6 in. gauge lines in Western and Southern Australia, also in Queensland. New construction of long mileages of 4 ft. 8½ in. gauge main line was recommended and the total cost of the proposals was estimated at more than £76,000,000.

**South America.**—Electrification continued to be pressed forward energetically in Brazil; one scheme related to the Sorocabana railway, with electric traction in use from São Paulo to Santo Antonio, and another to the Central of Brazil with a view to extending electric traction from Belém and Barra do Pirahy to Volta Redonda. The Paulista railway proposed to convert its line to Bauru and the São Paulo railway planned electrification to Jundiahy. Lastly, the Leopoldina was considering the electrification of its suburban routes in the Rio de Janeiro area.

The completion of the reconstruction of the Victoria-Minas railway, serving vast iron ore resources, was of considerable economic importance as it could handle 1,500,000 tons annually. Interest focused on the expectation that by 1946 the new international railway bridge between Uruguayana (Brazil) and Paso de los Libres (Argentina) would be opened for traffic, thus providing the first direct rail communication between the two countries. The Salta and Antofagasta trans-Andean rail link made progress and the Chilean section was virtually complete, with the Argentine section nearing the border. Peru had a railway project to link Cuzco with Iquitos on the Amazon (620 mi.), thus providing another trans-Andean route; three other short lines were under construction in Peru. **Randall-Maclver, David** (1873-1945), British archaeologist and anthropologist, was born in London, the son of John MacIver, a shipowner. He later added Randall, the surname of his stepfather, to his own name. He received his bachelor's degree at Queen's college, Oxford, 1896. He was a member of one of the Flinders Petrie archaeological expeditions to Egypt and was Laycock student of egyptology at Worcester college, Oxford, 1900-06. He spent several years in Egypt doing research in comparative anthropology, studying Egyptian skull formations of various periods under direction of Sir Arthur Thompson. From 1907 to 1911 he carried out archaeological expeditions for the University of Pennsylvania in Egypt and the Sudan. He was librarian of the American Geographical society, New York, 1911-14, and served during World War I in France and Macedonia as an intelligence officer with the rank of captain. After the war, he conducted explorations and research in Italy and his writings established him as an authority on the prehistoric period of the Italian peninsula. A member of several learned societies, he contributed articles on the Comacines, Etruscans, Picenes and Villanovans in the 14th edition of the *Encyclopædia Britannica*. Among his

publications are *Mediaeval Rhodesia* (1924), *Villanovans and Early Etruscans* (1924), *The Iron Age in Italy* (1927), *The Etruscans* (1927), *Italy Before the Romans* (1928) and *Greek Cities in Italy and Sicily* (1931). He died at his home in New York city, April 30.

**Rayon and Other Synthetic Fibres.** Products of rayon and other synthetic fibres continued in 1945 their record-breaking rise in consumption. Total production in the United States of rayon yarn of all types was 792,100,000 lb. compared with 723,957,000 lb. in 1944. Table I shows the division as to rayon filament yarn and rayon staple fibre.

Table I.—United States Rayon Production in Millions of Pounds

	1945	1944	1943	1942	1941	1940
Rayon filament yarn . . . .	623.7	555.2	501.1	479.3	451.2	390.1
Rayon staple fibre . . . .	168.4	165.7	162.0	153.3	122.0	81.1

The use of rayon in automobile and plane tire cord continued to show a marked increase. Rubber tire manufacturers in 1945 prepared to feature the rayon tires in their consumer advertising which meant that production of heavy denier tire yarn would not decrease, but probably would increase in 1946. On the contrary, the amount of rayon yarn available for textile fabrics used in clothing and household furnishings was the lowest after pre-war. In 1941, weavers of dress fabrics and similar materials used 70% of the available rayon supply. In 1945, this proportion had decreased approximately to 50%.

The ending of World War II had no effect in improving the yarn supply situation for the consumer. The cancellation of government military contracts represented at the maximum about 10% of the yarn supply. Aggravating the fabric weaving problem was the increased pressure from garment manufacturers and retail stores for greater yardage of material, particularly for essential clothing items such as low-priced street dresses, underwear, blouses, men's shirts, etc. In 1939, production of rayon and silk civilian fabrics totalled 1,400,000,000 yd. In 1945, the production of rayon fabrics alone (silk production was still nominal) totalled 1,554,000,000 yd., an increase of 11% over the combined rayon and silk yardage. The industry also was the subject of a series of directives from government war agencies in 1945 controlling the types of fabrics to be produced and the distribution of that production, on the grounds that the needs of the public for low and medium priced clothing were not being met because the fabrics were not available. When the end of the war came in August, it was expected that early conversion of heavier industries to peacetime products, such as automobiles, refrigerators, radios, etc., would siphon off some of this consumer spending and thus relieve the pressure on textiles. In the rayon fabric field, it was also hoped that additional relief would come with return of cotton looms to civilian fabrics. Early development of labour difficulties interfered in both heavy industry consumers' goods and in return to cotton goods.

During 1945, rayon fabric manufacturers faced by a shortage of the usual types of synthetic yarns in the filament group directed their production toward mixtures of filament yarns with spun, all spun or blends of rayon with other fibres, such as wool, protein and glass. Something of this trend is reflected in the yardage produced in the four principal groups: all filament, filament and spun rayon, all spun rayon and all others, the latter representing the blended fabrics. Comparison of production for

NYLON YARN feeding into a cord loom in a Massachusetts mill during 1945. Light, strong and elastic, nylon was used in aircraft tires during World War II, and contributed to the safety of bomber and fighter planes

January through September 1944 with the same period in 1945 is shown in Table II.

Table II.—Production of Rayon Broad Woven Fabrics (Except Tire Fabrics)  
(Thousands of lin. yd.)

	All filament	All spun rayon	Comb. filament and spun rayon	All other rayon mixtures
1944 . . . . .	832.7	116.4	113.6	118.7
1945 . . . . .	776.4	118.8	115.5	123.0
% of change .	-4.1	+2.1	+1.7	+3.6

In the hosiery industry, the other principal consumer of rayon and synthetic yarns in the United States, the end of the German hostilities and the cancellation of many government contracts for nylon parachute fabrics brought immediate hope of return of nylon, the fibre that had just started on its way by Feb. 1942, when use of nylon was forbidden for civilian products. In 1941, the last full year of production, 9,000,000 dozen pairs of women's nylon hosiery were produced, of a total of 54,000,000. In 1945, of a total production of 42,000,000 dozen pairs of women's hosiery, 35,000,000 were rayon. Throughout 1945, the production of rayon hosiery decreased, women's full-fashioned types more sharply than others, and this was reflected in the deliveries of rayon yarn to the hosiery industry. In 1944, the total poundage was 45,000,000. In 1945, it was 35,000,000. When nylon was released to the hosiery industry in August, the producers of the yarn announced that deliveries of hosiery yarns would begin about Sept. 1 in initial shipments of 30, 40 and 70 denier (size). At the same time, reduced yarn prices were announced. The amount of yarn available at existing capacity was stated to be sufficient to produce 30,000,000 dozen pairs of women's hosiery a year. Using 1945 figures of total production of hosiery, that meant 12,000,000 dozen pairs would have to be made of some other fibre, rayon; or if it were again available, silk.

Production of rayon yarn in Great Britain averaged 11,700,-

000 lb. a month, during the first nine months of 1945. In September, of the total 11,300,000 lb., 7,000,000 were continuous filament and 4,000,000 staple fibre. Spun rayon yarn rationing ended in Great Britain on Dec. 31. The cotton v. rayon competition also disturbed Britain. Rayon's encroachment on use of Egyptian cotton was commented on in April by the British cotton controller. By the end of the year, exports of British staple rayon had begun in larger quantities and U.S. processors were discussing its effect on the U.S. yarn producer.

In the Netherlands, rayon production facilities suffered seriously from the war. In Sept. 1944, two large plants of the Enka company were dismantled by the Germans and the buildings were later almost destroyed by fire in the fighting around Arnhem. Another plant in Ede was bombed but in August it was thought possible to renew operations when coal and raw materials were available. Production in the Breda plant had already started again in June.

Coal shortages prevented an early return to production in Belgium; plants were only slightly damaged by the war. Pulp came from Sweden but operations in 1945 were limited to about 25% of capacity on filament yarn and 58% on staple fibre.

South American countries reported many new ventures in rayon yarn production. A Peruvian plant was completed by December and expected to start substantial operations early in 1946. Another plant was reported planned in Brazil where a limited amount was being produced for domestic consumption. Argentina and Colombia also had plants in operation, although in several cases, it was reported early in 1945 that machinery was antiquated and the supply of raw material frequently inferior. In the meantime, demands for United States rayon yarn were increasing. At the end of the year, it was reported that the export pool of rayon yarn had dwindled from 5,000,000 to 2,000,000 lb. and would be worse as the government order to set aside

# 632 RECEIPTS, GOVERNMENT—RECONSTRUCTION FINANCE CORP.

5% of U.S. yarn production for export purposes had been revoked in October.

**Reconstruction Finance Corporation.** The Reconstruction Finance Corporation was created by the U.S. congress on Jan. 22, 1932, and started operations on Feb. 2, 1932.

The enactment creating the corporation authorized it to extend financial assistance to agriculture, commerce and industry through direct loans to banks, trust companies, building and loan associations, insurance companies, mortgage-loan companies and various agricultural credit agencies. Loans were also authorized to closed banks to aid in their reorganization or liquidation and, upon approval of the Interstate Commerce commission, to railroads or receivers of railroads to provide temporary financial assistance. The original enactment also authorized the corporation to accept drafts and bills of exchange drawn upon it arising from the sale of agricultural or other products to buyers in foreign markets.

Through amendatory and supplemental legislation the corporation was authorized: (1) to purchase the capital stock of banks, insurance companies, agricultural credit corporations, national mortgage associations and various governmental agencies; (2) to make loans to business enterprises, mining interests, agricultural improvement districts, public school authorities and various other classes of borrowers; (3) to assist in financing the construction of public works and various self-liquidating projects; and (4) in connection with the defense and war programs, to provide financing for purposes of plant conversion and construction, working capital, mining operations and other activities; to provide war production facilities; to provide supplies of, and to stock pile, strategic and critical materials; and to undertake a wide range of other activities incident to the war effort. The corporation was also designated by the Surplus Property administrator as the disposal agency for government-owned war surpluses of aircraft, plants and industrial real estate, capital and producers' goods and consumer goods.

Certain subsidiaries were organized by the corporation for the performance of purely peacetime functions. Included in these were the following which continued in 1945 to be wholly owned and managed by the corporation: the RFC Mortgage company, created on March 14, 1935, to aid in the re-establishment of a normal market for sound mortgages on income-producing urban property; Disaster Loan corpora-

tion, created by the act of Feb. 11, 1937, and organized on Feb. 15, 1937, for the purpose of making loans to those who had suffered by reasons of floods or other disasters (this corporation was dissolved, and its functions, powers, duties and authorities transferred to the RFC, effective July 1, 1945); and Federal National Mortgage association, created on Feb. 10, 1938, to maintain a market for first mortgages insured by the Federal Housing administration under Title II of the National Housing act.

Other corporations were created for the purpose of aiding in the national defense program; namely, Metals Reserve company, Defense Supplies corporation, Rubber Reserve company, Defense Plant corporation, U.S. Commercial company, War Damage corporation, Rubber Development corporation and Petroleum Reserves corporation. U.S. Commercial company and Petroleum Reserves corporation were transferred to the Office of Economic Warfare (later the Foreign Economic administration) by executive order 9361, issued July 15, 1943. Rubber Development corporation, another subsidiary of the RFC, likewise was transferred by this executive order to the Office of Economic Warfare. Pursuant to executive order 9630, issued Sept. 27, 1945, certain functions handled by the Foreign Economic administration through Rubber Development corporation, Petroleum Reserves corporation and U.S. Commercial company were redistributed to the RFC.

By public law 109, 79th congress, approved June 30, 1945, certain national defense subsidiaries of the corporation were dissolved, effective July 1, 1945, and all their functions, powers, duties and authority were transferred to the RFC. These included Defense Plant corporation, organized on Aug. 22, 1940, for the purpose, among other things, of financing construction and equipping defense plants and projects throughout the U.S. and operating them if necessary; Defense Supplies corporation, organized Aug. 29, 1940, and Metals Reserve company, organized June 28, 1940, for the purpose of acquiring stock piles of strategic and critical materials; Rubber Reserve company, organized June 28, 1940, for the purpose of building up a national stock pile of raw rubber and of developing and supervising the operation of facilities for the production of synthetic rubber.

War Damage corporation, organized on Dec. 13, 1941, for the purpose of offering reasonable insurance against loss or damage to property resulting from enemy attack, continued

Reconstruction Finance Corporation—Summary of Loan & Purchase Activities Feb. 2, 1932, Through Dec. 31, 1945

	Authorizations	Disbursements	Repayments and other reductions

Allocations and loans to other governmental agencies and for relief by direction of congress . . . . .	4,254,603,216.87	3,801,390,936.51	3,381,121,094.11†
GRAND TOTAL . . . . .	\$40,388,966,853.55	\$34,607,019,421.56	\$32,253,672,924.14

\*Includes \$7,650,698,299.91, representing credits arising from the merger of RFC war affiliates with RFC under public law 109, 79th congress. As of Dec. 31, 1945, the corporation held \$8,866,774,700.49 in commodities, wartime capital facilities and other assets acquired under the merger.

†Includes \$2,785,258,704.21 of corporation's notes cancelled pursuant to act of congress approved Feb. 24, 1938.

to function as a subsidiary of the corporation during 1945.

Pursuant to Title III of the act approved June 22, 1944 ("G.I. Bill of Rights"), under which the Administrator of Veterans' Affairs was to guarantee certain loans to veterans for the purchase or construction of homes, farms and business property, the administrator issued, on Dec. 22, 1944, regulations relating to the guarantee of loans made to veterans for the purchase of business property, and subsequently on Jan. 5, 1945, designated the RFC as an agency with authority to receive and consider applications for guarantee of business loans and to forward to the Veterans' administration written recommendations as to the approval or disapproval of such guarantee applications.

Following the cessation of hostilities in 1945, a principal function of the corporation was to assist in financing industry to re-equip plants for peacetime operations, increase production, and to enter new fields of industrial activity. The corporation set forth a seven-point program which, in the main, provided for co-operation with banks in supplying funds needed for reconversion and, where local credit was not available, in making loans direct to business. As part of this program the corporation announced a blanket participation agreement plan under which the corporation, in effect, automatically guaranteed a portion of any business loan extended by an approved bank under the agreement. As of Dec. 31, 1945, more than 1,200 loans, totalling more than \$58,000,000 had been authorized under the agreement and individual loans ranged from \$240 to \$350,000, established as the maximum for any individual loan an approved bank might make under the agreement. More than 1,900 banks had been approved, as of that date, to make loans under the agreement.

The corporation was designated as the disposal agency for government-owned surplus aircraft, plants and industrial real estate, and capital and producers' goods under regulations issued by the Surplus Property administrator pursuant to executive order 9425, dated Feb. 19, 1944, and continued throughout 1945 to act as such disposal agency pursuant to section 35 of the Surplus Property act of 1944, approved Oct. 3, 1944. Executive order 9643, issued Oct. 19, 1945, terminated the Office of Surplus Property in the department of commerce and on the same day the Surplus Property administrator designated the RFC as the disposal agency for consumer goods.

Under executive order 9665, dated Dec. 27, 1945, and effective Jan. 28, 1946, the lending and surplus property disposal activities of the Smaller War Plants corporation were transferred to the RFC.

Effective Jan. 15, 1946, War Assets corporation, subsidiary of the RFC, was designated as the disposal agency for government surplus consumers' goods and capital and producers' goods.

Effective Jan. 28, 1946, all duties of certifying war veterans as eligible for preference in the purchase of surplus property were transferred from Smaller War Plants corporation to War Assets corporation. The corporation functions under the direction of a board of directors whose members are appointed by the president subject to confirmation by the senate. The board in 1945 consisted of: Charles B. Henderson, Chairman, Sam H. Husbands, Henry A. Mulligan, Charles T. Fisher, Jr., and Harvey J. Gunderson.

Loan agencies are maintained by the corporation in Atlanta, Ga.; Birmingham, Ala.; Boston, Mass.; Charlotte, N.C.; Chicago, Ill.; Cleveland, O.; Dallas, Tex.; Denver, Colo.; Detroit, Mich.; Helena, Mont.; Houston, Tex.; Jacksonville, Fla.; Kansas City, Mo.; Little Rock, Ark.; Los Angeles, Calif.; Louisville, Ky.; Minneapolis, Minn.; Nashville, Tenn.; New Orleans, La.; New York, N.Y.; Oklahoma City, Okla.; Omaha, Neb.; Philadelphia, Pa.; Portland, Ore.; Richmond, Va.; St. Louis,

Mo.; Salt Lake City, Utah; San Antonio, Tex.; San Francisco, Calif.; Seattle, Wash.; Spokane, Wash.; and a special representative of the corporation has headquarters in San Juan, Puerto Rico, and in Honolulu, T.H. (C. B. H.)

**Reconstruction Planning.** The end of World War II, the discovery and use of atomic force and the establishment of the United Nations organization to maintain international peace and security were the outstanding developments in a year of climax and sudden change. In the midst of war, the nations of the world began in 1945 to put into operation the reconstruction measures that had been planned during active hostilities.

The closing stages of the European war led to two important meetings of the leaders of Great Britain, Russia and the United States to plan the final defeat, terms of surrender and postwar treatment of the axis nations. The Big Three, conferring in Yalta in Feb. 1945, agreed on these matters and further proposed a world security conference of all the United Nations to be held in San Francisco the following April. When Germany surrendered unconditionally in May, its territory was divided into four zones of occupation under the military rule of the three largest Allies and France. The Yalta program of demilitarization of the reich, eradication of the nazi party, trial of war criminals, control of German industry and political and educational institutions was put into force.

Hard upon unexpected changes in the national leadership of the United States and Great Britain, a second conference was held in conquered Berlin in July. Stalin of Russia, Prime Minister Attlee, head of Britain's new Labour government, and President Truman, Roosevelt's successor in the United States, agreed on temporary boundaries for Germany and procedures for the transfer of German nationals from invaded countries. Plans were set in motion for the trial of war criminals by a joint Allied military tribunal, to begin in the fall. Revisions were made in the policies of the Allied control commissions in Rumania, Bulgaria and Hungary and for the treatment of Austria and Spain. Secret arrangements were completed for Russia's entry into the war against Japan. During the conference President Truman proposed for consideration a plan to internationalize European inland waterways as an aid to the future peace of Europe. A few months later a two-year transportation pact was signed in London by ten European nations and the United States, providing for joint control and allocation of civil transport resources on the European continent and for an inland transport organization to work out uniform rates and tariffs for international traffic.

A forerunner of peace was the historic United Nations Conference on International Organization held at San Francisco between April 25 and June 26. With the 50 nations attending the assembly still in the midst of the dislocations of war, a charter for world organization for peace, built on the Dumbarton Oaks proposals of the preceding fall, was agreed on and submitted to the United Nations' governments for ratification.

Between Aug. 8 when the United States approved the charter and Nov. 15 when Venezuela ratified it, 43 countries formally deposited instruments of ratification of the charter of the United Nations. Six additional countries had taken steps toward approval, making nearly 50 nations which had joined forces by the end of the year in bringing the U.N.O. into being. The first general assembly meeting was scheduled to be held in London in Jan. 1946, and the United States had been chosen as the permanent seat of the new world organization.

The shock of atomic bomb explosions in Japan in August began a new and fearful era in human relations. The new force effectively removed any doubt that international co-operation to

establish and preserve peace among the nations was the only alternative to wholesale destruction. With the sudden end of the Japanese war coming soon after, the peoples of the world were abruptly faced with the immediate need for security and control measures for victors and losers alike. Toward the end of 1945 the leaders of Great Britain, Canada and the United States, as the three powers controlling the secret of the atomic bomb, recommended that a commission be set up under the soon-to-be-established U.N.O. to consider and prepare proposals for the control of atomic energy and for an international exchange of fundamental scientific information for peaceful ends.

Besides the Yalta and Berlin meetings of the Allied heads of state, periodic conferences of the foreign ministers of Russia, Great Britain and the United States were instituted during the year. The first meeting, held in London in September, ended in a stalemate over the fundamental issue of whether or not the peace should be made by the three largest powers to the exclusion of the other United Nations. In December, when the second conference of the council of foreign ministers was held in Moscow, this issue was clarified by the underlying thesis of the agreements that all the United Nations had fought in a common war and that all should participate in the making of peace and its enforcement. The ministers agreed on a wide range of procedures for preparation of peace treaties with Italy, Rumania, Bulgaria, Hungary and Finland; for Allied supervision of Japan and other far eastern countries; and for the control of atomic force through a proposed atomic commission consisting of the members of the U.N.O. security council and Canada. The success of this proposed machinery for order and future security would depend largely on how closely the large powers could bring their foreign policies into harmony.

The war's end brought severe economic dislocation in its wake. Private and governmental agencies were at work in Europe and Asia providing food, shelter and health care. The United Nations Relief and Rehabilitation administration was the first international organization to function in the postwar period, administering relief for devastated areas of Poland, Greece, Italy and other southeastern European countries. Plans were in progress to extend U.N.R.R.A. funds to alleviate conditions in China, Korea, Formosa, Austria and battle-torn areas of Russia.

Widespread operations were begun to rehabilitate industrial processes, stabilize currencies and revive world trade. The Bretton Woods Monetary pact went into effect in December, signed by all of the larger powers except Russia. By the end of the year the United States had made preliminary arrangements for substantial loans to Great Britain, France and a number of other countries needing financial priming to rebuild their economies. Great Britain and the United States agreed to consider revisions in their trade policies in preparation for a world trade conference to be called in 1946.

Meanwhile, political upheavals were taking place in Europe and Asia. The trend of European elections during the year was toward socialism and nationalization of industry. In the far east, China was attempting to end civil conflict and Japan, under Allied control, was in the process of abolishing its state religion, educational system and traditional belief in the divinity of the emperor and Japan's ruling destiny. The first steps in rebuilding peacetime living conditions were being taken all over the world. **Reconversion:** see BUSINESS REVIEW; LAW; WAR PRODUCTION, U.S.

**Red Cross.** **United States.**—In 1945 the American Red Cross reached the peak of war activities and at this strategic point could view its accumulated strength in volunteer service, in trained personnel and in financial support, with all of which it had met its wartime obligations and maintained its normal domestic work. It could divert this strength to immediate postwar needs and to peacetime expansion.

During the war the American Red Cross used more than \$250,000,000 and 80% of its personnel in its service to the armed forces. On June 30, 1945, there were 9,400 workers overseas taking Red Cross services wherever U.S. servicemen were on duty. Three months later 9,177 were continuing those services to the armies of occupation. On June 30 there were 820 clubs and rest homes and 500 clubmobiles and other mobile units overseas, and on Nov. 1, 648 clubs and rest homes and 223 mobile units. Of these, 107 clubs were in the Pacific and 8 in Japan. On June 30 there were 9,300 workers on the home front, which number was increased to 10,194 within three months to meet needs arising from demobilization. Of the 138 headquarters buildings constructed by the Red Cross in the United States during the war, only 24 had been closed by the end of November. Through the Camp and Hospital council, a volunteer group organized in 1941, communities sent 25,000,000 articles to army and navy installations, a program later extended to veterans' hospitals. During the war Red Cross camp, hospital and liaison workers aided 12,000,000 servicemen or their families overseas or in the United States, and 8,223,000 were assisted by Red Cross home service workers who also handled 6,298,000 communications for servicemen, ex-servicemen and civilians. Loans and grants to servicemen and ex-servicemen totalled \$60,000,000.

The Red Cross certified 104,400 nurses to the military during the war.

The American Red Cross prepared 27,000,000 food packages for prisoners of war and handled 110,000 communications for them. Aid to prisoners of war was made possible through the International Red Cross committee in Geneva, acting under provisions established by the Geneva convention of 1929.

Foreign war relief sent abroad from the beginning of the war to June 30, 1945, totalled more than \$148,000,000. The relief supplies were made up of Red Cross supplies and those bought with funds allocated by congress and resources from other agencies and governments. Red Cross volunteer workers produced more than 31,000,000 garments for foreign war relief in the war period.

The Red Cross blood donor service, inaugurated in Feb. 1941, at the request of the army and navy, completed its mission Sept. 1945, during which time it had procured more than 13,000,000 pints of blood from volunteer blood donors. In 1945 the American Red Cross extended its blood donor recruitment activities by authorizing its chapters to assist in civilian programs under certain conditions.

During the year ending June 30, 1945, Red Cross workers assisted 400,000 former servicemen applying for government benefits. This field of service was increasing. In one typical month, Oct. 1945, trained workers of the Red Cross claims service handled 86,894 cases in the Veterans' administration, which was an increase of 143% over those of Oct. 1944. Another service to veterans, which had been continuous from 1917 and which promised to increase, was the Red Cross home service. During the war home service workers in the chapters assisted 898,000 ex-servicemen and their families, and in the year ending June 30, 1945, assisted 364,448.

The contribution of work (893,808,352 hours during the war

period) of the 3,000,000 women enrolled in Red Cross volunteer special services involved preparation through special training courses. Volunteer workers of the American Red Cross represented one of the organization's greatest sources of wartime help, and one of its strongest assets for postwar programs. Certificates given 1941-45 included: 14,438 in home service, increasingly needed in service to veterans; 55,556 for hospital and recreation corps, increasingly needed in hospitals in the United States; 194,994 to nurse's aides, indispensable during the war and of continuing importance in military and civilian hospitals, as were the 9,003 dietitian's aides whose corps was organized in 1943. These with the 151,027 trained for canteen work, 42,695 for motor corps and 89,672 as staff assistants formed an important part of the Red Cross educational activities.

Of great value during the shortage of nurses and doctors were the 1,421,163 persons who completed courses in home nursing, furthering the Red Cross objective of a Red Cross home nursing certificate in every home. Nutrition courses were completed by 693,557 persons.

Special effort toward conservation of human life was the addition during the war of 32,944 persons who successfully completed courses in accident prevention, 7,507,958 in first aid and 1,227,293 in water safety. In 1945 a convalescent swimming program for war casualties applicable to a wide range of physical and mental disabilities was initiated and was expected to have long-range peacetime use.

The Junior Red Cross, with a 1944-45 membership of 19,905,400, produced 35,000,000 comfort and recreational articles for the armed forces during the war, and for foreign war relief up to July 1, 1945, expended from its National Children's fund \$665,000 which was used mainly for medical and school supplies. It also sent more than 1,000,000 gift boxes to contemporaries overseas.

In the year ending June 30, 1945, the Red Cross gave relief in 260 disasters in the United States, giving assistance to 242,000 persons.

The president of the United States is president of the American Red Cross. The active head, Basil O'Connor, is chairman of the central committee, composed of 18 members, 6 appointed by the president to represent the United States government, 6 elected by the Red Cross board of incorporators, and 6 by the delegates of chapters. (H. B.M.)

**The World.**—The first meeting after 1938 of the board of governors of the League of Red Cross societies—the federation of the 63 national Red Cross and Red Crescent societies—was held in Paris in Nov. 1945. Representatives of 41 societies were present. Basil O'Connor, chairman of the American Red Cross, was elected chairman of the league, filling the vacancy caused by the death in 1944 of Norman H. Davis.

The Red Cross societies and their international organizations concentrated on the alleviation of war-caused suffering during 1945 in the operation of services for the sick and wounded, for prisoners of war and for the civilian populations in war-devastated areas. Services to the armed forces included the assignment of medical and hospital personnel to aid the medical departments of the various belligerents, the operation of rest centres and canteens for the wounded and able-bodied, recreation programs in camps, hospitals and leave centres and communication facilities between the members of the forces and their families.

After the armistice in Europe and the far east special attention was given to services for returning prisoners of war and other repatriates, to aid to the destitute and sick of the civilian population, and to the uniting of war-separated families. The rejuvenated societies in the liberated European countries expanded their relief programs with the help of supplies and personnel principally from the American, British and Canadian Red

A 4-YEAR-OLD orphan girl in Manila, P.I., with one of the 1,000 gift packages sent by the U.S. Junior Red Cross during 1945

Cross societies. The Union of Red Cross and Red Crescent Societies of the U.S.S.R. expanded its public health activities especially in the devastated areas of western Russia. The societies of the Baltic states were incorporated into the Russian national organization.

Following the collapse of Germany the German Red Cross society was declared nonexistent by the occupying authorities, but many of the local units of the organization were permitted to continue to operate. The Japanese Red Cross continued as a national organization after the surrender of Japan, but with a restricted program.

The International Red Cross committee under the presidency of Professor Max Huber of Switzerland began the task of re-adjusting its vast wartime organization, although the committee's delegations continued to be active in behalf of prisoners still awaiting repatriation. (See also PRISONERS OF WAR AND DISPLACED PERSONS.)

Late in 1945 the Nobel Peace prize for 1944 was awarded to the International Red Cross committee in recognition of its services to prisoners of war. (P. E. R.)

**Refugees.** As the Allied armies moved swiftly eastward in the winter and spring of 1945 to meet the soviet armies in Germany, civilians displaced by the war in liberated areas of Europe returned to their homes in devastated cities and to farms in rural areas pitted by the craters of bombs and honeycombed by unexploded mines which were still to take their toll of lives as an aftermath of war. The advance of the armies in the west and the east released hundreds of thousands

DISPLACED GERMANS, fleeing before Russian advances in Czechoslovakia, travelled in long caravan trains toward Silesia during 1945

of United Nations slave labourers, recruited in the earlier years of the war by Germany to satisfy its ever-increasing need for manpower. Victims of German brutality in nazi concentration camps were also released, starved, ill-clothed and showing visible signs of the tortures to which they were subjected. The malnutrition of thousands was so far advanced that medical aid could not save them after liberation. The millions of displaced persons released from German control as the nazi armies disintegrated became a serious problem for the military, preoccupied with the problems of rapid advance and the total liquidation of the nazi forces. Lines of communication were clogged and shelter, provisions and means of transport to the rear were unavailable. The displaced trekked homeward living on the land.

Estimates of the numbers displaced from their homes at the end of the war in Europe are only approximate. In 1944 Germany had 8,500,000 United Nations forced labourers within the areas that were incorporated into the German reich. These were exclusive of the prisoners of war whose status was maintained as such during the war. Many prisoners of war were forced to join the ranks of labourers contrary to the provisions of the Geneva convention. German figures gave the number of labourers employed in occupied countries as an additional 4,000,000. This figure was never verified by other sources.

The displacements of the German population increased substantially in 1945; earlier displacements had resulted from the bombing of German cities and the dispersal of German industries. In the last months of the war there was a general movement of Germans westward from Poland and East Prussia which extended as far as Denmark and southwestward toward Switzerland and Austria. Relief workers estimated the total displacement of Germans and United Nations nationals in Ger-

many at the end of the war as between 21,000,000-30,000,000.

In the far east the displacement of civilian populations was comparable in numbers with that in Europe. Although no reliable estimate of the westward movement of those uprooted by the war in China became available, a total in excess of 20,000,000 was considered conservative. The China Overseas commission charged with the return of Chinese to prewar overseas domiciles reported in Dec. 1945 that 184,000 overseas Chinese had registered with the commission, of whom 120,000 were located in the coastal region of China south of Shanghai awaiting repatriation. The commission also reported a monthly flow of 1,000 Chinese from Japan mostly to northern China and Shanghai and that 31,000 had arrived in China by Dec. 1945.

The displacement of all nationalities in Japan was estimated at approximately 12,000,000. In addition to the Japanese displaced within the country by the war this figure included more than 2,000,000 Korean labourers and their families, 38,000 Formosan Chinese labourers and unrecorded numbers of Chinese labourers. Included also were Japanese nationals whose return to the homeland from Manchuria, China, Formosa and the Japanese Mandated Islands was already started before the end of the war.

There was extensive movement of Japanese civilians abroad prior to and during the war. Some 2,000,000 were in China at the end of the war, slightly larger numbers in Manchuria, more than 800,000 in Korea, 200,000 in Australia and New Guinea, and more than 500,000 in southeast Asia. The total of Japanese abroad was estimated to exceed 6,500,000 although not all of these could fairly be considered as war displaced. However, the outcome of the war raised difficult problems of their return to Japan. Exclusive of military forces more than 300,000 Japanese had been returned to Japan at the end of the year mostly from Korea, the Philippines and China.

The outstanding development during the year was the rapid

repatriation from central Europe of more than 5,500,000 United Nations displaced persons by the military forces occupying Germany. Considering the almost complete destruction of railroads and transport equipment that took place in Europe this accomplishment by the fall of 1945 was without parallel in the movement of populations. These large numbers were moved by truck, by plane and on foot. The desire of the displaced persons to reach home was matched by the military necessity to accomplish repatriation in order to restore peace and order in Germany at the earliest possible time. More than 2,000,000 soviet nationals were moved eastward and approximately 2,000,000 French nationals returned to France. Slightly under 500,000 Belgians and a similar number of Netherlands nationals were returned to their countries by late summer. Approximately 600,000 Italians were returned to Italy in the fall months of the year during which other hundreds of thousands of Balkan nationals were repatriated.

The approach of cold weather in the fall of 1945 retarded the pace of repatriation from central Europe. Approximately 800,000 Polish nationals remained in displaced persons centres in Germany during the winter. Other groups numbering 200,000–300,000, including Baltic nationals and Yugoslavs, resisted repatriation and posed a problem of settlement elsewhere.

Included in this group were some 100,000 Jewish survivors of the concentration camps of Germany and eastern Europe for whom immigration to Palestine was advanced as a matter of immediate urgency. This number was increased toward the end of the year by a movement of Jewish refugees from Poland into Germany. The United States and British governments established the Anglo-American Committee of Inquiry in Dec. 1945 to study and make recommendations on the settlement of Jewish refugees in Palestine, and the possibilities of settlement for such refugees in countries outside Europe.

The United Nations Relief and Rehabilitation administration first assumed the administration of refugee camps in the middle east from which Yugoslavs and Greeks were repatriated to their home countries. During the year the military turned over to U.N.R.R.A. the operation of displaced persons centres in Italy, Germany and Austria and representatives of the organization were sent to the far east to explore the needs of persons displaced beyond the borders of their own countries in that area.

At the third meeting of the council of U.N.R.R.A. in London in Aug. 1945 it was envisaged that U.N.R.R.A. relief operations in Europe would be concluded by the end of 1946. The Intergovernmental Committee on Refugees which had assumed responsibility for the relief of refugees in western European and neutral countries, in which U.N.R.R.A. was not operating, was preparing to deal with the long-term problem of nonrepatriable refugees in Europe and the far east. On the initiative of the British government the problem of refugees was placed on the agenda of the assembly of the United Nations convening in Jan. 1946. This action gave testimony to the importance of the problem of refugees resulting from World War II, although the size and character of the problem as compared with that resulting from World War I remained to be clarified in many aspects. (See also CHILD WELFARE; JEWISH RELIGIOUS LIFE; PRISONERS OF WAR AND DISPLACED PERSONS; WORLD WAR II.)

**Relief.** Relief, as a national problem, remained at a minimal level of importance during the continuance of World War II in 1945. Able-bodied men and women in all English-speaking countries found ample opportunity to work, so the category of general relief remained practically constant. The special categories, old age, dependent children and blind, showed the effect of this stabilizing influence even more strikingly as the slightly downward trend of 1944 continued through to Sept. 1945. With the end of the war, however, the trend was reversed and while not particularly marked in the statistics of relief, by the end of October signs were not wanting that in the United States and Canada, applications for assistance would rise dramatically before the winter of 1945–46 was over. A spot survey taken in Nov. 1945 of about 20 communities in the U.S. showed aged workers were losing their jobs to workers from war plants and to returned veterans; Negroes, who were drawn into industries during the period of manpower shortage, were being dismissed and non-Negroes employed in their stead. Applications for unemployment compensation promptly reflected the cutbacks in war work, jumping from an average of less than 400,000 a week up to Aug. 15 to 1,700,000 in October.

Two factors in the U.S. were cited as aggravating the condition of the unemployed, able-bodied man. Congress' refusal to underwrite unemployment compensation for a minimum of 26 weeks at \$25 minimum benefit per week left the unemployed worker at the mercy of state laws, some of which were quite liberal, but others were restrictive. The other factor was the weakness of the federal policy in welfare both in Canada and the U.S., the federal laws making no provision of relief for the able-bodied unemployed. And in most states and provinces, especially those dominated by a legislature drawn largely from rural areas in which unemployment of the able-bodied was practically unknown, no provision of relief was made for this group.

The Wagner-Murray-Dingle bill that was intended to remedy this defect in federal provision in the U.S. made no progress whatever in congress during the year, and a new and much more conservative measure, the Green bill introduced in 1945 was also stalled. The provision requiring residence in a state of from one to five years before becoming eligible for relief would be eliminated by the passage of either bill.

During 1945 Canada put into effect its plan of children's allowance for families of low income. Grants are made on the double basis of income and number and ages of children per family; families whose income is \$1,200 a year or less receive full benefits, and families with an income between \$1,200 and \$3,000 receive grants on a sliding scale. The rate per child is fixed at \$5 per child per month for children under five, increasing by \$1 per month each three years of age to \$8 per month per child for age 13 or more. However, after the fourth child, the rate is reduced by \$1 a month for the fifth, \$2 a month for the sixth and seventh and \$3 a month for the eighth and additional children. Thus a family of three children, aged 4, 9, 12 would receive \$18 a month, whereas a family of eight children, aged 2, 4, 6, 7, 8, 10, 11, 12 would receive but \$40 a month. It was estimated that the plan cost the dominion about \$200,000,000 in 1945, some of which would be offset by the increased purchasing power of the lower income group. Canada thus joined all the European countries, New Zealand and Australia in giving recognition to the nonconformity between wages in low income families and a minimum standard of living. A

new department, health and welfare, was created at the time the act was passed, and the administration of family allowances placed in charge of a deputy minister of welfare. Actual operation was decentralized by setting up an office in each of the nine provincial capitals. In this way the co-operation of provincial departments of welfare and private child welfare agencies was secured.

Contributions to war chests in Canada and the U.S. averaged only about 95% of 1944, whereas the American Red Cross which asked for the same amount as in 1944, namely \$200,000,000, received \$231,600,000 as against \$216,434,000 in 1944, or an increase of about 7.5%.

The new labour government of England, busied with pressing problems in international relations, had in 1945 proposed no new plans in the social services. (See also CHILD WELFARE; MUNICIPAL GOVERNMENT; SOCIAL SECURITY.) (F. J. B.)

**Relief, War:** see WAR RELIEF, U.S.

**Relief and Rehabilitation Administration, United Nations:** see UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION.

**Religion.** The year 1945 was a transitional period for religion. The churches were endeavouring to carry over the unprecedented energies and special devotions of the World War II period into the more normal work of the church as well as to capitalize on the exceptionally generous financial support which the war period had developed.

Virtually all major U.S. denominations attempted the raising of vast funds for rehabilitation and relief. Much of the money was to go to the promotion of the normal work of the church at a higher level. But many millions were to be devoted to the restoration and repair of church mission properties damaged by war, both in Europe and the Orient; and other millions to the relief of suffering people in war-devastated countries.

The most inclusive efforts, like that of the Methodist Church, undertook to raise to a higher level "all phases of the church's life." A \$25,000,000 Methodist fund for that purpose was over-subscribed by \$2,000,000.

An enormous demand for new church construction accumulated during the war years and a large number of new church buildings was expected as soon as materials would be available. On the other hand, a very wide sense prevailed that what was most needed was a recovery of the inner life of the church.

A MAKESHIFT ALTAR of fuel drums served these coast guardsmen and soldiers during a Catholic mass on le Jima in 1945

Besides their vast money-raising campaigns nearly all major denominations were putting great stress on evangelism. In order that these renewed evangelistic methods should not be transitory, the Methodist Church was promoting a permanent "new life" movement in an attempt to overmatch the institutional adjustments of the church by an enlargement and deepening of its spiritual power.

The war produced an extreme shortage of ministers. A new commission of the Federal Council of Churches was set up to recruit and prepare for the ministry the 3,800 men in the army services whose names had been secured from chaplains and others.

With the end of wartime pressure a considerable renewal of the extensive pacifist tendency in the churches was voiced. The most representative agencies, including the Federal Council of Churches, the National Council of Church Women, and the Methodist Commission on World Peace went on record in opposition to proposed legislation for peacetime conscription.

Undoubtedly the most significant specific influence of religion upon world affairs was the part which was played in the making of the revised charter of the United Nations organization. A representative conference held in Cleveland in February recommended that the churches support the Dumbarton Oaks proposals and urged nine improvements, several of which were directly incorporated in the charter of the United Nations, particularly as a result of the influence of John Foster Dulles, chairman of the Federal Council commission, and special advisor to the U.S. state department in the San Francisco conference.

The movements toward co-operation and unity in the field of religion in 1945 are treated in another article (CHRISTIAN UNITY). On the side of conflict and tensions, theological divergencies of previous years continued with special modifications reflecting war conditions. The deepest divergencies related to the proper relations of the church to the world. The experiences of the war and especially the imperative necessity of resistance to oppression and tyranny by churches under persecution were on the side of an "activist" attitude which assumed a large measure of responsibility by the church for human life and the organization of society. At the close of World War II a contrary attitude was reasserting itself in numerous quarters to the effect that politics and social reform were not the business of the church and should be left to the state and the voluntary action of citizens. Theological thinking was somewhat shocked but at the same time influenced in a measure by a form of apocalypticism in vogue in Europe which held that the world's disasters were an evidence of special divine judgment and that the designs of man were essentially beyond his control through any moral effort and that the end of the human order may be imminent. Against such a background the discovery of the atomic bomb was interpreted destructively as a symbol of global catastrophe and a period of ever increasing misery and evil for the human race.

The spread through war migration of populations of fundamentalistic tendencies greatly accentuated the activities of the fundamentalistic churches in areas in which they had not previously been strong, and started new competition between them and the more moderate churches for the leadership of U.S. youth. A spectacular and successful nation-wide campaign called "Youth for Christ" brought 65,000 young people to Soldier field, Chicago, on Memorial day and was followed by similar gatherings in 300 cities.

Protestant-Catholic tensions also flared into verbal conflict, apparently with new frequency. They concerned chiefly the Protestant missions in allegedly Catholic countries, especially Latin America, and the political and social influence of the two

EASTER SERVICES at sea for members of the U.S. armed forces in 1945. The men had somewhere secured Easter lilies which can be seen upon the portable altar

groups in the U.S.

The radio and other vehicles of public communication during the year voiced numerous expressions of religious faith by laymen, including public officials and leaders of thought. A mood of humility and expectancy toward religion as a solution of the world's problems and even of personal affirmation and commitment to religion was repeatedly affirmed. Such nonecclesiastical versions of religion furnish an essential part of the story of religion during 1945.

Among specific events was the announcement of the appointment by the Pope of four additional U.S. cardinals, and the greatly decreased influence of the Italian element in the College of Cardinals was of capital interest.

Compilations of church membership statistics by the *Year Book of American Churches* showed larger total membership in the U.S. in 1945 than ever before, and an increased rate of recent growth. (See also CHRISTIAN UNITY; CHURCH MEMBERSHIP; also under separate denominations.) (H. P. D.)

**Republican Party.** The Republican party in the United States used the off-year of 1945 to strengthen its national organization and to formulate the basic principles upon which it was to try to regain control of congress in 1946 and of the White House in 1948.

At a meeting in Indianapolis, Ind., on Jan. 22, 1945, the Republican national committee voted "to place the national Republican organization on a full-time, all-year-round basis and to institute an intensive campaign, in co-operation with the Senate and Congressional Campaign Committees, to win Republican control of Senate and House in 1946."

The committee also adopted a recommendation that "the Party, in addition to exercising its duty of criticising and analyzing the actions of the Administration, should offer to the country at the commencement of the 1946 campaign, its own affirmative and constructive program to build a happy and more prosperous America."

National Chairman Herbert E. Brownell, Jr., immediately named a planning committee to execute this program, and its proposal for reorganizing national headquarters at Washington, D.C., was adopted by the executive committee of the Republican national committee, as well as by house-senate leaders at a

meeting in Washington on March 26-27, 1945. Most of the changes were put into effect by midsummer.

The planning committee's report called for the establishment of 11 departments at national headquarters, including several new activities, and for expansion of existing offices.

John A. Danaher, former U.S. senator from Connecticut, was named congressional aide, a new post, to serve as liaison between Republican members of congress and the Republican national committee and its state branches.

Hugh R. Wilson, former ambassador to Germany and assistant secretary of state, was selected as advisor on foreign affairs. He was the party's official spectator at the San Francisco conference which framed the United Nations charter. William C. Murphy, Jr., for 20 years Washington newspaper correspondent and former president of the National Press club, was given the post of publicity director.

Other departments established or expanded in 1945 included radio, research, labour, veterans, women's, young Republican, finance, speakers. By the end of the year, the minority headquarters and field forces were engaged in a greater variety of political activity than was customary in an off-year.

Meanwhile, house-senate leaders named a policy committee to frame a platform of aims and principles to serve as a guide for party workers and candidates. The house and senate chairmen, respectively, were Rep. Charles A. Halleck of Indiana and Sen. Robert A. Taft of Ohio.

Although their platform was held by some party chieftains to be "too vague" or "too conservative," it was endorsed by the Republican national committee at Chicago, Ill., on Dec. 8, 1945, with the proviso that it be "further developed and augmented by the ideas, thoughts and aspirations of the Republican Party throughout the United States."

The preamble reflects the general tone of the document:

Republican members of Congress, supplementing the 1944 Republican platform, present this statement of our aims and purposes:

Today's major domestic issue is between radicalism, regimentation, all-powerful bureaucracy, class exploitation, deficit spending and machine politics, as against our belief in American freedom for the individual under just laws fairly administered for all, preservation of local home rule, efficiency and pay-as-you-go economy in government, and the protection of the American way of life against either fascist or communist trends.

We believe that genuine social and economic progress can be achieved only on those American constitutional principles and it is our purpose to give our citizens this clean-cut choice.

In foreign affairs we shall continue to strive to avoid partisanship. But we shall also seek to avoid secrecy, inefficiency and drift. . . . We consider that the maintenance of a strong, solvent, free America is the basis of our greatest contribution to world order.

Chairman Brownell reported at the December meeting that he had travelled 42,000 mi. in 1945, delivering speeches and conferring with groups in the field. He said that for the 1946 congressional campaign, he had concentrated on 134 so-called marginal house districts in 28 states, where the Republican candidate received from 40% to 55% of the vote in the regular 1944 contests. The G.O.P. holds 51 of these debatable seats. Outside the "Solid South," he said, there would be 30 senate places contested for by the Republicans in the fall of 1946.

Sen. Wallace H. White, Jr., of Maine was elevated from the post of acting floor chief to that of minority leader of the senate. Sen. Arthur H. Vandenberg of Michigan remained as head of the Republican conference, and Sen. Taft as chairman of the Steering committee. Sen. Kenneth Wherry of Nebraska was named assistant floor leader.

Rep. Joseph W. Martin, Jr., of Massachusetts continued as minority leader of the house, and Rep. Leslie C. Arends of Illinois was appointed assistant. He succeeded Harry F. Englebright of California. Mr. Halleck remained as chairman of the Congressional Campaign committee, and Sen. John G. Townsend, Jr., of Delaware as head of the Senatorial Campaign committee. (See also UNITED STATES.) (R. Tu.)

**Reuther, Walter Philip** (1907- ), U.S. labour leader, was born Sept. 1 in Wheeling, W.Va., the son of a trade unionist. He studied at Wayne university, Detroit, Mich., for three years, and then with his brother, Victor, toured (1933-35) France, Germany, Italy, the soviet union, China and Japan to study labour conditions. On his return home Reuther worked in small tool and die shops, joined the United Automobile Workers and organized and became president of U.A.W. Local 174, which embraced employees of a number of small plants. He first gained prominence for his organization of the successful sit-down strikes in the Detroit automobile and related industries (1936-37). He then became director of the U.A.W.'s General Motors department (1939) and was named one of the union's two vice-presidents (1942). Reuther, who had kept strikes and stoppages at the G.M. plants to a minimum during World War II, launched a campaign after Japan's surrender to obtain higher wage levels. He demanded (Sept. 14) a 30% raise for the U.A.W. in General Motors plants, contending that the corporation could grant this raise, even reduce motor car prices substantially and still make larger profits. The corporation's rejection of these demands was described by Reuther (Oct. 22) as tantamount to a "sit-down strike" against the government policy of increasing wages, and on Nov. 21 about 180,000 U.A.W. union members in General Motors plants throughout the United States went on strike. Reuther's proposal that General Motors open its books to determine the company's ability to pay the requested 30% increase was taken up by Pres. Truman's fact-finding board. The company rejected this proposal, explaining, Dec. 28, that compliance would lead to "the death of the American system of competitive enterprise." The same day Reuther averred that General Motors had turned down an effort "at a fair and equitable settlement" and said his union would be prepared "to stay on the picket line for the duration of this home front war."

**Rhineland.** A province of the German land of Prussia. Area 9,462 sq.mi., pop. 8,453,063 (1933). Together with the neighbouring province of Westphalia (area 7,804 sq.mi. with a pop. of 5,205,705) the Rhineland forms the most important industrial section of Germany and the indispensable economic basis of German military power. Some of the largest cities in the Rhineland are: Cologne (768,426 in 1939), Essen (659,871), Duesseldorf (539,905), Dortmund (537,000), Duisburg (431,256), Wuppertal (398,099), Gelsenkirchen (313,003), Bochum (303,288).

The chief part of the Westphalian basin and the hub of the German iron and steel industry is the valley of the Ruhr, a right bank tributary of the Rhine.

The Rhineland and Westphalia became part of Prussia in 1815. After World War I, to insure fulfilment of the peace treaty, Allied troops occupied the left bank and the bridgeheads of the Rhine. The occupied territory was to be evacuated in three stages in accordance with the fulfilment of the treaty; the right of reoccupation was reserved in the event of default. Originally the occupation was supposed to end in 1935; in reality the third and final zone of occupation was evacuated on

June 30, 1930. German default in reparation payments led to an occupation by the French and Belgians of the Ruhr in 1923. In World War II the Rhineland and Westphalia were heavily bombed. In 1945 their territory fell mostly into the British zone of occupation.

To avoid the renewed danger of German aggression the French government in 1945 insisted repeatedly, to the governments of the United States, Britain and Russia, upon the creation of a special regime for the Rhineland and Westphalia. By such a regime not only the security and peace of western Europe was to be assured but also the industrial resources of the territory could become important factors in the economic reconstruction and integration of western Europe. The French considered definite arrangements for the western borders of Germany the more urgent because the eastern borders of Germany had been settled at the Berlin conference. (H. Ko.)

**Rhode Island.** A north Atlantic state of the United States, in New England; one of the 13 original states; popularly known as "Little Rhody." Area, 1,214 sq.mi. (smallest of the United States), including 156 sq.mi. of water; pop. (1940) 713,346. The urban population was 653,383 (91.6%). On July 1, 1944, the bureau of the census estimated the civilian population of the state at 778,972. Capital, Providence (253,504). Other cities include Pawtucket (75,797); Woonsocket (49,303); Cranston (47,085); Newport (30,532); Warwick (28,757); Central Falls (25,248).

**History.**—At the regular 1945 session of the legislature, leading measures passed included the following: an act giving seniority employment benefits to honourably discharged veterans of World War II; act providing for the establishment of veterans' retraining and re-employment committees and for the establishment of veterans' information service centres; act providing for the creation of a commission on co-ordination and execution of postwar programs and defining its powers and duties; act to provide for incorporation of nonprofit medical service corporations and defining their powers; act providing for mandatory retirement of members of the state police force after 20 years' service; act imposing an additional and emergency tax on the gross earnings of electrical corporations; act raising the tax on parimutuel wagers from 3½% of total amount of money wagered at racing events to 4%; act providing for rebates of taxes paid on gasoline used by commercial fishermen, farmers and industry for nonhighway purposes; acts authorizing the city of Providence to set up a finance department, to refund \$5,000,000 of debt in the next five years and to issue \$1,250,000 in bonds for modernization of the fire department; act granting annual appropriation of \$19,360,843.35 for support of the state government for fiscal year beginning July 1, 1945; act making available an additional \$1,000,000 for the relief of cities and towns in the state; act authorizing the city of Newport to issue bonds in amount of \$533,000 for hurricane rehabilitation purposes and for the purchase of equipment for the health, police, fire and public works departments; act granting a deficiency appropriation of \$613,500 for the support of state agencies for the remainder of the current fiscal year ending June 30, 1945.

The chief executive officers of the state elected in Nov. 1944 for 1945-46 were J. Howard McGrath, governor; John O. Pastore, lieutenant governor; Armand H. Cote, secretary of state; John H. Nolan, attorney general; Russell H. Handy, general treasurer. J. Howard McGrath, governor, resigned Oct. 6, 1945, to accept appointment as solicitor general of the United States and John O. Pastore became governor of the state.

**Education.**—During 1944-45 there were in the public elementary schools 57,185 pupils and 2,000 teachers; in junior high schools 19,292 pupils and 900 teachers; in senior high

schools (three years) 14,041 pupils and 693 teachers; in senior high schools (four years and vocational) 4,529 pupils and 210 teachers. Pupils attending private schools were: elementary 24,213; junior high 4,763; senior high (three years) 548; senior high (four years) 5,943. Total number of teachers in private day schools was 1,310. The director of education in 1945 was James F. Rockett.

JOHN O. PASTORE, Democrat, was sworn in as governor of Rhode Island in Oct. 1945 to succeed J. Howard McGrath, who had resigned to become solicitor general of the U.S.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The total number of persons

receiving relief in all categories (excluding incapacitated fathers) in Nov. 1945 was 18,882 or about 2.63% of the state's 1940 population. The total amounts paid out during the year Dec. 1, 1944–Nov. 30, 1945, were as follows: general public assistance \$915,211; soldiers' relief \$79,122; old-age assistance \$2,929,195; aid to dependent children \$1,016,757; aid to the blind \$37,741. In unemployment compensation, the net amount of benefits paid during 1945 was \$5,172,087.04 to 36,080 different individuals. The amount paid into the fund during 1945 was \$14,201,657.09. There were 736 inmates in correctional institutions on Nov. 30, 1945, and 4,893 patients in charitable institutions and institutions for defectives, the number in the latter being 3,825.

**Communications.**—The total mileage of highways on Dec. 1, 1945 (excluding city streets) was 2,680.86, of which the state highway system comprised 810.93 mi. At the close of the year 1944 railroads were operating 185.8 mi. of road and electric railways 82 mi. Water-borne commerce of the state for 1944 was 2,948,334 tons, of which 112,012 tons were foreign commerce (imports 105,684 tons; exports 6,328 tons) and 2,836,322 tons were coastwise (receipts 2,584,311 tons; shipments 252,011 tons). Airways totalled 120 mi.; there were one airport and three landing fields. In Dec. 1944 there were 158,201 telephones in service and in Dec. 1945, 164,707 in service.

**Banking and Finance.**—There were 35 banking institutions in 1945. Resources of 24 banks under state supervision totalled \$747,680,210.22, and of 11 banks under federal supervision, \$292,242,176.70. Savings deposits (exclusive of club accounts) in savings banks and trust companies (the 24 state banks) amounted to \$457,225,787.70 on June 30, 1945. In addition, six loan and investment companies had resources of \$3,102,166.54; eight building and loan associations \$62,655,464.99; 26 credit unions \$8,991,885.79.

At the close of the fiscal year, June 30, 1945, total state receipts were \$21,916,048.73; expenditures and encumbrances \$21,624,140.67; surplus from operation \$4,038,446.79. The state gross debt was \$25,327,000.00; net debt \$21,357,321.42.

**Agriculture.**—The total estimated value of agricultural production was \$18,700,000 in 1945 and actual value was \$18,613,000 in 1944. Total acreage of principal crops harvested was 51,000 in 1945. Cash estimated income from crops in 1945 was \$5,200,000, and actual income was \$5,308,000 in 1944; from livestock and livestock products \$11,300,000 in 1945 and \$11,110,000 in 1944; from government payments \$900,000 in 1945

and \$901,000 in 1944; total cash income \$17,400,000 in 1945 and \$17,313,000 in 1944.

Table I.—Leading Agricultural Products of Rhode Island, 1945 and 1944

Crop	1945	1944
Corn, grain and silage and forage (grain equivalent) bu. . .	378,000	288,000
Hay (fame), tons . . . . .	48,000	37,000
Alfalfa, tons . . . . .	2,000	2,000
Potatoes, bu. . . . .	1,276,000	1,235,000
Oats, bu. . . . .	32,000	30,000

Peaches, bu. . . . .	9,000	20,000
Pears, bu. . . . .	3,000	7,000
Grapes, tons . . . . .	50	200

Table II.—Livestock and Livestock Products of Rhode Island, 1945 and 1944

Item	1945	1944
Cows and heifers, 2 years and over . . . . .	23,000	23,000
All cattle and calves . . . . .	30,000	30,000
Hens, 3 months and over . . . . .	546,000	594,000
Sheep and lambs . . . . .	2,000	2,000
Hogs . . . . .	8,000	10,000
Milk produced, lb. . . . .	128,000,000	129,000,000
Eggs produced, doz. . . . .	6,300,000	6,600,000
Chickens raised, no. . . . .	1,004,000	1,002,000
Turkeys raised, no. . . . .	35,000	30,000

**Manufacturing.**—The total estimated value of manufactures was \$516,390,541 for 1939 and \$517,196,193 for 1937. Employment in 1939 totalled 106,269 wage earners and 12,005 salaried personnel.

The number of establishments was 1,460. Wage earners received \$105,406,950 and salaried personnel \$27,940,576. (Figures for 1945 were not obtainable from the bureau of the census.)

Report of the state department of labour for Nov. 1945 showed 102,335 wage earners and weekly pay roll of \$3,676,015 for all manufacturing industries in Rhode Island.

**Mineral Production.**—The value of mineral production in Rhode Island is small, exceeding only that of Delaware and the District of Columbia. Value in 1944 was \$612,000 and in 1943 \$808,000. Stone (\$213,351 in 1944\* and \$410,478 in 1943 and \$351,664 in 1942) and sand and gravel (\$287,112 in 1944 and \$327,750 in 1943) are the principal products. Production of stone reached 19,790 tons in 1944\* and 171,230 tons in 1943 and 191,420 tons in 1942; sand and gravel 352,905 tons in 1944 and 356,043 tons in 1943. (Figures for 1945 were not available.)

(M. C. ML.)

\*Excl. basalt and unclassified stone.

**Rhodesia.** The territory extending from the Transvaal border northward to the boundaries of the Belgian Congo and of Tanganyika Territory. It is bounded on the east by Portuguese East Africa, Nyasaland and the Tanganyika Territory, and on the west by Belgian Congo, Portuguese West Africa and Bechuanaland. Area 440,656 sq.mi.; comprises two territories of the British empire; viz., Southern Rhodesia and Northern Rhodesia. Southern Rhodesia is a self-governing member of the British commonwealth, but supervision over native rights is reserved to the imperial government. Northern Rhodesia remains a dependency of the crown. Certain essential statistics are given in the table on page 642. (See also BRITISH EMPIRE.)

**History.**—The first meeting of the Central African council was held on April 24, 1945, at Salisbury, the second in October. The organization now had standing committees on civil aviation, health, economic problems and African housing. To these the October conference added, among other things, committees on natural resources and trypanosomiasis, with a special committee on migrant labour, and, if approved, an air authority and joint research organizations. A motion for amalgamation in Northern Rhodesia was defeated by 13 votes to 9, but elicited a government guarantee of scope for European enterprise which was upheld by the secretary of state in a cable published in

\*Exchange rate: £1 = 398 cents U.S. in 1945.

September.

In a report on secondary industry in Northern Rhodesia, Dr. W. J. Busschau held out no hope of new development, beyond the possible construction of a wheat mill, a central foundry, a factory for fish dehydration, leather works, some clothing works and a fibre plant. In fact, he considered tourists as a more hopeful economic proposition. The new development adviser, G. F. Clay, recommended the development of native agriculture, at a cost of £500,000 a year, constructed around five focal centres with a well-equipped and qualified technical staff. He also envisaged a marketing and development company on public utility lines. The paramount chief of the Barotse, Yeta III, abdicated at the age of 76 and was succeeded by Imwiko, a son of his half-brother, Lewanika.

In Southern Rhodesia plans were made for the rehabilitation of white ex-soldiers, for 450 of whom £1,500,000 were voted to provide farms on seven-year leaseholds. A new Fairbridge settlement scheme for British children was also set on foot at an old R.A.F. camp at Induna. An Industrial Development corporation was inaugurated with a capital of £1,000,000, and plans for a mass emigration of 500,000 Lancashire cotton workers were seriously considered, partly in connection with new textile factories started at Gwelo. In July there was a report from the native production and trade commission, which recommended various experimental projects in native reserves, such as collective farms and co-operatives, with a central marketing board for all native products.

(H. V. L. S.)

**Ribbentrop, Joachim von** (1893- ), German statesman, was born April 30 at Wesel on the Rhine and was educated at the gymnasium at Metz. In 1910 he went to Canada as an independent merchant. At the outbreak of World War I he returned to Germany, enlisted in a Hussar regiment, advanced to lieutenant colonel and by the end of the war was attached to the war ministry. After the war he returned to private business as a wine merchant. He first became identified with the Nazi party as a worker in 1930. In 1935 Ribbentrop was appointed ambassador-at-large, and from 1936 to 1938 he was ambassador to Great Britain. He became foreign minister, Feb. 4, 1938, and from then on played a prominent role in the diplomatic manoeuvring that co-ordinated with German military operations.

In 1939 he made the deal with Russia that kept peace until Germany was ready to invade. In 1940 he negotiated the three-power pact with Italy and Japan. In the final days of the Hitler regime, Grand Admiral Karl Doenitz ousted Ribbentrop as foreign minister, May 2, 1945.

Captured by British troops in a Hamburg rooming house on June 14, 1945, Ribbentrop was indicted as a war criminal and was one of the principal defendants at the Nuernberg trial that opened Nov. 20.

**Rice.** Another record crop of rice was produced in 1945 in the United States following the record of 1944. The crop was estimated by the U.S. department of agriculture at 70,160,000 bu. compared with 70,237,000 bu. harvested in 1944 and a prewar average of 52,346,000 bu. 1934-43. The acreage was increased about 2.3% in 1945 above 1944 and nearly 50% more than prewar. Yields in 1945 were slightly

more than in 1944 and about the same as prewar. Harvest weather was generally favourable except in Arkansas where rains caused some losses and in Texas where the hurricane passed. The yields in California were reported at 60 bu. per acre, Arkansas 52 bu.; Texas 45 bu.; and Louisiana 39.5 bu. The demand for rice for military and civilian food in the orient was so great that shipments to these areas were taken from the U.S. supply. Civilian consumption in the U.S. was expected to continue about the average of 6.7 lb. per capita of 1944, compared with 5.7 lb. per capita in prewar.

Stocks of rough rice in the U.S. on Jan. 1, 1945, were nearly 31,000,000 bu., but declined to 13,800,000 bu. by April 1, which was the largest supply on that date after 1941. About half of this supply was in California and the rest in the southern rice area.

The world's rice crop was estimated at 6,500,000,000 bu. compared with 6,800,000,000 bu. in 1944 and 7,400,000,000 bu. average 1935-40. North America was the only area showing an increase above the previous year. The smallest crop in Asia and Free China accounted for most of the decline. The Japanese crop was only about 70% of prewar. A small surplus was available in Korea. In Indo-China, Malaya and the South Pacific, war conditions disturbed production seriously but the acreage was well maintained. The crop in India was about the same as in 1944. Africa had a crop about the same as in 1944 but the Australian crop was the smallest after 1932, amounting to only 1,547,000 bu. compared with 3,747,000 in 1944. Most of the crop was available for export as domestic civilian consumption was prohibited after Aug. 1942 in order to make the

U.S. Production of Rice by States, 1945 and 1944

State	1945 bu.	1944 bu.	State	1945 bu.	1944 bu.
Louisiana . . .	23,028,000	21,318,000	Arkansas . . .	14,612,000	14,595,000
Texas . . .	18,000,000	17,248,000	California . . .	14,520,000	15,000,000

cereal available for export. In Chile a record acreage was reported with a crop of 7,862,000 bu. Record exports were available in 1945. The Brazilian rice crop was more than 93,000,000 bu. but the surplus for export was smaller because of a small crop in the main rice surplus areas and also because domestic prices were higher than prices offered by the U.S. and Great Britain for export.

**Rio Muni:** see SPANISH COLONIAL EMPIRE.

**Rivers and Harbours.** The corps of engineers, U.S. army, created by an act of congress approved March 16, 1802, was first called upon to function in the conservation and development of streams for navigation under authority of an act of congress approved April 30, 1824. From that time on the corps of engineers continuously carried out, in accordance with the authorizations of congress, various works on the navigable waters of the country and their

tributaries. In addition to improving rivers and harbours for navigation, it was called upon to plan and prosecute the development of streams in the interest of flood control, hydroelectric power, pollution control, conservation and related purposes. The corps' civil works in the field are effected through some 40 districts grouped into 12 divisions conforming roughly to watersheds. The territory in which these works are performed embraces Alaska, Hawaii, Puerto Rico and the Virgin Islands as well as the continental United States.

In conformity with the national policy limiting wartime construction in order to conserve manpower, equipment and materials, the new work program for rivers and harbours after 1941 was restricted to improvements having direct importance to the war effort. During the fiscal year ended June 30, 1945, improvement and maintenance work were performed on 16 regular navigation projects, and maintenance work was carried out on 250 projects, including the numerous coastal ports, the harbours and connecting channels on the Great Lakes and the extensive Intracoastal Waterway and Mississippi river network, together with the operation and care of the canalized Ohio river system, Illinois waterway and upper Mississippi river. The federal expenditures for new work and maintenance operations on navigation projects during the fiscal year ending June 30, 1945, were \$57,145,900.96.

The principal items of new work performed during the fiscal year other than on canals and inland waterways, included the completion of dredging the Liberty island and Red Hook flats anchorages, New York harbour, to project depths of 20, 30 and 40 ft. over an area of about 600 ac. and enlargement of channel facilities of New York and New Jersey channels in Arthur Kill at the bend opposite Sewaren, New Jersey. Ledge rock was removed to a depth of 41 ft. in the west half of the channel on the Marcus Hook, Chester, Eddystone and Tinicum ranges in the Delaware river, and dredging and rock excavation was accomplished in the Withlacoochee river, Fla., to provide a navigation channel ten feet deep from the mouth to Port Inglis, Fla. Dredging was undertaken to provide a settling basin at the mouth of the Los Angeles river diversion channel at Los Angeles and Long Beach harbours, Calif.

In addition to the new work outlined in the preceding paragraph, maintenance operations were performed at important river, harbour and other waterway projects previously completed along the Atlantic, Gulf and Pacific coasts, in the interior and on the Great Lakes. Work was also performed on 14 projects of a river and harbour nature required in connection with the war effort by the navy department and other government agencies.

The 35,000 kw. generating unit at the Fort Peck dam in Montana was in operation during the major portion of the year, the amount of power generated during the year being 84,334,630 kw.hr. Water stored in the reservoir created by the Fort Peck dam was released to augment the natural stream flow during low water periods to provide for navigation. The ten generating units at the Bonneville Navigation dam on the Columbia river, Washington and Oregon, produced during the year 3,405,231,000 kw.hr.

The River and Harbor act approved March 2, 1945 (public law 14, 79th congress), authorized 292 new navigation projects or modifications of existing projects at an estimated total cost of \$382,000,000. (See also AQUEDUCTS; CANALS AND INLAND WATERWAYS; DAMS; FLOODS AND FLOOD CONTROL.)

(R. A. WR.)

**Other Countries.**—In view of the continuation of hostilities into 1945 it was scarcely to be expected that much could be achieved in Europe during 1945 in the way of port development and expansion. Indeed, the wholesale devastation of quayside structures and equipment and the blocking of navigable fairways by the scuttling of craft by the enemy when retiring

from coastal vantage points in addition to those sunk by mines and gunfire, caused the entire efforts of all maritime engineers and services to be directed towards the restoration of existing accommodations and facilities for shipping. Much ingenuity was displayed in dealing with difficult problems of reinstatement and, in particular, mention may be made of certain special devices adopted for the rapid sealing of locks and dock entrances wrecked by demolition charges. The basis of the scheme, officially known as "Shark," was the construction of a fleet of floating caissons in units which could be transported from Great Britain to the continent of Europe and sunk in any desired position. No fewer than 300 of these units were provided, involving the use of 10,000 tons of structural steel and 3,000 tons of timber. Each caisson was 40 ft. long, 7 ft. wide and 30 ft. in height. By bolting a number of the units together, the greater part of a damaged dock entrance could be closed, while gaps between the caisson ends and the dock entrance walls were filled by means of heavy timber flaps reinforced with steel and hinged on to the outer units, the pressure of the impounded water serving to retain the flaps in position against the walls.

As regards docks and harbours in Great Britain, there had been considerable activity in providing additional accommodation for shipping—for military, as distinct from commercial, purposes. Most of this had been in preparation for the great invasion on D-day, but only in 1945 were particulars released for publication. Much of the accommodation was intended to be temporary to meet the needs of the moment without thought of providing permanent installations for future needs. Though perhaps not so spectacular as the great military harbours created on the beach of Avranches in Normandy, commonly designated "Mulberry," some of these port installations were notable in size and importance. Of two emergency home ports located on the southwest coast of Scotland so as to be as remote as possible from aerial attack, one was at Gareloch head off the Clyde estuary and the other at Cairn Ryan on Loch Ryan, Wigtownshire. The sites were chosen so as to obtain sufficient draught of water without recourse to dredging. Six berths for large vessels, each 500 ft. long, were provided at the former site and five similar berths at the latter site, all with a depth of 33 ft. of water. The berths were equipped with quay cranes and ample railway sidings and connections.

An instance of war port accommodation abroad was the new port of Ras Tanura in Saudi Arabia. Situated on a long, narrow sandy peninsula about 5 mi. in length, on the mainland of Arabia, about 40 mi. northwest of Bahrain, it was used by the Arabian-American Oil company who landed there considerably more than 100,000 tons of cargo, mainly from the U.S.A., at a pier capable of accommodating three barges simultaneously, working between ships at an anchorage 2 mi. out and the shore. A new pier which was completed in 1945 could receive four ships alongside in 36 ft. of water and was equipped with three fixed cranes of 125 tons lifting capacity in addition to a number of mobile cranes.

Of more general interest were the announcements of the opening of two great graving docks in the southern hemisphere. The graving dock at Sydney (1,177 ft. long with 147½ ft. entrance width and having 47 ft. of water over sill at high water), was opened on March 24 by the duke of Gloucester, the governor general of Australia, and named the Captain Cook dock by the duchess of Gloucester. The slightly larger graving dock at Capetown, South Africa (1,248 ft. long with 148 ft. entrance width and 46 ft. of water over sill at high water) was opened on Sept. 18 by R. J. de Wit, acting administrator officer of the Union of South Africa, and named the Sturrock dock after the minister of transport, F. C. Sturrock, to whose initiative and energetic action the dock was largely due.

(B. Cu.)

**Roads and Highways.** The year 1945 was one of great accomplishment by highway builders for purposes of war, but it also produced a vast wreckage of highways in those countries most in need of highway transport. Deterioration and destruction of highways that progressed throughout the war in many parts of the world reached a peak as the war approached its climax and damage was caused in five countries that was expected to take years to repair. On the other side of the ledger were the active preparations for large postwar highway programs in every country with sufficient economic strength to support highway work.

Construction engineers and workers, a large portion of them from the highway field, made possible many of the powerful blows delivered by Allied armies. Machines developed for highway work, and men trained on highway construction, built roads, bases and airfields on the islands across the Pacific to Okinawa, bridged the Rhine and hundreds of other streams in Europe and advanced with the fighting forces to repair the roads. The Japanese were outclassed in fighting weapons but there was even greater disparity in the means of creating air bases and supply routes for the fighting forces. This superiority was a most important factor in establishing, maintaining and expanding a foothold at every landing in the Pacific.

In the fighting to cross the Rhine and on the advance into Germany the number of engineer troops required in some sectors to bridge the streams, repair roads and construct bypasses around obstacles was almost as great as the number of fighting

SECTION of the new Stilwell road, connecting India and China, appears like a ribbon above the river below. The road, built at a cost of \$148,910,000, was declared surplus property by the U.S. army on Nov. 6, 1945.

men.

Once across the Rhine the advance was not a simple matter of speeding over the famous *autobahnen*. Bridges across streams were demolished and overhead crossings had been blasted to fall on the highway. At places three or four structures were replaced or removed for every mile of advance.

Gen. Eugene Reybold, chief of engineers of the U.S. army, credited the road building industry with having constructed in the United States during the war, 20,000 mi. of road on army reservations, 5,000 mi. of access roads, 2,000 mi. of strategic roads and more than 1,000 army airfields.

**Unusual Road Construction.**—With the exception of the Ledo road, later called the Stilwell road, completed in Jan. 1945, there were few large highway projects during the year that attracted wide public attention but there were some of interest because of the novel character of the construction.

The 478-mi. road from Ledo in northeast India, twisting through mountains, swamps and jungles to a junction with the Burma road near the Chinese border 566 mi. from Kunming, was built by military forces and natives speaking over 200 different dialects. Rain, mud, malaria and tropical heat made the job extremely difficult. With the completion of the road, convoys hauling supplies began moving to China for the first time after the Japanese closed the Burma road in 1942.

A novel floating concrete roadway across the wide Derwent river in Tasmania, a part of the commonwealth of Australia, was completed in 1944 and reported in the technical literature of 1945. Most pontoon or floating bridges are anchored at a number of points so as to resist movement by wind and current. This bridge is built without such numerous intermediate anchor-

ages. It forms a sweeping curve and resists the downstream flow by arch action. The bridge rises and falls through a tidal range of 8 ft.

For 25 years highway officials had trouble in keeping open to traffic a section of road across a swamp near Elizabeth City, N.C. Earth and cinder fill and concrete slabs placed on a layer of logs sank into the swamp. A timber causeway served for a time but was not adequate for the heavy war traffic to the Norfolk area. In 1945 a new road was being constructed by dredging out the swamp muck and backfilling by pumping sand into the big trench left by the dredge.

The Bailey bridge, developed in England for army use in quickly replacing destroyed bridges, was demonstrated to have important peacetime use. Near Gladewater, Tex., a bridge carrying important war traffic was partly washed out by flood. On April 18, 175 trucks transported Bailey trusses and equipment to the site. The following day temporary spans of 120 and 150 ft. were erected and the bridge was again open to traffic.

**United States.**—Highway construction sank to a new low level because of the war. The number of men employed on construction by the state highway departments was only one-sixth of the number in 1941. Maintenance forces had shrunk to 70% of the 1941 figure. Highways completed with federal funds were all war projects and amounted to 4,011 mi. The federal government expended more than \$5,000,000 in building roads needed in making atomic bombs. The need for highway transport in war industries, daily travel of war workers, food distribution and other essential uses was so great that 16,500,000,000 gal. of gasoline was consumed on highways. Travel by vehicles on rural highways was estimated at 122,000,000,000 mi. Nearly one-fourth of this travel was by trucks.

The most important development of the year was the plan-

ning of a large postwar highway program. Near the close of the preceding year federal legislation authorized \$500,000,000 for each of the first three postwar fiscal years. For each year there was authorized \$225,000,000 for the federal-aid highway system, \$150,000,000 for expenditure on a system of principal secondary or feeder roads and \$125,000,000 for sections of the federal-aid system in urban areas. The funds were to be matched by the states and expended under state highway department supervision.

**Canada and Alaska.**—The Alaska highway had been maintained in good condition and was open to authorized travel continuously after completion in 1943. Public travel had not been permitted. Improvements were made on the Richardson highway from Fairbanks to Valdez.

For the postwar period, Canada planned the highest types of modern highway for its more densely populated areas and extension of two-lane surfaced roads throughout its provinces. Work was begun on difficult mountain construction that was to connect the Peace River valley and the south end of the Alaska highway with Prince George and the Pacific coast area. Surveys were made for extension of the road network northward through a wilderness area from Grimshaw to the mouth of Hay river on Great Slave lake.

**Pan-American Highway.**—Work on the 3,300-mi. section of this highway from the Texas border to Panamá, which is known also as the Inter-American highway, continued during 1945 but only at a moderate pace. At the end of the year 2,487 mi. had a surface suitable for automobile travel at all seasons of the year and 280 mi. was passable in dry weather. Impassable gaps in Mexico, Honduras, Costa Rica and Panamá totalled 567 mi. The gap in Honduras was only eight miles and a bypass was in use. The most notable work of the year was done in Costa Rica in constructing a road across the Talamanca range at an elevation of 11,000 ft. Mexico actively pushed surveys and construction to close the gap in southern Mexico. Highway travel from the U.S. was possible to about 50 mi. south of Oaxaca, a distance of 1,140 mi. from the Texas border.

Local improvements were made on the route in South America but there were no notable improvements during the year. Several gaps had to be closed before the highway as a whole would be suitable for tourist travel. Near the end of 1945 a contract was awarded by Ecuador for construction of 100 mi. of the route from Quito to the border of Peru at a cost of \$2,000,000. This construction, through the Andes mountains at elevations up to 10,000 ft., was expected to take about two years.

**United Kingdom.**—Repair of extensive war damage to highways was under way. During the war an extensive program of express highway construction both for the London area and interconnecting the larger cities was discussed and general plans were presented. Preoccupation with the general elections and the many readjustments necessary with the end of fighting in Europe prevented definite formulation of postwar highway plans. At the end of 1945 a strong demand for immediate action was being made. There was urgent need for both highways and housing and it was recognized that neither class of facility could be planned independent of the other.

**Africa and Asia.**—There was almost no road construction, other than military work during World War II. In 1945, India was planning an extensive highway program as a means of improving economic conditions. A number of Chinese engineers were trained in the U.S. to direct future work in China. These were indications of programs that had not yet taken definite form.

During the year information was disclosed on an important use of highways in central Africa in the two preceding years. By the end of 1941, the Mediterranean was virtually closed as a supply route to the British army in Egypt. Supplies were transported with difficulty via the long route around Africa and through the Suez canal. Japanese submarines made the trip hazardous and a shorter route was desired. Investigation was made of various routes across Africa. British chiefs of staff selected and developed a route up the Congo river to Aketi, thence 800 mi. by highway, with a narrow gauge rail line as an alternate for the first 400 mi., to Juba on the Nile. From there, supplies were transported either by highway or river to Khartoum and then over normal lines of transport. Hundreds of miles of highway were improved and trucking facilities established in the heart of Africa for this most important military operation.

**War Damage to Highways.**—Destruction of highways, particularly bridges, reached a peak in 1945. Damage was done that would take years to repair. From the beginning of World War II the highways of Europe were damaged by war traffic with only crude repairs to serve military vehicles. In 1944 and until May 1945, as the Germans were driven from large areas in Russia, Italy, France, Belgium and Holland, they destroyed practically all bridges behind them. Every bridge and culvert between Rome and Naples, about 1,200 in all, was blown up. Some 6,500 bridges in France were destroyed. The numerous magnificent structures across the Rhine were all destroyed with the exception of the bridge at Nijmegen. All but four of the 45 bridges across the Seine between Paris and Le Havre were severed.

Nowhere did destruction by the Germans exceed that of their own *autobahnen*, particularly in the Ruhr region. Because of the Ruhr network of canals, railroads and highways from three to five structures could be seen from almost any point on the *autobahnen*. These modern structures

were uselessly destroyed after it was evident that Germany had lost the war.

The Allied armies erected many temporary structures soon after bridges were destroyed and others were later erected by prisoners and civilian forces. With few exceptions these were temporary makeshifts. Often they blocked navigation on rivers and canals. Making permanent replacements was expected to take years. Europe was never in greater need of all forms of transportation. There was critical need for coal throughout all countries. Near the end of 1945 coal was piled up along the Rhine with most of the normal rail and water lines blocked. Some coal was being transported by highway and a special effort was made to open the highways for transport of food and fuel. (See also MOTOR TRANSPORTATION.)

(T. H. MacD.)

**Rockets:** see POWER ENGINEERING.

**Rodriguez, Jose Maria Caro** (1866— ), cardinal archbishop of Santiago, was born at Cauhil in the diocese of Rancagua, Chile, June 23. He was educated at the Santiago seminary, Pio Latino college and the Gregorian university and was ordained at Rome in 1890.

Social action based on the teachings of Pope Leo XIII was begun by Archbishop Caro when he was vicar apostolic of Iquique, the mining section of Chile, and continued by him as bishop of La Serena (1927) and archbishop of Santiago (1939). For 20 years preceding his consecration he divided his time and activity between the seminary and the press.

As ordinary of the capital he maintained friendly relations with the government and furthered its social plans but kept aloof from political entanglements. He represented the Chilean hierarchy at the International Eucharistic congress at Chicago and was host to prelates and other dignitaries from all over the Americas at the Chilean National Eucharistic congress in 1941.

He was nominated to the Sacred College of Cardinals according to an announcement of Dec. 23, 1945, and was created and proclaimed cardinal at consistory Feb. 18, 1946.

**Roentgen Ray:** see RADIOLOGY.

**Rokossovsky, Konstantin** (1905?— ), Russian army officer, first saw action against the Germans during World War I. In World War II, during the battle for Moscow, 1941, Rokossovsky commanded one of the seven Russian armies defending the capital and acquitted himself with merit. One of the "younger generals," Rokossovsky won his greatest renown at the battle of Stalin-grad, 1942-43, when he directed the six soviet armies of the Don front that first trapped and then annihilated the 22 divisions of the German 6th army. During the great Russian offensive of 1943, Rokossovsky headed an army on the central front. In 1944 he played a prominent role in the liberation of White Russia, the ousting of German forces from eastern Poland and in the fierce battle for Warsaw. In the big drive into Germany that started in mid-January 1945, he led the 2nd White Russian army that broke through German defenses south of Lomza and destroyed German resistance in Stettin, West Pomerania and Mecklenburg provinces. For his share in the multiple Russian offensive, he was awarded the order of victory.

**Roman Catholic Church.** The pope, Pius XII, is recognized as supreme ruler and pastor of the Roman Catholic Church. The pope creates cardinals, and appoints archbishops, bishops, vicars and prefects apostolic who exercise ecclesiastical jurisdiction throughout the world. With its full complement, the college of cardinals consists of 70 members. The Sacred college ordinarily consists of 6 cardinal bishops, 50 cardinal priests who are always bishops, 14 cardinal deacons. At the beginning of 1945 the number of cardinals was 41 but was reduced to 38 by the deaths of Cardinal Joseph MacRory, archbishop of Armagh and primate of

Ireland, Cardinal Adolph Bertram, archbishop of Breslau, Germany, and Cardinal Justin Seredi, archbishop of Strigonia and primate of Hungary. The latter two were noted for opposition to the nazis and refusal to yield to their threats.

On December 23 the pope announced a consistory, the first after 1937 in which cardinals were created, and designated 32 prelates who would receive the red hat. This was the largest number of cardinals created in the modern era. In 1801 Pius VII had appointed 27 at one time. Of the 32 new cardinals 4 were Italians and 28 non-Italians. Italian cardinals were in a minority for the first time after the Schism of the West. The pope justified this move on the basis of the church's universality and supernational character. All continents and 19 countries were represented in the Sacred college. From the western hemisphere there were 14, of whom 5 were from the U.S. and 2 from Canada. Archbishops Francis J. Spellman of New York, Samuel A. Stritch of Chicago, Edward Mooney of Detroit, John J. Glennon of St. Louis and James C. McGuigan of Toronto were the new North American cardinals. In England, Archbishop Bernard W. Griffin of London became the youngest cardinal, at the age of 46.

The Catholic population of the world in 1945 was estimated at between 398,000,000 and 400,000,000, but no accurate figures could be given because of war conditions, though the larger estimate appeared to be more likely. The number of patriarchates was 14, of which 7 were merely titular. The number of residential sees in the Catholic Church in 1945 was 1,334, including archbishoprics and bishoprics. Vicariates and other jurisdictions numbered some 520. Ecclesiastical jurisdictions in the Americas were: United States 122; Brazil 101; Canada 50.

The number of Catholics on the American continents was variously estimated at from 112,000,000 to 141,600,000. Catholics in the U.S. and territories numbered 23,963,671. There were one cardinal, 22 archbishops, 137 bishops and vicars apostolic. The clergy numbered 38,451, both diocesan and members of religious orders. There were 14,302 parishes; 6,917 missions and stations; 53 diocesan seminaries; 224 colleges and universities. Total number in Catholic colleges and schools was 3,305,804. General and special Catholic hospitals were 786. Converts to the church numbered 84,908.

Chaplains in the U.S. forces numbered in excess of 4,200, including auxiliary chaplains. Of the 172 U.S. chaplains who died in World War II 67 were Catholic priests.

Catholics in England and Wales numbered 2,393,983; those of Scotland 600,000. There were 6 archdioceses and 18 dioceses; 7,106 priests. Canada and Newfoundland had 13 archdioceses, 33 dioceses and 4,800,000 Catholics.

**The Church and World War II.**—Total damages to the Catholic churches of Europe was estimated at \$6,000,000,000, exclusive of schools and other religious buildings. Some 12,000 Catholic churches in the reich were destroyed or severely damaged. In Italy 65 churches of artistic interest were in ruins and in London 55 Catholic churches were wrecked by flying bombs. The two Catholic universities to suffer most during the war were those of Nijmegen, Netherlands and Louvain, Belgium. During 1945 the debris was cleared at Monte Cassino in Italy and plans were laid for rebuilding the abbey.

Cardinal Hlond, returning to Poland after a visit to the Vatican revealed that under the nazi occupation 3 bishops and 2,000 priests had died. The Cardinal had been released from German imprisonment at Paderborn on April 1, 1945, by the U.S. 9th army. The Polish bishops, in a joint pastoral, exhorted the faithful to ensure the rebuilding of their country on Christian principles.

In Germany documents revealed that the nazis had plans laid for total destruction of the church once the war was won.

The German bishops, in a joint pastoral, exhorted the faithful to bear their trials in a Christian spirit and blamed the nazi philosophy and education for the crimes committed by Germans at home and abroad. On Dec. 13, 1945, Archbishop Conrad Groeber of Freiburg, Germany, said catastrophe would have befallen Europe had the nazis won. Cardinal Faulhaber led the Corpus Christi procession through bomb-shattered Munich. Curfew easement permitted the first Christmas midnight mass in Berlin after 1939. On the occasion of the annual meeting of the bishops at Fulda, Germany, the bishops would not permit their pastoral to be read so long as several passages remained blue-pencilled by a U.S. army censor. Theresa Neumann, famous German stigmatic, survived the war and was uninjured. The historic cathedral of Cologne came through the war with only minor damage.

In Yugoslavia it became known that during World War II two-thirds of the bishops had either been killed or imprisoned. During Nov. 1945 the remaining bishops issued a sharp statement concerning the restrictions placed upon the church. Commenting editorially, *Osservatore Romano* said the three obstacles in the way of social and religious peace in Yugoslavia were: opposition of the Orthodox Churches to a concordat with the Holy See; political and cultural divergences between Catholic Croats and Slovenes and the Serbs; the favouring of communism by Marshal Tito. The pope appointed Most Rev. Joseph P. Hurley, bishop of St. Augustine, Fla., as regent *ad interim* of the apostolic nunciature in Belgrade.

From the Ukraine came reports in December that only the Orthodox Church was permitted to function. In the Ruthenian territory the diocese of Mukochevo was liquidated by the Russians and the Catholics invited to break with Rome.

When President Roosevelt died many Catholics throughout the world expressed their sorrow. Cardinal Suchard said France mourned his death; in Australia the apostolic delegate presided at a special mass; in Rome thousands attended a memorial mass in the American church.

In a joint statement the British hierarchy proposed to the United Nations eight points essential to peace. The centenary of Cardinal Newman's conversion was solemnly celebrated, with 500 delegates from 16 countries present.

The French archbishops made an appeal for national union in a spirit of reconciliation. The pope, in February, named Saint Therese of Lisieux the secondary patron of France.

Some 100,000 Catholics of Mexico and other American countries gathered at Guadalupe to participate in the golden jubilee celebration of the crowning of the Blessed Virgin of Guadalupe.

In Rome on Dec. 13, 1945, the pope signed decrees approving the beatification of Ven. Maria Teresa de Soubiran and Ven. Maria Teresa Eustochio Veresi, foundresses of institutes of religious women. On July 6 the Vatican excommunicated Most Rev. Don Carlos Duarte da Costa, bishop of Maura in São Paulo state, Brazil, for preaching revolutionary practices. In November classes were resumed in the major theological seminaries of Rome; some of the seminaries still remained closed, including the American and English colleges. The pontifical academy of St. Thomas Aquinas announced the addition of a juridical-economic department to its existing faculties of philosophy and theology. Mgr. J. Gerard Kelly of Chicago, Ill., was appointed rector of the North American college in Rome.

**Missions.**—In the Philippines total war losses to Catholic properties amounted to \$125,000,000, according to a report submitted to the U.S. senate by Sen. Tydings of Maryland. Carlos P. Romulo, resident commissioner, revealed the Manila cathedral had been blown up by the Japanese while filled with men.

Archbishop Martin Lucas was appointed apostolic delegate to South Africa and Southern Rhodesia, a territory embracing 19

vicariates and 3 prefectures, with a total of 660,000 Catholics, of whom 600,000 were coloured. In Basutoland the first Catholic university, named after Pope Pius XII, was opened during 1945.

In China Generalissimo Chiang Kai-shek welcomed back Bishop O'Gara. Religious restrictions were lifted from missionary activity in Japan. In Indonesia a number of missionaries were slain in the native conflict.

**United States.**—In 1945 the pope declared that the Concordia See would henceforth be the diocese of Salina. Most Rev. Stanislaus Bona was named bishop of Green Bay, Wis.; Most Rev. Ralph L. Hayes as bishop of Davenport, Ia.; Mgr. Edward J. Hunkeler as bishop of Grand Island, Neb.; Most Rev. Henry J. O'Brien as bishop of Hartford, Conn.; Most Rev. John F. O'Hara as bishop of Buffalo, N.Y.; Rev. Vincent Waters as bishop of Raleigh, N.C. Maj. Gen. William B. Arnold was named bishop of the military ordinariate; Mgr. John K. Mussio as first bishop of the new diocese of Steubenville, O.; Most Rev. James H. Ryan as first archbishop of the archdiocese of Omaha, Neb.; Rev. Apollinaris Baumgartner, O.F.M.Cap., as Vicar Apostolic of Guam.

Most Rev. John J. Glennon, archbishop of St. Louis, Mo.; Most Rev. Edward Mooney, archbishop of Detroit, Mich.; Most Rev. Samuel A. Stritch, archbishop of Chicago, Ill. and Most Rev. Francis J. Spellman, archbishop of New York and military vicar were created cardinals by Pius XII. In August Archbishop Spellman began a tour of inspection of his military vicariate in the Pacific area.

The Laetare medal conferred annually by Notre Dame university, Notre Dame, Ind., went to G. Howland Shaw, known for work in the field of juvenile delinquency. John A. Coleman, of New York Catholic charities, was recipient of the Catholic Action medal. The James J. Hoey medal was awarded by the Catholic Inter-racial council to Paul Williams, of the Catholic Committee of the South, and to Ralph Barth. Rev. John Quasten was appointed new dean of the faculty of sacred theology at the Catholic University of America. Louis F. Budenz, managing editor of the *Daily Worker*, communist organ of New York city, returned to the church and joined the faculty of Notre Dame university.

On V-E day the Apostolic delegate issued a statement expressing gratitude to God and officiated at services in the nation's capital. In St. Louis, Mo., in October, 22,000 attended the centenary celebration of the Saint Vincent de Paul society. Notre Dame university was recipient of a gift of \$1,000,000 to be used for the promotion of chemical and scientific study. (J. LAF.)

**Roosevelt, Franklin Delano** (1882-1945) devoted the last few months of his life to preparing for a victory over the axis and a difficult post-war era which he did not live to experience. When he died suddenly on April 12, 1945, at his Warm Springs cottage in Georgia, the armed forces he had mobilized as commander in chief were beating at the gates of Berlin and bombarding the shores of Japan's home islands.

His death caused universal shock. Despite obvious evidence of his physical strain through 1944, the state of his health had been a carefully guarded secret. In late Feb. 1945, Vice-Adm.

THE RIGHT HAND of St. Stephen, Hungary's most sacred relic, was entrusted to a U.S. army chaplain in 1945 for return to Budapest from Austria, where it was taken during World War II

Ross T. McIntyre, White House physician, gave public assurances that his condition was "excellent." But when he continued to lose weight early in March, Dr. McIntyre prescribed a rest in the south. On March 30 he left for the infantile paralysis centre which he founded.

At one o'clock of the fatal day he was sitting before the fireplace of the "Little White House" while a New York artist sketched him. Suddenly he exclaimed to Commander Howard G. Bruen, a naval physician: "I have a terrific headache!" The stricken president was carried into his bedroom, where he died at 3:55 P.M., Georgia time, of a massive cerebral haemorrhage without regaining consciousness. The White House announced his death at 5:48 P.M., eastern war time, and at 7:09 P.M. Vice-President Harry S. Truman was sworn in as president in the cabinet room.

Quiet, sorrowing crowds lined the railroad tracks as the funeral train brought the body to Washington, where simple ceremonies were held in the east room at 4 P.M., April 14. For three days the nation and the world paid him a tribute which no other U.S. president, in life or in death, had received. He was given a military burial on Sunday morning, April 15, in a hedge-enclosed rose garden on the ancestral estate at Hyde Park, N.Y.

Almost as if he had a premonition that the end was near, even the energetic Roosevelt had rarely laboured so ceaselessly as he did during those last few months. It seemed as if he were consciously striving to write a last will and testament for what he knew might be a free but chaotic universe.

In an 8,000-word message to congress on Jan. 8, 1945, he tried to forecast the immediate future:

"This new year of 1945 can be the greatest year of achievement in human history. 1945 can see the final ending of the nazi-fascist reign of terror in Europe. 1945 can see the closing-in of the forces of retribution about the center of the malignant power of imperialistic Japan. Most important of all—1945 can and must see the substantial beginning of the organization of world peace."

The year 1945 did, though he did not see these things.

In the field of foreign affairs he called on the nation to dedicate itself whole-heartedly to "winning the war." He promised self-determination for the liberated peoples, although, he added wistfully, "it is difficult to guess what kind of self-government people will want." On the domestic side he asked enactment of a National Service act "for the total mobilization of our human resources for the prosecution of the war." He urged a system of military training. He pledged himself to demand new humanitarian reforms at home after victory.

He noted that several laws for promoting domestic rehabilitation had already been passed: the Surplus Property, Contract Settlement, Servicemen's Readjustment and the War Mobilization and Reconversion acts. To aid world recovery, he urged action on proposals to expand the Export-Import bank, to create the International Bank for Recovery and Development and the International Monetary fund.

Roosevelt was inaugurated for the fourth time on Jan. 20, 1945, on the south portico of the White House. It was one of the shortest and simplest ceremonies of its kind, with only 8,000 witnesses.

In the first week of February Roosevelt journeyed to Yalta on the shore of the Black sea for a military and diplomatic conference with Prime Minister Churchill and Premier Stalin. The three statesmen discussed past battlefield successes, and agreed upon a crushing attack on Germany, the only surviving foe in Europe. They also arranged for zonal occupation of a defeated reich by the United States, Britain, Russia and France. They made preliminary plans for establishment of new

governments in liberated countries and issued a formal call for an assembly of Allied representatives at San Francisco on April 25, 1945, to form the United Nations organization and write a world peace charter.

The "Big Three" also sought to soften German resistance. They repudiated any purpose to destroy the German people, only the nazis and militarists. They promised to liberalize the newly formed governments of Poland and Yugoslavia in accord with the popular will and the principles of the Atlantic charter.

On March 1 Pres. Roosevelt reported to congress on the Yalta mission. He said that Yalta represented a "successful effort by the three leading nations to find a common ground for peace." (See also UNITED STATES.) (R. TU.)

**Roques, Emile** (1880— ), Cardinal archbishop of Rennes was born at Graulhet, France, on Dec. 8. He studied at Albi Grand seminary. Ordained at 24, he took further studies at Toulouse and Dusseldorf, and taught and served as superior at Catres seminary. Invested as bishop of Montauban in 1929 and as archbishop of Aix in 1934, he was named archbishop of Rennes and primate of Brittany a few days before the invasion of Brittany by the German army in 1940.

A master of the German language, he vigorously protested the arrest of the directors of the Christian Agricultural youth and the deportation of workers by the occupation authorities.

He was named to the College of Cardinals in an announcement of Dec. 23, 1945, and was created and proclaimed a cardinal at consistory on Feb. 18, 1946.

**Rose, Maurice** (1899–1945), U.S. army officer, was born Nov. 26, in Middletown, Conn. At the age of 17 he joined the Colorado National Guard. He saw active duty with the A.E.F. during World War I, and was twice decorated. Following his discharge from the army in 1919, he was commissioned a second lieutenant in the regular army and by 1940 he had risen to the rank of lieutenant colonel. After the start of World War II, he was named chief of staff of the 2nd armoured division, and in Dec. 1942 was sent overseas where he participated in the North African campaign, at the end of which he was acting as chief of staff of the 1st armoured division. Gen. Rose returned to the 2nd armoured division, took over a combat command, and led the lightning dash across Sicily that cut the island in two. During the Normandy invasion he was again with the same division, which spearheaded the U.S. 1st army's breakthrough at St. Lo. He was subsequently given command of the 3rd armoured division, believed to have been the first to enter Belgium and Germany. In March 1945, he was awarded the D.S.M. and was cited for "displaying inspiring leadership, tactical skill and great valour." On the day of his death he was directing the fight to take an important road junction. His jeep ran into a group of German tanks which had infiltrated American lines and Gen. Rose was prepared to surrender. As he lowered his hands to unfasten his holster, evidently misinterpreting a German order, he was shot and killed by an enemy tankman near Paderborn, Germany, March 30.

**Rothenstein, Sir William** (1872–1945), British artist, was born Jan. 29 at Bradford, Yorkshire. For early career, see *Encyclopædia Britannica*. One of England's leading artists and a distinguished writer,

Sir William was famed for his sketches and portraits of international celebrities over a span of five decades. His unique series of portraits mirrored the history of Europe from the Victorian era to World War II. Many world notables sat for Sir William, including Paul Verlaine, Algernon Charles Swinburne, Emile Zola, Oscar Wilde, Anatole France, Henry James, Walter Pater, George Bernard Shaw, Rudyard Kipling, T. E. Lawrence and the duke of Windsor. While the greater part of his fame rests upon his portraiture, Sir William was equally versatile in lithographs, etchings, still lifes and landscapes. His works are represented in the principal galleries of Great Britain, the Musée du Jeu de Paume, Paris and the Metropolitan museum in New York. In World War I he was official artist of the British and Canadian forces serving in France, and during World War II, despite his advanced age, he flew frequently in combat aircraft to complete portraits of servicemen. A skilful writer and astute observer, Sir William wrote a number of works; the best known are his memoirs, published in England in three volumes under the title *Men and Memories*. Volume 1, covering the period 1872 to 1900, was published in 1931. The second volume which covered the era between 1900 and 1922 was released in 1932 and the third volume, entitled *Since Fifty: Men and Memories*, covering the 1922-38 epoch, was published in 1939. Sir William died at his home in Stroud, Gloucestershire, Feb. 14.

**Rowing.** Intercollegiate rowing in the United States during 1945 was confined entirely to the east coast. Columbia, Cornell, Harvard, Massachusetts Institute of Technology and the U.S. Naval academy produced crews and rowed an abbreviated schedule of races. Harvard again rowed informally, confining themselves to competition at home on the Charles river.

The season opened on April 28, at Cambridge, Mass., where the U.S. Naval academy varsity and junior varsity crews won both races over the one-and-three-fourths-mile Charles river course in rough water and against a stiff head wind. In the varsity race Harvard was second and M.I.T. a close third. Winning time was 10 min. 7 sec. The junior varsity race ended in the same order, Navy winning in 10 min. 32 sec.

A week later, May 5, over the same course, the M.I.T., Harvard and Cornell crews met. Conditions were fair, with choppy water and a stiff quartering breeze. M.I.T. won the varsity race with Cornell second, three-fourths of a length back, and Harvard third. The winning time was 9 min. 17½ sec. Cornell won the junior varsity event in 9 min. 33 sec. with M.I.T. second and Harvard third. As an added attraction the M.I.T. and Harvard third varsity crews rowed a preliminary race over the Henley distance of one-and-five-sixteenths miles, which M.I.T. won.

On May 12, Columbia and the U.S. Naval academy raced over the one-and-three-fourths-mile Severn river course at Annapolis, Md. The start was delayed until almost dark because of very rough water and a strong head wind. The Naval academy junior varsity defeated Columbia's junior varsity by one-and-one-half lengths in 11 min. 51 sec., and the good Columbia varsity won over the Naval academy crew by two lengths in 11 min. 15 sec.

On May 19, Columbia, Cornell, M.I.T. and the Naval academy were scheduled for a two-mile regatta over the Cayuga lake course at Ithaca, N.Y., but because of a strong wind and extremely rough water it was impossible for the crews to get up to the start. Rather than call it off it was decided to row the race in one-mile heats, two crews to a heat, on the more protected Cayuga inlet. In the drawings for preliminary heats M.I.T. and Cornell were paired and Navy and Columbia were paired, both in the varsity and junior varsity events. Cornell defeated M.I.T. in both classes, winning the junior varsity race by one length in 5 min. 15 sec. and coming from behind in the varsity race to win by inches in 5 min. 14 sec. In the other heats the Naval academy junior varsity again won from Columbia and a greatly improved Navy varsity defeated Columbia by a very narrow margin in 4 min. 45 sec. Because of the strong,

slightly quartering wind at the start, it was very difficult for referee Edward H. TenEyck to get the crews lined up and in this particular heat the crews were well over the starting marks when they were sent away. In the finals the good Naval academy crews defeated Cornell, winning the junior varsity event by one-half length in 5 min. 15 sec. and the varsity race by three-fourths of a length in 5 min. 7 sec. In an added event the Naval academy plebes easily defeated the Cornell and M.I.T. freshman crews in that order, winning in 5 min. 12.6 sec.

This marked the end of competition for the Naval academy crews as final examinations commenced the following week. The others continued on, M.I.T. going to New York on June 2 for a dual regatta with Columbia over the one-and-three-fourths-mile Harlem river course. Under excellent rowing conditions the Columbia crews won both events, the junior varsity by three-fourths of a length in 8 min. 19 sec. and the varsity by three lengths in 8 min. 9 sec.

The season came to a close on June 9, with Columbia and Cornell meeting in another dual regatta over the same course at New York. In water ranging from choppy to quite rough, Cornell won both races, the junior varsity by 12 ft. in 8 min. 21 sec. and the varsity by one-half length in 8 min. 19 sec.

Princeton, after an absence from the water of two years, resumed practice during the summer under the coaching of Gordon Sikes. The Princeton and Columbia summer crews engaged in two informal regattas, the first on Aug. 25 at Princeton, N.J., where the Columbia varsity defeated the Princeton junior varsity and varsity, in that order, over the Henley distance on Lake Carnegie in 7 min. ¼ sec. The same crews met in a return engagement on Sept. 8 in New York over a one-and-one-half-mile course on the Harlem river. The result was the same, Columbia's varsity winning in 6 min. 55 sec., one-half length ahead of the Princeton junior varsity with the Princeton varsity third by another one-half length.

Again, as in the previous three years, the Poughkeepsie regatta, Dad Vail regatta and all regularly scheduled cup races were not held.

A return to rowing in 1946 was indicated at Pennsylvania where coach Russell S. Callow, following a leave of absence during the war, returned and worked with a squad of men through the fall. (R. H. Sb.)

**Royal, Forrest** (1893-1945), U.S. naval officer, was born Feb. 10, in New York. He was graduated from the Naval academy in 1915 with an ensign's commission and later did postgraduate work in ordnance at the Annapolis Post Graduate school. He received a M.S. degree from the Massachusetts Institute of Technology in 1924. A one-time aide to Adm. William H. Standley (then commander of the battle force, U.S. fleet) he was assigned to a U.S. naval mission to Brazil, 1939-41. Upon his return to Washington, he was given command of the cruiser "Milwaukee." In 1942, he was attached to headquarters of the commander-in-chief of the U.S. fleet. He later became U.S. secretary to the combined chiefs of staff and the joint chiefs of staff. In June 1944, he was transferred to command of the amphibious Group Six and directed the amphibious assaults on Leyte, Lingayen and Mindanao. He was promoted by President Roosevelt from a captain to a rear admiral in 1944 and was awarded the D.S.M. for his services in the Philippines campaign. Adm. Royal commanded the 7th amphibious force which landed troops at Tarakan Island, May 1, 1945, and led amphibious operations in the Brunei bay area the following month. His death from natural causes, on June 18, in the Pacific theatre of war, was announced by Secretary of the Navy Forrestal.

**Ruanda and Urundi:** see BELGIAN COLONIAL EMPIRE; MANDATES.

**Rubber.** For the first time after 1941 rubber could be regarded as an available commodity on world markets during 1945, rather than an alarmingly scarce raw material. The imperative need for military equipment set the pace for the rubber industry throughout most of the year. Supplies of synthetic rubbers were, in general, sufficient for both military and civilian needs. By the first quarter of 1945 shortages either had developed or were threatened in the supplies of natural rubber, carbon black, rayon cord and a great many of the other raw materials required to make rubber articles needed by the United Nations. The transportation of great armies on a vast scale accounted for the bulk of the military demand which took precedence over civilian requirements. The War Production board appointed a director of rubber programs to integrate the

industry, to facilitate the building of new factories for the production of tires, carbon black, guayule rubber, rayon cord and other critical items, to anticipate the industry's manpower needs and to collaborate with both military and civilian authorities to ensure the manufacture of rubber goods on an unprecedented scale. Shortly after V-E day the trend toward expansion was sharply reversed and most of the projected factories were cancelled. After V-J day, emphasis was placed upon the reconversion of the industry from war to peace. Significant progress was made during the World War II period in the replacement of natural rubber by synthetic rubber, from 99% natural rubber used in 1941 to a low of 11% in Oct. 1945. This replacement, made with scarcely any reduction in output of manufactured products, had little effect on the life and performance of rubber articles. In Dec. 1945, the first shipments of crude rubber after 1942 from the far east were received in the United States and the end of tire rationing was announced. Interesting comparisons of the preparation and use of synthetic rubbers in the United Nations and in Germany were available in 1945. These show that specific products made from GR-S were superior to the corresponding articles made in Germany from Buna S.

**Supplies of Rubber.**—The rubber stockpile of the United Nations was administered by Rubber Reserve company, Washington, D.C. Their comprehensive review, "Report of the Rubber Program 1940-1945," is the basis for the following information. Of 1,117,000 tons (in this article the unit of measurement is the *short ton*) of natural rubber purchased during 1940 to 1945, 85,500 tons were involved in cancellations and only 28,000 tons in losses by enemy action. The natural rubber stockpile as of July 1, 1945, was 91,000 tons plus 2,000 tons of rubber as latex. (Note that the minimum requirement set by the Baruch committee in 1942 was 112,000 tons.)

Natural Crude Rubber Supply

	Total U.S. crude rubber imports (short tons)	Total U.S. crude rubber consumption (short tons)	Total U.S. crude rubber stocks (short tons)
1939 . . . . .	545,000	664,000	141,000
1940 . . . . .	910,000	726,000	324,000
1941 . . . . .	1,148,000	868,000	596,000
1942 . . . . .	303,000	422,000	474,000
1943 . . . . .	38,700	355,000	157,000
1944 . . . . .	110,000	161,000	105,000

The consumption of natural and synthetic rubbers in 1944 was nearly 800,000 tons, 80% of which was synthetic. The estimated consumption for 1945 was more than 1,000,000 tons, 85% of which was synthetic rubber. In 1945 the estimated production in tons of synthetic rubber in government-owned plants was GR-S (butadiene-styrene co-polymer) 990,000, GR-I (butyl) 57,000, GR-M (neoprene) 57,000. Actual production probably ran lower than these estimates as a result of cancellations of orders following V-J day. The percentages of GR-S derived from alcohol and petroleum respectively bear a determining relation to the cost.

	1943	1944	First seven months 1945
GR-S from alcohol . . . . .	77%	64%	49%
GR-S from petroleum . . . . .	23	36	51
	1943	1944	First five months 1945
Average cost GR-S . . . . .	\$0.355 lb.	\$0.307 lb.	\$0.272 lb.

The withdrawal from production of all alcohol plants for butadiene manufacture except for their use in contingencies was announced in December, thus lowering the annual capacity for GR-S production by 250,000 tons. The remaining GR-S production was based upon butadiene from the lower cost petroleum sources. In one case, out-of-pocket costs as low as \$0.128

per pound for GR-S were realized. During 1945 synthetic rubber plants owned by the government operated at between 50,000 and 88,000 tons per month. The high rates of production prevailed during the first half of the year. The U.S. share in the development of synthetic rubbers was signalized in a series of awards made during 1945 by scientific and technical organizations. These included the Midwest award to L. P. Kyrides in part for his early development of U.S. synthetic rubber, the Perkin medal to E. K. Bolton for Du Pont's early researches on neoprene, the first Backeland award to E. R. Gilliland for his part in the government's synthetic rubber program, and the \$1,000 prize of the American Chemical society to F. T. Wall for basic studies on the structure of co-polymers.

**Natural Rubber.**—Information available from the far east, source of nearly all the world's plantation rubbers as late as Dec. 1945 was very fragmentary. Malayan reports indicated extensive injury to the personnel formerly used in tapping rubber trees. These workmen were sent to Indo-China by the Japanese to build military railroads, and perished there by the thousands. Less than 65,000 tons of crude rubber were reported on hand in Malaya. Although little damage to plantations was cited, slow resumption of production due to shortages of labour, supervisors and equipment seemed probable. In Sumatra and Java, which at one time jointly supplied half of the world's plantation rubbers, trees were said to have been uprooted in several instances to provide land for foodstuffs or for aircraft landing fields. In these islands the prospects of extensive rubber tapping in 1946 were very slight, especially because of postwar political upheavals. Indo-China reported a large inventory of crude rubber (170,000 tons). Some natural rubber was expected to be produced in the Philippines and in Borneo, but the resumption of full production from all parts of the far east was not expected for at least another year, probably longer. Combined natural rubber inventories of more than 300,000 tons were possibly available in Malaya, French Indo-China, Siam and Borneo. Indicative of wide interest in natural rubber was the research work in progress at various locations. The French Rubber institute, with laboratories in France, Indo-China and the Ivory Coast, was studying the production and evaluation of natural rubbers, and was training rubber technologists. The Agricultural Institute of the North at Belem, Brazil, with the support of the government, initiated studies on rubber. The British Rubber Growers association maintained extensive laboratories near London, England, for the study of fundamental rubber problems. One specific and worthy objective of their work was to find compositions in which natural rubber excels synthetic rubber. Extensive researches by the U.S. department of agriculture and other agencies in the Americas, Russia, Sweden and Great Britain, on unusual sources of rubber (e.g., *kok-saghyz*, *Cryptostegia* and guayule) failed to show these rubbers competitive with plantation rubber or GR-S.

**The Rubber Study Group.**—The state department arranged a meeting in Jan. 1945 in the United States of the Rubber Study group with delegates from the Netherlands, the United Kingdom and the United States. This group meets periodically to discuss matters pertaining to natural and synthetic rubber, and the share which each is destined to play in supplying the world's raw material needs. Another meeting was held Nov. 20, 1945, in London, to which France also sent delegates. No official report was published. It is interesting to note that a reduction in the export price of GR-S from the former level of \$0.315 to \$0.185 was announced in Sept. 1945. This action foreshadowed the inevitable price competition between natural and synthetic rubbers.

**Tires and Tubes.**—Early in 1945 extensive shortages of natural rubber, carbon black, rayon and butyl rubber confronted

the War Production board. The appointment of J. L. Collyer, president of the B. F. Goodrich company, as special director of rubber programs was followed by rapid action in relieving these shortages, thus ensuring prompt deliveries of critical military equipment. The maintenance of controls over necessary war matériel facilitated reconversion to civilian needs in early autumn, and permitted the lifting of gasoline rationing. Late in the year it was announced that tire rationing was to be abolished, effective Jan. 1, 1946. The year 1945 thus brought to an end the era of critical tire shortages which had lasted for four years. For the production of inner tubes the supplies of butyl rubber, 22,000 tons in 1944, were substantially increased to exceed 60,000 tons in 1945. The quality of inner tubes made from butyl rubber in certain respects was even better than that of tubes from natural rubber; notably, tear resistance, ease of repair and rate of air leakage. The rubber bureau of the WPB reported that Buna S tires made in Germany were probably not as good as U.S. GR-S tires with the same natural rubber content. Even though the Germans had been forced to favour their tires by extensive reduction of operating speeds, ply separation still was a constantly recurring defect. The Russians, as well as the Germans, might have been bothered with tire quality for their reports revealed constant difficulties with ply separation. Although these reports favoured the use of Russian synthetic SK to lessen ply separation, another report cited the benefit to be had from vast foreign experience (probably U.S.). Reports from Great Britain indicated that tire producers there would welcome a change from GR-S to the more elastic natural rubber for tires as soon as it was available.

**Other Rubber Products.**—Before the war tires and tubes

made in the United States consumed 70% to 72% of the natural rubber supply. During World War II this requirement had risen to 90%, thus leaving only 10% of the available natural rubber for other products. This adjustment forced the abandonment of many lines of civilian manufacture, such as golf ball thread, which would be resumed with the relaxation of government regulations. The great bulk of industrial rubber articles, hose, belting, coated fabrics, gasket and sealing rubbers, rubber-lined tanks, footwear, drug sundries and household rubber articles had to be made mainly from synthetic rubber and reclaim. The civilian requirements for all necessary rubber products were thus satisfied. From Great Britain it was also reported that while natural rubber is superior in tires, the so-called mechanical rubber goods could be made from synthetic rubber satisfactorily. In the United States alone the consumption of natural rubber, synthetic rubber and reclaim for 1945 exceeded 1,150,000 tons.

**Plastics.**—World-wide interest was shown by rubber manufacturers in the synthesis and use of plastics. In the United States leading rubber companies during 1945 opened new factories for the production of vinyl polymers and enlarged research facilities for the study of plastics. New co-polymers, made from styrene (cerex) and from vinyl chloride (geon) were announced. From Great Britain reports indicated that plastics can be used to supplant rubber as insulation, as coatings for fabric, and for paper and as calendered sheeting. German scientists were notably successful in perfecting synthetic plastics which displaced rubber or synthetic rubber in established uses, such as sponges and foams, coatings for leather, rubber, wood and paper, and as adhesives for foil structures, for rubber to metal and for rubber to tire cord.

**Trends Confronting the Rubber Industry.**—Until 1942 the rubber industry had been occupied mainly with the problems of mass production of rubber articles. During World War II many manufacturers of rubber goods were hired by Rubber Reserve company to make synthetic rubber in government-owned plants, which required the mastery of chemical and engineering facilities on a very extensive scale. The extent to which the government would continue to operate synthetic rubber plants and the extent to which private industry would take over in the event that government did not continue to operate them were questions vitally affecting the future of the rubber industry. The resumption of rubber goods manufacture for civilians during 1946 had to be undertaken on a very large scale. It was estimated that at least 66,000,000 passenger tires would be

RUBBER AND CANVAS L.C.T., assembled and inflated on an English beach. It was revealed on Dec. 5, 1945, that entire fleets of dummy invasion craft carrying dummy tanks, artillery and other equipment, were used along the English Channel to confuse enemy observers before the invasion of Normandy

produced as compared with the high of 50,000,000 fabricated in both 1940 and in 1941. In addition to domestic shortages, the rehabilitation of captured war torn areas required large tonnages of conveyor belt, hose and other mechanical equipment. Rubber factories in Europe seemed to have survived the war with comparatively slight damage. Those in France and Belgium were actively engaged in producing tires and tire repair material for the United Nations by the first quarter of 1945. GR-S, carbon black and other raw materials were sent to these factories from the United States and the plants were operated effectively under the military government. Factories in Great Britain, like those in the United States, were occupied mainly in making necessary military articles. In Germany where rubber factories were not primary targets, operations were being resumed. The largest tire plant near Hanover, which was never bombed, and a tire plant at Hamburg were running in the autumn on as nearly full scale as their supplies permitted. The synthetic rubber factories in the British and French occupation zone of western Germany which had been bombed were capable of operations on a restricted scale by late October. They were limited by supply of materials rather than by destruction of the plants. The rubber industry of the world was expected to be confronted with an active market for a few years which would require nearly 1,700,000 tons of raw rubber each year. By taking advantage of new uses for rubber, and by creating demands for rubber goods in countries outside North America, rubber requirements could be nearly doubled without threat to the potential supply which comprised 1,700,000 tons of natural and 1,500,000 tons of synthetic rubber. (H. L. TL.)

**Ruffini, Ernesto** (1888– ), Archbishop of Palermo, was born at Nantua, France. He studied at Rome, specializing in scripture. He was professor at the Pontifical Propaganda university in Rome where he taught many U.S. priests and bishops. He entered the Sacred Congregation of Seminaries and Universities, and following the death of the prefect, Cardinal Gaetano Bisletti, was retained as secretary. Working directly under His Eminence Pope Pius XI, he prepared the *Constitution Deus Scientiarum Dominus*, inaugurating sweeping scholastic reforms in seminaries and universities. He personally supervised implementation of the constitution for Roman Theological, Canonical and Scriptural universities.

Named archbishop of Palermo in Oct. 1945, to succeed His Eminence Luigi Cardinal Lavitrano, he was serving as prefect of the Sacred Congregation of the Affairs of Religious when he was named in an announcement of Dec. 23, 1945, to the Sacred College of Cardinals. He was created and proclaimed a cardinal at consistory on Feb. 18, 1946.

**Rumania.** A kingdom in southeastern Europe. After 1939 its frontiers underwent many changes. Bessarabia and northern Bukovina were lost to the soviet union; northern Transylvania to Hungary; southern Dobruja to Bulgaria. On Jan. 1, 1940, Rumania had an area of 113,919 sq.mi. and a population of 19,900,000. On Jan. 1, 1941, Rumania's territory was c. 74,000 sq.mi. and its population was c. 16,000,000. In 1945 the whole territory of Transylvania was restored to Rumania. Capital, Bucharest. Principal cities: Bucharest (648,162); Jassy (104,471); Galatz (102,232); Timisoara (89,872). Religion: mostly Greek Orthodox. King: Michael I (Mihai). Prime minister (1945) Peter Groza.

**History.**—At the beginning of 1945 Rumania found itself under a coalition government headed by General Nicolai Radescu as prime minister and minister of the interior. General Radescu had been a staunch adversary of the Germans and of the war against Russia. The governmental coalition, the National Democratic Front, under the leadership of the vice-premier, Peter Groza, found itself, however, in disagreement with the premier. Large scale demonstrations, supposedly organized by the Communist party which played the decisive part in the National Democratic Front, manifested against Radescu. The hands of the king were forced by the arrival in Bucharest of the Russian vice-commissar of foreign affairs, Andrew Vishinsky, who on

March 3 prevailed upon the king to dismiss Radescu and to appoint a new cabinet under Peter Groza. Radescu, fearing for his personal safety, took refuge in the British legation.

The new government represented officially a coalition. The premier, Peter Groza, was the founder and leader of the Plowman's Front which had split off from the National Democratic Peasant party. Vice-premier and minister of foreign affairs was George Tatarescu, formerly a henchman of ex-King Carol II during his attempts at a royal dictatorship. The key ministries were in the hands of communists: the ministry of the interior which commands the *siguranza*, the dreaded secret police, under Theodor Georgescu; the ministry of justice under Lucretiu Patrascanu; and the ministry of propaganda and the press under Petru Constantinescu. The greatest influence was exercised by Miss Anna Pauker, a veteran communist leader. The two most important Rumanian parties, the National Democratic Peasant party under Julius Maniu, the veteran democratic leader of the Rumanian people, and the (conservative) Liberal party under Dinu Bratianu, were not represented in the government. Much of the communist propaganda was directed against Maniu.

The new government was strengthened by the restoration of that part of Transylvania which Rumania had ceded to Hungary in 1940. This question of Transylvania was settled by Russia without awaiting the peace conference or any consultation with the Allies. In Transylvania Hungarian inhabitants received wide minority rights.

Measures in favour of the poorer peasantry were undertaken as part of a land reform program. Nevertheless Rumania was faced at the end of 1945 with a breakdown in its agriculture and near famine conditions, in spite of the fact that Rumania is a highly fertile country which in normal years exports grains. Rumania's industries, especially its important oil wells, were incorporated into the Russian economy.

The growing dissatisfaction in the country, with the absence of democratic liberties and with the existing regime, led the king to appeal in August 1945 to the United States, Russia and Great Britain for the democratization of the regime. But Prime Minister Groza refused to resign. His visit to Moscow in September strengthened his position. At the beginning of November popular demonstrations on the occasion of the king's birthday were suppressed. The Liberal party protested in a statement against the abrogation of civic liberties. Even the Social Democrats who formed part of the coalition threatened with opposition. Their two cabinet members, Labour Minister Lotar Radaceanu and Education Minister Stefan Voitec, pleaded with the communists for the formation of a single worker's party. The overwhelming majority of the Social Democrats and their leader Constantine Titel Petrescu, rejected such a close collaboration and decided to maintain their identity.

**Agriculture, Minerals and Trade.**—Rumania is predominantly an agricultural country. The few industries which exist, like flour milling, brewing and distilling, are directly connected with agriculture. The chief crops of the country are maize, wheat, barley, rye and oats. The principal minerals are petroleum and natural gas, iron and copper ores, salt and lignite. The output of natural gas in 1937 amounted to 62,175,022,462 cu.ft.; the output of crude oil in 1938 amounted to 7,286,000 short tons, while it decreased in spite of all German efforts to 5,511,000 tons in 1942. In 1940 only 1,532,000 tons of petroleum were exported, as against 3,075,000 tons in 1939.

The monetary unit is the lei, nominally 10 milligrams gold (.900 fine). It had a value in 1940 of about 0.69 cents U.S. In 1938 the total imports amounted to 18,767,000 lei, the exports to 21,532,000 lei. The chief importing countries were Germany, Czechoslovakia, Great Britain, France and Italy; while the

chief exports went to Germany, Great Britain, Czechoslovakia, Italy and France. The estimated ordinary revenue for 1942-43 amounted to 71,200,000,000 lei; the expenditures to 72,500,000,000 lei. The public debt on April 1, 1939, was 104,127,428,054 lei. (See also WORLD WAR II.) (H. Ko.)

**Rundstedt, Karl Rudolf Gerd von** (1875- ), German army officer, was born Dec. 12 at Aschersleben. He served in Alsace and Poland during World War I. Von Rundstedt achieved military renown in the Polish and French campaigns early in World War II and was created a marshal of the reich, July 19, 1940. He participated in the Russian campaign, 1941, but after his defeat at Rostov, he was shifted to France in 1942. After the scuttling of the French fleet at Toulon, Nov. 27, 1942, Hitler made von Rundstedt military ruler of France. Von Rundstedt was the wehrmacht's supreme commander on the western front when the Allies invaded France, June 6, 1944. He was replaced a month later, but was returned to this post in Sept. 1944, according to German broadcasts. His surprise counteroffensive launched in mid-December 1944 against Allied lines in the Belgium-Luxembourg sector, tore a 60-mi. hole in Allied lines before it was stopped. Although this attack was regarded as a brilliantly planned operation, Rundstedt's forces were spent after the first three weeks of battle. On March 22, 1945, information reaching the Allied 21st army group said Rundstedt had been replaced by Kesselring. Captured May 1, by U.S. troops, Rundstedt later declared that the systematic aerial destruction of German communications was one of the principal reasons for Germany's defeat.

**Running:** see TRACK AND FIELD SPORTS.

**Rupertus, William Henry** (1889-1945), U.S. marine corps officer, was born Nov. 14 in Washington, D.C. A member of the national guard in Washington, he attended the Coast Guard academy at New London, Conn., 1910-13, and then entered the marine corps as a second lieutenant. He served as commander of a marine detachment on board a U.S. battleship attached to the British grand fleet in World War I, and later was assigned to duty in Haiti and Peiping. At the outbreak of World War II, he was assistant commander of the 1st marine division, one of the first units to be sent to the South Pacific. He was advanced to the rank of brigadier general in 1942 at the onset of the Solomons invasion, and to that of major general the following year. He was decorated with the navy cross by Fleet Admiral Chester W. Nimitz for his outstanding service in the Solomons campaign, and in May 1944 was given the D.S.M. by General MacArthur for "skilful and courageous leadership" in the New Britain campaign. After the Peleliu campaign in the autumn of 1944, Gen. Rupertus was returned to the marine corps base at Quantico, Va., where he became commandant of the corps school. He died suddenly, apparently of a heart attack, while in Washington, March 25.

**Rural Electrification.** The electrification of rural areas in the United States, which progressed at an accelerated rate after the establishment of the Rural Electrification administration in 1935, resumed its upward trend during 1945 following the relaxation of wartime regulations over the use of materials in May 1945 and the cessation of World War II. During the early part of the year, as well as during 1944, operators of rural electric distribution systems, particularly rural electric co-operatives, were active in the preparation of plans to extend electric service

on an area-wide basis. The relaxation of regulations in May 1945 permitted them to begin the execution of these plans in order to meet the increasing demands of farmers for electric service. At the end of the year it was estimated that approximately 2,900,000 farms were receiving central station service, or about 48% of the total number of farms reported by the 1945 agricultural census.

The growth of rural electrification is shown by the approximate number and percentage of electrified farms, as follows: Dec. 1934, 744,000, 10.9%; June 1936, 840,000, 12.3%; June 1938, 1,300,000, 19.1%; June 1940, 1,870,000, 27.1%; June 1941, 2,126,000, 34.9%; June 1942, 2,337,000, 38.3%; June 1943, 2,454,000, 40.3%; June 1944, 2,573,000, 42.2%; June 1945, 2,726,000, 44.7%. These percentages are based on the total number of farms reported by the census in 1935 and 1940. A considerable part of the accelerated progress after 1935 was accounted for by rural electric, nonprofit co-operatives. Nearly 95% of the loans of the Rural Electrification administration were made to these co-operative enterprises which were owned by the consumer members and governed by boards of directors selected by the members.

By the end of 1945, Rural Electrification administration had allotted approximately \$669,000,000 to finance on a self-liquidating basis the construction of rural distribution lines and other electric facilities. At the close of the year, 842 systems had in operation about 454,000 mi. of line serving more than 1,391,000 consumers in comparison with 410,000 mi. serving 1,217,000 consumers at the end of 1944. Approximately 80% of the consumers were farms; the balance consisted of nonfarm residences, industrial and commercial enterprises, and community institutions. During 1945 borrowers of funds from the Rural Electrification administration increased their financial stability, as was indicated by payments in advance of due date of about \$20,000,000, cumulative to the year end, on their debts to the government in contrast to about \$374,000 overdue more than 30 days.

Perhaps the outstanding development in rural electrification during 1945 was the preparation, and in many instances the completion, of plans to extend electric service into rural communities on an area coverage basis. Rural electric co-operatives in many states completed plans for bringing service to substantially every unserved farm and other rural residence in their areas, and after the end of the war began active construction of lines. Through these comprehensive plans for area coverage the co-operatives reported that they would be able to serve on an economical basis "thin" territory and isolated communities that otherwise could not be reached except at exorbitant cost.

Because of its contribution to farm production and farm living, increased application of electric power to farm and rural community activities continued to receive much attention of research agencies and others in the development of new and improved electrical farm equipment. Among those items receiving greatest interest were electrical applications for mow-curing of hay and farm refrigeration equipment, particularly freezers and food storage chests for the farm home. The increased use of electricity in rural areas as consumers become acquainted with its many benefits was shown by consumption figures released during 1945 by the Rural Electrification administration. It was reported that on REA-financed systems under 3 years old the average monthly residential consumption was 59 kw.hr. while on systems over 6 years old the monthly consumption was 97 kw.hr. (R. T. B.)

## Russian Literature.

The transition from war to peace had not yet made itself felt in soviet Russian literature at the close of 1945. The Union of Soviet Writers held its first peacetime session at which the war achievements and the prospects for the future were evaluated. As if answering some implicit criticisms and fears, the chairman, Nikolay Tikhonov, said that there was no need to fear for soviet literature and its future; but at the same time he criticized some aspects of war literature. Meanwhile the war itself continued to be one of the dominant themes. Among the best works of the year was Konstantin Simonov's novel *Dni i nochi* (*Days and Nights*), a simple and yet stirring story of the critical months in the battle for Stalingrad, written from the point of view of its defenders holding out in the remnants of the city. Unlike much wartime literature, it is free from all bombast and gives a very good picture of the real battle of Stalingrad. Simonov's play *Tak i budet* (*And So It Shall Be*), dealing with the end of the war, was criticized for its sentimental optimism.

The growing interest in Russia's past, which was one of the features of the existing patriotic phase, was responsible for Alexei Tolstoy's last work—two plays under the common title *Ivan Grozny* (*Ivan the Terrible*). The author described this as "a dramatic tale in two parts." It is in fact a series of rather disjointed dramatic *tableaux* held together by a common underlying idea and showing some colourful episodes in the life of Ivan the Terrible and the Russian state. Its main defect is an ill-concealed tendency to project the present into the past. Tolstoy died on Feb. 23, 1945, at the age of 62, and his death was lamented by many as the greatest loss for Russian literature after Maxim Gorky.

In poetry the outstanding event was a small book of original poems by Boris Pasternak, *Zemnoy prostor* (*The Earthly Expanse*), his first for many years. Its chief characteristic is unexpected simplicity coupled with the freshness and originality which one has come to associate with Pasternak.

Russian literature in exile was carried on mainly in the U.S. A new novel by M. Aldanov, *Istoki* (*The Sources*), was in course of publication in the *New Review*. Its theme is the not so distant "antecedents" of the Russian revolution. Among Russian books published in the U.S. was M. Zetlin's *Pyatery i drugie* (*The Five and Others*), a novelized account of some of the leading Russian composers and their friends against the background of the period, and V. Zenzinov's *Vstrecha s Rossiyey* (*An Encounter with Russia*), a valuable documentary work based on authentic letters found on Russian prisoners and dead during the Soviet-Finnish War. Attempts were being made to revive Russian literary life in Paris, but up to Oct. 1945, nothing had appeared beyond a slender almanac containing a fragment by Ivan Bunin and some stories and poems by younger writers. (G. St.)

**Rye.** The 1945 rye crop in the United States was estimated at 27,823,000 bu. compared with 25,872,000 bu. produced in 1944, and a prewar average of 41,434,000 bu. in 1934-43. The acreage for harvest was 2,096,000 ac., or 7% less than the 2,254,000 ac. harvested in 1944, and the average of 3,379,000 ac. 1934-43. The yield was above the average being 13.3 bu. per acre compared with 11.9 bu. in 1934-43. The shift from rye- to wheat-growing continued the trend that began ten years before. The season was generally favourable for the

U.S. Production of Rye in Leading States, 1945 and 1944

State	1945 bu.	1944 bu.	State	1945 bu.	1944 bu.
South Dakota . . .	4,495,000	4,508,000	Kansas . . . . .	788,000	987,000

crop except in Texas and New Mexico where droughts reduced yields. (J. C. Ms.)

**Saar.** The Saar is an industrial and mining district on the border of France and Germany. Area: 738 sq.mi., of which 574 sq.mi. were part of the Prussian Rhine province and 164 sq.mi. part of the Bavarian Palatinate. Pop. 770,000. According to the Treaty of Versailles Germany ceded to France the 31 coal mines in the territory as compensation for the destruction of the coal mines in northern France. The territory was administered by the League of Nations from 1920 until 1935 when, according to the provisions of the Treaty of Versailles, a plebiscite was held which decided with an overwhelming majority for the return of the territory to Germany. The large majority of the voters were working-class people of the Roman Catholic faith; the German government which they desired to join was the National Socialist administration of Chancellor Hitler. France received 900,000,000 francs compensation for the relinquishment of the mines.

In 1945 the Saar territory was under French occupation. The French government pressed for a delineation of Germany's western frontiers and were opposed to a return of the Saar under a central German administration. (H. Ko.)

**St. Louis.** Eighth largest city of the United States, St. Louis, Mo., had a population of 816,048 by the federal census of 1940, with an additional 541,567 persons living within the greater metropolitan area. Mayor (Jan. 1, 1946): Aloys P. Kaufmann (Rep.)

A landslide municipal election on April 3, 1945, elected every Republican candidate for city office except one, and carried Mayor Aloys P. Kaufmann to a second term by a record majority of 108,654 votes to 54,512 votes.

In violation of the rules, 860 of the 2,300 eligible members of the police department organized a union. The board of police commissioners tried and dismissed the two leaders, and as 1945 ended a court test of the union's legality was in prospect.

The city was starting work slowly on a \$43,427,000 postwar public improvement program voted in 1944. Condemnation proceedings began to acquire a 4,000-ac. tract for a new airport and ground was purchased to increase existing Lambert-St. Louis municipal airport from 1,060 to 1,400 ac.

A midyear survey showed contracts awarded St. Louis area firms from the start of the national defense program totalled \$2,500,000,000. During the first 11 months of 1945, 52 new industries were started and 142 expanded, representing a capital investment of \$24,770,446.

After administering the archdiocese of St. Louis for 42 years, Archbishop John J. Glennon was appointed to the College of

Cardinals by Pope Pius XII on Dec. 23, 1945.

The municipal government maintained its enviable financial position, beginning the 1945-46 fiscal year (April 9, 1945) with a \$3,145,275.29 surplus. Bonded debt was \$49,296,000; valuation of real and personal property, \$1,093,968,700; tax rate (city, state and school), \$2.75 on \$100 valuation. During the 1944-45 fiscal year the city treasury received \$46,585,427.21, paid out \$41,611,727.26. Budget appropriation for 1945-46 was \$36,006,172.98. (E. L. R.)

**Salazar, Antonio de Oliveira** (1889- ), Portuguese statesman, was born at Santa Comba Dão (Coimbra) on April 28, 1889. In 1916 he became professor of economics at Coimbra university. Shortly after the revolution of May 1926 the Portuguese president, General António Oscar de Fragosa Carmona, invited him to join the government as finance minister; he accepted the post, but, finding himself unduly restricted, resigned within a week. Less than two years later, after stipulating that complete freedom within his department should be given him, he resumed office on April 27, 1928. In 1930 Dr. Salazar founded the civil organization known as the National union. On July 5, 1932, he became president of the council of ministers; in the following year the new corporative constitution of the Portuguese republic was submitted to the country in a plebiscite and a national assembly elected. In 1936 Dr. Salazar assumed the portfolios of war and foreign affairs. In Sept. 1944, in drastically remodelling his government, he handed over the war portfolio to a former under-secretary in the department, but retained the portfolio of foreign affairs.

On May 18, 1945, Dr. Salazar made a notable speech to the national assembly justifying Portuguese neutrality in World War II *vis à vis* the Anglo-Portuguese alliance. "It is at times," he observed, "a great favour to be quiet, provided one is vigilant and faithful; and it cannot be disputed that it served a positive interest of the Allied nations for us not to have become involved in the conflict." He went on to stress the desire of the government to collaborate in the postwar world, and forecast possible modifications of the constitution and the national assembly. He strongly affirmed the truly democratic character of his form of government, "if democracy, in addition to its political significance, may have a social significance and foundation."

In Oct., 1945, Dr. Salazar permitted the creation of political parties other than his own, that of National Union, and announced general elections for Nov. 18. (See PORTUGAL.)

(E. A. P.)

**Sales, Retail and Wholesale:** see BUSINESS REVIEW.

**Saliege, Jules-Geraud** (1870- ), cardinal archbishop of Toulouse, was born at Mauriac, France, on Feb. 24. He was ordained in 1895. He taught mathematics and theology, and received an army citation as chaplain in World War I. Consecrated bishop in 1926, he was named archbishop of Toulouse in 1928.

His episcopate was distinguished by a profound social action among apostolate and the working classes. During World War II, in the midst of a German-ordered mass manhunt for Jews, he issued a pastoral read in all churches in the archdiocese denouncing racial persecution. Arrested by the Germans, he was released because of advanced age and ill-health and was permitted to remain in his archbishopric.

Named to the Sacred College of Cardinals according to an announcement of Dec. 23, 1945, he was created and proclaimed cardinal on Feb. 18, 1946.

**Salt.** Despite cutbacks in the war program, the output of salt in the United States rose from 15,214,152 short tons in 1943 to 15,717,171 tons in 1944, including 3,448,238 tons of rock salt, 3,942,621 tons of evaporated salt, and 8,326,312 tons of salt in brine. Even with this quantity available, demand constantly crowded supply. War demand increased many uses and created some new ones. The 1944 output was 57% greater than that of 1939, and many postwar readjustments were in prospect as the industry returned to normal civilian supply.

In Canada, 1944 production also reached a new high, at 695,217 short tons, as compared with 687,686 tons in 1943, but dropped back to 678,000 tons in 1945. (G. A. Ro.)

**Salten, Felix** (1869-1945), German writer, was born Sept. 6 in Budapest, of Jewish parents. He was drama critic of the Viennese paper, *Neue Freie Presse*, and he wrote the German version of *Abie's Irish Rose*, produced in Vienna in 1927 by Max Reinhardt. German critics found the translation an excellent one in which very little of the original humour was lost. A prolific writer, Salten produced numerous novels, essays and plays. His first great success *Bambi* was translated into English, 1932, and became a classic of animal life. The work was further popularized by Walt Disney's motion picture of the same name. Salten fled from Austria during the Hitler invasion and went to live in Switzerland. Other of his works are *Die Kleine Veronica* (1903); *Neue Menschen auf Alter Erde* (1925); *The Hound of Florence* and *Fifteen Rabbits* (1930); *Samson and Delilah* (1931); *City Jungle* (1932); *Florian, the Emperor's Stallion* (1934); *Perri* (1938); *Bambi's Children* (1939); *Renni, the Rescuer* (1940) and *Good Comrades* (1942). He died in Zurich, Oct. 8.

**Salvador, El.** A republic on the west coast of Central America, the only one without a Caribbean littoral. It is the smallest Central American state but the most densely populated (area, 13,176 sq.mi.; pop. 1,880,000 by 1943 off. est.). The capital is San Salvador (1943 est. pop. 107,813); other cities are Ahuachapán (13,636), Cojutepeque (15,095), Nueva San Salvador (formerly Santa Tecla) (24,016), San Miguel (18,945), San Vicente (13,330), Santa Ana (46,806), Sonsonate (17,320). Language, Spanish; religion, Roman Catholic. Presidents in 1945: General Osmín Aguirre y Salinas (provisional) and General Salvador Castañeda Castro.

**History.**—A presidential election was scheduled for three days starting Jan. 14, 1945, with several candidates in the field on Jan. 1. All withdrew before the election date, however, with the exception of General Salvador Castañeda Castro who was classed as the administration candidate. The election was held in spite of the withdrawal of opposing candidates, with Castañeda Castro reportedly receiving 312,754 votes. On Feb. 19 the Aguirre administration was recognized by several nations including the United States; representatives of El Salvador were not admitted to the Chapultepec conference, however, until Castañeda Castro assumed office on March 1.

A general amnesty was decreed shortly after the inauguration of the new president. A national assembly started preliminary meetings Feb. 1 and a regular session on Feb. 15; it later took up consideration of constitutional revision. In the last week in November an amended version of the constitution of 1886 became the national charter, replacing the constitution of 1939. Among amendments was one prohibiting re-election of the chief executive at the end of his four-year term.

A cabinet reorganization involving four portfolios took place on Oct. 8. Plots to unseat the government were reported on several occasions during the year, and one revolt, which included an attempt to bomb police barracks from an aeroplane, was suppressed in June. A state of siege was declared (June 11) and several leaders were arrested and some persons exiled.

The government announced on May 21 that relations with the soviet union would be established, although no envoy would be sent at the time for reasons of economy. The United Nations charter was ratified July 12. President Castañeda Castro held meetings during the summer with President Arévalo of Guatemala, with the objective of eliminating barriers between the two nations as a first step toward eventual union of the several Central American nations. A protocol signed later in the year according to press reports eliminated certain restrictions on commerce and provided for co-operation in cultural fields.

Little information on economic developments in El Salvador in 1945 were made public.

**Education.**—Primary schools (1941) numbered 1,330, with an enrolment of 89,792; intermediate schools numbered 58, with an enrolment of 3,309. The national university had 506 students. The 1944 budget allowed 2,397,552 colones for education (1943: 2,246,000 colones).

**Finance.**—The monetary unit is the colón, valued in 1945 at 40 cents U.S. The 1945 budget estimated revenue at 31,665,262 colones, and expenditures at 31,561,336 colones. Bank notes in circulation on Oct. 31, 1945, were estimated at 43,769,000 colones.

**Trade and Resources.**—Imports for the first 10 months of 1945 were valued at 9,172,000 colones (for the same period in 1944: 7,885,000 colones); exports were valued at 1,743,000 colones (for the same period in 1944: 4,224,000 colones). Coffee exports for the quota year ending Sept. 30, 1945, amounted to 997,589 bags of 60 kg. each (1943-44: 1,043,864 bags). Gold production for 11 months of 1944 amounted to 23,110 troy oz.; silver output to 276,284 troy oz.

**Communication.**—Railways were estimated at 375 mi., with two roads in operation. All-season highways totalled 1,378 mi. in length, with an additional 2,300 mi. of unimproved roads. Air service was supplied by T.A.C.A. and Pan American Airways.

**Salvation Army.** The Salvation Army carried religious and social services to approximately 225,000,000 servicemen and women on 26 fighting fronts during World War II. War urgency needs were met by 3,000 Red Shield clubs, often improvised huts established on beachheads, in jungles and in desert outposts. In the U.S., Salvation Army clubs and those operated through the U.S.O. provided personal and accommodation services including mending, wrapping and mailing packages, checking valuables, emergency transportation, financial and legal aid, sleeping accommodations, voice recordings and home hospitality. Salvationists visited approximately 595,000 wounded and sick servicemen in hospitals.

By late 1945, 1,000 mobile canteens had travelled a distance equivalent to four times around the world. Many mobiles were equipped with library, radio set, film projector, record player, and could serve 4,600 men on one trip. Twenty-three Salvation Army mobile units were attached to the invasion army in France. An auxiliary service to the global land Red Shield canteens was provided in Australia by a motor launch which met sea and land convoys and visited remote outposts on island rivers.

Among later war-related developments were included: a home

in France for children whose parents could not be found; a refugee boys' home and "Warphanage" in China; soldiers' and sailors' rest homes in South America and the middle east; homes for evacuees, demolition crews and moving units in England after bombings; grocery stores in Canada for stranded families in war boom towns; dining rooms serving meals to war workers' children; restaurants in Belgium for refugees; hostess houses throughout the U.S. for families and friends of enlisted men.

Evangelical work on the fighting fronts was adapted to circumstances and location. Religious guidance and consolation were given all individuals requesting them, regardless of creed, race or colour.

The regular network of rehabilitation services continued in 1945 to minister in practical ways to emergency needs of humans.

The year 1945 was marked in the U.S. by a national spiritual campaign; intensification of youth activities; increased war service emphasizing aid to veterans in adjusting to civilian life. The co-ordination of the work was directed by Commissioner Donald McMillan, national secretary, national headquarters, New York city. (See also CHURCH MEMBERSHIP.)

(D. Mn.)

**Samoa, American.** A group of islands in the South Pacific, a U.S. possession by virtue of a tripartite treaty with Germany and Great Britain regulating the disposition of the Samoan archipelago, concluded in Nov. 1899. Area, 76 sq.mi. Pop. (1940) 12,908. The capital is Pago Pago, on the island of Tutuila. There are six inhabited islands, Tutuila, Aunuu, Ofu, Olosega, Tau and Swains. There is also an uninhabited coral atoll, Rose Island, located 70 mi. east of its nearest neighbour.

American Samoa is governed by a naval officer, commissioned as governor by the president. There is a native governor in each of the three administrative divisions; these native governors appoint the county chiefs, who select the village chiefs. The natives are of Polynesian stock and more than doubled in numbers during the period of U.S. rule. There were 36 public schools with an enrolment of about 3,000, and 6 private mission schools in 1943.

The chief product of American Samoa is copra, of which about 1,100 tons are exported annually. Taro, breadfruit, yams, pineapples, oranges and bananas are produced commercially. The government handles the crop for the natives. The budget for 1939 called for an expenditure of \$127,317; the estimated income was \$106,231.

Construction of a naval air base at Pago Pago began in 1940. Information about American Samoa was restricted because of the need for military secrecy, but it is known that, especially during the first phase of the war in the Pacific, it was a valuable communications link, located as it was almost midway between Hawaii and Australia.

(W. H. Ch.)

**Samoa, Western:** see MANDATES; PACIFIC ISLANDS, MANDATED.

**Sand and Gravel.** The continued decline in building activity in 1944 reduced the demand for sand and gravel in the United States to the prewar level. The output of sand dropped from 82,053,000 short tons in 1943 to 68,978,000 tons in 1944, and of gravel from 152,011,000 tons in 1943 to 125,805,000 tons in 1944. While construction uses for sand declined, most types of industrial use increased.

The production of sand and gravel in Canada decreased from 25,744,469 short tons in 1943 to 24,941,950 tons in 1944.

## San Francisco.

San Francisco, Calif., had a resident population of 827,400 on Aug. 1, 1945, according to the special U.S. census and ranked about 10th among United States cities, whereas in 1940 it was 12th with a population of 634,536. Although the population increase during the period amounted to 192,864 or 30.4%, the total number of dwelling units of 235,329 increased but 7.3%, producing an extremely tight housing situation with little immediate relief in sight. Mayor in 1945: Roger D. Latham.

Persons employed in San Francisco as World War II ended in 1945 were estimated at 400,000 compared with 380,000 in 1944 and 271,000 in 1940. As the year ended there were several thousand unfilled employment opportunities in San Francisco in special fields for skilled workers and clerical workers with specialized training. However, the unemployment claims were about double the opportunities.

Substantial developments in the bay area during 1945 resulted in the attainment of new highs in several fields of activity in San Francisco including financial transactions, postal receipts, retail sales, airport traffic, real estate sales and utilities. San Francisco bank debits for 1945 were approximately \$21,200,000,000 or about \$1,500,000,000 more than 1944, while bank clearings for 1945 amounted to \$15,744,000,000 compared with \$14,835,000,000 in 1944, or an increase of 6%. Retail sales in San Francisco for 1945 were estimated at \$840,000,000 or about \$76,000,000 more than 1944. Wholesale sales rose to an estimated total of \$3,043,000,000 or \$60,000,000 more than 1944. Real estate sales in San Francisco toward the end of 1945 established a new all-time monthly high breaking a 20-year record made in March 1925.

Cumulative reports for the first 11 months of 1945 revealed increases over the same period of 1944 in building permits of 135% in number and 130% in value, the real estate sales value 39%, department store sales 13%, financial transactions 7.6%, airport plane traffic 168%, passengers 75%, air mail loaded 118%, electrical energy sales 9%, industrial and commercial gas sales 12%. At the same time commercial failures shrank to an all-time low.

San Francisco's funded debt on June 30, 1945, was \$113,285,300, leaving an actual margin for future bond issues of \$101,226,297. Estimated revenues receivable during the 1945-46 fiscal year amounted to \$107,169,882 of which \$44,078,401 was from taxes. The total assessed valuation for the 1945-46 fiscal year was \$1,216,677,471; tax rate, \$4.83 per \$100 assessed valuation. Tax delinquency for the fiscal year ended June 30, 1945, was at an all-time low of 0.66% and the lowest in the U.S. among large cities. (R. B. Kr.)

**San Francisco Conference:** see UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION.

## San Marino.

An independent republic in northern Italy, 14 mi. southwest of Rimini by road. Area: 38 sq.mi.; pop. (Sept. 1939) 14,547. Chief town: San Marino. Executive power is exercised by regents two of whom are appointed every six months from the popularly elected grand council. Wine, cattle and building stone from the Mount Titano quarries are the chief exports.

Elections were held in March 1945 and out of a total of 60 seats, 18 went to the Communists, 18 to the Socialists and 4 to the Republican Democrats. The remaining 20 went to the Right Wing.

**Santo Domingo:** see DOMINICAN REPUBLIC.

**São Tomé:** see PORTUGUESE COLONIAL EMPIRE.

## Sapieha, Adam Stefan

(1867- ), cardinal archbishop of Cracow, Poland, was born at Krasieczyn, son of an ancient aristocratic family, on May 14. He made theological studies at Innsbruck and in Rome, and was ordained in 1893. Named bishop in 1911, he was elevated to archbishop in 1925 when Cracow became an archdiocese. He was president of Lwów Theological seminary from 1897, advisor to Vatican on Polish affairs from 1905, and president of "The Rock," Christian social organization, from 1904. In 1928 he reimbursed and reopened the Polish Church and Hospitium of St. Stanislaus in Rome, founded in 1578 by Cardinal Hosius.

He defiantly, in public, denounced nazism, fascism and communism. He refused to admit to the Cracow cathedral King Carol of Rumania while on an official visit because of the king's open concubinate. During World War II the archbishop's residence was termed a "fortress" by the populace because the nazis dared not invade it. In 1940 the archbishop locked the doors of the Wawel cathedral and personally retained the keys.

Nominated to the College of Cardinals according to an announcement of Dec. 23, 1945, he was created and proclaimed a cardinal at consistory on Feb. 18, 1946.

**Sarawak:** see BORNEO.

## Saskatchewan.

The central of the three prairie provinces of Canada, Saskatchewan was created a province in 1905, by the act of the Canadian parliament. The area is 251,700 sq.mi.; the population (1941 census) 895,992. The chief cities of Saskatchewan are as follows: Regina, the provincial capital (58,245); Saskatoon (43,027); Moose Jaw (20,753); Prince Albert (12,508); Weyburn (6,179). Local administration is in the hands of a provincial parliament composed of a lieutenant governor, an executive council, and a legislative assembly of 52 members. Saskatchewan is represented at Ottawa by 21 members of the house of commons and six senators.

**History.**—During 1945, the Co-operative Commonwealth Federation government continued in office. T. C. Douglas was provincial premier. On Nov. 21, the by-election in Wadena returned a C.C.F. member. As, however, the party held the seat previously, this did not alter the representation in the assembly: C.C.F. 47; Liberals 5; Active Service members 3. At the dominion elections on June 11, Saskatchewan returned the following members to Ottawa: C.C.F. 18; Liberals 2; Progressive Conservatives 1.

**Education.**—For the school session, 1941-42, the enrolment in all educational institutions was 223,097; total revenue for the provincially controlled schools in 1943 was \$13,673,798. The University of Saskatchewan, with its seat at Saskatoon, is the provincial university. Registration in the autumn of 1945 was 2,780.

**Agriculture.**—In 1944, the estimated gross value of agricultural production was \$624,608,000; farm income, \$503,300,000. In 1945, the wheat crop was estimated to be 158,000,000 bu. The value of field crops was \$295,223,000 (1944, \$448,894,000). For the first 50 weeks of 1945 the inspected slaughtering of livestock were as follows: cattle 161,276; calves 23,339; hogs 669,436; sheep 48,344. Indicative of the changing character of agriculture was the construction of a \$200,000 linseed oil plant in Saskatoon, the first unit of the \$2,250,000 industrial program of the Saskatchewan wheat pool. (J. I. C.)

**Savings and Loan Insurance Corporation, Federal:** see HOUSING.

**Savings Banks:** *see* BANKING.

**Schwellenbach, Lewis Baxter** (1894– ), U.S. jurist and cabinet member, was born Sept. 20 in Superior, Wis. He was graduated from the University of Washington, Seattle, Wash., in 1917 with an LL.B. degree and served with the U.S. army as a private during World War I. After the war, he returned to Washington where he was admitted to the bar in 1919. He became active in Democratic state politics, and in 1934 was elected to the U.S. senate. During his tenure, Sen. Schwellenbach supported the administration in both its domestic and foreign policies. He voted for the wage-hour law and the Wagner acts, and was also a member of the La Follette civil liberties committee. He resigned from the senate in Dec. 1940 to become federal judge of Washington state, eastern district. President Truman named him secretary of labour, May 23, 1945, and his appointment was approved by both the A.F. of L. and the C.I.O. He assumed office on June 30. He endorsed, Sept. 25, the theory of raising the minimum wage law to 65 cents an hour, asserting that the resulting wage increases would not register an appreciable effect on the costs of production, and urged the senate to provide legislation to this end. Schwellenbach also declared himself, Oct. 29, in favour of equal pay for women and advocated legislation banning pay differentials because of sex. He was occupied with numerous labour problems in the latter half of 1945, including the oil and automobile industry strikes and a threatened steel walkout.

## Scientific Research and Development,

**Office of.** The Office of Scientific Research and Development (OSRD) was created in the Office for Emergency Management (*q.v.*) by executive order 8807 of June 28, 1941. Dr. Vannévar Bush of the Carnegie institution of Washington was appointed director. Within the OSRD were set up the National Defense Research committee (NDRC) and the Committee on Medical Research (CMR), the former to assist the director of the OSRD in the mobilization of the scientific personnel and resources of the U.S. on instruments of warfare, and the latter to advise and assist with special reference to the medical personnel and resources of the U.S. An Office of Field Services (OFS) was established within OSRD to facilitate the introduction of OSRD-developed equipment into actual military operations. The NDRC operated as a committee of the Council of National Defense from June 27, 1940, until June 28, 1941, during which time it entered into a number of contracts which were assumed by the OSRD.

During the period from July 1940, to the cessation of hostilities with Japan, OSRD entered into contracts totalling more than \$500,000,000 principally for the development of new weapons for the armed services. After the cessation of hostilities most of these contracts were terminated; and by the end of 1945 only a few remained active for a limited amount of basic research. Among the most spectacular developments released in 1945 in which OSRD played a leading part were the atomic bomb and the proximity fuse. In a report to the house of representatives, the committee on appropriations wrote of OSRD on Oct. 17, 1945: "The contribution that it has made to the winning of the war is inestimable. Without such contribution, it is safe to say that victory still would await achievement."

(I. St.)

**Scrap:** *see* SECONDARY METALS.

**Sculpture.** Sculpture, like the other arts, during the year 1945, continued to reflect the unsettled state brought upon it by World War II, with its inevitable curtailments of production and promotion facilities. During the final swing toward victory, however, an effort was made toward restoring clarity and direction through forward-looking planning on the part of groups as well as individuals. Distinguished work was done by conservatives in the trend of the great traditions of early sculpture, notably by sculptors working in the field of monuments and memorials. Through the fortunate continuance of these projects artists were engaged to commemorate figures of national importance, and to employ sculpture as the focal point of planned public areas in cities. Sculptors such as Sir William Reid Dick, who was engaged on an equestrian statue in 1945, and Paul Manship, who was active in producing reliefs of new importance, gave impetus through their work to the survival of public sculptural works.

This field, however, was not without criticism in relation to the discussion of future war memorials, with the hope, as was expressed in various quarters, that careful consideration be given them by specialists and high standards maintained. One block of sentiment was heard to advocate practical educational and utilitarian memorials, in which sculpture played a part, in preference to statues of an indiscriminate and traditionally sentimental character.

Sculpture in the forms most generally exhibited continued to manifest the contrasts developed throughout late years. A large body of sentiment favoured work done in a style which, though influenced by historical traditions, was yet developing along lines of lively vitality. Large displays of sculpture thus continued in 1945 to be predominantly naturalistic in their interpretations of sculptural ideas. In another and diverse style the revolt against tradition was advanced by an increasing number of talents, led by outstanding and very popular artists such as Jacques Lipchitz, Henry Moore, José de Creeft and Ossip Zadkine. These artists explored the possibilities of expressing themselves and the age by drastic simplification of forms or by abstract shapes, often imaginative or surrealistic in their symbolisms, which bore little or no relationship to nature. Moore, in England, was still one of the chief exponents of work with this outlook, although an important 1945 work of his showed an interesting departure on more traditional lines. Whereas Lipchitz, one of the U.S. refugees from France, proved a favourite of the *avant-garde* by his resourceful and vigorous mythological works based on South American primitive folklore.

Preoccupation with simplicity, volume, mass and a restricted formalization of the human figure—all strong manifestations of the interest of youth before World War II, fell off in consequence no doubt of the depletion of the ranks of young sculptors who were drawn into the armed services. Whether this trend would revive in its former state when many returned to their former occupations appeared to be a subject for the future to determine. Meanwhile, popular with an increasing number of sculptors was the matter of materials which were susceptible to new sculptural effects. Not only did artists carve directly in stone or wood with increased appreciation of a greater variety of mediums, but others adopted sheet iron and steel to manipulate imaginatively with few preliminary models or none.

Sculpture requires practical encouragement, and in the last year of the war patronage was far from substantial. Artists assumed the responsibility, however, of making presentations of their work which in many cases were generously appreciated. Transportation problems, labour and other important factors tended to restrict the holding of special, large-scale sculpture shows. With reconversion, materials and instruments of the profession were expected to increase the facilities to a large extent

JACOB EPSTEIN, photographed in 1945 with an almost completed sculpture of Ernest Bevin, then newly appointed British foreign secretary

denied to sculptors in 1945.

Another promise entertained during 1945 which bid fair to be achieved was the tendency to draw sculptors into collaboration with architects. Plans for memorials, in some areas, followed the custom of arranging competitions for teams of artists and architects, with the commendable purpose of unifying their activities. In other quarters there was the tendency to commission sculptors and craftsmen of repute to design and execute memorials in materials and in quality more fitting for cemeteries than the familiar markers which had so long disfigured them. (See also ART EXHIBITIONS.) (C. BU.)

**Seabees.** Following authorization of the first regiment on Dec. 28, 1941, the naval construction battalions, popularly known as the "Seabees," participated in every major amphibious operation of World War II, including the occupation of Japan and of Japanese-controlled areas in China.

At the end of the war, 83% of the 240,000 Seabees on active duty were serving overseas. Under the direction of the bureau of yards and docks and the immediate supervision of officers of the civil engineer corps of the navy, they built, operated and maintained more than 400 naval bases in outlying areas.

In 1942, the construction efficiency of the Seabees was estimated to be in the ratio of five to one as compared with that of Japanese construction troops. By 1945, the construction potential of the average Seabee battalion had been increased by 300%.

Seabees were among the first naval personnel to occupy Japan, detachments landing at Yokosuka naval base, Tokyo bay, prior to the formal surrender. Other units landed at Nagasaki and in Shanghai, China. In atom-bombed Nagasaki, the Seabees built new roads, a radio station, docking facilities, warehouses and oil storage and distribution stations. In Shanghai they provided base facilities for U.S. naval aviation.

The last major Seabee project of the war was the base at Okinawa. This was planned as the greatest single wartime construction undertaking in military history. Installations scheduled for Okinawa included 22 airfields and 1,100 miles of road.

Comparable construction was not possible at Iwo Jima, because of the small land area. The major assignment there was the construction of three airfields. The largest of these, called Central airfield, has one of the longest runways in the Pacific—9,800 ft. Serving as an emergency landing point for bombers unable to return to the Marianas after sweeps over Japan, Central airfield during the closing months of the war was used by more than 5,000 B-29s.

In the Philippines, Seabee construction projects mounted into the hundreds. Warehouses, hospitals, personnel structures, airfields, roads, harbours and fleet facilities were provided.

Marianas bases—Guam, Tinian and Saipan—taken in 1944 were completed by mid-1945. A major fleet anchorage was developed at Apra harbour. Vast networks of airfields were placed in operation on all three islands, and supply and staging area facilities expanded.

Seabee "special" battalions, trained in stevedoring operations, handled cargo at all of the advanced bases. Other Seabee bat-

DIVING SEABEES off Iwo Jima, going down in their water-proof skin-tight suits to hook up an underwater aviation gasoline pipeline to a coast guard manned tanker, so that it could refuel the Iwo airfield, captured in Feb. 1945

tations operated pontoon causeways and floating pontoon gear. A few were organized expressly for truck operation. Smaller detachments specialized in camouflage, automotive repair, operation of spare parts depots, demolition work, petroleum supply and fog generation. The use of artificial fog as a protective screen saved thousands of lives and many ships at Okinawa.

Seabee maintenance units, a quarter of a battalion in size, took over the operation and supervision of public works and utilities at advanced bases after major construction had been completed, freeing full battalions for other assignments.

When bases were no longer needed, maintenance units were assigned the job of closing them down. Eventual "roll-up" of many bases was anticipated even before landing operations were launched. Equipment and installations were planned so that they were 90% salvageable for future use. (B. ML.)

**Seabrook, William Buehler** (1886–1945), U.S. author and explorer, was born Feb. 22 in Westminster, Md., the son of a Lutheran minister. He was a student at Roanoke college, Salem, Va., and later received the Ph.B. and A.M. degrees from Newberry college, Newberry, S.C., in 1905 and 1906 respectively. He worked for a time on a Georgia newspaper and then went to Europe where he did free-lance writing while studying philosophy at the University of Geneva, Switzerland. He returned to the United States, remaining in Atlanta from 1909 to 1915. In the latter year, he went overseas to join the French army. Gassed at Verdun, he was invalided out of the service with a *croix de guerre*. After the war, Seabrook matured as a writer of distinction. He had that rare gift of creating exceptional excitement and interest in his writing. In 1924 he went to Arabia, lived among the nomadic desert tribes and wrote his observations and experiences in *Adventures in Arabia* (1927). His second book, *The Magic Island*, describing his experiences among Haiti's voodoo worshippers, was a Literary guild choice in 1929. In *Jungle Ways* (1931), Seabrook related how he ate a cannibal meal of human flesh in the Liberian jungles. Then he wrote *Air Adventure* (1933) and *The White Monk of Timbuctoo* (1934). In 1934, Seabrook had himself committed to an institution in a New York suburb where he took a cure for alcoholism. He gave an account of his experiences in *Asylum* (1935), a best-seller. Among his other works are *These Foreigners* (1938), a drama-

tized survey of the American melting pot; *Witchcraft* (1940) and *No Hiding Place* (1942), an autobiography. He died Sept. 20 at his farm home near Rhinebeck, N.Y., from an overdose of sleeping tablets, according to the local medical examiner.

\*Ratio of secondary recovery to consumption of new metal; where a second figure appears, this is the percentage of the total secondary metal recovered from old materials the remainder having come from the reworking of new plant scrap.

†Other platinum group metals.

The passing of the peak of World War II demand for metals is clearly reflected in the reduced recoveries of secondary metals, and the increased percentages of recovery made from old scrap. Recoveries from new plant scrap declined appreciably.

During the first nine months of 1945 dealers' receipts of nonferrous scrap totalled 772,064 short tons, and shipments in the same period were 773,733 tons, with a corresponding reduction in stocks. These figures compare with receipts of 771,789 tons and shipments of 753,521 tons in the first three quarters of 1944, and receipts of 1,030,262 tons and shipments of 991,398 tons in the full year.

In 1944 there was a small decline in consumption of ferrous scrap in the U.S., to 61,349,201 short tons, against 61,650,956 tons in 1943. The 1944 total included 35,426,349 tons of plant scrap and 25,922,852 tons of purchased scrap. The make-up of steel furnace charges showed little change; plant scrap content rose from 28.7% in 1943 to 29.0% in 1944, while purchased scrap dropped from 21.8% to 21.2%, the total declining from 50.5% to 50.2%. The sudden ending of the war with Japan brought an abrupt change in consumption in 1945, already declining after the close of hostilities in Europe. Average consumption during 1944 was 2,952,000 tons of plant scrap and 2,160,000 tons of purchased scrap monthly; during the first seven

months of 1945 these averages in tons were 2,520,000 and 2,000,000 respectively, dropping to 1,937,000 and 1,625,000 in Aug. 1945. Consumption during the first eight months of 1945 was 20,187,000 tons of plant scrap and 15,627,000 tons of purchased scrap, a total of 35,814,000 tons, 12% below the average rate for 1944.

**Second World War:** *see* WORLD WAR II.

## Secret Service, U.S.

Secret service agents of the treasury department mapped and executed security plans to protect President Franklin D. Roosevelt at the "Big Three" conference at Yalta and President Harry S. Truman at Potsdam. Agents were also with President Truman at the United Nations conference in San Francisco and safeguarded the signed charter until its delivery to the state department June 28, 1945. Protection was extended by the secret service to distinguished visitors, including Prime Minister Winston Churchill, the earl of Athlone, governor general of Canada, Sergio Osmeña, president of the Philippines, Madame Chiang Kai-shek of China, Princess Juliana of the Netherlands, and Norway's Crown Prince Olaf, Princess Martha and their children.

In 1945, the secret service uniformed force protected \$232,657,030,473 in money, stamps, bonds and other government securities in transit, and another \$285,000,000,000 in production and storage in Washington and Chicago.

Counterfeiting was reduced to a point where it was not a serious menace and losses to the public through acceptance of counterfeits were held to a minimum. Total representative value of bogus bills and coins seized during the year was \$68,325, of which only \$28,852 represented losses to innocent victims. There were 58 persons arrested for counterfeiting.

Thefts and forgeries of government checks and war bonds were the principal secret service enforcement problems. Two plants for the production of counterfeit treasury checks were seized by agents before the counterfeiters succeeded in defrauding many merchants. There were 16,380 forged checks received for investigation and agents arrested 1,722 check thieves and forgers. Of these, 706 or about 41% were under 21 years of age. Special efforts were made in a "Know Your Endorser" campaign to prevent forgeries by minors by warning merchants to use extreme care in cashing checks for juveniles. In New York city alone, 31 juvenile forgers were arrested.

Forged and altered war bonds received for investigation totalled 2,587 and resulted in 241 arrests. In New York city the theft of \$2,125 worth of war bonds deprived the registered owner of support and necessitated his entry to a charity home before he submitted a claim for duplicate bonds.

There were 1,594 convictions for check forgery in the fiscal year 1945 as against 1,480 the previous year. Bond forgery convictions totalled 192 in 1945 as against 68 for the fiscal year 1944. Convictions for currency counterfeiting numbered 42 in 1945 and 54 in 1944. Convictions were obtained in 97.8% of the cases of all types which went to trial in 1945 as compared with 97.9% of cases tried in 1944. Fines in criminal cases in 1945 totalled \$126,713 and imprisonments totalled about 2,178 years. Additional sentences aggregating about 2,338 years were suspended or probated. There were 21,493 criminal investigations disposed of during 1945.

The secret service crime prevention program, which for several years had substantially reduced the financial losses suffered by the public, was actively continued in the "Know Your Money" and "Know Your Endorser" campaigns in accordance with the treasury department's effort to stimulate public respect for federal law and to secure the public's co-operative assistance in preventing crime by pointing to the stake which the honest

THE UNITED NATIONS CHARTER, completed in 1945, being transported from San Francisco, Calif., to Washington, D.C., under secret service protection in a 75-lb. fireproof safe

citizen has in the effort.

**Securities:** *see* BUSINESS REVIEW; STOCKS AND BONDS.

## Securities and Exchange Commission.

The membership of this federal agency at June 30, 1945, consisted of the following: Chairman Ganson Purcell and Commissioners Robert E. Healy, Sumner T. Pike, Robert K. McConnaughey and James J. Caffrey. Commission headquarters were in Philadelphia, Pa.; regional offices were maintained in Atlanta, Ga., Baltimore, Md., Boston, Mass., Chicago, Ill., Cleveland, O., Denver, Colo., Fort Worth, Tex., New York, N.Y., San Francisco, Calif., and Seattle, Wash. The laws administered by the commission and its activities thereunder during the fiscal year ended June 30, 1945, are discussed below.

**Securities Act of 1933.**—Securities registered with the commission under this act during the fiscal year for public sale aggregated \$3,280,589,071, bringing the total of such securities to \$28,625,981,071. Through registration, disclosure is obtained of pertinent financial and other information upon which investors may determine whether to purchase securities being offered. Registration is not to be taken as a guarantee against loss, for the act contains no prohibitions against the sale of registered securities for lack of merit but imposes instead the requirement of truthful and adequate disclosure of facts upon which investors may determine their merits. The act also prohibits misrepresentation, deceit and other fraudulent practices, under penalty of fine, imprisonment or both.

**Securities Exchange Act of 1934.**—Under this act, which provides for disclosure of information concerning securities listed and registered on exchanges and for regulation of securities trading both on exchanges and in the over-the-counter market, there were registered with the commission on June 30, 1945: 19 national securities exchanges; 3,675 separate security issues of 2,185 companies listed upon exchanges; 4,046 individuals or firms doing a broker-dealer business in the over-the-counter markets; and one association of over-the-counter securities dealers. In addition to the disclosure of financial and other

information concerning listed securities, holders of such securities must be apprised of all relevant facts when their votes on corporate affairs are solicited. The commission has important powers of surveillance over securities trading practices in order to prevent fraud, manipulation and other conduct prohibited by the act. During the fiscal year, 16 individuals or firms were found by the commission to have violated provisions of the act, with the result of revocation of their registrations with the commission or their suspension or expulsion from membership in exchanges or the security dealers association. Actions of this nature to June 30, 1945, totalled 263.

**Public Utility Holding Company Act of 1935.**—In its regulation of the financing and related activities of registered public utility holding companies and their subsidiaries, the commission during the year ended June 30, 1945, passed upon the issuance of securities by these companies in the aggregate amount of \$1,308,641,520 as meeting standards prescribed in the act for protection of investors, consumers and the public; this brought the total of securities so approved to \$7,323,809,432. Insistence upon imposition of more conservative financing policies to meet the standards of the act operates to protect investors while at the same time improving the financial condition of the issuing companies.

Major readjustments in the composition of holding company systems to limit their operations to geographically integrated and economically co-ordinated units, and to simplify the corporate and capital structures of system companies and redistribute voting power among security holders on a fair and equitable basis were in progress during the fiscal year. As of June 30, 1945, the commission had approved 56 plans (in whole or in part) submitted voluntarily to accomplish these objectives of the act; and it had issued numerous other integration and simplification orders directing action to that end. To that date, nonretainable properties and interests divested from holding company systems aggregated approximately \$4,182,000,000; other properties the subject of divestiture orders aggregated \$3,500,000,000. In addition, holding companies with total system assets of \$3,850,000,000 were subject to liquidation and dissolution orders at June 30, 1945.

**Trust Indenture Act of 1939.**—Trust indentures covering debt securities in the principal amount of \$1,791,190,320 were qualified during the year ended June 30, 1945, as meeting the standards of this act, bringing the total of securities for which indentures had been qualified to \$6,137,318,058.

**Investment Company Act of 1940.**—On June 30, 1945, there were registered with the commission under this act 366 investment companies engaged in the business of investing and trading in securities. Their activities must conform to standards prescribed in the act for the protection of investors.

**Investment Advisers Act of 1940.**—Individuals and firms registered under this act as engaged in the business of advising others with respect to security investments numbered 783 as of June 30, 1945; their activities must conform to prescribed standards.

**Bankruptcy Act, Chapter X.**—In performance of its function under this act as adviser to federal courts in corporate reorganization cases under chapter X, the commission participated in 116 cases during the year ended June 30, 1945, and presented to the courts its analysis and views as to the fairness and feasibility of 63 plans of reorganization proposed in such cases.

**Enforcement Activities.**—In court actions instituted by the commission during the year ended June 30, 1945, to enjoin fraudulent or other unlawful activities in the purchase and sale of securities, 32 individuals and firms were permanently enjoined from continuing the acts and practices complained of;

this brought the total of persons so enjoined to 1,089. Indictments and convictions on charges of fraudulent securities transactions numbered 23 and 17, respectively; the 35 persons convicted brought the total of such convictions to 1,135. (See also STOCKS AND BONDS.) (G. PL.)

**Seeing Eye, The.** From 1928, when Morris Frank brought the first guide dog, Buddy I—bred and trained by Mrs. Dorothy H. Eustis and Elliott S. Humphrey in Switzerland—to pass the test of New York street traffic, the Seeing Eye in the U.S. has every year come nearer its ambition to supply all capable blind persons with the independence and companionship a soundly educated dog gives. In 1945, 885 men and women relied upon such dogs. Seeing Eye provides dog guides to the war blind (happily fewer than feared), at no cost to the service men or the government; and Morris Frank, guided by Buddy I's successor, visited 94 army, navy and Veterans' administration hospitals to advise in the care of the newly blinded. Funds come from a membership of about 23,000 sympathetic people and from special gifts and legacies. Replacement of dogs (whose lives are shorter than ours) is guaranteed, so as not to let slip back into helplessness anyone whom a guide dog has once set free. The Seeing Eye, Inc., is at Morristown, N.J. Henry A. Colgate is president. (B. TA.)

**Seismology.** The year 1945, marking the end of hostilities over most of the world, was the signal for a general reorganization of seismological activities on a peacetime basis. Indicative of this was the first meeting after the beginning of World War II of the executive committee of the International Union of Geodesy and Geophysics in London in December to make future plans for its various affiliates, including the International Seismological association. In the United States, steady progress in seismological research continued and there was little disruption of routine observatory activities.

Earthquake activity was below normal. On Nov. 27, 4,000 persons were killed near Karachi, India, by a seismic sea wave from a submarine shock in the northern part of the Arabian sea. Several hundred were killed at Adana, Turkey, on March 20. The greatest shock of the year, as indicated by seismograph records, occurred near the Bismarck archipelago on Dec. 28. The outstanding shock in the United States occurred in open country about 40 mi. southeast of Seattle, Wash., and destroyed a few chimneys. Ground and air waves generated by the atomic bomb blast in New Mexico on July 16 were recorded on seismographs in many states.

The outstanding research development was the navy's successful use of seismographs to spot and track hurricanes from minute ground waves called microseisms which had long been known to be associated with barometric lows. The method was originally developed at St. Louis (Missouri) university.

An investigation of local earthquakes due to the water load at Boulder dam revealed that they occurred mostly on a fault system a short distance upstream from the dam. Reclassification of important earthquakes according to a magnitude scale based on instrumental records was advanced at the Pasadena Seismological laboratory. Records back to 1904 were being used. (See also DISASTERS.) (F. NN.)

**Selective Service, U.S.** Administration of the Selective Training and Service act during 1945 was marked by defeat of both Germany and Japan, but in January of that year the need of combat replacements was acute and, partly because of losses and a temporary military setback in Germany, calls for men from the armed forces, which had dropped down to considerably under 90,000 a month,

were raised with a view of obtaining 750,000 men by July of 1945.

On Jan. 1, 1945, the manpower picture, registrants 18 through 37, looked like this:

Total living registrants . . . . .	22,084,000
Class I-A . . . . .	797,000
(Note.—Class I-A figures include men being processed for preinduction physical examination, postponed inductions, appeals, etc.)	
Class I-A* . . . . .	3,000
(Note.—Men being processed for preinduction examination, etc., who, without local board approval have left employment for which they were deferred. SS Reg. 622.22-2)	
Class IV-F (rejected for military service) . . . . .	3,592,000
Unclassified . . . . .	61,000
Classes II-A and II-B (deferred in occupations other than agriculture) . . . . .	4,198,000
Classes II-A(L) and II-A(F), II-B(L) and II-B(F) (deferred in occupations other than agriculture and not qualified for general military duty) . . . . .	864,000
Classes II-C and III-C (deferred in agriculture) . . . . .	1,472,000
Classes II-C(L) and II-C(F) (deferred in agriculture and not qualified for general military duty) . . . . .	132,000
Class III-D (deferred as hardship cases) . . . . .	51,000
Class I-C (registrants who have become members of the armed forces) . . . . .	10,753,000
(Note.—Includes a substantial number who have been discharged or transferred to the reserves. Does not include registrants 38 years of age or over, women, or non-registered enlisted men, i.e., men enlisted at age 17, etc.)	
All other classes . . . . .	161,000

During the month of Jan. 1945, Selective Service took coordinated steps with other agencies to reduce the number of withdrawals from war industries for reasons other than induction in order to assist the procurement of men for the armed forces and simultaneously to keep the production of war munitions at a high level. Provisions were made generally tightening the requirements for deferments in the older age groups, particularly 26 through 29. This was necessary because there were insufficient men in the most desirable age group—below 26—to meet the calls placed on the local boards.

Local boards and appeal boards were furnished with what was known as the War Manpower commission's "List of Essential Activities," revised to specify those considered most critical, as a guide in determining selections for induction among the age group 26 through 29.

The local boards were also advised that such registrants, to the fullest extent possible, should be called in the following order:

- (1) Registrants not employed in an activity appearing on the essential activities list;
- (2) Registrants whom the local board found to be employed in relatively unimportant jobs in essential but not critical activities;
- (3) Registrants whom the local board found to be employed in relatively unimportant jobs in critical activities;
- (4) Registrants whom the local board found to be engaged in relatively more important jobs in essential activities;
- (5) Registrants whom the local board found to be engaged in more important jobs in critical activities.

If a replacement was available for a registrant, however, the local boards were informed that he should be classified as available for induction, regardless of his place in the list.

In Feb. 1945, the regulations were further revised, making a distinction in the standards for registrants 30 through 33 and those 34 through 37. The reason was that the supply of men in the group below 26 was virtually exhausted and the number 26 through 29 was extremely limited. Consequently, the revised regulations provided that a registrant 30 through 33, to be deferred, had to be "necessary to" as well as "regularly engaged in" an activity in war production or in support of the national health, safety or interest; while a registrant 34 through 37 need only be "regularly engaged in" such an activity.

Registrants in the age group 18 through 37 who left the employment for which they were deferred without the consent of their local board were classified as available for service.

The manpower pool on May 1, 1945, shortly before the defeat of Germany, is shown by the following table:

HOME FOR LEAVE and reassignment in 1945, a veteran of the European war hurries from a New York dock with his mascot in one hand and his lunch in the other

	Total	Per cent
Total living registrants (18 through 37) . . . . .	22,023,000	100.0
Class I-A . . . . .	1,024,000	4.6
(Note.—Includes men being processed for preinduction examination, postponed inductions, appeals, etc.)		
Class I-A* . . . . .	52,000	0.2
(Note.—Men being processed for preinduction examinations, etc., who, without local board approval, have left employment for which they were deferred)		
Class IV-F (rejected for military service) . . . . .	3,253,000	14.8
Class II-A and II-B (deferred in occupations other than agriculture, most of whom have not had physical examination) . . . . .	3,451,000	15.7
Classes II-A(L), II-A(F), II-B(L), and II-B(F) (deferred in occupations other than agriculture and not qualified for general military service) . . . . .	1,325,000	6.0
Classes II-C and III-C (deferred in agriculture, most of whom have not had physical examination) . . . . .	1,297,000	5.9
Classes II-C(L) and II-C(F) (deferred in agriculture and not qualified for general military service) . . . . .	241,000	1.1
Class III-D (deferred as hardship cases) . . . . .	46,000	0.2
Unclassified . . . . .	60,000	0.3
Class I-C (registrants who have become members of the armed forces) . . . . .	11,119,000	50.5
(Note.—Includes registrants discharged or transferred to the reserves. Does not include registrants 38 or over, women or non-registered enlisted men, i.e., men enlisted at 17, etc.)		
All other classes (includes public officials, ministers and divinity students, conscientious objectors, and ineligible aliens) . . . . .	155,000	0.7

A reduction in calls came shortly after the defeat of Germany, but General Hershey reminded local boards that "the release of men who have fought long and well depends on sending others to fill their places" in summing up the changes in Selective Service policies which became effective May 23, 1945.

General Hershey described the objectives of the changes in policy in these words:

- (a) To continue to meet the calls of the armed forces;
- (b) To continue to defer for industry and agriculture the men they must have to carry on adequate production of munitions of war and food;
- (c) To resubmit for re-examination men under 26 who have been rejected for military service—especially those individuals who the local boards, their examining physicians, or the medical advisory boards believe can render military service;
- (d) To defer men 30 and over, especially fathers, when they are rendering service which the local board believes to be contributing to the national health, safety and interest. In the attainment of this objective, the local board should decide whether or not a registrant has a moral

right to leave a war job, the farm, or the merchant marine until he is no longer needed. When the local board decides that it is the registrant's duty to finish the job for which he has been continually deferred, he is not entitled to the privilege of continued deferment if he fails to remain at his post, regardless of age or marital condition;

(e) To permit the occupational deferment indefinitely of registrants 30 and over and those unfit for military service;

(f) To permit the local boards to indefinitely defer in I-C or I-G those men who have completed—either under the point system, physical disability discharge, or otherwise—sufficient service to warrant relief from induction;

(g) To permit local boards to resubmit for induction registrants discharged from the armed forces whose service has been insufficient to entitle them to be relieved from induction.

Revised requirements announced in June provided that to be eligible for occupational deferment a registrant 30 through 33, as well as a registrant 34 through 37, need merely be "regularly engaged in an activity in support of the national health, safety, and interest or useful to the community, or in an activity in war production or in an agricultural occupation or endeavour essential to the war effort." It was previously required that registrants 30 through 33 be found "necessary to" as well as "regularly engaged in" the occupations described in order to be eligible for occupational deferment.

The national military manpower pool of male registrants, ages 18 through 37, was as follows immediately before the defeat of Japan was announced Aug. 14:

	Total	Per cent
Total living registrants. . . . .	22,029,000	100.0
Class I-A. . . . .	658,000	3.0
(Note.—Includes men being processed for preinduction examination, postponed inductions, appeals, etc. Of the total number in Class I-A, 299,000 are 18 through 25, who are being processed and of whom only about 50,000 are available to fill a call at any one time.)		
Class IV-F (rejected for military service). . . . .	3,256,000	14.8
Class II-A and II-B (deferred in occupations other than agriculture, most of whom have not had physical examination, and of whom 107,000 are aged 18 through 25). . . . .	3,445,000	15.6
Classes II-A(L), II-A(F), II-B(L) and II-B(F) (deferred in occupations other than agriculture and not qualified for general military service). . . . .	1,409,000	6.4
Classes II-C and III-C (deferred in agriculture, most of whom have not had physical examination, and of whom 239,000 are aged 18 through 25). . . . .	1,265,000	5.8
Classes II-C(L) and II-C(F) (deferred in agriculture and not qualified for general military service). . . . .	272,000	1.2
Class III-D (deferred as hardship cases). . . . .	45,000	0.2
Unclassified. . . . .	87,000	0.4
Class I-C (registrants who have become members of the armed forces). . . . .	11,430,000	51.9
(Note.—Includes registrants discharged or transferred to the reserves. Does not include registrants 38 or over, women, or non-registered enlisted men, i.e., men enlisted at 17, etc.)		
All other classes (includes public officials, ministers and divinity students, conscientious objectors, and aliens). . . . .	162,000	0.7

With the defeat of Japan, President Truman decreed a substantial reduction in calls of men for the armed services and at the same time lowered the age of acceptability for induction from under 38 to under 26.

No registrant over 26 years old was to be inducted, or ordered to preinduction physical examination, unless he volunteered. Local boards were advised to give special preference for occupational deferment to registrants under 26 engaged in transportation and coal mining, both of which industries were still hard pressed for manpower. Special consideration was also given registrants in national defense projects and key personnel in reconversion activities.

Classification II-B was eliminated in September. In Class II-B had been placed registrants "necessary to and regularly engaged in an activity in war production." These registrants were transferred to Class II-A, defined as "necessary to and regularly engaged in an activity in the national health, safety and interest," including:

(1) the production and services required to maintain the armed forces of the United States during the period of the occupation of enemy territory; (2) research, development and manufacturing of weapons or other items necessary to the maintenance of adequate national defense; (3) transportation and other activities required for the demobilization of our armed forces; (4) activities and services required for an expeditious reconversion from a wartime to a peacetime economy; and (5) other activities which the local board considers essential on a national or local basis.

In announcing a deferment plan for advanced students and teachers in scientific and engineering courses, General Hershey

told local boards that the demands of long-range national interest required a resumption of such advanced studies for men having the necessary qualifications and that this plan was set up "in order to fully develop the technical and scientific skills which have been acquired and to provide for adequate teaching facilities for returning veterans who desire to resume their studies in these fields." In consequence, the local boards were instructed to give serious consideration, under specified conditions, to the occupational deferment request of any registrant accepted by an accredited college or university as a candidate for a master's degree or a doctor's degree in the physical sciences or engineer courses; likewise for teachers of the physical sciences and engineering and those engaged in research in accredited colleges and universities.

Regulations were also amended to provide for the postponement of induction of high school students before they were 18 years old, until they were graduated or until they became 20 years of age, whichever was the earlier, with the provision that their course of instruction be pursued "continuously and satisfactorily."

Under specified conditions the local boards were also instructed to give special consideration to registrants under 26 pursuing a full-time course of study in medicine, dentistry, veterinary medicine or osteopathy until their graduation.

In December, national headquarters announced discontinuance of induction of fathers except in the case of volunteers. A registrant with less than three children could volunteer for induction but a registrant with three or more children was not acceptable to the armed forces and could not volunteer.

Regulations defined a father as follows:

The term "children" . . . shall include legitimate or illegitimate children from the date of their conception, children legally adopted, step-children, foster children, and persons who are supported in good faith by the registrant in a relationship similar to that of parent and children but shall not include persons 18 years of age or over unless they are physically or mentally handicapped.

Discontinuance of induction of fathers with three or more children had been announced previously, on Nov. 5.

Registrants who were interned as civilians by enemy nations, on or after Dec. 7, 1941, are not to be inducted into the armed forces, local boards were instructed on Dec. 28, 1945. Regulations were amended to provide for classification of such registrants in Class I-G, a deferred classification.

At the end of the year 1945 there were approximately 7,000 conscientious objectors assigned to some 150 civilian public service camps and projects. All of them 38 years of age or over had been discharged. Others were being released in accordance with the general plan of demobilization, but the rate of discharge was slightly below that of the armed forces. The peak number in the camps and projects was approximately 8,500.

The manpower picture, close to the end of 1945, for registrants 18 through 25 was approximately as follows:

	Total, ages 18-25		Age groups	
	Number	Per cent	19-21	22-25
Total living registrants. . . . .	8,818,000	100.0	3,167,000	4,768,000
I-C. . . . .	6,228,000	70.6	2,220,000	3,643,000
IV-F. . . . .	1,288,000	14.6	526,000	599,000
I-A, I-A-O, I-A*, I-A(B). . . . .	312,000	3.5	62,000	49,000
Unclassified. . . . .	133,000	1.5	24,000	48,000

The Selective Training and Service act specifically provides job preference for veterans. It provides that, if the veteran's military service was satisfactory, and he applies for his former civilian position, federal or private, within 90 days after release by the military, "such person shall be restored to such position or to a position of like seniority, status and pay." Concerning private employers, these words were added, "unless the em-

ployer's circumstances have so changed as to make it impossible or unreasonable to do so." And another provision requires that the veteran who has been restored shall not be discharged without cause within one year.

General Hershey repeatedly asserted that only congress can change the law and that aside from the responsibility of the director of selective service to administer the statutory provisions, no legal authority is given by the act to any individual, or any administrative body, to adjudicate the job rights of veterans either directly or indirectly.

United States district attorneys have the responsibility to represent veterans if they must go to court to obtain their civilian job rights, and the district courts of the United States are empowered to enforce compliance with the law's provisions.

The Selective Service act requires that "The Director of Selective Service . . . shall establish a personnel division with adequate facilities to render aid in the replacement in their former positions or in securing positions" for "those who have satisfactorily completed their service." That division in 1945 was functioning through 6,443 local boards, their clerical staffs and re-employment committeemen in co-operation with their state headquarters.

A comprehensive statement issued by General Hershey in Sept. 1945, defined the three main objectives of the Selective Service System's Veterans Assistance program as follows:

- (1) To assist veterans of World War II in obtaining re-employment in former positions, or positions of like seniority, status and pay, and to assist them in obtaining new employment, where desired;
- (2) To furnish information to veterans and to the public regarding rights, benefits and privileges of veterans under existing federal, state and local laws, and to refer inquirers to the proper agency, organization or person where such rights can most readily be obtained; and
- (3) To stimulate national, state and community awareness of their responsibilities for providing sufficient job opportunities to accomplish full employment for veterans.

This program is designed to be carried out through the full co-operation of all Selective Service agencies and personnel, compensated and uncompensated.

Fifty-five state organizations (including New York State Procurement office), 6,443 local boards, and 505 appeal boards comprised the Selective Service system in 1945.

There were 198,943 persons connected with the system on Dec. 31, 1945. Of this number 181,707 who were uncompensated, were divided as follows: 24,276 local board members; 7,889 government appeal agents; 75,827 members of advisory boards for registrants; 28,234 examining physicians; 7,394 examining dentists; 2,514 members of boards of appeal; 8,497 members of medical advisory boards; 18,096 re-employment committeemen; 8,449 advisers and field agents of the medical survey program; 1 state director; and 530 special advisers and consultants.

The original Selective Training and Service act, enacted Sept. 16, 1940, provided that not more than 900,000 men were to be in training at one time, and placed a 12-month limitation on length of service unless congress should declare the national interest imperilled.

The organization formed under the regulations was composed of a director of selective service appointed by the president and responsible to him; state directors appointed by the president upon recommendation of the governors of the states; at least one local board in each county or similar political subdivision, appointed by the president upon recommendation of the governors; one or more re-employment committeemen attached to each local board to advise and protect veterans in their rights to obtain their old jobs back as provided in the act; a medical examiner attached to each board; a government appeal agent to carry appeals in behalf of the registrant or the government; and one or more boards of appeal for each state, members of which were appointed by the president upon recommendation of the governor.

The act's termination date was set for May 15, 1945, except for certain provisions, including especially those having to do with veterans' re-employment rights.

Toward the end of 1944 the act was extended to May 15, 1946, unless the president should proclaim, or congress should declare by concurrent resolution, a termination of hostilities.

Congress passed a joint resolution removing the territorial restrictions on the use of the army immediately after the attack on Pearl Harbor, and on Dec. 20, 1941, amended the Selective Training and Service act of 1940 with provisions extending the period of military service from one year to the duration of the war, plus six months. The restriction that limited the number of inductees in training at any one time to 900,000 was likewise removed.

The registration age was extended by another law from 18 to 65 years, but liability for service was not extended at that time beyond the 20 to 45 year-old group.

Two polls taken during the year 1945 by the American Institute of Public Opinion, one in January and the other in July, showed that the majority public opinion approved of the manner in which the local boards were administering the Selective Training and Service act.

The question: "Do you think the draft is being handled fairly in your community?"

The result:

	Yes	No
January 1945 . . . . .	75%	25%
July 1945 . . . . .	79%	21%

Executive officers of the Selective Service system on Dec. 31, 1945, were: director, Major General Lewis B. Hershey; deputy director, Colonel Carlton S. Dargusch; asst. director, presidential appeals and advisory, Colonel John D. Langston; asst. director, camp operations, Colonel Lewis F. Kosch; asst. director, postwar plans, Colonel Victor J. O'Kelliher; chief liaison and legislative officer, Colonel Louis H. Renfrow; executive asst. to the director, Colonel Campbell C. Johnson; general counsel, Colonel George H. Hafer; budget officer, Lieut. Colonel Arthur R. Boone; chief information officer, Colonel James T. Coatsworth; planning officer, Colonel William Hart; adjutant general, Colonel Edmund H. Jones; presidential appeals officer, Colonel John N. Andrews; medical consultant, Colonel Richard H. Eanes; special assignments officer, Lieut. Colonel Joseph H. Berry, Jr. (See also FEDERAL BUREAU OF INVESTIGATION; HEART AND HEART DISEASES; INDIANS, AMERICAN; LAW; MEDICINE; PHYSICAL MEDICINE AND OCCUPATIONAL THERAPY FOR THE WOUNDED; WAR MANPOWER COMMISSION.) (L. B. H.)

**Selenium.** World production of selenium is of the order of 600-700 short tons a year, mostly from the United States and Canada. In the United States production dropped from 635,581 lb. in 1943 to 485,446 lb. in 1944. On the other hand, imports increased from 81,720 lb. in 1943 to 97,800 lb. in 1944. Supplies were plentiful, and production exceeded sales from 1942, and producers accumulated stocks of more than 500,000 lb. The Canadian production declined from 374,013 lb. in 1943 to 298,592 lb. in 1944, but increased to 419,000 lb. in 1945. (G. A. Ro.)

**Serédi, Justinian George,** CARDINAL (1884-1945), Hungarian prelate, was born April 23 in the village of Deaki, Hungary. As a young boy of

humble origin named George Szapucsek, he was encouraged by the local priest to study for the clergy. He joined the Benedictine order at 17 years of age, and attended the Benedictine university in Rome from which he was graduated with a doctorate in theology. He was ordained a priest in Hungary in 1918. He was soon recalled to Rome where Pope Pius XI named him counsellor of the Papal Committee for Codification of Canonical Law and also appointed him confidential secretary of the Vatican secretary of state. While in Rome he edited the 14 volumes of the *Codicis Juris Canonici Fontes*, a work on church law. On Dec. 19, 1927, he was created and proclaimed a cardinal priest by Pope Pius XI and became primate of Hungary and archbishop of Esztergom. Cardinal Serédi was as early as 1934 an outspoken opponent of nazism. By law a member of the Hungarian upper house, he frequently denounced anti-Semitic laws from that platform and used every opportunity to attack racial discrimination. He was put under house arrest in Oct. 1944 for his failure to endorse the nazi puppet regime of Premier Ferenc Szálasi, and was taken as a hostage by the nazis shortly before the Russian troops captured Esztergom, his official residence outside Budapest. A Vatican German-language broadcast, reported by the Federal Communications commission April 13, said that he had died of a heart attack but did not state where or under what conditions his death had occurred.

**Seventh Day Adventists.** Membership in United States and Canada, as of Sept. 30, 1945, was 211,552, a gain of 5,861 over the same date in 1944. World membership was 564,024, a gain of 14,734 over 1944. Total church receipts for the calendar year 1945 in the United States and Canada were in excess of \$24,000,000 representing a per capita contribution of \$113.20. This compares with \$22,612,119 for the calendar year 1944, representing a per capita of \$109.28. As of Sept. 30, 1945, there were 2,715 churches in the United States and Canada, and 6,691 in the world. Retail sales of literature by denominational publishing houses for the calendar year 1945 were in excess of \$7,000,000 in the United States and Canada; and in excess of \$9,000,000 in the world. Publications were issued in 185 languages. Enrollment in denomination's schools in the United States and Canada—elementary, secondary, college—as of Sept. 30, 1945, was 33,520; compared with 31,345 on the same date in 1944. Conferences and institutions throughout the world were, almost without exception, free of debt at the end of 1945, with assets in excess of \$100,000,000.

When World War II ended in the summer of 1945 approximately 12,000 Seventh-day Adventist youths were serving in the U.S. army in a noncombatant capacity, most of them in the medical corps. On Oct. 12, 1945, one of these men, Cpl. Desmond T. Doss, was awarded the congressional medal of honour, the first conscientious objector ever to receive this decoration.

During 1945 a special offering for rehabilitation of mission institutions was received in all the churches in the United States and Canada, netting a little more than \$1,000,000. This is part of a \$5,000,000 rehabilitation fund being created for overseas fields. During the year 220 tons of clothing were shipped abroad through the welfare organization of the church.

Important developments of the year included: A \$3,000,000 expansion program for the denomination's medical college located at Loma Linda and Los Angeles, Calif.; the creation of a plan for a closer integration with the church, legally and other-

wise, of certain self-supporting institutions; a plan for financial aid to physicians and dentists who wish to engage in private practice overseas; a plan for increasing the theological training of prospective ministers by the addition of eight quarters of seminary training beyond college; a plan for additional training for mission appointees, particularly in the matter of elementary medical care for primitive peoples.

The regular quadrennial world conference, which was to have been held in May 1945, will be held at Takoma Park, Washington, D.C., June 5-15, 1946. Plans for general postwar reorganization of the world work of the denomination were being held in abeyance until that conference. (See also CHURCH MEMBERSHIP.) (F. D. N.)

**Shaposhnikov, Boris Mikhailovich** (1882-1945), Russian army officer, was born Oct. 4 in Zlatoust, Russia. At 19 he entered the Moscow Military school and after completing his studies went into army service. He was graduated from the Academy of the General Staff in 1910, was commissioned an officer in the tsarist army, and was aide to Grand Duke Nicholas on the general staff during World War I. In May 1918, his offer to serve the red army was accepted; he was appointed an assistant commissar by Lenin and Trotsky, and in 1930 he joined the Communist party. He was chief of the general staff, 1929-31, and was again appointed to that position in 1937 when he also became a member of the central executive committee of the U.S.S.R. For his achievements in the Finnish campaign, 1939-40, he was promoted to the rank of marshal in May 1940. In the summer of that year, he resigned from the general staff because of ill health, but was recalled Oct. 31, 1941, when the Germans were nearing Moscow. Under his direction, the red army traded space for time, and curtailed the power of the blitzkrieg technique with a defense in depth strategy. His planning enabled the Russians to hurl back the nazis at Stalingrad in 1942. Russia's recognition of his achievements was evidenced by the nation-wide observance of his 60th birthday. As chief of the Frunze Red Banner Military academy, 1932-35, Shaposhnikov trained many of the outstanding red army commanders and helped lay the groundwork for the creation of a modern army. He was vice-commissar for national defense, 1941, Stalin's personal military adviser and deputy of the supreme soviet of the U.S.S.R. In April 1943, it was announced that owing to protracted illness, Shaposhnikov had been replaced as chief of staff by Marshal A. M. Vasilevsky. His publications include *The Cavalry* (1923), *On the Vistula* (1924) and *The Brain of the Army*, 3 vols. (1927-29). He died March 26.

**Sharpening Stones:** see ABRASIVES.

**Sheehan, Winfield R.** (1883-1945), U.S. motion picture producer, was born Sept. 24 in Buffalo, N.Y. After a brief try at newspaper work, he entered the motion-picture industry in 1914 in Hollywood, where he organized the studios of Fox Film corporation. He rose to become vice-president and general manager of the firm and in 1926 was put in charge of all its productions. Sheehan was credited with discovery of such screen celebrities as Theda Bara, Warner Baxter, Tom Mix, Will Rogers, Alice Faye, Janet Gaynor, Paul Muni, Shirley Temple and Rita Hayworth. He was one of the few producers to foresee the popularity of "talkies" and was quick to convert to sound stage equipment. Among his productions were *What Price Glory*, *David Harum*, *Florian*, *Seventh*

*Heaven and Cavalcade*, for which he won the 1933 Academy award. He left the Fox company in 1935. Nine years later, he returned to the industry with his own producing company, which filmed the story of Capt. Eddie Rickenbacker's life, *Captain Eddie*. He died in Hollywood, Calif., July 25.

**Sheep.** The great decline in the number of sheep on United States farms, which started in 1943, continued through 1945. On Jan. 1, 1945, there were 47,945,000 sheep and lambs according to estimates by the U.S. department of agriculture compared with 51,769,000 head a year earlier—a decline of 7%. Since the number of sheep and lambs on feed was larger than a year earlier the decline was entirely in stock breeding sheep. This decline brought the total down to the level of 1928. At this rate of decline the number of sheep appeared likely to drop to the low record of the early 1920s, when there were only about 33,000,000 head compared with the high peak of 56,700,000 head in 1942. During the first eight months of 1945 the slaughter of ewes was the largest on record for that period of the year.

The low returns for lambs and shortage of labour on the ranges were the chief factors causing the decline. Subsidies for lambs sold for slaughter were a factor that was expected to check the decline in lamb production. These subsidies were authorized through June 1946. While wool prices were relatively high the world stocks were large and the future of wool prices uncertain. With the end of World War II the labour situation began to improve as the experienced ranchmen, removed from the range country by the draft, were returning. Wool production in 1946 was expected to show further declines because of the marketing of the large numbers of mature sheep.

Lamb feeding was at a high level in 1945 in spite of the smaller lamb crop. A total of 6,630,000 head of sheep and lambs were reported by the U.S. department of agriculture to be on feed on Jan. 1, 1945. This compares with a high record of 6,979,000 head in 1943. The slaughter of lambs declined in midsummer, however, as growers withheld them for the higher subsidies for heavy animals compared with light ones.

The farm value of sheep and lambs declined to \$411,000,000 on Jan. 1, 1945, from \$451,383,000 a year earlier. This compares with a prewar average of \$339,000,000 from 1934-43. Prices of slaughter lambs were higher during the first half of 1945 than a year earlier but declined during the last quarter as slaughter became heavier on Dec. 1 when an increase in the subsidies became effective. (See also LIVESTOCK; MEAT; WOOL.)

FILMS.—*Farm Animals* (Encyclopædia Britannica Films Inc.).  
(J. C. Ms.)

**Shidehara, Kijuro,** BARON (1872– ), Japanese statesman and diplomat, was created a baron in 1920. He was graduated from the Imperial university, Tokyo (1895), entered the diplomatic service in 1896, and was appointed Japanese minister to the Netherlands (1914). The following year, he was made vice-minister of foreign affairs. He was Japanese ambassador to Washington, D.C. (1919-22), and attended the Washington conference (1921-22). Baron Shidehara was foreign minister from 1924-27 and from 1929-31, when he resigned in protest against Japanese seizure of Manchuria. This earned him a reputation as a "liberal." It was subsequently alleged, however, that Shidehara, related by marriage to the Mitsubishi family, had championed the practices and policies of the "Zaibatsu" (Japanese big business). He lived in relative seclusion until the fall of the first postwar cabinet of Prince Naruhiko Higashi-Kuni in 1945, whereupon Shidehara formed the new government on Oct. 6. On Oct. 9, the baron-premier

promised establishment of a "liberal" regime, but prudently refrained from indicating whether his government would include all parties of the left, including the communists. He urged caution in abolition of Shinto as the state religion and, like his predecessor, Higashi-Kuni, he defended the authority of the emperor. Shidehara complied, albeit reluctantly, with directives from Gen. MacArthur, such as the one of Oct. 11 under which the Japanese cabinet was ordered to allow Japanese women to vote, encourage labour unions, liberalize educational methods, abolish the "thought-control" organs and democratize Japanese economic institutions.

**Shigemitsu, Mamoru** (1887– ), Japanese statesman and diplomat, was born July 29 in Oita-ken. He received his law degree from Tokyo Imperial university, entered the foreign service in 1911, and held minor diplomatic posts in Germany, England and the United States, 1911-18. He was a member of the Japanese delegation at the Paris peace conference, 1919. Shigemitsu was minister plenipotentiary to China, 1929-30. In 1932, he was hit by fragments of a bomb hurled by a Korean patriot at Shanghai and lost a leg. He was made vice-minister of foreign affairs, 1933, and was appointed ambassador to the soviet union, 1936. Two years later, he was named ambassador to England. In 1941, Tokyo ordered him to leave his British post and return home. Two days after the Japanese attack on Pearl Harbor, Shigemitsu was appointed ambassador to the Chinese puppet regime at Nanking. In April 1943, Premier Hideki Tojo reshuffled his cabinet and made Shigemitsu his foreign minister. Prior to Pearl Harbor, Shigemitsu was reported in favour of Japanese co-operation with Britain and the United States and was said to be highly critical of the ruling Japanese military clique. Shigemitsu was retained as foreign minister in the Koiso cabinet (July 1944), but was not in the succeeding Suzuki regime. When Prince Higashi-Kuni formed the first postwar cabinet of defeated Japan (Aug. 16, 1945), Shigemitsu was back as foreign minister. In his first statement, Aug. 18, he told his countrymen that they must admit their defeat and said Japan must win the "world's sympathy and understanding." He signed the Japanese surrender document aboard the U.S. battleship "Missouri," Sept. 2. On Sept. 17, Shigemitsu, too closely associated with Japan's defeat, was dismissed as foreign minister.

**Shinwell, Emanuel** (1884– ), British cabinet member and politician, was born Oct. 18 in London. A member of the Labour party, Shinwell was a member of the house of commons, 1922-24, 1928-31 and was re-elected in 1935. He was financial secretary in the war office (1929) and secretary for mines (1924 and 1930-31). A caustic-tongued debater, Shinwell was a frequent critic of conservative governments. His oratorical attacks generally were couched in blunt language and his exchanges with the Churchill government leaders frequently enlivened debates in commons. During World War II, Shinwell denounced the Churchill government for its "fumbling" of the Malaya, Hong Kong and Libya campaigns, and for many other real and alleged negligences. However, he did not spare members of his own party in the Churchill coalition and at one time, in late 1942, the Labour party executive board was pondering "disciplinary measures" to curb Shinwell's acidulous attacks. An avowed "left-winger," Shinwell surprised his supporters in Dec. 1942 with a spirited defense of the much criticized Darlan agreements; he stated that if the Allies could master north Africa with Darlan's aid the agreements were justified. After the Labour party took over the government in the summer of 1945, Prime Minister Attlee appointed Shinwell to the post of

minister of fuel and power. An advocate of nationalization of the coal mines, Shinwell declared (Aug. 17) "we will steadfastly pursue a policy of public ownership in vital services of the country." He headed the British delegation at the Anglo-American oil conference in London and negotiated the new oil pact (Sept. 24). A bill to "establish public ownership and control of the coal mining industry and certain allied activities," was introduced in commons by Shinwell (Dec. 19).

**Shipbuilding.** Statistics on shipbuilding, unavailable during World War II, were gradually made public after the close of hostilities, providing approximate data on world shipping from Sept. 1939 to the end of 1945.

Estimates of world merchant shipping losses by sinking, during the war, show a loss in Allied tonnage more than double that of the axis powers. Losses of the former were approximately 22,168,000 gross tons; those for Germany, Italy and Japan were estimated at 10,000,000 gross tons. Total losses of 32,168,000 gross tons thus represent a destruction of slightly less than half of all prewar merchant shipping of steam and motor vessels (each more than 100 gross tons), which amounted to about 68,500,000 gross tons.

New construction during the war was carried on mainly by the U.S., Great Britain, Canada and Sweden. The heaviest output came from the U.S. which built 38,250,000 gross tons between Sept. 1939 and Dec. 31, 1945. Great Britain followed with an output of 6,900,000 gross tons, Canada with 2,700,000 gross tons and Sweden with 875,000 gross tons. With new construction totalling 48,725,000 gross tons, losses were more than offset to bring the total world tonnage at the end of 1945 to about 85,000,000 gross tons, an increase of about 20,500,000 gross tons more than the prewar figure.

U.S. shipping emerged from the war with its tonnage four times greater than at the outset and equivalent to 67% of all world tonnage in 1939. British shipping, including that of the colonies and dominions, had shrunk by about 2,400,000 gross tons. Below are statistics on the standing of the U.S. and the British empire before and after the war, as well as the losses and new construction of both:

	U.S.	British empire
Tonnage, Sept. 1939 . . . . .	11,400,000 gross tons	21,000,000 gross tons
War losses . . . . .	3,800,000 gross tons	11,700,000 gross tons
New construction . . . . .	38,250,000 gross tons	9,300,000 gross tons
Tonnage, Dec. 31, 1945 . . . . .	45,800,000 gross tons	18,600,000 gross tons
Net difference . . . . .	+ 34,400,000 gross tons	- 2,400,000 gross tons

Between 1940 and 1945, construction of naval vessels, including both combatant and vessels of the large auxiliary types, in U.S. shipyards, numbered 1,555 vessels of 4,780,000 displacement tons. Vessels of the steel landing craft types numbered an additional 4,114, and 3,354 self-propelled naval vessels of smaller types, such as minelayers, coastal transports, salvage vessels, submarine chasers, etc., were also built. In addition to these four categories, many thousands of still smaller craft were built. For the army, U.S. shipyards turned out 12,813 vessels, mainly of the smaller types, with an approximate value of \$770,000,000. An additional \$56,000,000 was expended for 310 crane barges. For the coast guard, about 300 vessels of seagoing types and many smaller craft were constructed during the same period.

British naval construction between Sept. 1939 and June 1944 added 5,744 vessels to the fleet, weighing 1,907,077 standard displacement tons and including 722 major war vessels (1,333,961 s.d.t.), 1,386 mosquito craft (132,796 s.d.t.) and 3,636 landing craft, etc. (440,320 s.d.t.).

During 1945, cancellations by the navy and Maritime commission totalled 377 vessels, 212 of which, cancelled by the navy, were of the combatant and auxiliary types. The navy

also cancelled 12,214 district craft, small landing craft and small boats.

**Ship Repairing.**—During 1945, 23,800 vessels of 1,000 gross tons and over were repaired in U.S. repair yards, exceeding the amount of repair work for the two preceding years. In 1944, this figure was 22,014 and in 1943, 17,172. These figures, of course, include a possible repairing of the same vessel on more than one occasion.

**Employment.**—Labour statistics for U.S. shipbuilding showed a steady decline after the peak employment of about 1,722,500 in Dec. 1943. At that time, about 322,500 were employed in government navy yards and the remainder in private shipyards and repair yards. By Nov. 1945 only 332,600 were employed in private yards and about 228,800 in government navy yards, a drop of 76% and 31%, respectively, from their peak employment. At the close of 1945, many shipyards had closed down entirely, having completed building contracts with the navy or Maritime commission.

**Earnings.**—The latest available statistics on hours and wages at the end of 1945 showed the average hourly earning rate for Sept. 1945 in shipbuilding and ship repairing to be \$1.316, the highest rate in any of the durable goods industries. Average weekly earnings for September were \$50.92, on the basis of 38.7 hours per week. (See also SHIPPING, MERCHANT MARINE.)

(X.)

**Great Britain.**—The turnover in 1945 from war to peace conditions started in Britain, very gradually at first, at the beginning of the year; for the Allies already appeared to have sufficient standardized tramp-type ships for the completion of the war in Europe and the Japanese campaign demanded something much more akin to peacetime types. Owners were therefore allowed to order ships approximating to their desires. The surrender of Japan greatly accelerated the tendency, although the government control of material and work, carrying with it a measure of control of design, remained. Many shipping companies had to order new tonnage or see their business disappear; but the shipyards found it difficult to quote definite prices and owners were naturally nervous of accepting a vague liability.

At the end of World War II it was estimated that British prices for a straightforward cargo ship specification were about 50% higher than prewar rates, 25% more than the Swedish yards could quote, and they rose rapidly for ships of special types like passenger or refrigerated tonnage. The two new Union-Castle motorships for the South African route, of about 27,000 tons, were reckoned by the company to cost them more than £2,000,000 apiece, and as payments of the government's war risk insurance were not calculated on replacement value the financial problem was a very great one. Many tramp owners, who were not under the same pressure to restore their services at the first opportunity, were nervous of ordering, partly owing to the question of price, partly because there was a chance that the tramping market might be flooded by war-built government tonnage, and partly because an overhaul of the rules for the calculation of registered tonnage was widely demanded and might have serious effects on the earning powers of any particular type of ship. The popular shelter-deck type was considered likely to be the one most penalized by any change of rule.

The admiralty not only controlled design, principally in order that available materials might be put to the best possible use, but also allocated permits to place orders, first with regard to the national value of the ship proposed, and second to the war losses sustained by individual owners. This control, and the holding up of practically all technical development during the war in favour of simplicity to secure rapid delivery, caused the majority of the ships in process of building to be of con-

servative design in principle although with great improvements in matters of detail, particularly in the machinery and accommodations. In order to secure delivery a number of cargo ship owners ordered ships from various yards according to the dimensions and design which the respective establishments had built for the government during the war instead of in the usual classes of exact sisters, while the changed conditions expected during the following years caused some well-known companies to order ships differing radically from their prewar practice.

*Retention of Wartime Features.*—Many features insisted upon by the authorities during the war to avoid the bottleneck of supplies appeared likely to become standard practice in peace. The insistence on single screws instead of twin, in all but a few exceptional cases, was being perpetuated by many owners for cargo ships of a size and speed which would have been given twin screws before 1939. The great increase in the use of plastics and aluminum alloys for nonstrength members also found favour; while the electric drive ordered by the ministry of war transport for certain strategic and special service vessels was favourably discussed and was adopted by the Canadian Pacific line for their new 17-knot cargo ships and by the Anglo-Saxon Tanker company for a ship of very moderate speed. The welding of parts, or even of whole ships, also greatly increased in Britain, although not to nearly the same extent as in the U.S.A.

The old argument between the advocates of steam and diesel machinery continued with apparently as little chance of definite agreement being reached as there was in 1939.

With regard to the design and dimensions of passenger ships, the possibilities of air competition had much influence; but the first panic subsided and owners were determined to concentrate on features and attractions which aeroplanes could not offer, although there was divided opinion as to what these were and how space should be allocated between private cabins and public rooms.

Allied experts naturally carefully examined the technical progress made by the Germans when their surrendered merchant ships came in for survey and refit. In the hulls and major fittings German construction would appear to have made little or no progress after 1939. In matters of minor detail, however, and in machinery a good deal of interest was discovered.

Although cargo and passenger tonnage attracted greatest attention, the fishing and whaling fleets also placed a number of orders. Fishing trawlers taken up by the navy for mine-sweeping and antisubmarine work were being reconditioned as quickly as possible; but the so-called trawlers specially built for the admiralty were unsuitable for fishing, so that the industry did not get the same relief as it did in 1919. The successful German raid on the Norwegian antarctic whaling fleet and the acute shortage of whale oil throughout Europe led to special facilities being given to the British yards to hasten completion of the pelagic motherships ordered at Belfast and on the Tees.

*Labour Problems.*—On the labour side a measure of unrest, inevitable at the end of hostilities, caused anxiety. Concern was also caused by the friction between the trades unions, which were recognized as the official authority for all bargaining and arranging, and the shop stewards who were nominally members of the unions but who worked directly against them on many occasions during the war. Yards experienced difficulty in re-absorbing apprentices who had been conscripted into the services before their time was completed and in striking a balance between their former earnings and the wages appropriate for men three, four or five years older (frequently with a wife and family) with no more technical knowledge.

In the matter of plants the normal developments which would

have taken place in six years were naturally retarded, but advantage was taken of the opportunity given by air-raid damage to carry out certain improvements piecemeal. Most of the biggest British yards were considering big modernization plans, although frequently they were handicapped by the age and size of their sites in built-up areas.

*Europe.*—In all the liberated countries great efforts were being made to get the shipbuilding industries again active, the damage done by German sabotage and Allied air raids varying immensely but usually being serious. The Danish yards were the least damaged. The neutral Swedes, although handicapped during the war by shortage of material and having, owing to the German blockade, to lay up most of the ships which they completed, were able to keep their yards in excellent condition, to test and put into effect a large number of technical improvements and to put themselves into a particularly strong position for getting orders from Allied countries. WORKERS at the California Shipbuilding Corp. yards in Los Angeles, Calif., gathered beneath the V-slanted giant cranes as the news of Japan's surrender was made known in Aug. 1945

## Shipping, Merchant Marine.

Shipbuilding under direction of the United States Maritime commission was reduced after the end of World War II to about one-third of the deliveries in the first quarter of 1945. There were 556 vessels under construction or contract when hostilities ceased on Aug. 14. Of these, 135 were cancelled, the building schedule adjusted to the new conditions, and the commission prepared to build ships in the categories that the wartime program had left deficient, notably passenger vessels and refrigerated ships.

Between Jan. 1, 1939, and Jan. 1, 1946, U.S. shipyards built 5,694 ocean-going vessels aggregating 56,473,399 dead-weight tons. (Dead-weight tonnage is the actual cargo-carrying capacity of a vessel, expressed in tons of 2,240 lb.) This total included dry cargo vessels of various types; tankers; wooden, steel and concrete barges; ore carriers; harbour and ocean-going tugs. It also included vessels built directly for or converted to military service; aircraft carriers, frigates, transports, hospital ships, tank carriers, oilers and tenders, and partially completed vessels outfitted by the navy as combat transports and combat cargo ships. In addition to these large vessels, about 1,000 small barges and 200 power boats were built.

Of these vessels 97% were constructed after Pearl Harbor. The Maritime commission, established by the Merchant Marine act of 1936, inaugurated a long-range program contemplating construction of 500 vessels at the rate of 50 per year. The first of these were delivered in the summer of 1939, at which time the commission doubled its construction program, redoubling it twice in the following two years, as the world shipping situation grew more critical.

In 1941 the commission conceived and put into execution the emergency Liberty ship program, to build ships by mass assembly methods by which it was hoped to reduce the construction time for these 10,500 dead-weight ton vessels to around six months.

THE LIBERTY SHIP "William Wirt" being disarmed in July 1945 after the close of the European war. As a merchant vessel in the West Indies during wartime she carried a 5-inch deck gun

The first Liberty ships were delivered three weeks after Pearl Harbor. Following the declaration of war against the axis, the commission expanded the shipbuilding facilities of the U.S. by the building of several shipyards for construction of Liberty ships and other type vessels. Almost 80 shipyards held Maritime commission contracts in 1943.

Production in U.S. shipyards in 1941 was 103 vessels, aggregating a little more than 1,000,000 dead-weight tons. The Liberty program so increased the production that by the end of 1942 the production of the previous year had been increased seven times. There were 762 vessels aggregating more than 8,000,000 dead-weight tons delivered in the year. Of these, 542 were Liberty ships.

The peak of the commission's program came in 1943. All ship construction records were broken in that year by the delivery of 1,949 vessels—1,238 of them Liberty ships—aggregating 19,270,746 dead-weight tons.

The 27,000,000 tons of shipping built in those first two years of the United States' participation in the war replaced all the shipping losses suffered by the United Nations. As a result of this fulfilment of the essential cargo needs of the Allied nations, the commission was able to give increased emphasis to the building of faster vessels than the Liberty, which is capable of about 11 knots.

These faster vessels were the C-types with which the commission had started its long-range program, and Victory ships, whose design and adaptability to mass assembly methods grew out of the Liberty program. All are propelled by modern turbine or diesel machinery, which give them about 50% more speed than the Liberty, according to the power of their propulsion machinery.

The Liberty program was curtailed in 1944 and many of the facilities of the commission were put into production of the faster cargo vessels, better suited not only to the purposes of war but the long-range uses of peace.

The demands for petroleum products for mechanized war also compelled the commission to increase production of tankers. Two tanker designs were produced by the commission shortly after it was established, and their production increased rapidly through 1944. In Aug. 1945, there were 1,057 tankers flying the U.S. flag, including those under military jurisdiction.

Ship construction in 1944 was greatly in the direction of military vessels. Many Victory ships emerged as transports. There were 50 aircraft carriers built in 1943 and 1944; 96 frigates—armed vessels to escort convoys—were delivered in the two years; 200 fast vessels became transport and cargo vessels equipped by the navy for specialized warfare; oilers and tenders were built for the navy, and a considerable number of fast ships were transferred to the armed services for special purposes.

The total of Maritime commission construction in 1944 was 1,786 vessels aggregating 16,447,366 dead-weight tons. Though these totals did not reach those of the previous year, there was actually more shipbuilding in 1944 than 1943, by tonnage displacement. The units constructed were larger and more complicated, and the dwindling of the Liberty program to 720 deliveries had its effect on the total.

The tonnage goal set for 1945 was 13,000,000 dead-weight tons, based on the assumption that the war would continue through the year. With the revisions after the war's end, the year's total was 1,097 vessels aggregating 10,598,154 dead-weight tons. There were 100 vessels scheduled for construction in 1946, almost all of them passenger, passenger-cargo or refrigerated ships.

(E. S. L.)

Europe.—At the beginning of 1945 all Allied shipping developments were in suspense in expectation of a long war against Japan which would tax the available tonnage even more than the

war in Europe, the distances involved demanding more ships, and the tramp type which existed in such numbers being far less useful. What tonnage could be spared from the east was nearly all devoted to supplying the fighting forces in Europe, then the armies of occupation and then the starving population of the liberated countries. Enormous quantities of stores and ammunition were being taken east to be piled up at the bases in anticipation of stiff fighting when Japan was invaded. The unexpectedly swift collapse of Japan brought great relief and immediate steps were taken to return the ships to commercial service as quickly as possible.

There was an immense amount of war work to be done first. As soon as Germany surrendered a large westward movement of U.S. troops for transfer to the Pacific began; in addition to all available U.S. ships a number of British passenger liners was employed, notably the Cunard White Star "Queen Mary" and "Queen Elizabeth," carrying 15,000 men each, and "Aquitania" carrying 8,000. Practically all other large British passenger ships were engaged in the Pacific, the numbers carried on each voyage being considerably reduced on tropical routes. After the surrender of Japan they were equally busy on the repatriation of men due for leave or demobilization, released prisoners, etc., and any space left was allotted to civilian passengers who could show a good reason for travelling. There were bitter complaints of the discomforts involved in voyages by troopship, although every passenger before embarkation had to sign a paper stating that he understood the conditions and would submit to the discomfort and military law. Apart from the troopers, a large and increasing number of passengers was carried in cargo ships, practically all the liners lately built having the legal accommodation for 12 increased four or fivefold by government wartime order. The question of postwar regulations was causing a good deal of concern as it was obvious that the passenger fleet would not be adequate for several years.

The official figures of British merchant navy casualties at the end of the war with Germany were 30,589 killed, 4,690 missing and 4,088 interned, the average strength latterly being 150,000 men. The demobilization of men who had chosen the merchant navy under the Military Service act was in many cases more difficult than in the fighting services, but there was an immediate drastic reduction in the state training schemes.

Norwegian and Danish merchant seamen proved conspicuously loyal to the Allies after the liberation of their countries, readily volunteering for indefinite service in the Pacific as soon as they had been given a few days' leave with their families.

Although steps were taken as quickly as possible to release shipping for commercial purposes it was obvious that the lifting of control would have to be gradual. Early in the year the united maritime authority had been established to utilize all Allied tonnage to the best advantage for the war effort. Sweden adhered to the arrangements voluntarily as soon as the Skagerrak blockade was lifted, and the acceleration of its end had to be carefully discussed. In the national control some British companies, particularly those owning cargo or passenger liners, had lost or lost control of so many of their ships, in some cases all, because of their national value that it was considered only fair to help them to keep the remnants of their prewar connections by allocating tonnage, as it could be spared for their routes, on the system employed during the war.

In the British general election the nationalization of all forms of transport was a prominent issue and it remained part of the trades union policy despite the recantation of Emanuel Shinwell and other former advocates of including shipping. Difficulties were realized particularly in the tramping trades which demanded vast experience, and the final policy was to demand that the coasting trade should be nationalized, beginning with the

liners. There was also a movement toward partial nationalization in both Australia and Canada; but in Palestine, where the Jewish element advocated great maritime expansion, the suggestion was for private enterprise with state encouragement only.

**War Losses.**—The Allied powers all lost 50% or more of the tonnage with which they started the war; France lost two-thirds and the U.S.S.R. was known to have had an immense number of ships destroyed during the German occupation and bombardment of Russian ports. From rather more than 21,000,000 gross tons with which Britain started the war about 12,000,000 were sunk, while about 7,000,000 tons were built despite handicaps. The losses were 1,360 ships by submarine, 440 by aircraft, 340 by mine and 210 by surface raiders. Axis losses had not been definitely published, but such of their ships as were still afloat were put on Allied service pending their disposal under the final peace terms.

(F. C. Bo.)

**Shipping Administration, War:** *see* WAR SHIPPING ADMINISTRATION.

**Shoe Industry.** With the advent of victory in Europe and later in Japan, style restrictions maintained in the United States under Footwear Conservation order M-217 were lifted in 1945 and the industry was again given the opportunity for design and creative development.

Tanneries turned out more sole leather from 1943 to 1945 than in any similar period after World War I to meet the unprecedented scale of military demand. During World War II, the quality of sole leather itself remained unchanged for civilian manufacturers. Such leather frequently came out of the same hides as the military cuts but the armed services took such a high percentage of certain grades and weights of leather that little was left for the civilian type. However, the signing of the peace was quickly followed by army and navy cutbacks in shoe procurement, which resulted in the first easing of the shoe situation.

One of the most important developments in the shoe industry, during the rationing period, was the production of the nonrationed shoe to fill the consumer gap, created by the lack of standard, rationed footwear. Not only were new methods and materials applied in producing these shoes but merchandising received an important stimulus. In the early summer, production of these nonrationed types began to decline and the industry was saved the costly obsolescence of war stock.

Reconversion for the shoe industry from war to peacetime pursuits did not entail the same difficulties as those industries where plant and equipment had been converted to direct military output. Nevertheless, time was required to expand the physical process of output and not until the end of Oct. 1945 did operations begin to reach the level required to meet consumer demand.

Shoe rationing was lifted on Oct. 30, 1945, and thus removed a tremendous bookkeeping burden from the retailers' shoulders. It returned to shoe retailers the function of servicing their customers with the shoes they needed and wanted and gave them back some semblance of peacetime operation.

The anticipated buying rush, when shoe rationing was lifted, did not develop. However, this good common sense on the part of the public did not offset the real problems confronting manufacturers and distributors in the closing months of 1945. In the face of heavy underlying demands, inventories were slim, materials short and manpower inadequate. In part, these conditions reflected the transitional phase which could be expected to moderate as time went on. However, one aspect of the situation was expected to be a harassing problem well into 1946. Requirements of the liberated European countries could only be filled

from the world sources upon which the United States draws for a portion of its raw material supplies. Until the end of 1945 these international requirements were reconciled through the agency of the Combined Raw Materials board and unless that body, or a similar agency, continued the task of ensuring world trade co-operation in hides and skins, continued supply difficulties were probable. Shoe factories outside the U.S. were being restored as quickly as possible.

Table I.—U.S. Domestic Shoe Production, 1945, 1944, 1943, 1942

Year	Government shoes	Civilian shoes	Total
1945 (prelim.) . . . . .	48,100,000	441,700,000	489,800,000
1944 . . . . .	50,485,000	417,446,000	467,931,000
1943 . . . . .	46,885,000	418,512,000	465,397,000
1942 . . . . .	40,875,000	442,995,000	483,870,000

In 1945 the estimated total production of civilian footwear in the U.S. amounted to 441,700,000 pairs, a greater total than in any year before 1941. Yet it would be completely misleading to assume that more shoes in the accepted and normal sense were available to the home front. On the contrary, production of staple footwear was substantially lower than prewar. Pairage was sustained only by the manufacture of nonrationed types and a record-breaking production of slippers. Unfortunately, there was no breakdown of the actual rationed types as against the nonrationed footwear but it was safe to assume that the (estimated) production of 169,800,000 pairs of shoes other than all leather, in 1945, represented, in the aggregate, the nonrationed shoes.

\*Preliminary.

†Excludes shoes for military purposes:

1943 Military . . . . .	46,885,000 pairs
1944 Military . . . . .	50,485,000 pairs
1945 Military . . . . .	48,100,000 pairs

Synthetics, plastics and substitutes for leather footwear continued to be important during 1945 and it was expected they would be some influence in spurring the tanners to exert themselves in the competitive period that would follow when the leather situation became easier.

At the end of 1945, retail stocks were at an all-time low, with little prospect of replenishment. By and large, shoe retailers had a profitable year in 1945. (See also LEATHER.) (E. G. AN.)

**Shows.** Horses.—The principal local horse shows in the United States were resumed following the end of World War II particularly during the fourth quarter of 1945. The restrictions on shipments and travel limited attendance except in the larger cities. The American Horse Show association reported 108 shows held in 1945 under its auspices compared with 62 in 1944. Heavy horses were shown at the few state fairs and general livestock exhibitions, but these exhibitions were generally planned to open in 1946.

The Second Annual Chicago Horse show Nov. 3-11, 1945, was one of the largest ever held, with 588 horses in 1,705 entries in 125 classes. More than \$60,000 was paid in prizes to the winners. Attendance was large and more than \$85,000 was raised in benefits for war veterans. The outstanding show in the east was held at Devon, Pa., Sept. 20-22 with 215 horses in 1,000 entries. The Kentucky State Fair show at Churchill Downs with 400 entries was one of the largest. Other important exhibitions were the Los Angeles, Calif., fall show, the Spokane Horse show, the Nebraska State Fair exhibition, and those at Memphis, Tenn., and Jackson, Miss. The National at New York and most of the older shows in the east were severely restricted.

A new development of local community horse shows resulted from the renewed interest in light horses, including saddle horses and children's ponies. In Iowa there were 25 such local shows held in 1942, 67 in 1943, 152 in 1944 and 176 in 1945 with an average attendance of about 2,000 in 1945. Such shows were particularly popular in states that did not have legalized betting. In Tennessee the growing popularity of the walking horse, which has a gait that takes the place of the saddle trot, led to shows of this general-purpose animal in growing numbers. Plans and announcements indicated that horse shows would be resumed in increasing numbers in 1946.

(J. C. Ms.)

**Livestock.**—Livestock shows in the U.S. were more restricted in 1945 than in any previous war year due to additional curtailments on shipping and travel. A number of state fairs that were held in the three previous years were therefore cancelled altogether or were limited to the shipment of exhibits that could be sent by truck, making them local shows.

Denver repeated its 1944 rating at the top of all regularly held livestock shows in the U.S. when the National Western Stock show was held there Jan. 13-21, 1945. Among the few exhibitions in the U.S. whose facilities were not required for war purposes, this show continued uninterrupted during the war.

The Hereford cattle show at Denver was the largest showing of 1945 of this breed and was highlighted by the sale of two bulls at \$50,000 each. It also attracted creditable exhibits of the other two beef breeds, the Shorthorn and the Aberdeen-Angus. Perennially famed for its large exhibitions of commercial feeder cattle exhibited in carload lot units, as well as purebred beef bulls for range use, these departments continued strong.

Ft. Worth, Tex., is the home of the oldest livestock show in the U.S. This event, the Southwestern Exposition and Fat Stock show, was held from March 9-18 for the second time in its new setting, the Will Rogers Memorial amphitheatre.

Such other regular sectional expositions as the Pacific International in Portland, Ore., the American Royal in Kansas City, Mo., the Aksarben in Omaha, Neb., were again curtailed by reason of the war to shows featuring livestock raised and ex-

hibited by farm boys and girls as 4-H or vocational agricultural projects.

Largest among all livestock shows of the U.S., and the world, prior to World War II was the International Live Stock exposition in Chicago. This event was held annually during the first week of December from its inception in 1900 to 1941, following which it was cancelled for the duration of the war.

In its place four exhibitions confined to fat cattle, sheep and swine were held at the Chicago stockyards during the same week the full exposition took place prior to the war. The substitute show, known as the Chicago Market Fat Stock and Carlot competition, was held from Dec. 1-6, 1945. It was the United States largest showing of the year of fat stock, numbering 5,488 head of cattle, sheep and swine exhibited by stockmen and farm boys and girls from 15 states and Canada.

All of the animals in the show were sold at record-breaking prices in auction sales which followed the judging. The grand champion steer sold at \$10 a pound or \$11,100 for the animal. The grand champion carload of 15 head of fat steers brought \$2 a pound or \$30,660 for the load. The grand champion barrow, at \$7 a pound, brought \$2,037, and the grand champion wether lamb, at \$3 a pound, brought \$252. The total return to the owners on all the livestock in the show—all slaughter animals—was \$814,270.83.

The major show of 1945 on the Pacific coast, the Great Western Live Stock show, was held in Los Angeles, Calif., Dec. 1-7—the only major livestock event of the year on the Pacific coast.

Canada's two principal livestock shows, the Royal Winter fair and the Canadian National exposition, both in Toronto, had also been suspended during World War II. The largest show of 1945 in Canada was the Calgary Exhibition and Stampede in early July.

Both of the major annual dairy shows of the U.S., the National Dairy show, an itinerant exhibition, and the National Dairy Cattle congress at Waterloo, Ia., were also dormant because of wartime restrictions; and a majority of the state fairs were not held in 1945 for the same reasons.

States which supported fairs on a state-wide basis in 1945, most of which were restricted to livestock exhibits from within the state, were Arkansas, Colorado, Idaho, Kansas, Louisiana, Mississippi, New Mexico, South Dakota and Utah. None of the major state fairs, those of the midwest, took place.

The only show of importance in Great Britain that survived the war period was the annual Perth Show and Sale in Scotland. It featured exhibitions of Aberdeen-Angus and Shorthorn cattle. It was held in Feb. 1945, in consecutive weeks for the two breeds.

South America's leading agricultural show, the Palermo, in Buenos Aires, was held in August. It is the world's largest annual showing of Shorthorn cattle but less notable for its exhibitions of the other two beef breeds, the Hereford and Angus, as well as for Holstein-Friesians and Guernseys, its two principal dairy breeds. (W. E. O.)

**Dogs.**—The dog field, particularly that of shows, was affected materially by war conditions during 1945; but soon after V-J day, renewed activity in breeding, sales and shows appeared to be greater than at any time previous.

The headline news continued to be the excellent work of war dogs in actual combat. The use of dogs, mostly German shepherds and Doberman pinschers, in the Pacific Islands warfare against the Japs was praised officially by the war department, and certificates of merit were issued to various dogs. Use of dogs on the European battlefield was mostly for sentry or alert work with some messenger service and some work in locating wounded and missing persons.

Public interest in dogs continued to be extensive. Because at no time were there any priorities or ceiling prices in the dog field, sales were brisk.

Registrations in the various stud books reached record totals for 1945. The American Kennel club exceeded its previous top of 82,000 for a year's totals by reaching the new high of 135,000. The merry little cocker spaniel was still in top place followed in order by the beagle, Boston terrier, Scottish terrier and wire-haired fox terrier.

The *American Field* stud book, mostly for bird dogs, also had a new high of 16,589 with pointers, English setters and Irish setters leading in that order.

In bird dog trials, the two top winners may be said to have been the pointer Ariel, in the Alberta Prairie Chicken Trials; and the pointer Bolero, in the American Field Quail Futurity.

In retrievers, the National Field championship title was won by the black Labrador bitch Black Magic.

At the dog shows (bench shows), the boxer male Ch. Warlord of Mazelaine led in major show honours; although first placing in the largest show of the year, the Westminster in New York city with 2,652 dogs entered, was captured by the Scottish terrier male Ch. Shieling's Signature.

National Dog week in its 18th year was observed widely; it emphasized more training and better control of dogs, particularly in public places. (W. Ju.)

**Siam (Thailand).** A kingdom of southern Asia between Burma and French Indo-China, extending southward into the Malay peninsula; area 198,247 sq.mi.; pop. (census 1937) 14,464,105, (est. March 1940) 15,717,000. Chief towns: (pop. 1937) Bangkok (former cap., 681,214); Chiangmai (544,001); Khonkaen (473,475); Chiangrai (443,476). Ruler: King Ananda Mahidol; language: Siamese; religion: Buddhism.

**History.**—After the fall of the puppet government of Luang Pibul Songgram in July 1944, Thailand, under the leadership of Kuang Kovid Aphaiwong, prime minister, and the Regent Luang Pradit Manudharm, pursued a policy of non-co-operation with the Japanese, and in the attempt to revive the democratic way of life showed a complete re-orientation of the policy of Pibul. The sudden end in 1945 of the war in the far east gave the resistance movement which had been built up no chance to prove itself, but Ernest Bevin, British foreign secretary, acknowledged on Aug. 20 "the help received from this movement. If it has not taken overt action before now, I ought to make it clear that this has been due to our advice, on purely military grounds." He then added a *caveat*: "It remains to be seen how far its spirit permeates the country." The United States Office of Strategic Services issued a report in September which revealed that the regent was the leader of the resistance movement and was in constant communication with the state department, the British government and the Allied command in the India-Burma theatre.

On Aug. 16 Thailand repudiated its declaration of war on Great Britain and the United States and later announced that territories which it had occupied in Burma and Malaya would be returned to Britain. Arrangements were made immediately for the release of civilian internees and a Thai military mission was sent to the southeastern Asia command, which arranged for the evacuation of prisoners of war and the surrender of the Japanese in Thailand. It was also agreed that Thai naval, land and air forces should be handed over to the Allies for use as required.

There were disturbances in Bangkok at the end of September, Thai nationals shooting at Chinese and also fighting among themselves.

A British government spokesman at Singapore stated on Dec. 14 that Britain was still at war with Thailand. Britain considered the withdrawal of the declaration of war unconstitutional and thought that Thailand should offer concrete evidence of its good faith and make restitution for damage to British interests and the interest of territories on its borders, for which Britain was responsible. (J. R.A.)

On Sept. 7, 1945, a decision of the council of ministers was announced, to discard the terms "Thailand" and "Thai" and to revert to the terms "Siam" and "Siamese," applicable only to foreign languages, but not to the Thai language.

**Education.**—In 1938-39: government schools 429; scholars 61,297; local public and municipal schools 11,072; scholars 1,484,483; universities 2; students (1937) 11,525.

**Banking and Finance.**—(1942) revenue, \$77,650,000; expenditure \$95,800,000; expenditure, capital (est. 1941) \$20,700,000; public debt (March 31, 1940) \$25,500,000; notes in circulation (July 31, 1941) \$96,000,000; reserves (July 31, 1941), gold \$35,850,000; foreign assets (July 31, 1941) \$56,100,000; exchange rate (average 1940) 1 baht = 35.15 U.S. cents; (Sept. 1941) 1 baht = 36.97 cents U.S.

**Trade and Communication.**—Foreign trade 1940-41 (merchandise): imports \$60,200,000; exports \$95,000,000. Communications: roads, state highways completed (1938) 1,815 mi.; railways, open to traffic (1938) 1,925 mi.; airways, length of route opened (1938) 444 mi.; motor vehicles licensed (1937-38): total 11,439 (cars 5,910; trucks 4,233; buses 146; cycles 559); wireless receiving set licences (1938) 29,834.

**Agriculture and Mineral Production.**—Production (in short tons): rice (1939-40) 5,590,200; rubber (1940 exports) 49,500; tin ore, metal content (export 1940) 19,470; tobacco (1938-39) 9,240; cotton ginned (1940-41) 2,640; maize (1938-39) 6,160.

**Sierra Leone:** *see* BRITISH WEST AFRICA.

**Silesia.** Of this former Prussian province a part of Upper Silesia was ceded to Poland as a result of a plebiscite on June 15, 1922. It was organized as a province, Slask, with an area of 1,633 sq.mi. and a population of 1,124,967, with the capital Katowice (Kattowitz). The defeat of Germany in World War II resulted in having all the remaining parts of Prussian Silesia placed under Polish administration. This Polish acquisition consisted of the Upper Silesian district of Oppeln with an area of 3,750 sq.mi. and a population of 1,379,408; the Lower Silesian district of Liegnitz with an area of 5,257 sq.mi. and a population of 1,235,093, and the Lower Silesian district of Breslau with an area of 5,019 sq.mi. and a population of 1,897,172.

The province of Silesia included, in addition to great industrial wealth and natural resources, some of Germany's principal towns, like Breslau (pop. 625,198), Hindenburg (130,433) and Beuthen (100,584). In 1945 the German population was everywhere being replaced by Polish settlers. Under Polish administration Silesia was divided into three provinces, Lower Silesia with the capital at Wroclaw (Breslau), Middle Silesia with the capital Opole (Oppeln) and Upper Silesia with the capital Katowice (Kattowitz). A small part of the province of Silesia, especially the territory around Kladsko (Glatz) and Ratibor (Raciborz), was being claimed by Czechoslovakia. (H. Ko.)

**Silk.** With the surrender of Japan in Aug. 1945, to the United States forces, renewed interest in the use of silk was sharply accelerated by anticipated return of Japanese supplies of raw silk. Newer sources of supply, Brazil primarily, lost prominence among former users of the luxury fibre as the hope arose that the need of the Japanese for money to buy food and supplies from other countries would force their early return as silk producers at a price more in accord with prewar levels. The high price of Brazilian silk, \$12 to \$15 a lb., limited the possibilities of its use in fabrics and garments of prewar variety and some processors were disappointed in the general quality of the silk. Announcement in October by the U.S. military authorities that approximately 46,000 bales (approx. 6,103,000 lb.) were on hand in Japan for shipment as soon as the grades had been determined and a price policy set gave impetus to plans in the U.S. for a revival of silk as the fibre of luxury garments and other products.

The first half of 1945 saw increasing attempts by many countries to capture the profitable U.S. silk market before World War II ended. Most notable of the markets was Brazil. Production during 1945 totalled 1,102,000 lb. compared with 286,598 lb. in 1943. About half of this production was consumed in Brazil but the U.S. took 16,000 lb. in the first six months at an average price of slightly more than \$12 per lb. It was estimated that the shipments during the last half of the year exceeded this amount.

Brazilian authorities planned on increased production in 1946 by distribution of 4,000,000 gr. of silkworm eggs and supplies of mulberry cuttings through the Serfco de Sericultura.

In the United States, a group in Texas and another in California prevailed upon two governmental bodies to appoint special committees to study the problems attendant upon raising raw silk in their respective states. A Texas member of congress, William R. Poage, was appointed on Oct. 5, as chairman of a

subcommittee of the agriculture committee of the house of representatives with other members from Mississippi, Tennessee, Minnesota and California to investigate the possibility of developing a U.S. silk growing industry. The California state legislature created a special committee which issued a lengthy report on the "Possibilities of Silk Production and Industry in California" at the 56th session of the legislature during 1945.

Turkey, India, Russia, Spain, Damascus and Palestine were other competitors for the production of raw silk with Italy coming out of the war with its silk area virtually undamaged (around Como) and promising to ship raw silk to the U.S. as soon as price controls set by the U.S. government could be adjusted to permit such importation.

China came back first to the United States market, following the war's end, by shipping 600 bales in Dec. 1945. It was expected that further shipments would be made within a short period although some doubt was expressed as to whether sufficient silk of the quality desired would be available.

Plans for shipping the Japanese silk began with the steps taken by the Japanese ministry of agriculture in October to increase raw silk production by returning to mulberry cultivation about 150,000 chobu (367,500 ac.) which had been used for food production during the war. It was estimated that approximately 150,000 bales of raw silk could be added to production by this action. The mulberry trees had been pruned enough so as not to prevent the growth of vegetables but not enough to prevent the tree growth when needed. By the end of October, the Japan Raw Silk association was organized and capitalized at 20,000,000 yen to assume the business of the Japan Raw Silk Control Co. and the Japan Central Raw Silk association, previously ordered discontinued by Allied headquarters. In November, D. E. Douty, international silk expert and president of the United States Testing company in Hoboken, N.J., was sent at the request of Allied headquarters to Japan for an inspection of 46,000 bales of silk held in stock and a supply of cocoons that might produce an additional 60,000 bales. At the end of 1945, Japanese sources were being quoted as promising a crop of about 100,000 bales by May 1946 and 250,000 bales the following year. The prewar production varied from 600,000 to 800,000 bales a year. (See also RAYON AND OTHER SYNTHETIC FIBRES; TEXTILE INDUSTRY.)

**BIBLIOGRAPHY.**—Brazilian Government Trade Bureau, New York; Bureau of Foreign and Domestic Commerce, Washington; Fairchild Publications, New York. (I. L. BL.)

**Silver.** Output of silver by the major producing countries is shown in the table.

	1940	1941	1942	1943	1944
United States . . . . .	68.28	71.08	55.86	40.87	35.65
Canada . . . . .	23.83	21.75	20.70	17.35	13.63
Newfoundland . . . . .	1.49	1.66	1.11	1.26	1.16
Mexico . . . . .	82.64	78.36	84.86	76.63	65.46
Honduras . . . . .	3.90	3.63	3.48	3.16	3.12
Argentina . . . . .	3.71	2.92	2.84	?	?
Bolivia . . . . .	5.63	7.35	8.12	7.30	6.80
Chile . . . . .	1.51	1.24	1.32	1.09	?
Peru . . . . .	19.37	15.12	16.04	14.66	15.83
Belgian Congo . . . . .	3.54	3.47	3.96	3.25	?
South Africa . . . . .	1.29	1.48	1.48	1.33	?
Australia . . . . .	14.08	12.00	9.51	8.59	?
Total . . . . .	275.39	261.57	247.75	217.04	186.20

It will be noted that data are lacking from Europe and Asia, each of which supplied about 8% of the prewar output. In these figures almost as much as in the case of gold is evidence of the extent to which output was restricted in favour of metals essential to the war program.

**United States.**—The United States outputs shown in the table are refinery data. Mine production was slightly lower, declining from 41,680,826 oz. in 1943 to 34,473,540 oz. in 1944, a drop of about half after 1940. However, this planned retrench-

SILVER PRODUCTION of the major producing countries and of the world, as compiled by *The Mineral Industry*

ment in favour of the base metals had repercussions that had apparently not been anticipated. While silver output was dropping by half, consumption of silver in industry was expanding rapidly, eventually reaching about fourfold over the prewar level, with the result that industrial consumption, much of it for war purposes, reached a total during 1941-44 that was about double the domestic output—aside from needs for coinage and other purposes, which in themselves took amounts about equal to output. In effect, the entire expanded industrial consumption had to be supplied from treasury stocks. In addition to these normal industrial uses, the treasury also supplied more than 900,000,000 oz. under lease for nonconsumptive uses in war plants, the chief demand of this type being for conductor bars in electrolytic plants producing aluminum and magnesium, the supply of copper being short at the time the plants were being built. A further 243,700,000 oz. was supplied to other governments under lend-lease. Because of scarcity of supply, the U.S. price for foreign silver was raised to a par with the price for domestic production, 71.11 cents, on Sept. 21, 1945.

**Canada.**—The preliminary estimate on mineral production in Canada during 1945 put the silver output at 12,866,597 oz., as compared with 13,627,109 oz. in 1944. (See also MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. Ro.)

**Simons, Moises** (1889?-1945), Cuban composer, began the study of music with his father, Leandro Simons, a prominent musician. In 1930, he received the Spanish government's first prize for his operetta, *La Nina Merse*, presented at the Barcelona world's fair. In the same year, "The Peanut Vendor," a popular song, was published and fast became an international hit. Composer of light and serious music, Simons was best known for his compositions "Negra Quirina" ("Cuban Belle"), "A Gozar" ("Let's be Gay"), and "Serenata Cubana" ("Cuban Serenade"). He resided in Paris and then Madrid and died in the Spanish capital, June 28.

**Sinkiang** (CHINESE TURKESTAN). Largest and most remote of the provinces of China, bounded N. and W. by the soviet union, N. by Mongolia, S. by India and Tibet, E. by China. The name means New Dominion. Area, 705,769 sq.mi.; pop. (est. of the Chinese ministry of the interior, 1936), 4,360,020. Capital, Urumchi (Tihwa) (50,000) in the northern part of the province. The two other largest towns, Kashgar (80,000) and Yarkand (75,000) are in the south. Religions: Confucianism, Taoism, Mohammedanism. Governor (appointed 1944) Wu Chung-hsin. Chinese constitute about 10% of the population and there are 14 other ethnic groups, mostly Turki tribes.

Sinkiang is a country with vast stretches of desert and arid land. The limited area under cultivation is mostly in oases and river valleys. According to a Chinese estimate of 1918 a little

more than 1,000,000 ac. of land in Sinkiang were under cultivation. The principal crops were wheat and corn, with rice, cotton, kaoliang, beans, melons and other fruit also being cultivated. A later Chinese estimate of 1942 gives the following figures of livestock in Sinkiang: sheep 12,000,000; horses 2,000,000; goats 1,300,000; cattle 1,000,000; camels 500,000.

Because of its geographical location and the absence of rail and adequate highway connection with China, Sinkiang, both before and after the Russian revolution, carried on much of its limited foreign trade with the U.S.S.R. The completion of the Turk-Sib railway in 1930 facilitated trade contacts between the U.S.S.R. and Sinkiang. There is also some caravan trade over the high passes which separate Sinkiang from India.

Among Sinkiang's leading exports are wool, cotton, furs, skins, sheep, cattle and horses. Imports consist largely of machinery and manufactured goods. Some 2,440 mi. of highways were constructed during 1932-42, but there were no railways in the province in 1945. The air route from Chungking to Moscow is across Sinkiang, with stops at Hami, on the eastern border of the province, and Urumchi.

Russian political influence asserted itself in Sinkiang during a confused period of civil strife which became acute in 1934. Chinese sovereignty was never abrogated, however, and in 1942 and 1943 there was a more definite assertion of Chinese authority. Officials and commissions of the central government entered the province; British and U.S. consulates were reopened in Urumchi; Russian troops withdrew from Hami. Russian machinery and equipment which had been installed in Sinkiang were removed. Tass, the soviet official news agency, on April 2, 1944, reported an alleged violation of the frontier of Outer Mongolia in the course of a clash between Chinese troops and wandering Kazak nomads. (W. H. Ch.)

**Skating:** see ICE SKATING.

**Skiing.** With most of the top flight skiers still in the armed forces, the sport was devoted principally to junior development during 1945. In the only jumping test of importance, Merrill Barber temporarily succeeded Arthur Devlin as the United States' outstanding amateur, defeating the latter at the Bear mountain tourney.

Middlebury college won the Harvard invitational with 254.8 points to Harvard's 240.9. Elliott Lang, 14-year-old Andover, Me., high school sophomore, topped the metropolitan junior competition with firsts in the downhill and jump, second in the cross-country and seventh in the slalom.

Hampered by transportation difficulties, skiing in the middle west was held to a minimum. Plans for 1946, however, indicated a gradual return to the ski-train specials of prewar days.

(M. P. W.)

**Skin Diseases:** see DERMATOLOGY.

**Slate.** The production of dimension slate in the United States dropped from 73,310 short tons in 1943 to 60,950 tons in 1944. The production of slate granules and flour increased from 395,550 tons in 1943 to 416,890 tons in 1944.

(G. A. Ro.)

**Slim, Sir William Joseph** (1891- ), British army officer, was born Aug. 6. He was educated at a grammar school in Birmingham, England. At the start of World War I, he was commissioned into the Royal Warwickshires and was shipped to France with Lord Kitchener's "First 100,000." He subsequently saw action at Gallipoli, where he was severely wounded, and in Mesopotamia. After the war, Slim decided to stay in the services, and in

1939 he was commandant of a senior officer's school in Bombay province. When World War II opened, he was a colonel, and in Aug. 1940 he was a general. Gen. Slim participated in fighting on the border of Eritrea, and in the Anglo-Egyptian Sudan, the Allied campaign in Syria and the joint Anglo-Russian drive in Iran. After Japan's entry into the war, he was transferred to the Burma theatre in March 1942 as head of the 1st Burma corps. In Oct. 1943 Gen. Slim was given command of the British 14th army which halted the Japanese drive into Manipur state, India, in June of 1944. Then he opened the arduous campaign to regain all of Burma, and recaptured Mandalay in March 1945 and Rangoon in May. By the latter date the Burma campaign was virtually ended and his army had forced the enemy to retreat toward Thailand (Siam).

**Slovakia.** A part of Czechoslovakia until March 1939, when its independence was established with German help. Its nominal independence as a republic came to an end in the beginning of 1945. Slovakia then again became a part of Czechoslovakia. It enjoys a large degree of autonomy. Area 14,848 sq.mi.; population (census of 1930) 2,450,000, mostly Roman Catholics, but there is a considerable Protestant minority. Capital: Bratislava (123,852); chief cities: Trnava (24,000), Nitra (21,250).

**History.**—The clerical fascist regime in Slovakia which collaborated with the Germans came to an end in 1945. As the year ended, the country was under the Slovak national council which was composed equally of communists and democrats. The council enjoyed a large autonomy in the domestic affairs of Slovakia. In the Czechoslovak government in Prague the Slovaks were represented by six members in the cabinet and by two of the five vice-premiers. In the Czechoslovak provisional national assembly the Slovaks had one-third of the deputies. These 100 Slovak delegates, half communists and half Democrats, were elected in the city of Baňská Bystrica, on Aug. 29. The party which formerly ruled Slovakia, the Catholic Peoples party founded by Father Hlinka, was outlawed, as its leaders were responsible for Slovakia's independence and collaboration with the Germans. These leaders, among them the former president, Msgr. Josef Tiso, and prime minister, Dr. Bela Tuka, were under arrest and faced trial for collaboration in 1946. (See also CARPATHO-UKRAINE; CZECHOSLOVAKIA.) (H. Ko.)

**Smith, Holland McTyeire** (1882— ), U.S. marine corps officer, was born April 20, in Russell county, Ala. After graduating from the University of Alabama, 1903, he practised law, but gave it up to join the marine corps, and was commissioned a second lieutenant in 1905; he was promoted through the grades to major general, 1941, when he became commanding general of the Atlantic fleet's amphibious forces. In 1943, he directed U.S. amphibious forces during the battle for the Aleutians and in the invasion of Tarawa and Makin. Smith was also assault commander of operations in the Marshall Islands, Feb. 1944, the landings on Saipan, June 1944, and the invasion of Iwo Jima, Feb. 1945. Lt. Gen. Roy S. Geiger succeeded Smith as commanding field officer of the marine corps, June 22; the latter was made head of the marine training and replacement command at San Diego, Calif.

**Smith College.** Smith college for women in Northampton, Mass., had a 1945-46 total enrolment of 2,355. No summer session was held in 1945, so the number of girls studying during the summer decreased, but the numbers doing volunteer work and employed in camps and business in-

creased. Curriculum emphasis remained on general education in the arts, humanities, history, languages and science. Interest in international affairs continued, illustrated by departmental and college lectures on public affairs, by a junior year in Mexico for students taking Spanish, and by exchange of students with the University of Toronto. The intensive method of language instruction was tried in German and Russian. Demand grew for courses cutting across departmental lines, and majors correlating work in several departments. Trustees, faculty, alumnae and students continued to discuss problems of education in post-war society. (For statistics of enrolment, faculty, library volumes, etc., see UNIVERSITIES AND COLLEGES.) (H. F. D.)

**Smithsonian Institution.** The institution was founded in the United States in 1846 through the bequest of James Smithson, an English scientist, "for the increase and diffusion of knowledge among men." The governing body is the board of regents, comprising the chief justice of the United States, the vice-president, three senators, three representatives, and six eminent private citizens. The executive officer is the secretary. Dr. Alexander Wetmore was the secretary in 1945. The institution administers six government bureaus that grew directly out of its early activities, and also the Freer Gallery of Art. The National Gallery of Art is a bureau of the institution, but is administered by a separate board of trustees.

The staff of the institution continued in 1945 until the end of the war to devote a considerable part of its time to furnishing technical information to the army, navy and other war agencies. Hundreds of requests were received for such information in the fields of geography, anthropology, biology, geology and engineering. Many of the requests called for extended research, reports or conferences. Two papers were published in the series "Smithsonian War Background Studies." These covered China and the Aleutian Islands. Most of the 21 papers that were issued in this series dealt with the geography, peoples and resources of the regions penetrated by World War II. Others treated of the evolution of nations, the natural-history background of camouflage, and the poisonous reptiles of the world. Up to the close of 1945, 232,725 copies had been printed by the institution, and the army and navy had ordered 409,720 additional copies.

The institution continued during 1945 to take its part in the government's program for the improvement of cultural relations with the other American republics. Four of the five volumes of the *Handbook of South American Indians* were in press, and the fifth was practically completed. The new Institute of Social Anthropology created within the institution continued its co-operative work in anthropology in Mexico and Peru. Several members of the staff conducted field expeditions in South and Central American countries in co-operation with scientists of those countries.

All the priceless and irreplaceable material from the collections of the United States National museum that had been evacuated to a safe place during the war was returned safely to the institution. As the repository of more than 18,000,000 specimens of national value, the institution, of course, continued their care and the care of the buildings.

The astrophysical observatory maintains its three solar observing stations on distant desert mountains, to keep unbroken its unique record of the variation of the radiation emitted by the sun on which all life and weather depends. Much progress had been made in the study of the relations of solar variation and weather.

The art treasures of the National Gallery of Art were augmented by numerous gifts during 1945, including 80 important

Italian, French and Dutch paintings and 26 pieces of sculpture from Samuel H. Kress and the Samuel H. Kress foundation, and 1,740 prints and drawings from Lessing J. Rosenwald. The gallery gave Sunday evening concerts, lectures, and conducted tours for servicemen and women and their friends.

It was expected that the Smithsonian Institution's program of research and exploration would be resumed as soon as possible after the re-establishment of normal conditions. (A. Wt.)

**Snyder, John Wesley** (1896— ), U.S. government official, was born June 21 at Jonesboro, Ark. He attended Vanderbilt university, Nashville, Tenn., 1914-15, leaving before he obtained a degree, and in 1917 he joined the army and was promoted to artillery captain. While in France, he met Capt. Harry S. Truman and after the war the two became friends. Following the armistice, Snyder entered the banking profession, and in 1930 he became national bank receiver in the office of the comptroller of currency in Washington, D.C. He was appointed manager of the St. Louis loan agency of the Reconstruction Finance corporation in 1937 and executive vice-president and director of the Defense Plant corporation, a subsidiary of the RFC, in 1940. In early 1943, Snyder resigned from his various governmental posts to return to private banking. On April 17, 1945, President Truman appointed Snyder federal loan administrator, and three months later (July 16) Snyder was made director of the Office of War Mobilization and Reconversion. Regarded as a "hard-headed businessman" rather than a social theorist, he was opposed to government planning and he stood for a minimum of government regulation of private enterprise. Snyder endorsed (Sept. 1) the Murray Full Employment bill, declaring that his task of reconversion would be futile if it were not accompanied by full production and employment. He also was opposed to a formal declaration of the end of hostilities of World War II, declaring (Oct. 26) that such an act would end wartime controls and seriously interfere with reconversion. In his first report on the U.S. transition from a wartime to a peacetime economy on Sept. 6, he declared that the initial reconversion steps had started out "boldly." He advocated retention of some controls and urged that the forces of deflation and inflation be checked by a "firm policy of economic stabilization."

**Soap, Perfumery and Cosmetics.** The year 1944 with total retail sales of \$546,300,000 was the largest in the history of these industries, in the United States. As the year 1945 closed it was estimated that sales of toilet soaps, perfumes and cosmetics would exceed 1944 by at least 20%, to a total of something more than \$650,000,000, with totals in the southwest and the far west running far ahead of this figure in percentage.

Supplies of raw materials continued to improve although in this respect the position of the three industries was far from ideal. At the end of 1945 fats and oils were still scarce and critical. This was especially true of castor oil, which was a vital factor in the production of hair tonics. Closures and glassware were still in relatively short supply. At least two of the largest producers were six months back in deliveries at the end of 1945. In view of the over-all situation the Civilian Production administration retained order L-103 in force—the order which prohibits the manufacture or use of new glass moulds. Thus as in the previous year, the creation of new products was somewhat limited all through 1945.

After V-E day it was hoped there would shortly be some importation of natural flower oils from France. By the end of the year a few odd lots had made their appearance, but the condition of the French industry was not such as to hold out

much hope for resumption of steady imports. The French perfumers themselves were in equally bad case as to supplies of bottles, chemicals, solvents, fats, oils, materials imported from other parts of the world; indeed almost everything essential to the operation of their industry. In addition, their costs in francs were several times higher than they were before the war; so that even with revaluation of the franc it was not anticipated at the close of 1945 that French goods could be a serious competitive factor on the U.S. market for some time to come: either there would be no French perfume offered for sale at all in the U.S., or it would be so expensive as to put it entirely out of reach of all but a very few.

In Great Britain the domestic quota system which it had been hoped would be relaxed after V-J day was still in force at the end of the year, although it was felt that something must be done about it shortly, as one means of reducing unemployment, which with demobilization, was again becoming a factor in the total industrial situation. There had however, been some easing of export restrictions; which fact, coupled with the reduction of the tax of 100% on all profits in excess of the pre-war years, to 60%, to take effect in April 1946, gave the industries a better outlook.

However, unquestionably the most significant development in Great Britain was the formation of a new trade association. Previously there had been two such groups. It was felt that on any approach to official bodies, that however the two associations might complement one another, nevertheless, the industries would be better served if they could speak with one voice. As a result a new group was formed, known as the Toilet Preparations and Perfumery Manufacturers Federation of Great Britain, Ltd. Apart from material shortages probably the biggest problem in the British industries was, as with individuals, one of housing. (H. T.)

**Soapstone:** see TALC.

**Soccer.** The Brookhattan soccer team of the Bronx, N.Y., scored an unusual "grand slam" in 1945 by winning the National and Lewis cups and the American league championship. Winners of the eastern division play, Brookhattan won the National Challenge cup in the final over the Cleveland Americans. The Eintracht Sports club of Brooklyn won the National Amateur cup, along with the eastern and New York state amateur titles.

The Vikings of Chicago, Ill., continued to three years their dominance of midwest soccer, repeating as champions of the National league. The western amateur was won by the Rafteries of St. Louis, Mo., while the St. Louis Schumachers won both the national junior and western junior crowns. Pompeii of Baltimore, Md., captured the eastern junior division, while the Cork Celtics of New York won the Metropolitan league but relinquished the Metropolitan cup to Segura of Brooklyn.

(M. P. W.)

**Socialism.** In 1945, a year of momentous events, there were no national elections in the United States by which to judge the strength of socialism. In this respect municipal elections were not significant. Bridgeport, Conn., followed its usual habit by re-electing Jasper McLevy of the Connecticut Socialist party as mayor. Louis P. Goldberg, chairman of the New York Social Democratic federation, was elected to the New York city council on the Liberal party ticket. The year saw conferences of the Socialist party and the Social Democratic federation on lines of joint action. It also saw more inclusive exploratory conferences looking to the possible formation on a nationwide scale of a mass party along the lines of the Canadian Co-operative Commonwealth federation.

"THE PAINLESS WAY." Cartoon by Shoemaker of the *Chicago Daily News* after the results of the British election were announced in July 1945

The Socialist party aggressively pushed a bill for full production and full employment for which it got support of a non-partisan committee. It vigorously opposed peacetime military conscription and urged U.S. leadership in bringing about its universal abolition, along with effective renunciation of atomic explosives as part of a program of progressive disarmament essential to any healthy development of the United Nations organization and to peace itself. The party was critical of the San Francisco charter but approved its ratification. It was insistent on the end of the veto power of each of the Big Five in the Security council and on nonimperialist peace settlements, the liquidation of colonial empires, and more adequate feeding of the hungry, as essential to peace. Originally, the victory of the British Labour party stimulated increased interest in socialism in the U.S., but the Labour government's apparent support of imperialist policies retarded the interest its electoral success had aroused.

**South America.**—In Peru the Peoples' party (formerly the Aprista) in the summer election elected on its socialistic program a larger number of deputies than any other party.

In Argentina the Socialist party, many of whose leaders were exiled (some of them carried on a vigorous agitation from Montevideo, Uruguay), formed with the communists and others a democratic union against Col. Juan D. Perón and they were members of the coalition in support of the radical candidate for president, Dr. Jose P. Tamborini.

In Venezuela Romulo Betancourt, head of the Accion Democratica, professing socialistic aims, secured power in a coup d'état after the regime of President Medina showed signs of perpetuating itself in power.

**Canada.**—Canada perpetuated the Liberal government of Mackenzie King in its general election. The socialist Co-operative Commonwealth federation (C.C.F.) led by M. J. Coldwell increased its representation in the dominion parliament from 10 to 28 but was unable to follow the example of Australia, New Zealand and Great Britain by winning a socialist victory. It increased its voting strength in Manitoba, British Columbia and Nova Scotia. It lost relative strength in Ontario. In Saskatche-

wan under the government headed by Prime Minister T. C. Douglas it extended government control over electric power, conducted an insurance business and increased other public services.

**Australia.**—In Australia socialist government under the Labour party continued in power following the death of John Curtin, the prime minister. His successor, Joseph Benedict Chifley, had been treasurer and minister of postwar reconstruction in the Curtin cabinet. The government extended public banking and nationalized all interstate civil air line operations.

**New Zealand.**—In New Zealand the Labour government continued its insurance operations; bought many large estates for improvement, subdivision and lease to veterans; and took first steps toward complete acquisition of shares of the Bank of New Zealand.

**Great Britain.**—Following V-E day the British Labour party broke up the national coalition. Prime Minister Churchill then set a general election on July 5. Labour polled 11,992,292 votes; the Conservatives 9,960,809 votes; and the Liberals 2,239,668 votes. The Labour party elected 393 out of 640 members of parliament. Clement R. Attlee succeeded Winston Churchill as prime minister with Ernest Bevin, foreign minister; Hugh Dalton, chancellor of the exchequer; and Herbert S. Morrison, president of the council and leader of the house. The Labour government nationalized the Bank of England and took preliminary steps for nationalizing coal mines, civil aviation and cable and wireless communication. The party announced a further program for nationalizing the electric and gas industry and all inland transportation and canals. Its leaders drafted legislation for establishing social insurance on the lines of the Beveridge plan; for rebuilding devastated cities and towns; for a national health service, the reorganization of textile industry; the repeal of the Trade Disputes act and for widespread educational reform.

**Continental Europe.**—The re-establishment of democratic parties in areas where they had been repressed or entirely suppressed in the midst of a hungry, cold and chaotic Europe was very difficult. A major question everywhere was the relation of socialism to communism. In eastern Europe, notably Poland, the officially recognized Socialist party was commonly regarded as the puppet of the communist dominated government while the Independent Socialist party was illegal. In Rumania the Social Democratic party represented in the so-called National Democratic front cabinet became increasingly critical of the government and of the communists and finally refused to enter joint election lists with the communists. In October it demanded a series of reforms including cessation of illegal arrests. In Hungary, Socialists worked closely with communists and were said to have suffered because of their co-operation, especially in the Budapest local election. In the national elections they won 69 seats in parliament as against 70 for the Communists and 245 for the Agrarians or small landholders. Socialists held three seats in the cabinet headed by Zoltan Tildy of the small landholders.

In Austria the provisional government headed by Dr. Karl Renner, Social Democrat, gave way to a coalition government formed following the November election. The Peoples' party (conservative) won the most votes and seats in parliament. The Social Democrats were fairly close seconds while the communists made a poor showing. The Social Democrats had five posts in the Figl cabinet, the Peoples' party seven and the Communists one. Dr. Karl Seitz, mayor of Vienna in its great socialist days, was elected chairman of the reconstituted Social Democratic party. The Renner provisional government instituted laws for the nationalization of power, mining and petroleum and much heavy industry.

In Czechoslovakia there had been no national elections and

the Social Democrats were represented in the provisional cabinet and a national assembly, in which the Czech and Slovak communists had the largest number of seats. The government was nationalizing the key industries and financial institutions of the country and expelling all Sudeten Germans.

In Germany all political parties existed by grace of the occupying powers in their respective zones, and Social Democratic representation was a matter to be determined by the occupation authorities. In Bavaria Wilhelm Hoegner, a Social Democrat, was minister-president under U.S. appointment. The new Saxon provisional government was also headed by a Social Democrat, Rudolf Friedrichs, once mayor of Dresden. The Russians in their zone permitted a rebirth of the Social Democratic party and it had minority representation in a provisional government.

In October the first conference of the Social Democratic party was held in Wennigsen near Hannover in the British zone. The conference was divided on the proper attitude toward communists, the majority of delegates from western Germany opposing united front action, while the majority from eastern Germany held that it was necessary. The official report of the conference declared that "the attitude of the Communist party apparatus has completely destroyed any hope of overcoming the cleavage for the time being."

In the Scandinavian countries, Sweden after July had an all Social Democratic cabinet led by Premier Albin Hansson which had taken a number of steps toward increased socialization. In Norway the Labour party (socialist) won 77 out of 150 seats in the October election and organized a coalition government under the Socialist premier, Einar Gerhardsen. In Denmark on May 9 a provisional government was formed under leadership of Vilhelm Buhl, a Social Democratic underground leader. In August the Socialist party rejected proposed unity at that time with the communists. In the general elections the Socialist representation in parliament fell to 48, the Communists elected 18, the Agrarians 38, out of a total of 149. Buhl refused to form a minority or a coalition government and the Agrarians formed a minority government.

In Italy the most significant development was the socialist decision in October as a result of Ignazio Silone's leadership to reverse an earlier decision of the Rome conference looking toward fusion with the communists. In membership the Socialists were third in size, the Catholic Christian Democrats being first and the communists second.

In France the Socialists emerged from the October election for the National Assembly with 151 deputies, the Communists 152, and the Catholic Popular Republican movement (M.P.R.) 138. The Socialists were represented in the coalition cabinet under Gen. Charles de Gaulle and were pushing extensive measures of socialization.

In the Netherlands, Socialists held the posts of minister of social affairs, of commerce and industry, and of food supply in a coalition government. In Belgium at the end of the year Achille van Acker continued to head a four-party cabinet much disturbed by controversy over the question of the abdication of King Leopold which the Belgium Socialists were demanding.

In Finland in March the Social Democrats, while winning the largest number of seats in parliament of any single party, were far from a majority and lost heavily over their previous showing. Prime Minister Juho K. Paasikivi of the National Coalition party continued his leadership following the election but reconstituted his coalition cabinet. At the end of the year the old Social Democratic party leader V. Tanner, together with other wartime leaders, was a defendant in the War Guilt trials which were the result of Russian pressure.

A Socialist party emerged in Japan which demanded the resignation of the Shidehara cabinet, but its strength was unknown.

(See also COMMUNISM; LABOUR PARTY.) (H. W. L.; N. T.)

**Socialist Soviet Republics:** see UNION OF SOVIET SOCIALIST REPUBLICS.

**Social Security.** In 1945 the importance of adequate provision for economic security to the future of the world was stressed in the creation of an Economic and Social council by the United Nations conference and in the meetings of the Inter-American conference and of the permanent committee of the Inter-American Conference on Social Security. The United Nations Relief and Rehabilitation administration also emphasized the need for revival of social insurance systems in liberated countries. Plans to strengthen and broaden such systems, developed in part by European governments-in-exile during World War II, were put into effect in 1945, notably in Belgium, France, Czechoslovakia, Luxembourg and Norway. Great Britain set up its new ministry of national insurance and adopted a system of cash family allowances. First payments were made of children's allowances in Canada. The Argentine system of old-age, invalidity and survivors' insurance for commercial workers began operation; Ecuador similarly began its expanded program of health, maternity, disability, old-age and survivors' insurance; and Brazil enacted an organic law which was to unify nearly all existing systems and extend coverage for social insurance, assistance and services to all income recipients.

**United States.**—No new social security measures were established on a nation-wide basis in the United States in 1945. In a message to congress on Nov. 19, President Truman made the first comprehensive recommendation for a health insurance program. Both social insurance and public assistance in 1945 continued to reflect wartime conditions. In addition to comprehensive provisions for aged, disabled or unemployed veterans and for veterans' survivors, the federal government administered the old-age and survivors' insurance system for industrial and commercial workers, special retirement and unemployment insurance systems for railroad workers, and retirement and workmen's compensation provisions for federal employees. All states and territories administered unemployment compensation programs, for which administrative costs are met by federal grants under the Social Security act, and all states but Mississippi administered workmen's compensation. Slightly more than half the employees of state and local governments were members of public retirement plans.

With termination of all federal work programs by July 1943, the only significant forms of public aid in the United States in 1945 were the special types of assistance, administered by states with the aid of matching federal grants, and general assistance, financed wholly by states and localities. During the first nine months of 1945, two new state plans were approved for federal aid (aid to dependent children in Alaska and aid to the blind in Delaware), bringing the number of jurisdictions using federal funds for all three programs to 47. One state administered aid to dependent children and three administered aid to the blind without federal funds, and one had no program for aid to the blind.

**Social Insurance and Related Programs.**—In an average week of 1944, about 32,000,000 persons were in jobs covered by the federal old-age and survivors' insurance program or the railroad retirement system; most of these were also covered by state unemployment compensation laws or the Federal Railroad Unemployment Insurance act. Of the jobs excluded from old-age and survivors' insurance and, by and large, from unemployment insurance, 8,000,000, on the average, represented farm owners or farm workers; 6,000,000, employees of federal,

state or local governments; 4,500,000, self-employed persons in nonagricultural pursuits; and 2,000,000-3,000,000, workers in domestic service, service for certain nonprofit organizations, casual employment and other excluded jobs.

Payments under all social insurance and related programs represented about 1.3% of all income payments in 1944, about the same proportion as in 1943.

Estimated weekly unemployment in 1944 averaged only about 800,000, and a weekly average of less than 100,000 persons received unemployment benefits under state laws, the Railroad Unemployment Insurance act, or the G.I. Bill of Rights. Payments to unemployed persons totalled \$67,086,000. Reconversion and demobilization caused a slight increase in unemployment benefits in the first seven months of 1945, and a sharp jump after Japan's surrender. In Sept. 1945, payments totalling \$58,000,000 were made to a weekly average of 637,000 beneficiaries under the state laws, 2,100 railroad workers, and 73,200 ex-servicemen.

Of an estimated 9,900,000 persons aged 65 or over in Dec. 1944, nearly one-third were employed or were wives of employed persons and about 1,200,000 were beneficiaries under retirement programs. In 1944 the federal old-age and survivors' insurance system paid \$119,000,000 in monthly benefits to retired workers and their wives and young children. In Sept. 1945 such benefits, totalling \$13,700,000, were paid to about 625,000 persons. At least 1,100,000 persons were potentially eligible for benefits but were not drawing payments, largely because the insured worker continued in covered employment.

The wage loss from illness or disability of persons in the labour force was estimated at \$3,500,000,000 for 1944. Disability compensation under social insurance and related programs totalled only \$670,783,000, of which \$412,000,000 represented payments to disabled veterans; \$191,000,000, workmen's compensation; \$5,000,000, temporary disability benefits in Rhode Island; \$31,000,000, payments to disabled railroad workers, and about an equal amount, payments to disabled government employees.

In 1944, social insurance and related public programs paid survivors \$290,089,000 in monthly benefits and \$56,684,000 in lump-sum payments. Of the monthly benefits, nearly half was paid under the veterans' program, nearly one-fourth under old-age and survivors' insurance, and about one-sixth as workmen's compensation. In Sept. 1945, monthly survivor benefits totalling \$9,000,000 were paid to 564,000 beneficiaries of old-age and survivors' insurance (88,000 aged widows, 5,900 aged parents, 354,000 children of deceased workers and 116,000 widows with such children in their care). About 624,000 survivors of veterans received \$26,200,000.

**Public Assistance.**—During the war there was a marked and nearly continuous decrease in recipient rolls for old-age assistance and aid to dependent children from prewar levels and a decline also in recipients of aid to the blind. General assistance caseloads dropped precipitously. In 1944, public aid under these programs represented only 0.6% of all income payments in the United States and totalled \$944,000,000 in contrast to the 1941 total of \$2,325,000,000 which also included federal work programs. In Sept. 1945, \$61,000,000 was paid to 2,000,000 recipients of old-age assistance; \$12,700,000 to 259,000 families receiving aid to dependent children in behalf of 658,000 children; \$2,300,000 to 71,000 recipients of aid to the blind; and \$6,900,000 to 232,000 general assistance cases.

**Financing Social Security Programs.**—In fiscal years ended in 1944 the federal government, the states and their localities expended \$4,110,400,000 for social security and welfare purposes, including not only social insurance and public assistance, but also expenditures for public health and welfare and em-

ployment services, which accounted for about one-fourth of the total. Of the total, \$2,118,200,000 represented state and local funds, and \$1,992,200,000, federal funds, of which \$533,800,000 was granted to states.

Total contributions to social insurance programs by employers and employees rose with increasing wages subject to contribution. Since benefit expenditures were at relatively low levels, the assets of social insurance trust funds increased. Of \$15,300,000,000 in assets of the three largest funds on Sept. 30, 1945, \$6,900,000,000 was in the old-age and survivors' insurance trust fund, \$771,000,000 in the railroad retirement account, \$6,900,000,000 in the state accounts and \$676,000,000 in the railroad account in the unemployment trust fund. (See also LAW; RELIEF.)

(A. J. A.)

**Great Britain.**—The first instalment of the comprehensive scheme of social security envisaged in the government's White Papers of 1944 was given legislative effect by the Family Allowance act on June 15, 1945, to operate from a date to be fixed. This act provided for the payment to every family which includes two or more children, and for the benefit of the family as a whole, an allowance in respect of each child, other than the first, at the rate of 5s. a week. Payment of the allowances would continue generally until the children reached the age of 16. The family was broadly interpreted so that qualification for an allowance extended to children being maintained by either of their parents or other persons. Where the parents were living together the allowance would normally be paid to the wife, although payment might be made either to the wife or husband. The allowances would be inalienable and of universal application; there would be no exceptions; but as an interim measure arrangements were made to avoid duplication of such payments from other state funds until the comprehensive scheme of national insurance should come into operation. Any person dissatisfied by the award or decision in respect of an allowance might appeal to one or more referees, who might on a point of law refer the matter to the high court of justice.

It was estimated that more than 2,500,000 families would be eligible for allowances which would be paid to about 4,500,000 children. The cost of allowances would be about £57,000,000 and the cost of administration about £2,000,000 all of which would be met by the exchequer. The administration of the act was the responsibility of the new minister of national insurance, James Griffiths, M.P.

Little progress was made in public with the proposals for a national health service, but the National Insurance (Industrial Injuries) bill was brought before parliament, and other bills dealing with the remaining aspects of the social insurance proposals were anticipated.

The Industrial Injuries bill implemented the general provisions of the first White Paper (Cmd. 6551) on workmen's compensation, and the bill was explained in a memorandum by the minister of national insurance issued as a White Paper (Cmd. 6651). The main provisions were the establishment of an industrial injuries fund under the control of the minister of national insurance into which would be carried all contributions by insured persons, their employers and the exchequer, which would contribute one-fifth of the aggregate of insured persons and their employers, and out of which would be paid all benefits and administrative charges. It was assumed that in postwar conditions annual contributions of employers and employed would be approximately £23,000,000 and the exchequer contribution £4,500,000. The scheme would cover all persons working under a contract of service, there would be no income limit and no provision for contracting out. Contributions would be paid by all insured persons and their em-

ployers, a total of 7d. a week for men (employer 4d., workman 3d.), women 5d. (employer 3d., woman 2d.), boys under 18, 3d. (employer 1½d., boy 1½d.), girls under 18, 2d. (employer 1d., girl 1d.). Benefits were to include injury allowances, dependents' allowances, disablement pensions and widows' pensions, and were generally higher than those proposed in the first White Paper on workmen's compensation—for example, an injury allowance for a married man of 56s. at a flat rate for 26 weeks as against the original proposal of 43s. 9d. for the first 13 weeks and then rising to 50s. The rates proposed in the bill were subject to the consideration of parliament. (J. McAT.)

**Social Service:** see CHILD WELFARE; RELIEF; SOCIAL SECURITY.

**Societies and Associations.** The following is a selected list of U.S. societies and associations, with date of founding, membership, officers, and chief activities during 1945. See also the separate articles on AMERICAN LEGION; BOY SCOUTS; RED CROSS; YOUNG MEN'S CHRISTIAN ASSOCIATION; etc.

**American Academy of Arts and Letters.**—An organization founded in 1904 by the National Institute of Arts and Letters in order to make the institute more efficient in the protection and furtherance of literature and fine arts. Membership of the academy is limited to 50 members chosen only from the institute. At the fourth joint public ceremonial on May 18, 1945, medals were awarded and 15 \$1,000 arts and letters grants were given. On Nov. 2 at the annual meeting three new members were elected, Douglas South Freeman, Robinson Jeffers and Lee Lawrie. Officers elected for 1946 were: president, Walter Damrosch; chancellor and treasurer, James Truslow Adams; secretary, Van Wyck Brooks. In 1945 the academy published the 24th edition of its *Yearbook* and one art exhibition catalogue. Headquarters: 633 W. 155th St., New York city.

**American Academy of Arts and Sciences.**—Membership of the academy is limited to 800 fellows and 130 foreign honorary members divided among four classes: mathematical and physical sciences; natural and physiological sciences; the social arts; and the humanities. At the regular monthly meetings held in 1945 various research papers were read. Three grants-in-aid for research were made during the year by the committee on the Permanent Science Fund. Officers (1945): president, Howard M. Jones; treasurer, Horace S. Ford; corresponding secretary, Abbott Payson Usher; recording secretary, Hudson Hoagland.

**American Academy of Political and Social Science.**—The academy, nearly 60 years of age, had a membership in 1945 of almost 12,000. Members are primarily business and professional people interested in serious discussion of public questions. During the year meetings were held as usual. The annual meeting held in April was devoted to the topic "Twentieth Century Agreements and Disagreements." The academy publishes a bimonthly journal, the *Annals*, and various timely documents. President (1945): Ernest Minor Patterson. Headquarters: 3457 Walnut St., Philadelphia 4, Pa.

**American Association for the Advancement of Science.**—A scientific association whose membership in 1945 increased to more than 27,000. It publishes a nontechnical science series; a technical series of 20 volumes, of which those on *Human Malaria* and *Relapsing Fever* were widely used by the medical corps of the U.S. army and navy in the tropics; and the serial publications, *A.A.A.S. Bulletin*, the *Scientific Monthly* and the weekly journal *Science*. Officers (1945): president, Charles F. Kettering; permanent secretary, Forest Ray Moulton; treasurer, William E. Wrather.

**American Association of Law Libraries.**—The association was founded in 1906 and incorporated in 1935 "to promote librarianship, to develop and increase the usefulness of law libraries, to cultivate the science of law librarianship, and to foster a spirit of co-operation among the members of the profession." The association in 1945 had a membership of 503 bar association, county, court, government, law school and state law librarians in the U.S. and Canada. Publications: *Index to Legal Periodicals*; edited for the association at the Harvard Law School library, Cambridge, Mass., *Law Library Journal*. President (1945-46): Miles O. Price, Columbia University Law library, New York city.

**American Bankers Association.**—A national organization with a membership in 1945 of more than 15,000 banks. The association's primary activities are educational. Its educational projects include the American Institute of Banking, which offers study courses to banking employees, and the Graduate School of Banking, which offers a two-year graduate course for bank officers. In 1945 the association gave direction to the activities of the banks of the U.S. in war bond drives, tax collecting for the bureau of internal revenue, loans to manufacturers and credit to farmers. Officers elected in 1945: president, Frank C. Rathje, president of the Chicago City Bank and Trust company, Chicago, Ill.; vice-president, C. W. Bailey, president of the First National bank, Clarksville, Tenn.; treasurer, S. Albert Phillips, vice-president of the First National bank, Louisville, Ky. Headquarters, 12 E. 36th St., New York city.

**American Bar Association.**—The association was founded in 1878 to advance the science of jurisprudence and promote the administration of justice. Its membership numbered about 35,000 in 1945. The Ross prize of \$3,000 went to Robert A. Sprecher of Chicago, Ill., for an essay on "The Development of the Doctrine of *Stare Decisis* and the Extent to Which it Should be Applied." Winners of the American citizenship essay contest

were: Ralph Bushnell Potts of Seattle, Wash., first prize; John H. Flanagan of Carthage, Mo., second prize; and Paul R. Kach of Baltimore, Md., third prize. The association publishes the monthly *American Bar Association Journal*, an annual volume of reports and proceedings, and various pamphlets. Willis Smith was president in 1945. Headquarters: 1140 N. Dearborn St., Chicago, Ill.

**American Bible Society.**—The society held its 129th annual meeting in May 1945. Daniel Burke, LL.D., was president; Gilbert Darlington, treasurer; Rev. Dr. Francis C. Stiffler, editorial and recording secretary. In co-operation with the British and Foreign Bible society, the Scottish Bible society and other missionary organizations, the scriptures were translated into 1,068 languages up to 1945; 21,000,000 volumes were distributed throughout the world in 1944.

**American Chemical Society.**—Founded in 1876, this society had 43,050 members in 1945 with 108 local sections in 43 states. Local meetings were held in place of national meetings due to wartime restrictions. During the year expenditures were approximately \$975,000. Officers (1945): chairman, Roger Adams; president, C. S. Marvel; treasurer, Robert T. Baldwin; secretary, Charles L. Parsons. Publications, *Journal of the American Chemical Society*; *Chemical Abstracts*; *Industrial and Engineering Chemistry*; *Chemical and Engineering News*; *Journal of Physical Chemistry*; *Chemical Reviews*; *Journal of Chemical Education*; *Rubber Chemistry and Technology*. Headquarters, 1155 16th St. N.W., Washington, D.C.

**American College of Life Underwriters.**—The college grew out of the needs for efficient life underwriting and was incorporated in 1927. Its objects are the training of students and the setting up of standards for the profession. In 1945, there were 2,472 holders of the Chartered Life Underwriter designation. To obtain the C.L.U. award, candidates must first pass five examinations, which in 1945 were held at 107 universities and colleges, and then complete three years of satisfactory business experience. President: S. S. Huebner. Headquarters: 36th and Walnut streets, Philadelphia 4, Pa.

**American College of Surgeons.**—The college was founded in 1913 by surgeons of the U.S. and Canada to elevate the standards of surgery and to stimulate high professional and ethical ideals. The fellowship for 1946 numbered approximately 14,000; 582 were received into fellowship in 1945. On its approved list in 1945 were 3,181 hospitals in the U.S., Canada and other countries; 392 cancer clinics in hospitals and 1,137 medical services in industry were approved during the year. Hospitals approved for graduate training in surgery and surgical specialties in 1945 numbered 289. Official journal: *Surgery, Gynecology and Obstetrics*. President in 1945: Dr. W. Edward Gallie, Toronto, Ont., Canada. Headquarters: 40 E. Erie St., Chicago, Ill.

**American Economic Association.**—This professional association of economists was founded in 1885 to encourage economic research and stimulate thought and discussion of economic problems. It was composed in 1945 of 4,159 members and 1,752 library, corporate and other subscribers. The 58th annual meeting, held at Cleveland, Ohio, in Jan. 1946, was the first after 1941 of national scope. The program covered a variety of subjects, including full employment, monetary policy, problems of foreign areas, monopoly and competition, international investments, public utility regulation and international cartels. Publications: *American Economic Review* (quarterly), and *Papers and Proceedings* of the annual meetings. President (1946): Emanuel A. Goldenweiser.

**American Geographical Society.**—The principal activity of the society in 1945 was the completion of what was believed to be the largest cartographic project ever undertaken by a private institution. This was the *Map of Hispanic America on the Scale of 1:1,000,000*. It took 25 years to complete at a cost of more than \$500,000. For this work the society was awarded a citation by the Pan-American Society of the U.S. for its contribution to inter-American co-operation. Official publications are the quarterly periodical, the *Geographical Review* and the monthly, *Current Geographical Publications*. With the addition of numerous books, pamphlets, maps and atlases during 1945, the society's collection was brought to a total of 116,587 books, 23,014 pamphlets, 133,357 maps and 2,287 atlases.

**American Institute for Property and Liability Underwriters, Inc.**—The institute was incorporated in 1942 for the establishment of educational standards and the training of students in professional property and casualty underwriting. In 1945, 229 candidates took 452 examinations held in 23 states, the District of Columbia and Hawaii. Forty-six candidates held the C.P.C.U. (Chartered Property Casualty Underwriter) designation in 1945. President: L. G. Purmort. Headquarters: 36th and Walnut streets, Philadelphia 4, Pa.

**American Institute of Accountants.**—This national society of certified public accountants was founded in 1887 to maintain high standards of education and practice for the profession, and to develop the technique of accounting to serve the public interest. With more than 9,000 members and associates in 1945, it continued its activities in the development of war contract termination and renegotiation procedures, and in the improvement of federal income taxation. Officers (1945-46): president, T. Dwight Williams; vice-presidents, Homer N. Sweet and Earl A. Waldo; treasurer, Maurice E. Peloubet; secretary, John L. Carey. Publications: the *Journal of Accountancy*; the *Certified Accountant*, both monthly. Headquarters, 13 E. 41st St., New York city.

**American Institute of Chemical Engineers.**—This organization was founded in 1908 for the advancement of chemical engineering in theory and practice. During 1945, many of the regular activities were curtailed due to wartime restrictions, but one national meeting was held in Chicago, Ill., in December. Officers (1945): president, Dr. Lawrence W. Bass; treasurer, C. R. DeLong; secretary and executive secretary, Stephen L. Tyler. Publications, *Transactions of the American Institute of Chemical Engineers*; *A.I.Ch.E. Bulletin*. Headquarters, 50 E. 41st St., New York city.

**American Institute of Electrical Engineers.**—The society, founded in 1884, had 75 sections and 125 student branches in educational institutions throughout the U.S. in 1945. Its wartime activities consisted chiefly in the preparation of emergency standards and operating guides for electrical equipment. President in 1945: Dr. William E. Wickenden,

president of Case School of Applied Science, Cleveland, Ohio. Publications: monthly, *Electrical Engineering*; annual, *Transactions*; the semi-annual, *Transactions Supplement to Electrical Engineering*; *Standards*; and the *Yearbook*. Headquarters, 33 W. 39th St., New York city.

**American Institute of Mining and Metallurgical Engineers.**—An organization founded in 1871 for the purpose of promoting the economic and scientific search for, production and use of minerals, including metals, coal, petroleum and other nonmetallic minerals. Its membership in 1945 was 14,000. Because of travel restrictions only sectional meetings were held during the year. Publications for 1945 included five volumes of *Transactions*; monthly issues of the magazine *Mining and Metallurgy* and regular issues of the periodicals: *Petroleum Technology*, *Metal Technology* and *Mining Technology*. Officers (1945): president, Harvey S. Mudd; secretary, A. B. Parsons. Headquarters, Engineering Societies Bldg., 29 W. 39th St., New York city.

**American Iron and Steel Institute.**—The publication of the 24th edition of the *Directory of Iron and Steel Works in the United States and Canada* was one of the important activities of the institute in 1945. The directory covers the many changes in the industry that took place after the preceding edition was published in 1938. Research activities sponsored by the institute proceeded at an accelerated pace during 1945. The officers were: president, W. S. Tower; vice-presidents, B. F. Fairless and Frank Purnell; secretary, G. S. Rose. Headquarters: 350 Fifth Ave., New York city.

**American Law Institute.**—From its organization in 1923 to early 1944, the principal work of the organization was the *Restatement of the Law*, an "orderly statement of the common law of the states of the U.S." The last two volumes were published in 1945. The *Restatement* was in general use by the courts. The chief work of the institute in 1945 was on a model code of commercial law, expected to be completed in 1949 or 1950. There were in 1945, aside from the official membership of persons holding leading judicial bar and law school faculty positions, 860 life members. The president in 1945 was George Wharton Pepper; William Draper Lewis was director and chief of editorial staff. Executive offices, 3400 Chestnut St., Philadelphia, Pa.

**American Society of Civil Engineers.**—A society founded in 1852 for the purpose of advancing the sciences of engineering and architecture. Membership in 1945 was approximately 21,000. The professional activities of the society were directed through the society's headquarters; its professional committees; its technical divisions; its 164 local subdivisions; and its student chapters at 123 institutions. Publications: *Proceedings* (monthly); *Transactions*, a yearly volume; *Civil Engineering* (monthly); and the *Yearbook*. President (1945), J. C. Stevens, Portland, Ore. Principal office: 33 W. 39th St., New York city.

**American Society of Mechanical Engineers.**—A national organization whose more than 19,000 members in 1945 were grouped into 17 professional divisions covering all phases of mechanical engineering. The society's work during the year was carried on by 70 sections including one in Canada. Student branches were also maintained in about 120 engineering schools. The society holds four national meetings annually. Officers (1945): Secretary, Colonel C. E. Davies; treasurer, K. W. Jappe. Chief publications, *Mechanical Engineering*, a monthly periodical, and *Transactions*, including the *Journal of Applied Mechanics*. Headquarters, 29-33 W. 39th St., New York city.

**Anti-Saloon League of America.**—A national nonpartisan interdenominational federation of state temperance organizations established in 1895. During 1945 it had affiliates in 31 states. The league advocated the maintaining of restrictions against the liquor traffic to prevent waste of food materials, fuel, transportation facilities and manpower during World War II. It also sought revision of the practices of the radio industry which allowed the sale of radio time to advertisers of alcoholic beverages but which permitted radio licensees to decline to sell time for temperance broadcasts. Protest was also made against radio advertisement of alcoholic beverages in areas where the people had voted "no licence" under local option laws. President (1945), Bishop Ralph S. Cushman; general superintendent, Dr. George W. Crabbe. National headquarters: 131 B St., S.E., Washington 3, D.C. (See also LIQUORS, ALCOHOLIC.)

**Brookings Institution.**—This nonprofit organization is devoted to research and training in the field of economics and government. The institution is supported by grants from foundations, its own endowment and income from the sale of publications. Publications for the year 1945 included the following: *International Tribunals: Past and Future*, by Manley O. Hudson; *Labor Policy of the Federal Government*, by Harold W. Metz; *Postwar Fiscal Requirements*, by Lewis H. Kimmel and associates; *Debtor and Creditor Countries, 1938-1944*, by Cleona Lewis; *Should Price Control Be Retained?* by Harold G. Moulton and Karl T. Schlotterbeck; *Business Leadership in the Large Corporation*, by R. A. Gordon. Officers (1945): chairman, Dwight F. Davis; vice-chairman, Dean G. Acheson; president, Harold G. Moulton; vice-president, Edwin G. Nourse; treasurer, Henry P. Seidemann; secretary, Elizabeth H. Wilson. Headquarters, 722 Jackson Pl., Washington, D.C.

**Carnegie Trusts.**—*Carnegie Corporation of New York*, established in 1911 with an endowment of \$135,000,000, makes grants to institutions and agencies whose activities aim at the advancement and diffusing of knowledge among people in the U.S. and Great Britain. During 1945 grants totalling \$1,002,500 were made among colleges and universities and various agencies. The other five separately administered Carnegie organizations in the U.S. founded before the corporation for specific purposes are:

*Carnegie Institute of Pittsburgh* (1896), comprising a museum of fine arts, a music hall, a museum of natural history and a public library;

*Carnegie Institution of Washington* (1902), devoted to scientific research; up to 1945 it had expended about \$50,000,000 in its program;

*Carnegie Hero Fund Commission* (1904), established to recognize heroic acts performed throughout the U.S., Canada and Newfoundland; up to 1945 it had awarded 3,373 medals and a total of \$6,714,449;

*Carnegie Foundation for the Advancement of Teaching* (1905), established to provide retiring pensions for teachers and to advance higher education, paid \$1,879,205.27 in 1945 in such allowances, raising the cumulative expended total to \$48,197,732.33;

*Carnegie Endowment for International Peace* (1910), established to

serve the purpose indicated by its name, continued in 1945, to expend its income in research, publication and study on the causes of war and international misunderstanding.

**Catholic Community Service, National.**—An agency designed to promote the spiritual, recreational, social and educational welfare of men and women in the armed forces, war production workers, and the families of both groups. It differs from other war service organizations, however, in its provisions for spiritual aid to Catholics. A member agency of the United Service organizations, it participated as of Jan. 1946 in more than 350 operations, and, in addition sponsored 71 independent operations in the U.S. and in Italy, France, Egypt, Hawaii, the Philippines, Australia and the Fiji Islands.

**Catholic Library Association.**—An international organization of librarians, educators and others interested in the promotion of Catholic literature and Catholic library work. The association's membership in 1945 was 1,442 with 21 units distributed throughout the U.S. Book fairs and the publication of bulletins and book lists were the principal activities of these units during the year. *The Catholic Library World*, issued eight times annually, is the official publication of the association. Officers (1945): president, Richard James Hurley, University of Nebraska, Lincoln, Neb.; vice-president, Brother Thomas, F.S.C., Manhattan college, New York city; secretary-treasurer, Dorothy E. Lynn, University of Scranton, Scranton, Pa.

**Commonwealth Fund, The.**—An endowment, established in 1918 by Mrs. Stephen V. Harkness "to do something for the welfare of mankind." In 1945 appropriations totalled \$1,644,216.90. Activities tending to promote or maintain physical and mental health accounted for three-quarters of this total. Fourteen fellowships for postgraduate study in medicine and public health were awarded Latin-Americans in 1944-45. Directors of the fund (1945): Malcolm P. Aldrich (president), William E. Birdsall, Phil W. Bunnell, Adrian M. Massie, Lewis Perry, Barry C. Smith, William E. Stevenson and Thomas D. Thacher. Offices: 41 East 57th St., New York city.

**Daughters of the American Revolution, National Society of.**—A society having 24 active national committees covering patriotic, educational and historical fields. Membership in 1945 was approximately 145,000 members in 2,570 chapters. During World War II more than \$400,000 was appropriated for numerous activities among the agencies of the Red Cross, army and navy. Most important among the national committees is the Approved Schools program, to which \$77,640 was subscribed in 1945, whereby 14 mountain schools were assisted by D.A.R. funds. Official publications of the society are: *National Defense News* and the *National Historical Magazine*. President general in 1945 was Mrs. Julius Y. Talmadge. Headquarters, Administration Bldg., 1720 D St., N.W., Washington, D.C.

**Elks, Benevolent and Protective Order of.**—This fraternal order was organized in 1868 for the purpose of practicing charity, justice, brotherly love and fidelity; promoting the welfare and enhancing the happiness of its members; quickening the spirit of American patriotism and cultivating good fellowship. In 1945, there were 1,410 lodges with 750,000 members. Charitable expenditures for the year amounted to almost \$4,000,000. The Elks war commission continued to work in co-operation with the U.S. government in the prosecution of World War II. Publication, the *Elks Magazine*, a monthly periodical.

**Falk Foundation, The Maurice and Laura, of Pittsburgh, Pa.,** continued during 1945 to devote its funds to the support of research studies of economic problems which are basic to the development of U.S. industry, trade and finance. In addition to new grants of \$69,100 for this purpose, payments of \$350,000 were made during 1945 on earlier grants. Research projects completed during the year under the foundation's subventions resulted in the publication by the Brookings institution, Washington, D.C., of *Postwar Fiscal Requirements*, *Should Price Control Be Retained?* and *Labor Policy of the Federal Government*; in the publication by the National Bureau of Economic Research, New York, N.Y., of *Labor Savings in American Industry, 1899-1939*; and in the publication by a special committee on postwar tax policy of *A Tax Program for a Solvent America*.

**Guggenheim Memorial Foundation.**—The John Simon Guggenheim Memorial foundation was established for the advancement of research in all fields of knowledge and for creative work in the arts. For the year 1945-46, 121 fellowships were granted, with stipends totalling \$352,125. The foundation in 1945 had an endowment of \$19,460,932; up to 1945, \$3,132,000 had been distributed in the form of 1,506 fellowships. Officers (1945): president, Mrs. Simon Guggenheim; secretary-general, Henry Allen Moe. Headquarters of the foundation are at 551 Fifth Ave., New York city.

**Kiwanis International.**—An organization, founded in 1915, which consisted in 1945 of 154,000 business and professional leaders in 2,340 clubs throughout the U.S. and Canada. Community betterment is its principal objective. Its program includes participation in public affairs, aid to youth, promotion of closer rural-urban relations, maintenance of democracy and preservation of the free enterprise system. Officers (1945): president, Hamilton Holt, Macon, Ga.; secretary, O. E. Peterson, Chicago, Ill. Headquarters, 520 N. Michigan Ave., Chicago, Ill.

**Knights of Columbus.**—A fraternal order of men, organized in 1882, dedicated to the preservation and championship of Catholic and American principles. Its membership as of Nov. 1, 1945, was more than 541,000 within 2,500 councils in the U.S., Canada, Newfoundland and Central America. At its 63rd supreme convention, appropriations were voted for \$3,000 to the Catholic Hour radio program and \$1,000 for the Canadian Catholic Hour. The order's Canadian Army Huts organization completed its fifth year of recreational and overseas activities in 1945; the plan for extending insurance benefits to sons and male relatives of members came into effect. Publications: *Columbia*, a monthly magazine, and *News*, a weekly. Judge John E. Swift was elected supreme knight. National headquarters: New Haven, Conn.

**Lions Clubs, International Association of.**—Founded in 1917 as a nonpolitical, nonsectarian association of service clubs whose purpose is to recognize and meet the needs of the community, its activities cover eight classifications: boys and girls; citizenship and patriotism; civic improve-

ments; community betterment; education; health and welfare; safety; sight conservation and aid to the blind. In 1945 its membership was made up of approximately 240,000 business and professional men with 4,950 clubs in 15 countries. Officers (1945): secretary-general, Melvin Jones; international president, Ramiro Collazo of Havana, Cuba. Monthly publication, the *Lion Magazine*. Headquarters, 332 S. Michigan Ave., Chicago, Ill.

**Music Library Association.**—The association was organized in 1931 to foster the establishment, growth and use of music libraries and collections. Membership in 1945 included about 350 individuals and 125 institutions in the U.S. and Great Britain. Two meetings are held annually. The summer meeting is held in conjunction with the annual conference of the American Library association. Officers (1945): president, Edward N. Waters of the Library of Congress; vice-president, Otto E. Albrecht of the University of Pennsylvania, Philadelphia, Pa.; secretary-treasurer, Catherine N. Lay of the District of Columbia public library. Publications: *Notes*, a quarterly journal; *Music and Libraries*; *Code for Cataloging Music*.

**National Academy of Sciences.**—A scientific body incorporated by an act of congress in 1863 for the purpose of investigating and reporting upon scientific subjects as called for by any department of the U.S. government. Membership is limited to 450 active members of U.S. citizenship and 50 foreign associates. In 1945 the academy was engaged largely in government problems concerned with scientific matters related to World War II. Officers (1945): president, Dr. Frank B. Jewett; foreign secretary, Dr. Walter B. Cannon; home secretary, Dr. F. E. Wright; treasurer, Dr. J. C. Hunsaker. The academy building is at 2101 Constitution Ave., Washington, D.C.

**National Association of Manufacturers.**—The association was founded in 1896 and functions as industry's "watch dog" on federal affairs, and as the spokesman of industry before the national government and its congressional and administrative agencies. It operates through six departments, namely those on taxation, industrial relations, economic security, public relations, research and law, as well as through various committees. Membership numbered 14,000 active members and approximately 1,200 associate members in 1945. The association issues six regular publications including the *Law Digest* and numerous bulletins. President (1946): Robert Wason. Headquarters are in New York city.

**National Lawyers Guild.**—As a consultant organization to the U.S. delegation to the San Francisco conference in 1945, the guild advocated the establishment of a new world court. The guild's proposal was in opposition to the American Bar association for the continuation of the old world court. The guild also supported the veto power of the permanent members of the Security council of the United Nations organization. Continued support of a federal unified system of social security was made by the guild in its advocacy of the enactment of the Wagner-Murray-Dingell bill. National officers (1945): president, Attorney-General Robert W. Kenny of California; secretary, Martin Popper of New York. Headquarters: 902 Twentieth St., N.W., Washington 6, D.C.

**National League of Women Voters.**—The league was founded in 1920 for the purpose of helping U.S. citizens to accept their responsibility for government. During 1945 local leagues in 550 communities gave information to the public on various local, state and national issues. Officers (1945): president, Miss Anna Lord Strauss; secretary, Mrs. Daniel Early; treasurer, Mrs. W. H. Peterson. Publication, *Trends* (biweekly). Headquarters (1945), 726 Jackson Pl., Washington, D.C.

**Performing Right Societies.**—A world-wide confederation of composers, authors and publishers of musical works whose chief purpose is the licensing to commercial interests of the right to perform publicly the copyrighted work of their members. The International Confederation of Performing Right Societies, whose activities had been hampered by war conditions and government regulations, was in 1945 returning to normal working conditions, with headquarters at Lausanne, Switzerland. The most influential member of the confederation is the American Society of Composers, Authors and Publishers (A.S.C.A.P.). Its total membership in 1945 reached about 2,000, comprising 1,750 composers and authors, 250 publishers. A.S.C.A.P. was a leader in steps to restore prewar conditions among societies of the confederation. Adopting a new policy of five-year rather than one-year contracts, new contracts were signed with the societies of England, France, Spain, Argentina, Brazil and Uruguay. In the fields of symphony and concert music as well as television, A.S.C.A.P. continued to expand its licensing activities. Deems Taylor was re-elected for fourth term as president, 1945-46. A.S.C.A.P. headquarters (1945); 30 Rockefeller plaza, New York city.

**Research Libraries, the Association of.**—This association of 47 of the largest research libraries in the U.S. and Canada met twice in 1945. The most important subject of discussion at both meetings was the problem of securing books and periodicals published in enemy and occupied countries during World War II. The association continued its printing of a book catalogue of Library of Congress cards, of which 130 of 160 projected volumes were completed by the end of 1945. The next project was to be a photo-lithoprinted edition of the *British Museum Catalogue of Printed Books, 1881-1900*.

**Rockefeller Foundation.**—The foundation was chartered in 1913 and is concerned with problems in the medical, natural and social sciences, the humanities and public health. During 1945, approximately \$11,330,600 was appropriated for work among its varied fields of interest. President (1945): Raymond B. Fosdick; secretary: Norma S. Thompson. *The General Education Board* was incorporated in 1903 for the promotion of education in the U.S. Appropriations in 1945 approximated \$2,945,000. President: Raymond B. Fosdick; secretary: William W. Brierley.

**Rosenwald Fund, The Julius.**—The provisions of the fund require that the trustees expend all of its funds by Jan. 6, 1957. By 1945, approximately \$20,000,000, representing all of its year-to-year income and nine-tenths of its principal, had been expended. The assets of the fund as of June 30, 1945, had a value of approximately \$2,500,000. The main programs in 1945 were concerned with the improvement of the content and quality of rural education of both white and Negro schools in the south; fellowships for Negroes and for white southerners; and improvement of race relations, especially between white and Negro citizens in the U.S.

During 1945 the fund expended approximately \$600,000.

**Rotary International.**—A world-wide organization of Rotary clubs, made up of groups of representative men, for the purpose of furthering co-operation and goodwill in business and community life. In 1945 there were 5,579 clubs in more than 60 countries with a membership in excess of 253,000. Activities in 1945 included general community service as well as a program designed to promote an understanding of the United Nations charter. The Rotary clubs of the U.S. and Canada sponsored 371 institutes of international understanding during the year. Official publication of the organization is the *Rotarian*. President (1945): T. A. Warren, Wolverhampton, England; secretary: Philip Lovejoy, Chicago, Ill. International headquarters are in Chicago, Ill.

**Russell Sage Foundation.**—This foundation, established in 1907 for the purpose of improving social and living conditions in the U.S., has an endowment of \$15,000,000. About 70% of its income in 1945 was devoted to work carried on by its own staff, the rest to work by other organizations. Its later publications included the *Social Work Year Book 1945*, edited by Russell Harold Kurtz; *Law Training in Continental Europe*, by Eric F. Schweinburg; and bibliographies on *Rehabilitation of the Disabled Serviceman* and *Organized Labor's Participation in Social Work*. Officers (1945): president of board of trustees, Morris Hadley; general director, Shelby M. Harrison. Offices, 130 E. 22nd St., New York city.

**Special Libraries Association.**—Founded in 1909 to promote the use of special libraries by business and industrial organizations. As of Dec. 31, 1945, the association had approximately 3,984 members, with 21 chapters in the U.S. and 2 in Canada. These members represented banking, advertising, insurance, finance, social welfare, publishers, newspapers, manufacturers, museums and specialized departments of universities. The official journal *Special Libraries* was published monthly September through April; bimonthly, May to August. Officers (1945): president, Herman H. Henkle, Library of Congress; treasurer, Paul Gay, University of Pennsylvania, Philadelphia; executive secretary, Mrs. Kathleen B. Stebbins, New York city. Executive office, 31 E. 10th St., New York city.

**Spelman Fund of New York.**—The fund was chartered in 1928. During 1945 it continued its program directed at the improvement of the methods and techniques in the field of public administration. The chairman of the board of trustees in 1945 was Charles E. Merriam.

**Theatre Library Association.**—An organization affiliated with the American Library association and interested in preserving and making accessible to the public the records of the drama and kindred fields of entertainment. The membership in 1945 was 130. Publications of the association are the *Broadside*, issued three times yearly, and the *Theatre Annual*, issued in January. Officers (1945): president, George Freedley, Theatre collection, New York public library; secretary, Mrs. Sarah Chokla Gross, McCord Theatre museum of Dallas, Tex.; treasurer, Mrs. Elizabeth P. Barnett, Theatre collection, New York public library.

**Twentieth Century Fund.**—Founded in 1919 by Edward A. Filene, the foundation serves a threefold purpose: research; policy formulation; and public education on current economic questions. During World War II, the fund carried on an intensive research and educational program on the basic problems of postwar reconstruction in the U.S. In progress during 1945 were surveys of the foreign economic relations of the U.S., cartel arrangements in world trade and monopoly problems in domestic business. Officers (1945): president, John H. Fahey; chairman of executive committee, Henry S. Dennison; treasurer, Morris E. Leeds; executive director, Evans Clark. Headquarters: 300 W. 42nd St., New York city.

**Woman's Christian Temperance Union, National.**—During 1945 more than 40,000 new women members were added to the national organization. Activities during the year included a training school for organizers held during the month of April as well as summer courses in alcohol education. Five motion pictures produced by the W.C.T.U. were shown to approximately 2,000,000 people as well as slide films to as many children in public and church schools. Officers (1945): president, Mrs. D. Leigh Colvin; vice-president, Miss Mary Ervin; corresponding secretary, Miss Lily Grace Matheson; treasurer, Mrs. Margaret C. Munns; recording secretary, Mrs. Glenn G. Hays. National headquarters are located in Evanston, Ill.

**Women's Clubs, General Federation of.**—The federation was composed in 1945 of 16,500 clubs approximating 2,500,000 members. It continued with its war service program during the year. An intensive recruiting drive was conducted for the women's services, the Cadet Nurse corps and the Women's Land army. The federation's war bond campaign, concluded in June, reached a total sales of \$154,459,132. The federation was one of the five national women's organizations to participate in the San Francisco conference. Other activities in 1945 included participation in conferences on youth programs and needs, national health and the united national clothing drive. President (1945), Mrs. LaFell Dickinson. National headquarters, 1734 N. St., N.W., Washington, D.C.

**Sociology.** The year 1945 saw a surprising increase in the amount of sociological publication—although whether all this represented fundamental research was in considerable degree doubtful. Apparently the imminence of victory of World War II in the early part of the year, and its decisiveness when it came, had something to do with the upswing. Publishers perhaps became more optimistic and were getting ready to capitalize on a postwar boom. On the other hand, the scholarly journals also showed a considerable increase in the number of significant articles.

Problems of the postwar world of course loomed large; among the more general treatises T. C. McCormick's (editor) symposium, *Problems of the Postwar World*, deserved promi-

nent notice. About 20 contributors dealt with topics ranging from fiscal policy to the treatment of occupied Germany, and the sociological chapters in the collection received very favourable comment from reviewers.

More specific studies, many of them postwar, fell into the general categories of military-civilian adjustment and readjustment, "the government of men" under wartime conditions of various types, social stratification, race relations and similar themes, critical analyses of currently accepted sociological doctrines and family problems. Most of these studies used sociological modes of analysis, broadly defined, but sharper focus here and there would have been desirable, as various reviews and critiques which appeared in 1945 pointed out.

Military-civilian matters were dealt with by Robert A. Nisbet, "The Coming Problem of Assimilation," S. Kirson Weinberg, "Problems of Adjustment in Army Units," Alfred Schuetz, "The Homecomer," all in the *American Journal of Sociology* (*Am. J. Sociol.*), and by Wilbur B. Brookover, "The Adjustment of Veterans to Civilian Life," in the *American Sociological Review* (*Am. Sociol. R.*). A text, *Counseling with Returned Servicemen*, by Carl R. Rogers and John L. Wallen, made its appearance, but like most counselling studies, it was only of indirect sociological significance.

*The Government of Men*, by A. H. Leighton, centred on the problem of Japanese relocation, but as the title indicates, many general considerations of social control were raised. Leighton is an anthropologist-psychiatrist by training, but like so many persons using such a perspective, his direction of attention and analytic interest is definitely although perhaps unwittingly sociological. Another study, much more clearly sociological because made with full awareness, was John Useem's "The Pattern of Military Government in Micronesia" in the *Am. J. Sociol.* and his integrally related paper in the *American Anthropologist*.

Useem and his wife, Ruth Hill Useem, contributed a significant analysis to the social stratification interest mentioned above as clearly apparent in 1945. "Minority-Group Patterns in Prairie Society," *Am. J. Sociol.*, dealt with the acculturation and concomitant secularization of a Norwegian group, and showed how thoroughly the old-line race relations approach was outmoded so far as certain minority group phenomena were concerned. More clearly in the social stratification vein was Oliver C. Cox's "Race and Caste: A Distinction," *Am. J. Sociol.*, and his "Estates, Social Classes, and Political Classes," *Am. Sociol. R.* The same is true of Thelma D. Ackiss' "Sociopsychological Implications of the 'White Superiority' Complex," Gerhart H. Saenger's "Social Status and Political Behavior," Orvis Collins' "Ethnic Behavior in Industry," H. B. Johnson's "Inter-marriage Between German Pioneers and Other Nationalities," H. L. Neugarten's "Social Class and Friendship among School Children," and Allison Davis' "Caste, Economy, and Violence"—all in the *Am. J. Sociol.* The *Am. Sociol. R.* contained Kingsley Davis and Wilbert E. Moore's "Some Principles of Stratification," Lloyd Allen Cook's "An Experimental Sociographic Study of a Stratified 10th Grade Class," William H. Form's "Status Stratification in a Planned Community," Julian L. Greifer's "Attitudes to the Stranger," and P. A. Sorokin's "War and Postwar Changes in the Social Stratifications of the Euro-American Population."

Numerous reviews and commentary articles appeared in the wake of Gunnar Myrdal, R. M. E. Sterner and Arnold Rose's *American Dilemma*, a race relations treatise in the narrower sense which was first published in 1944. The general conclusion seemed to be that they were psychologically correct in their diagnosis of impartiality among many U.S. sociologists dealing with the race problem. This same point was made from another angle by Carey McWilliams, "Race Discrimination and the

Law" in *Science and Society*. But although on the right track psychologically, Myrdal, Sterner and Rose went badly astray in the logic of their attack on the "freedom from value-judgments" position. An interesting article on a little-known race group was Brewton Berry's "The Mestizos of South Carolina," in the *Am. J. Sociol.* A good general summary was provided by E. B. Reuter's "Racial Theory: Developments in the Past Fifty Years," in the *Am. J. Sociol.*

The occasion of Reuter's survey was the special semicentennial issue of the *Am. J. Sociol.* This appeared in May 1945, and although unduly devoted to exaltation of certain parochial trends in U.S. sociology, it nevertheless furnished a welcome benchmark. Especially noteworthy was Florian Znaniecki's article, "Controversies in Doctrine and Method," in the *Am. J. Sociol.* Another important collection of papers—not, however, grouped around a central theme—was the April 1945 issue of the *Am. Sociol. R.* Because of the fact that the annual meeting of the American Sociological Society was cancelled, the papers designed to be read at that gathering were printed under one cover. The presidential address, Rupert B. Vance's "Toward Social Dynamics," was a valuable statement of the point of view that equates social dynamics with social progress.

This same collection was important because of the critical tendency it manifested; one of the many straws in the wind was Melvin Tumin's "Culture, Genuine and Spurious: A Re-Evaluation." The familiar categories of folk and urban, sacred and secular, were examined, with the conclusion that Edward Sapir (whose early work on culture was the start of the re-evaluation) had something real albeit hazy in view when he spoke of culture as "genuine" and "spurious." Other critical studies appearing in 1945 were Jessie Bernard's "Observation and Generalization in Cultural Anthropology," *Am. J. Sociol.*, a kindly but trenchant discussion of Margaret Mead's neglect of evidence and loose conceptualization; Joseph Schneider's "Cultural Lag: What Is It?," *Am. Sociol. R.*, an attack on W. F. Ogburn's carefree use of a dubious hypothesis; and Thomas C. McCormick's "Simple Percentage Analysis of Attitude Questionnaires," *Am. J. Sociol.*, a proposal for the more frequent use of simple types of statistical analysis over apparently more precise but really only more complicated procedures.

Marriage and the family had a bumper crop of books and articles. The long-awaited text, *The Family*, by Ernest W. Burgess and Harvey J. Locke bore the subtitle "From Institution to Companionate"—which raised afresh the problem of the nature of social institutions, if nothing else! Evelyn Millis Duvall and Reuben Hill brought out a lively presentation, *When You Marry*, designed for the general reader and for courses paying little heed to the larger contexts of marriage and the family; and Sidney E. Goldstein, in his *Marriage and Family Counselling*, provided the first complete manual combining the counselling experience of many specialists other than sociologists. Svend Riemer's studies, published in the *Am. Sociol. R.* and elsewhere, continued to stress the role of housing in family relations—an emphasis particularly timely in view of the present crisis. J. H. S. Bossard, Read Bain, R. H. Cole, Harry Grossman, J. O. Reinehmann, and others also made worthwhile contributions on family themes in *Am. J. Sociol.* or *Am. Sociol. R.*

Among miscellaneous but important publications were Abram Kardiner's *The Psychological Frontiers of Society*, a book which Robert Merton characterized as "marking a turning point in the study of man." Rural sociology was enriched by the work of an anthropologically trained observer, James West (pseudonym), whose *Plainville, U.S.A.* is a sort of Missouri *Middletown* or *Small Town Stuff*.

President of the American Sociological Society for the year was Kimball Young of Queens college (Long Island, N.Y.). The annual meeting, normally held in December, was postponed until March 1946. (H. BEC.)

**Sodium Carbonate.** Production of natural sodium carbonates in the United States increased from 165,993 short tons in 1943 to 184,826 tons in 1944. Canada has a small output, 44 tons in 1944 and 239 tons in 1945. (G. A. Ro.)

**Sodium Sulphate.** The output of natural sodium sulphate in the United States increased from 160,622 short tons in 1943 to 168,923 tons in 1944. Canadian production dropped from 102,421 tons in 1944 to 86,643 tons in 1945. (G. A. Ro.)

**Softball.** Its popularity unimpaired by the war, softball continued as one of the few growing sports in the United States. Two girls' professional leagues flourished, along with many amateur circuits. Rockford, Ill., won the All-America Girl's Ball League championship, while the Rock-Ola Music Maids finished first in the National Girls' Softball league. The Fort Wayne Zollners captured the Amateur Softball association's annual tournament with a 1-0 victory over Flint, Mich., in the final. The New Orleans Jax Maids won the women's amateur championship for the third time in four years. (M. P. W.)

**Soil Erosion and Soil Conservation.** The trend toward soil

conservation had reached world-wide proportions by the end of 1945. In addition to the United States, no fewer than 29 countries had embarked on some form of program to conserve soils and rainfall and thereby increase per-acre production of crops, whether cultivated, grass or woodland crops. At the same time, people of many other nations were seeking knowledge and facts about soil conservation methods and the best ways of determining the needs of eroding lands. This wide interest in modern conservation farming appeared to be motivated, in all parts of the world, by desire of the people for efficiency and safety in production of food and industrial crops, higher nutrition levels and better living for rural areas, and for security and permanence in a postwar world economy.

Brought to light by the United Nations Food and Agriculture organization's first conference at Quebec (Oct. 1945) was the need for development of scientific tropical and subtropical cropping systems and conservation cultivation practices for bringing into use many lands capable of producing quantities of food crops. Emphasized, also, was urgent need for modernization of farming through proved conservation methods, in overpopulated regions of the far east such as India, parts of the East Indies and China, to provide food supplements essential to the health of the people without destroying vast tracts of valuable land. Recommendations adopted by the conference which had a direct bearing on expansion of soil conservation programs already started in 30 countries were as follows:

1. That foresters and soil experts join hands and develop programs for better use of all lands.
2. That provision be made for training soil conservation technical staffs sufficient for leadership of all phases of soil conservation programs.
3. That exchange of personnel be promoted among countries, including agricultural scientists, technicians, farmers and students specializing in soil conservation agriculture.
4. That surveys be made of all countries not yet surveyed in detail, to determine best land utilization practices and conservation methods needed, and for best use of water available for agriculture.

**United States.**—By the end of 1945 all of the 48 states had enacted legislation authorizing local land owners and operators to carry on soil conservation and erosion control work and to obtain help in doing it. The common goal was to restore eroded lands and establish farming systems based on scientific land treatment and use. More than two-thirds of the states had appropriated special funds for use by their soil conservation districts. At the same time, several of the state legislative branches were re-examining their older land-utilization regulations in conjunction with their state soil conservation laws, with a view to revising and improving them to take into account new scientific findings regarding the physical capabilities of land and its needs for conservation techniques.

By Dec. 15, 1945, farmers in 45 states had organized 1,440 soil conservation districts and 21 grazing districts, including 3,622,557 farms with a total of 801,716,518 ac. Soil conservation farming plans had been prepared for about 140,000,000 ac. of this land, and complete conservation systems were established on approximately 13,000,000 additional acres during the year. An important trend was seen in the desire of farmers for conservation farming plans based on scientific findings regarding the land, yet flexible enough to allow production increases or decreases or shifts to new crops to conform with economic changes and demands likely to develop in the immediate postwar period. Some farm plans were revised with this trend in mind, and new plans including high-yielding rotation systems of various adapted crops were developed for an additional 9,000,000 ac.

Soil depletion and erosion were known to have affected from 2,000,000 to 3,000,000 ac. of good farm land as a direct result of World War II production. Wind erosion had become a problem on the peanut producing lands of Texas; while in the humid southeast, serious runoff erosion resulted from the growing of this essential war crop on erodible soils. Surveys showed, also, that land was deteriorating in some parts of the corn belt states where soybeans had to be expanded to sloping lands without cover crops or suitable rotations. These war damaged lands were marked for immediate postwar attention.

Interest in soil conservation treatments for range lands was greatly intensified as rangemen observed the advantages of seeding, rotation and deferred grazing, water developments for livestock and other methods of improving run-down ranges and keeping good ranges in continuous and high production. Many ranch owners were using a system devised by the soil conservation service for evaluating range conditions in relation to what the land could be made to produce with appropriate conservation practices. The system is based on the fact that a knowledge of the range vegetation and its effectiveness in controlling erosion is essential to economical use of range lands. During 1945 more than 10,000,000 ac. of range land in the 17 western states were brought under conservation systems of stocking, and 324,000 additional acres were seeded to grass.

The water conservation division, established as a part of the soil conservation service June 30, 1944, began water conservation surveys on 28 watersheds during 1945. Charged with the responsibility of appraising U.S. water resources, the division was collecting data for use in determining the values of proposed water projects and providing such information to departmental agencies, soil conservation districts, other state and federal

agencies, and civic groups and individuals.

Soil conservation methods for irrigated areas of the west expanded greatly during the war years. By 1945 there were nearly 250 soil conservation districts in the irrigated regions, including more than 4,000,000 ac., or one-fifth of all irrigated lands. Through group action the districts, with assistance of soil conservationists, were able to make economical use of the irrigation water available, to grow vast quantities of feed and forage for the livestock industry and to increase per-acre production of fruit and vegetable crops from some of the best dry-land soils of the west.

Research studies were carried on throughout the year in all states to improve soil conservation practices, adapt them to local conditions, and develop new practices or combinations of practices to fit special problem areas. In crop producing areas field experiments were conducted to improve methods of establishing grass and legume cover on cultivated fields so that lands overcropped during the period of emergency production could be speedily restored.

Important hill culture experiments, conducted by the Iowa Agricultural Experiment station and the soil conservation service over an eight-year period, were reported in the latter part of the year. The experiments were started to develop safe and profitable cropping systems for lands so hilly and steep or so badly eroded that they could not be farmed in the usual way. Results showed that fruits, grapes, nuts and post trees, as well as high tannin sumac and veneer woods can be grown profitably between contour strips of grasses and legumes ordinarily used for pasture or meadow. The steep slope soils were protected from erosion by this mixed cropping, and soil-fertility conditions were greatly improved in the eight years without use of fertilizers. The method was recommended to farmers having little cropland and too much rough, hilly land on their farms.

Water conservation research in progress included sedimentation studies in the southwestern states, where silting of reservoirs seriously hinders water utilization; development of methods for soil conservation and supplementary sediment control on reservoir watersheds in several parts of the country; and studies to explore the possibilities and values of recharging ground water through water spreading on soils treated to maintain infiltration rates.

**Mexico.**—Erosion surveys by the department of soil conservation revealed that the principal causes of erosion in Mexico were deforestation of steep slopes, lack of crop rotations and overgrazing on lowland farms, and up and down hill cultivation of moderately sloping lands. Soil conservation work was greatly expanded during 1945, the prime objectives being to save critically eroded areas and increase agricultural output to aid in solving serious nutritional problems in the immediate postwar period.

Techniques for major improvement of the land of much of central Mexico had been adapted by field experiment, and many thousands of acres had been treated. The principal soil conservation methods in use were contouring, rotations incorporating leguminous crops, a special process of terracing in which small dikes of stones, earth, branches or other available materials were constructed on the contour, planting of tested grasses and establishment of special types of forest and fruit trees on eroded hillsides. More than 40,000 young trees were planted by small farmers of the Jalisco soil conservation district.

A project for the study of climate and human welfare as related to soil and water conservation was started during the year at Tacubaya. This project which was co-operative between the soil conservation service and other agencies of the United States and several Mexican agencies, had begun collection of accurate climatic and geographic data for use in farm planning, especially in arid regions where methods of conserving rainfall were needed before cropping plans could be devised. Preliminary surveys indicated that much land considered too dry for profitable farming could be brought into production by irrigation and use of soil-moisture storage practices.

A national soil conservation law was passed by the congress of Mexico in Dec. 1945.

**Central America.**—In the latter part of 1944, soil conservation demonstrations were started in the central tableland region of Costa Rica where soils were found to be seriously eroded as the result of deforestation, overgrazing and cultivation of steep slopes. A conservation needs survey showed that large areas of abandoned steep lands would have to be planted to trees and grasses, and that conservation methods such as contour terracing, rotations with leguminous crops and use of soil organic materials on intensively cultivated lands would be necessary to save the soils of the densely populated region. Experiments were begun in several areas to develop high-altitude cropping systems and conservation practices for all parts of Costa Rica.

Work was started in Guatemala to apply soil conservation practices to the 10,000 ac. school farm of the National School of Agriculture. At the same time, demonstrations and experiments were set up in El Salvador to develop a soil conservation program for all of the country. All three of the Central American programs were led by conservation technicians trained in the U.S.

**South America.**—In Venezuela, the service of conservation and rational utilization of soils was established by decree of the president on Feb. 10, 1945, as a regular bureau of the ministry of agriculture and animal husbandry. The functions of the new service as set forth by the decree were to work uninterruptedly toward arresting erosion on all the nation's lands, and to utilize adequately and with the greatest profit the ranges, woodlands, farmlands and waters in permanent contact with farmers of all regions. Soil conservation works already started in Andean states were incorporated in the new agency, and funds and personnel were provided for a long-time soil conservation program. Preliminary country-wide surveys were started to determine the most critically eroded areas. In the state of Trujillo soil conservation cropping systems and retirement of land to pastures had already proved their effectiveness, and farmers were being aided in planning land use according to the conditions and capabilities of the soils. An intensive educational program was started to inform Venezuelan land users of the causes of erosion and simple ways to protect their fields while awaiting scientific farm plans.

Land surveys in Chile revealed moderate to severe erosion in the central coastal regions, where wheat and cattle are produced. With a view to bringing about soil conservation on these lands, Chilean agronomists started experiments to develop legumes and grasses and adapt them

to cropland rotations and pastures that would increase per-acre production and protect soils. Twenty-six grasses and legumes, including kudzu, from the United States were planted in Chile during 1945 to accumulate seed and seedlings for soil conservation plantings.

In Argentina, a broad program was underway to extend subsurface tillage, mulching with crop residues, contouring and other conservation methods to areas subject to drought and wind erosion. Experimental and demonstrational work was being done under supervision of the Institute of Soils and Agriculture, and practices had spread to farms and ranges, highway banks and reclamation areas in northern Argentina. Emphasis during the year was on adaptation of machinery to soil and water conservation methods of using residues for dune control, terracing and soil-moisture conserving practices such as pasture furrowing and subsurfacing for flat lands. Wind erosion damage was reported from many parts of the corn, wheat and grazing zones.

Uruguay started soil classifications and land-use investigations, preparatory to launching a program to apply conservation practices to farm and range lands. The major erosion problems of the country were sheet and gully erosion in cultivated fields. Brazilian programs were expanding rapidly in four states, with terracing and contour strip cropping adapted to large acreages of cotton, maize and tomatoes. Irrigation work was in progress to restore 260,000 sq.mi. of drought affected land in Maranhão, Piauí and Ceará to production, and soil conservation plans were being developed for using the lands to grow great quantities of food crops.

West Indies.—Soil conservation structures for steep mountainsides were extended over large areas southeast of Port-au-Prince, Haiti. Bench terracing with hillside ditching and walls built of rocks gathered from the land constituted the basis of the work. Land protection laws were enforced by specially appointed agents who patrolled the farms to prevent burning of residues, tree cutting on slopes of more than 30% and crop planting on 45% slopes without soil conservation methods.

In Puerto Rico and the Virgin Islands, where soil conservation work was a part of the program of the United States, emphasis was on farm planning and more efficient land use. More than 1,000 ac. of idle land in Puerto Rico were converted to production during the year, and 1,500,000 lb. of food and 3,500 lb. of sugar cane were harvested to provide income to 935 families. In western Puerto Rico, conservation practices on 10,000 ac. had increased coffee yield by 150,000 lb., sugar cane by 9,000 tons, minor crops by 400 tons and pasture crops sufficient to support an additional 500 animal units.

In St. Croix, Virgin Islands, pasture improvement demonstrations were spread to larger acreages. Soil conservation work started in Jamaica in both valley and mountain lands during the year.

Great Britain.—A new program for co-ordination of conservation agriculture and forestry and the better use of hill lands was formulated under Britain's ministry of agriculture and the secretary of state for Scotland. Hill lands were being planned according to suitability for afforestation or sheep farming. At the same time, there was an increased interest in erosion and how to combat it, as the Scott committee reported that approximately 100 sq.mi. of topsoil were lost to agriculture yearly and that wartime increase in overuse of soils, involving 125 sq.mi. in one area alone, had rendered much land unusable and made the need for conserving topsoil a national issue. Legislation authorizing an inland water survey for all of Great Britain was passed during 1945, and regional advisory water committees were being instituted to conform with natural water resources regions in preparation for collection of data. It was intended that water resources data would be co-ordinated with land-use and soils surveys data for over-all planning for conservation of natural resources.

Africa.—Marked progress was made in adapting soil and water conservation to seriously eroded lands in the British colonies. In Kenya, the soil conservation service was completing surveys for long-term planning. Works already completed included 70,000 ac. of narrow-based terraces, 17,000 ac. of runoff control structures, 200 grassed drainageways, 2,200 mi. of contouring and 44,000 ac. of contour banks and trenches.

In Uganda, emphasis was on control and protection of grazing lands and provision of stock water facilities. The area of reserved forest was increased by 380 sq.mi. to preserve lands not suitable for cultivation. In crop producing areas, contour strip cropping had been widely adopted by farmers. Research on grass covers in their relation to soil structure had shown that grass has inherent value in building soil in the Kampala region.

In Tanganyika, a ten-year program was started to control erosion on 5,000,000 ac. of pasture and on 1,000,000 ac. of cultivated land in the Central province. Large grazing areas were reserved for use during the dry season, hundreds of hilltops were closed to cultivation and gullying was controlled over large acreages of communal plantations. Land-use adjustments in Rhodesia consisted of the moving of villages involving some 18,000 people from impoverished areas to good lands laid out on the contour with strips of vegetation interposed for erosion control. Surveys were in progress in Nyasaland and Somaliland to determine areas suitable for cropping and methods for restoring severely eroded areas marked for retirement to trees or grazing. In Basutoland, Bechuanaland and Swaziland soil conservation methods in use by native farmers were terracing, contour cultivation, contour plantings on banks to prevent gullying, protection of water supplies, planting of fuel reserves, controlled grazing, fire control and introduction of improved farming practices through farm planning. Work in the three dependencies was carried out under the British Colonial Development and Welfare act with a grant of funds of approximately \$1,500,000.

India.—In Bombay province an extensive program was under way to apply soil and water conservation methods to the cultivated land of the province. Work had been completed on 140,000 ac. by the close of 1945, including lands in the districts of Bijapur, Ahmednagar, Sholapur and Satara. Plans were completed for 150,000 additional acres. An improved dry-farming method was being applied to much of the land, with elaborate systems of bunding (similar to terracing as used in the United States) to impound rainwater, check erosion and increase soil-moisture content in areas liable to periodic failure of crops due to inadequate distribution of rainfall, generally tracts with average annual rainfall of 25 in. Other practices already applied to large areas were strip cropping, gully control, contour cultivation, rotational grazing and pasture seeding,

incorporation of legumes into rotations, water impounding for livestock and crop residue management. It had been determined that the soil conservation methods were capable of increasing yields from 100% to 400% above those attained by former local practices, depending on the soil-climatic variations. The program was under leadership of the office of the director of agriculture for Bombay province.

China.—Funds were set up for soil conservation in the Yellow river basin. The Kansu soil conservation station was multiplying erosion control plant species for use in aeroplane seeding of eroded areas in the northwest provinces. Chinese technicians were trained by the soil conservation service of the United States in the making of maps from aerial photographs to enable China to progress rapidly with a soil conservation program in the postwar period. From the standpoint of China's total agriculture, preliminary studies revealed that the most fundamental needs were for methods of conserving and distributing water on farms, flood control in lowlands, more exact principles of bench terracing for slopes to permit use of more acres and higher per-acre yields and grassland improvement including production of hay and silage for livestock. A vigorous co-operative program between the United States and China was in progress to develop grass and legume varieties more suitable for northern regions of the United States and for China's central and northwestern provinces. Thirty grasses from different parts of the United States were tested in China during 1945; and, in exchange, the soil conservation experiment station at Tienshui, Kansu province, had provided the United States soil conservation service with planting materials of four Chinese lespedezas, a northern kudzu and hull-less barleys from the vicinity of Tienshui and from Tsoh Ni, a mountain community at the headwaters of the Dao river in Kansu province.

Australia.—A national soil conservation service was established by the government in the spring of 1945 and was authorized to plan a long-term soil erosion control program for the entire country. The new service absorbed the separate programs of Victoria, New South Wales and South Australia and also various soil conservation projects of limited extent in other states. Work was started to delineate critical areas, construct experiment stations for soil conservation research and to lay out demonstrations in co-operation with farmer groups. The first major demonstration was started in September on an area of 3,000 ac. near Gulgong, New South Wales. Operations begun included construction of 7 mi. of grassed waterways, contour banking of 750 ac. and pasture furrowing of 800 ac.

Erosion of gigantic proportions resulted from the worst drought in the history of Australia over an 18-months' period in 1944-45 and from flooding of northern rivers. With restoration of the eroded lands in view, farmers were adopting stubble mulching, terracing and contouring, shelter belt planting and pasture furrowing to prevent further damage and to prepare lands for scientifically planned rotations including grasses and legumes grown as green manure and feed crops.

New Zealand.—Regulations for treatment and use of land in soil conservation districts were adopted in May 1945. Soil conservation districts were established by declaration of the New Zealand governor-general by order-in-council under the New Zealand Conservation and Rivers Control act of 1941. Each district is headed by a committee consisting of a soil conservator appointed by the council, one or more persons appointed by the council from nominations by local authorities, and other persons appointed by the council because of specific knowledge of district problems. The committee may require a local land occupier (1) to change or restrict livestock numbers to conform with grazing capacity of land, (2) to refrain from stocking, plowing or cultivating any or all of his land for a specified period, (3) to plant grasses, trees, shrubs or other erosion-control plants as specified, (4) to carry out specified soil conservation works to reduce or prevent erosion or flood damage and (5) to refrain from changing use of certain lands if a change would promote soil erosion or damage by flood.

U.S.S.R.—Surveys by the Soviet Soil Erosion laboratory revealed serious gully erosion in battle-scarred areas of Byelorussia, the Ukraine, the Crimea, on the banks of the Don and on badly broken country west of the Volga. In addition to gullying, the infertile subsoil thrown up from craters and trenches covered all fertile topsoil on many fields. It was estimated that 588.6 cu.yd. of earth would have to be shifted on one field of an acre and a half before plantings could be made. Soil scientists were working on problems connected with restoring soil fertility to thousands of filled-in and levelled fields within the 17,537,000,000 ac. that had been overrun by the enemy during World War II. Intensive studies were in progress to develop green-manure crops, especially nitrogen-collecting plants, for infertile sandy soils, the nonblack soil belts and for northern podsol soils cleared of forests for agricultural purposes.

Crops had been adapted to soils, climatic conditions and water supplies in most of Georgia, Armenia, Azerbaijan, Uzbek, Tajik and Turkmen. In Georgia, contour planting and terracing for orchards and vineyards was used extensively, and in Turkmen contouring was applied to semidesert lands as they were reclaimed for production of fruits, vegetables, cotton and other crops by numerous irrigation works.

Damage by wind erosion in central Siberian regions was reported during the year 1945. Conservation of soil moisture was determined as an important feature of soil conservation for many regions of the U.S.S.R. (See also AGRICULTURE; AQUEDUCTS; DAMS; IRRIGATION; METEOROLOGY.)

FILMS.—*Work of Rivers; Work of Running Water; Work of the Atmosphere* (Encyclopædia Britannica Films Inc.) (H. H. Be.)

**Solar System:** see ASTRONOMY.

**Solomon Islands.** An archipelago in the western Pacific, included in Melanesia and forming a chain (in continuation of that of the Admiralty Islands and New Mecklenburg in the Bismarck archipelago) from N.W. to S.E.

between 154° 40' and 162° 30' E., 5° and 11° S., with a total land area of 17,000 sq.mi. Administratively the islands are divided between the British Solomons (a colonial possession of Great Britain, with a land area of 11,700 sq.mi. and a pop. [1931] of 94,105, of whom 497 were Europeans) and the northern islands of the group, of which Bougainville is the largest. These belonged to Germany before World War I and were assigned to Australia under a League of Nations mandate after that conflict. Powers of government in the British Solomons are vested in a British resident, whose seat of administration is located on Tulagi Island, off the south coast of Florida Island. Resident commissioner (appointed 1943): Col. O. C. Noel, O.B.E.

The Solomons constitute a double row of large mountainous volcanic islands, flanked by some small atolls to the north, east and south. They extend for a distance of 900 mi. from Bougainville strait in the northwest to Fakata, or Mitre Island, in the neighbourhood of the Santa Cruz Islands to the southeast. Their northern extremity is marked by the atoll Ontong Java or Lord Howe, their southern by Rennell Island; the intervening distance is 430 mi. The great majority of the natives belong to the Melanesian race, but some 4,000 inhabitants of the outlying atolls are Polynesians.

**History.**—The strategic importance of the Solomons had been realized in some quarters in Australia after World War I, but the terms of the league mandate forbade fortification of the northern islands, and the British government took no steps to create air and naval bases in the British Solomons. The base at Singapore was supposed to provide adequate protection for what seemed, before the Japanese onslaught in 1941, a safe and remote part of the world.

The central Solomons area marked the farthest southward penetration of Japanese ground, air and naval forces. A turn of the tide in this combat theatre was marked when U.S. marines seized Tulagi and the important Henderson airfield on Guadalcanal in Aug. 1942. For some time the marines were hard pressed, but decisive naval victories in October and November of that year eased the U.S. position.

A steady but slow process of clearing the Japanese from the part of the archipelago which they had occupied went on during 1943, and by the end of that year the Japanese were on the defensive in the last of their major strongholds in the Solomons area, the large northern island of Bougainville. The forward movement in the Solomons was co-ordinated with the clearing of the Huon peninsula in northeastern New Guinea, and with landings, at the end of 1943, in New Britain, an important objective of both drives being the major Japanese base of Rabaul, in New Britain. By Feb. 1944, the Allied offensive in the Pacific had by-passed the Solomons and New Guinea and pushed on to Truk, the next step on the road back to the Philippines. Formal Japanese surrender of the islands took place in a ceremony aboard a British aircraft carrier off Rabaul on Sept. 6, 1945. (See also WORLD WAR II.)

**Finances, Trade, Education.**—Revenue in 1940-41 was £51,320 sterling, expenditure was £65,848. Exports during 1940-41 were £131,938. Among the principal products of the Solomons are bêche-de-mer, copra, ivory nuts, trochas shell used for pearl buttons, cocoa, rubber, sweet potatoes, pineapples, bananas, yams. Education is in the hands of five missions.

**Somervell, Brehon Burke**

(1892- ), U.S. army officer, was born May 9 in Lit-

tle Rock, Ark., and was graduated from West Point in 1914. During World War I he was a divisional chief of staff of personnel and operations on the western front, 1918-19, and was assistant chief of staff of supplies of the U.S. occupation force in Germany, 1919-20. He later supervised a number of civilian engineering and construction projects in the United States and in Europe, and was WPA administrator for New York city, 1936-40. He was made assistant chief of staff in charge of the army supply division on Nov. 25, 1941, and supervised the shipment of supplies to U.S. armed forces all over the world. On March 2, 1942, Lt. Gen. Somervell was made commander of the army supply services. He was nominated for promotion to the rank of a full general, March 13, 1945. He attended the Potsdam parley in the summer of 1945 and on Sept. 20 he asked to retire.

Gen. Somervell made his final report as commanding general of the army service forces on Oct. 27, and on Dec. 26, the army announced that he would retire as of Jan. 1, 1946, to be succeeded by Lt. Gen. LeRoy Lutes.

**Soong, T. V.** (1894- ), Chinese statesman, was born in Shanghai, the eldest son of Charles Jones Soong, wealthy Bible publisher, and the brother of Mme. Chiang Kai-shek. He attended Vanderbilt university, Harvard and Columbia, where he specialized in economics, and later he worked in New York banking houses. He returned to China in 1917, and six years later became director of the department of commerce with the nationalist government established in Canton. He was finance minister, 1928-33, and in 1936 he founded the Bank of China. Chiang Kai-shek named him foreign minister, Dec. 23, 1941.

Soong spent much of 1943 in the United States. On Dec. 4, 1944, he was named acting president of the executive yuan, which gave him a position in China second in importance only to that of Chiang Kai-shek. Soong attended the San Francisco conference of the United Nations in April 1945 and at the plenary session, April 26, stressed that there was "no hope for any nation without a really effective system of collective security." He was in Moscow in June and July where he conferred with Premier Stalin, presumably on proposals for the Russo-Chinese treaty and the soviet plans for attacking Japanese forces in Manchuria. He quit his position as foreign minister, July 30, because of the burden of his many concurrently-held government posts. On Aug. 24, Leo T. Crowley, U.S. administrator for the Foreign Economic administration, disclosed that Soong had asked for a \$2,000,000,000 loan for China's rehabilitation.

CHINESE PREMIER T. V. Soong (centre) signing the United Nations Charter at Washington, D.C., on Aug. 21, 1945, in the presence of U.S. Secretary of State J. F. Byrnes (left) and Chinese Ambassador Dr. T-M. Wei. Dr. Soong was obliged to leave the conference at San Francisco before the final signing of the charter

**Sorghum:** *see* SYRUP, SORGO AND CANE.

**South Africa, British:** *see* BRITISH SOUTH AFRICAN PROTECTORATES.

**South Africa, The Union of.** A self-governing dominion of the British commonwealth of nations. The four provinces of which it consists, the Cape of Good Hope, Natal, the Transvaal and the Orange Free State, extend from the southernmost point of the African continent to the Limpopo in the north. The former German colony of South-West Africa (pop.: European 33,600; Bantu and coloured [mixed] 287,731) is administered under mandate as an integral part of the union, but this territory has not been incorporated as a province. Area 472,550 sq.mi. (incl. Walvis bay, 430 sq.mi.); pop. (est. June 30, 1941) 10,521,700 (Europeans 2,188,200; Bantu 7,250,700; coloured 844,400; Asiatic 238,400). Chief towns (pop. census 1936): Capetown (seat of legislature) 344,223; Johannesburg 519,384; Durban 259,606; Pretoria (seat of government) 128,621; Port Elizabeth 109,841. Governor-general in 1945: Rt. Hon. N. J. de Wet (governor-general designate: G. B. Van Zyl); premier: Field Marshal Jan C. Smuts. Languages: English, Afrikaans. Religion: European population: Christian (Dutch Reformed churches 55%; Anglican 19%; Methodists 6%; Presbyterians 5%).

**History.**—When hostilities ceased in Europe in May 1945, 80,000 South Africans were serving outside their country. Of these a large proportion were members of the 6th South African armoured division who had been in the front line for a year. The South African air force had never been out of action from the beginning of the war, and had grown to a striking power of more than 30 squadrons in the field. Parallel with this development was the expansion of the South African air force shuttle service which at the beginning of 1945 was flying 21 Dakotas in either direction along the 6,000-mi. route from Pretoria via Cairo to Fano in Italy. This service at one time carried as many as 1,000 reinforcements for the 6th division. With the release of South African prisoners of war in Europe the service was extended to England, and up to June 12, when it ceased repatriating ex-prisoners of war from England, it had carried 1,870 officers and other military personnel to South Africa.

The union's demobilization machinery swung into action in January and up to February, 8,056 European returned soldiers had been placed in new employment in addition to 19,560 who had been reinstated in their previous employment. The directorate of demobilization estimated that work would have to be found for 40,160 European male volunteers and it was not pessimistic about its capacity to place these men. In the meantime thousands of ex-volunteers had been assisted under the generous benefits and financial assistance scheme and were being rapidly rehabilitated in civilian life.

At the end of the second session of the union's ninth parliament—a session which proved to be the third longest in history—H. G. Lawrence, minister of social welfare and demobilization, succeeded in getting the Housing (emergency powers) act passed. This contained drastic proposals to speed up the building of houses on the national scale by the state and other bodies, and under it the government accepted the responsibility of providing houses for the people. Other acts passed during the session included the Financial Relations act and the Native Education Finance act, which gave effect to new arrangements outlined in the budget speech; the Standards act and Scientific Research Council act for the promotion of industry; the Electoral Laws Amendment act, which made the registration of voters continuous and abolished periodical registrations; the Registration of Employment act to provide information on unemployment; and the Native Urban Areas Consolidation act.

During the session the board of trade and industries' special report on industrial development was published. This recommended "moderate" customs protection, the reduction of costs under the threat of lower protection, research, decentralization of industry and certain taxation relief. It emphasized that rationalization and efficiency were more important than protection in future development. It was revealed by the minister of finance that South Africa's contribution to U.N.R.R.A. amounted to about £4,500,000. So far £1,025,000 had been voted. Ten per cent of the total was to be transferred in cash, 90% being used to make purchases on behalf of U.N.R.R.A. Of this a great portion was to be composed of military stores and equipment held by the government.

A scheme to reclaim the native reserves at a cost of several million pounds was initiated. It introduced two major factors: the recovery of exhausted land, the opening up of new areas for native settlements, and the payment of wages to those employed in working on and maintaining the recovery schemes in the permanent native reserves. (J. Mb.)

With the end of World War II, the wartime coalition government ended in November, and Prime Minister Smuts's United party continued in power alone. First the Labour party withdrew, entailing the resignation from the cabinet of W. B. Maudslayi and his replacement by Dr. Henry Gluckman. Then the Dominion party withdrew, entailing the cabinet resignation of Col. C. F. Stallard, and his replacement by J. W. Mushet. It was a friendly parting after a sustained war effort. The task of steering South Africa into the peace period thus fell wholly on the United party.

**Education.**—In 1941: state and state-aided primary and secondary: European schools 3,622, scholars 388,925; non-European schools 5,229, scholars 678,161; universities, average number of students, 11,801.

**Banking and Finance.**—Revenue (est. 1945-46) £SA118,277,000; expenditure (est. 1944-45) ordinary £SA59,813,000, war £SA102,500,000; public debt (March 31, 1945) £SA522,098,589; notes in circulation (March 31, 1945) £SA51,000,000; gold reserve (March 31, 1945) £SA103,000,000; exchange rate (average 1944) £1 SA=398 cents U.S.

**Trade and Communication.**—External trade (1940) (exclusive of goods in transit and of gold bullion and specie): imports (total) £105,099,234; exports (domestic) £28,562,207; re-exports £5,528,430. Communication and transport: roads fit for motor traffic (1938-39) 87,495 mi.; railways, including South-West Africa (March 31, 1940) 13,645 mi.; airways, including South-West Africa (1939): passengers carried 35,578; freight and mails carried 2,640,984 lb.; mileage flown 1,751,453; shipping (1940) entered 6,598; net tonnage 25,504,068; cleared 6,554; net tonnage 25,315,168. Motor vehicles licensed (Dec. 31, 1940): cars and taxis 317,958; vans and trucks 51,215; tractors 1,044; cycles 21,725; wireless receiving set licences (1944) 365,250; telephones, instruments in use (1940) 202,753.

**Agriculture, Manufacturing, Mineral Production.**—Production (in short tons): gold (1942) 439,191 kg.; diamonds (1939) 1,269,828 carats; maize (1943-44 est.) 3,674,400,000 lb.; coal (1940) 19,282,534; sheep, number (Aug. 31, 1939) 38,289,430; cattle, number (Aug. 31, 1939) 11,852,736; wool (1940) 137,788; wheat (1944-45 est.) 844,000,000 lb.; cane sugar, refined, 515,656; iron ore (metal content) (1940) 436,511; pig iron and ferroalloys (1940) 335,099; steel (1939) 346,122; silver (1940) 44.3; manganese ore (metal content) (1940) 192,351; chrome ore (chromic oxide content) (1940) 80,799; asbestos (1938) 24,140; wine (1938-39) 41,079,620 U.S. gal.; tobacco, European cultivation 15,212; potatoes (1938-39), European cultivation 216,933; oats, European cultivation (1939-40) 88,956; barley, European cultivation

(1938-39) 22,597; mohair (1940), export 2,094; copper (smelter production) (1940) 14,991; groundnuts (1938-39), European cultivation 14,881; benzol (1939) 1,874; superphosphates of lime (1937) 180,777. Industry and labour: (census 1939) establishments 9,837; employees, European 117,056; others 189,087; value of gross output £SA172,764,000; value added to materials used £SA85,108,000. Employment index (average 1929=100), average 1941, 164; Feb. 1942, 172.

**South America:** see ARGENTINA; BOLIVIA; BRAZIL; BRITISH GUIANA; CHILE; COLOMBIA; ECUADOR; PARAGUAY; PERU; URUGUAY; VENEZUELA.

**South Australia.** A state of the Australian commonwealth, 380,070 sq.mi. in area, bounded by longitudes 129° E. and 141° E., and by latitude 26° S. and the southern coast of the continent. Population (est. Dec. 31, 1943) 621,998. Chief city and capital (pop. Dec. 31, 1943), Adelaide, 362,500. Governor in 1945: Lieut. Gen. Sir Charles Willoughby Moke Norrie.

**History.**—The government in 1945 introduced a special bill to reappoint Sir Charles McCann as agent-general and trade commissioner in London for a further three years. He had been agent-general for 11 years. Detailed plans were submitted to the air minister for a modern continental-type airport for Adelaide to cost \$3,200,000. The state premier announced that the state government would accept liability for its maintenance. The government also planned the establishment of a deep-sea port in the southeast. Drought conditions during 1944 had adversely affected agricultural and pastoral output and stock losses were estimated at more than 900,000. The 1945 wine vintage, partly due to winter frosts, was down by 30% compared with the previous season. Meat exports, however, increased by 25%. A record house construction program costing \$4,000,000 was planned for 1945-46. It was to be undertaken by the state housing trust and state bank.

**Education.**—In 1941: number of schools (state) 989 (private) 157; teachers (state) 3,078 (private) 831; scholars (state) 72,156 (private) 13,502; average attendance (state) 62,051 (private) 12,002.

**Finance.**—In 1943-44: revenue \$49,744,000; expenditure \$49,696,000; debt outstanding (June 30, 1944) \$346,576,000. (Conversion rate: £A1=\$3.2 U.S.)

**Communication.**—Roads (1941) 54,412 mi.; railways (1942-43): government 2,547 mi. Motor vehicles licensed (Dec. 31, 1944): cars 59,271; commercial vehicles 24,906; cycles 7,139. Wireless set licences (Dec. 1944) 155,717.

**Agriculture and Manufacturing.**—In 1943-44 (in short tons): wheat 620,714; barley 126,430; currants 11,500; raisins 18,300; wool 57,500; butter 9,930; wine 16,900,000 gal. Industry (1943-44): factories 2,166; employees 69,000; gross value of output \$215,264,000; unemployment (trade union returns) (Feb. 1945) 1.2%. (W. D. MA.)

**South Carolina.** A south Atlantic state of the United States, and eighth of the original 13 to ratify the constitution, 1788; popularly known as the "Palmetto state." Area, 31,055 sq.mi., including 461 mi. of inland waters; pop. (1940) 1,899,804; white 1,084,308; Negro 814,164; others 1,332; 75.5% rural; 0.3% foreign born. Capital, Columbia (62,396). Other cities include Charleston (71,275); Greenville (34,734); Spartanburg (32,249). The bureau of the census estimated the civilian population of the state, July 1, 1944, at 1,923,354.

**History.**—Ransome J. Williams became governor on Olin D. Johnston's resignation Jan. 2, 1945, to become senator. Gov. Williams urged that criminal laws be better enforced. The sher-

iff's association agreed and severely criticized liberal pardons. Legislative efforts were ineffectively made for constitutional revision of the pardoning power. A resolution for referring to popular vote the removing of the constitutional prohibition of divorce failed, lacking the necessary two-thirds. The Preparedness for Peace commission recommended consolidations and systematization of governmental agencies, with little effect. An extensive alumina plant began operations in July; large hydro-electric expansion occurred; meat packing considerably enlarged, and a \$12,000,000 box factory and a \$10,000,000 celanese plant were announced. A few protracted strikes in textile mills occurred. The National Council of Negro Democrats, meeting in Columbia and sponsored by Carolina Negro Democrats with representatives from several states, urged a systematic campaign for making Negroes politics conscious as necessary for securing recognition in the south.

Exports (not including shipments under the War Shipping administration) from South Carolina to foreign countries, year ending June 30, 1945, were \$1,732,898; imports into South Carolina ports during the same period, \$3,912,566.

From Nov. 1, 1940, through June 30, 1945, accession to U.S. army personnel from South Carolina totalled 119,000 males and 1,886 females. Total accessions to the navy were not available; but those in service at the close of World War II totalled 45,827 males and 1,065 females.

**Education.**—Greatly increased appropriations were made for the university and other state colleges. The pay of public school teachers was raised. The retirement benefits for teachers and other state employees was to begin in 1946. State superintendent of education J. H. Hope, popularly elected continuously from 1922, reported for the year ending June 30, 1945: enrolment in white elementary schools 180,443; in Negro elementary schools 178,334 (white population 1940, was 270,144 greater than Negro); in white high schools 67,452; in Negro high schools 23,999; white and Negro elementary teachers respectively 6,210 and 5,201; white and Negro high school teachers respectively 2,904 and 774; expenditures for white schools \$20,710,888; for Negro schools \$5,257,019. Following the comprehensive examinations for reclassifying teachers into five groups, further subdivided, as a basis for future advances in pay, up to Jan. 7, 1946, 11,700 had been recertified with about 6,000 more soon to follow. As in Charleston in 1944, in Columbia in 1945 a federal court ordered equal pay for equal work for teachers irrespective of race. Reclassification based on training, experience and comprehensive examination was adopted largely in anticipation of such decisions.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In the year ending June 30, 1945, federal allocation for needy persons equalled \$2,389,575, to which the state added \$2,535,322. A total of \$3,560,109 went to the aged; \$1,100,781 to dependent children; \$210,181 to the blind. There were 35,056 persons assisted financially. In addition there were sparsely inhabited poorhouses in 13 of the 46 counties. The State Unemployment Trust fund supplied entirely by employers totalled June 30, 1945, \$36,759,272. Payments to the unemployed during the year then ending were \$222,537. Patients in the state hospital for the mentally diseased June 30, 1945, were 5,591, including 850 on parole; in the school for feeble-minded 974; prisoners in state penitentiary and farms 933. Legal executions during same period, 2. Inmates in the reformatory for white boys 232; for Negro boys 167; in white girls' reformatory 88. The few executions registered tenderness of jurors and governor, not scarcity of murders.

**Communication.**—Paved highways June 30, 1945, 7,335 mi.; earth type improved roads 7,807 mi.; funded debt for highways, being steadily reduced was \$52,917,263. A \$42,000,000 three-year highway building program was adopted in Oct. 1945. Railroads 3,563 mi. Eastern Air Lines and Delta Air Lines crossed the state in all four cardinal directions.

**Banking and Finance.**—On June 30, 1945, there were 22 national banks (plus 19 branches), 86 state banks (plus 5 branches), 37 cash depositories and 1 private bank, with capital and deposits and resources as follows: national \$14,531,000, \$339,170,000 and \$354,755,000; state \$11,315,585, \$184,334,495 and \$195,825,055. Resources of federal building and loan associations totalled \$31,742,448; state associations \$13,140,651. The state debt on June 30, 1945, was \$54,961,555, almost all for highways. A state debt of \$1,964,469 was paid during the year. State tax collections for the year ending June 30, 1945, totalled \$45,280,301, of which \$13,221,730 was from income taxes and \$12,157,795 from gasoline and auto tags. A \$10,000,000 surplus remained. Federal internal revenues for the year ending June 30, 1945, were \$181,345,494, \$163,776,360 being from income taxes. Duties on imports were \$472,472. Farm mortgage debts on Jan. 1, 1944, totalled \$42,932,000, a decrease of 8.2% in five years.

**Agriculture.**—The value of 37 leading field and truck crops in 1945 was \$262,570,000 compared with \$274,841,000 in 1944. The farm labour shortage was so serious that a slight beginning was made in mechanical cotton picking. The value of cotton and cottonseed was \$81,927,000 and of the next most valuable crop (tobacco) \$60,970,000. Fruits, many of which were lost by frost in 1943 and 1944, were abundant. The peach crop was exceeded only by those of California and Georgia. The acreage of all crops cultivated was 4,416,000 ac., 4% below 1944. The acreage

Table I.—Leading Agricultural Products of South Carolina, 1945 and 1944

Crop	1945	1944
Corn, bu. . . . .	23,414,000	24,160,000
Wheat, bu. . . . .	2,912,000	3,588,000
Oats, bu. . . . .	16,023,000	15,064,000
Hay, tons . . . . .	508,000	410,000
Irish Potatoes, bu. . . . .	2,480,000	1,464,000
Sweet Potatoes, bu. . . . .	5,890,000	7,056,000

Peanuts, lb. . . . .	25,000,000	25,400,000

only of oats, lespedeza, sorghum and tobacco were above those of 1944. The total number of farms increased from 137,558 in 1940 to 153,573 in 1945, and acreage from 11,238,697 to 11,575,322. The average size of farms sank from 81.7 ac. to 75.4 ac.

**Manufacturing.**—The total value of manufactures for the year ending June 30, 1945, was \$1,106,912,578 as against \$1,093,100,709 the preceding year. Employees numbered 154,384 as against 161,122 the preceding year.

Table II.—Principal Industries of South Carolina, 1945 and 1944

Industry	Value, 1945	Value, 1944
Textiles. . . . .	\$787,171,222	\$771,034,396
Lumber and products (boxes, paper and pulp, furniture, etc.) . . . . .	81,832,929	88,041,111
Electricity . . . . .	25,223,573	25,364,657
Clothing (including knitted) . . . . .	24,981,840	22,710,948

**Minerals.**—Production for the year ending June 30, 1945, chiefly stone and clays, especially kaolin, totalled \$3,562,613; previous year, \$3,359,300. (D. D. W.)

## South Dakota.

A north-central state of the United States, admitted as the 40th state on Nov. 2, 1889, popularly known as the "Coyote state." Area 77,047 sq.mi., of which 511 sq.mi. are water; population (1940) 642,961, with 158,087 listed as urban and 484,874 as rural; Indian population 23,347. The federal census bureau estimated the civilian population on July 1, 1944, at 558,629. The state census taken during 1945 revealed a population of 589,802. Capital, Pierre (4,322 in 1940). Principal cities: Sioux Falls (40,832), Aberdeen (17,015), Rapid City (13,844), Huron (10,843) and Mitchell (10,633).

**History.**—Legislative enactments during the 60-day session ending March 2, 1945, included the creation of a state conservation commission; activation of a state teachers' pension and annuity system; reduction of the ore tax from 6% to 4%; increased old age assistance benefits; and an increase in state aid to education from \$1,165,000 to \$2,625,000.

State officials in 1945 included: M. Q. Sharpe, governor; Sioux K. Grigsby, lieutenant governor; George T. Mickelson, attorney-general; Mrs. L. M. Larson, secretary of state; Miss Hazel Dean, treasurer. J. F. Hines was superintendent of public instruction, a position filled by nonpartisan ballot.

**Education.**—The school census, ages 6–21 years, was 155,420 in 1944–45 as compared with 158,112 in 1943–44. The enrolment was 84,100 in elementary schools and 28,724 in high schools. Total expenditures were \$15,323,124.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During the fiscal year ending June 30, 1945, the state department of social security distributed \$3,720,968 among 14,520 persons in old age assistance; \$603,985 among 1,948 families, including 4,763 children, under the aid to dependent children program; and \$56,568 for the needs of 254 blind persons. Unemployment benefit payments were allotted during 1944 to 2,762 claimants for a total of \$24,406 at an average weekly rate of \$8.84. Eight penal and charitable institutions were in operation during 1945 on a legislative budget of \$1,375,000.

**Communications.**—The state maintained a highway system of 5,905 mi. which in 1944 included 2,808 mi. of pavement and 2,797 mi. of gravel surface, maintained at a cost of \$2,432,597. There were 3,990 mi. of railroad in operation during 1944.

Telephones during 1943 numbered 96,679, of which 30,302 were rural.

**Banking and Finance.**—There were 36 national banks in operation on Dec. 30, 1944, with total assets of \$168,547,000 and deposits of \$159,283,000. One hundred thirty state banks and trust companies on June 30, 1945, had resources of \$150,822,000 and deposits of \$141,620,000. Nine building and loan associations on June 30, 1945, reported total resources of \$3,413,018.

Total receipts for the state treasury for the fiscal year ending June 30, 1945, were \$32,958,617; disbursements were \$27,486,473. The bonded indebtedness was \$24,994,000. Federal internal revenue collections for the same period totalled \$37,150,064, of which amount \$32,287,401 was derived from the income tax.

**Agriculture.**—Favourable weather conditions and the stimulus of high prices accounted for near-record crop productions in 1945.

About 1,000,000 acres of idle cropland were put into use during the war period and large areas of grazing land were shifted to grain production.

Principal Agricultural Products of South Dakota, 1945 and 1944

**Mining.**—Gold mining operations, resumed in July 1945, remained below normal because of a manpower shortage. The state maintained a high rank during World War II in the production of feldspar, bentonite and mica. (H. S. S.)

## Southern California, University of.

This institution, on private foundation, at Los Angeles, Calif., comprised in 1945, 26 schools and colleges, the latest addition being the college of aeronautics, provided by Capt. Allan Hancock and located at Santa Maria, Calif. During 1945 the university lost by death Vice-President Henry Bruce and Dean R. K. Immel of the school of speech.

The 1945 enrolment was the institution's largest, and included 2,500 returned veterans. Military activities continued. The occupational and physical therapy departments were crowded and also many of the regular departments. The Graduate Record Examination was adopted for use in connection with admission to the graduate school.

In Jan. 1945 the graduate school celebrated, with elaborate program, its 25th anniversary, the general theme being "Graduate studies in a world reborn."

A complete system of retirement for faculty and other employees was in effect, under which 14 faculty members, including five deans and directors, were retired. Albert S. Raubenheimer was executive dean in 1945.

In Sept. 1946, the university was to abandon its accelerated wartime schedule and return to the regular two-semester plan. The six-weeks' summer session was to continue.

For the ninth time the "Trojan" football team won the right to represent the coast conference at the Pasadena Rose Bowl, on New Year's day. A movement was launched for a new field house and armoury building, as a memorial to Howard Jones, who served with distinction as head football coach for many years prior to his untimely death. (For statistics of enrolment, faculty, library volumes, etc., see UNIVERSITIES AND COLLEGES.)

(R. D. Hu.)

**Southern Rhodesia:** see RHODESIA.

**South Tirol.** Tirol, south of the Brenner pass, was ceded after World War I by Austria to Italy. This new Italian province of Venezia Tridentina (5,250 sq.mi. with a population of 669,029 according to the census of 1936) was in its southern part (Trento) inhabited by Italians, while in the northern part (Bozen or Bolzano) the population was German. In spite of almost 25 years of strenuous Italian efforts at Italianizing the German population and much forced German emigration, the people of German-speaking southern Tirol retained their language and national character and the desire to be reunited with Austria. In Nov. 1945 the Austrian government presented a formal note to the Allies demanding the return of southern Tirol to Austria. Italy pleaded the retention of Austrian south Tirol for strategic reasons, regarding the Brenner pass as a military asset of great importance.

**South-West Africa:** see MANDATES; SOUTH AFRICA, THE UNION OF.

**Sovereigns, Presidents and Rulers:** see PRESIDENTS, SOVEREIGNS AND RULERS.

**Soviet Republics:** see UNION OF SOVIET SOCIALIST REPUBLICS.

**Soviet Union:** see UNION OF SOVIET SOCIALIST REPUBLICS.

**Soybeans.** The United States soybean crop in 1945 was the third largest of record, estimated at 190,646,000 bu. compared with 192,863,000 bu. harvested in 1944 and an average of 86,732,000 bu., 1934-43. The yield in 1945 was only slightly less than in 1944, 18 bu. per acre, which compares with 17.6 bu. per acre 1934-43. The acreage grown for beans, 10,596,000 ac., was almost exactly the same as in 1944 compared with 4,812,000 ac. in 1934-43. Much of the crop in the central states was late and frosts resulted in small beans and poorly filled pods. Indiana and Illinois, leading soybean states, had yields of about 20 bu. per acre. Iowa harvested only 18 bu. per acre which was 2 bu. below 1944.

The total acreage of soybeans grown for both stock feed and beans was more than 13,300,000 in 1945, compared with the record of 14,600,000 in 1943, and the prewar average of 7,300,000 in 1935-39.

The support price of soybeans of \$2.04 per bu. to farmers was continued through 1945 and the value to processors averaged \$1.70 to \$1.75 per bu., the difference being paid by the Commodity Credit corporation. The purchase of soybean oil by the United States department of agriculture increased sharply in 1944 but declined in 1945. The amount used in

U.S. Soybean Production by Leading States, 1945 and 1944

State	1945 bu.	1944 bu.	State	1945 bu.	1944 bu.
Ill. . . . .	74,100,000	72,870,000	Kan. . . . .	2,740,000	3,315,000
Iowa . . . .	34,848,000	38,720,000	N.C. . . . .	2,700,000	2,058,000
Ind. . . . .	27,924,000	23,744,000	Mich. . . . .	1,952,000	1,595,000
Ohio . . . .	20,072,000	21,796,000	Va. . . . .	1,360,000	945,000
Mo. . . . .	9,490,000	10,605,000	Tenn. . . . .	966,000	1,044,000
Minn. . . . .	6,825,000	4,340,000	Miss. . . . .	962,000	1,150,000
Ark. . . . .	3,344,000	3,612,000	Wis. . . . .	636,000	735,000

manufacture also increased to a new high record in 1945. Of the total production of 1,400,000,000 lb. of oil in 1945 about one-half was used in manufacture. A disposition among growers to reduce the acreage of the crop was noticed in 1945 as foreign sources of oil were expected to again depress the market following the end of the war.

FILMS.—*Science and Agriculture* (Encyclopædia Britannica Films Inc.). (J. C. Ms.)

**Spaatz, Carl A.** (1891- ), U.S. army air officer, was born June 28 in Boyertown, Pa. He was graduated from West Point in 1914. During World War I he commanded a pursuit squadron in the St. Mihiel offensive in

1918, and was decorated for shooting down two enemy planes. He was chief of staff to Gen. Henry H. Arnold in 1941, and soon after Pearl Harbor he took over the air force combat command. In July 1942 he was named U.S. air commander in Europe. Early in 1943 he was shifted to the Mediterranean theatre as commander of the 12th U.S. air force and of the United Nations' Northwest Africa air forces. On Dec. 24, 1943, Pres. Roosevelt announced the appointment of Gen. Spaatz as commander of "the entire American strategic bombing force operating against Germany" from all directions. During 1944 and 1945, under his command, U.S. air forces brought all points in Europe within range of Allied bombers.

Spaatz was named for promotion to the temporary rank of full general, March 13, 1945. He represented the U.S. at the German surrender ceremonies in Berlin, May 8. He was named commander of the newly created U.S. strategic air force in the Pacific to direct Superfortress blows against Japan, the war department announced July 5. He said in a statement, Nov. 15, before a senate committee that a unified service command, in which the air force would be given equality, was an "imperative."

**Spain.** A southwestern European state, occupying about 84% of the Iberian peninsula. Area (including the Balearic and Canary Islands): 194,947 sq.mi. Pop. (1940 census): 25,877,971; (1944 est.) 26,761,902. Madrid (1,140,621) is the capital. Other large cities (1944 est. pop.): Barcelona (1,108,961); Valencia (508,072); Seville (347,997); Zaragoza (266,488); Málaga (258,598); Murcia (210,617); Bilbao (208,347). Religion: Roman Catholic. Caudillo or Chief of State: Gen. Francisco Franco.

**Foreign Affairs.**—Spain's government in 1945 weathered an ever-mounting storm of foreign criticism but only at the expense of isolation from the conflux of international affairs. In March the country was thoroughly aroused by Japanese atrocities in the Philippines. Diplomats in belligerent countries were instructed to cease representing Japanese interests, and in April Spain broke off relations with Japan. As Allied armies were delivering the blows which led to Germany's unconditional surrender, the government blocked the assets held in Spain by subjects of axis-dominated countries and on May 7 severed relations with Germany. Pierre Laval, who had fled to Spain in May, was expelled at the request of the Allies. But the official attitude toward Russia, exemplified by Franco's statement that "we cannot believe in the good faith of communist Russia," vitiated Spain's friendly overtures toward Britain and the U.S. At the Berlin conference the three powers declared that they "would not favour any application for membership" in the United Nations organization "put forward by the present Spanish government, which . . . does not, in view of its origins, its nature, its record and its close association with the aggressor states, possess the qualifications necessary to justify such membership."

Replying to a message from Franco, Churchill cited the overthrow of the Tangier regime as one reason for distrust of Spain's attempted *rapprochement* with the Allies. In August the Tangier question was studied by experts representing Britain, France, Russia and the U.S.; and, pursuant to the agreement signed by these four powers, in October Spain withdrew from its unilateral administration of the International Zone in favour of a committee of control.

Acutely susceptible to foreign antipathy, the government made every effort to disassociate foreign policy from its domestic program. The official attitude was expressed by Foreign Minister José Lequerica, who asserted that "the internal regime, purely Spanish, created by Spaniards and defended by them,

MOVIE THEATRE in Madrid, Spain, featuring *Guadalcanal*, U.S. war film, which had a successful run in that city during the summer of 1945

has nothing to do with its foreign policy." The policy of *Hispanidad* was said to "fortify the Pan-American and Good-Neighbour policy of the U.S." This view was received with scant enthusiasm in Latin America where complaints were chronic of Spanish co-operation with elements unfriendly to the United Nations.

Guatemala, Panamá and Bolivia broke diplomatic relations with Spain; but Britain and the U.S., despite strong demands from certain segments of public opinion, hesitated to take this drastic step. The latter governments, however, lost no opportunity to express publicly their distaste for the Franco regime. In December, U.S. Ambassador Norman Armour, who had replaced Carlton J. H. Hayes in January, was recalled.

In Mexico the Spanish committee of liberation, achieved some progress in harmonizing the divergent ambitions of the exiled groups working for Franco's overthrow; and in August formed a government-in-exile, headed by Martínez Barrio (president) and José Girál (premier), which Mexico, Guatemala and Panamá quickly recognized. Eschewing violence, the anti-Franco forces advocated a plebiscite, which they hoped economic sanctions and diplomatic pressure would force Franco to accept.

Denouncing Franco's dictatorial regime, the pretender, Don Juan, asserted that a constitutional monarchy "alone can provide an effective guarantee for religion, order and liberty." In order to strengthen the hand of the monarchists the duke of Alba resigned as Spanish ambassador to Britain. Late in December the U.S. and Britain accepted the invitation of France to a parley on the Spanish question, while year-end dispatches from Europe pictured Franco as striving to make a deal with the monarchists which would not rob him of personal power.

**Domestic Policies.**—Gen. Franco gave few assurances that his regime would undergo important transformation spontaneously. In Jan. 1945, he described the nation as a "Catholic state, eminently socialized . . . in which all Spaniards are equal before the law"; and in May he declared that "Spain is not a

dictatorship." The Falange, with its 100,000 state-supported officials, was called a necessary instrument for national unification; as for its political influence, Franco said that it "wields no political power . . . and makes no political decisions, because all political power and decisions depend absolutely upon the government." A cabinet shake-up in July, giving monarchists and non-party members a majority, was called a "further stage in Spain's spiritual and material reconstruction." Plans published in June promised the electorate an early opportunity to elect one-third of the membership of local and regional governing bodies, but later announcements postponed elections to the spring of 1946.

In Feb. 1945, the minister of justice reported that the jails held 22,900 political prisoners, as compared with the peak of 271,000 in 1940. The tribunal of political responsibilities was abolished in June; the government promised to drop political charges against exiles upon their return to Spain; and in October full pardon was extended to prisoners convicted of political crimes committed before the end of the Civil War. A bill of rights, based upon the constitution of 1876, was approved by the Cortes in July; but amendments to the penal code during the year made blasphemy, contravention of the labour laws and disparagement of the regime criminal offenses. Censorship of news dispatches to foreign countries was abandoned in April.

**Economic Conditions.**—Weather, war and politics combined to induce progressive deterioration in economic activity generally. Because of continued drought, abnormal cold and shortages of fertilizer, grain harvests were not expected to reach 60% of 1944 yields, when production was about one-third below the 1932-35 average. Thus, the country faced the necessity of importing almost half the cereals required for normal consumption; but the end of Allied preclusive buying curtailed the accumulation of foreign exchange for purchases abroad and reacted adversely upon mining and industrial production.

The wheat harvest for 1945 was estimated at 2,000,000 tons (2,700,000 in 1942). Estimates of sugar production for 1945-46 ran as high as 143,000 tons, as compared with an output of 159,000 tons in 1944-45. Olive production was expected to

show improvement over the poor yield of 1944, early estimates having placed the olive-oil yield for 1945 at 330,000 tons.

Iron ore production declined to 656,000 tons in the first half of 1945, compared with 863,000 tons during the same period in 1944. Steel output likewise dropped to 314,000 tons during the first half-year, from 385,000 tons in the first half-year of 1944. Coal (including lignite) production in the first quarter averaged about 1,000,000 tons monthly, or slightly less than the monthly average for 1944. In the first quarter lead production was down to 1,980 tons monthly (2,970 tons per month in 1944); copper, 715 tons monthly (880 tons per month in 1944); and zinc, 1,650 tons monthly, the same as in 1944. Tungsten ore output, reflecting the cessation of war demand, dropped from 102 tons in July 1944 to 10 tons in November, the last figure available in 1945. Foreign demand for superphosphates stimulated the production of pyrites to about 207,000 tons in the first half of 1945 (152,000 tons, Jan.-June 1944), while potash output rose above the 140,000 tons (K<sub>2</sub>O) produced in 1944 (the second highest output on record).

Excepting textiles, all industries dependent upon electricity or water suffered from the lack of power. With adequate supplies of raw cotton on hand, the cotton textile industry worked at near capacity; but cement production declined while the construction industries were handicapped by the dearth of equipment, materials and transport facilities. Over-all industrial activity in the second quarter was reported as 70% of the rate maintained in the first half of 1944.

**Trade and Transport.**—Although no statistics were available, it was estimated that foreign trade receded from the levels of the preceding year, when imports stood at 722,600,000 gold pesetas and exports at 776,400,000 pesetas.

In March the minister of public works reported on improvements in the transport system from the close of the Civil War. About 1,000 new locomotives and 30,000 passenger and freight cars were acquired by the railroads in this period and 1,500 bridges were rebuilt; but the shortage of coal and electricity forced the suspension or frequent curtailment of rail and street-car service. In April the government concluded an agreement with the International Telephone and Telegraph Co., under which Spain acquired four-fifths of the common stock in the Spanish Telephone Co.

**Finance.**—The peseta under exchange control was priced at 9.130 cents (U.S.). The public debt, which stood at 36,300,000,000 pesetas in April 1944, was increased in January by an issue, heavily oversubscribed, of 2,000,000,000 in treasury bonds. The circulation of the Bank of Spain reached 17,200,000,000 pesetas in August (17,700,000,000 at the end of 1944), just short of the maximum note circulation of 18,000,000,000 fixed by decree in March. The budget for 1946 called for expenditures of 13,200,000,000 pesetas. The army, air force, navy and government (police) departments received 48.6% of the total ordinary and extraordinary appropriations.

The official index of wholesale prices stood at 208 in May 1945 (1939=100), as compared with 203 for Oct. 1944; while the cost-of-living index (1939=100) rose to 184 in July (176 in Oct. 1944).

## Spanish-American Literature.

Gabriela Mistral won the 1945 Nobel prize for literature. It was the first time that a South American received the coveted award. Gabriela Mistral was born in 1889 in northern Chile. After long years of leading an anonymous life in her native country she won recognition from the Mexican government, was invited as a guest of honour to teach and give

lectures in Mexico, saw her book *Desolación* published by the Instituto de las Españas in New York, and became one of the leading writers of America. In 1938 she published her second volume of verse, *Tala*. A career diplomat, in 1945 she was Chilean consul in Petropolis, Brazil.

The publishing house known as Fondo de Cultura Económica and its new series "Tierra Firme" were responsible for several of the best books published by Spanish Americans during 1945: *Ruta del Perú* by Luis E. Valcarcel; *Del ensayo Americano* by the Cuban Medardo Vitier; *Argonautas de la Selva*, an account of Francisco Orellana's adventures in the Amazon, by the Ecuadorean Leopoldo Benitez; and *Interpretación del Brasil*, the study by Gilberto Freyre which was so warmly received by American critics.

Younger novelists were far more productive than the old masters, Rómulo Gallegos being the exception; his latest work *Sobre la misma Tierra* has been called a film novel, better to be seen than read. Among the newcomers Gregorio Amunátegui, a Chilean senator, deserves special mention; his novel *Avenida San Juan 128* tells of behind the scene politics among Santiago's old conservative parties. The Argentinean Isidoro Sagues received a prize from Losada Publishing House for his novel *Mal de Ciudad*, the story of a provincial family shaken and stranded by the fast and modern Buenos Aires. A strong social conflict presented without outburst of any sort makes Alfredo Varela's *El Río obscuro* both pleasant and interesting reading. Manolo Cuadra is the author of *Almidón*, a doubtfully humorous novel which despite the author's efforts has failed to create any sensation outside his native Nicaragua. Nicasio Tangol deals with Chiloé and its people in his *Huipampa, Tierra de Sonámbulos*. *Pensativa* by Jesús Goytortúa Santos is a melodramatic tale based on the mysterious identity of the main character, a mystery, by the way, that the reader solves long before the author. The Argentinean writers, as if desirous to escape a reality which is not too pleasant to record, turned to poetic prose and memories of old times. S. Bulbrich and J. L. Borges edited a delightful anthology around the *Compadrito* theme, that colourful and bizarre type so popular with tango composers. Manuel del Cabral, known for his Negro poetry, has also written a book of poetic prose, *Chianchina busca el Tiempo*. Pedro Guillén writes a tale of two cities in his *Vida y Pasión de dos Ciudades*, the cities being Guatemala, where he was born, and Mexico where he settled down. Other 1945 novels deserving mention are: *Los de adentro* by Francisco Javier Espejo and Francisco Rojas Gonzalez' *La negra Angustia*. Julio Rosales, from Venezuela, produced the only collection of short stories worthy of special mention, *Historia de Rapaces*.

Among the biographies one of the most distinguished was María Wiese's account of José Carlos Mariátegui's life; well written and documented, this book is a great contribution to the political and literary history of modern Peru. Other biographies published in 1945 were: Carlos Cabello Reyes' *Genio y Figura de Bernardo O'Higgins*; Julio Iglesias' *José Santos Ossa*; and Raúl Téllez Yañez' *Fray Camilo Henríquez*. No year passes without the appearance of a book on Martí written by a Latin American author; in 1945 it was Andrés Iduarte's turn and his book is called *Martí, escritor*. Dr. Juan José Arévalo, president of Guatemala, published his *Escritos Políticos* in which he strives for the organization of one great republic that would embrace all the Central American countries. *Idola Fori* by Carlos Arturo Torres is a collection of essays dealing with sociological problems from an American point of view. Silvio Zavala's latest contribution to the history of America is also a group of essays entitled *Ensayos sobre la colonización española en América*. Some contributions to the criticism of Spanish American letters should also be mentioned, for example, Reginaldo

María Arizaga's *Valores poéticos de América* which includes poets of all the countries to the south, and Domingo Melfi's charming little book *El viaje literario*. On the more scholarly side it is important to point out the publication of Juan J. Remos' *Historia de la Literatura Cubana* and Arturo Jimenez Pastor's *Historia de la Literatura Argentina*.

The following are the outstanding books of poetry which appeared in 1945: Pedro Prado's new collection of sonnets entitled *Esta bella ciudad envenenada*; Humberto Díaz Casanueva's mourning poem, *Requiem*, dedicated to the memory of his mother which has originality, depth and true feeling; Fausto Soto's *Preludio Nuestro*, rich in imagery and delicate of expression; Adalberto Ortiz' *Tierra, son y tambor*, Negro poetry in the best tradition; Olga Solari's *Selva*, a promising first book; Humberto Zarrilli's *Cántico de la imagen*; Eduardo Mendoza Varela's *Poesía*; and Jorge Gonzalez Durán's *Ante el polvo y la muerte*, winner of the Mexican literary prize for 1944.

Mexico and Chile paid homage to two of their greatest living poets. Enrique Gonzalez Martínez received the Avila Camacho prize consisting of a gold medal and 10,000 Mexican pesos. Pablo Neruda, representing the Communist party in the Chilean senate, was awarded the Chilean national prize for literature, 100,000 pesos. In Argentina the literary awards of the year went to Eduardo Mallea, Ulises Petit de Murat and Leonidas Barletta.

(F. A.A.)

**Spanish Colonial Empire.** Total area (approx.) 135,200 sq.mi.; total population excluding Spain (est. July 31, 1944) 1,377,000.

The accompanying table lists the colonies, protectorates, etc., of Spain (*q.v.*) with certain essential statistics appropriate to each of them.

Spanish Colonial Empire

Country and Area sq. mi. (approx.)	Population Estimated July 31, 1944 (1930's omitted)	Capital, Status, etc.	Principal Products (in short tons)	Imports and Exports	Road, Rail and Shipping	Revenue and Expenditure
Ceuta Melilla, Alhucemas, Chafarines and Peñon Velez 82	145	Madrid, administered as part of Spain	exports (1942) raw materials 610,900 manufactures 7,370	(1942) imp. \$15,500,000 exp. 5,000,000		
Morocco, Spanish 8,080	992	Tetuan, protectorate High commissioners: General Juan Varela	(1943) iron ore 780,000 (1943) antimony ore 220	(1943) imp. \$29,500,000 exp. 7,600,000	rds. c. 500 mi. rly. 80 mi.	(1938) rev. and exp. \$12,300,000 1938 peseta =11.05 c.

Western Sahara, including Ifni and Spanish Sahara 116,200	72*	Villa Cisneros, colonies	fish and dates			(1929) rev. and exp. \$1,320,000

\*Ifni = 35, Spanish Sahara = 37. 1 gold peseta = 24.9 cents U. S. 100 gold pesetas = 352.7 paper pesetas.

**Spanish Guinea:** see SPANISH COLONIAL EMPIRE.

**Spanish Literature.** During the latter part of 1944 and the whole of 1945 several Spanish refugees living in Mexico played intensely active roles in literature. José Moreno Villa, poet, painter and art historian of note, sketched in his unconventional autobiography many famous Spaniards who used to frequent the Centro de Estudios or reside in the Residencia de Estudiantes: Unamuno, Ortega y Gasset, Juan Ramón Jiménez, García Lorca, etc. The author also included some of his more recent poems along with reproductions of several oil paintings. While relating in his biography *El general Miaja* the life of the defender of Madrid, Lázaro Somosa Silva gives an eyewitness account of the desperate

efforts of the populace to fortify the capital in the early days of the siege by Franco. Ramón Iglesia in *El hombre Colón y otros ensayos* gathered a number of essays and reviews which have for their subjects the man Columbus, the historian Bernal Díaz del Castillo, the *mexicanidad* of the colonial humanist Sigüenza y Góngora and the problems of historiography. Two posthumous works of Enrique Díez-Canedo, *Letras de América* and *Epigramas americanos*, added more lustre to his already well-merited fame as a poet, critic and master of Spanish-American literature. The first mentioned consists of numerous essays treating literary figures belonging to practically every age and nation of Latin America. Especially stimulating are the chapters concerned with Sor Juana Inés de la Cruz; the editions of Rubén Darío's complete works and studies relative to the poet; and poetry in Mexico, Colombia, Bolivia and Chile. His little book of epigrams, handsomely printed and illustrated with attractive sketches and vignettes by Ricardo Martínez de Hoyos, contains fleeting impressions experienced between 1928 and 1944 while journeying through South America, the orient and Mexico. *No son cuentos* by Max Aub, Valencian journalist, playwright, novelist and poet, consists of eight sketches which, though related in short-story form, are in fact real human experiences connected with the Spanish Civil War. The first leaves a lasting impression with its portrait of the sharecropper converted into a patriot through the gift of some land. Paulino Masip shows in the four-act farce *El hombre que hizo un milagro* the effect produced on a small-town barber who by accident restores sight to a blind beggar.

Writers and scholars remaining in Spain also led productive lives. A new series *Clásicos Españoles* with approximately 100 volumes in preparation was initiated for the purpose of continuing the work of the two large collections known commonly

as the *B.A.E.* and *N.B.A.E.* Dámaso Alonso's *Ensayos sobre poesía española* is made up of literary essays discussing both the old and modern in Spanish letters: *Poem of the Cid*, Fray Luis de León, Quevedo, Bécquer, García Lorca, etc. His latest book of verse *Hijos de la ira* represents a new departure in his creative poetry, the whole being in a sense a study of his own relations to God. Vicente Aleixandre likewise manifests religious maturity in his *Sombra del paraíso*; retired from the world because of illness, he cultivates a style more ornate than formerly. *El mar en la poesía española* is an anthology of sea poems drawn from every literary period but with the 19th and 20th centuries making the most fruitful contributions. The well-known woman writer Concha Espina came forth with a new novel *Victoria en América*.

**Spellman, Francis Joseph** (1889- ), cardinal archbishop of New York, was born at Whitman, Mass., on May 4. He was ordained in Rome, May 14, 1916, and served from 1922 to 1925 as assistant chancellor of the archdiocese of Boston. In 1925 he became the first U.S. priest ever called to active service in the papal secretariat of state at the Vatican. In 1932 he was named titular bishop of Sila, to serve as auxiliary bishop of Boston. On May 23, 1939, he was installed as the sixth ordinary of the New York archdiocese. Seven months later, on Dec. 11, 1939, he was named by the holy see to be the U.S. military vicar.

In his capacity as military vicar, Spellman was perhaps the most widely travelled churchman of his time. He journeyed the world over for inspections of military installations, conferences with chaplains and to meet and cheer U.S. fighting men in the field. On these trips he inaugurated the practice of obtaining the names and addresses of servicemen and writing to their parents. It was estimated he sent out more than 15,000 letters in carrying out this practice. During World War II, in connection with his work as military vicar and in support of the war effort, Archbishop Spellman gained wide recognition for a number of poem-prayers he composed. Among these were "Our Sleeping Soldiers," "Peace With Justice" and "Prayer For America." In Aug. 1945, his volume, *No Greater Love*, an account of his second tour of the European battle fronts, was published. In 1945 he was serving as secretary of the Administrative Board of the National Catholic Welfare conference, Washington, D.C.

On Dec. 23, 1945, an announcement of new appointments to the Sacred College of Cardinals included the name of Archbishop Spellman. He was created and proclaimed cardinal at consistory on Feb. 18, 1946.

**Spelman Fund of New York:** see SOCIETIES AND ASSOCIATIONS.

**Spices.** Because India's price for black pepper is about 21 cents per lb. landed in the U.S. and the U.S. government maintained the ceiling price of 8½ cents, the only importer was the U.S. government which acquired pepper for the armed services. Since little had been consumed up to V-J day, the problem of distributing the unused portion arose. Eventually the ceiling was raised to 10 cents per lb. at which spice grinders were permitted to buy.

War delayed reconversion in the Netherlands East Indies. Rationing of Java and Sumatra spices was expected to continue.

Unfavourable 1945 weather reduced the U.S. crop of mustard seed. Imports from Europe were expected to offset some of the shortage. The next crop in the U.S. would mature in Sept. 1946.

Cinnamon is obtainable only in Ceylon where sale is controlled by government monopoly. In Sept. 1945, the commissioner in charge advanced prices about 30%. This revision stopped imports since costs exceeded OPA ceilings.

Another monopoly spice is Jamaica pimento or allspice. Jamaica is the world's sole producer. The decision of the "competent authority" there to hold allspice 15% above the price of cloves illustrated a defect in autocratic action. Since the two spices are similar, the use of cloves increased; demand for

pimento dropped sharply.

Even during prewar years consumption of mustard in the U.S. exceeded that of any other spice. This leading position was further strengthened by general scarcity of condiments. Unsettled conditions in Java and Sumatra meant further delay in obtaining pepper (black and white), cinnamon, nutmeg, mace and Amboina cloves. Production of sesame seed in Central America increased during 1945. News from Yugoslavia of the sage grown there was favourable, indicating that imports might be landed in time for U.S. autumn demand in 1946.

The war cultivation of spices in the U.S. was unsuccessful with the exception of mustard seed and red peppers. Both had been profitable crops after 1935. Acreage was easily expanded as demand increased.

When the Dutch again took the Netherlands they found thousands of bags (110 lb. each) of caraway seed. Against a normal price of 12 cents per lb., trading opened at 65 cents delivered in New York. They were also shipping blue poppy seed. Denmark was expected to ship some mustard seed.

Liberated Hong Kong announced that it had cinnamon (China cassia) for sale. The prices were to be adjusted to U.S. ceilings. Mid-Africa and Madagascar continued to offer cayenne peppers, ginger, cloves and vanilla beans. Inflation hampered trade with France and Turkey, North Africa and the Levant from which coriander and cumin seeds were obtained prior to World War II.

Imitation ground pepper, cinnamon and nutmeg came on the market in large volume. These consisted of a cereal base (corn meal, wheat material, buckwheat hulls, etc.) in which were incorporated imitation essential oils with or without small percentages of true spices, in order to simulate the appearance and flavour of pure material. Such products complied with state and the national food laws by declaring the ingredients on the labels.

The spice business in the U.S. faced no reconversion problem. Increase in demand for chili powder was noted, partly as a result of tourists' visits to Mexico where a national dish is chili con carne. The chillies (red peppers) used are a large variety; not too hot, and of rich flavour. These are ground with spice seeds and a dash of garlic.

(C. A. T.)

**Spirits:** see LIQUORS, ALCOHOLIC.

**Sports and Games:** see ANGLING; ARCHERY; BADMINTON; BASEBALL; BASKETBALL; BILLIARDS; BOWLING; BOXING; CHESS; CRICKET; CURLING; CYCLING; FENCING; FOOTBALL; GLIDING; GOLF; GYMNASTICS; HAND-BALL; HORSE RACING; ICE HOCKEY; ICE SKATING; LACROSSE; MOTOR-BOAT RACING; POLO; ROWING; SHOWS; SKIING; SOCCER; SOFTBALL; SQUASH RACQUETS; SWIMMING; TABLE TENNIS; TENNIS; TRACK AND FIELD SPORTS; TRAP-SHOOTING; WRESTLING; YACHTING.

**Spruance, Raymond Amos** (1886- ), U.S. naval officer, was born July 3. He entered the navy in 1903 and was promoted through the ranks to rear admiral in Oct. 1940. He was sent to the Pacific theatre of operations at the outbreak of war with Japan in Dec. 1941, and was in complete charge of operations during the landings of the U.S. marines on the Gilbert Islands of Makin and Tarawa, Nov. 20-23, 1943. At that time it was also disclosed that he had been made chief of a newly created Central Pacific command. He was in over-all command of the invasion of the Marshall Islands on Jan. 31, 1944, and of the naval action against Truk on Feb. 16-17. He was promoted to full admiral in Feb. 1944, and in April was designated commander of the U.S. 5th fleet. He commanded the naval assault on the Marianas Islands which preceded U.S. landings there in June, and his 5th fleet won a decisive victory over a large

Japanese fleet in the waters between the Marianas and the Philippines on June 18-19. Spruance also directed naval operations in the Okinawa landings, April 1, 1945, and declared (June 2) that the Okinawa operation "resulted in the greatest naval casualties encountered in any of our operations." In the command shifts announced by the navy department, Nov. 20, Spruance was moved up to the post of commander in chief of the Pacific fleet vacated by Adm. Chester W. Nimitz. Secretary of the Navy James Forrestal said, Dec. 4, that Adm. Towers would "eventually" replace Spruance in this post.

**Squash Racquets.** For the fourth straight year, national competition in squash racquets was cancelled and almost all tournament play was restricted to New York city. Andrew C. Ingraham of the Harvard club was ranked No. 1 in the metropolitan area on his sweep of ten inter-club matches and the Red Cross handicap tournament. He won the University club championship with a final decision over John Smith, victor in the 1944 Red Cross tournament. The Metropolitan doubles was won by Cliff Sutter and J. B. Maguire. J. Dudley Pope won the Chicago district championship. The United States won the inaugural Alastair Grant trophy, contested on a doubles basis, with a 10-1 victory over Canada.

Squash tennis, also restricted because of the war, brought a repeat to H. J. Rose of the Princeton club as veterans' champion. He defeated Capt. Frank R. Hanson of the Columbia club, 15-11, 15-4. (M. P. W.)

### Stabilization Administrator, Office of.

This office was established as the Office of Economic Stabilization within the Office for Emergency Management on Oct. 3, 1942, by executive order 9250, to control as far as possible inflationary tendencies which would impede prosecution of the war and the operation of the domestic economy in the U.S. The same order established the Economic Stabilization board to advise the director of the office.

The director was authorized to formulate and develop a comprehensive national economic policy for the control of civilian purchasing power, prices, rents, wages, salaries, profits, rationing, subsidies and related matters.

The stabilization program had the purpose of preventing avoidable increases in the cost of living, co-operating to minimize unnecessary migration of labour from one business, industry or region to another, and facilitating the prosecution of the war. Executive order 9328, of April 8, 1943, provided for regulations to stabilize the national economy by controlling price, wage and salary increases. With the ending of the war, the program called for control of both inflationary and deflationary tendencies which might impede the orderly transition to a peacetime economy.

Under executive order 9620, Sept. 20, 1945, the Office of Economic Stabilization was abolished and all functions and authority were transferred to the Office of War Mobilization and Reconversion. Within the Office of War Mobilization and Reconversion was established the Office of Stabilization Administrator. The functions and authority of the director of economic stabilization, transferred under executive order 9620 to the director of the Office of War Mobilization and Reconversion, were delegated to the stabilization administrator. (See also WAR MOBILIZATION AND RECONVERSION, OFFICE OF.)

**Stainless Steel:** see METALLURGY.

**Stalin, Joseph Vissarionovich** (1879- ), Russian statesman, was born

"MR. RED CHIPS GOES TO TOWN." Plöschke of the *Chicago Herald American* illustrated one view of Stalin's foreign policy in 1945

in Georgia in Transcaucasia and succeeded Lenin as virtual dictator of the soviet union in 1924 (see *Encyclopædia Britannica*). On May 6, 1941, shortly before the German invasion, Stalin assumed the premiership of the U.S.S.R. after the resignation of Vyacheslav Molotov from that office.

Throughout 1942 and 1943, Marshal Stalin repeatedly appealed to the Allies to open a second front and asserted on several occasions that Allied aid was not commensurate with Russia's contribution in engaging the greater bulk of the nazi army. At the historic Tehran conference in Nov. 1943, Stalin and Roosevelt met for the first time, Stalin and Churchill for the second. The three United Nations chiefs agreed on a master plan to destroy German military power. Stalin acknowledged (April 30, 1944) the Anglo-American contribution in material aid, and on June 13 he hailed the invasion of France as a "grandiose" and "masterly" achievement. At Yalta, Stalin again conferred with Roosevelt and Churchill (Feb. 4-11, 1945); they agreed on final measures for the defeat of Germany and on policy regarding liberated countries. After the death of Roosevelt, Stalin paid tribute to the U.S. leader (April 13) as a "great organizer of the struggle of the freedom loving nations against the common enemy. . . ." In a victory speech, May 9, commemorating the defeat of the reich, Stalin said that although the soviet union was victorious, it did not intend "either to dismember or annihilate Germany." He attended the Berlin conference where the Big Three made public their agreement on the final decisions for the rule of Germany and settlement of other European problems (Aug. 2), and seven days later (Aug. 9), Russia entered the war against Japan. Some time after Japan formally surrendered on Sept. 2, Stalin took an extended vacation in the Caucasus, which caused considerable speculation on the state of his health. However, he reappeared in Moscow during the conference of foreign ministers (Dec. 16-26) and some of the visiting diplomats said he was in excellent spirits and health. (See also UNION OF SOVIET SOCIALIST REPUBLICS.)

**Stamp Collecting:** see PHILATELY.

**Standards, National Bureau of.** This bureau was established by act of the U.S. congress March 3, 1901. During the year 1945 it was made up of nine scientific and technical divisions, three divisions dealing with commercial standardization, a special division set up as a World War II measure and concerned wholly with military problems, and three divisions charged with the administration of internal affairs. The scientific and technical divisions, and those engaged in commercial standardization were: electricity, weights and measures, heat and power, optics, chemistry, mechanics and sound, organic and fibrous materials, metallurgy, clay and silicate products, simplified practice, trade standards and codes and specifications.

The bureau's effort continued to be concentrated mainly on problems connected with the war. Its regular appropriation of \$2,924,500 was supplemented by transferred funds totalling nearly \$6,582,881 from the army, navy, Office of Scientific Research and Development, National Advisory Committee for Aeronautics, War Production board and other agencies. The staff throughout the year averaged 2,000; in addition 54 research associates were working in the laboratories as representatives of 14 national engineering societies and trade associations.

The chief of the weights and measures division represented the department of commerce at a screw thread conference held in Ottawa, Ont., Can., during Sept. and Oct. 1945. Co-operative research was started, which it was hoped would lead to a unified system of screw threads in Great Britain, Canada and the United States.

The bureau assisted various agencies that were concerned with the assignment of postwar radio frequencies. As the result of its extensive research on radio propagation, the bureau was able to suggest allocations best suited to different purposes.

A great deal of attention was given to all phases of the automotive fuel situation. There is a growing interest in possible substitutes for gasoline for use in countries that have no petroleum of their own. Many tests have been made of nonhydrocarbon fuels, including alcohol and various gases.

Adsorbents, which are important in the sugar and other industries, were studied in a co-operative project supported by several refineries in the United States and in Canada. An extensive bibliography of the scientific literature on bone chars and other adsorbing materials was published.

In co-operation with the war department, a painting schedule and colour scheme was developed for army hospitals. For the interiors, soft-toned, bright, cheerful pastel colours that create a restful effect were selected. Various kinds of paint—flat oil, flat emulsion and enamels—were recommended, depending upon the location. A representative of the bureau visited the post engineers and instructed them in carrying out the work.

Many improvements in aeronautic instruments were made as the result of co-operative work with the navy department. An example was the development of a new and easily constructed flow meter to serve as part of the field test sets used to check oxygen equipment on aircraft.

The mass spectrometer was successfully employed in analyzing samples of the liquid and gaseous materials that constitute the basis of synthetic rubber manufacture. This elaborate and highly specialized instrument enabled the bureau to make quick, complete and accurate analyses of butadiene, styrene and other monomers submitted by plant operators through the Rubber Reserve company.

A new 6 x 42 service binocular, the body of which was made entirely of plastic, was designed for the Army-Navy Munitions board and placed in production. As it was without adjustments, was waterproof, and lighter than conventional instruments, it

was considered specially suitable for combat service in the tropics.

Outdoor corrosion tests of aluminum, magnesium and various light alloys used in aircraft construction were continued at a new location on Chesapeake bay. Full-size magnesium wings were subjected to the combined action of tide water and a marine atmosphere. It was hoped that through these tests the corrosion-resistance of this popular metal could be increased; its rapid deterioration is one of its principal drawbacks.

A new furnace was designed and constructed for annealing optical glass in the bureau's glass plant. Through the use of a powerful electrically-driven heat-resisting fan, the temperatures throughout the furnace were equalized much more rapidly than in the ordinary type. It was found possible to anneal optical glass pressings in three days, thus saving a full week in making elements for fire-control instruments.

The limitation orders of the War Production board, issued during the early part of 1945, often included requirements for the simplification of sizes and varieties of goods produced for civilian use. Although the majority of these orders were later revoked, many of the affected industries were anxious to retain the benefits of the simplified schedules. The bureau continued to assist all interested groups in the development of voluntary simplified practice recommendations to go into effect when normal conditions would again prevail.

As an aid in the development of export trade, various commercial standards were developed for products to be sold abroad, and particularly in Latin America. Typical of these standards is one covering diesel engines. Its object is to overcome the difficulty experienced by U.S. manufacturers in exporting their product because of the favourable horsepower ratings of engines built outside the United States.

The *National Directory of Commodity Specifications* was revised and placed on sale. It was the only complete, up-to-date compilation of standards and specifications having national recognition.

The results of the year's work, insofar as these were not confidential, were made available through 111 publications in the bureau's own series and 63 articles in the technical press. The list of publications was brought up to date through the issuance of a new supplement. The special series of mathematical tables, of which the director of the bureau is the sponsor, was made up of 53 tables available to the public, 32 of which were obtainable through the bureau.

(L. J. BR.)

**Stanford University** (THE LELAND STANFORD JUNIOR UNIVERSITY), an institution of higher education near Palo Alto, Calif.

The year 1945 was marked by gifts to the university totalling \$3,400,110, and by development and then decline of various army and navy units, particularly those for training in the languages, culture and geography of the Pacific area. A special naval unit to go on into the period of peace was established and housed in Toyon hall. Some 200 officers from all services were enrolled in the civil affairs training school preparing for immediate assignment in the conquered areas.

There was a shortage of students in the scientific laboratories and a reduction of research, since men of student age were in combat service and many faculty members in war work elsewhere. Turkey sent a number of geology and mining students, and Professor George S. Myers brought from Brazil students in ichthyology, following his years of study there on the fishes of South America.

Notable among honours received by faculty members was the 1945 American Society of Mechanical Engineers medal to Dr. William Frederick Durand, who was also presented the

John J. Carty gold medal of the National Academy of Sciences. Dr. Frederick Emmons Terman was appointed dean of the school of engineering, returning from his leadership in research in radar defense. Dr. Merrill Kelley Bennett, of the Food Research Institute, was appointed dean of the school of social sciences. Dr. John M. Stalnaker was appointed dean of students; Dr. H. Donald Wimbler advanced to registrar (vice Dr. John Pearce Mitchell, retired); and Dr. Harold H. Fisher became chairman of the directors of the Hoover Library (vice Dr. Ralph H. Lutz).

The third conference on the humanities was held under the leadership of Dean John W. Dodds; also in this school, through a grant of \$25,000 from the Rockefeller foundation, was established a program of Pacific, Asiatic and Russian studies. (For statistics of enrolment, faculty, library volumes, etc., see UNIVERSITIES AND COLLEGES.) (R. L. W.)

**Stars:** see ASTRONOMY.

**Stassen, Harold Edward** (1907— ), U.S. politician and naval officer, was born April 13 in West St. Paul, Minn. He studied at Minnesota university and law school, Minneapolis, Minn., 1925-29, and was admitted to the Minnesota bar in 1929. He first ran for political office in 1930 when he was elected county attorney, a post he held for eight years. He was elected governor of Minnesota on the Republican party ticket in 1938 and was inaugurated in Jan. 1939, one of the youngest governors in the U.S. He was re-elected governor for the 1941-43 term. Stassen was temporary chairman and keynoter of the Republican national convention in 1940 and was national chairman of the Governors' conference and of the Council of State governments, 1940-41. He resigned as governor in 1943 to join the U.S. navy. A commander and flag officer to Adm. Halsey, Stassen saw action in four battles. On Feb. 20, 1945, Stassen accepted Pres. Roosevelt's appointment as delegate to the San Francisco conference of the United Nations. At the annual conference of governors at Mackinac Island, Stassen declared, July 2, that U.S. acceptance of the United Nations security charter and adoption of a flexible foreign policy could give the world a minimum of 50 years of peace. Stassen, who was promoted to the rank of captain in October, was released from the navy on Nov. 15, at which time he said that he intended to return to public life in an endeavour "to strengthen the liberal and progressive elements in the Republican party." Toward the end of 1945, his name was frequently mentioned as one of the ranking G.O.P. candidates for the presidential nomination in 1948.

**Stettin.** Stettin, formerly a city in Germany, pop. 270,747 (1933), was the capital of the Prussian province of Pomerania and the busiest German port on the Baltic sea at the mouth of the Oder river. Four-fifths of the city lies west of the river. The provisional frontier between Poland and Germany was fixed in Sept. 1945 in such a way as to include the whole of Stettin and an additional strip of land west of the Oder river within Poland. The strip of land includes the town of Swinemunde on the Baltic sea. The name of Stettin was changed to "Szczecin" and a Polish mayor, Peter Zaremba, was appointed. Stettin was intended to become Poland's largest seaport on the

Baltic because it forms a natural outlet for the coal and the industrial products of the former Prussian province of Silesia which was incorporated into Poland after World War II. The Russians retained occupation rights in the Polish territory west of Stettin for five months by an agreement of Oct. 1, 1945. That territory includes important electrical works, an oil plant and in addition one of Germany's principal experimental stations in the development of the flying bomb. (H. Ko.)

**Stettinius, Edward R., Jr.** (1900— ), U.S. statesman, was born in Chicago Oct. 20, son of Edward R. Stettinius, partner in the firm of J. P. Morgan and company. He studied at the University of Virginia, and in 1934 he became vice-chairman of the finance committee of the U.S. Steel corporation; by 1938 he had become chairman of the board of that corporation. In May 1940, he was appointed a member of the advisory commission to the Council of National Defense, and a few days later he resigned all his offices with the U.S. Steel corporation. Stettinius served as lend-lease administrator from Aug. 28, 1941, until Sept. 25, 1943, when Pres. Roosevelt named him as Sumner Welles' successor as undersecretary of state. When Cordell Hull resigned as secretary of state because of ill health, Stettinius was named to succeed him on Nov. 27, 1944. Early in December, in his first declaration of foreign policy in his new post, Stettinius told Britain that European peoples should be allowed to work out their own governments without interference. His statement was believed to apply specifically to Britain's opposition to Count Carlo Sforza's appointment as Italy's foreign secretary. Stettinius attended the Yalta conference (Feb. 4-11, 1945) and the Inter-American Conference on War and Peace at Mexico City (Feb. 21-March 8). He welcomed the delegates at the opening of the San Francisco conference of the United Nations, April 25; his subsequent espousal of Argentina as a United Nations candidate was criticized widely at home and abroad because of that country's unmistakably totalitarian form of government. His resignation as secretary of state was accepted June 27, by Pres. Truman; the president thereupon appointed him U.S. member on the security council and chairman of the U.S. delegation on the general assembly of the United Nations.

**Stilwell, Joseph W.** (1883— ), U.S. army officer, was born March 19 at Palatka, Fla. He was graduated from West Point, 1904, and served with the A.E.F. in France during World War I. After Pearl Harbor he was promoted to lieutenant general, Feb. 1942. He served a month as General Chiang Kai-shek's chief of staff and in March 1942 Chiang gave him command of the 5th and 6th Chinese armies fighting the Japanese invading Burma. Beaten by stronger and better-equipped Japanese, Stilwell retreated toward India. Following the fall of Burma in May 1942, he said: "I claim we got a hell of a beating. We got run out of Burma and . . . I think we ought to find out what caused it, go back and retake it." During 1943, as U.S. commander in southeastern Asia under Lord Louis Mountbatten, he was busy preparing to do so.

His efforts were abruptly interrupted Oct. 28, 1944, when he was relieved of his China-Burma-India command and recalled to Washington. His removal was attributed to growing friction between himself and Generalissimo Chiang Kai-shek over disposition of Chinese troops as well as strategic and political problems. Prior to his recall Stilwell was made a full general, in Aug. 1944. Secretary Stimson announced (Jan. 25, 1945) that Stilwell had succeeded Lt. Gen. Ben Lear as commander of the army ground forces in the U.S. Stilwell was named, June 22, as commander of the U.S. 10th army on Okinawa. He took over

the command on June 28, and on Sept. 7 he accepted the surrender of some 105,000 Japanese troops scattered throughout the Ryukyus. On Nov. 14, Stilwell was named president of an army board to study equipment needed by postwar ground forces.

**Stimson, Henry Lewis** (1867— ), U.S. statesman, of whom a biographical sketch appears in *Encyclopædia Britannica*. A Republican, he became an ardent admirer of Cordell Hull's policies as secretary of state (the office Stimson had held in Pres. Hoover's cabinet) and was always quick to defend Hull's actions against criticism. He favoured in particular a strong stand for the United States against Japan, Germany and Italy. Pres. Roosevelt appointed him secretary of war on June 20, 1940. In Jan. 1944, Stimson recommended enactment of labour draft legislation to "extend the principles of democracy and justice more evenly" between civilian and soldier. Stimson endorsed, April 8, 1945, a proposal for merging the army and navy into a single department with a single secretary; he also advocated universal peacetime

HENRY L. STIMSON, who retired as U.S. secretary of war in Sept. 1945, bade farewell to Gen. George C. Marshall, army chief of staff, at Washington, D.C. Beside him is Mrs. Stimson, and first among the line of high ranking officers is Gen. H. H. Arnold

military training (June 15). On returning from the Berlin conference, he issued a statement (Aug. 6) on the atomic bombing of Hiroshima and the history of the new weapon. Stimson resigned as secretary of war, Sept. 18, and was succeeded by Undersecretary Robert P. Patterson. In a farewell statement the following day, he said that the U.S. should preserve its leadership and influence by maintaining its military and naval power.

**Stock Exchanges:** see STOCKS AND BONDS.

**Stocks and Bonds.** **Stocks.**—Compared especially with 1944 and 1943, the 1945 stock market in the United States was decidedly different with respect to (1) much greater activity, (2) a much higher price level, (3) a much greater continuity of trend, and (4) an extension of the bull market to all leading classes of stocks. In fact, the 1945

market may be described as an active bull market throughout the year, with only one brief period of moderate decline in the middle of the year. At the end of December, industrial stocks showed an appreciation of 38.2%, railroad stocks 17.4%, public utilities 28.1% and copper stocks 41.5%. For all of the first three leading groups, the appreciation amounted to 33.6% as compared with a rise during the same period of 1944 of only 6.2%.

Briefly summarized, the 1945 stock market experienced three distinct price trends, namely, (1) a rise from January to June with monthly averages rising from 107.1 to 119.8, or 11.8%, (2) a moderate decline during July from 119.8 to 117.4, or 2%, and (3) a rise from August to December, inclusive, from 117.4 to 137.6 or 20.2%. With the exception of a 2% decline during July, the market of 1945 may thus be characterized as a substantially continuous bull market.

Market factors influencing the stock price levels were numerous. On the bull side ten considerations seemed to have been stressed by the speculative community, namely, (1) a strong undercurrent of inflation thinking, (2) an enormous pressure of idle funds seeking investment, with outright purchases the general rule, (3) a diminution of investment bond issues owing to large refunding operations, (4) continued low interest yields on choice bonds with a much larger yield obtainable from stocks, (5) favourable corporate earnings and increased dividend declarations, (6) federal tax legislation reducing corporate taxes materially, (7) better prospects for utility shares, resulting partly from tax reductions and partly from a likelihood of more liberal recapitalization plans for common stockholders, (8) a belief by many in a huge postwar boom to meet the needs of foreign nations as well as domestic depleted backlogs of goods, repairs and badly needed new construction, (9) the hope of abolition of price and other economic restrictions with the close of hostilities, and an expected stimulation of private enterprise, and (10) a feeling that stocks were not too high, despite their rise, in view of the devalued dollar (devalued by nearly 40% in 1933).

Unfavourable market factors were also plentiful, such as (1) continued heavy government deficit spending, (2) a substantial business reaction from excessive war activity, (3) a faltering reconversion of business to peacetime conditions, (4) a substantial increase in production costs as well as a distinct trend toward higher living costs, and (5) an enormous increase in strikes throughout the nation, with the automotive industry paralyzed, and with a threatened stoppage at the end of the year of the iron and steel, electrical and aluminum industries of the nation. All of these ominous factors, however, seemed to be ignored by the stock market.

Bad news of the above character, especially strike news, seemed to be greeted with an appreciation in stock values. Increasingly the inflation and boom psychologies seemed to brush all unfavourable factors aside and more and more to hold the market within their grip.

Using the Standard & Poor's barometric figures (average for each month based on daily closing prices), the average monthly price of 20 representative railroad stocks stood at 49.3 for Jan. 1945, as compared with 46.6 and 32.3 for December and January of 1944, respectively. Thereafter in 1945 a rise occurred until June, when the monthly average stood at 58.6. The gradual nature of the rise for railroad shares was indicated by the monthly averages of 50.4 for February, 50.5 for March, 52.5 for April, 54.7 for May and 58.6 for June. Following June the monthly average declined slightly to 53.4 for August. Thereafter a moderate increase occurred which brought the monthly average back to 56.2 for September, 59.0 for October, 62.7 for November and 64.0 for December.

Table I.—U.S. Security Market Prices

	Railroads 20 stocks		Industrials 50 stocks		Public Utilities 20 stocks		Copper 7 stocks		Stocks 50 stocks	
	1945	1944	1945	1944	1945	1944	1945	1944	1945	1944

\*Copper figures use 1935-39 as a base period. All other figures use 1926 as a base period.

The above figures are an average for the month based on daily closing prices, except for copper, which are weekly closing prices.  
(Source of data—Standard & Poor's Trade and Securities, Current Statistics.)

In the field of industrial stocks, using Standard & Poor's averages for 50 leading issues, the average monthly price stood at 131.8 for Jan. 1945, as compared with 128.5 and 117.4 for December and January of 1944, respectively. From January to June of 1945 this monthly average rose from 131.8 to 145.2, or an increase of 10.1%. Following June the average monthly price level declined to 141.7 for July. Thereafter the monthly averages increased to 143.3 for August, 153.7 for September, 159.7 for October, 163.5 for November and 166.7 for December.

Similar price movements by months occurred in the public utility group of stocks, although on a somewhat larger scale. For 20 public utility stocks the Jan. 1945 average stood at 57.7, as compared with 55.1 and 50.2 for December and January of 1944, respectively. Following Jan. 1945 the average monthly price increased from 57.7 to 71.2 for July, an increase of 23.4%. Thereafter the price level declined slightly to 69.8 for August, followed by an increase to 72.9 for September, 77.3 for October, 83.4 for November and 83.2 for December. The copper stocks monthly average price stood at 91.2 for Jan. 1945, as compared with 84.8 and 75.2 for December and January of 1944, respectively. By June 1945 this average stood at 97.2. Then followed a decline to 91.3 for the month of August. Thereafter a substantial increase occurred, the rise extending to 99.6 for September, 110.6 for October, 120.7 for November and 126.3 for December.

Combining the 50 stocks used by the Standard & Poor's index for railroads, industrials and public utilities, the market showed an increase from 107.1 for January to 119.8 for June, or about 11.8%. Subsequently the price level declined slightly from 119.8 to 117.4 for July. Following July the monthly price level again rose to 137.6 for December, the averages for August, September, October and November being 117.7, 125.8, 131.0 and 135.3 respectively.

On Nov. 1, 1945, the market value of all listed shares on the New York Stock exchange stood at \$69,560,969,000, with an

average market price per share of 80.2. On Nov. 1, 1944, this market value stood at \$53,087,000,000, with an average price of 69.7. An appreciation in value of approximately 15.1% was thus shown for 1945.

**Number, Volume and Amount of Stocks.**—According to the New York Stock exchange's compilation, the total stocks listed on that exchange on Nov. 1, 1945, stood at 1,572,812,000

shares, with a total market value of \$69,560,969,000. This value compared with \$53,087,000,000 and \$45,101,000,000 on Nov. 1 of 1944 and 1943, respectively. Of the 1945 total (as of Nov. 1), U.S. stocks aggregated 1,531,385,000 shares, valued at \$68,315,517,000 and stocks of other countries 41,426,000 shares, valued at \$1,245,451,000. The total of shares was distributed over 1,249 separate United States issues and 18 issues of other countries, representing a total of 906 issuing corporations.

Total shares traded on the New York Stock exchange during 1945 amounted to 377,563,575 shares, as compared with 263,074,018 shares during 1944, 278,741,765 during 1943, 125,677,963 during 1942, 170,534,363 during 1941, 207,605,359 during 1940 and 1,124,991,000 during 1929, the largest yearly total on record. The 1945 market, contrary to that of 1944 and 1943, was much more active, there being an increase in transactions in 1945 of nearly 44% over the volume recorded for 1944. January, June, October and November were the largest months for volume on the New York Stock exchange during 1945, with 38,995,195, 41,310,246, 35,476,347 and 40,405,573 shares, respectively, while July was the smallest with 19,977,030 shares. The New York curb market had sales during 1945 of 143,337,205 shares, as compared with 71,061,783 shares during 1944 (a doubling), 71,382,463 during 1943 and 22,327,822 during 1942.

**Bonds.**—Using the Standard & Poor's barometer figure for composite bonds (average for each month based on daily closing prices), the average high price stood at 117.6 for Jan. 1945. Thereafter the monthly high average price rose to 118.3 for April. Subsequently the price varied between 117.4 for September and 119.4 for December. The bond market was thus remarkably stable for the year, and at an exceedingly high price level. Monthly fluctuations between high and low were also very small, the largest fluctuation occurring during February and December, when the range between high and low, however, amounted to only 0.90 points.

According to the New York Stock exchange's record, bond

Dec.	119.4	118.5

and note flotations of United States corporations during 1945 totalled \$4,884,508,000; but exclusive of refunding issues, investment trusts and holding companies, the total flotation amounted to only \$1,161,079,000. These figures compared with similar totals during 1944 of \$2,602,863,000 and \$551,992,000, respectively.

**Number, Volume and Amount of Bonds.**—According to the New York Stock exchange's compilation, the total par value of bonds listed on that exchange at the end of December 1945 stood at \$138,085,021,000, with a market value of \$143,110,516,000. These figures compared with \$111,115,884,000 and \$112,620,709,000 for the corresponding date of 1944. The increase in the par value of bonds during 1945 was largely attributable to the issue of large amounts of United States government securities. Of the 1945 total, United States corporation bonds (at the end of December) amounted to \$13,944,169,000, with a market value of \$14,118,929,000; company bonds of other countries with a par value of \$681,437,000 and a market value of \$685,807,000; United States government bonds (inclusive of corporations and subdivisions) with a par value of \$121,585,200,000 and a market value of \$126,879,314,000; and other governments (inclusive of subdivisions) with a par value of \$1,874,217,000 and a market value of \$1,426,465,000. The total listed bonds of United States corporations were distributed over 648 issues with 336 issuers; of United States government bonds with 84 issues and 3 issuers; and other governments with 210 issues and 51 issuers.

Total bonds traded on the New York Stock exchange during 1945 amounted to \$2,261,985,110, as compared with \$2,694,703,700 during 1944; \$3,254,716,525 during 1943; \$2,182,625,800 during 1942; \$2,114,098,550 during 1941; and \$1,671,598,875 during 1940.

**Stock Exchanges.**—The 1945 chronology of the New York Stock Exchange's alterations in its rules and practices, either actual or proposed, was confined to a comparatively small range of subjects. The following may be listed as the most important:

**Proposed Ban on Floor Trading.**—In January the Trading and Exchange division of Securities and Exchange commission made public its report on a proposed rule to prohibit floor trading by members of the

SALES AND PRICES on the New York Stock exchange, 1945

New York Stock exchange and the New York Curb exchange. In reply the president of the New York Stock exchange requested that consideration be given by the SEC to plans which the exchange had perfected for the control of floor trading. He also called attention to the exchange's study of the problem in agreement with the SEC and declared that "adoption of the rule might amount to a major surgical operation upon one of the most delicately adjusted segments of our national economy." On Feb. 8 the SEC announced that a public hearing would be held on April 9. At this hearing the exchange opposed the proposed ban on the ground that the proposal "was based on inadequate data and would dislocate delicate market machinery and impair its usefulness." An objective study and a report of findings by Cole, Hoisington and company, economic consultants, were submitted in opposition to the proposal.

**Raising Margin Requirements.**—The Federal Reserve board announced on Feb. 2 that effective Feb. 5 margin requirements for the purchase of registered securities would be increased from 40 to 50%, the 40% requirement having been in effect from Nov. 1, 1937. Early in March 1945 the board of governors of the New York Stock exchange amended its margin requirements "to provide for 100% margin on securities selling at or below 10; a minimum of \$10 a share on stocks selling above 10, 10% of the principal amount of any bond selling above 10% of its principal amount and a minimum margin account equity of \$1,000. The change in the minimum maintenance requirement was from 30% of the debit balance to 25% of the market value." Member firms were also requested (March 23) to report, as of the last business day of each month, "the amount of credit extended on securities to customers carrying margin accounts; the amount of such credit extended on U.S. government obligations; the amount of customers' free credit balances, and the amount of cash firms have on hand and in bank deposits." On July 5 the Federal Reserve board again increased margin requirements for the purchase of registered securities from 50% to 75%, and also applied this same increase to short sales. The board further ruled that proceeds of sales of stocks in undermargined accounts should be used to the extent necessary to increase the margin on the securities remaining in the account up to 75%. It is interesting to observe from the replies to the New York exchange's questionnaire on the subject that "as of June 30, member firms carried a total of 137,752 open margin accounts for customers, compared with 256,504 open margin accounts as of Nov. 30, 1938."

**Miscellaneous.**—Four other alterations or proposals for alterations are deserving of special mention:

(1) A proposal from the chairman of the board of the Federal Reserve system (Feb. 20) to the Senate Banking committee "that gain from speculation in stocks be taxed in addition to the capital gains tax, as a measure to combat inflation."

(2) Revision of the New York state stock transfer tax rates, effective July 1, "to eliminate emergency rate and to provide a graduated scale of charges of from 1 cent to 4 cents a share depending on the selling price. Previous rates provided for a charge of 3 cents a share for stocks under \$20 and 4 cents for stocks \$20 and over. Those rates included a 1½ cent and 2 cent per share emergency rate, respectively."

(3) Adoption of additional rules by the New York Stock exchange relating to trading by members for their own account on the floor and providing that "a floor member's own bid or offer to establish or increase a position in a stock which he has an interest in does not have parity with an order originating off the floor, nor does his bid or offer have precedence, based on size, over an order originating off the floor." Further provision was made to the effect that "a floor trader cannot 'stop' stock in which he has an interest; nor can he, for his own account, buy at a higher price than the last sale (a plus tick), or at the same price as the last sale if that price is above the next preceding different price (zero plus tick), or sell, except at a loss, until the second succeeding trading day." However, exceptions were made to meet special circumstances, as well as for specialists and odd lot dealers.

(4) Undertaking by the New York Stock exchange of a study "to consider the advisability of permitting member firms to do business in corporate form. On Nov. 15, the president of the New York exchange transmitted to members an outline of the restrictions and conditions which the exchange would impose if member corporations were permitted." (See also BUSINESS REVIEW.) (S. S. H.)

Others . . . . .	29	12,027	12,055	41	11,120	11,160
Total . . . . .	619	154,961	155,580	832	170,512	171,343
Value . . . . .	\$14,855	\$160,787	\$175,642	\$13,367	\$170,953	\$184,320

**Dimension Stone.**—Sales of dimension stone in 1944 declined 25% in quantity but increased 8% in value. The reduction in construction work resulted in a drop in sales that had amounted to 73% after 1939. In addition to the items shown in the table, 60,950 tons of slate were sold as dimension stone in 1944, against 73,310 tons in 1943.

**Crushed Stone.**—Sales of crushed stone in 1944 declined 21% in both quantity and value. The 1944 tonnage reported above does not include: 24,148,000 tons of limestone used in making cement and 12,947,000 tons used in making lime; 416,890 tons of slate granules and flour; 740,454 tons of asphaltic stone. Including these additional items and dimension stone, the total stone output was 193,832,000 tons in 1944, against 221,634,000 tons in 1943.

**Canada.**—Stone production in Canada was as follows, in short tons, 1944 figures being given first, followed by (1943): granite 269,879 (780,422); industrial limestone, not including that used for lime or cement, 5,560,989 (6,256,181); structural limestone 12,180 (9,328); marble 11,829 (11,848). The preliminary estimate of mineral production for 1945 gives a total of 5,884,718 tons, against 5,994,992 tons in 1944. (G. A. Ro.)

**Straits Settlements.** A British crown colony, under Japanese occupation from Feb. 1942 until Aug. 1945, when it was returned to British rule, one of the three principal divisions of British Malaya, the others being the Federated and Unfederated Malay States (*qq.v.*). Area of Straits Settlements, 1,356 sq.mi.; pop. (1941) 1,435,895, racially divided as follows: Europeans 18,101, Malays 315,629, Eurasians 13,540, Chinese 927,003, Indians 148,851, others 12,771.

The capital is Singapore, located on an island at the tip of the Malay peninsula and separated from the mainland by the narrow strait of Johore. It was founded as a trading post by Sir Thomas Stamford Raffles, pioneer of British enterprise in this part of Asia, in 1819, and developed into one of the great cities and ports of the orient. The limited territory of the Straits Settlements also includes the second largest city in Malaya, Penang, located on an island off the west coast of the peninsula.

**Education, Finance, Communications.**—There were 420 schools, with 83,078 students and pupils, in 1940. The unit of currency before the Japanese occupation was the Straits dollar, equivalent to 47.51 U.S. cents in 1941. The pound sterling was often used in financial estimates. Revenue in 1941, the last year for which figures were available, was £5,501,790 and expenditure was £7,056,729. At the end of 1940 there were 1,073 mi. of metalled roads and 133 mi. of gravelled roads in the colony. There were radio broadcasting stations at Singapore and in Province Wellesley for Penang. (W. H. CH.)

**Strategic Mineral Supplies.** During the early stages of World War II, in what was then called the defense program, and before the United

States became an active belligerent, it was becoming evident that previous conceptions on strategic mineral supplies were inadequate, and long before the war was over it had been effectively demonstrated that the U.S. could maintain self-sufficiency in few of the many minerals and metals that are required in such enormous quantities by modern mechanized warfare. This being the case, the only safeguard against critical shortage of supply in any future emergency lay in the advance accumulation of stock piles, to supplement the domestic output and such imports as could be maintained.

**Stock-piling.**—Although strong advocacy of stock-piling was made as far back as the early 1920s, no action was taken, and it was not until June 1939 that congress authorized steps in this direction, and then on only a relatively small scale. Before any great progress had been made, the war was under way in Europe, and world markets were so disorganized that purchases from foreign sources were greatly hampered. After a year, so little had been accomplished that the Metals Reserve company was organized to take over the program and speed it up. The results accomplished by Metals Reserve are a part of the war history, and need not be detailed here. The point to be made in this connection is that stock-piling on a large scale had been proved necessary, and had been accomplished under severe handicaps. At the same time it was demonstrated that stock-piling before the war would have resulted in the saving of time, effort, money and lives.

With the war drawing to a close, it became necessary to look to the future, and make plans for the disposal of the surplus stocks on hand at the end of the war. In order to prevent these stocks from disorganizing postwar-markets, and at the same time to start a nucleus of stock-piling for future needs, the Surplus Property act of 1944 provided that all surplus property designated by the Army and Navy Munitions board as suitable for stock-piling purposes should be added to the stock piles authorized by the legislation of 1939.

**Legislation.**—Since the stock-piling provisions of the Surplus Property act were scheduled to expire at the end of 1945, it was necessary that additional legislation be provided if stock-piling were to go beyond this preliminary step. In March 1945 and again in October bills were introduced in congress to provide permanent stock-piling procedure. In the hearings on these bills the chief objections centred on the question as to whether stock-pile purchases should be made from domestic or foreign producers, and the methods proposed for the protection of industry against release of stock-piled material, with consequent bad effect on the current market. In December the former bills were reformulated and passed by the senate in a form acceptable to industry.

**Army and Navy Munitions Board Report.**—In the light of the experience gained in the war, and under the conditions existing at the end of the war, it was necessary to recast the entire basis of strategic mineral supplies. The Surplus Property act provided that the Army and Navy Munitions board should report to congress its recommendations as to the maximum and minimum amounts of each strategic or critical material that should be included in the stock pile. In accordance with this directive the board made a report in which the necessity for stock-piling is the sole criterion in the determination of strategic materials, and the only differentiation between strategic and critical materials lies in the amounts recommended for the stock pile. All materials which war experience showed to be short in supply were divided into three subclasses, depending on the relative desirability and feasibility for stockpiling, as follows:

A. Those commodities for which stock-piling is considered the only satisfactory way of assuring an adequate supply for a future emergency.

B. Materials the stock-piling of which is practicable, acquisition of which is recommended only so far as they are turned into the stock pile as surplus property, on the score that future supply may be secured by stimulating output from North American sources, or by the use of substitutes.

C. Materials not recommended for stock-piling, because difficulties in storage outweigh the advantages of stock-piling.

In its report to congress the board listed 43 items in Group A, 20 items in Group B, and 5 items in Group C, a total of 68 items, of which 24 items are different forms or grades of the same 9 basic materials. The 1940 official list included nine strategics and six criticals in the mineral and metal group; the comparison of this total of 15, against the numbers given above, is a rough measure of the extent to which the status of strategic minerals has been modified by the war. (G. A. Ro.)

**Streptomycin:** see BACTERIOLOGY; CHEMISTRY; CHEMOTHERAPY; UROLOGY.

**Strikes and Lock-outs.** The United States, Canada and Great Britain published, for many years, current statistics of strikes and lock-outs, their causes and results, together with detailed reports upon the more important strikes of each year. After 1942 the strike information gathered by these countries was less complete, because of war conditions.

During the first eleven months of 1945 (Table I) there were 456 less strikes in the United States than in all of 1944, and about 240 less than in the "strike year" of 1937. More workers struck during that period than in any year after 1935 except in 1941. Man-days idle almost equalled the entire year of 1937. The numbers of strikes, of strikers and of man-days lost in-

Table I.—United States: Number of Strikes, Workers Involved and Man-days Lost, 1935–1945

Year	Number of strikes beginning in year indicated	Workers involved in strikes beginning in year	Man-days idle during year
1935 . . . . .	2,014	1,117,213	15,456,337
1936 . . . . .	2,172	788,648	13,901,956
1937 . . . . .	4,740	1,860,621	28,424,857
1938 . . . . .	2,772	688,376	9,148,273

Total . . . . .	1,899	473,500*	2,498,000	1,860	758,000*	3,525,000

The Ministry of Labour Gazette, Nov. 1945 (London).

\*Some workers, chiefly in coal mining industry, were involved in more than one stoppage and are counted more than once in totals. The net number of individuals involved in coal mining stoppages in the period under review in 1945 was approximately 100,000 and, in the corresponding period in 1944, was approximately 350,000. For all industries combined the corresponding net totals were approximately 330,000 and 550,000 respectively.

During the first ten months of 1945 there were 1,899 strikes in Great Britain, which compared with 1,860 in the corresponding months of 1944. But only 473,500 workers were idle in the

Compiled from The Ministry of Labour Gazette (London).

\*Figures for Oct. 1945 are provisional and subject to revision; those for earlier months have been revised where necessary in accordance with latest information.

strikes of 1945, compared with 758,000 in the 1944 strikes. In man-days lost the 1945 strikes were likewise less serious: 2,498,000 compared with 3,525,000 in 1944.

In Great Britain wage questions accounted for more than one-half both of the total number of stoppages in 1944 and of the workpeople directly involved. The few disputes which arose on questions of hours of labour accounted for only 2.6% of the workpeople directly involved. Disputes in connection with the employment of particular classes or persons, working rules and discipline were responsible for more than two-fifths of the total number of stoppages and for about one-quarter of the workpeople directly involved (Table IV).

Table IV.—Analysis of Principal Causes of Industrial Disputes in Great Britain in 1944

Principal causes	Number begun during 1944		People directly involved	
	Number	Per cent	Number	Per cent
Wage increase . . . . .	339	15.4	78,000	10.9
Wage decrease . . . . .	78	3.6	9,000	1.3

Compiled from Canadian Labour Gazette.

The sharp increase in the number of Canadian workers on strike in Sept. and Oct. 1945 resulted largely from disputes in the automobile industry. (See also LABOUR UNIONS; NATIONAL LABOR RELATIONS BOARD; UNITED STATES; WAR LABOR BOARD, NATIONAL.)

(D. D. L.)

**Stritch, Samuel Alphonsus** (1887- ), cardinal archbishop of Chicago, was born at Nashville, Tenn., on Aug. 17. He was ordained in Rome, May 21, 1910, and at the age of 30 was chancellor of the diocese of Nashville. He was named bishop of Toledo in 1921, being the youngest member of the American hierarchy. He was appointed archbishop of Milwaukee in 1930, and succeeded Cardinal George Mundelein as head of the archdiocese of Chicago in 1939.

Archbishop Stritch early recognized the need of helping the innocent victims of World War II in the ravaged lands of Europe and Asia. As treasurer of the Bishops' War Emergency and Relief committee, he supervised the distribution of large sums raised by U.S. Catholics.

Under his direction the charity program in the archdiocese was vastly expanded. The Sheil School of Social Studies opened in 1943, and measures taken for the training of priests in social work evidenced his interest and awareness of the importance of Catholic action in that particular field. He reorganized the Archdiocesan Council of Catholic Women and took measures to cope with the war-accentuated dangers to Christian family life. He was elected chairman of the administrative board of the National Catholic Welfare conference, Nov. 1945, having served terms as vice chairman and treasurer.

On Dec. 23, 1945, it was announced that Archbishop Stritch was nominated to the Sacred College of Cardinals, along with 31 others. He was created and proclaimed cardinal at consistory, Feb. 18, 1946.

**Strontium.** War demand for strontium passed its peak in 1943, and the United States output of celestite decreased from 7,566 short tons in 1943 to 3,005 tons in 1944. Imports dropped from 16,881 tons in 1943 to 5,793 tons in 1944, and consumption from 13,387 tons to about 6,000 tons. (G. A. Ro.)

**Submarines:** see NAVIES OF THE WORLD; SUBMARINE WARFARE.

**Submarine Warfare.\*** The capitulation of Germany and Japan in 1945 was in large measure the result of two submarine campaigns: First, the failure of the U-boats, in spite of new techniques and renewed vigour; second, the cumulative successes of United States submarines in throttling Japanese loot-lines. The democratic world ended this long and debilitating struggle greatly in debt to the efficacious anti-submarine measures employed by the Allies, and to the aggressive, deadly work of United States submarines.

The end of this most devastating of wars at last brought a rift in the fog of censorship; many hitherto concealed facts were thrust into the glare of publicity and previously hidden items concerning the work of submarines were finally revealed. Hence this article will occasionally cut back to earlier years to bring into focus certain features of the war beneath the sea that have previously been withheld.

**The U-Boat Campaign.**—In 1942 and 1943 the heavy toll of the U-boat threatened to snap the tenuous Lend-Lease lifeline to Britain and the U.S.S.R. Superhuman efforts were re-

\*All assertions or opinions contained in this article are the private ones of the writer and are not to be construed as official or reflecting the views of the U.S. navy department or of the naval service at large.

quired to offset its depredations, and industry, science and naval skill united to encompass its defeat. This collaboration bore ripe fruit in 1944, when sinkings by U-boats were reduced beyond the danger point, and in 1945, despite the fact that, with the advent of the *schmökel* (an underwater breathing device for submarines), U-boat warfare flared into renewed activity, its effectiveness was still further reduced.

In Jan. 1945, total Allied merchant losses were somewhat less than 100,000 gross tons. With the advent of better weather, activity increased, especially in British home waters and on the Murmansk route. Berlin claimed huge successes for its submarines newly equipped with *schmökels*, and for its midge U-boats, asserting the latter had even attacked convoys in the Thames estuary. Total February losses to Allied cargo bottoms totalled about 110,000 tons. Spring witnessed U-boat activity around Britain and the arctic route to Russia—also sporadic attacks off Iceland, Halifax, Gibraltar, Capetown and in the Indian ocean. March merchant losses were approximately 116,000 gross tons from all causes. In April it was ascertained that the islet of Heligoland was sheltering large numbers of U-boats, readying them for a major offensive; this bastion was heavily bombed. Convoys returning from the Barents sea were heavily attacked in a gale by a combined force of U-boats and Norway-based aircraft, but losses were few and the attackers took as much damage as their prey. April losses, however, were the highest after Aug. 1944—126,000 gross tons of Allied merchant shipping; while mostly in British waters, there was a renewal of activity off the east coast of the U.S., and the work of midge U-boats off Belgium was also partly responsible.

While the German armies were rapidly disintegrating in April and May, the U-boats, with morale unimpaired, were slowly recovering their former effectiveness. A steady rate of increase in sinkings was manifested throughout the year and boded no good for the Allies if permitted to continue. In early May a wolf pack attacked a coastwise convoy off the coast of Rhode Island, sinking a large collier, and only two days before the German surrender the U.S. destroyer "Frederick C. Davis" fell victim to U-boat attack. Such growing losses were, however, brought to a timely end by the complete collapse of the nazis. Admiral Doenitz, who succeeded Hitler in control of the government, broadcast to his U-boats on May 4, 1945, orders to cease hostilities and start home. This was superseded by Allied instructions for German submarines to surface, radio their positions, hoist the black surrender flag and await orders.

It was believed about 100 U-boats were then still at large. By late May, 70 of these were safe in British ports, 6 in the United States, and 10 to 12 still at sea. Large numbers were taken in German and Norwegian ports, or were discovered to be scuttled there; 40 were captured under construction or repair at Bremen. By late August only two U-boats remained unaccounted for and these were presumed to be sunk. In the final stages of war Germany had about 450 submarines (excluding midges) but only about one-third of these, largely because of Allied bombing attacks, were operational.

The convoy system again proved its worth. Only one merchantman out of each 1,000 U.S. ships sailing in convoy was lost to U-boats. No similar figures on British losses were available but, due to lack of sufficient escorts, they were probably considerably higher in the early days of the war. At one time 7 escort carriers and 324 destroyers and destroyer escorts of the U.S. navy alone were used in escorting or in indirect protection of the valuable cargo fleets.

In spite of these favourable statistics, the loss of merchant bottoms to U-boats was appalling. At least 440 U.S. ships, of 2,740,000 gross tons, went down under submarine attack; other sources (aircraft, mines, perils of the sea) boosted the U.S. total

to 538 ships of 3,310,000 gross tons; 5,519 U.S. merchant seamen gave their lives. Great Britain lost 2,570 merchant ships aggregating 11,380,000 gross tons, while more than 30,000 British mariners forfeited their lives. Total shipping losses of Allies and neutrals during the entire war amounted to 4,770 cargo carriers of 21,140,000 gross tons—a figure equal to Britain's total prewar merchant fleet!

The battle of the Atlantic had been waged furiously over a 5½-year period. The U-boat was a menace to the bitter end, and at the very last had recovered enough strength to force the tightening-up of the convoy system to an extent unknown after 1943. After the war once again merchant ships could ply the seas in safety except for danger of unswept mines. But the toll of the U-boat had been depressingly heavy and at one time the Allied shipping situation was extremely precarious.

**U.S. Submarines in the Pacific.**—Relentlessly and in increasing numbers the U.S. submarine force continued its deadly operations against the life lines of the tottering Japanese empire. Until the surrender of Japan secrecy concerning this silent service prevailed and the public had to be content with occasional colourless, routine announcements of the "bags" of returning, unidentified boats. These totalled 399 ships sunk during the year 1945, almost 15% of which were naval craft. Losses to submarines were reported by months as follows:

January . . .	72	March . . .	38	May . . . . .	30	July . . . . .	21
February . . .	66	April . . . . .	15	June . . . . .	25	August . . . .	132

It will be noted that, except for August, there was a gradual monthly reduction in sinkings, undoubtedly due to the increasing scarcity of targets as Nipponese ships were being wiped from the high seas and forced into waters ever closer to home. In April, Vice-Admiral Charles A. Lockwood, U.S.N., commander of submarines in the Pacific, publicly deplored the poor hunting and stated that "advances of our air, ground and surface forces are depriving submarines of areas formerly rich in targets." In spite of new bases relatively close to their operating areas, the effectiveness of the undersea boats was falling off purely because of their own previous ability and audacity.

Frequently the routine reports were lightened by inclusion of large combatant ships or of fat, valuable tankers. These were prime targets and the rate at which tankers were destroyed is indicated by the fact that at war's end Japan had only 60,000 tons not under repair left afloat. The construction rate of merchant bottoms was also, thanks to the depredations of U.S. bombers, down to almost nothing; replacement was out of the question. One large carrier, three escort carriers, three light cruisers and numerous destroyers were reported victims of submarine attack. The sinking of the carrier "Chuyo" (22,500 tons), details of which were later released, was particularly notable. The "Sailfish" (formerly the ill-fated "Squalus," raised from a peacetime grave) was battling a typhoon on the surface when its radar showed the proximity of many vessels. Almost rammed by a Japanese destroyer, it sighted the "Chuyo" close aboard just before diving. A hurried attack was conducted and two torpedoes were heard to strike home. The "Sailfish" then rode out a half-hour counterattack by depth charges but when things quieted down she again surfaced. Circling in the murky area the "Chuyo" was discovered disabled and, at long range, two more torpedoes found their target. A hail of fire descended on the "Sailfish" but, ignoring the misplaced salvos, she sailed resolutely into close quarters and, with another two torpedoes, delivered the *coup de grace*.

In May, Japan protested via diplomatic channels the sinking of the relief ship "Awa Maru" by a U.S. submarine, later identified as the "Queenfish," with a loss of about 1,000 including many Allied prisoners. In July, after thorough investigation, the United States assumed responsibility and informed Japan that

disciplinary action was being taken. It developed that the "Awa Maru" was proceeding at night in a fog and that, although proper lights were shown, recognition was impossible. The attack was made by "means other than visual" (radar or sonar), which indicated that intent was lacking.

By early summer 1945, 240 U.S. submarines were in action and most of these, in relays, were pitted against the remaining enemy. Their area of operations contracted as rapidly as did their targets. As early as April, Fleet Admiral C. W. Nimitz, U.S.N., commander in chief of the Pacific fleet, reported that submarines were working freely in the South China sea, cutting the vital lifeline from Japan to Indonesia. This was verified by Radio Tokyo, which agreed that the submarine blockade of Japan was particularly effective, the food shortage having reached "catastrophic proportions." In July, Japanese sources again admitted that U.S. submarines were boldly operating in force in the sacrosanct waters of the sea of Japan, interrupting the continuous stream of valuable light traffic with mainland ports. Vice-Admiral Lockwood, in confirmation, told an amazing tale of "one of the most dangerous deeds of the war." Eight submarines, working in conjunction, entered these perilous waters with but little navigational data and succeeded in sinking at least 100,000 tons. Although impeded by destroyer attacks and the ubiquitous fishing vessels, all contrived after hair-raising experiences to make good their escapes. Most of their 50 victims were small, but they were essential to the maintenance of the home islands. The net was closing. The days of the Greater East Asia Sphere were numbered. Submarines were still playing a stellar role in the debacle.

It will be recalled (above) that the month of Aug. 1945 showed an increase in Japanese shipping losses to 132 vessels. This was due to two reasons: first, the 50 ships garnered in the invasion of the sea of Japan; second, the clean-up of all hitherto unreported losses by submarines returning to their bases at war's end.

The phenomenal success of U.S. submarines may be partially attributed to two previously unknown factors: first, the breaking of Japan's supersecret code before the war, of which it remained ignorant until the end; second, the formation in China of an underground, the Sino-American Co-operative Organization (S.A.C.O.) under direction of Rear Admiral M. E. Miles, U.S.N., made it possible to obtain detailed information about Japanese ship movements originating in China. These, of course, were but auxiliary aids. Numbers, training, superior material and *esprit de corps* remained the deciding factors.

At war's end Japan admitted having lost more than 2,000 merchantmen, aggregating 7,600,000 gross tons—more than the total prewar Japanese merchant marine. They had remaining 1,200,000 gross tons, of which only 720,000 tons were usable. According to navy department figures, U.S. submarines sank more than 5,000,000 tons and damaged another 2,500,000. Fleet Admiral E. J. King, U.S.N., chief of operations, gives the submarine force credit for 63% of all Japanese ship losses—a remarkably high figure.

The official Japanese compilation of combatant ship losses is no less interesting. U.S. submarines again polled a high score—but most astoundingly they were credited with 23 Nipponese submarines whereas they had modestly claimed only 2. The table follows:

Japanese Naval Losses

Type	Original strength	Lost	Sunk by submarines
Battleships . . . . .	12	11	1
Large Carriers . . . . .	21	15	4
Escort Carriers . . . . .	5	5	4
Cruisers . . . . .	43	38	12
Destroyers . . . . .	177	134	43
Submarines . . . . .	193	131	23

In commendation of the submarines' work Fleet Admiral King remarked:

They operated aggressively against enemy combat ships and commerce. No waters of the Pacific were too remote . . . and their patrols carried them to the interior lines of Japanese sea communication, where they littered the bottom of the ocean with the sunken wrecks of a large part of Japan's once great merchant fleet, as well as many naval vessels. Their contribution to the success of our advance in the Pacific is noteworthy.

**Japan's Submarine Effort.**—Japan, with a total of about 200 submarines (excluding midgets) in operation during the war, exhibited little facility in their use. At no time were they brought into effective play against the long and vital U.S. supply lines. Their efforts were diffused and abortive; they were used to supply isolated garrisons, to transport troops to outlying bastions, and to attempt to run the blockade to German-held ports. Only a scattered few were employed in their proper role. There seemed to be in the higher echelons of their naval hierarchy no true conception of their proper employment.

In late July, shortly before war's end, the U.S. heavy cruiser "Indianapolis," while proceeding from Guam to Leyte, was sunk by an enemy submarine in about 15 minutes, with a loss of more than 800 men. Within a few days the U.S. destroyer escort "Underhill" engaged a pack of midget submarines which were stalking a convoy in Philippine waters. After sinking one midget the "Underhill" rammed a second, this time setting off the midget's torpedoes and sinking both the submarine and itself. On these occasions, at least, one has positive evidence of aggressive Japanese submarine action.

During the war's later stages Japanese naval officials emphasized the construction of midgets and one-man suicide torpedoes. Despite splendid opportunities to use these weapons of desperation at Okinawa, they accomplished but little, probably because hampered by lack of range and the multitude of off-shore picket ships. As peace was signed, all that remained of the once-vaunted Japanese submarine fleet was a handful of big I-boats and numerous untried midgets.

**British Submarines in Action.**—With the advent of 1945 there was little left for British submersibles to do in the Atlantic and Mediterranean; accordingly many were transferred to the Far Eastern Fleet where, based on Indian ocean ports, they continued their depredations, this time against Japan. Some were placed under operational control of U.S. commands. Although detailed reports were lacking, an indication of their effectiveness was apparent in the admiralty's statement that in eight months they accounted for 274 Japanese vessels of all classes.

An unusual incident occurred in March when H.M.S. "Graph," formerly a captured U-boat, after a 36-hour chase followed its quarry into port and complacently sank it there. Probably the best over-all performance was achieved by H.M.S. "Storm." During one year in the Pacific this gallant vessel sank 20 Japanese supply ships, 1 destroyer and 4 escorts, with a record of 9 victims in one day. To cap its audacious career it entered Port Owen's tortuous channel on the surface in full daylight. Opening fire before discovery, it sank two gunboats, then calmly, in a superb piece of seamanship, turned around and made its getaway. The most important kill was made by H.M.S. "Trenchant" when it sank a heavy cruiser of the "Haguro" class in the Southwest Pacific.

In July, four British two-man midget submarines cut the Singapore-Hong Kong cable, forcing the enemy to use radio which was intercepted to the Allies' advantage. Another was successful in destroying a Japanese vessel in port by means of underwater demolition charges. British submarines, as well as surface craft, were a real factor in bringing the war against Japan to a speedy termination. As they did against the axis powers, once more they performed splendidly.

Above: THE U-858, first German submarine to surrender to U.S. forces after V-E day, proceeding under escort to Cape May, N.J., where formal surrender took place on May 14, 1945

Right: TORPEDOES being taken from a submarine tender to replenish the supply of a U.S. submarine operating against Japanese shipping in 1945. Such supply services cut down the submarine's "dead" time by reducing the number of trips to rear area bases

Below, left: A TENSE MOMENT in the control room of a U.S. submarine during 1945, as the men worked on a problem while a Japanese ship dropped depth charges near by. They could only shut off their motors and hope the enemy would not find their range

Below, right: GERMAN SUBMARINES on the ways at Bremen harbour where they were captured in 1945 by the Allies. About 40 vessels were found in various stages of construction and repair

**Russia's Submarine Record.**—The capitulation of its enemies failed to lift the heavy blanket of secrecy from Russian submarine operations. As far as is known its large force of submersibles added little to eventual victory. While this was partly due to lack of opportunities, one doubts if the soviet submarine arm had yet reached sufficient maturity to be fully effective. With Russia's entry into the Japanese war much was expected of the many Red submarines supposedly based at Vladivostok. That no action materialized was probably due to the few days elapsing before Japan's surrender.

**Submarines of Other Nations.**—The few submarines belonging to other Allied nations were employed under control of either Britain or the United States and their work is included with the records of those nations. In no reported case was any of these craft engaged in unusual or spectacular exploits during 1945.

**Submarine Losses.**—*United States.*—U.S. submarines were lost at the rate of 2 per month in 1945, an increase over the 1944 rate, which was 1½ monthly. This was expected. More submarines were operating in more restricted waters, because of the paucity of targets more daring chances were taken, and one can assume that Japanese anti-submarine technique was steadily advancing.

A total of 15 U.S. submersibles, all modern 1,500-tonners, failed to return from their missions in 1945 and were accounted lost. In chronological order these were the "Harder," "Growler," "Tang," "Escolar," "Shark," "Barbel," "Albacore," "Scamp," "Swordfish," "Kete," "Trigger," "Snook," "Lagarto," "Bonefish" and "Bullhead." Thus the total submarine losses of the United States were brought to 49 for the entire war. Compared with the huge percentage of loss to both the German and Japanese flotillas this is an outstanding record. But when one considers that fewer than 250 U.S. submarines were employed throughout the war the percentage of loss (about 20%) is unquestionably higher than for any other class of U.S. combatant vessel.

Of those lost in 1945 two had achieved remarkable records. The "Harder" so distinguished itself that its skipper won the distinguished service cross and four navy crosses, while the ship itself received the presidential unit citation. The "Trigger" also held the latter honour for "an exceptionally notable record of severe damage inflicted on hostile shipping."

With the release of Americans from Japanese prisons, survivors related the fate of six submarines previously lost. The "Tang" was sunk off Formosa in Oct. 1944, after a record of 100,000 tons of enemy shipping. Struck by a mine, or by its own circling torpedo, it went down in 30 fathoms; 18 men managed to escape, some using the Momsen lung, but only nine survived the night to be rescued by enemy destroyers. The "Perch," in March 1942, was depth-charged by destroyers in the Java sea; diving in 200 ft. of water, it stuck in the bottom mud. It struggled to the surface but, damaged beyond possibility of diving again, it was scuttled to prevent capture. The entire crew was made prisoner. The "Sculpin" was sunk in a surface battle with a destroyer near Truk in Nov. 1943. The "S-44" was likewise a destroyer victim off the Kuriles in Oct. 1943. The "Grenadier" went down under the bombs of enemy planes in April 1943, near Malaya. The "Tullibee" was lost off Palau in March 1944 with a sole survivor.

**Great Britain.**—Following the German surrender the admiralty announced that 69 British submarines (excluding midgets) were lost throughout the war. Ten of these losses were made known in 1945. Of these the "Porpoise" had probably the outstanding record; it was prominent in running supplies to beleaguered Malta and had more than 35,000 tons of enemy shipping to its credit.

Details of the loss of the "Stratagem" became known from survivors.

Depth-charged in the Malacca straits in Nov. 1944, it sought refuge on the bottom but was rent asunder by explosives; eight men made good their way to the surface, to fall into enemy hands.

**Germany.**—The final report on U-boat losses was made by Fleet Admiral King in December. Based on both Nazi and Allied figures he stated that a heavy toll, 153 U-boats, was taken in 1945 alone. During the entire war 782 German submarines were lost, the nature of the fate of about 700 being known. More than 600 were sunk by Allied navies and the aircraft under their control, 60 were destroyed in port by strategic bombing and 25 more were sea victims of non-naval aircraft. Of those sunk by naval forces, 151 were credited to the United States, a few were Russian casualties, but the lion's share (464) fell prey to the royal navy. As an interesting sidelight, at least 26 U-boats were sunk by Allied submarines; only one of these is credited to U.S. submersibles as these were not active in numbers in the Atlantic. The above figures exclude midget U-boats, of which 81 were sunk or captured in the North sea alone.

A grave loss to Germany was the accidental sinking of a U-boat near Bergen, Norway, while conducting experiments with rocket launching apparatus and other new techniques. In addition to the crew, 23 foremost Nazi submarine experts went down with this craft.

It was disclosed in 1945 that in June 1944 Germany suffered the embarrassment of having one of its submersibles, the U-505, captured intact by U.S. forces off the coast of West Africa. A search group consisting of an escort carrier and several destroyer escorts attacked and damaged the U-boat, then boarded and towed it to port.

**Japan.**—The U.S. navy was extremely modest regarding Japanese submarine losses—at the beginning of Aug. 1945 it laid claim to only 13 sure kills. With the surrender of Japan, however, the truth became known and the anti-submarine effectiveness of U.S. warships was proved to be of high quality. Nipponese authorities admitted they lost 131 of their undersea fleet and had 59 left, only 50 of which were usable. Midgets are excluded in these figures, but the losses in this category were also high. Astonishingly, Allied submarines were credited with 23 of the 131 kills.

**Other Nations.**—From a final compilation of figures the admiralty stated it had proof of sinking 65 Italian submarines during the course of the war. The Greek navy announced that it sustained the loss of 4 of its small submarine force during hostilities.

**New Construction and Developments.**—*United States.*—Such new submarines as were built in U.S. shipyards in 1945 followed the pattern of the successful 1,500-ton class, with improvements as indicated by war service. Deck guns were placed forward of the conning tower and anti-aircraft armament was stepped up. There were 211 submarines built after 1939 but, since losses were fewer than expected, the building rate had been considerably decreased.

Radar was in use on submarines early in the war, but the secrecy pertaining to such devices only lately was lifted. These devices were developed for use both surface and submerged, the latter on a telescopic mast extended above the waves. Radar was also indispensable to aircraft in detecting enemy submarines and was a vital factor in conquering the U-boat.

The use of electric torpedoes by submarines was announced in 1945. Although slower than steam torpedoes they had the valuable feature of showing no wake, hence lessening the chance of evasion by the target.

**Great Britain.**—Although exact information was lacking, it seemed likely that Britain constructed only sufficient submarines to replace those lost and that these included no sensational developments. The royal navy, a pioneer in the use of radar, undoubtedly took full advantage of this scientific advance. The admiralty announced that six submarines were fitted as minelayers and that these were highly successful—despite the fact that five were lost by enemy action. Patrol-type submarines were also fitted to eject ground mines from torpedo tubes.

**Germany.**—Authoritative reports after the surrender said that 1,174 U-boats, exclusive of midgets, were constructed during the war. So great was Nazi dependence on this weapon that submarine construction usually held top priority and unlimited funds were thrown into new and radical developments. The most effective of these was the *schnörkel*, or "air mast," reported in 1944. This device permitted the U-boat to use its diesel engines for submerged propulsion, thus obviating the necessity of periodic visits to the surface for recharging batteries. In the spring of 1945 *schnörkel*-equipped U-boats appeared in numbers on the sea lanes and were more successful than expected, creating new problems for Allied anti-submarine forces. Nazi naval leaders claimed the chief advantages to be (1) avoidance of radar detection, (2) ability to remain in the best hunting areas, (3) ability to remain submerged for weeks. Living conditions were, however, admittedly terrible.

In the final stages of the war Germany, probably as an anti-invasion measure, went in heavily for midget U-boats. They were built in three types, ranging from one-man 29-footers to two-man 39-footers, carrying two torpedoes each but having very low speed. It seemed doubtful that their few successes warranted the effort.

As protection for her flotillas while under repair, the art of building submarine shelters made constant progress. The newest pens, at Bergen, had an outside roof 25 ft. thick, then an inner 11-ft. roof, both of steel-reinforced concrete. The space between was utilized as living quarters for submarine crews. Such pens were impervious to even the heaviest bombs that were used against them.

After the surrender, word of other new developments came out of Germany. First, a new type torpedo, known as a "spider," which trails behind it a length of wire over which radio impulses, sent by the firing station to direct its course, depth and speed, are received. Second, an experimental type submarine with only a small diesel engine for surface propulsion but a tremendously beefed-up storage battery that will permit submerged speeds up to 18 knots for short spurts. Although said to be successful, this type had not gone into production.

Most revolutionary of all, however, was the rumoured development of an entirely new type of propulsion—the Walther cycle engine, using hydrogen peroxide as fuel, and whose exhaust is soluble in sea water. This entirely eliminates the bulky storage batteries. Submerged speed is

said to be 25 knots for indefinite periods, with only 10 knots available on the surface. Experiments were reported successful, but further development was necessary. That the fuel is enormously expensive is one drawback, requiring that a small diesel be added for surface propulsion. Had this astounding craft been developed sooner it might have profoundly affected the course of the war.

**Japan.**—According to their own figures 126 Japanese submarines were constructed after 1941. These were of varied classes: small coastal types under 500 tons, fleet submarines of 1,000-1,600 tons, submarine cruisers up to 2,400 tons and combined cruiser-supply types of 3,000 tons. It was reported that one craft was of 5,500 tons, the largest ever built, and was capable of catapulting aircraft. At the other end of the scale small, crude submarine transports, about 290 tons, 11 knots, and able to carry 50 troops or 50 tons of cargo were constructed for army use. Such diversity of effort failed to produce any standard type with characteristics comparable to U.S. submarines.

In their dire extremity the Japanese resorted to radical measures to increase their submarine and anti-submarine effectiveness. Rubber sheeting was placed on the hulls of their subs to make them invisible to asdic detection; batteries of perforated tubes were mounted on the sheathing to absorb sonar echoes. Decoys designed to give a broad radar echo and hence divert enemy submarines from their convoys were tried out, as were also underwater noisemakers to confuse the issue. All are thought to have been ineffectual.

As might be expected, they went in heavily for midget submarines and human torpedoes. The latter usually consisted of a normal 24-in. torpedo, a pilot's compartment being inserted between the explosive head and the air flask. These had a range of only about 10 mi. and were distinctly suicide weapons; they were frequently carried on decks of submarines as additional armament. It was reported that in July 1945, the home islands had assembled 273 midgets, 203 human torpedoes and 1,499 suicide boats in anticipation of invasion.

**Submarine Tactics.**—As far as could be determined no developments in submarine tactics took place in 1945 other than the use of U.S. submarines in co-operation with "Dumbo" planes to recover downed aviators. The planes not only directed the underseas rescuers to their men but frequently gave real support by strafing and driving off interfering enemy patrol craft. More than 500 airmen were rescued by submarines during the course of the war.

The U.S. and British fleets made admirable use of submarines on scouting and reconnaissance missions. Vital information was often obtained, one instance being the sighting in April 1945, by a U.S. submarine, of a heavy Japanese task force headed to interrupt the Okinawa landings. Although unable to attain attack position, his contact report resulted in the sinking by U.S. planes of the Japanese dreadnaught "Yamato."

Submarines achieved considerable success as blockade runners. It was reported in 1945 that the 3,000-ton "Narwhal" and "Nautilus" were regularly assigned to supply Filipino guerrillas. They landed tons of cargo, technical experts and coast watchers, and brought out intelligence reports and key personnel. Many other U.S. submarines duplicated this work, both in the Philippines and other Pacific islands. One daringly landed a demolition party in the main Japanese islands, destroying a vital bridge together with a crossing train. The admiralty disclosed similar use of British submarines to land royal marine commandos at European points; in one case these succeeded in blowing up a German blockade runner in the Bordeaux roadstead.

Germany also made use of submarines as blockade runners to Japan, carrying highly technical personnel and supplies, and valuable concentrated cargoes. In 1944, 19 submarines started for the far east but 6 were lost enroute. Of the 12 that began the homeward journey 4 were lost and only 3 eventually arrived. The venture proved to be of doubtful value.

**Conclusion.**—Submarines in World War II proved beyond question their value as combatant arms of the world's navies. U-boats brought defeat dangerously close to the Allies, while the submarine weapon as wielded by the United States played a decisive role in the downfall of Japan. That submarines were expected to continue as a potent force was evident from the U.S. decision to keep 90 in active commission and 110 in reserve.

With the advent of the atomic bomb it seemed probable that the role of underseas craft would take on greatly added importance. One of the developers of the bomb, Dr. Alvin M. Weinberg, predicted submarine fleets, atomic-powered and capable of travelling at present surface speeds while submerged at 1,000 ft. He commented, "The safest place on this tortured planet, should an atomic war break out, will be deep below the surface of the ocean." (See also NAVIES OF THE WORLD; SHIPBUILDING; WORLD WAR II.) (E. E. HA.)

was 718,000 in 1945 compared with 558,000 in 1944 and an average of 808,000 in 1934-43. The acreage was restricted by the shortage of labour for thinning and harvesting. The yield was about 12 tons per acre which is almost the same as that of 1944 and the average. The total of refined sugar was expected to be 1,228,000 tons compared with 987,000 tons in 1944 and an average of 1,407,000 tons, 1934-43. The sugar content of the beets was lower than usual in 1945. The damage due to freezing in the fall was light.

Sugar cane production in 1945 was estimated by the U.S. department of agriculture at 6,668,000 tons compared with 5,700,000 tons in 1944 and an average of 5,196,500 tons 1934-43. The Louisiana crop was 5,648,000 tons compared with 4,920,000 tons in 1944 and the Florida crop 1,020,000 tons in 1945 compared with 780,000 tons in 1944. The total acreage was 281,900 compared with 273,100 a year earlier and an average of 263,900, while the yield was unusually high, 23.7 tons per acre compared with 20.9 tons in 1944 and an average of 19.6 tons 1934-43. The hurricane in Florida did only slight damage to sugar cane. Frosts did some damage in Louisiana. The output of sugar per ton of cane was 156 lb., a little less than the average of 167 lb., while the production of molasses was 48,966,000 gal. compared with an average of 33,864,000 gal. 1934-43.

Maple sugar production was the poorest of record because of the small number of trees tapped and the low yield per tree. This poor season was due to peculiar weather, first an early warm period in February and March that started the sap to running before producers were ready to harvest it and then started growth of buds and checked sap production unusually early. Total production of sugar was estimated at 251,000 lb., less than half that of 1944 and only 70% of the previous low record of 366,000 lb. in 1939. Syrup production was only 991,000 gal., 39% of 1944 production.

**Subsidies:** see AGRICULTURE.

**Sudan:** see ANGLO-EGYPTIAN SUDAN; FRENCH COLONIAL EMPIRE.

**Sugar.** Total sugar production in the United States in 1945 was about 1,900,000 tons (raw basis) compared with 1,500,000 tons in 1944. Both beet and cane sugar crops were larger than in 1944 but not sufficient to meet national requirements.

Sugar beets returned a crop of 8,638,000 short tons compared with 6,755,000 tons in 1944 and 9,644,000 tons average 1934-43. The increased production was due to increased acreage which

BAGS OF SUGAR for Dutch consumption being stacked in 1945 in a civil affairs depot in Holland—one of many such set up by the Allies to feed liberated peoples

Sugar supplies were reduced at the beginning of 1945 and were further reduced the second and third quarters of the year. Household rations were only 62.5% of 1944 levels and only about one-third of prewar years, not including sugar for canning which was 60% of 1944. Institutions received only 75% of the amount allowed in 1944. Total sugar stocks on Jan. 1, 1945, were reduced to 1,200,000 tons, the smallest since records have been available. The slightly larger U.S. crop was not sufficient to relieve the acute shortage.

World sugar production, for that part of the world accessible to the United Nations, was estimated to be about 20,400,000 tons of raw sugar or 5% less than was produced in the same territory in the previous season. The greatest reduction in the 1944-45 season was in Cuba where only 3,900,000 tons were made compared with 5,600,000 tons the previous year. This reduction was due to the severe drought and the fact that there was little two-year-old cane to be ground. This old cane yields more sugar per ton than the younger cane. All of the Cuban crop was purchased by the Commodity Credit corporation from the Cuban Sugar Stabilization institute at a minimum price of 3.1 cents per lb. with certain premiums in case the ceiling price was raised above 4.2 cents per lb. The price paid was .4 cent higher than that paid for the three previous crops but did not cause any increase of price to consumers.

Table I.—U.S. Production of Beet Sugar by States, 1945 and 1944

State	1945 short tons	1944 short tons	State	1945 short tons	1944 short tons
Colorado . . . . .	273,000	230,000	Nebraska . . . . .	88,000	68,000
California . . . . .	216,000	178,000	Utah . . . . .	59,000	55,000
Montana . . . . .	130,000	109,000	Wyoming . . . . .	51,000	40,000
Idaho . . . . .	108,000	80,000	Ohio . . . . .	32,000	17,000
Michigan . . . . .	97,000	73,000	Other states . . . . .	174,000	137,000

The sugar crop of Puerto Rico was estimated to be 950,000 tons, nearly one-third larger than in 1944, but below the average. The U.S. purchased all of the Puerto Rico crop. The sugar crop of European countries was less than in 1944. The British crop was about 15% less than in 1944. Australia's crop was about one-fifth below the prewar average. The crops of India and China were reduced. The Philippine crop was not available and the Hawaiian output below normal. A reserve of about 1,500,000 tons was discovered in Java which was expected to be available in 1946. World supplies as a whole were the smallest after the beginning of the war.

The distribution of sugar was allocated by the Combined Food board and part of the Cuban crop purchased by the U.S. was allotted to Canada, Great Britain and U.S.S.R. and liberated areas.

Table II.—U.S. Production of Cane Sugar, 1945, 1944 and 10-Yr. Average

State	1945 short tons	1944 short tons	Average 1934-43 short tons
Louisiana . . . . .	429,000	369,000	369,000
Florida . . . . .	92,000	68,000	66,000

Sugar consumption dropped to about 72 lb. per capita in 1945 compared with 89 lb. in 1944 and a prewar average of 97 lb. Civilians were restricted by rationing much more than other classes of users, the military ration being about double that of civilians. The total amount of sugar used in households, hotels, restaurants, etc., was about 25% less in 1945 than in 1944. The industrial uses were reduced, including candy and chocolates while more was allotted to ice cream and dairy products. Bottled beverages were restricted also. Sugar consumption was restricted in Europe and Britain below the U.S. level.

Incentive payments were made to growers for beets and sugar cane by price support agreements with processors to assure growers a higher return. Under the Act of 1937 payments in 1945 amounted to about \$51,000,000. Payments for sugar beets

amounted to \$3.00 per ton and for cane \$1.60 per ton. (See also BEEKEEPING; MAPLE PRODUCTS; PRICE ADMINISTRATION, OFFICE OF; SYRUP, SORGO AND CANE.)

FILMS.—*People of Hawaii* (Encyclopædia Britannica Films Inc.). (J. C. Ms.)

**Suicide Statistics.** During 1945, mortality from suicide in the general population of the United States was on about the same low level as that for 1944. This indication is provided by the experience of the millions of industrial policyholders of the Metropolitan Life Insurance company. Their records showed lower death rates from suicide in 1945 than in 1944 for each of the first four months of the year. However, for the period beginning with May 1945, the month of victory in Europe, through September (the latest month with available data), the death rate from suicide was higher than for the same period of 1944. The differences were greatest in May and in September, the first month of peace after the victory in Japan. This situation conforms with experiences found in connection with World War I, when it was observed in a number of countries that mortality from suicide was low during the period of war, but rose after hostilities were over.

There were 13,725 deaths from suicide in the U.S. during 1943 (the latest year with complete records), the death rate being 10.2 per 100,000 population. This may be compared with corresponding figures of 12.0 for 1942, 12.9 for 1941, and 14.3 for 1940. Canada, in 1944, had 730 deaths from suicide and a rate of 6.1 per 100,000; the rate for 1943 was 6.4. In England and Wales, there were reported 3,759 deaths from suicide during 1944, that is, a death rate of 8.9 per 100,000; this may be compared with a rate of 9.1 for the year 1943.

A study of the reasons given for attempted suicide (*Statistical Bulletin* of the Metropolitan Life Insurance company, Feb. 1945) using records for Detroit in 1942 and 1943, showed that among men, nearly 40% of the attempts (whether successful or not) were motivated by ill-health, about 30% by domestic difficulties but only 4% by love affairs. Among women, domestic difficulties caused about 50% of the attempts, ill-health caused about 20% and love affairs somewhat more than 10%. Of the attempts made by men, about half were successful where the motive was ill-health, about one-seventh in cases with family difficulties and about one-tenth in love affairs. The proportions of successful attempts by women were: one-quarter in cases of ill-health, one-fiftieth in cases of domestic difficulties and only one in 114 for love affairs.

Mortality from suicide is much lower among the married than among the single, widowed or divorced (U.S. bureau of the census, *Vital Statistics—Special Report*, Vol. 23, No. 7, Nov. 1945). U.S. data for 1940 show that among males, the single had a death rate 66% greater than the married, while the excess for the widowers was even greater (198%) and the divorced had the greatest excess (292%). The excesses in mortality for women followed the same pattern, but at a lower level.

Single women had a mortality 38% in excess of the married, widows 63% and divorced women 261%.

In 1943, white males in the U.S. had a death rate from suicide of 16.4 per 100,000 population, white females had a rate of 5.9, Negro males 4.8 and Negro females 1.3. There was only one suicide under ten years of age—a white male—but there were 58 suicides of children 10 to 14 years old. The suicide death rate rose continuously with advance in age to a level of 31.3 per 100,000 at ages 75 and over.

**Sulphur.** Mine production of crude sulphur in the United States increased to 3,604,337 short tons in 1944, after having dropped from 3,875,968 tons in 1942 to 2,843,440 tons in 1943. Shipments were 3,308,306 tons in 1943 and 3,941,373 tons in 1944, the excess over production cutting stocks to 3,920,000 tons. In the first three quarters of 1945 both production and shipments continued to increase, the former to 3,079,151 tons and the latter to 3,558,341 tons, increases of 18% and 19% respectively over the same period of 1944.

In Canada the total output, including elemental sulphur and the sulphur content of pyrite concentrates and of sulphuric acid made from them, declined from 257,515 short tons in 1943 to 248,088 tons in 1944. The preliminary estimate of output in 1945 showed a further decline to 245,859 tons.

Production in Sicily, the world's second largest producer in normal conditions, was badly disorganized by World War II. The usual prewar output of 350,000 to 500,000 short tons dropped steadily during the war, to only 10,385 tons in the fiscal year ending July 31, 1944.

World production was estimated by the U.S. bureau of mines at 4,480,000 short tons in 1942, 3,360,000 tons in 1943 and 3,920,000 tons in 1944. (G. A. Ro.)

**Sumatra:** see NETHERLANDS COLONIAL EMPIRE; NETHERLANDS INDIES.

**Sunday Schools.** The World's Sunday School association is a federation of national and international councils of religious education in 52 countries. Its president in 1945 was Sir Harold Mackintosh, one of its vice-presidents Madame Chiang Kai-shek and the chairmen of its administrative committees were J. Arthur Rank in Great Britain and Judge Lewis L. Fawcett in North America. A sponsoring committee for its postwar program of reconstruction was headed by Major Edward V. Rickenbacker.

On Dec. 14 the association issued an appeal endorsed by President Truman, King George VI, President Chiang Kai-shek, Queen Wilhelmina, King Christian X, King Gustav V and King Haakon VII which declared that a just and enduring peace "must rest upon the solid foundations of strong moral and spiritual character. . . . Only if the Church fulfills its teaching mission will future generations be blessed by the peace for which this generation is planning and praying."

The Sunday School board of the Church of Christ in Japan asked for information, literature and religious films, "anything that will show the Japanese children that America is a good friend and neighbour to them, who have been taught in these years by the militarists and nationalists that the Americans were demonic enemies." Active steps were taken toward the rehabilitation of Sunday school work in China and Korea; a Christian Youth movement was organized in South Africa; and a Congress of the Latin American Union of Evangelical Youth, with representation from nine countries, was planned for Havana in Aug. 1946.

The International Council of Religious Education, representing 40 Protestant denominations of the U.S. and Canada, under the presidency of Harold Stassen, authorized a comprehensive revision of the English Bible upon which a committee of scholars had been working from 1937. The revised standard version of the New Testament was scheduled for publication on Feb. 11, 1946. The revision of the Old Testament was to be published in 1949. (See also CHURCH MEMBERSHIP.)

(L. A. We.)

**Superphosphates.** Increased demand for fertilizers raised superphosphate production in

the United States from 6,292,955 short tons in 1943 to 6,692,368 tons in 1944. Sales of phosphate rock to producers of superphosphates in 1944 were 4,123,027 tons, or 69% of the total sales. (G. A. Ro.)

## Supreme Court of the United States.

The cases decided in 1945 were predominantly labour, taxes and business regulation. It was a term characterized by vigorous dissents and numerous five-to-four decisions. The split in the higher court indicated the continuing digressions from the beaten path of conservatism.

The resignation of Justice Owen D. Roberts gave the court a more liberal term. Justice Roberts, long aligned with the majority members of the court, became during the last five years of his 15-year tenure an "extreme dissenter," having written dissenting opinions to some 166 cases. These were in the main based on his view that the majority justices were too liberal in their interpretation of statutory language. His philosophy may be summarized from one of his last dissenting opinions in the Associated Press case (*see below*) in which he said, "For myself, I prefer to entrust 'regulatory legislation of commerce' to the elected representatives of the public instead of freezing in the decrees of courts less responsible to the public will."

To succeed Justice Roberts, the president appointed the Hon. Harold H. Burton, Republican senator from Ohio. His record in congress, on the whole, favoured a liberal approach toward the continuation of government controls, and at the same time, restricting certain activities of the labour unions (as in his co-authorship of the Burton, Hatch and Ball labour bill).

Justice Robert Jackson, appointed by the president to prosecute the nazi war criminals on behalf of the United States government, took a leave of absence from the bench.

Number of Opinions, U.S. Supreme Court, 1944-45 Term

	Favourable to government	Against government
Federal criminal cases not including those arising out of war . . .	3	6
Federal war cases . . .	4	2
Federal public contracts cases . . .	3	1
Federal miscellaneous cases . . .	5	5
State tax cases . . .	5	2
State regulation cases . . .	5	3
State criminal cases . . .	4	3

President Truman and members of the U.S. supreme court in 1945, during the latter's annual call on the president. Left to right, bottom row: Chief Justice Harlan F. Stone; President Truman; Associate Justices Hugo Black and Felix Frankfurter. Middle row: Associate Justices Stanley F. Reed, Harold H. Burton, Wiley Rutledge and Frank Murphy. Top row: Associate Justice William O. Douglas; Charles Elmore Cropley, clerk; J. H. McGrath, solicitor general; Thomas E. Waggaman, marshal; Attorney General Tom C. Clark. Associate Justice Robert H. Jackson was absent

There was a total of 119 cases decided in the 1944-45 term, 77 favourable to the government and 42 against the government. Federal regulation cases led the list, 20 for the government and 7 against; federal taxes were second, with 17 for the government and 8 against. Labour, a close third, was 11 for the government and 5 against. Other cases are listed in the table.

Outstanding cases of the term are briefly considered below:

**Business Regulation.**—Few organizations can any longer claim immunity from the antitrust laws. The Associated Press was found to have violated the antitrust law by provisions of its bylaws which denied membership to its applicants competing in the same "field" in a city with existing members. The restraints on trade in news by the Associated Press were no less than those considered within the ban of the Sherman act with reference to combinations to restrain trade outlets in the sale of tiles, enamelled iron ware, lumber, women's clothing or motion pictures. (*Associated Press v. U.S.*)

Motion-picture theatre operators were found guilty of violating the antitrust law in connection with the sale of film rights. The court sustained the decree enjoining the exhibitor from making franchises with certain distributors for the purpose of maintaining their theatre monopolies and preventing independent theatres from competing with them. Since congress had declared that the rule of trade and commerce should be competition, not combination, the court could not refuse to sustain the decree merely because "by some other measure of the public good the result may not seem desirable." (*U.S. v. Crescent Amusement Co.*)

Nor would the court sanction the violation of the antitrust law on the pretext of complying with fair-trade laws. Under the guise of these laws, retail dealers in alcoholic beverages agreed to patronize only those purchasers who made price maintenance contracts and supplied products solely to the retailers observing such contracts. Both the federal and state fair-trade acts expressly provide that they shall not apply to price maintenance contracts among producers, wholesalers and competitors. (*U.S. v. Frankfort Distilleries.*)

Major companies in the glass container industry violated the Sherman Antitrust act by restricting their licences to manufacture and use patents controlling glassmaking machinery. The manufacturers were required to license under their patents all applicants on reasonable terms at uniform reasonable royalties and existing licensees were required to remain as such on the reasonable rental and royalty basis as prescribed by the district court or repudiate their leases and their rights against their licensors' receiver appointed by the district court. (*Hartford-Empire Co. v. U.S.*)

The supreme court confirmed the authority of the Federal Trade commission to prohibit basing point pricing systems under which delivered prices of products were based upon an artificial rather than actual-place-of-shipment basis. Under this method favoured customers were permitted to obtain products at old low prices after general price increases had become effective. Since allowances were not due to the differences in cost of manufacture, sale or delivery, they were discriminatory as violations of Robinson-Patman act. (*Corn Products Refining Co. v. FTC; FTC v. A. E. Staley Mfg. Co.*)

The court approved the power exercised by the Federal Power commission in ordering reduction in natural gas rates to determine the company's operating expenses on the basis of its actual costs incurred in producing gas piped by it. There was no abuse of discretion by the commission in refusing to make allocation of costs between the business subject to regulation and that not subject thereto. (*Panhandle Eastern Pipe Line Co. v. Federal Power Commission.*)

**Civil Rights.**—The supreme court ruled that Missouri denied due process

of law to a defendant accused when it failed to advise him as to his right to counsel on trial for a capital offense. The court pointed out that "one who was not protected by counsel, who did not waive his right to counsel and who was ignorant of his right to demand counsel" is one of the class which the law protects. The point was more significant since punishments for murder in the first degree, second degree or manslaughter are different, and the differences are governed by rules of construction meaningful to those trained in the law, but unknown to the average layman. (*Tompkins v. Missouri.*)

It affirmed the death penalty imposed for violation of the federal kidnapping act even though the injuries inflicted upon the kidnapped person were not permanent and had healed at the time sentence was imposed. The act that authorizes the death sentence when recommended by a jury "provided that the death sentence shall not be imposed by the court if prior to its imposition the kidnapped person has been liberated unharmed." (*Robinson v. U.S.*)

It set aside the deportation of Harry Bridges, west coast labour leader, on the ground that there was not sufficient evidence to show that he was "affiliated" with an organization advocating the overthrow of the United States government. By "affiliation," the court explained, is meant "assisting in the enterprises of an organization, securing members for it, taking part in meetings organized and directed by or on behalf of the organization." "The associations which Harry Bridges had with various communist groups seem to indicate no more than co-operative measures to attain objectives which were wholly legitimate." (*Bridges v. Nixon.*)

State police officers who, in connection with the arrest of a Negro, beat the prisoner to death, were held to be subject to prosecution under the federal civil rights law. (That statute makes it a crime for a person under authority of law to deprive a person of the rights, privileges or immunities secured to him by the constitution.) In making the arrest, the court concluded, the officers were acting under the authority of law, since it was their duty under Georgia law to make the arrest. (*Saens v. U.S.*)

The court refused to invalidate a Texas court's conviction of a Negro for murder solely because only one Negro appeared on a grand jury panel of 16. There was no evidence of an attempt, reasoned the court, to discriminate against the Negro, nor did the fact that the number of Negroes on the panel was not entirely proportionate to the eligible white persons in itself show any discrimination. (*Akins v. Texas.*)

The New York civil rights law which provides that no labour organization may deny a person membership because of race, colour or creed was deemed a proper exercise of the states' police power. A federal postal employees association was not denied due process and equal protection of the law when it was included among the labour organizations subject to the law against discrimination. The 14th amendment was adopted to prevent state legislation designed to perpetuate discrimination on the basis of race or colour. (*Railway Mail Association v. Corsi.*)

**Labour.**—Unions were held liable under the antitrust laws when they combined with nonlabour groups to restrain interstate trade. (*Allen-Bradley Co. v. Local Brotherhood of Electrical Workers.*) Such restraints when limited to labour groups, however, still enjoy absolute immunity from prosecution regardless of the extent of the monopoly and the degree of urging their "conspiracy" effects. (*Hunt v. Crumbock.*)

Labour was vastly strengthened when states which sought to curb the activities of union organizers were rebuffed on the ground that such curbs constituted restraints of free speech. (*Thomas v. Collins; Hill v. Watson.*)

In the absence of special circumstances, company rules barring solicitation, distribution of literature and wearing of union insignia on company premises (on the employees' own time) were outlawed on the ground that such restrictions constitute unlawful interference with employees' statutory rights. (*Republic Aviation Corp. v. NLRB; NLRB v. Le Tournau Co. of Georgia.*) Company rules against employee activity on their own time on company property were likewise barred where their effect was to restrain union activity. The National Labor Relations board's cease and desist order was held applicable to "successors and assigns" of a company as well as to the company itself. (*Regal Knitwear Co. v. NLRB.*)

The employer of approximately 5,000 workers, having offered to increase wages without conferring with the bargaining agency representing some 30 bushmen, was found to have violated the Wagner act since its action constituted an attempt to undermine the union. (*May Department Store Co. v. NLRB.*)

In the realm of wage and hour regulation, employees enjoyed an almost perfect score in the application of the law and the computation of overtime. The United States supreme court extended the application of the Fair Labor Standards act to pieceworkers (*U.S. v. Rosenwasser*), building service employees (*Borden v. Borella*), and to warehouse workers of a retail chain store system, even though the employees of the local unit might be exempt (*A. H. Phillips v. Walling*); and it sustained the wage-hour administrator's power to ban homework in an industry in order to effectuate a wage order. (*Gemsco Inc. v. Walling; Maretzo v. Walling; Guiseppe v. Walling.*)

The court broadened the concept of time regarded as having been worked by including, in certain instances, travel time. (*Jewel Ridge Coal Corp. v. Local No. 6167 U.M.W.*) Nor would it permit an employee to be bound by a waiver of his claim to unpaid overtime where no bona fide dispute existed as to liability, but it denied interest on the collectible amount. (*Brooklyn Savings Bank v. O'Neil; Dize v. Maddrix; Arsenal Building Corp. v. Greenberg.*)

The glimmer of hope, entertained by employers, that overtime compensation provisions of the wage-hour law do not prohibit contracts between employees and employer for all-inclusive and regular and weekly salaries, practically vanished in 1945. As a result of two decisions, the possibility of evolving such a plan for computing overtime was severely diminished. The two such plans that reached the supreme court were invalidated. In the first, hourly rates established by contract for overtime purposes did not reflect the amount employees actually received. (*Walling v. Youngerman-Reynolds Hardware Company, Inc.*) In the second, rates fixed by contract with a union failed to consider incentive bonuses, earnings resulting from piecework or higher rates paid for non-incentive work. Extra wages may not be segregated into regular and

overtime portions to create artificial compliance. (*Walling v. Harnisch-Jeger Corp.*) (See also LAW.)

**Members of the Court.**—The United States supreme court was composed in 1945 of the following members (dates indicate year appointment was confirmed by the senate): chief justice, Harlan F. Stone (associate justice 1925, chief justice 1941); associate justices Hugo L. Black (1937), Stanley F. Reed (1938), Felix Frankfurter (1939), William O. Douglas (1939), Frank Murphy (1940), Robert H. Jackson (1941) (on leave of absence 1945), Wiley B. Rutledge (1943) and Harold H. Burton (1945).

**Surgery.** The treatment of burns occupied the attention of surgeons and investigators in 1945 because of the high mortality rate which followed extensive burns. As originally shown by F. A. Collier and his colleagues in an experimental study, whole blood is essential to maintain life in the severely burned animals, although plasma and saline solutions will save those less severely burned. The validity of these experimental observations was substantiated in 1945 by clinical observations in humans. W. E. Abbott and his co-workers showed that, in the severely burned patient, transfusion of blood is necessary to maintain life and that in addition to the administration of whole blood intravenously, the patient should be given salt solution by mouth. E. I. Evans and I. A. Bigger also showed that additional blood is necessary in the severely burned individual. In addition to burns, the importance of whole blood became appreciated in the treatment of the severely injured. Shortly after the outbreak of World War II it was felt that plasma or other blood substitutes might replace blood in the severely injured casualties. It was soon learned that nothing could take the place of blood except as a temporary substitute. Champ Lyons showed that even the chronically ill patient, who because of prolonged infection or other debilitating disease, is in a state of chronic shock, requires whole blood. Many of these patients show normal values for red blood cells and haemoglobin and yet they are actually anaemic because of the marked decrease in the amount of the fluid constituents of the blood, making the cells of the blood appear to be normal. Only by the administration of large amounts of blood can these patients be prepared for major surgical procedures.

In the field of vascular surgery, many advances were made in 1945. In Banti's disease in which the blood pressure within the portal vein is increased, changes occur in the spleen, which give rise to a collection of fluid within the peritoneal cavity. By making an anastomosis between the splenic and the renal veins as suggested by A. O. Whipple the symptoms can be relieved. Of great importance, also, is the relief of symptoms in children who have congenital heart conditions, resulting in cyanosis. The shunting around of these anomalies by anastomosing the pulmonary and subclavian arteries was successfully performed by A. Blalock. R. E. Gross and Blalock also successfully removed an obstruction of the aorta, known as coarctation of the aorta, and reanastomosed the ends of this large vessel.

In order to decrease the acidity in patients with stomach ulcer in whom the acidity plays a very definite causative role, L. R. Dragstedt suggested the division of the vagus nerves above the diaphragm. This is undoubtedly an adjunct in many cases in which stomach ulcers are resistant to other types of treatment, and particularly in the highly strung individual.

In 1945, a great deal was done on the use of substances to control haemorrhage, particularly when an uncontrollable ooze results. Although fibrin was used previously, especially when combined with thrombin which causes clotting of the blood, two other substances were suggested. One is an oxidized cotton or cellulose, which when combined with fibrin acts as a blood controlling tampon. Because it is oxidized it can be left in the body and will be absorbed. V. K. Frantz and her co-workers showed that oxidized cellulose is an excellent haemostatic agent and yet can be left in place. In addition to fibrin foam and oxidized cellulose, an absorbable gelatin sponge when combined

with thrombin is an excellent agent for controlling bleeding. C. Pilcher and W. F. Meacham demonstrated that this substance could be used on the surface of the brain to control bleeding and could be left in place without producing irritation. A new material for dressing of wounds was suggested by N. Owens. Surgical rayon is ideal for immediate contact with burns, granulating areas and surface wounds. It decreases the amount of pain when dressings are changed and permits adequate drainage. It is much preferred to ordinary gauze. A new antibacterial agent, streptomycin, was being produced in sufficient quantities to be used clinically. Its great value was in the control of certain infections which did not respond to the sulfonamides and penicillin, and it was of particular value in the control of certain urinary infections which are resistant to most other types of treatment. Streptomycin was used very successfully in paraplegics who have had spinal injuries and are paralyzed below the point of injury. These individuals are particularly susceptible to kidney infections which resist treatment. Streptomycin controlled the infection satisfactorily. (See also ANAESTHESIA; MEDICINE.)

**Surinam** (DUTCH GUIANA). A Netherlands colony in north-eastern South America between British Guiana and French Guiana. Area, 54,291 sq.mi. Pop., Jan. 1, 1944, 189,484, including approximately 1,000 Dutch, 1,000 other Europeans and Americans, 50,000 British Indians, 35,000 Javanese, 2,400 Chinese, 19,000 bush Negroes and 2,600 aboriginal Indians. The chief cities are the capital, Paramaribo (pop., 60,723), Nieuw Nickerie (5,000), Coronie (4,500), Moengo (1,400). The governor is appointed by the queen but a measure of self-government had existed from 1866. Dutch is the official language. Governor (1945): Dr. J. C. Brons.

**History.**—The colony's chief problems in 1945 were those of reconversion from the World War II period. It was announced late in the year that a committee headed by a former governor would arrive in Surinam early in 1946 to study financial and economic conditions for the Netherlands government; one of the chief problems to be discussed was that of a possible adjustment in value between the Surinam and Curaçao guilders. The colonial government late in 1945 studied plans for the expenditure of 15,000,000 florins for public works over a five-year period.

**Education and Religion.**—In 1943 there were 43 public schools with 5,583 enrolled, and 72 private (mostly denominational) schools with 12,666 enrolled.

All religious sects are free. Church memberships were reported Jan. 1, 1944, as follows: Mohammedan, 43,861; Hindu, 36,255; Moravian Brethren, 34,869; Roman Catholic, 32,539; Reformed and Lutheran, 13,578.

**Finance.**—The monetary unit is the florin (or guilder), valued in 1942 at approx. 53 cents U.S. The position of the florin tended to be weakened in mid-1945 because of devaluation in the Netherlands with respect to the pound sterling. Prior to

1941 the home government had to subsidize the colony and hence reserved the right to review its budget; during and after that year the budget had been balanced. Estimated revenues for 1945 were 8,171,000 florins (1944: 11,619,000) and expenditures were 8,166,844 florins (1944: 11,602,000). Actual revenues in the first half of 1945 were 4,656,929 florins, the chief items of which were import duties and income taxes. The debt in 1941 was 927,500 florins. Notes in circulation Jan. 1, 1945, totalled 11,735,000 florins. The reserve of gold coin and bullion June 30, 1945, was 6,622,395 florins. A serious shortage of dollar exchange existed early in 1945.

**Trade.**—Exports and imports for 1944 were valued at 6,880,780 and 15,645,344 florins, respectively; corresponding figures for 1943 were 14,173,267 and 22,268,102 florins. Exports of bauxite (the most important product) for the first 11 months of 1945 were 625,000 metric tons; the future of bauxite exports was uncertain because of the end of World War II; large stock piles existed at Paramaribo. Wartime trade had shifted largely to the U.S. because of the disruption of the previously normal trade with the Netherlands.

**Communication.**—Steamship connections exist with the United States, Venezuela and the West Indies, although sailings continued irregular through most of 1945. Air service is supplied by Pan American Airways and K.L.M. (Royal Dutch Air Lines). Pan American Airways curtailed certain of its services in 1945 but K.L.M. was understood to be planning a considerable postwar expansion, partly based on Surinam. Approximately 107 mi. of railway exist, although service on a portion of the lines was abandoned in 1945 because it was not self-sustaining. The colony has 211 mi. of improved roads. The 1945 road budget was 320,000 florins. Communication in the interior depends largely on the rivers; dredging projects in the lower reaches of the rivers were being planned or considered for the Surinam and other streams in 1945.

**Production.**—Aside from the mining of bauxite and gold, agricultural and forest products are the chief items in Surinam's economy. The cultivated area is estimated at only 65,000 ac. Bauxite production in the first quarter of 1945 was 131,696 metric tons, of which 128,257 tons were exported. Gold production in the first half of 1945 was 83,561 grams as against 69,304 grams for the same period of 1944 and 177,943 grams for all of 1944. Sugar and rice production were both expected to increase in 1945; production of paddy rice for 1945 was estimated at 35,200,000 kg. and the total crop at 40,905,000 kg. Paddy rice production in 1944 totalled 34,580,000 kg. Sugar production in the first half of 1945 was 1,932 metric tons (all of 1944: 3,567 metric tons). Balata production in the first ten months of 1945 was 275,531 lb. as against 325,150 lb. for the corresponding period of 1944. Timber resources include mora, possum, cedar and greenheart but these are not exploited commercially.

**Surplus Property Administration:** see SURPLUS PROPERTY DISPOSAL; WAR MOBILIZATION AND RECONVERSION, OFFICE OF.

**Surplus Property Disposal.** Preliminary estimates at the end of 1945 indicated that, with the coming of victory, the U.S. government had entered into what was probably the world's largest merchandising enterprise. By the end of the year a total of nearly \$13,000,000,000 (original cost) of aircraft, industrial plants, machines, raw materials, consumers' goods and property of practically all kinds had been declared surplus. The movement of govern-

ment-owned property into surplus rose tremendously. Of the total declarations, about \$11,500,000,000 was declared surplus during 1945 alone, and more than four-fifths of this huge amount became surplus in the last third of the year.

Surplus property is disposed of under the Surplus Property act of 1944. Disposition may take place in different ways. During 1945, \$2,600,000,000 of surplus property was disposed of by sale or other means. Property originally costing \$950,000,000 was sold for a total price received of \$390,000,000. Scrapping and salvaging of nonsalable aircraft accounted for more than \$1,600,000,000, while the balance of disposals comprised abandonments, donations and transfers without reimbursement. In addition to disposals, almost \$140,000,000 of industrial plants and equipment, aircraft and other property was leased.

Taking stock at the end of the year, officials found that the government had on hand approximately \$10,000,000,000 of surplus property, measured in original cost. Much of this was unsalable. In particular, about 30% of the total inventory consisted of nonsalable aircraft. A scrapping program was under way to reclaim from these aircraft, over a period of years, the secondary aluminum and other materials they contained.

Another 25% of year-end inventory was in plants and in industrial real property. Plant and industrial equipment, machine tools, general-purpose machinery, raw and semiprocessed materials and other capital and producers' goods accounted for 10%. Surplus consumer goods amounted to more than 7% of the total surplus inventory. Automotive vehicles, chiefly trucks; apparel, footwear, textile fabrics, various kinds of electrical equipment and household fixtures were outstanding in this classification.

All other surplus property available for disposal in the United States (including territories and possessions) totalled \$200,000,000, major items being marine property and manufactured foods. Large-scale declarations of real estate as surplus had not yet begun. A substantial portion of the total surplus inventory was overseas, totalling approximately \$1,400,000,000.

Shortly after the end of 1945 the Surplus Property administration estimated that more than \$26,000,000,000 of property would have been declared surplus by July 1, 1946. This was nearly four times the total surplus resulting from World War I. All these figures were in original cost except the price received, which was the equivalent of cash proceeds.

Organizationally, surplus property activities in 1945 reflected the increasing importance of disposals. On Jan. 2 the Surplus Property board, created by the act, commenced active operations although all three members of the board were not confirmed by the senate until later in the month. Hon. Guy M. Gillette was chairman of the board and the other two members were Hon. Robert A. Hurley and Col. Edward H. Heller. The board immediately set to work preparing basic regulations, utilizing what had been previously accepted in 1944 by the Surplus War Property administration, an organization set up under executive order No. 9425 of Feb. 19, 1944. When the war ended in Germany, the basic outlines of the World War II surplus property disposal were taking shape. The board was the general supervising agency, charged with the development of broad disposal policies. Actual disposals were carried on by different federal agencies designated by the board for that purpose and chosen with regard for their previous experience in property management and available staffs. Although subsequent actions had modified the disposal system originally established by the board, essentially the same disposal system existed at the end of the year. On Dec. 31 the major disposal agencies were:

- Industrial plants—War Assets corporation, a Reconstruction Finance corporation subsidiary
- Capital and producers goods—War Assets corporation, an RFC subsidiary
- Aircraft—War Assets corporation, an RFC subsidiary
- Consumers' goods—War Assets corporation, an RFC subsidiary
- Maritime property—U.S. maritime commission
- Agricultural commodities and food—department of agriculture
- Houses and housing facilities—National Housing agency
- Farm and forest land—Farm Credit administration (department of agriculture)
- Mineral and grazing land—General Land office (department of interior)
- Community facilities—Federal Works administration
- U.S. surplus property located in foreign countries—army-navy liquidation commissioner.

RENOVATED JEEPS parked at a U.S. depot in England in 1945. They constituted part of the vast accumulation of surplus property throughout the world which was awaiting eventual disposition

On Oct. 1, the board was replaced by a one-man surplus property administrator, W. Stuart Symington, pursuant to congressional authorization. The new Surplus Property administration possessed the same functions as its predecessor, the Surplus Property board. The work of preparing basic policy went ahead rapidly and by the end of the year most of the areas of the act had been covered by policy regulations.

The act authorizes that veterans be given a preference to purchase surplus property for the establishment, operation and maintenance of their own enterprises. This preference was drastically liberalized by removing an arbitrary limit to purchases and by making it possible for veterans to buy initial stocks of goods for resale or to buy property necessary to their employment and by permitting direct purchases from disposal agencies. The basic problem involved in all surplus disposal programs—that of moving vast quantities of goods through the limited outlets represented by the disposal agencies' field offices—is particularly hampering when thousands of different items are being sold to more thousands of veterans. The veteran might purchase through the Smaller War Plants corporation, under Section 18 of the statute, or direct from the disposal agency upon certification of eligibility from the Surplus War Property commission. (Early in 1946 this function was transferred to the RFC.)

The Surplus Property administration also acted to encourage the speedier movement of contractor inventory and small lots of scrap, salvage and other excess property from the owning agencies direct into private production. On a larger scale was another authorization by which government property built on privately owned land might be sold directly by the owning agency. This complemented the option previously given private operators to buy excess government machinery, tools and other industrial equipment in their plants, thereby assisting civilian production and employment.

By a third action the Surplus Property administration extended the existing pricing formula for surplus machine tools and general-purpose machinery so as to cover types of equipment in various stages of use extending back to 1920, and to include equipment not covered before.

The act grants to federal agencies first choice to purchase surplus property; to state and local governments, second choice. A very great problem in the administration of this preference was in overcoming the delay which its exercise necessarily imposed on other disposals. Consequently, there was established a system of reserves by which items estimated to be required by preferential purchasers might be held for their inspection while other surplus goods might be disposed of immediately. A system of local offices for the administration of this preference was also commenced.

By another authorization to the disposal agencies, nonprofit educational and public health institutions were given opportunity to buy at a discount surplus property appropriate to their needs. By this means, schools, colleges, hospitals and similar institutions might provide themselves with new or additional operating equipment and plant from property that was available in surplus.

A pricing policy was established for consumers' goods, designed to channel as much as possible of surplus consumer items into retail stores, directly or through wholesalers, for resale while the market was relatively good.

Other basic policies involved disposal programs for the sale of surplus government airports to local communities, the encouragement of community leaders to co-operate in the disposal of adjacent surplus real property, the stock-piling of critical materials for national defense purposes and the establishment of a compliance system to ensure conformity to the provisions of the act.

(S. F. R.)

**Suzuki, Kantaro**, BARON (1867- ), Japanese statesman, was born Dec. 24 in Osaka, and was graduated from the Japanese naval academy in 1887. He

served as vice-minister of the Japanese navy, commandant of the Kure naval station, commander in chief of the combined fleet, chief of the navy general staff and war councillor. In 1929 he was named grand chamberlain and privy councillor, concurrently. Following his resignation as grand chamberlain in 1936, he was made a baron. That same year, Suzuki, pre-eminently a "navy" man, was wounded in a revolt staged by young Japanese army officers, because he allegedly was antagonistic toward the army extremists who dominated the Tokyo government. In Aug. 1944, when the Japanese military were largely discredited by their successive defeats in the Pacific area, Suzuki was "pushed" to the fore as president of the privy council. After the fall of the Kuniaki Koiso cabinet (April 5, 1945), Suzuki formed a new government. On April 14, although his country was at war with the United States, Suzuki expressed his "profound sympathy" to the people of the U.S. on the death of President Roosevelt. On July 29 Suzuki rejected the U.S.-British-Chinese surrender terms formulated at the Berlin conference. However, when the emperor accepted the surrender terms (Aug. 15), Suzuki and his cabinet resigned to make place for men "with fresh ideas." In an interview later, he was reported to have declared that he sounded out the soviet union in June 1945 on the possibility of peace but that this "feeler" was ignored by the soviet union.

**Swains Island:** see PACIFIC ISLANDS, U.S.; SAMOA, AMERICAN.

**Swaziland:** see BRITISH SOUTH AFRICAN PROTECTORATES.

**Sweden.** A democratic monarchy of northern Europe. Area, 173,341 sq.mi.; pop. (Dec. 31, 1944) 6,597,348. Capital, Stockholm (as of Dec. 31, 1945) 671,525. Other principal cities (Dec. 31, 1944), were Göteborg (Gothenburg) (296,289), Malmö (167,885), Norrköping (75,792), Hälsingborg (65,357), Örebro (58,590). Religion, Lutheran Christian. Ruler in 1945: King Gustavus V. Prime minister: Per Albin Hansson.

**History.**—The wartime coalition government was dissolved in July 1945, though Per Albin Hansson, prime minister from 1932 (with a brief interruption in 1936), retained his post. The new cabinet was wholly Social Democratic. Östen Undén, chancellor of the universities, pro-Allied in sympathy and broadly experienced by work in the League of Nations, became foreign minister; Gunnar Myrdal, professor of economics, legislator, writer on the American Negro problem, became minister of commerce. Many of the former ministers remained, among them Ernst Wigforss in finance, Gustav Möller in social affairs, and Axel Gjöres in civilian supply. In international relations there was obviously a strong desire to enter and work with the United Nations, but without neglecting traditional Scandinavian collaboration. Declarations to this effect at the opening of the Riksdag in October brought overwhelming approval, in which the Swedish communists wholeheartedly joined. Meantime various meetings on common Scandinavian affairs were held in Oslo, Copenhagen and Stockholm, and the Norden society asked for a common citizenship in the Scandinavian countries.

The ending of World War II created an irresistible urge to re-evaluate Sweden's policy of armed neutrality. Documents discovered in Berlin indicated that Hitler had planned an invasion of Sweden in Feb. 1942, but that the Swedes obtained information and instantly mobilized. This, together with the German generals' opinions that Sweden's military strength would require more invasion forces than could be spared from the Russian front caused postponement and eventual annulment of the scheme. More information also became available during 1945 on the large amount of clandestine aid, even in the form of munitions, which was smuggled into Norway, sometimes through the agency of the Swedish frontier guards.

Humanitarian aid given by the Swedes to war victims assumed a great variety of forms. More than 70,000,000 kronor was given to Norway, largely in foodstuffs. Some 225,000 children in Norway were fed daily in 1944-45 by Swedish agencies, but the Quisling government refused offers to take 15,000-20,000 of the children to Sweden and other offers to take in destitute refugees from northern Norway. Several thousand went to Sweden for brief periods after the war was over. From Finland, the Baltic states, Denmark, Norway and other countries, however, 193,000 refugees were given hospitality in Sweden during the early months of 1945, and about 125,000 remained there in the autumn. Government and private sources co-operated to send 900,000 kr. worth of food to Krakow, Poland. Shiploads of food were sent to the Netherlands, and public benefits were held in Stockholm and a "Dutch Week" in Uppsala. In December the government sent 10,000 pairs of children's shoes to France. Raoul Wallenberg was attached to the Swedish legation in Budapest to direct the work of saving Jews in Hungary, and he and a staff of 300 did heroic service there.

Count Folke Bernadotte and the Swedish Red Cross brought 16,000 prisoners of war to southern Sweden from Germany in the first chaotic days of May. Bernadotte served as liaison man in the peace offers of Heinrich Himmler to the western Allies in the days just preceding his own and Germany's final collapse, and wrote an interesting account of the people and events in Germany in the spring of 1945 (see bibliography).

The job of serving as asylum for soldiers and civilians from all northern Europe was not always easy. Sweden risked trouble with Germany by a long-standing policy of abetting the return flight to England of hundreds of U.S. and British aviators forced

down on its neutral territory, in helping to train Danish and Norwegian "police" and in carrying on a regular underground for both refugees and saboteurs. After the war in Europe was over Sweden had to face the unpleasant necessity of returning many an unwilling soldier—especially the 2,700 Balts who had arrived in Sweden in German uniform. Russia demanded them as prisoners of war and in November and December Sweden sent them, but hundreds staged a hunger strike and a few committed suicide. By a decision of November, 8,000 Polish Jews and lesser numbers from other countries were permitted to remain in Sweden and to take employment.

Sweden's industrial peace was broken by the five-month strike of metal workers, involving 125,000 labourers and 700 employers. Settlement was made for an hourly wage increase of about two cents and a piecework increase of 5%, adjustments affecting about one-third of the workers. This was the most long-drawn-out and costly labour dispute in Sweden after the general strike of 1909. There were other slight upward adjustments in wages, but the cost-of-living index was held level from 1942 (when, however, it had risen to 40% more than 1939). Both Prime Minister Hansson and Minister of Commerce Myrdal declared that the government economic policy was fundamentally one of efficiency—that despite a leftist trend business would be left in private hands as long as this system functioned effectively, but that the government would not hesitate to nationalize if it appeared to be a means for achieving greater production.

**Education.**—In 1941-42 there were 529,750 pupils and 25,848 teachers in the regular elementary schools, and 53,868 students in secondary schools. In the five institutions of university grade 8,937 students were enrolled in 1944. The state provided also a large number of special industrial and continuation schools.

**Defense.**—Attainment of the five-year plan for the army and the coastal artillery was almost completed at the beginning of 1945; the navy and air corps programs would take until mid-1947. These long-range plans, separate from current preparedness, were budgeted at 3,800,000,000 kr. The expenditures on regular defense were considerably reduced in the spring of 1945. Defense policy was based on a desire that Sweden should be no military vacuum nor the pawn of any great power. During the year there were launched two 7,000-ton cruisers with special anti-aircraft equipment and "the strongest destroyer in the world," the 1,800-ton "Öland."

**Finance and Banking.**—The monetary unit is the krona (26 U.S. cents at par, 23.86 cents on Nov. 28, 1945). The fiscal year ending in June 1944 left a government deficit of 928,049 kr. (less than half the deficit of 1942). The national debt at the end of 1944 was 10,494,766,812 kr., more than double that of four years earlier. In 1940 there were 28 private banks with deposits of 4,793,477 kr. Gold reserves in Oct. 1945 reached a new peak of \$498,250,000. Riksbank note circulation in Oct. 1945 was \$641,750,000. Commercial bank loans were up to \$1,377,000,000 and deposits to \$1,763,500,000 (Oct.).

**Trade.**—Sweden was fortunately situated economically in comparison with the warring powers, but it nevertheless had to make profound readjustments. Its normally heavy trade with Germany had ceased entirely before the end of 1944. Fearing German action, Sweden on Jan. 28 even halted its "safe-conduct" traffic with the west, and found itself tightly blockaded. Gradually conditions improved, and Sweden prepared for a vast trade expansion. Agreements were made with Poland providing for a loan of 100,000,000 kr., Swedish rebuilding of Polish ports, the rental of 1,300 railroad cars and engines and the export of iron ore and machinery; in return Sweden was to obtain 200,000 long tons of coke and 6,000,000 long tons of coal, but by November only 100,000 long tons of the much needed coal had been delivered.

With other countries trade agreements were pushed vigorously. Reconstruction credits and gifts to other countries totalled nearly 3,000,000,000 kr. (more than \$675,000,000). Among the outstanding credits were: Norway 540,000,000 kr.; Denmark 230,000,000 kr.; Finland 220,000,000 kr.; Belgium 100,000,000 kr. Gifts totalled about 200,000,000 kr. A monetary agreement was made with Great Britain to facilitate commerce, and Sweden reached into the South American field with an exchange arrangement with Argentina whose agricultural products Sweden could well use. The U.S. figured largely in Swedish plans as a replacement of Germany for the supply of structural steel, machinery, textiles and dyestuffs, and many Swedish purchasing missions crossed the Atlantic. Counting on the continuance of such relations the Swedish Inter-Continent Air Line (S.I.L.A.) engaged in trial flights to New York.

Ship losses for Sweden during World War II amounted to 235, with a gross tonnage of 546,000 and a loss of 1,374 lives; besides these, 25 vessels were confiscated by the Germans in European ports. The Swedish shipbuilding program had, however, almost kept pace with the losses and the 1945 merchant marine had 1,555,600 gross tons, only about 5% less than in 1939, and made up largely of highly efficient motor vessels. More than 150 vessels, totalling some 1,000,000 tons dead weight, were ordered from Swedish yards in the early months of 1945, half of them for Norwegian owners.

Imports in 1944 amounted to 1,677,382,000 kr. and exports to 853,396,000 kr. This balance began to shift in 1945 and Sweden was even

PILES OF LOGS in a Stockholm suburb which were to be used as home fuel in the houses lining the street. Because of the shortage of coal in Sweden in 1945, available supplies were reserved for industry

forced to limit exports, especially of forest products.

**Communication.**—On Dec. 31, 1940, there were 10,231 mi. of railroads. By 1943 railway electrification served half the trackage and 85% of freight volume. In 1939 there were 53,787 mi. of highways. Automobiles licensed (Dec. 1944) numbered 81,239. Airways (1939) flew 1,536,000 mi. and carried 60,000 passengers. Telephones (Dec. 31, 1941) numbered 980,000 (about 150 per 1,000 persons), putting Sweden second only to the U.S. in the per capita ratio of telephones. Telegraph mileage was 11,040. There were 1,470,375 licensed radio sets and 35 broadcasting stations.

**Agriculture.**—As of June 1, 1944, the number of horses was 603,857; cattle 2,858,949; sheep 558,290; swine 1,053,865; hens 6,174,517.

Cereal crops in 1944 took 1,442,835 hectares, of which oats used 555,837; vegetables used 3,763,248 hectares; meadows 1,019,010. The cereal crop in 1944 was below normal with 2,313,095 long tons (of which oats was the largest with 730,037 tons); the potato crop was very low at 1,434,574 long tons; the sugar-beet crop about normal at 1,803,350 long tons.

**Forestry.**—In the period 1940–44 more than 6,000,000,000 cu.ft. of timber was cut for fuel, against a normal cut of about 3,000,000,000 cu.ft. Much of the excess cut was useful thinning, but the labour burden was heavy. Export of wood products was down in 1944 to 324,635,000 kr., but climbed in 1945.

**Manufacturing.**—Industrial establishments in 1942 numbered 19,955 and workers 580,773. Values of chief manufactured products (figures for 1941) are shown in the table.

Values of Principal Manufactures of Sweden, 1941

	kr.
Machinery . . . . .	1,359,063,000
Ships . . . . .	206,242,000
Automobiles, etc. . . . .	225,293,000
Electrical apparatus . . . . .	322,101,000
Milling . . . . .	204,102,000
Wood pulp . . . . .	276,578,000
Paper . . . . .	210,206,000
Wood . . . . .	229,167,000
Furniture, etc. . . . .	194,341,000
Yarn, etc. . . . .	204,942,000
Textiles . . . . .	330,326,000
Breads . . . . .	185,659,000
Tobacco products . . . . .	248,055,000

**Mineral Production.**—Production of the leading minerals in 1941 (in long tons) was as follows: iron ore 10,527,889; iron and steel 1,165,593; bar iron and steel 821,547; coal 556,690; copper 11,879; gold 5,950 kg.; silver 23,682 kg.

**Sweet Potatoes:** see POTATOES.

**Swimming.** World War II activities were chiefly responsible for the development in 1945 of more proficient swimmers than ever before. Not only did expanding facilities at belligerent army and navy training centres provide greater accommodation for schooling, but practical experience improved the efficiency of teaching staffs, making for speedier progress and better final results. Increasing national and sectional learn-to-swim campaigns contributed to the good work also.

Competition in the warring countries suffered in quality but not in quantity, for although many of the leading contestants were in the service, a larger number of boys and girls engaged in water sports. Fighting men, meanwhile, were afforded the opportunity to participate in Allied championships conducted in various theatres of operations and in frequent less important carnivals and events staged for them at home and abroad.

Because of the chaotic state of transportation in Europe, the Federation Internationale de Natation Amateurs, in control of Olympic and intercountry competition and entrusted with the supervision of world's swimming records, was unable to resume its functions at the end of hostilities as planned. But H. E. Fern, of Great Britain, president and acting secretary, believed it would be possible for the executive bureau, inoperative after the war started, to reconvene some time in 1946.

With the bureau not functioning, national bodies having record claims deferred their presentation. Fern, however, disclosed receipt of vouchers for a men's 400 m. free style relay standard of 3 min. 58.4 sec. by an Argentine team composed of J. M.

ANN CURTIS (left), new 100-yd. titleholder, with Brenda Helser, whom she defeated during the A.A.U. indoor swimming meet at Chicago, Ill., on April 13, 1945

Duranone, A. Yantorno, G. Lingenfelder and F. Neumayer. The listed mark of 3 min. 59.2 sec. was set in 1938 by a U.S. four.

Breast stroke swimmers were credited officially with two record feats. Joseph Verdeur, of the United States, lowered the figures for 200 yd. from 2 min. 22 sec. to 2 min. 21 sec., and Alfred Nakache, of France, those for 200 m. from 2 min. 37.2 sec. to 2 min. 36.8 sec. Leonid Meshkov, of Russia, equalled the tabled time for 200 m., but his exploit was not to be considered, since the soviet was not a member of the F.I.N.A.

(L. DE B. H.)

**Switzerland.** A republican confederation of 22 cantons of west-central Europe, bounded N. and E. by Germany, S. by Italy and W. by France. Flag, white cross on red background. Area 15,944 sq.mi.; pop. (1941 census) 4,260,179. Chief towns: Berne (cap. 129,331); Zürich (333,829); Basle (161,380); Geneva (124,442); Lausanne (92,000). Languages (census 1930): German 2,924,314; French 831,100; Italian 242,034; Romansch 44,204; and others 24,797. President (Jan. 1, 1945) Eduard von Steiger, succeeded on Jan. 1, 1946, by Dr. Karl Kobelt.

**History.**—With the surrender of Germany in May 1945, Swiss conditions began rapidly to improve. Thousands of U.S. soldiers on furlough took advantage of short tours provided by Swiss railways and hotels and thus began to revive one of

Switzerland's greatest sources of prosperity, the tourist trade. The demobilization of the greater part of the Swiss army reduced expenditures, increased manpower for agriculture and industry and made possible the removal of rationing restrictions on tea, coffee, textiles, shoes and some other consumers' goods. The federal government reduced the price of many products in order to keep down the cost of living, which at the end of Sept. was 152.8 (Aug. 1939=100).

**Education.**—Managed locally by the cantons and communities, education is obligatory and free. The seven universities (Basle, Zürich, Berne, Geneva, Lausanne, Fribourg and Neuchâtel) had a total of 9,649 matriculated students in the winter of 1940-41.

**Finance.**—The franc, the Swiss monetary unit, was devalued about 30% in 1936, so that it contained about 200 mg. of fine gold and had in 1945 an exchange value of 23.35 U.S. cents. The Swiss National bank on Dec. 1, 1945, had 4,502,300,000 frs. in gold and 249,200,000 in other assets, with 3,337,100,000 notes in circulation and other sight liabilities of 1,186,100,000.

**Trade and Communications.**—Coal, one of the country's most vital imports, was no longer available from Germany, but this deficiency was partly made good by the arrival of U.S. coal at Genoa, the U.S. having undertaken to supply about 300,000 tons annually, *i.e.*, nearly 10% of the country's requirements. Switzerland remained seriously short of other raw materials, cotton, wool, rubber, copper and lead. Foreign trade during the first nine months of 1945, especially after the end of the war in May, showed a good revival. The monthly average value of imports rose from 38,000,000 frs. in January to 77,000,000 in June and 128,000,000 in September, a nine-month total of 585,000,000 (as compared with a 12-month prewar total of 1,606,900,000 frs. in 1938). The monthly value of exports increased from 29,000,000 in January to 119,000,000 in May and 128,000,000 in September, a nine-month total of 1,001,000,000 (1,316,700,000 in 1938).

In 1945 Switzerland had 3,218 mi. of railway, mostly electrified and three main and three local broadcasting stations.

**FILMS.**—*Children of Switzerland* (Encyclopædia Britannica Films Inc.). (S. B. F.)

**Symington, William Stuart** (1901— ), U.S. government official, was born June 26 in Amherst, Mass. He joined the army during World War I, and after the armistice he attended Yale university, New Haven, Conn., 1919-23. His first job was with the Symington company, a railroad equipment plant owned by his family. He later joined other concerns owned by his family and then entered the radio manufacturing field. He became president of Colonial Radio (1930-35) and of Emerson Electric Manufacturing company in St. Louis, Mo. (1938). On June 7, 1945, Pres. Truman appointed Symington as chairman of the Surplus Property board. On Sept. 5 it was announced that Symington would accompany John W. Snyder, reconversion director, on the latter's mission to study the needs of western Europe, appraise lend-lease stockpiles and determine repayment possibilities. The Senate approved Pres. Truman's proposal that surplus property disposal be placed under the supervision of a single man, and on Sept. 18 Pres. Truman named Symington surplus property administrator.

**Symons, Arthur** (1865-1945), British poet and critic, was born Feb. 28 in Wales. Educated in France and Italy, Symons introduced the literature of both countries to the British Isles and was a familiar name to college students of European literature. At 19 years of age, he edited the *Shakespeare Quarto Facsimiles* for Bernard Quaritch. He was on the staffs of *Athenaeum*, the *Saturday Review*, and was

editor of *Savoy*. His last works include *Confessions* (1930), *Translation of the Adventures of Giuseppe Pignata* (1930), *Wanderings* (1931) and *Jezebel Mort and Other Poems* (1931). He died at his home in Wittersham, Kent, Jan. 22. (See *Encyclopædia Britannica*.)

**Syria and Lebanon.** Independent republics, formerly French mandated territories, bordering the eastern Mediterranean. Syria: area 73,587 sq.mi.; pop. (est. 1942) 2,800,000; chief town, Damascus (cap.) 225,000. Lebanon: area 3,475 sq.mi.; pop. (est. March 1943) 1,025,000; chief town, Beirut (cap.) 234,000. President (1945) of Syria, Shukri el Quwatli; of Lebanon, Sheikh Bishara el Khoury. Language: Arabic; religion: mainly Mohammedan.

**History.**—The beginning of 1945 provided hints of coming conflict in a resolution passed by the Syrian chamber in January demanding the transfer of the *troupes spéciales* to Syria from France. This was followed by a show of French armed strength which provoked a Syrian protest. Lebanon also sent a note demanding the transfer to it of Lebanese *troupes spéciales*.

In May negotiations were opened for a treaty between France and Syria and Lebanon, but on May 18, when Gen. Paul-Etienne Beynet, French delegate general, presented his proposals, French troops were simultaneously landed. These troops, numbering some 1,200 and consisting of Senegalese and French Forces of the Interior (F.F.I.) units, were claimed by the French to be merely routine reinforcements, but were regarded by the Syrians as a threat. A general strike followed and a joint note was sent by Syria and Lebanon breaking off the negotiations. General Beynet was recalled to Paris to report while the Syrian opposition parties agreed to unite in the common cause. A week later clashes occurred and five French soldiers were reported killed. Serious disturbances followed in Homs, Hama, Aleppo and Damascus, Syrian gendarmes attacking all French posts. On May 30 the French shelled Damascus. Meanwhile, a political struggle proceeded, culminating in a note from Prime Minister Churchill to General de Gaulle, sent with U.S. approval, informing him of an order to the British commander in chief in the middle east to intervene in Syria and Lebanon and requesting that an order be sent to the French troops to cease fire. The order to cease fire was given, the French subsequently claiming that it was sent before the receipt of Churchill's note. The Syrian government subsequently reported that 593 persons were killed and 1,972 wounded in the disturbances. By the beginning of June quiet was restored by British troops, and French troops had retired to their barracks. Proposals made by General de Gaulle that the question should be discussed at a big five conference were rejected by Churchill and President Truman. De Gaulle also accused Britain of fomenting trouble in Syria and Lebanon against the French, these charges being denied by the British.

In the house of commons on June 14 Churchill pledged that British troops would be withdrawn the moment a treaty was signed between France and Syria and Lebanon. In July the French announced their decision to hand over the *troupes spéciales* (between 25,000 to 30,000 native and 5,000 French troops), the transfer to be completed within 45 days. In October it was reported that 24,000 troops had been transferred. There were further sporadic disturbances, in particular at Latakia, during the rest of the year. The Syrian cabinet re-

signed and was reformed under the former Prime Minister Fayeze el Khoury both in May and August. He resigned on Sept. 30 and a new cabinet was formed with Saadullah Jabry as prime minister. He also held the portfolios for minister for foreign affairs and defense.

In Lebanon a new cabinet was formed in January, under Abdul Hamid Karam as prime minister, which resigned in August. The new cabinet was headed by Sami Solh.

Syria and the Lebanon declared war on Germany and Japan on Feb. 26 and 27 respectively.

An agreement on the construction and operation of oil refineries was signed between Lebanon and U.S. oil companies.

On Dec. 13 an Anglo-French agreement was reached by which British and French forces were to be withdrawn from Syria and regrouped in the Lebanon until "such time as the United Nations organization has decided on the organization of collective security in this zone."

(D. K. M. K.)

The following statistics refer to Syria and Lebanon jointly:

**Finance.**—Monetary unit, the Syrian pound (divided into 100 piastres) = 20 French francs = (Nov. 1944) 40 U.S. cents. Revenue (1938) \$15,432,518. Expenditure \$13,386,700. Notes in circulation (1944) \$136,120,000; reserves (June 30, 1939), gold \$1,400,000; foreign assets \$12,720,000.

**Trade and Communication.**—Imports (1944) \$32,000,000; exports (1944) \$13,600,000. Roads (1939) c. 1,900 mi.; railways (1939) 690 mi.

**Agriculture.**—Short tons: wheat (1943) 641,630; barley (1940) 423,500; maize (1942) 36,300; oats (1939) 5,940; potatoes (1938) 45,760; tobacco (1941) 5,170; wine (1938) 1,135,200 U.S. gal.; cotton (1943) 2,860; cotton seed (1943) 6,710; sesamum (1938) 5,830; olive oil (1940) 14,300; wool (1938) 10,890; raw silk (1938) 220.

## Syrup, Sorgo and Cane.

The production of sugar-cane syrup in the United States in 1945 was estimated at 22,000,000 gal., compared with 21,506,000 gal. produced in 1944, and an average of 22,890,000

Table I.—U.S. Production of Cane Syrup by States, 1945 and 1944

State	1945 gal.	1944 gal.	State	1945 gal.	1944 gal.
Louisiana . . .	11,055,000	6,670,000	Florida . . . .	2,040,000	2,240,000
Georgia . . . .	4,640,000	4,356,000	Texas . . . . .	520,000	750,000

## Szold, Henrietta

(1860-1945), U.S. Zionist leader, was born Dec. 21, in Baltimore, Md., the daughter of a rabbi. She became actively interested in Zionism in the early 1900s. After a visit to Jerusalem in 1909, where she saw the appalling results of trachoma and other diseases among the poverty-stricken Jewish population there, she decided to rally the interest of U.S. Jewish groups in applying social hygiene measures in Palestine. To this end she founded in 1912 the Hadassah (whose name was taken from the Biblical designation of Queen Esther), a women's group designed primarily to help the Jewish population in Palestine. This organization, of

which she was president until 1926, developed into the U.S. women's Zionist organization. Miss Szold helped raise large funds in the U.S. to develop a public health program in the Holy Land and subsequently numerous clinics and hospitals and infant welfare stations were established there and a program of education was instituted. Miss Szold was a delegate to many Zionist conventions, was a member of the World Zionist Executive committee in Palestine, and in 1935 she directed the movement for resettling German-Jewish children in the Holy Land. She died in Jerusalem Feb. 13.

## Table Tennis.

The end of World War II enabled the International Table Tennis federation to begin preparations in the latter part of 1945 for resumption of the world championships, which hostilities had cancelled for six consecutive years. The competition includes matches for individual titles, for the Swaythling Cup (national men's teams) and the Corbillion Cup (national women's teams). In England it was proposed to restore the height of the net to 6¼ in. from the 6 in. to which it had been reduced before the war in an effort to handicap ultradefensive players. The game continued to be one of the chief recreations in the armed forces of many nations, and star players travelled by aeroplane to give exhibitions. The greatest upset in organized civilian play in 1945 occurred in the U.S., where Sally Green, after winning the national women's singles title for five straight years, was dethroned by Davida Hawthorne.

## Talc.

The sales of talc minerals in the United States dropped from 412,868 short tons in 1943 to 398,863 tons in 1944, while mine production fell from 436,249 tons to 418,228 tons. The only reported increase in use was in rubber.

Canadian production in 1943 included 14,204 short tons of soapstone and 11,959 tons of talc, increasing to 19,013 tons of soapstone and 13,584 tons of talc in 1944; these figures give totals of 26,163 tons and 32,597 tons respectively. Output declined again in 1945, the preliminary estimate for the year being 13,889 tons of soapstone and 13,000 tons of talc, a total of 26,889 tons.

## Tardieu, André Pierre Gabriel Amédée

(1876-1945), French politician and writer, was born Sept. 22 in Paris. He was educated at the École Normale Supérieure and entered the chamber of deputies in 1914. For his earlier career, see *Encyclopædia Britannica*. Tardieu was premier in 1929-30 and again in 1932. A brilliant orator and wit, he exerted most of his influence during the interim between World Wars I and II. He suffered a nervous breakdown just before the outbreak of World War II and lived in retirement on the French Riviera. He died in Menton, Sept. 15.

## Tariffs.

Because of the exigencies of World War II, customs tariffs were employed as instruments of commercial policy less during previous years than perhaps during any comparable period in at least three decades. Although prewar schedules of import duties generally had been maintained, at least in form, they had less effective application during the war than previously. There had been scattered instances where

governments increased or imposed new protective duties to foster specific industries, but these increases were scarcely representative of the war period. Because of wartime scarcities of essential materials, the closing of important sources of supply and the blockade of others, the shortage of shipping and the greatly increased demand for strategic materials, some countries suspended temporarily the application of duties on commodities essential to the prosecution of the war. Non-belligerent countries, impelled by the hunger for industrial equipment, raw materials and prime essentials, frequently sought to protect their economies by granting at least temporary exemption or reduction of duty. The world's commerce had been dominated not by tariffs but by export permits, priorities and allocations.

Although actual hostilities ceased in 1945, the immediate postwar supply situation had been sufficiently acute throughout the world that the emphasis continued to be on the control of exports rather than imports. Import controls, which were general during the war and throughout 1945, were employed primarily, not to restrict, but to facilitate imports, to allocate shipping space and to control the ultimate distribution of whatever imports were obtainable.

By and large, 1945 was a standstill year with respect to tariffs and related instruments of commercial policy. There were virtually no important modifications of tariff schedules throughout the world. Various countries, which were occupied by enemy nations during World War II, had, of course, either reimposed the import duties previously in force or had adopted temporary tariff schedules. Nontariff controls, many of them either originating or strengthened during the war, continued to be more important in world trade than tariffs themselves. Although there appeared to have been no over-all revision of the tariff schedule in any major country, there were many piecemeal modifications, usually relatively unimportant, raising or lowering the rates of duty for specified import items. These scattered changes displayed no decided pattern or trend; modifications providing for lower rates of duty, however, appeared to have been more numerous and of greater importance than those providing for increased import charges.

At least four countries, all in Latin America—Costa Rica, the Dominican Republic, Honduras, and Peru—made upward revisions of the duties on virtually all imports into their respective countries. These increases, however, were of minor significance and were usually imposed as revenue measures in the form of a small surcharge added to the former customs duties. In effect, tariff rates were also increased in Chile, where the duties were published in terms of "gold" pesos but collected in current paper pesos at a fixed rate of conversion. By legislation, effective Jan. 1, 1945, the conversion ratio was increased by 60%. Although the immediate result was to increase the actual duties payable in Chile, the adjustment does not appear to have been out-of-line with changes in the value of the currency which had long previously occurred. In July 1945, a somewhat similar adjustment was made in Nicaragua.

Some of the more important modifications imposing increased duties on individual imports into various countries follow. In February, France increased the tariff on most items in its petroleum schedule. In May, Italy approximately doubled the import duties on most types of manufactured tobacco. In July, the United Kingdom restored its duties on imports of machinery and accessories, which had been exempt from duty during World War II. During 1945, various Latin-American countries also increased the duties on various commodities, as in the case of raw wool and wool yarn by Brazil; petroleum products, edible oils and certain hair dressings by Costa Rica; alcoholic beverages and petroleum products by the Dominican Republic; almanacs and calendars by Guatemala; gasoline, wool, zinc oxide and numerous iron and steel products by Mexico; naphtha, gasoline and certain other petroleum products by Paraguay and fish products by Uruguay.

The most prominent relaxation of tariff restrictions in Europe during the year were provisions exempting from duty the contents of gift packages and articles imported for personal use. During the year privileges of this character were granted by Belgium, Denmark, France, Finland, Greece,

Italy, Norway, Netherlands, Poland, Sweden, Switzerland and Yugoslavia. Belgium, however, made an extensive downward revision of its customs tariff in February, when it temporarily exempted from the payment of duty more than 200 articles of prime necessity and industrial supplies.

The supply situation was also a chief cause of numerous revisions in Latin-American countries, where most of the reductions or exemptions from duty were temporary and were frequently granted only for specified quantities of imports. During the year, relief of this character was granted for imports of certain agricultural fertilizers, antimony, telecommunications equipment, pedigreed fowl, silkworms and raw silk in Argentina; equipment and supplies for the edible oil industry in Bolivia; dried meat, corn, onions, wheat, live sheep and penicillin in Brazil; refined petroleum products, various supplies used by newspapers and magazines, varnished tin-plate and numerous prime necessities, including crude oil, diesel oil, gasoline, coffee, sugar and wood pulp, in Chile; raw materials for the manufacture of vegetable lard in Colombia; scientific publications and literary works in Costa Rica; canned milk, eggs, livestock and poultry feed, machinery and equipment for use in the construction of public works, corn and various types of breeding stock in Cuba; certain construction materials and many essential food commodities, including meats, milk, eggs, butter, fish, potatoes, peas, lentils, beans, oats, corn and lard in Ecuador; corn, beans, rice, cacao beans, sole leather and cotton thread in El Salvador; automobile tires and psyllium seed in Guatemala; materials used by the embroidery industry and bottles in Haiti; paper bags in Honduras; certain cardboard and paper packing materials, plastic mosquito netting, gasoline, eggs, cement and specified insecticides in Mexico; X-ray equipment in Nicaragua; wheat flour, certain bleaching agents, gazogenes and specified types of industrial and scientific equipment in Paraguay; cement in Peru, middlings, millet, sorghum, barley, sheep dip, corn, various wheat and oat products, peas and lentils, potatoes, alpaca hair, forage and incubators and brooders in Uruguay; and wood piling, silk shower curtains, plastic pipe fittings and related materials, aviation gasoline, fishing nets, cement and wheat in Venezuela.

Shortly after the outbreak of the war, Canada imposed a War Exchange tax amounting to 10% of the value of imports from non-empire sources, in order to conserve the available supply of exchange for the purchase of essential war materials. Canadian imports were thereby shifted to purchases from the sterling area. During the war, as the supply problem became acute, this charge constituted, of course, an additional tax on imports which had to be obtained from the United States and other non-empire sources. In Oct. 1945, shortly after the cessation of hostilities, this tax was removed, inasmuch as its purpose had been served and because it was "discriminatory and could not be justified under conditions of normal trade." In April 1945, imports of numerous commodities into Newfoundland were exempted from a similar tax, amounting to 7½% ad valorem.

The most important action relating to United States tariff policy in 1945 was the renewal of the Reciprocal Trade Agreements act.<sup>1</sup> The congress of the U.S. not only authorized the president to continue the program of negotiating reciprocal, unconditional most-favoured-nation commercial agreements with other countries and to grant mutual concessions therein, but it also further liberalized the terms under which such concessions could be granted.

As the urgency for their use diminished during 1945, wartime and pre-war systems of import and exchange control in various countries were relaxed.

Lately, new systems of import control were established in at least two countries—Mexico and Brazil. The Mexican system, initiated in 1944, was elaborated more fully during 1945; from time to time additional commodities were added to the list for which official licences had to be obtained before their importation was permitted. The protection of domestic industries and the prevention of postwar "dumping" were dominant motives for the new program. The Brazilian import-licence control system was inaugurated Jan. 1945. Although it was initially described as a wartime measure, it also appeared to be associated with the desire to protect nascent industries. Despite general access to an abundance of exchange balances and a consequent relaxation of exchange controls throughout Latin America, exchange control was established in Peru in Feb. 1945. The announced purpose of the new policy was that of assuring future use of accumulated exchange holdings for financing imports which would contribute most to the development of the Peruvian economy. (See also INTERNATIONAL TRADE.) (D. L.H.)

**Tasmania.** A state of the Australian commonwealth, forming an island 26,215 sq.mi. in area to the south-east of the mainland, from which it is separated by 140 mi. of Bass strait. Pop. (est. Dec. 31, 1943) 245,434. Chief cities: Hobart (cap., 70,800); Launceston (est.) 40,000. Governor (1945): Admiral Sir Hugh Binney.

**History.**—Admiral Sir Hugh Binney was in 1945 appointed governor of Tasmania in succession to Sir Ernest Clark.

Although the state possesses extensive and valuable forests unregulated exploitation and neglect in the early days of settlement made great inroads on its timber assets. The government prepared a \$16,000,000 plan for the regeneration of forest resources. The premier asked for an initial advance from the loan council which would provide employment for 1,000 returned soldiers. The gross value of agricultural production during 1943—

<sup>1</sup>Originally enacted in 1934.

44 was \$23,303,000, the highest for many years in spite of depleted manpower. Because of the new industries which Tasmania's hydroelectric scheme had attracted to the state, R. Cosgrave, the premier, announced that demobilization would provide no unemployment problem.

**Education.**—In 1941: number of schools (state) 424, (private) 63; teachers (state) 1,273, (private) 329; scholars (state) 33,354, (private) 6,886; average attendance (state) 27,457, (private) 5,320.

**Finance.**—Revenue (1943-44) \$11,197,000; expenditure \$11,110,000; public debt (June 30, 1944) \$96,205,000. (Conversion rate: £A1=\$3.2.)

**Communication.**—Roads (1940) 9,386 mi.; railways, government (1944) 642 mi.; private, 130 mi. Motor vehicles licensed (March 1945): cars 17,003; commercial vehicles 6,804; cycles 2,677. Wireless receiving set licences (June 1944) 50,356. Telephones (June 30, 1941) 19,565.

**Manufacturing.**—(1943-44) factories 994; employees 10,791; gross value of output \$66,714,000; unemployment (trade union returns) (Feb. 1945) 0.7%. (W. D. MA.)

**Taxation.** United States.—Tinkering with taxes continued to be a popular pastime in the congress of the U.S. during 1945. As in the preceding year, two revenue laws were enacted, though neither was regarded as much more than stopgap legislation. The long-heralded "scientific revision" of the revenue code was again deferred, pending developments of the early postwar era. Taxpayers—corporate and individual—were given no assurance of the early establishment of a stable basis upon which tax liabilities could be computed over a fairly long period of time. They had to become reconciled to the prospect of year-to-year changes in the immediate future.

With but very few exceptions the two tax laws enacted in 1945 gave no reductions for that year, and affected the operation of the revenue code in comparatively minor degree with respect to 1945 taxes. From the standpoint of the taxpayer, the bright spot on the horizon was definite knowledge of substantial tax relief in 1946.

**Upward Trend Reversed.**—For the first time in 16 years, the upward trend of tax legislation was reversed by the congress. Both of the new revenue acts reflected the popular dissatisfaction with continuance of the burdensome levies of the preceding years. They were hailed as the initial steps in a fiscal program of relaxation of wartime pressure upon the financial resources of the nation. Corporations and estates, as well as individuals, shared in the lower levies to become effective in 1946.

In the face of conditions regarded as harbouring elements conducive to serious inflation, the lowering of tax revenues to be collected by the government was justified as a necessary aid to business in the reconversion period and a psychological stimulus to the people generally. With uncertainty as to the extent of lowered government expenditures in the period immediately ahead, record-breaking reduction in taxes, effective Jan. 1, 1946, was voted, despite a predicted treasury deficit of more than \$30,000,000,000 for the fiscal year ending June 30, 1946. A comparison of tax collections for 1945 with the prewar year of 1940 reflected the gigantic increase that had been necessary to conversion from a prewar to a wartime economy. Total revenue collections of the federal government for the fiscal year ended June 30, 1945, amounted to approximately \$46,500,000,000 compared with a total of \$5,400,000,000 collected in the fiscal year 1940. These receipts were exclusive of old-age insurance taxes.

**Business and Individuals Benefit.**—The Tax Adjustment Act of 1945, signed by President Truman on July 31 at Potsdam, Germany, was designed to aid the cash position of business, and to provide incentives to small business to enter into peace-

"AT LONG LAST!" Shoemaker of the *Chicago Daily News* voiced the relief of U.S. taxpayers in 1945 at the prospect that congress would start reducing the heavy tax load

time production. Its provisions did not affect individuals, being confined to corporations or other business concerns, with the relief measures becoming effective Jan. 1, 1946.

The second tax legislation of the year—the Revenue Act of 1945—became law Nov. 8. Its provisions affected both individuals and corporations as of Jan. 1, 1946. Under this law, it was estimated that 12,000,000 low-income persons would be removed from federal income tax rolls altogether, and that all other persons with incomes up to \$50,000 a year would realize tax reductions of 10% or more. Smaller percentage cuts were provided for those with incomes in excess of \$50,000 a year. Total reductions for individuals were expected to aggregate \$2,742,000,000 annually, while business was given relief estimated at \$3,178,000,000.

**Tax Program for a Solvent America.**—Consideration of the tax legislation of 1945 by congressional committees was attended by serious study of economic conditions and by constructive

Table I.—Computation of U.S. Tentative Surtax by Salary Brackets

"TAKE ONLY AS PRESCRIBED, UNCLE." Burck of the *Chicago Times* registered apprehension at a too drastic or ill-timed cut in federal taxes during 1945

suggestions by citizen groups and public officials. The new secretary of the treasury, Fred M. Vinson, enunciated the Truman administration's policy as "a complete modernization of tax laws to help achieve high levels of employment and production." He urged upon congress "a fiscal policy aimed at maintaining the economy at or near full employment and co-ordinating all government programs that have either an inflationary or deflationary effect."

One of the outstanding contributions to the discussion of tax revision was the report, in book form, of a group of several of the nation's best known tax students, functioning as the Committee on Postwar Tax Policy. This committee, headed by former Under-secretary of the Treasury Roswell Magill as chairman, was sponsored through a special grant from the Maurice and Laura Falk Foundation. Harley L. Lutz, professor of public finance at Princeton university, Princeton, N.J., served as director of research. Its recommendations were based on a 16-months' study of the tax question and its relation to fiscal policy. The underlying theme of the report was a balanced federal budget. The committee's proposals were predicated not upon national income but on the needs of the country's postwar economy and the preservation of free enterprise. For corporations, repeal of all excess profits taxes and gradual reduction of corporation tax rates over a period of years were recommended, along with suggested abandonment of the capital stock tax. As affecting individuals, a graduated schedule of rates applying to taxable net income was urged as a substitute for the prevailing 3% normal tax. The rates proposed would start at 20% for incomes up to \$2,000 and reach 42% on incomes between \$20,000 and \$25,000. Incomes between \$100,000 and \$200,000 would be taxed at a rate up to 54% and incomes over \$1,000,000 a year at 72%. The committee also recommended major reductions in gift and death taxes.

**The Tax Adjustment Act.**—Designed primarily as a postwar reconversion measure to enable U.S. business to improve its cash position during the period of changeover from manufacture of war materials to peacetime production, the Tax Adjustment Act of 1945, passed by congress in July, did not affect existing tax rates. It did, however, provide direct tax relief for business by increasing the specific exemption of corporations for excess profits tax purposes from \$10,000 to \$25,000, effective at the end of 1945. This provision was later repealed in the Revenue Act of 1945, which abolished the excess profits taxes, effective Jan. 1, 1946.

Other provisions of the Tax Adjustment act made immediately available to business the 10% postwar excess profits credit with respect to tax liabilities for 1944 and subsequent years; advanced the maturity date of outstanding postwar refund bonds at the option of the owner, on or after Jan. 1, 1946; created new procedure for quick refunds based upon carry-backs of net operating losses and of unused excess profits credits, and expedited refunds resulting from recomputation of deductions for amortization on property used in connection with government war contracts. The amount of postwar credit, after credit for debt retirement, applicable to 1944 liabilities was estimated at \$830,000,000 and the amount applicable to 1945 liabilities at \$710,000,000. The estimated net amount of bonds issued or to be issued with respect to postwar credits was \$480,000,000 for 1942 and \$820,000,000 for 1943, or a total of \$1,300,000,000 for the two years. The Revenue Act of 1942 had provided a carry-back of unused excess profits credits and a carry-back of business losses. Furthermore, the act of that year set up a postwar credit or refund of 10% of the excess profits tax, to be evidenced by non-interest-bearing bonds, payable at certain designated times soon after the end of World War II.

**Revenue Act of 1945.**—At an estimated cost to the federal government of \$5,920,000,000 in the ensuing year, tax liabilities of corporations and individuals were reduced by the Revenue Act of 1945, approved by the president on Nov. 8. Effective Jan. 1, 1946, this law provided the largest reduction in taxes ever granted in a single revenue measure. For the first time in almost a score of years a federal revenue measure was titled, "an act to reduce taxation, and for other purposes." The new law automatically amended or repealed certain sections of the internal revenue code. The total reduction indicated in 1946 taxes exceeded by almost \$1,000,000,000 the treasury's estimate of the amount that could safely be allowed. Secretary Vinson, in a statement to the senate finance committee, said: "We cannot afford more than \$5,000,000,000 of tax reduction for the calendar year 1946. The fundamental justification for tax reduction at this time, when the federal government still is running a large deficit (in excess of \$30,500,000,000) is the promotion of a vital, invigorated peacetime economy . . . to achieve the greatest positive economic good."

**Individual Taxes.**—"Take-home pay," a phrase that developed rapidly to plague industry and politicians coincidental with the growing practice of withholding sums from pay envelopes either to comply with tax requirements or to meet payments on war bonds or labour union dues, was increased for 1946 through enactment of the new revenue law. Millions of workers in the "low-income brackets" were absolved from any tax liability whatsoever, and all others received relief in varying degree. The withholding feature of tax collection, introduced originally with the enactment of Social Security legislation and extended in 1944 to implement the "pay-as-you-earn" program, was retained. Congress adhered to the theory that consumer purchasing power should be encouraged and that tax reduction for the lower income groups would bolster this policy by providing more spendable cash.

A new device was resorted to in connection with lowering of the normal tax and surtax of individuals. It was the introduction of a "tentative normal tax" and a "tentative surtax." These were to be computed in a manner similar to past procedure (except for new reductions) and the amounts thus arrived at were to be further reduced by a flat 5%.

The normal tax rate of 3% was retained in the new law, and individuals were allowed the same exemptions for normal tax purposes as were provided for surtax under the prior law. These were \$500 for the taxpayer, \$500 for the spouse of the taxpayer if a joint return was filed or if the spouse had no gross income and was not a dependent of another person, and \$500 for each dependent with gross income of less than \$500.

The surtax rates on individuals were reduced by 3% uniformly in each of the brackets of surtax net income. (See Table I.) By reason of this 3% reduction the maximum combined rate of normal tax and surtax for 1946 was reduced to 85½% from the prior limit of 90%.

Changes in the normal tax exemptions and reduction of surtax rates necessitated revision of the 1946 optional tax table for use of individuals with adjusted gross incomes of less than \$5,000 a year. These changes resulted in a reduction of more than 10% for every amount shown in the table. (See Table II.)

**New Withholding Rates.**—Revision of normal taxes and surtax rates also necessitated the promulgation of a new set of withholding rates,

though prior regulations governing the collection of taxes via the withholding route were retained with virtually no modification. (See Table III.) An added provision required employers to furnish statements or receipts of taxes withheld to all employees whose wages for any pay-roll period exceeded the amount of one withholding exemption, even though no tax was required to be withheld because the total withholding exemptions exceeded each wage payment. This provision was made because final returns were still required of all persons receiving \$500 or more gross income even though no tax were due. To such individuals was extended the privilege of filing the withholding receipt as a tax return.

**Relief for Servicemen.**—A special exemption of \$1,500 was provided for all commissioned officers in the military and naval forces for service pay received in years beginning after Dec. 31, 1942, and before termination of the war, as proclaimed by the president. Similar exemption was authorized for citizens or residents of the United States serving as members of the military or naval forces of any of the other United Nations during World War II.

All pay of servicemen below the grade of commissioned officers was exempted if received in years beginning after Dec. 31, 1940, and before termination of the war, by proclamation of the president. Provision was made for refunding overpayments of tax on such service pay, and also granting servicemen a period of three years in which to pay off accrued tax liability.

**Social Security Taxes.**—The 1% tax withheld from wages and salaries up to \$3,000 a year under the Federal Insurance Contribution act and the 1% tax on employers were "frozen" for another year. Under the law as revised, a rate of 2½% on both employer and employee was fixed for the calendar years 1947 and 1948.

The \$5 annual tax on the use of motor vehicles and boats was repealed, effective June 30, 1946.

Other excise taxes were not repealed. Under prior law they were to continue until "about six months" after the President's proclamation declaring the war officially ended. However, the new law did provide for floor stock refunds on distilled spirits, wines or cordials, imported perfumes, or fermented malt liquors held by manufacturers or dealers on the date when the war would be officially declared to have ended.

**Corporation Taxes.**—The predominant feature of the Revenue Act of 1945, from the standpoint of business, was the repeal of the excess profits tax on corporations, effective Jan. 1, 1946. This was a highly controversial subject—whether to ease the burden of the tax by raising exemptions or to erase it altogether from the revenue code. The repeal relieved industry of the special levy of 8½% on profits rated high in comparison to prewar earnings, and subjected them only to the normal tax and surtax rates. The estimated saving to business in 1946 through repeal of the excess profits tax was approximately \$2,900,000,000.

Surtaxes for corporations with net incomes of more than \$50,000 were reduced to 14% from the existing rate of 16% and for corporations with net incomes under \$25,000 to 6% from 10%.

The capital stock tax was repealed with respect to years ending after June 30, 1945, and the related declared value excess profits tax was repealed, effective June 30, 1946. Provision was made for reduction of declared value excess profits taxes where recovery of war losses in 1945 was concerned.

**State and Local Taxes.**—Legislatures in at least 44 of the 48 states were in regular session during some portion of 1945, and many of these enacted new laws or revised existing statutes to provide additional revenue

for the postwar era. These laws covered a wide scope, ranging from income tax exemptions for members of military and naval forces to additional excise levies. New or increased gasoline taxes were imposed by Idaho, Iowa, Kansas, Minnesota, Oklahoma and Oregon, and concessions or exemptions of taxes on gasoline and similar fuels were made on behalf of the U.S. government by Connecticut, Florida, Georgia, Idaho, Ohio, South Dakota and Wyoming. Eleven other states made minor regulatory changes in gasoline tax legislation. Florida reduced the mileage tax on trucks and trailers of less than 5,500 lb. from 1 cent per mile to ¾ cent, and on those over 5,500 lb. from 2 cents to 1½ cents per mile. Taxicabs were required to pay a permit fee of \$25 and registration fee of \$5 a year. Other changes in motor vehicle tax laws were made by Arkansas, Delaware, Illinois, North Carolina, North Dakota, Tennessee and Washington.

Exemption or relief with relation to state income taxes of military or naval service personnel was granted by Alabama, California, Colorado, Georgia, Iowa, Kansas, Maryland, Massachusetts, Minnesota, New York, Oklahoma, South Carolina, Utah and Vermont.

Almost one-half of the states in which legislatures convened in 1945 made revisions in individual income tax provisions. Emergency levies on businesses in New York, Pennsylvania and Wisconsin were extended and individual income tax reductions in California, Iowa and New York were continued.

Insurance tax legislation was revised in many states as a result of the decision of the United States supreme court, holding that the business of insurance is commerce and subject to interstate commerce law regulation. Much of this legislation was designed to provide nondiscriminatory taxation of domestic and foreign insurance companies. States in which insurance tax changes were made included Alabama, Arizona, Arkansas, California, Connecticut, Delaware, Florida, Georgia, Iowa, Maine, Maryland, Massachusetts, Missouri, New Hampshire, New Jersey, New Mexico, North Carolina, Oklahoma, Oregon, South Dakota, Tennessee, Texas, Washington and West Virginia.

Changes in bank tax laws were made by Alabama, Massachusetts, New York, Pennsylvania and Vermont, and laws affecting stock transfers and document recording were enacted in Minnesota, New York and Pennsylvania.

Other familiar classifications of taxes undergoing alteration in various states were: sales, gross income and use taxes, intangibles, inheritance and gift, liquors, tobacco and cigarettes, mining and minerals, chain stores, public utilities and franchise taxes. Georgia repealed its state poll tax.

Great Britain.—War's end brought promised tax relief for millions of the harassed people of the United Kingdom, who had borne the brunt of the devastating Nazi assault. The prospect of radical cuts in succeeding years, however, was tempered by the discontinuance of lend-lease and the limitation on new loans from the United States. Nevertheless, the new Labour government, in its first peacetime budget, slashed 10% from the standard income budget, and freed 2,000,000 low-income earners from the nation's tax rolls.

To aid business in the reconversion period a 40% cut was made in the excess profits levy. Chancellor of the Exchequer Hugh Dalton, in presenting the new budget to the house of commons on Oct. 23, 1945, announced that the government would maintain a belt-tightening policy of continued savings and price controls. The program included a further rise in taxes on large incomes, through increase in surtaxes on all earnings in excess of \$8,000 annually. The new surtax rates rose from 10% for the first \$2,000 of income to 97½% on all income over \$80,000 a year.

The general rate of taxation in 1945 was 10 shillings in the £, after deduction of personal allowances. This was reduced, effective April 6, 1946, to 9 shillings in the £, through slightly increased exemptions. At an estimated annual cost in revenue to the government of more than £2,500,000,000 (£1=\$4.035 U.S.), pre-war exemptions were restored, namely, \$9.40 a week for single persons and \$15.40 for married couples; married, one child, \$19.60; three children, \$28.20 and five children, \$36.60.

Reduction of the excess profits tax, effective Jan. 1, 1946, to 60% instead of the wartime 100%, would give Britain's business \$1,000,000,000 to aid in reconversion, Chancellor Hugh Dalton said. He also recommended that parliament abolish purchase taxes on articles of special importance for building, such as heating equipment, plumbing and refrigeration. In a later statement to the house of commons the chancellor revealed that individual taxation in the United Kingdom in 1945 was nearly 20 times heavier than before World War I. In 1913-14 taxation was \$14.25 per person compared with \$262.10 in 1944-45.

Australia.—In introducing the annual budget in the Australian house of representatives on Sept. 7, 1945, Prime Minister J. B. Chifley announced a reduction in income tax amounting to approximately 12½% in a full year, and lowering of sales taxes over a wide range of commodities. The reductions were to become effective Jan. 1, 1946.

Canada.—The dominion's hopes for early easement of the onerous tax levies prevailing throughout the war were blasted by the Ottawa government's announced policy of adhering to a "three-year plan" of economic and social development. The nine provinces were requested on August 6, 1945, to cede to the dominion voluntarily for a minimum of three years their rights to collect personal income, corporation and succession taxes. In return the dominion promised increased subsidies to maintain the economic stability of the provinces, to reduce taxes, and to expand unemployment insurance and other "social security." The Ottawa government promised to pay to the provinces an "irreducible minimum" of \$12 per capita of 1941 population, and to aid the development of natural resources.

Finance Minister J. L. Ilsley announced to the new parliament on Sept. 28 a reduction of \$1,000,000,000 in war expenditures for 1945, but he cautioned that there could be no substantial reduction in taxes or borrowing as the task of reorganization for peace, the demands of the social service program and the need for credits to other countries would

be too heavy.

France.—The magnitude of the problems faced by the "liberated countries" in Europe was illustrated by the plight of France in seeking to bring economic stability out of the chaotic conditions produced by the war. Following a census of wealth, taken by the government earlier in 1945, the consultative assembly on July 30, 1945, approved a capital levy consisting of two parts, viz., a straight levy on current net worth, and a special levy on the increase of wealth between Jan. 1940 and June 1945. The levy on net wealth was to rise progressively from 3% on smaller fortunes to 20% on amounts exceeding 300,000,000 francs after allowing certain exemptions. Provision was made for collection in four instalments in the 1946-49 period. It was estimated by the ministry of finance that this levy would bring the government more than 100,000,000 francs. The levy on wartime increments of wealth, to be paid in 1946, was to rise progressively from 20% on modest fortunes to 100% on

**Tea.** The production of tea began to recover in 1945 and supplies were increased as shipping improved. The Combined Food Board's London tea committee allocated the supply through 1945 as in previous years. The imports in 1944 were reported to be about 90,000,000 lb. which was approaching prewar levels. In 1945 the per capita consumption was estimated to be .66 lb. compared with .67 lb. prewar average. Some types of tea were scarce and stocks reduced. Military requirements of the United States forces were relatively small which accounted for the control being placed in London where tea is regarded as an essential beverage. Imports were expected to quickly reach normal levels in 1946. (J. C. Ms.)

**Technicolor:** see MOTION PICTURES.

**Tedder, Sir Arthur William** (1890— ), British air officer, was graduated from Magdalene college, Cambridge, in 1912, and served with the royal flying corps in France during World War I. In 1936, he became air officer commanding the R.A.F. in the far east. He was promoted to deputy commander in chief of the R.A.F., 1940, and to commander in chief, 1941. In 1942, Tedder effectively co-ordinated the air and ground forces in the great El Alamein drive that started in October. He was subsequently knighted, made vice-chief of the air staff and was named air chief of the Mediterranean theatre, Feb. 11, 1943. On Dec. 28, 1943, he was named deputy supreme commander of Allied invasion forces under Gen. Dwight D. Eisenhower. After Air Chief Marshal Leigh-Mallory had been transferred to the southeast Asia theatre of war, Oct. 15, 1944, Sir Arthur directed Allied air operations in western Europe. Tedder signed the German surrender documents in the Berlin ceremony, May 8, 1945, as deputy commander of the Allied armies, representing Gen. Eisenhower. The air ministry announced, Oct. 19, that Tedder would replace Lord Portal as chief of the air staff and first and senior member of the air council on Jan. 1, 1946.

**Telegraphy.** Some of the developments of 1945 and previous years, which were not mentioned because of military secrecy, are discussed below.

**Transocean Telemeter Service.**—A telemeter system using the varioplex principle was installed between Washington and London. This system provides 12 two-way telegraph channels over one land line circuit, Washington to New York, and a submarine cable, New York to London. Each of the channels is equipped with two automatic printing telegraph machines, one for transmitting and one for receiving. By means of a cryptographic unit known as the "telekrypton," messages are automatically and simultaneously incoded as they are typed on the sending teleprinter, in Washington for example, and automatically decoded as they are received in London. Due to the efficiency of such an arrangement this special telemeter service was used extensively prior to and during the Allied invasion of France and Germany. Similar service was also inaugurated on the maritime cables between Canada and Newfoundland.

**Telefax (Automatic Facsimile Telegraph).**—An increasingly large volume of telegraph traffic was being handled by telefax. In 1945 more than 1,500,000 messages were handled by this method. The shortage of materials during the war slowed the installation of additional equipment for civilian use, but pro-

vided a period for further improvement and simplification of facsimile equipment. The use of telefax was extended from the handling of train orders by railroads to the rapid handling of air lines reservations. The feasibility of using telefax for a solution of the problem of providing an automatic record communications system for China with its alphabet of several hundred different characters was demonstrated and machines were shipped to China for the modernization of its record communications system. Facsimile messages and pictures were transmitted experimentally over a microwave radio beam circuit and it was expected that the anticipated rapid extension of these circuits would permit an early development of a nation-wide telefax network.

**Concentrated-Arc Lamp.**—An important by-product of telegraph research during the war years was a new device called the "concentrated-arc lamp." An intense cathode spot which does not change its position provides a point source of light as small as 0.003 in. in diameter. Efficiencies of from one to two candle-power per watt are obtained with the lamp. In addition to its use for purely telegraph communications purposes, the concentrated-arc lamp undoubtedly was expected to find important applications in such fields as lensless projection and enlargement, optical testing, photography and in many new devices which a brilliant point source would make possible.

**Carbonyl Iron.**—Research work with carbonyl powdered iron was continued during 1945 particularly in the use of this material for cores in high-frequency coils and transformers. Filters built with these coils served in some applications where crystal filters were formerly thought necessary.

**Automatic Equipment.**—Design changes were made in printing telegraph equipment which permitted operating speeds to be increased for special purposes from the standard 65 words per min. to 100 words per min. Portable test instruments (impulse-measuring sets) were designed to record teleprinter transmission for the purpose of adjusting equipment and measuring transmission losses, without stopping the circuit operation. An improved synchronizing method was developed for multiplex distributors thus making it practicable to use four channel multiplex equipment on long radio circuits, whereas the use of this equipment had previously been confined to land line operation.

**Radio Beam Telegraph.**—One of the most significant advances in the communications field during the war years was the development of a microwave radio beam relay system, which would provide a larger number of channels than were available for the handling of telegraph traffic and would also provide circuits for new uses such as telefax operation and for special leased networks required by large users of the telegraph. An experimental system in operation between New York and Philadelphia indicated that this method of transmission would improve the quality, dependability and speed of telegraph service. New design antennas equipped with parabolic reflectors transmit the signals in a narrow beam using a power of less than one watt. Unattended repeater stations located in towers on hills or mountains roughly 30 mi. apart, depending on the line of sight, automatically relay the telegraph signals without causing delay or interference.

FILMS.—*Development of Communication* (Encyclopædia Britannica Films Inc.). (J. L. E.)

**Telephone.** Until World War II ended, the first effort of the telephone industry in the United States in 1945 was to supply all needed communication and electronic equipment for the fighting forces, and to meet, on the home front, all war needs for local and long-distance service. The arrival of peace made it possible for telephone companies and

TELEPHONE LINEMAN in the U.S. army as he helped to keep communication wires in order on Okinawa during 1945

manufacturers to turn again to the needs of the home front where provision of many service facilities had necessarily been held in abeyance.

At the end of the year, the number of telephones in the U.S. was approximately 27,700,000, an increase during the 12 months of about 850,000. There were about 2,000,000 applications for main telephone service being held awaiting the provision of facilities. These were due in part to lack of telephone instruments, but the larger number of the applications held were due to shortages of cable or central office switching facilities. During 1945, telephone factories produced about 1,000,000 telephones for civilian use, together with many switchboards and related equipment. The industry expected it would be some time before all orders for telephone service held for lack of facilities could be filled, but before the end of 1945 an emergency program was in full swing to meet the needs of all waiting customers as quickly as that could be done.

Records were set in the volumes of local and long-distance calls handled. Local calls averaged 104,000,000 daily, compared with 101,700,000 per day for the preceding year. Completed toll and long-distance calls averaged approximately 4,900,000 daily, an increase of about 400,000 per day over 1944.

As in other years, special efforts were made to provide prompt and pleasing service to men and women in uniform. As many thousands of veterans returned to the U.S. from overseas, telephone centres staffed with experienced employees were ready at debarkation and demobilization points to assist them in placing their calls. To help handle these calls, many new long-distance circuits were put in with record speed.

Following the war's end, it was possible to disclose some of the wartime research and production achievements of the telephone industry. Telephone laboratories were revealed as major

contributors to electronic developments such as radar. Telephone factories were major sources of radar sets, electrical gun directors and computers, and combat radio receivers and transmitters. These products were in addition to great quantities of field telephones, switchboards and wire supplied to the armed forces.

To provide service for all who want it, to restore adequate telephone facilities and to develop numerous improvements in service, the Bell system at the war's end inaugurated the largest construction program in its history. Among other objectives, the program aimed to make telephone service available to 1,000,000 additional farm homes within the forthcoming few years. As part of over-all plans to strengthen the long-distance networks, some 1,500 mi. of coaxial cable had been placed in the ground by the year's end, with several thousand more miles scheduled for completion in the forthcoming few years. Suitably equipped, this type of cable can transmit television or carry several hundred telephone conversations simultaneously. Such a system, therefore, not only provides needed additional telephone circuits in large quantity, but can also serve as the basis for a nation-wide television network.

During the year, construction was also going forward on two experimental microwave radio relay systems that were expected to be suitable for transmission of telephone messages or television. Plans to provide mobile radiotelephone service to vehicles, permitting two-way voice communication between mobile units and any regular telephone, were announced. Progress also was reported in the automatic long-distance switching program, the goal of which is to enable any operator to dial direct, without assistance of another operator, any telephone in the United States.

FILMS.—*Development of Communication* (Encyclopædia Britannica Films Inc.). (W. S. G.)

**Television.** United States.—Television in 1945 moved much nearer to the establishment of a nation-wide sight and sound entertainment and educational service. One of the main issues was settled on June 27, 1945, when the Federal Communications commission announced frequency allocations for television. There were 13 six megacycle (mc.) channels established; six of which were located between 44 and 88 mc. and seven were between 174 and 216 mc. The 44 to 88 mc. band included, in addition to the six television channels, 4 megacycles between 50 and 54 mc. for amateur use and 4 megacycles between 72 and 76 mc. for nongovernment fixed and mobile services. Frequencies were assigned by the commission between 480 and 920 mc. for experimental broadcasting of both high resolution monochrome television and television in colour.

It was estimated that the 13 channels allocated to commercial television broadcasting would permit more than 400 stations throughout the United States with a maximum of seven in any metropolitan area. In the congested eastern seaboard region, interference problems limited the number of stations which could be allocated to cities such as Philadelphia, Baltimore and Washington. The Federal Communications commission had on file at the end of the year more than 130 applications for commercial television broadcasting licences.

A renewed interest in television program experimentation was evident during the year. Live talent studio pickups which had been discontinued during World War II were resumed. Numerous outdoor and indoor sporting events were televised. One of the notable events of the year was the broadcasting by stations in New York, Philadelphia, Pa., and Schenectady, N.Y., of the Army-Navy football game from the Municipal stadium, Philadelphia. The program was relayed to New York by coaxial cable and on to Schenectady by radio relay.

Further progress on the network problem was announced during the year. The American Telephone and Telegraph Co. completed its coaxial cable installation from New York to Washington, D.C., through Philadelphia as an intermediate point. For comparative purposes, the Telephone company was installing a radio relay link between New York and Boston, and expected to have by 1950 a coast-to-coast radio and cable network for television program distribution. Early in the year, the Philco corporation gave a demonstration of a television radio relay system between Washington and Philadelphia, and other organizations announced plans for the study of radio relay systems for television.

The inability to televise scenes under unfavourable light conditions has been a serious limitation to the broadcaster. That a satisfactory solution to this problem is at hand was indicated by the announcement of a new pickup tube developed by the RCA laboratories. The new tube, called the Image Orthicon, has a light sensitivity at least 100 times greater than prewar camera tubes. A television camera employing this tube was used by the National Broadcasting company to broadcast the Navy day dinner from the dimly lighted ballroom of the Waldorf Astoria hotel.

The Westinghouse company announced that in a co-operative venture with the Glenn L. Martin company it planned to investigate the possibility of broadcasting both frequency modulation and television programs from transmitters in planes flying at altitudes of 30,000 ft.

During the year, several demonstrations were given of projection type home television receivers equipped with special optical systems having high light efficiency and producing pictures approximately 18 by 24 in. It was expected that both direct viewing and projection type receivers would be ready for sale by the summer of 1946. (B. E. Sd.; G. L. Bs.)

**Great Britain.**—The report of the television committee, appointed in 1944 to prepare plans for the reinstatement and development of postwar television in Britain, was published early in 1945. The principal conclusions reached were that the television service should be recommenced on the standards in use before World War II (405 lines, interlaced, 25 frames per second) and that the service should be extended to six of the most populous centres in the provinces as quickly as possible. At the same time it was recommended that vigorous research should be begun on an improved system with a definition approaching that of the cinema and possibly incorporating colour and stereoscopic effects.

It was hoped that the television service would ultimately become self-supporting and not depend for part of its revenue on the ordinary broadcast licence fees and grant from the government, as in prewar days. To

this end it was suggested that a special licence for domestic viewers of £1 per annum should be introduced and that a cinema licence should be made available later.

Among the reasons given for the committee's recommendation were the importance of starting the public service again with the minimum of delay, the prevention of the dispersal of highly-trained staff from the BBC television station (most of whom were engaged in war work), avoiding the scrapping of the existing receivers in the hands of the public, and the difficulty of putting a greatly improved service into use within a reasonable time. "To leave a gap of some years without any television service would dampen interest and seriously retard commercial development in this country."

On the question of international standardization, the committee agreed that, while for the present it was not possible to fall into line with the existing U.S. practice, the earliest opportunity should be taken of reaching international agreement on the bands of frequencies to be allocated to television. On Nov. 5 the BBC announced the appointment of Maurice Gorham to take charge of the television service when it should begin. It was stated also that in addition to the London station at the Alexandra palace it was proposed to open six stations in the provinces, all transmitting the same program. It had not been found possible to increase the 40-mi. radius of transmission, but with the seven-station link-up 75% of the country's population would be able to see the program. Further appointments to the projected service announced later were those of D. C. Birkinshaw to be superintendent engineer from Dec. 1 and of H. W. Baker to be engineer-in-charge, television station Alexandra palace from Dec. 5.

**Europe.**—It was reported from France that the Paris television service had been resumed in 1940 under German control on a standard of 441 lines. On their departure from Paris, the Germans wrecked the Eiffel tower transmitter and dismantled the studio equipment. In 1945 it seemed probable that the service would be resumed on the old standard of 441 lines 50 fields, interlaced, as soon as the necessary repairs could be made.

It was also reported that R. B. Barthelemy, the well-known French radio engineer, had developed a system of 1,000 lines definition, using a pick-up camera of a new type.

**BIBLIOGRAPHY.**—*Report of the Television Committee* (H. M. stationery office). (G. P.)

**Tellurium.** The production of tellurium in the United States increased from 56,174 lb. in 1943 to 69,025 lb. in 1944, but sales dropped 62,260 lb. to 45,323 lb., and stocks rose to 163,105 lb. In Canada production was low—8,600 lb. in 1943 and 10,166 lb. in 1944, but the preliminary estimate of the 1945 output rose to 42,000 lb. Several other countries were producers on a smaller scale, but no figures were available in 1945. (G. A. Ro.)

**Tennessee.** A south central state, 16th to enter the union, called the "Volunteer state." Land area 41,961 sq.mi., water area 285 sq.mi. Population (1940) 2,915,841; rural 1,888,653; urban 1,027,206; rural farm 1,271,944; native white 2,395,586; Negro 508,736; foreign-born 11,320; other races, 199. The bureau of the census estimated the civilian population on July 1, 1944, at 2,870,158. Capital, Nashville (167,402). Other cities include Memphis (292,942); Chattanooga (128,163); Knoxville (111,580).

CONTROL ROOM at the New York studios of television station WCBW on the Columbia Broadcasting System during 1945

**History.**—Governor of Tennessee in 1944-45 was James Nance McCord; secretary of state, Joe C. Carr; state treasurer, C. C. Wallace; comptroller of the treasury, Sam K. Carson; adjutant general, Rufus E. Fort, Jr.; attorney general, Roy H. Beeler. Commissioners were as follows: agriculture, O. E. Van Cleave; conservation, Paul S. Mathes; education, Burgin Dossett (superintendent of schools, appointed by governor); finance and taxation, George F. McCanless; highways and public works, C. W. Phillips; institutions, Dr. W. O. Baird; welfare, William A. Shoaf; insurance and banking, James M. McCormack; labour, W. E. Jacobs, Sr.; public health, Dr. R. H. Hutcheson; railroad and public utilities, Sam Pharr, Leon Jourolman, Jr., John Hammer; safety, Lynn Bomar; employment security, W. O. Hake.

**Education.**—In 1944, of 5,067 elementary schools, 1,464 had three or more teachers; the number of one-teacher schools declined from 3,555 in 1927 to 2,393 in 1944. Enrolment in elementary schools in 1944 was 496,844. In 1944 there were 557 high schools with a total enrolment of 109,576; the number of teachers, 5,074.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In Oct. 1944, the total amount of assistance was \$974,348; 37,805 old-age recipients received \$607,098; aid to dependent children, 29,092 (11,060 families), totalled \$336,572; aid to the blind, 1,537, amounted to \$30,498. In 1944-45 there were eight correctional institutions; expenditures \$1,576,521. Separate schools were maintained for the blind, the deaf and the underprivileged; three state hospitals for the insane; a home and training school for feeble minded.

**Communications.**—Of about 82,000 mi. of public road, 7,491 mi. were state highways; state expenditures were \$10,259,662 for the year ending June 30, 1945. There were 3,507 mi. of railroads in Dec. 1944. As of Oct. 1945, there were 879 mi. of designated airways and 39 airports, of which eight were class I, 17 class II, seven class III, four class IV and three class V—class V accommodating the largest planes. There were 353,400 telephones in the state, 245,100 residential and 108,300 business. Water-borne commerce on the Tennessee river in 1943 amounted to 2,869,218 short tons; Cumberland river 712,059, Mississippi river 10,891,691 short tons from Ohio river to Baton Rouge, La., and 3,088,357 at Memphis.

**Banking and Finance.**—In April 1945 there were 70 national banks, and in June 1945, 222 state banks; assets \$1,215,916,000 for national and \$552,843,845 for state banks; deposits \$1,154,975,000 for national banks and \$522,117,265 for state banks. Savings and loan associations, Dec. 31, 1945, numbered 39 with assets of \$49,831,641.

Total state revenue for the fiscal year 1944-45 was \$55,638,228; revenue shared with counties and cities, \$7,593,200; revenue for state purposes, \$48,045,028. Direct bonded debt for the state was \$76,355,500; highway reimbursement debt \$7,060,137; gross debt \$83,415,637; unencumbered surplus in sinking fund \$7,525,245; net debt \$75,890,392.

**Agriculture.**—There were 239,285 farms in 1945; 18,005,762 ac. in farms. Gross value of agricultural production in 1944, was \$425,543,000; cash farm income, \$330,402,000 (including government payments); cash farm income from crops was \$156,003,000; from livestock and livestock products \$159,000,-

000; government payments to farmers \$15,399,000. Gross farm income from crops was \$192,185,000 in 1944. The forest area was about 14,000,000 ac.

**Manufacturing.**—In 1939 (the latest data available in 1945), 2,289 manufacturing plants yielded products valued at \$728,087,825, of which \$320,341,902 was added by manufacture. The number of wage earners increased from 107,645 in 1925 to 131,874 in 1939; wages paid in 1939, \$109,661,769.

**Mineral Production.**—The total value of minerals produced

Table II.—Principal Mineral Products of Tennessee, 1944 and 1943

Mineral	Value, 1944	Value, 1943
Coal . . . . .	\$23,088,000	\$20,321,025
Stone . . . . .	7,776,775	10,047,944
Zinc . . . . .	9,309,468	9,021,456
Cement . . . . .	6,080,921	7,342,894
Sand and gravel . . . . .	2,314,478	2,285,339
Clay products (other than pottery and refractories) . . . . .	1,500,000	1,800,000
Lime . . . . .	1,246,802	1,503,850
Clay, raw . . . . .	764,016	759,806
Barite . . . . .	279,567	383,007

in Tennessee in 1944 was \$63,382,000 compared with \$64,485,000 in 1943. (C. E. A.)

**Tennessee Valley Authority.** With the end of World War II in 1945, TVA again turned its attention to its long-range peacetime function. Conversion from war to peace did not involve any major changes, for TVA's role, both in war and peace, is the development and prudent use of the region's natural resources.

Thus, 1945 saw the virtual completion of its system of dams and their attending reservoirs, the creation of a 650-mi. deep water navigation channel, the capacity to impound immense quantities of potentially dangerous floodwater, and the production of about 12,000,000,000 kw.hr. of electricity.

The two largest dams in the TVA system, Kentucky and Fontana, were completed during 1945. The system's total reached 22, 16 of which were built by TVA. The completion of the Kentucky dam and reservoir assures a substantial measure of flood control in the Mississippi river, south of Cairo, Ill., for this one reservoir alone provides more than 4,000,000 ac.-ft. of useful flood storage and is capable of reducing the flood crest about 3 ft. at Cairo, Ill. All five of Kentucky's generating units, totalling 160,000 kw., were in operation as the year closed. The Fontana dam on the Little Tennessee river is the fourth largest concrete structure in the world. It is 480 ft. high and contains approximately 3,000,000 cubic yards of concrete. It was completed on a wartime 24-hour schedule in about three years. Two of its three units, totalling 135,000 kw., were operating in 1945.

Three-quarters of TVA power prior to V-J day was used for war purposes, either directly by industry from the TVA transmission system or through the facilities of 138 municipal and co-operative distributors. On Jan. 30, 1945, when the Fontana reservoir reached operating level, TVA under its agreement with the Aluminum Company of America began directing releases from the latter's reservoirs, thus integrating their operation with that of TVA dams, to assure maximum flood control and power production.

At the close of 1945, the TVA installed generating capacity was 2,264,982 kw., not including 311,120 kw. of installed capacity in the Aluminum Company of America dams.

Gross power revenues in the fiscal year ending June 30, 1945, were \$39,383,231 and net income after all power expenses amounted to \$17,945,460. Return on the average power investment was 4.76%.

Retail power distribution by 138 locally owned and managed municipal and co-operative systems brought them gross revenues of \$38,293,500 and a combined net income of \$7,326,000. About 600,000 consumers were being served by these systems.

Table I.—Leading Agricultural Products of Tennessee, 1945 and 1944

Crop	1945*	1944
Corn, bu. . . . .	67,151,000	59,950,000
Tame hay, tons . . . . .	2,628,000	1,601,000
Cotton, bales . . . . .	495,000	562,000
Wheat, bu. . . . .	5,688,000	6,714,000
Tobacco, lb. . . . .	131,985,000	125,645,000
Potatoes, bu. . . . .	3,485,000	2,464,000
Sweet potatoes, bu. . . . .	3,300,000	4,128,000

\*Estimated.

Domestic consumers under TVA rates used an average of 1,754 kw.hr. during the year and paid 1.85 cents per kw.hr., as compared with the national average use of 1,186 kw.hr. and national average domestic rate of 3.47 cents per kw.hr.

Four distributors—Starkville and Columbus, Miss., and Trenton and Lewisburg, Tenn.—initiated rate reductions saving their consumers \$100,000 annually. Four others previously had gone on the lower rates. The new domestic rate was about 25% below the standard TVA domestic rate, while savings to commercial and industrial consumers ranged from 1% to 20%.

TVA achieved a 26% increase in output of elemental phosphorus, an important munition. TVA shipped 8,314 short tons of anhydrous ammonia and 15,360 short tons of munitions grade ammonium nitrate crystal to the ordnance department during the fiscal year. Ammonium nitrate fertilizer produced totalled 111,390 short tons. Calcium carbide production for the synthetic rubber program totalled 82,455 short tons in the fiscal year 1945.

Increased demands for elemental phosphorus caused a fourth successive annual reduction in production of concentrated phosphatic fertilizers which had been used with success in soil- and water-conserving types of agriculture on test-demonstration farms in 28 states. Of the 29,793 short tons of phosphorus produced, an all-time high, 4,041 short tons were available for fertilizer. This was used to produce 22,358 short tons of concentrated super-phosphate and 4,149 short tons of calcium metaphosphate. TVA also produced 6,440 short tons of dicalcium phosphate for use as a supplement to stock feeds, helping replace shortages caused by cutting off of U.S. imports of bone meal.

TVA forestry activities were aimed at increasing timber output for war and at the same time encouraging cutting practices which preserve forests and woodlands as future assets. The Tennessee valley, it is estimated, produced 600,000,000 bd.ft. of lumber during 1945. During the year, 100 demonstrations of sustained-yield management were established co-operatively with state extension services or conservation departments. The woodland management program was extended to 11 new counties, making a total of 78 valley counties having one or more demonstrations.

By June 30, 1946, the TVA would have received congressional appropriations totalling \$677,617,270 and \$63,072,500 from sale of bonds.

At the close of the fiscal year 1945, TVA employees totalled 12,348. The board of directors consisted in 1945 of David E. Lilienthal, chairman, Harcourt A. Morgan and James P. Pope. (See also DAMS; ELECTRICAL INDUSTRIES; PUBLIC UTILITIES.) (K. R. K.)

**Tennis.** The end of World War II, and the defeat of Japan in midsummer enabled more tennis tournaments to be held in 1945 than in 1944, although lists were still depleted, and often composed largely of servicemen out of training. The national championships were as usual held on the Labor day week end at the West Side Tennis club, Forest Hills, L.I. Although few foreign entrants competed, and the majority of the best men in the U.S. were still overseas, more players took part than in 1944. The singles title was again won by Sgt. Frank Parker, who again defeated William Talbert, this time in three sets; 14-12, 6-1, 6-2. The best match of the tournament was the final of the women's singles, won by Mrs. Elwood T. Coke, who as Miss Sarah Palfrey won her first national championship in 1930. Returning to competitive play after an absence of several years, she defeated Miss Pauline Betz, who had won three successive singles titles, by a score of 3-6, 8-6, 6-4.

(J. R. T. V.)

**Termites:** see ENTOMOLOGY.

**Teschen.** The district of Teschen was in 1945 disputed between Czechoslovakia and Poland. The duchy of Teschen (Tessin) was originally ruled by Polish princes but became a part of the lands of the Bohemian crown in 1335. It is of great strategic and economic importance. It is the watershed between the Vistula (Baltic sea) and the Danube (Black sea) and the crossroads of the railroads from Berlin to Budapest and from Vienna to Warsaw. In its territory are important coal mines on which Czechoslovak industry largely depended.

Czechoslovakia and Poland disputed the area in 1919. The Council of Ambassadors decided on July 28, 1920, to partition the territory, and the solution was accepted though against Polish wishes. The weakness of Czechoslovakia at the time of the Munich crisis was used by the then Polish government to present an ultimatum to Czechoslovakia for the Czechoslovak part of the Teschen district. In 1945, in spite of all protestations of Slavic brotherhood and in spite of the fact that both governments were Russian controlled, the struggle for Teschen flared up with undiminished violence between the two governments. The Polish army occupied the territory on June 19. The Czechoslovak government immediately protested. It declared that any cession of the territory to the Poles would affect the most vital interests of Czechoslovakia. In spite of many attempts no agreement was reached during 1945. The question was left to a decision by the peace conference. (H. Ko.)

**Texas.** A west-south-central state of the United States; the 28th state admitted to the union on Dec. 29, 1845. Popular name, "Lone Star state." Area, 263,644 sq.mi. of land and 3,695 sq.mi. of inland water surface. Pop. (July 1, 1944) 6,876,248; est. Jan. 1, 1945, 6,750,000. Rural pop. (1940) 3,503,435 or 54.6% of total. During the World War II period rural migration to industrial centres amounted to 500,000; there was a moderate reversal of migration, city to country, during the latter part of 1945. White pop. (1940) 5,487,545; Negro, 924,391; other 2,888. Native pop. 6,179,296; foreign-born 235,528, principally from Mexico. Capital, Austin (87,930 in 1940). Four largest cities (1940): Houston (384,514); Dallas (294,734); San Antonio (253,854); Fort Worth (177,662). These cities accumulated approximately 25% additional population each, 1940-45.

**History.**—The closing of large ordnance, aeroplane and ship-building plants, built for war production, was the outstanding event of 1945, causing some redistribution of population and lessening of drastic labour shortage. The only state election in 1945 was on Aug. 25 when three constitutional amendments were adopted, increasing the supreme court from three to nine members; providing for soldier voting without poll tax for a limited time after the war; and giving state agencies wider discretion in distribution of social welfare benefits; one amendment, increasing legislative pay, was defeated. Submission of these amendments was the principal permanent result of the 49th legislature in biennial session Jan. 2 to June 5. The controversy over University of Texas control continued during 1945 with the institution placed on probation by the Southern Association of Colleges and Secondary Schools.

The principal state officers (biennium, Jan. 1, 1945, to Dec. 31, 1946) were: governor, Coke R. Stevenson; lieutenant governor, John Lee Smith; secretary of state, Claude Isbell; comptroller, George H. Sheppard; attorney-general, Grover Sellers; treasurer, Jesse James; superintendent of public instruction, L. A. Woods; state land commissioner, Bascom Giles; chief justice of the supreme court, James P. Alexander; railroad commission (having administration of transportation, oil and nat-

ural gas), Olin Culberson (chairman), Beauford Jester and Ernest O. Thompson.

**Education.**—Expenditures for public schools in 1945 were \$130,000,000, from about half state and half local revenue. There were 1,007 independent and 4,841 common school districts; 1,246 accredited four-year high schools. Scholastic population (6-17 years) in 1944-45 was 1,495,974; enrolment, 1,043,438. Classroom teachers, 36,602. Average salary: white \$1,354; Negro, \$920. University enrolment (1945-46) 7,729, was 34% less than the prewar average. Enrolment of seven state teachers' colleges was 4,820, also considerably under the prewar normal.

**Social Insurance and Assistance; Public Welfare and Related Programs.**—On old-age pension rolls were 175,000 persons; aid to dependent children, 10,500 persons; aid to blind, 4,600 persons. Average monthly payments: old-age, \$21.00; dependent children, \$9.00 per child and \$21.00 per family; blind, \$24.00.

As of Dec. 31, 1945, there was available for payment of unemployment compensation a sum of \$154,575,189. Employers in Texas subject to the Unemployment Compensation act in 1945 numbered 20,624. Total taxable wages paid by these employers to their workers in 1945 was somewhat in excess of \$1,500,000,000 and taxes amounted to about \$14,000,000. During the calendar year 1945 the Unemployment Compensation commission paid \$3,971,526 in unemployment benefits. However, these payments increased from month to month throughout the year, from about \$54,000 in January to \$1,219,166 in December.

All forms of pension payments, after declining for several years, turned upward in latter 1945. State eleemosynary institutions included 12 hospitals for mental diseases, a sanatorium for tuberculars, a state school for the blind white, a state school for the deaf white, a state school for blind and deaf Negroes, two homes for delinquent white children, two homes for white orphans, one home for Negro orphans and one home for crippled white children.

**Communication.**—The public road system had a total mileage of approximately 195,000, of which 24,664.96 mi. were in the designated highway system on Aug. 31, 1945. Total disbursements, 1944, were \$46,615,967.39. Texas railway main line trackage was 15,752.73 mi. Truck line revenue was \$44,401,557.49; bus, \$42,560,560.00. Texas had approximately \$20,000,000 annually of foreign exports; \$1,500,000 of foreign imports; \$66,000,000 annually of outbound coastwise shipments; and \$6,000,000 of inbound shipments. Nine commercial air lines traversed the state, with a total of 294 commercial airports. Telephone exchanges numbered 1,061; total telephones, 983,941.

**Banking and Finance.**—There were on Jan. 1, 1945, 398 state and 436 national banks with resources of \$780,910,000 and \$4,092,473,000, respectively; total, \$4,873,383,000. Life insurance in force amounted to \$4,663,000,000. The number of policies was 5,168,000. Total state government disbursements were \$185,000,000, of which 37% was for education; 29% for pensions and benefits; 20% for highways; 14% for administrative, legislative and judicial.

**Agriculture.**—The total crop value in 1945 was \$754,914,000, a marked decline from 1944 because of drought conditions in parts of the state. Cotton acreage of 6,000,000 and production of 1,820,000 bales were the lowest after 1895, the result of 15 years of cotton decline as acreage was diverted to other crops. The census of 1945 showed a continued decrease in the number of farms and number of tenants and an increase in the average size of farms and the degree of mechanization. More than 50 crops were produced on a commercial scale during 1945.

Table I.—Leading Agricultural Products of Texas, 1945

Crop	Production	Value
Cotton lint (bales) . . . . .	1,820,000	\$193,830,000
Wheat (bu.) . . . . .	41,778,000	61,414,000
Corn (bu.) . . . . .	66,832,000	80,198,000
Sorghum for grains (bu.) . . . . .	60,921,000	71,887,000
Cottonseed (short tons) . . . . .	741,000	39,273,000
Rice (bu.) . . . . .	18,000,000	34,560,000
Oats (bu.) . . . . .	42,441,000	29,284,000
Grapefruit (boxes) . . . . .	23,000,000	28,750,000

The value of all livestock on Texas farms on Jan. 1, 1945, was \$583,259,000.

Table II.—Number and Value of Livestock in Texas, Jan. 1, 1945

Livestock	Number	Value
All cattle . . . . .	7,590,000	\$376,241,000
Milk cows only . . . . .	1,593,000	103,545,000
Hogs . . . . .	2,019,000	32,182,000
Sheep . . . . .	10,091,000	60,673,000
Goats . . . . .	3,500,000	15,050,000
Horses . . . . .	559,000	30,713,000
Mules . . . . .	372,000	29,597,000
Chickens . . . . .	33,972,000	34,651,000
Turkeys . . . . .	856,000	4,152,000

**Manufacturing.**—Because of the large amount of Texas manufacturing which was diverted to war production, no data were issued after 1940 when there were 5,376 plants with 126,996 wage earners and a value of \$1,530,220,676 of production. The total value of production in 1945 was estimated at \$3,000,000,000, a precipitate drop from approximately

Table III.—Leading Mineral Products of Texas, 1944

Mineral	Quantity	Value
Oil, bbl. . . . .	748,947,000	\$906,226,000
Natural gas, cu. ft. . . . .	1,323,885,000,000	199,900,000
Natural gasoline, gal. . . . .	1,196,237,000	57,030,000
Sulphur, short tons . . . . .	2,582,237	38,174,544

\$4,500,000,000 in 1944, because of the closing of most of the war plants in the latter part of 1945.

**Mineral Production.**—Texas in 1944 was the leading mineral producing state with a total value of production of \$1,160,000,000. Petroleum, natural gas and natural gasoline accounted for a large percentage of this value, though there were approximately 60 other kinds of minerals produced commercially. (S. McG.)

**Texas, University of.** A co-educational institution of higher education at Austin, Tex., with seven schools and colleges and a graduate school. The 63rd annual session opened Sept. 1, 1945, continuing under the trimester calendar which was to revert to the two-semester basis in Sept. 1946. There were 9,191 students enrolled, including 2,260 veterans of World War II. Emphasis was given in mathematics, natural sciences, engineering, business, social sciences and graduate work in all fields in which interest was shown by the veterans, and special housing was provided for this group within the resources of the institution. The navy V-12 program, which had been in operation from July 1943, was continued through the school year, although with fewer trainees than in former years. The third co-operative summer field school was held in Mexico City in 1945 under the joint direction of the University of Texas Institute of Latin American Studies and the National University of Mexico, and the program of teaching of English as a second language was continued with a special six weeks' program for teachers. The medical school is located at Galveston, Tex., the school of dentistry and the M. D. Anderson Hospital for Cancer Research are both in Houston, Tex., the College of mines and metallurgy is in El Paso, Tex., all of which are branches of the University of Texas. (For statistics of enrolment, faculty, library volumes, endowment, etc., see UNIVERSITIES AND COLLEGES.) (T. S. P.)

**Textile Industry.** Superimposed upon the normal business of the textile industry of supplying clothing for the United States was the additional task of supplying clothing, parachute cloth and hundreds of other items for the armed forces, as well as industrial fabrics in unprecedented volume for war industries. After cessation of hostilities in 1945, the industry faced a continued record demand for the immediate postwar period—and threatened then to revert later to its position of one of the most easily depressed of all industries.

The reasons for this apparent paradox were simple. In the first place; textiles were probably the easiest of all major industries to convert to wartime use. Overnight, the industry became the quartermaster general's arsenal of democracy. In the second place, textiles were probably the easiest of all major industries to reconvert to peacetime use. The technical difficulties were negligible compared with most other industries supplying major requirements for World War II.

But it was equally true that the easiest industry for a newly awakened industrial country to "invade" was the textile industry. That was exactly what most of the free or liberated countries were expected to do: start to make textiles.

The U.S., with an increasingly high wage-level, was expected to be at an ever-increasing disadvantage in the production of old-line textiles. Synthetics offered another problem.

From the standpoint of the industry itself, this whole prospect involved problems—but from the standpoint of the consumer it involved better and better textiles, at lower and lower prices. World competition was expected to force research and the results, added to those achieved during the war by research on military fabrics, should mean more versatile, more durable and more attractive fabrics, at less cost. **Theatre.** U.S.—As in 1944 and 1943, the financial prosperity of the theatre in the U.S. in 1945 was out of all proportion to the critical quality of most of the stage offerings. The box office responded to many plays and shows ranging from the but relatively meritorious to the distinctly inferior. Only such as were downright impossible, and were so designated by the critics, were consigned by the public to limbo, and even in this catalogue there were occasional exceptions. Thus, though the majority of the reviewers had forcefully condemned exhibits like *School For Brides* and *Catherine Was Great*, they continued to run far into 1945 from the previous year, the former lasting out the entire season in New York city and the latter achieving 191 performances and thereafter taking to the road with good returns. The abrupt failures indicated only that, despite the public's hunger for the theatre, there was a limit beyond which its appetite, however indiscriminate, simply could not go.

The relatively meritorious plays alluded to were few. *Dark Of The Moon*, by Howard Richardson and William Berney, based upon the paraphrased Barbara Allen folk legend of the Carolina Great Smokies, was one. Though faulty in casting, staging and direction, a measure of poetic imagination emerged from it and two or three of its scenes managed a telling effect. *The Glass Menagerie*, by Tennessee Williams, was to a lesser degree another. Admirably staged and acted—the production was one of the finest the theatre had proffered in some years—the presentation, which dealt with the futile lives of a St. Louis slum family, created an audience mood not readily forgotten. As a playscript, the exhibit was defective, but the arts of the theatre brought to bear upon it contrived to conceal the flaws and to convert it into an impressive stage evening. Laurette Taylor's rare performance, a first-rate company, Jo Mielziner's setting and lighting and Eddie Dowling's direction thus manoeuvred the play into the choice of the New York Drama Critics' Circle as the season's best, though *Dark Of The Moon* might have been a wiser selection.

John Patrick's *The Hasty Heart*, which treated of a stubbornly suspicious and selfish Scot soldier's gradual surrender to the friendly offices of his fellow soldiers, was highly esteemed by some of the reviewers, but seemed to others an essentially grease paint job, though not without one or two episodes that exercised a modicum of sympathetic appeal. John van Druten's sex comedy, *The Mermaids Singing*, though disesteemed by the majority of the reviewers, indicated his locally unmatched talent for such comedy and provided a cultivated theatre occasion. And Harry Brown's play of U.S. soldiers during the Italian invasion, *A Sound of Hunting*, while covering familiar theatrical ground, displayed numerous sound critical virtues, though it, too, was received unfavourably by most of the newspaper critics.

In the musical department, *Carousel*, with music by Richard Rodgers and book, derived from Molnar's *Liliom*, and lyrics by Oscar Hammerstein II, was the year's best. There was, however, very little critical competition, most of the other shows representing a new aggregate low. The losses on these amounted to something well over \$1,500,000, since the public, warned by the critics, would have nothing to do with them. Among the costly failures, which could not draw customers even from an otherwise carelessly spending populace, were *Sing Out, Sweet Land!*, *A Lady Says Yes*, a poor revival of *La Vie Parisienne*, *The Firebrand Of Florence*, *Memphis Bound*, *Hollywood Pinafore*, *Mr. Strauss Goes To Boston*, *Carib Song* and *The Girl From Nantucket*, the last named alone losing something like \$360,000.

Several musicals of indifferent merit succeeded, however, in achieving long and financially blessed runs, among them *Up In Central Park* and *On The Town*, as did also a decidedly poor

LAURETTE TAYLOR and Eddie Dowling in a scene from Tennessee Williams' *The Glass Menagerie*, which was judged the season's best play by the New York Drama Critics' Circle on April 10, 1945

one called *Are You With It?* And a revival of Victor Herbert's melodious *The Red Mill* prospered beyond expectations.

One feature of the year was the number of successful hold-overs from not only the previous year but the years before that. These included the phenomenal *Life With Father*, which entered its seventh year; the ditto *Oklahoma!*; *Harvey*, which was awarded the Pulitzer prize; *Anna Lucasta*, which substituted a second company for the original which in turn scored a great success in Chicago; *I Remember Mama*; *Bloomer Girl*; *Follow The Girls*; *Song Of Norway*; and *The Voice Of The Turtle*.

Dramatic revivals included *The Tempest*, which enjoyed a successful engagement of 100 performances in New York but managed only a mediocre road engagement; a semi-amateur performance of *As You Like It*, which collapsed within a week; *The Barretts Of Wimpole Street*, which scored 87 performances; a short-lived *You Can't Take It With You*; Maurice Evans' duplication of the *Hamlet* which he had presented in Honolulu and elsewhere to the G.I.'s; and Shaw's *Pygmalion* with Gertrude Lawrence in the leading role.

Among the U.S. playwrights of past position, George Kelly appeared with a dramaturgically dubious but periodically interesting study of a female egoist called *The Deep Mrs. Sykes*; Elmer Rice with *Dream Girl*, a suggestion of *Lady In The Dark* without music; Robert Sherwood with an over-garrulous and uninteresting propaganda play, called *The Rugged Path*, about an idealistic newspaper editor's search for his soul; Irwin Shaw with *The Assassin*, a fair to middling melodrama about the Darlan murder; Vincent Lawrence with *The Overtons*, a very uneven but intermittently witty rewrite of an earlier play; Philip Barry with *Foolish Notion*, a juvenile treatment of its characters' imaginings; S. N. Behrman with a lacklustre pro-working man dramatic lecture, *Dunnigan's Daughter*; and Howard Lindsay and Russel Crouse with a critically negligible but prosperous box-office exhibit, *State Of The Union*, dealing with self-seeking politicians in opposition to a political idealist.

Many Hollywood writers hopefully laid siege to the theatre, but mainly with disastrous consequences. Of them all, only

## Statistics of the Theatre in New York City, 1945 and 1944

Approximate cost of production . . . . .	\$4,000,000	\$3,500,000
Number of shows booked for other cities . . . . .	74	91

Arnaud d'Usseau and James Gow managed to find trade with a melodrama of Negro prejudice in the south called *Deep Are The Roots*. Those who discovered that there are as many miles between drama and the motion picture as there are between the Atlantic and the Pacific included in their number B. H. Orkow, with *Star Spangled Family*, Edward Chodorov with *Common Ground*, Les White and Bud Pearson with *Too Hot For Maneuvers*, Jacques Deval with *Oh, Brother!*, Lester Vale with *Devils Galore*, Vera Mathews with *Make Yourself At Home*, Edmund Goulding with *The Ryan Girl*, Harry Kleiner with *Skydrift* and Stanley Richards with *Marriage Is For Single People*.

The new foreign plays were few: Daphne du Maurier's *Rebecca*, a poor dramatization of her novel of the same name; Leslie Reade's dated murder melodrama, *The Stranger*; a minor comedy, *It's A Gift*, by Curt Goetz and Dorian Otvos; *Lady In Danger*, a trashy mystery exhibit by the Australian Max Afford in an adaptation by Alexander Kirkland; Bert Brecht's anti-Nazi alarm, *The Private Life Of The Master Race*; and Terence Rattigan's *O Mistress Mine*, originally titled *Love In Idleness*, a feeble play which served as a vehicle for the Lunts.

The leading metropolitan experimental groups showed nothing of value. Figuring among the various exhibits were the Blackfriars' *Simon's Wife*, by Francis D. Alwaise, an amateur version of the story of Simon, called Peter, and his wife Leah; the same organization's *Home Is The Hero*, a poor, returned-soldier play by Courtenay Savage; the ditto's *Seven Mirrors*, a wholly undramatic effort dealing with woman's duty in a man's world; and the American Negro theatre's *Garden Of Time*, a badly confused analogy laid in ancient Greece and in the modern state of Georgia.

Established U.S. playwrights who were not represented during the year were Eugene O'Neill who, though he had finished at least two new plays, *The Iceman Cometh* and *A Moon For The Misbegotten*, decided to withhold them from production until the next year, when he personally could be present to supervise them; William Saroyan, who had been in the army and was not released until late in the year; Paul Green; Sidney Kingsley, who preferred to seek money in the Hollywood film factories; Clifford Odets, who occupied himself likewise; and John Steinbeck, who spent part of the year in collaboration on a book for a musical comedy, which had not been completed at the year's conclusion.

Among the better-known actors and actresses, Helen Hayes declared her intention of abandoning the stage for a year and devoting herself to the radio; Katharine Cornell appeared at the year's very end in a French-derived version of the classic *Antigone*; Tallulah Bankhead wasted her efforts on the here-before noted *Foolish Notion*; Laurette Taylor, as recorded, scored a personal triumph in *The Glass Menagerie*; and Ethel Barrymore appeared in a revival of Philip Barry's mediocre *The Joyous Season*. Walter Hampden pathetically turned clown in a seedy comedy, *And Be My Love*, by Edward Caulfield, which lasted for only 14 performances; and Bobby Clark turned his comic abilities to some account in Molière's *A Would-Be Gentleman*.

In the way of minor phenomena, the melodrama, *The Drunkard*, first produced by P. T. Barnum in New York city in 1846,

was still running in its 12th successive year at the Theatre Mart in Los Angeles; several companies made their appearances in revivals of *Uncle Tom's Cabin* throughout the country; and *Tobacco Road* was still playing return engagements around the land after all these many seasons. (G. J. N.)

**Great Britain.**—During 1945 the English theatre, especially in London, was submitted to the continuing and ever-increasing strain of war hazards until, in May, relief came. It could hardly be a year of progress and innovation, because peacetime readjustments and rebuildings were inevitably delayed. It was a case of carrying on. Revivals continued to flourish. The repertory of ancient and modern classics at the Haymarket theatre added Webster's little acted but often quoted tragedy, *The Duchess of Malfi*, to its list of achievements and this was succeeded in the autumn by a glittering revival of Oscar Wilde's *Lady Windermere's Fan*. Other classics to be gaily refurbished were *The Rivals*, with Edith Evans, and Pinero's riotous late-Victorian farce, *Dandy Dick*.

The "Old Vic" company remained at the New theatre in London and added the two "Falstaff" historical plays, *Henry IV*, Parts I and II, to their Shakespearean record; the *Oedipus* of Sophocles and Sheridan's *The Critic* were also given. It was determined by the managements at both these theatres that, since so many people of all nations were passing through London, it was essential to keep classics on view, cast and mounted with the best of British resources in acting and decoration. Naturally this reliance on the old and familiar evoked the criticism that companies of such distinction, having the support of the newly formed Arts Council of Great Britain, should be more adventurous and afford more opportunity to the new writer for the stage. New plays, indeed, were not particularly numerous or distinguished. The theatre both in and out of London was suffering, paradoxically, from wartime prosperity. Almost anything presented was liked and runs were consequently long. This meant that stages were fully occupied and that new managements with new ideas found it difficult to procure a place in which to work. Thus the production of fresh plays tended to be on a small scale in outlying or provincial theatres. The Embassy theatre, in south Hampstead, was reopened and did present a series of original pieces, of which Joan Temple's *No Room in the Inn* was an especially lively example, combining effective stagecraft with a remorseless scrutiny of the treatment of derelict and unwanted children in wartime and after. At the tiny Mercury theatre in Notting Hill, room was found for a season of new poetical plays, and the Lyric, Hammersmith, made famous by Nigel Playfair a quarter of a century earlier, was reopened as a home for new plays. In London's West End Daphne du Maurier scored a new success with *The Years Between*; in this, Clive Brook appeared as a soldier-statesman, deemed to have disappeared and died in the maelstrom of Europe, but returned to discover himself replaced in parliament by his wife whose unsuspected political abilities he now found embarrassing. This was one of the best new pieces of 1945.

One of the events of the year was the reopening of the Sadler's Wells opera house in north London with a new and much-applauded opera—*Peter Grimes*—with music by Benjamin Britten, a young British composer of whom much was hoped. Ballet continued to be enormously popular and three companies played simultaneously to packed houses in central London—the Sadler's Wells company, Ballet Jooss, and the International Ballet. (I. Br.)

**Tibet.** A country of central Asia, lying N. and N.E. of the Himalayas, mainly a high tableland. Nominally a Chinese dependency, it is in practice independent. Area, about 450,000 sq.mi.; estimates of the population vary, but 2,000,000 is a probable figure. The religion is Lamaism, a late form of Buddhism modified by animism and primitive magic, and education is in the control of the many monasteries. The ruler is the 14th dalai lama (born 1933) enthroned in 1940 as Lingerh Lamutanchu.

In a statement made in August 1945 before the national supreme defense council and the central executive committee of the Kuomintang, Generalissimo Chiang Kai-shek announced that China must now allow Tibet a high degree of autonomy.

**Tien, Thomas** (1890— ), titular bishop of Ruspe, vicar apostolic of Tsingtao, China, was born at Changtsiu, on Sept. 27. Orphaned as a little boy, he was taken into the Divine Word orphanage at Puoli, first settlement of Divine Word missionaries at Shantung. In early youth he entered the society's minor seminary at Yenchowfu and completed his studies at the major seminary there. Ordained in 1918, he taught mission schools for three years and then was assigned to various missions in Shantung.

He entered the Divine Word novitiate in 1929, made his religious profession 1931 and took final vows in 1934. He became first apostolic prefect of the newly erected Yangkü prefecture. He was consecrated vicar apostolic of Yangkü by Pope Pius XII on the Feast of Christ the King, and was named titular bishop of Ruspe and vicar apostolic of Tsingtao in 1942, succeeding Bishop George Weig, S.V.D.

He was appointed to the Sacred College of Cardinals, according to an announcement of Dec. 23, 1945, and was created and proclaimed cardinal at consistory on Feb. 18, 1946.

Total . . . . .	196	264	276	140	132	112

Since two-thirds of the prewar tin output originated in countries that were occupied by Japanese troops, the tin industry of the world was recast during World War II, and especially the supplies of the United Nations, which had been only partially offset by increased production in countries still accessible. After the loss of the oriental smelting capacity, a tin smelter was built in the U.S., making that country for the war years the largest smelter of tin in the world. Smelters of the U.S., Great Britain and the Belgian Congo handled about two-thirds of the

ore output of 1944.

The government-owned smelter in Texas did not start operation until April 1942, but there was a small amount of smelting done in private plants before that. The salient features of the industry in the U.S. are shown in Table II.

Table II.—U.S. Tin Industry, 1940-44  
(Thousands of short tons)

	1940	1941	1942	1943	1944
Imports, total . . . . .	127.8	169.6	55.7	33.9	49.8

Secondary recovery . . . . .	29.7	37.5	33.9	33.8	29.1
Consumption* . . . . .	97.2	134.7	85.7	80.3	90.0
Stocks† . . . . .	87.7	143.4	144.4	125.5	107.2

\*Includes primary and secondary metal. †Includes ore and metal.

It was not known in 1945 how long it might take to get the eastern sources back into production, and with stocks so low, there was some question whether the supplies on hand would carry through the reconversion period and get industry back on its way to normal civilian consumption. It might be from one to two years before production could come back to the prewar level. The situation was improved somewhat, however, by the recovery of moderate stocks of Japanese-produced tin in the reoccupied countries.

Operation of the Texas smelter would seem to be assured until the eastern smelters could be rehabilitated, but its final disposition would be a matter for international agreement. (See also METALLURGY; MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. Ro.)

**Titanium.** After 1943 the former heavy imports of ilmenite from India were largely replaced by domestic output, and the U.S. had been much more nearly self-sufficient in its supply of titanium. The salient statistics of the industry during World War II are shown in the table.

Statistics of Titanium Industry, 1940-44  
(In short tons)

	Gross weight		TiO <sub>2</sub> content		Total	Imports	
	Ilmenite	Rutile	Ilmenite	Rutile		Ilmenite	Rutile
1940 . . . . .	20,702	2,888	9,505	2,475	11,980	223,891	2,164
1941 . . . . .	21,526	3,130	9,930	3,192	13,122	170,689	6,291
1942 . . . . .	93,397	2,648	41,328	2,466	43,794	10,407	10,525
1943 . . . . .	211,715	3,987	94,283	3,639	97,922	78,093	14,338
1944 . . . . .	280,791	6,922	128,095	6,312	134,407	108,948	10,019

Of the total ilmenite supply in 1944, 97% went into pigments, and the remainder into alloys and cemented carbides; of the rutile, 73% was used in welding rod coatings; and most of the remainder in alloys.

**Canada.**—Production of ilmenite concentrates in Canada had been declining sharply with the passing of war demand. Output dropped from 69,437 short tons in 1943 to 33,973 tons in 1944, and an estimated 13,307 tons in 1945. (G. A. Ro.)

**Tito:** see BROZOVICH, JOSIP (TITO).

**Tobacco.** A record crop of tobacco was harvested in the United States in 1945 following the near-record crop of 1944. The grand total of all types was estimated at 2,041,800,000 lb. compared with 1,952,000,000 lb. harvested in 1944 and an average of 1,392,300,000 lb. 1934-43. While average yields were lower, the larger acreage produced the big crop. The total acreage harvested was 1,845,900 ac. in 1945, 1,751,000 in 1944 and averaged 1,505,800, 1934-43. The yield in 1945 was 1,106 lb. per acre, 1,117 lb. in 1944 and 925 lb. average. About 57% of the crop was flue-cured, 31% air-cured and 12% other classes. Cigarette tobacco was in the largest supply though considerable supplies of flue-cured for export were produced.

The crop of flue-cured tobacco was estimated at 1,175,000,000 lb. compared with 1,089,700,000 lb. in 1944 and an average of

788,700,000 lb. This crop was larger than the previous record crop of 1939. Diseases in plant beds and cold weather at planting time held the acreage to only 6% above 1944 but the yield was high in the big producing states of North Carolina, South Carolina and Virginia. Adequate rainfall in midsummer promoted growth and harvest weather was also favourable. The fire-cured crop of Virginia, Kentucky and Tennessee was estimated at 62,720,000 lb., a little less than the 64,075,000 lb. harvested in 1944 and much below the average of 96,416,000 lb. 1934-43. This smaller crop was due to a lower yield, 997 lb., on a much smaller acreage, 63,100 ac. compared with an average of 112,600 ac. 1934-43.

The burley tobacco crop was 2% above that of 1944 and 84% above the average; 603,397,000 lb. in 1945; 591,467,000 lb. in 1944 and 327,800,000 lb. average 1934-43. The increase was due entirely to a larger acreage, 531,600 ac. compared with 500,600 ac. in 1944 and 361,150, average. The yield was 1,135 lb. in 1945, 1,182 lb. in 1944 and 902 lb. average, 1934-43.

The southern Maryland belt acreage was sharply reduced in 1945 due to unfavourable weather and shortage of labour, to a total of only 36,000 ac. compared with 45,000 ac. grown in 1944 and an average of 37,500 ac. The yield was low, 600 lb. compared with 850 lb. in 1944 and 752 lb. average so that the total crop was 21,600,000 lb. compared with 38,250,000 lb. in 1944 and 28,325,000 average, 1934-43.

Dark fire-cured tobacco acreage was increased 14% to 46,100 ac. above the 40,400 ac. grown in 1944 which was about the average. The yield was slightly below 1944 but above the average, returning a crop of 48,647,000 lb. compared with 44,514,000 lb. in 1944 and an average of 36,113,000 lb.

All cigar types reached a high total of 129,635,000 lb., almost 2% more than 1944 and above the average of 114,819,000 lb. 1934-43. The acreage was up to 90,500 ac. compared with 86,800 ac. in 1944 and an average of 85,850 ac. 1934-43. The yield was slightly lower. All of the increase was in the binder types, as fillers were 2.4% below 1944. Cigar filler grown in Pennsylvania and Ohio returned a crop of 56,856,000 lb. compared with 59,283,000 lb. in 1944 and 54,680,000 lb. average, 1934-43. Cigar binder types showed increases in nearly all areas. The total of binder tobacco was 61,780,000 lb. compared with 57,225,000 lb. raised in 1944 and an average of 50,908,000 lb. 1934-43. Wrappers grown in Massachusetts and Connecticut, shade grown in Connecticut and in Georgia and Florida returned a smaller yield and the total crop was 10,999,000 lb. compared with 11,290,000 lb. in 1944 and 9,230,000 average. The perique tobacco crop of Louisiana was estimated at 192,000 lb. compared with 210,000 lb. in 1944 and 141,000 lb., average.

U.S. Production of Tobacco by States, 1945 and 1944

State	1945 lb.	1944 lb.	State	1945 lb.	1944 lb.
No. Carolina . . .	819,790,000	752,956,000	Florida . . .	20,413,000	20,095,000
Kentucky . . .	469,395,000	475,240,000	Indiana . . .	13,540,000	14,456,000

Connecticut . . .	22,989,000	23,368,000	Kansas . . .	300,000	300,000
Maryland . . .	21,600,000	38,250,000	Louisiana . . .	192,000	210,000
Ohio . . .	21,274,000	25,347,000			

Stocks of tobacco were lower in relation to consumption in 1945 than a year earlier. Burley was in large supply, however, with a large carry-over, a big 1945 crop making a total of 1,334,300,000 lb., the largest Oct. 1 supply of 33 years of record. Stocks were 758,000,000 lb., 108,000,000 lb. above a year earlier. Maryland types of tobacco were about the same as a year before and the supply smaller. Dark tobacco stock stood at about the same level as a year earlier. Cigar types stocks and supply were both lower than a year earlier.

The production and consumption of cigarettes reached a new high record in 1945, above that of 1943. Cigarette consumption in 1944 was below 1943 because of inadequate supplies but in 1945 returned to the high level of nearly 100 packs per capita per year. This is 46% above the disappearance of 1939. Cigar manufacture declined from the high level of 1942 while the total output of all tobacco products was estimated to be a new record. Cigarette consumption was expected to decline as the government closed purchases for overseas shipments. The consumption of cigars continued the downward trend and averaged in 1945 about 36 cigars per capita which is less than half the 1917 average.

Consumption of smoking tobacco increased in 1945 because of the shortage of cigarettes and the reduction of factory employment and releases of the armed forces. Chewing tobacco consumption, which increased with the large employment in war plants where smoking was prohibited, showed a decline in 1945. Snuff consumption followed the same pattern of change as smoking tobacco. During 1945 a total of 43,004,000 lb. was withdrawn from stocks according to tax records.

Exports of tobacco increased in 1945 as shipping improved, stocks purchased over the previous four or five years and held in storage in the U.S. were being moved as rapidly as possible. U.S. exports dropped to 165,800,000 lb. from a prewar level of about 400,000,000 lb. exports per year. Export trade recovered to 499,000,000 lb. in 1944 and was expected to exceed that amount in 1945.

Prices of tobacco to growers passed a peak in 1945 and were expected to decline through 1946. This index of prices reached a 373 in October compared with an average of 245, 1940-41. The goals for 1946 were put at a total slightly larger than that of 1945 on the assumption that exports would increase, and if not the surplus could be absorbed into U.S. stocks without breaking the market. Loans at 90% of parity were offered as the incentive to attain the goal. (J. C. Ms.)

**Tobago:** see WEST INDIES, BRITISH.

**Togoland:** see BRITISH WEST AFRICA; MANDATES.

**Tojo, Hideki** (1884- ), Japanese army officer and statesman, was born in Tokyo, the son of Gen. Eikyo Tojo, master strategist of the Russo-Japanese War of 1904-05. A graduate of the Military Staff college in 1915, he went to Germany in 1919 as military attaché, and studied military strategy. On Oct. 18, 1941, Tojo, then a lieutenant general, became premier after Prince Konoye resigned. Tojo also took over the war and home ministry portfolios.

On Dec. 13, 1941, six days after Japan attacked Hawaii, Tojo said Japan was "fighting in self-defense and the cause of righteousness."

In Feb. 1943 Tojo was given dictatorial economic and political powers. In Feb. 1944, he assumed the additional duties of chief of the army general staff, war minister, head of the munitions ministry and governor of the Imperial Rule association, Japan's mass totalitarian party. In July, however, he was removed as chief of the army general staff and two days later his entire cabinet resigned and Tojo was officially placed on the reserve list, even in the army.

In an interview, Sept. 10, 1945, Tojo asserted that the United States, as the victor, could name the blameworthy, but added that historians "500 or 1,000 years from now may judge differently." The following day, Sept. 11, when he was to be arrested as a war criminal, Tojo shot himself in an attempt at suicide. He was then quoted as saying that he was to blame for the war. Nursed back to health, he was held in a prison camp with other high Japanese officials awaiting trial as war criminals.

**Tokyo.** The capital and largest city of Japan. Pop. (1940), 6,778,804; area, 257 sq.mi.; situated at 35° 41' N. and 139° 45' E. at the head of the bay of the same name on the southeastern coast of Honshu, largest of the Japanese islands. There were 1,029,695 buildings and dwelling houses in the city in 1937.

Tokyo was devastated by B-29 bombings before Japan surrendered in Aug. 1945. It was the worst damaged of all Japanese cities. The population of the city had greatly diminished in 1945 and a survey by the home ministry (based on data from the Cabinet Statistics council) estimated the population to be about 3,000,000 as of Aug. 31, 1945. An official report of the Japanese government on that date stated that 88,250 civilians in Tokyo had been killed and 61,306 injured. Of the city's

buildings 65% were totally destroyed with an estimated 220,000 persons living in 70,000 ground shelters in early September. More than 20% of the area was devastated by bombing.

From Sept. 1945, Tokyo was the headquarters of General Douglas MacArthur, commander in chief of the U.S. army of occupation. There were no serious incidents between the U.S. troops and the Japanese civilian population up to the end of the year, and some fraternization had taken place.

Tokyo is governed by an elected city council and board of aldermen and a mayor chosen by the city council. Twenty-two universities with 107,302 students were located in the capital before World War II. At the end of 1936 there were 14,329 factories with 403,095 workers, and 29,633 small workshops with five or fewer employees, with 47,251 operatives.

(W. H. CH.; X.)

**Tomatoes.** The total tomato crop of the United States in 1945 made another high record. The crop for the fresh market was 34% above average and 16% more than 1944. The crop for processing was nearly 500,000 tons less than 1944 but above the average. The fresh market crop of tomatoes was estimated at 32,331,000 bu. compared with 27,768,000 bu. in 1944 and an average of 24,093,000 bu., 1934-43. Florida produced nearly all of the winter crop of 2,655,000 bu. California came in with the early fall crop of about 4,000,000 bu. and also grew 2,000,000 bu. of the early summer crop. The summer crop came mostly from the south central states while the late summer crop was centred in New York, Michigan, Indiana and vicinity.

The average price for the season was \$3.38 per bu. for all seasons, ranging from \$5.50 per bu. for the late fall, \$4.95 per bu. for the winter crop down to \$2.84 per bu. for the late spring tomatoes. These prices were all above the level of 1944. With favourable prices and higher yields the value of the crop was put at \$108,234,000 compared with \$85,263,000 in 1944 and only \$36,989,000 average for 1934-43.

The yield of tomatoes for canning was below the average—4.82 tons per acre compared with 5.45 tons in 1944, the lowest in seven years. The crop in the Atlantic states was poor and reduced the average. Ohio and Indiana, the big producers, had near-average yields. The California yield was above average and equal to 1944. The price per ton averaged \$26.59 for canning tomatoes which compared with \$27.22 per ton in 1944 and an average of \$14.68, 1934-43. The total value of the crop was below that of 1944; \$70,864,000 compared with \$86,269,000 in 1944 and \$33,466,000 average.

U.S. Seasonal Acreage and Production of Tomatoes for Fresh Market, 1945 and 1944

Crop	Acreage		Production	
	1945	1944	1945 bu.	1944 bu.
Winter . . . . .	17,700	16,900	2,655,000	2,112,000
Early Spring . . . . .	80,500	61,900	6,765,000	5,442,000
Late Spring . . . . .	48,700	48,350	3,913,000	2,971,000
Early Summer . . . . .	38,150	35,720	5,316,000	4,920,000
Late Summer . . . . .	52,620	53,350	8,394,000	8,570,000
Early Fall . . . . .	19,100	16,300	3,998,000	2,975,000
Late Fall . . . . .	14,200	9,100	562,000	252,000

An unusually high proportion of the tomatoes processed in 1945 went into tomato juice and a smaller proportion was canned whole. With the reduction of military requirements, the civilian supply of juice, catsup and other products was ample, but whole tomatoes were scarce. (See also VEGETABLES.)

**Tongan Island Protectorate:** see PACIFIC ISLANDS, BRITISH.

**Tongking:** see FRENCH COLONIAL EMPIRE.

**Tornadoes:** see DISASTERS.

**Toronto.** Established as a French trading post in 1749, Toronto was some 50 years later, when Canada became a British colony, made the capital of the province of Upper Canada (Ontario). Still the capital and the seat of the provincial government, it covered in 1945 an area of 35 sq.mi. and had a population of nearly 700,000 persons, predominantly of British extraction. Toronto is an important place of manufacture and commerce and is the heart of the mining business of Canada. The mining stock exchange was said in 1945 to be the largest of its kind in the world. Communications by land and water and air are excellent, and owing to a very favourable position midway between the Atlantic and Pacific oceans Toronto has become a great centre for the distribution of goods throughout the dominion. The University of Toronto with its many colleges has become famous, and not least for its great achievements through research such as the discovery of insulin by Sir Frederick Banting and Dr. Charles H. Best. Its students flocked to the colours during World War II and on their return in 1945 were being encouraged and helped in the completion of their education. The Provincial museum and the Toronto Art gallery are outstanding, and in music a very high standard is set and maintained by the Toronto Symphony orchestra, the promenade concerts, the Mendelssohn choir, the Hart House quartet and many other excellent organizations.

(G. R. G.)

**Torpedoes:** see MUNITIONS OF WAR; NAVIES OF THE WORLD; SUBMARINE WARFARE.

**Totalitarian State:** see GERMANY; SPAIN; UNION OF SOVIET SOCIALIST REPUBLICS.

**Towers, John H.** (1885— ), U.S. naval officer, was born in Rome, Ga., Jan. 30, and was graduated from Annapolis in 1906. Towers, who was assistant director of naval aviation during World War I, organized and led a unit of flying boats that made the first transatlantic flight in history in May 1919. He was assistant chief of the navy department's bureau of aeronautics, 1929-31, was commanding officer of the United States aircraft carrier "Saratoga," 1937-38, and was made chief of the bureau of aeronautics in June 1939. In the same month, he was made a rear admiral. Adm. Towers was long an advocate of naval air expansion and was in the vanguard of the air-minded officers who fought for a vast naval air expansion program. In Sept. 1942, he was promoted to rank of vice-admiral and given command of the Pacific fleet air force. On Feb. 11, 1944, he was appointed deputy commander in chief of the Pacific ocean areas, a post which put him second in command to Admiral Nimitz. The navy announced July 14, 1945, that Adm. Towers had replaced Vice-Adm. John McCain as head of a naval carrier task force. Secretary of the Navy Forrestal, in disclosing plans, Dec. 4, to reorganize the naval commands with more emphasis on the role of aviation, said that Towers would "eventually" succeed Adm. Spruance as commander in chief of the Pacific fleet.

**Town and Regional Planning.** In the U.S. many of the larger cities provided liberal budgets for planning commissions. Reports issued in 1945 indicated that planning commissions were generally making more thorough surveys and were adopting capital budgets for planning projects. A growth in the number and activities of citizens planning associations was noted. Most cities prepared plans for postwar public works. The bureau of community facilities under the Federal Works agency made federal loans to state and local governments to assist in planning public works, exclusive of housing.

Urban redevelopment continued to be much discussed. There

were enabling acts of various sorts in about half of the states. At the end of 1945 a bill was pending in congress to extend federal aid to cities for urban redevelopment. For the first time the Public Roads administration was authorized by congress to grant federal aid for through highways in urban districts. Planning commissions in some cities took the initiative to bring about agreement on routes and uses of these highways to protect the master plan and prevent undue congestion of downtown districts.

Large conferences were prohibited during the war, but the American Institute of Planners in Jan. 1945, held an annual meeting in New York; the American Society of Planning Officials in May called together 50 city-planning officials in Chicago; and the American Planning and Civic association held several small conferences in Washington, including one to discuss the planning provisions in the pending National Housing and Urban Redevelopment bill.

In 1945 Harvard university appointed a chairman of its department of Regional Planning and the University of Chicago appointed a director of a new program for education in planning.

In Great Britain a number of planning reports for rebuilding devastated cities were issued. Implementation for the Barlow, Scott and Uthwatt reports was discussed, but at the end of 1945 it was uncertain what national land and planning policies would be adopted. (See also HOUSING; RECONSTRUCTION PLANNING.)

**FILMS.**—*Arteries of the City; Growth of Cities* (Encyclopædia Britannica Films Inc.). (H. Js.)

**Track and Field Sports.** Vision of a four-minute mile was once again renewed during 1945 when Gunder Haegg (Hägg) went the distance in four minutes, one and four-tenth seconds on a Swedish track.

The performance highlighted the continued duel of the two Swedish runners—Haegg and Arne Andersson—and scraped two-tenths of a second from Andersson's old world record of 4:1.6.

The mile mark, as well as all others set by the two stars of Sweden, might be wiped from the record books as a result of professional charges levelled against Haegg, Andersson and about a dozen other Swedish trackmen. The allegation that the athletes were subsidized by amateur clubs came late in the year 1945, and all subsequent developments were blotted out by a censorship. A ruling was expected early in 1946 as to the status of the Swedish stars.

Three 1944 champions successfully defended their crowns in the Amateur Athletic union senior outdoor championships. Henry Dreyer of the New York Athletic club retained his hammer throw title and dethroned Frank Berst of the same club in the 56-lb. weight throw. Dr. Arky Erwin, New Orleans Athletic club, continued his reign as 400-metre hurdles champion and Robert Kelley, University of Illinois, Urbana, won his second straight 800-metre title. Aside from Berst, those dethroned as A.A.U. senior champions were: Earl Audet, University of Southern California, beaten by Wilfred Bangert of Normandie, Mo., in the shot-put; Don Barksdale of Camp Ross, Calif., who finished second to Burt Cox, Villanova, Pa. marine trainee, in the hop, step and jump, and William Lund of Case School of Applied Science, who failed to place in the broad jump.

Standout of the 57th annual A.A.U. championships was Roland Sink, a 19-year-old midshipman at Harvard, who won the 1,500 metres in 3:58.4 over such veteran competition as Jim Rafferty and Rudy Simms, both of New York city. Next

#### Outstanding U.S. Track and Field Performances (Outdoor), 1945

100 Yards	High Jump
9.5 sec.—Samuels, Thos. Jefferson H.S., San Antonio	6 ft., 6¾ in.—Wiesner, Marquette
9.6—O'Reilly, U.S.N. Air Station, Fla.	6.6¾—Sheffield, Univ. of Utah
9.7—Afzal, Cleveland East Tech H.S.; Moon, Kemmerer H.S., Wyo.; Klemmer, Great Lakes	6.6—Barksdale, Camp Ross, Calif.; Green, A.A.F., Calif.
	6.5½—Schmacke, Massena, N.Y., A.A.
220 Yards	Broad Jump
20.9 sec.—Klemmer, Great Lakes; O'Reilly, U.S.N. Air Station, Fla.	24 ft., 8 in.—Lewis, Rankin, Pa., C.C.
21.2—Shurr, Texas	24¼—Bell, Los Angeles C.C.
21.3—Harris, Shore A.C., Asbury Park, N.J.; Van Velzer, Navy	23.9¾—Peacock, U.S. Coast Guard
	23.9¼—Haese, Fort Sam Houston
440 Yards	23.8—Bouwman, Navy
48.4 sec.—Kelley, Illinois	Discus Throw
48.6—Erwin, New Orleans A.C.	162 ft., 8¾ in.—Bangert, Univ. of Missouri
49.1—Holbrook, Texas A.&M.	157.5—Donaldson, Rice
49.2—Klemmer, Great Lakes; Lubin, New York univ.	155.0¾—Gordon, Camp Perry, Va.
880 Yards	154.6½—Hiler, Olympic club
1 min., 54.8 sec.—Cuff, Navy	148.8—Schrader, Hunter Field
1:55.3—Parsons, Michigan	Hammer Throw
1:55.5—Kelley, Illinois	158 ft., 2½ in.—Lieut. Miller, Navy
1:55.7—R. Hume, Michigan	156:6—Penico, Univ. of Pennsylvania
1:55.8—Williams, unattached, Los Angeles	153:5—Felton, Dartmouth
One Mile	145:5¾—Congdon, R.I. State
4 min., 17.9 sec.—Sink, U.S. naval trainee	144:11¾—Dambrowski, U.S. Army
4:18.5—Ross Hume, Michigan	Javelin Throw
4:18.6—Robert Hume, Michigan	208 ft., 10 in.—Cohen, U.S. Army
4:19.5—Barry, Navy	207:10—Marshall, Carlsbad, New Mex.
4:22—Hartzell, California	206:8½—Patton, U.S. Navy
Two Mile	205:5—Fagerlund, Iowa
9 min., 24.6 sec.—Kandl, Cornell	203—Fetzer, Dartmouth
9:25.5—Martin, New York univ.	Pole Vault
9:45.3—Filer, Drake	13 ft., 10 in.—Schmidt, Ohio State univ.
9:49.9—Truxes, Army	13:9—Padway, U.S. Navy
9:50.2—Birdsall, Michigan	13:7¾—Kring, Pacific univ.
120-Yard High Hurdles	13:7—Felton, Dartmouth
14.4 sec.—Lidman, Sweden; Fisher, Miami	13:6½—Moore, Western Michigan
14.6—Scott, Navy	Shot-Put
14.7—Moore, Olympic Club	53 ft., 4 in.—Bangert, Missouri
14.8—Urfurth, Breckenridge H.S., San Antonio	53:7¾—Audet, Southern California
220-Yard Low Hurdles	53:0¼—Quirk, Missouri
23.4 sec.—Walker, Illinois; Scott, Navy	51:10¾—Blanchard, Army
23.7—Scott, El Monte H.S., Calif.; Morrow, Army	51:8½—Hershey, Olympic club
23.8—O'Reilly, U.S. Navy Air Station, Fla.	Hop, Step and Jump
440-Yard Hurdles	45 ft., 8½ in.—Barksdale, Camp Ross, Calif.
54.2 sec.—Erwin, New Orleans A.C.	44:5¼—Atzet, California
55.2—Conor, U.S.M.A.	44:4½—Meyers, unattached, Los Angeles
56.4—Bates, Langley Field, Va.	44:2—Turner, Olympic club
	43:9¾—Fos, Fortier H.S., New Orleans (M.P.W.)

to Sink in the tournament spotlight was Barney Ewell, 27-year-old private at Camp Kilmer, N.J. Ewell won the 100 metre event, a title he held in 1939, with a record-equalling performance of 10.3 seconds.

The New York Athletic club won both A.A.U. team championships; the junior with 59 points and the senior with 74. New York's Pioneer club was runner-up in both divisions, scoring 50 junior points and 48 in the senior meet. On the collegiate front, the two service academies monopolized team honours. Navy won both the Intercollegiate A.A.A.A. and National Collegiate Athletic association outdoor titles and became the first eastern school to win the latter. Army captured the Intercollegiate A.A.A.A. indoor and cross-country championships. The University of Illinois won the Big Ten outdoor crown, while Michigan topped the conference's indoor competition.

Eulace Peacock, former Temple university sprinter and a member of the coast guard, easily repeated his pentathlon championship by winning the broad jump, javelin and discus and finishing second in the 200 metres. Charles M. Beaudry, Marquette university student-teacher, captured the decathlon by winning the 100 and 400 metre events and placing in four others. John Kelley of West Acton, Mass., won his second Boston marathon in 2 hr., 30 min., 40.2 sec.

**Indoor Track.**—Rafferty, the 29-year-old N.Y.A.C. veteran, took charge of the indoor season with a sweep of all (nine) mile races he entered, including the National A.A.U., Millrose A.A., Boston A.A., New York A.C., New York Knights of Columbus games and the Chicago Relays. However, he failed to get under 4:10 in any of his victories, his best performance being a 4:10.9 mile in Buffalo, N.Y. Haegg and Hurdler Haakon Lidman arrived belatedly from Sweden to compete during the last half of the indoor season, but the Swedish wonder man was unable to defeat Rafferty. He won only one mile race, topping an undistinguished field in 4:16.7 at Cleveland, Ohio.

**Outstanding Foreign Track and Field Performances, 1945**

100 Metres	110-Metre Hurdles
10.5 sec.—Assis, Brazil	14.3 sec.—Lidman, Sweden

	Javelin Throw
	247 ft., 7¼ in.—Rautavaara, Finland
	240:1—Ericksson, Sweden
	235:6¾—Jarvinen, Finland

New York A.C. won the senior indoor championship with 23 points to Army's 15½ and Navy's 13.

**Women.**—Alice Coachman, 21-year-old miss from Tuskegee Institute, Ala., dominated the 1945 women's A.A.U. championships with firsts in the 50 metre, 100 metre and high jump. Her 100-metre triumph included a close decision over the veteran Stella Walsh of the Cleveland Polish Olympics, who a week before had lowered the world record for the distance to 11.2 seconds. Miss Coachman's time was 12 seconds. As a result of her achievements, Tuskegee institute retained its team championship with 102 points to 68½ for the Cleveland Polish Olympics. (M. P. W.)

**Train, Arthur** (1875-1945), U.S. novelist, was born Sept. 6, in Boston. He was graduated from Harvard with a B.A. degree in 1896 and took his law degree there in 1899. After he was admitted to the bar, he went to New York where he worked with various law firms. He was assistant district attorney of New York county, 1901-08. He was named by Gov. Charles Evans Hughes as a special deputy attorney general of the state of New York, 1910. Later, he returned to his private practice. Meanwhile, Train wrote short stories, the first of which was printed in 1904. Thereafter, he wrote regularly and then created the immortal Mr. Tutt, a shrewd Yankee lawyer who employed legal stratagems to rescue his technically guilty, but morally innocent, clients from prison. The Tutt stories, written with sparkle and subtlety, enjoyed a wide following.

Among Train's works are: *Tutt and Mr. Tutt* (1920), *By Advice of Counsel* (1921), *Tut, Tut, Mr. Tutt!* (1923), *The Needle's Eye* (1924), *Page Mr. Tutt* (1926), *When Tutt Meets Tutt* (1927), *The Adventures of Ephraim Tutt* (1930), *Puritan's Progress* (1931), *Mr. Tutt's Case Book* (1937), *Old Man Tutt* (1938), *Tassels on Her Boots* (1940), *Mr. Tutt Comes Home* (1941) and *Yankee Lawyer; the Autobiography of Ephraim Tutt* (1943). Train died in New York city, Dec. 22.

**Trans-Jordan.** This Arab principality, bounded in the west by Palestine, on the north by Syria, on the northeast by Iraq, on the southeast and south by Saudi Arabia, is a British mandated territory. It is administered, under the supervision of the British high commissioner for Palestine and Trans-Jordan, Lieut. Gen. Sir Alan Gordon Cunningham, by Emir Abdullah ibn Hussein, who is supported by a constitutional government. Prime minister (May 1945): Ibrahim Hachem Pasha. Area, 34,740 sq.mi.; pop., c. 325,000, all Mohammedans except for c. 30,000 native Christians. Capital: Amman, the ancient Rabbat Ammon. Chief cities: Amman (25,000), Es-Salt, Maan.

**History.**—During 1945, as in previous years, Emir Abdullah adhered faithfully to the obligations of the treaty with Great Britain concluded in 1928. Great Britain promised the negotiation of a treaty between the two countries more favourable to Trans-Jordan's aspirations for the same complete independence which the neighbouring states of Iraq and Egypt had reached under Great Britain's guidance.

A definite advance in the international position of Trans-Jordan was achieved when the country became a member of the Arab league. This league was formed in Egypt in 1944 and began to function in 1945 as the international representation of

seven Arab states—Egypt, Iraq, Syria, Lebanon, Saudi Arabia, Yemen and Trans-Jordan. The first five of these states were members of the United Nations organization and were represented at the United Nations Conference on International Organization at San Francisco, Calif., where they acted in unity as spokesmen of common Arab interests. Most of the attention of the Arab league and of Trans-Jordan was devoted in 1945 to the defense of Arab rights in Palestine and to a struggle against Zionism. The prime minister of Trans-Jordan took an active part in all the conferences of the Arab league. Emir Abdullah worked for the creation of a great Syria which would include Syria, Lebanon, Palestine and Trans-Jordan in one state over which Emir Abdullah hoped to become the ruler.

**Communications, Education, Finance.**—The economic life of the country is primitive. Many of its inhabitants lead a nomadic or seminomadic life. No oil deposits were found up to 1945, but there were important phosphate deposits, and potash was being produced in the Dead sea. Illiteracy was widespread, though there were numerous private schools, and the government spent £27,874 (£=403.5 cents U.S.) in 1939 on public education. In view of the thin population of the country it is well provided with good motor roads connecting it with Palestine, Syria and Iraq. Of less importance is the Hejaz railroad running through the country from north to south at the brink of the desert. The value of the local currency is identical with that of Great Britain. The public debt was insignificant in view of considerable grants-in-aid from the British government to help to balance the budget. The public debt amounted in 1940 to £155,107. In 1939-40 revenue amounted to £513,971, including grants-in-aid from the British government. The expenditure was £510,293 for the same period. (H. Ko.)

**Trap-shooting.** Don Engleby, a Vermilion, O., restaurant owner, broke 99 targets out of a possible 100 to win the Grand American handicap and continue the 46-year-old tradition of no man ever having won the title twice. Engleby, the Ohio state champion, fired at 23 yd. and beat out S. Dalé Pierce of Geneseo, Ill., and Harris Myatt of Chillicothe, O., who finished in a tie for second with 98.

Rudy Etchen, 22-year-old gunnery specialist from the U.S. navy and Memphis, Tenn., highlighted the 46th annual American trap-shooting tournament at Vandalia, O., with triple championships. He broke 474 out of a possible 500 targets to win the over-all title, and had 381 out of 400 to take the all-around crown. Etchen also retained his doubles championship to become the first three-time winner in the event. Etchen scored 96 out of 100 in the doubles, with Herschel Cheek of Clinton, Ind., second with 93 out of 100.

Mrs. Van Marker of Evanston, Ill., carried on her dominance of the women's division, repeating as victor of the Grand national following a shoot-off with Florence Mos of Cincinnati. Each scored 94 out of 100. Ruth Knuth of Indianapolis, Ind., retained the women's champion of champions tournament with a 95 out of 100. Lt. Vic Reinder of Waukesha, Wis., winner of the 1944 all-around title, won the men's champion of champions in a three-way shoot-off.

E. T. Pugh of Morris, Ill., dethroned Capt. Joe Hiestand of Hillsboro, O., a four-time winner, as North American clay target champion with 199 out of a possible 200. Mrs. Lela Hall won her fifth North American clay target title with 192 out of 200. The men's preliminary handicap went to A. F. Jones of Thief

River Falls, Minn., with 99 out of 100, while Mrs. Isaac Andrews of Spartanburg, S.C., won the women's preliminary, 95 out of 100.

Illinois won the state team championship with 974 targets out of a possible 1,000. Texas, 973, was second. (M. P. W.)

**Trieste.** A city and port on the northeastern Adriatic (pop. 248,379 in 1936), and the chief city of the Italian province of Venezia Giulia e Zara (area 3,456 sq.mi.; pop. 977,257). This territory had formed part of Austria (Trieste from 1382) before World War I. It was then called Küstenland. After World War I the territory was claimed by Yugoslavia and by Italy. The Italian population was preponderant in the cities, the Yugoslav population, Croat and Slovene, in the rural districts. According to the census of 1910 there were 387,000 Italians and 435,000 Slavs.

The disposition of the territory played a major role at the peace conference of 1919. It was closely connected with the question of Fiume and Dalmatia. The control of the territory was settled by the treaty of Rapallo of Nov. 12, 1920, between Italy and Yugoslavia, which gave the territory to Italy. The collapse of the German armies in April 1945 brought Marshal Tito's Yugoslav forces into the occupation of the territory, and Marshal Tito declared his determination to unite it with Yugoslavia. Italy was united in an equally determined protest against the annexation of Venezia Giulia and especially of Trieste by the Yugoslavs. The Allied armies wished to have the question settled by the peace conference and to avoid any one-sided settlement by force. The acting secretary of state, Joseph C. Grew, declared on May 12 that "it is the firm policy of the United States that territorial changes should be made only after thorough study and after full consultation and deliberation between the various governments concerned." As northeastern Italy was an Anglo-U.S. theatre of operations, an Allied military administration was established and the Yugoslav forces prevailed upon to relinquish part of the territory to Allied administration until final settlement of the dispute. In an agreement concluded on June 9 the cities of Trieste, Gorizia and Pola and the territory connecting them were placed under Allied administration while the much larger part of the province east of that line was put under Yugoslavia without prejudice of the ultimate disposal of that area. Zara in Dalmatia and Fiume came under Yugoslav administration.

**Troubetzkoy, Amélie Rives,** PRINCESS (1863-1945), U.S. author, was born Aug. 23 in Richmond, Va. A popular novelist of the 1890s, she established her literary reputation with her first novel, *The Quick or the Dead?* (1888), which originally appeared in a magazine. The theme, a young widow's torment between her love for her dead husband and a new lover, then considered a taboo subject, caused considerable furor and resulted in enormous sale of

her book. Her second marriage, to Prince Pierre Troubetzkoy, a Russian artist, took place at the family estate in Virginia in 1896. Miss Rives was the author of *Seléné* (1905), *Augustine the Man* (1906), *The Golden Rose* (1908), *Pan's Mountain* (1910), *Hidden House* (1911), *The World's End* (1913), *Shadows of Flames* (1915), *The Ghost Garden* (1918), *As the Wind Blew*, poems (1922), *The Queerness of Celia* (1926) and *Firedamp* (1930). She died in Charlottesville, Va., June 15.

**Truman, Harry S.** (1884– ) became the 33rd president of the United States at 7:09 P.M. of April 12, 1945, upon the death of Franklin Delano Roosevelt. The vice-president from Independence, Mo., was sworn into office by Chief Justice Harlan F. Stone in the cabinet room of the White House.

Truman promptly pledged himself to carry out his predecessor's domestic and foreign policies. In an address before a joint session of congress and in a broadcast to the armed forces around the world, he reiterated the "fallen leader's" demand for unconditional surrender by the axis. In a telephoned speech opening the San Francisco United Nations conference on April 25, he urged the representatives of the victorious countries to write a world security charter and to create a "strong and lasting" organization that would "maintain peace and redeem the terrible sacrifice of the war."

The new chief executive's first days in office were historic. On May 8 he announced the final defeat of Germany. On Aug. 6 he reported that an atom bomb perfected by Allied scientists and manufactured in the United States had virtually wiped out the Japanese city of Hiroshima. On Aug. 11 he gave out the not unexpected news that Russia had declared war on Japan and had already invaded Manchuria. On the night of Aug. 14, to a jubilant nation, he proclaimed the end of the global conflict with the announcement of Japan's acceptance of Allied surrender terms.

Truman presented his own legislative program to congress in an 18,000-word message on Sept. 6, 1945, and simultaneously the era of good feeling—the political honeymoon—showed signs of ending. Bipartisan conservatives, who had hitherto withheld judgment, branded him as "ultra-New Dealish." Some liberal spokesmen did not think that he had travelled far enough in their direction.

The president asked for federal-state unemployment compensation of \$25 a week for 26 weeks, an increase in the existing 40-cent hourly minimum wage rate, extension of wartime controls, statutory creation of a permanent Fair Employment Practices commission, passage of a full employment bill, retention of federal control over state employment agencies, regional development of river basins on the pattern of the Tennessee Valley authority. It was these Rooseveltian proposals which irritated conservatives inside and outside congress.

Truman also recommended government reorganization, continuation of the draft for 18–25 age groups, limited and immediate tax reduction pending further study of the revenue structure and basic revision, a broad federal housing program, financial aid to veterans, farmers and small business men and an increase from \$10,000 to \$20,000 a year for members of congress.

When congress recessed for Christmas, only a few of the president's rather routine demands had become law. A conservative Democratic-Republican coalition thwarted his major and more far-reaching requests. Liberal and labour factions began

to criticize him because, in their opinion, he did not make a sufficiently aggressive fight for his (their) program.

On July 17 President Truman met at Potsdam with Prime Minister Churchill and Premier Stalin for discussion and tentative solution of postwar problems. It was, in reality, a preliminary peace conference. The three heads of states were accompanied by their respective foreign ministers—James F. Byrnes, Anthony Eden and V. M. Molotov. The British elections, which were held during the conference, introduced two new faces to the closing sessions—Labourites Clement R. Attlee and Ernest Bevin as prime minister and foreign minister, respectively. (See BERLIN CONFERENCE.)

The Potsdam meeting created a Council of Foreign Ministers which was given the task of framing peace treaties with the smaller of the vanquished axis nations for eventual submission to the United Nations. The council consisted of the foreign ministers of the United States, Britain, Russia, France and China. They met in London in September, but they made no progress, and they did not assemble again in 1945.

The foreign ministers of the Big Three, however, reached certain settlements at a Moscow meeting in December of 1945. They arranged for the writing of peace treaties with Italy, Rumania, Bulgaria, Hungary and Finland, with the provision that these documents would be submitted subsequently to all the Allied belligerents. They recommended that the United Nations organization study the problem of control of atomic energy. They agreed upon a four-power rule of Japan—the United States, Britain, Russia and China—in place of the supervision that had been exercised by the United States alone. (See also MOSCOW CONFERENCE.)

The Big Three also arranged for zonal control of Germany by the U.S., Britain, Russia and France; and for the liquidation of German militarism and nazism, without, however, the enslavement of the German people. They provided for trial of major war criminals, for reparations and for the establishment of new governments in Poland and Austria.

Foreign problems—a legacy of the war—beset Truman in the closing days of 1945. Almost all the Allies—Russia, Britain, China, the Netherlands, France—adopted aggressive and possessive policies in Europe, the Balkans, the middle east and the orient which appeared to violate the principles of the Atlantic charter, the Tehran, Yalta and Potsdam agreements. Washington protested periodically against these seeming infringements on the Allies' avowed program of eventual enfranchisement of colonial peoples and the promise of self-determination for liberated nations. As the fateful year ended, the administration's foreign policy was under constant fire by liberals and conservatives.

President Truman cheered the nation with his announcement that he favoured a speedy termination of the government's wartime controls over wages and prices, but his specific program precipitated a grave industrial crisis. When the C.I.O. unions voiced strike demands for a 30% increase in pay with the end of the war emergency, Truman stated his policy in a radio broadcast. He advocated higher wages without any increase in retail prices except when the manufacturer could prove that he needed relief. Meanwhile, he sponsored a Labor-Management conference at Washington that was entrusted with the task of devising machinery for preventing and settling industrial disputes.

When this conference proved barren of results, and strikes threatened the reconversion process in the automobile and steel industries, Truman proposed a compromise method for dealing with these difficulties. He asked congress to create a federal fact-finding agency that would investigate major industrial differences and make public the issues at stake. The proposed law would also bar strikes during this inquiry and provide for a

"cooling off" period of at least 30 days.

Truman admittedly brought forth this plan in an attempt to head off the enactment of extreme antiunion legislation by an impatient congress. But his scheme solidified organized labour against him. Even C.I.O. President Philip Murray, who had been a political stalwart for the Democrats during the Roosevelt regime, declared that the president's proposal was "designed to weaken and ultimately destroy labour union organizations." Murray's reaction aroused the fear among Truman's partisan friends, who obviously anticipated his renomination in 1948, that he had alienated the very group—the mass workingman's vote—which had made possible Democratic control of the government for 16 years.

(See also UNITED STATES.)

(R. Tu.)

**Tuberculosis.** Diagnosis and Case Finding.—C. E. Palmer observed that in the central eastern half of the United States where there is a high incidence of calcium deposits in the lungs there is a corresponding high incidence of reactors to histoplasmin. Thus it appears that an infection caused by the fungus *Histoplasma capsulatum* resulting in the disease histoplasmosis is prevalent in this area. Prior to this discovery, histoplasmosis was thought to be a fatal disease. It now appears that a mild form exists which does not even cause illness in the bodies of large numbers of persons and that it casts X-ray shadows which cannot be differentiated from those produced by tuberculous lesions. Formerly the tuberculin test was severely condemned by those who believed that all deposits of calcium in the lungs were due to tuberculosis. Deposition of calcium occurs in many diseases and conditions, and therefore is not a specific process. Palmer concluded that "a very high proportion of the pulmonary calcifications observed in roentgenograms of tuberculin-negative persons is due not to tuberculosis but probably to histoplasmosis." Palmer's work emphasizes the necessity of specific tests in diagnosis.

A comparative study of the various X-ray methods of inspecting the chests of a large number of persons was made. Each of the individuals included in the study had a 35-mm. photofluorogram, a 4x10 photofluorogram, a 14x17 in. paper film and a 14x17 in. celluloid film taken within a few minutes of one another. Independently, three chest specialists and two radiologists then inspected the films. A preliminary report of this study revealed that in the actual experience of the five experts, the efficiency for case-finding purposes was of approximately the same magnitude for each of the four methods. It was found that such advantage as may be inherent in any one technique is of so small a magnitude that it is much smaller than the human error involved in X-ray inspection.

R. H. Morgan made additional perfections in the development of a photo timer, one of the outstanding contributions in the field of radiology during 1945. H. E. Hilleboe and Morgan were the authors of a book on *Mass Radiography of the Chest*, which was the first of its kind to be published in the U.S. This is more than a book on X-ray, since it includes information on practically all phases of tuberculosis control work. A monograph entitled, "Mass Miniature Radiography of Civilians," was published by the British Medical Research council.

The committee on tuberculosis of the American Student Health association reported that the incidence of tuberculous infection among college students is steadily decreasing. It was strongly recommended that all students be tested with tuberculin and that X-ray films of the chest be made of only the reactors. The committee urged that faculty members and employees, including food handlers, participate in the tuberculosis control program on the same basis as students.

M. J. Seid emphasized the importance of the tuberculin test

for pregnant women. He found 380 reactors among 1,000 tested. Other phases of the examination revealed 14 cases of the reinfection type of pulmonary tuberculosis among the 380 reactors. W. H. Oatway, Jr., emphasized the value of examining for tuberculosis all of the 15,000,000 persons admitted to hospitals each year. Douglas called attention to the great importance of the private physician as a case finder. H. A. Burns and O. L. Bettag called attention to the seriousness of the tuberculosis problem in institutions for the mentally ill and in prisons. They outlined excellent methods of control in these institutions. D. B. Ruskin examined 1,852 patients in a state-owned hospital for epileptics and found 7.2% with active tuberculosis. Only 0.8% of the total number of patients examined had been diagnosed before the survey. He suggested that special hospitals be provided for tuberculous inmates of hospitals for the mentally ill.

**Tuberculosis and War.**—It was reported that among 16,000,000 persons examined for military service in the U.S., approximately 168,000 were rejected because of X-ray shadows which might represent tuberculosis. The emergency did not permit the military services to determine the cause of the disease producing the shadows. However, many rejectees were later examined, and a relatively small percentage (10 to 20) were found to have evidence of tuberculosis which required treatment.

After the beginning of World War II the total number discharged from military service because of tuberculosis reached approximately 20,000 in 1945. For a period corresponding with the length of World War I, the percentage of discharges was only about one-tenth as great during World War II. This was due to two main reasons: (1) there was far less tuberculosis among the citizens of the U.S. during World War II than during the earlier war; (2) much of the gross tuberculosis that existed among persons of military age was detected at induction centres, and the individuals were rejected for this war in much greater numbers than in World War I. In both the army and the navy there was no apparent association between the nature of service and the development of tuberculosis. Those engaged in the most strenuous and severe activities fared as well as those in more sedentary positions. Among the 20,000 persons discharged from service because of tuberculosis, from one-half to two-thirds of them had definite shadows on X-ray films at the time of induction which were overlooked or were considered insignificant. The remaining one-third to one-half had no X-ray shadows indicating the presence of disease at the time of induction. Doubtless the vast majority of this latter group had pre-X-ray tuberculosis when they were inducted, after which it evolved to such proportions as to cause illness or produce shadows. The remainder of these persons probably became infected while in service. In the Canadian army J. D. Adamson reported that approximately twice as many of those who went overseas fell ill from tuberculosis as those who remained at home.

**Tuberculosis and Veterans.**—The committee on tuberculosis among veterans of the National Tuberculosis association inspected hospitals for the tuberculous during 1945 and made recommendations with reference to organization and future care of patients. It was reported that between 1921 and 1944, 350,196 veterans were admitted to hospitals for tuberculosis, 92% of whom were from World War I. The cost of paying compensation or pensions and hospitalizing veterans because of tuberculosis between 1918 and 1944 amounted to \$1,422,540,000.

All persons discharged from military service during World War II because of tuberculosis were referred to the Veterans' administration for treatment. On May 1, 1945, there had been 15,249 admissions to veterans' hospitals. Plans were made for additional beds through 1947, when there were expected to be

11,587 available for veterans in 23 hospitals for the tuberculous and 11 tuberculosis departments of general veterans' hospitals. Many veterans do not require long periods of treatment in these hospitals. Others leave to be treated at home or in hospitals for civilians.

**Treatment.**—W. H. Feldman and H. C. Hinshaw demonstrated that the excellent results previously reported by treating tuberculous guinea pigs with sulfones (promin, diasone and promizole) were due to a suppressive action of the drugs. Animals so treated did not lose their sensitivity to tuberculin; moreover, those apparently successfully treated with promin over a prolonged period of time eventually died from tuberculosis after the medication was stopped. Penicillin was found to have no effect on tuberculosis in animals or man. Another antibiotic substance, known as streptomycin, proved to be efficacious in treating experimental tuberculosis. Feldman, Hinshaw and F. C. Mann found it effective in resolving or suppressing the disease. In 39% of the animals it resulted in a reversal of a positive to a negative sensitivity to tuberculin. M. I. Smith and W. T. McClosky reported that streptomycin has a chemotherapeutic index better than ten times that of promin. When they used a suitable combination of streptomycin and promin, they obtained results which under their experimental conditions they had not obtained previously. In a preliminary report of the effects of streptomycin on tuberculosis in humans, Hinshaw and Feldman presented the results upon 34 patients. Apparent significant improvement was seen in cases of early and extensive haematogenous forms of pulmonary tuberculosis, early miliary disease, and lesions of the kidneys and lymph nodes. These encouraging results stimulated more extensive studies.

M. I. Levine observed 90 infants before, during and after the development of primary tuberculosis complexes. He found that rest in bed did not influence the course of the primary complex or reduce the incidence of complications, nor was there evidence that lack of rest in bed was detrimental. The age of the child at the time of infection, rather than the method of treatment, seems to be the important factor in determining prognosis. Rest in bed during a primary infection with tuberculosis should be limited only to the period of elevation of temperature, as in the period of any febrile infection during childhood, he said. Contact with a tuberculous mother during the first year was much more dangerous than contact with a tuberculous father.

The Metropolitan Life Insurance company closed its 300-bed sanatorium at Mount MacGregor, New York, for lack of patients. In a few parts of the U.S., county and state sanatoriums had vacant beds, while in other areas there were patients on waiting lists. In most parts of the world the number of beds was inadequate in 1945.

Afonso MacDowell, of Brazil, emphasized that pregnancy in confirmed tuberculosis lost the sinister gravity it held for early obstetricians, largely because of the use of collapse therapy.

R. H. Overholt reported 36 cases of pulmonary tuberculosis for which he removed entire lungs, and 24 for whom lobes were removed. Operative fatality was 11.6%. In 47 cases for whom the risk was reasonable the mortality was only 4.3%.

R. Tapia Acuña, of Mexico City, made bronchoscopic examination of 279 patients with pulmonary tuberculosis, of whom 83 were found to have disease in the trachea and bronchi. He stressed the importance of bronchoscopy in tuberculosis as complementary for both diagnosis and treatment.

**Morbidity and Mortality.**—In the U.S. the mortality rate continued to decrease, reaching the all-time low figure of approximately 38 per 100,000 population.

R. E. Boynton reported that in the state of Minnesota between 1915 and 1919 the mortality rate for infants under one year was 130 per 100,000, whereas from 1940 to 1944 it was 9, a decrease of 93%. For all children under 15 years, the mortality was 34.1 from 1915 to 1919, and 3.9 from 1940 to 1944, a decrease of 88%. Among persons of all

**TERRACE** on Mussolini's modern villa near Rome, which in 1945 was a home for Roman orphans, some of whom were undernourished and tended toward tuberculosis

ages the mortality rate was 103.1 in 1915-19, and 27.5 from 1940 to 1944, a reduction of 73%. In 1915 there were 260 deaths from tuberculosis among children under 15 years of age, compared with 26 in the year 1944. Godias Drolet pointed out that while the child population under 15 had remained fairly constant around 1,500,000 in New York city, in 1915 there were 1,200 deaths, and only 110 in 1940.

In China it was estimated that 36,000,000, or approximately 8% of the population, had active tuberculosis. In Guam tuberculosis was the leading cause of death among adults. J. I. Baldo stated that tuberculosis occupies a leading place among causes of death in Venezuela. In urban centres the mortality rate varies from 210 to 407 per 100,000 inhabitants. It was reported that in Rio de Janeiro during 1944, of all deaths tuberculosis was responsible for 17.59%.

**Tuberculosis Control.**—C. L. Newcomb, of the National Tuberculosis association, reported a gross income of \$14,966,000 from the sale of seals in 1944 and predicted \$15,500,000 in 1945. The National Tuberculosis association published several pamphlets and produced films of excellent educational value on various phases of tuberculosis.

For the fiscal year beginning July 1, 1945, congress appropriated \$6,047,000 to the tuberculosis control division of the U.S. public health service for the prevention, treatment and control of tuberculosis. Of this amount, \$5,200,000 was given to the states and territories as direct grants to assist in the development of their public health programs for the control of this disease; the remaining \$847,000 was used by the division to recruit and train professional personnel including doctors, nurses and scientific personnel to carry on demonstrations, especially case-finding and follow-up programs in those states and large cities which did not have facilities and personnel. Approximately \$300,000 of the \$847,000 spent directly by the division was used for research in all phases of tuberculosis control. Some activities were being carried out in the epidemiology of the minimal lesion among 12,000 student nurses in 75 schools and 10 cities throughout the country. A review of BCG (Bacill Calmette Guérin) vaccination was in progress in co-operation with several of the research groups. Detailed demographic studies were being made on tuberculosis morbidity and mortality in the U.S. A sub-laboratory was established to study tuberculosis and allied pulmonary diseases in Kansas City. The staff of the division consisted of 68 medical officers including specialists in the fields of public health, radiology, chest diseases and internal medicine. In addition there were 40 public health nurses on loan to states and local communities.

Several state departments of health created or revived divisions of tuberculosis control.

The effectiveness of tuberculosis control measures is best determined

by the tuberculin test. In rural Kansas, S. L. Cox tested 36,995 children ranging from preschool to senior high school students, of whom 2.7% reacted. In this group were 12,733 from 15 to 18 years, of whom 3.7% reacted. Reports of testing high school students in various parts of the country indicate that the average incidence of infection among them was about 12 to 15%. F. E. Harrington *et al.* reported on the incidence of primary tuberculosis among grade school children in well selected schools. In 1926, 47.3% of the children reacted to tuberculin; in 1936, 18.9%; and in 1944, 7.7%. L. S. Jordan reported ten schools with an enrolment of approximately 2,000, in which 14.3% of the children reacted to tuberculin between 1930 and 1935; 4.3% between 1936 and 1940; and none in 1944.

A. E. Wight reported that every county and state in the nation maintained its modified accredited rating with reference to tuberculosis in cattle. During the fiscal year 1945, 8,000,000 cattle were tested throughout the U.S., and only 0.24% reacted. From 1917 to 1945 inclusive, 279,235,490 tests were administered, and 3,891,950 animals reacted. This activity played an important role in controlling tuberculosis in humans. (See also X-RAY.)

**Tung Oil:** see VEGETABLE OILS AND ANIMAL FATS.

**Tungsten.** The output of tungsten concentrates containing 60%  $WO_3$  for the major producing countries is shown in Table I, so far as data were available in 1945.

Table I.—World Production of Tungsten Concentrates

	(Short tons)				
	1937	1939	1941	1943	1944
United States . . . . .	3,500	4,298	6,566	11,945	10,282
Canada . . . . .	—	4	35	880	514
Argentina . . . . .	955	1,443	1,896	2,668	2,743
Bolivia . . . . .	1,986	3,678	4,798	7,608	8,747
Brazil . . . . .	7	8	39	1,393	2,448
Peru . . . . .	86	187	371	796	644
Portugal . . . . .	2,281	4,245	6,431	8,242	5,500?
Spain . . . . .	276	406	457	4,301	2,293
Burma . . . . .	7,599	9,081	?	?	?
China . . . . .	19,726	12,765	?	13,272	9,906
Total . . . . .	43,124	44,000	?	?	?

In order to cover a longer period, data are shown for every other year previous to 1943. The extent to which production was built up in so many countries is one of the marvels of the war production program. The results in the United States are especially noteworthy since, so far as is known, the U.S. became the leading producer in 1944. In the earlier years of World War II, Portugal and Spain furnished most of the German supply, but later the buyers of the United Nations adopted the policy of outbidding the German buyers, to reduce the German supply. When the Burma road was closed, and it was necessary to fly war supplies to China, considerable amounts of tungsten were brought out on the return trips.

**United States.**—Statistics of the tungsten industry in the United States, suppressed during the war years, were made

public in 1945 as shown in Table II.

Table II.—U.S. Tungsten Statistics, 1940-44

	(In short tons)				
	1940	1941	1942	1943	1944
Production . . . . .	2,436	3,210	4,489	5,736	4,882
Shipments . . . . .	2,531	3,125	4,441	5,684	4,893
Imports . . . . .	4,833	6,576	7,705	9,339	9,119
Consumption . . . . .	4,978	8,350	8,695	9,657	9,583
Stocks . . . . .	4,257	5,393	6,652	11,988	16,907

In spite of heavy increases in consumption, production and imports not only maintained a satisfactory supply, but built up large stocks for possible emergency demand. Consumption about doubled over prewar levels, and would have gone much higher except for extensive substitution of molybdenum for tungsten in tool steels. That this was an emergency substitution, and not a permanent trend in use, was made clear when restrictions on the use of tungsten were removed at the end of 1943, and there was an immediate swing back to tungsten, with a sharp decrease in the demand for molybdenum. (See also MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. Ro.)

**Tunisia:** see FRENCH COLONIAL EMPIRE.

**Tunnels.** After hostilities and the actual physical fighting of World War II came to an end during the year 1945, it gradually came to light that tunnels were considerably more of a factor in defense and offense than was known. Again no tunnel construction occurred except that which had some bearing on the world-wide conflict.

After the war, the damages to public utilities in London

SEABEES constructing one of a series of tunnels on Guam in 1945, to provide an additional water supply for the U.S. fleet operating from the island

wrought by dropped and flying rocket bombs were to a limited extent published. The civil defense of that city with its many utilities such as water, gas, drainage, hydraulic and electric supply, telephone, telegraph lines, etc., all confused with several hundred miles of passenger transit tunnels, constituted a huge and baffling problem requiring much preliminary study and great organization forces at immense expense, which, for example, included such precautionary measures as the building of four temporary bridges over the river Thames and many other such like defense arrangements in anticipation of the offensive. To the many miles of London's passenger tunnels about 30 cases of structural damage occurred, but, curiously, it seems the most serious of such cases befell the two comparatively small and only toll foot-way tunnels under the Thames river, including the one of historic interest to engineers called the Tower subway.

The work of construction of the New York Tunnel Authority's Brooklyn-New York Battery highway tunnels connecting Manhattan and Brooklyn under the harbour via Governor's Island was discontinued because of World War II. This work was resumed on Nov. 7, 1945.

On Aug. 4, the province of Ontario opened to the public a new inspection tunnel constructed under the falls of Niagara. From Aug. 1939 until then, these inspection facilities were closed to the public.

About 1930, mining of precious or essential metals became too expensive to recover from the mines at Leadville, Colo. However, in the face of the necessity for essential metals the 1943 U.S. congress made an appropriation to the department of the interior for the sole purpose of building a drainage tunnel in these mines at a level low enough to drain by gravity. The scheme included the main tunnel together with supplementary laterals. Despite enormous difficulties the work made good progress under an efficient and experienced construction organization. The extraordinary difficulties in construction were reminiscent of a few somewhat similar experiences met with in the past. Again and again enormous blow-ins of water and demoralized ground would rush into the heading. Because of excessive loads stretches of the tunnel were timbered and lined with concrete. Various measures were adopted to consolidate the ground in the face of these conditions, when water under pressure of 750 lb. per sq.in. was encountered. To effect consolidation bulkheads were built to confine the bad ground. Holes were drilled through these bulkheads through which a liquid mixture of cement was projected under high pressure; even sawdust and oats were injected in the attempt to seal structural cracks which carried cement back into the tunnel. In general this tunnel is in rock, the difficulties being met with in geologic faults where water to the extent of thousands of gallons per minute poured into the heading. From the latest information available in 1945, the tunnel was progressing normally in limestone and no fear was apprehended that future trouble would not be overcome by use of procedures previously developed. (J. FE.)

**Turkestan, Chinese:** see SINKIANG.

**Turkey.** A republic in the southeastern Balkans and in Asia Minor. Area, 296,500 sq.mi.; pop. (Oct. 20, 1940) 17,820,950. Capital: Ankara. Chief cities: Istanbul (Constantinople) 793,949; Izmir (Smyrna) 183,762; Ankara (Ankara) 157,242; Seyhan (Adana) 88,119; Bursa (Brusa) 77,598; Eskisehir 60,742; Gaziantep 57,132. Religion: predominantly Mohammedan. President: Ismet İnönü. Prime minister (1945) Sükrü Saracoğlu.

**History.**—Turkey completed at the beginning of 1945 the evolution it had started in 1944. On Aug. 7, 1944, Turkey had

broken off diplomatic and commercial relations with Germany. On Jan. 3, 1945, it followed that step by breaking off relations with Japan. In both cases its treaty of alliance with Britain was given as the determining reason. On Feb. 23, 1945, Turkey declared war on Germany and Japan and thus qualified for an invitation as a charter member to the United Nations conference in San Francisco. The declaration of war was approved unanimously by the Turkish parliament. On the same day a formal lend-lease agreement was signed between the United States and Turkey. Turkey was also among the first nations to ratify the United Nations charter, doing so on Aug. 16, 1945. On that occasion a special tribute was paid to the achievements and the friendship of President Franklin D. Roosevelt.

In the forefront of Turkey's political problems in 1945 were its relations with Russia. In June 1945 the Russian ambassador in Ankara, Sergei Alexandrovich Vinogradov, transmitted to the Turkish government a note stating the conditions for a new treaty of friendship between the two countries after the old one had been denounced by Russia on March 20. It was reported on reliable authority, though never officially published, that the Russians demanded the cession by Turkey of the districts of Kars and Ardahan and the establishment of a new regime governing the Straits of Constantinople. A lively agitation among Armenians living in the soviet union claimed Kars and Ardahan as parts of the soviet republic of Armenia. Russia demanded military bases in the straits and the replacement of the International convention by a bilateral treaty. It was also reported that the Russians suggested to the Turks the acceptance of territorial changes in the Balkans, probably a Bulgarian outlet to the Aegean sea which would cut off Turkey from Greece.

The Turks rejected the Russian demands. They were convinced that the cession of the strategic territories of Kars and Ardahan and of military bases in the Straits of Constantinople to Russia would render Turkey defenseless and end its independence. The Turks were opposed to any bilateral settlement of the straits question with Russia. They were willing to accept a reasonable international regime under the security council of the United Nations organization which would guarantee freedom of use of the straits without endangering Turkish national security. Such a suggestion was also made by Secretary of State Byrnes on behalf of the United States in a memorandum to the Turkish government.

The end of World War II resulted in an economic crisis, for prices remained high while the demand for Turkish products, stimulated by the war, suddenly ceased. The Turkish government in its plans for the industrialization of the country, the completion of the railroad net and the erection of a number of powerful hydroelectric plants, the material for which would have formerly been supplied by Germany, was looking for new trade relations with the west. The end of the war brought also a relaxation of censorship and of the strict discipline maintained in the Turkish parliament. The desire for the fuller obligation of the democratic rights guaranteed by the constitution was voiced insistently and the formation of an opposition party for the elections in the spring of 1946 was discussed.

**Education.**—In 1942 there were 11,413 schools with 29,854 teachers and 769,555 male and 331,706 female students. The total expenditure on education by the government in 1941-42 was £T.41,046,894. There were 20 institutions for higher education with 11,779 male and 3,099 women students. Among them was the University of Istanbul which, founded in 1900, was completely reorganized in 1933. In 1941-42 there were 8,713 students, among them 2,106 women. Among the other colleges there was in Ankara a school of law, an institute of history, language and geography, and an institute of advanced agriculture.

**Finance.**—Revenue for 1944-45 was estimated at £T.570,435,500, expenditure at £T.570,434,417. On May 31, 1939, the last date for which figures were published, the public debt amounted to £T.619,385,681, of which £T.331,761,478 represented the consolidated debt. After 1939 numerous loans to meet extraordinary expenditures, mostly for defense, swelled the public debt considerably. The monetary unit is the Turkish pound (£T.), divided into 100 piastres. The Turkish pound has been stabilized on the basis of 521 piastres to the English pound, and was valued at approximately 80 cents U.S. in 1945.

**Trade and Communication.**—In 1943 imports to Turkey amounted to £T.203,000,000; exports from Turkey to £T.247,000,000. Before World War II the chief exporters to Turkey were Germany, followed by the United States, Italy and Great Britain. The same order prevailed among the countries to which Turkey exported. Turkey imported mineral oils and coal, machinery, iron and steel manufactures, cotton piece goods, paper and paper manufactures, chemicals, tea, coffee and cocoa and rubber manufactures. It exported tobacco, cotton, hazelnuts, mohair, olive oil, resins, wool, opium and chrome.

On May 1, 1942, Turkey had a merchant fleet of 168 ships with a gross tonnage of 187,556. The total length of railway lines at the end of 1943 was 4,609 mi., of which 4,339 mi. were owned by the state.

**Agriculture and Industry.**—The main industry of the country is agriculture, which the government has tried to modernize and intensify. Besides cereals, tobacco, opium, figs, raisins, nuts and almonds are grown. In 1942 the tobacco crop amounted to 76,050 short tons. The breeding of sheep and goats is of great importance, and silk, mohair, skins and hides are exported. The Turkish government gave great consideration to a program of industrialization after the late 1920s, and a number of modern factories were constructed. The government granted special credits to the development of mining. The country has important deposits of coal, chrome, manganese and emery. A second five-year plan, proclaimed in 1936, concerned mainly mining and electrification. Its completion was halted by the war.

**Turner, Richmond Kelly** (1885– ), U.S. navy officer, was born May 27 in Portland, Ore. He was graduated from Annapolis, 1908, was commissioned an ensign, 1910, and studied at the Naval Ordnance school in 1916. During World War I he served on a number of battleships. After the war he trained at the Naval Aviation school in Pensacola, becoming a naval aviator, 1927. He was commander of the Asiatic fleet's aircraft squadron, 1928-29, chief of the navy's bureau of aeronautics planning division, 1929-31, and aviation adviser to the U.S. delegation at the Geneva disarmament conference, 1931-32. On July 1, 1935, he was promoted to captain and assigned to the Naval War college. Turner then returned to a desk job to direct the navy's war plans division, 1940; the following year he was promoted to rear admiral. During the following few years, Turner was one of the navy's most active admirals. He commanded amphibious operations in the Guadalcanal, New Georgia, Kwajalein, Saipan and Iwo campaigns and helped plan the Gilberts invasion. He was regarded as one of the navy experts in boat-to-beach operations. He was promoted to vice-admiral, Feb. 10, 1944, and was made a full admiral, May 15, 1945. Washington disclosed, Dec. 29, that Turner was named as one of the U.S. representatives to attend the military talks of the United Nations security council scheduled for Jan. 1946.

**Ukraine.** The Ukrainian Soviet Socialist Republic is one of the constituent members of the Union of Soviet Socialist Republics. Its area in 1939 was 170,998 sq.mi. with a

population of 30,960,221. Capital: Kiev (pop. 846,293). Other important cities: Kharkov (833,432), Odessa (604,223), Dnepropetrovsk (500,662). The Ukrainian Soviet Socialist Republic extended its territory in 1939 by the inclusion of parts of Poland extending to nearly 40,000 sq.mi. with a population of 7,000,000. On the other hand, the Moldavian Soviet Socialist Republic, until then an autonomous part of the Ukrainian Soviet Socialist Republic, was constituted on Aug. 2, 1940, with the addition of large parts of Rumanian Bessarabia into one of the constituent members of the Union of Soviet Socialist Republics and separated from the Ukraine. But the Bessarabian districts of Khotin, Akerman and Ismail, together with northern Bukovina, were incorporated into the Ukraine which also gained in 1945 by the annexation of the Czechoslovak Carpatho-Ukraine, a territory of 12,617 sq.mi. with a population of 725,357. For the first time all lands inhabited by a Ukrainian majority were united in the Ukrainian soviet republic. Several of these lands like eastern Galicia (formerly Austrian and Polish), northern Bukovina (formerly Austrian and Rumanian) and Carpatho-Ukraine (formerly Hungarian and Czechoslovak) never before formed part of the Russian empire.

The Ukrainian Soviet Socialist Republic was admitted as a member to the United Nations organization in 1945 and participated in the United Nations Conference on International Organization in San Francisco. Chairman of the Ukrainian delegation was Dmitry Zacharovitch Manuisky, one of the well-known old bolshevik leaders and member of the former Communist International, and, in 1945, deputy chairman of the Council of People's Commissars of the Ukrainian Soviet Socialist Republic. (H. Ko.)

**Umezu, Yoshijiro** (1882– ), Japanese army officer, was born in January at Oita. Although a graduate of the Naval academy and the Naval Staff college, he entered army service as commander of an infantry regiment. In 1934 he was named commander of a Japanese garrison in north China, and there directed many of the intrigues which culminated in the Chinese-Japanese war three years later. In 1936 he was returned to Tokyo as vice-minister of war, but in 1939 was again shifted to the Manchurian scene, where he held command of the Kwangtung army and the title of "Japanese ambassador." In reality, he was virtual ruler of the puppet regime. Characterized as a cautious, practical-minded commander, Umezu had long been considered one of the powers of Japan's military, and had been identified with its Asiatic expansionist adventures. After Premier Tojo was removed from the post of chief of general staff, which he held concurrently with his premiership, Umezu succeeded to that position, according to a Tokyo broadcast, July 18, 1944. He signed the Japanese surrender document for the Japanese imperial general staff in the ceremonies aboard the battleship U.S.S. "Missouri" in Tokyo bay, Sept. 2, 1945.

**Unemployment Insurance:** see SOCIAL SECURITY.

**Unemployment Relief:** see RELIEF.

**Unfederated Malay States.** One of the three principal subdivisions of British Malaya (see also STRAITS SETTLEMENTS and FEDERATED MALAY STATES). Area, 22,100 sq.mi.; pop. (1940) 1,912,497. There are five of these states with the following areas and populations: Johore, 7,330 sq.mi., pop. 737,590, capital Johore City; Kedah, 3,660 sq.mi., pop. 515,758, capital Alor Star; Kelantan, 5,750 sq.mi., pop. 390,332, capital Kota Bharu; Trengganu, 5,050 sq.mi., pop. 211,041, capital Kuala Treng-

ganu; Perlis, 310 sq.mi., pop. 57,776, capital Kangan. The largest, richest and most populous of these states, Johore, is at the southern tip of the Malay peninsula, opposite Singapore Island. The others, located in the northern part of British Malaya, were quickly overrun by Japanese forces in the first weeks of the World War II campaign which culminated in the capture of Singapore in Feb. 1942. They were transferred to the possession of Siam in 1943 but were handed back to British sovereignty by virtue of the treaty between Great Britain and Siam which was concluded at the end of 1945. Before the Japanese invasion the nominal rulers were native sultans, who conformed to the advice of British residents. Apparently this method of indirect administration continued under the Japanese occupation and the period of annexation by Siam. Rubber is the principal product of these states with rice and copra as secondary crops. (See also JAPAN.) (W. H. CH.)

**Union of South Africa:** see SOUTH AFRICA, THE UNION OF.

## Union of Soviet Socialist Republics.

The former Russian empire, an Eurasian state covering the whole of eastern Europe and northern Asia and much of central Asia, is a federation of soviet socialist republics. In 1939 its area was 8,173,550 sq.mi., its pop. (Jan. 17, 1939, census) 170,467,186. The union then consisted of 11 republics of which the Russian Soviet Federated Socialist Republic was by far the largest (78% of the whole territory and 64% of the population). Of the remaining 36% of the population, almost one-half lived in the Ukrainian S.S.R. (2% of the territory) and the other half in the nine other union republics (20% of the territory). The soviet union is inhabited by almost 100 different nationalities speaking different languages. In Jan. 1939, Great Russians constituted 58.4% of the population, Ukrainians 16.6% and White Russians 3.1%. None of the other nationalities, all of them non-Slavic and most of them non-European, reached 3% of the total population. The most important were Uzbeks 2.9%; Kazaks 1.8%; Tartars 2.5%; Jews 1.8%; Azerbaijanians 1.3%; Georgians 1.3%; Armenians 1.3%. The capital of the U.S.S.R. and of the Russian S.F.S.R. is Moscow (pop. 4,137,018). Ten other cities had a population of more than 500,000 in 1939: Leningrad, formerly St. Petersburg (3,191,304); Kiev (846,293); Kharkov (833,432); Baku (809,347); Gorki, formerly Nizhni Novgorod (644,116); Odessa (604,223); Tashkent (585,005); Tbilisi or Tiflis (519,175); Rostov-on-Don (510,253); Dnepropetrovsk (500,662). In 1939 there were 81 cities in the U.S.S.R. with a population of more than 100,000 inhabitants and 92 cities with a population of 50,000 to 100,000 inhabitants.

In 1939 the U.S.S.R. consisted of the following union republics: Russian S.F.S.R. (capital Moscow; area 6,372,860 sq.mi.; pop. 109,278,914); Ukrainian S.S.R. (Kiev; 171,777 sq.mi.; pop. 30,960,221); White Russian S.S.R. (Minsk; 49,022 sq.mi.; pop. 5,567,976); Azerbaijan S.S.R. (Baku; 33,196 sq.mi.; pop. 3,209,727); Georgian S.S.R. (Tiflis; 27,020 sq.mi.; pop. 3,542,289); Armenian S.S.R. (Erivan; 11,580 sq.mi.; pop. 1,281,599); Turkmen S.S.R. (Ashkhabad; 171,384 sq.mi.; pop. 1,253,985); Uzbek S.S.R. (Tashkent; 145,908 sq.mi.; pop. 6,282,446); Tadzhik S.S.R. (Stalinabad; 55,584 sq.mi.; pop. 1,485,091); Kazakh S.S.R. (Alma-Ata; 1,059,184 sq.mi.; pop. 6,145,937); Kirghiz S.S.R. (Frunze; 76,042 sq.mi.; pop. 1,459,301).

Chairman of the praesidium of the supreme soviet of the U.S.S.R. in 1945, Mikhail Ivanovich Kalinin; chairman of the council of people's commissars of the U.S.S.R., Marshal Joseph Vissarionovich Stalin; vice-chairman, Vyacheslav Mikhailovich Molotov, foreign commissar.

**History.—Expansion.**—In the years between 1939 and 1945

YOUNG WOMAN of the soviet army directing traffic on a Lublin street during the Russian occupation of Poland early in 1945

the U.S.S.R. expanded its territory considerably. It annexed in Europe the three Baltic republics of Estonia (18,353 sq.mi., pop. 1,126,413), Latvia (20,056 sq.mi., pop. 1,950,502) and Lithuania (22,959 sq.mi., pop. 2,879,070) and acquired from Finland 16,173 sq.mi. with a pop. of c. 500,000; from Poland 77,703 sq.mi. with a pop. of c. 12,775,000; from Rumania 19,300 sq.mi. with a pop. of c. 3,500,000. In 1945 the U.S.S.R. added to its territory the Carpatho-Ukraine from Czechoslovakia (12,617 sq.mi. with a pop. of 725,357) and the northern part of eastern Prussia from Germany (c. 7,000 sq.mi. with a pop. of c. 1,000,000). From Japan the U.S.S.R. acquired in 1945 Karafuto (southern Sakhalin), an area of 13,935 sq.mi. with a pop. (1935 census) of 331,943, and the Chishima or Kurile Islands (47 islands of 3,944 sq.mi.). Southern Sakhalin abounds in timber and petroleum; its most important industry is fishing. The importance of the Kuriles is strategic. In addition the formerly "independent" republic of Tannu-Tuva in Outer Mongolia (64,000 sq.mi.) was an-

nexed and transformed into the Tuvian Autonomous Region.

By a treaty of alliance with the national government of the Chinese republic on Aug. 14, 1945, the two main railroads in Manchuria, the Chinese Eastern railway and the South Manchuria railway, were to be joined into one railway system under the name of the Chinese Changchun railway to be the joint property of the U.S.S.R. and China and to be jointly exploited by them. The managing director was to be a Russian. The important naval base of Port Arthur, which had been in Russian imperial control from 1898 to 1904, was to become a naval base at the exclusive disposal of the battleships and merchant ships of the soviet union and of China. It was to be administered by a commission of three Russians and two Chinese with the chairman a Russian. The Russian government alone was to be responsible for the defense of Port Arthur. The nearby port of Dairen was to become a free port where the Russians would lease piers and warehouses and which would be administered by a soviet citizen. All these agreements were to run for 30 years.

*Reorganization.*—The U.S.S.R. was reorganized during World War II into a federation of 16 republics. To the 11 republics existing in 1939 were added: the Karelo-Finnish S.S.R., consisting of the territory ceded by Finland and the former autonomous S.S.R. Karelia (cap. Petrozavodsk; area 75,656 sq.mi.), the Moldavian S.S.R. consisting of most of Rumanian Bessarabia and the former Moldavian autonomous S.S.R. (area 13,124 sq.mi.), the Estonian S.S.R., the Latvian S.S.R. and the Lithuanian S.S.R. While the U.S.S.R. in 1939 was constituted of three European republics and eight Asiatic republics (three Trans-Caucasian and five central Asiatic), in 1945 the federation included an equal number of European and Asiatic republics.

On the other hand, several former autonomous republics and regions in the U.S.S.R. lost their autonomy during World War II. The German Volga A.S.S.R., one of the oldest autonomous administrations in bolshevik Russia, was abolished after the German invasion of Russia and its inhabitants dispersed into Siberia. Apparently the soviet authorities thought that the soviet citizens of German descent would be more influenced by their race than by their class allegiance, and proceeded with their transfer although the invading Germans never reached the territory of the former German Volga A.S.S.R. The four other abolished autonomous administrations were those of the Crimean Tatar A.S.S.R., of the Kalmyk A.S.S.R. with the capital of Elista, of the Chechen-Ingush A.S.S.R. around the important oil wells of Grozny in the Caucasus and of the Karachaevo-cherkesian autonomous region around Mt. Elbrus in the Caucasus. All these four regions were occupied by the Germans during World War II. The termination of their autonomy was probably due to the disloyalty of the populations. What happened to the populations was unknown; the indigenous languages seemed doomed because the soviet government renamed all the towns with Russian names.

*Victory over Germany and Japan.*—The soviet union mobilized the total war effort of its people against Germany, and for a short time in Aug. 1945 against Japan, by an appeal to Russian patriotism. Victory found the Russian troops in occupation of large parts of Germany and Austria, and of the former German satellites, Rumania, Bulgaria and Hungary. In these countries, as well as in Poland, Yugoslavia, Albania and Czechoslovakia, regimes came into power which were regarded as "friendly" to the soviet union. In Yugoslavia, Poland, Rumania and Bulgaria, these regimes were under communist control. The soviet union maintained large armies of occupation, probably as a consequence of the domestic food situation, for the armies of occupation lived largely "on the occupied lands." In Asia the soviet union concluded a favourable treaty with China which gave Russia economic and strategic positions of importance in Manchu-

ria. But on the whole Russia's relations with the Chinese national government under Generalissimo Chiang Kai-shek were friendly. Russia did not support officially the Chinese communists in their struggle with the Chinese government; on the contrary, it gave correct support to the legitimate government and facilitated the reoccupation of Manchuria by Chinese government troops. Russia also occupied the northern, highly industrialized part of Korea and claimed a share in the occupation and control of Japan proper. By the end of 1945 Russia and the United States had arrived at an agreement about the administration of Korea and Japan. Much international concern was caused by Russia's claims on Turkey and Iran where Russia apparently tried to realize the aggressive aspirations of the former imperial Russian government which revolutionary Russia in 1918 had officially and solemnly repudiated. From Turkey Russia demanded territories in eastern Anatolia and bases on the Straits of Constantinople, while in Iran the Russians were believed to favour autonomous and perhaps even separatist movements in the north which might lead either to the disintegration of Iran or to the establishment of a "friendly" government under soviet control over the whole of Iran. While by the end of 1945 the democracies and Russia seemed to arrive at agreed solutions in eastern Europe and the far east, Russia's demands on Turkey and Iran threatened to keep the tensions with the democracies acute.

*Relations with the Allies.*—With the defeat of the common enemies, the wartime alliance of the soviet union, Great Britain and the United States was subjected to much strain. This was the result not only of opposite ideologies but of conflicting national interests and security requirements. Nevertheless co-operation among the Big Three was maintained. They met during 1945 in not less than four conferences. In the first two (Yalta in the Crimea and Berlin [Potsdam] in Germany) the heads of the three nations conferred. At Yalta Marshal Stalin met with President Roosevelt and Prime Minister Churchill; at Berlin, where again the Russians were hosts in their zone of occupation, Marshal Stalin met with President Truman, and it was during that conference that Prime Minister Attlee replaced Churchill. As a result of the decisions of the Berlin conference the foreign ministers of the Big Three met in London in September. When this conference ended without agreement, the foreign ministers met again, at the suggestion of the U.S. secretary of state, at Moscow in December. Their agreement there smoothed the way for the opening of the United Nations assembly in London in Jan. 1946.

At the United Nations conference in San Francisco in the spring of 1945 the soviet union was represented by a delegation under the leadership of Foreign Commissar Molotov. In addition to the U.S.S.R., two of its constituent republics, the Ukrainian S.S.R. and the Byelorussian or White Russian S.S.R., became members of the United Nations organization and were represented at the United Nations conference. The U.S.S.R. did not join, however, some of the international bodies organized in 1945 in connection with the United Nations organization like the educational and food organizations. Nor did it ratify before the end of 1945 the Bretton Woods agreement. (See also BERLIN CONFERENCE; UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION; YALTA CONFERENCE.)

*The U.S.S.R. and the Democracies.*—Much of the international tension may be explained by the lack of communication between the soviet union and the democracies. The soviet union and all the territories occupied by its armies were on the whole inaccessible to foreigners. Travel in these territories was discouraged as was travel of soviet citizens abroad. U.S. and British press representatives in Moscow complained about the restrictions imposed upon their work in gathering and transmitting in-

formation.

The disagreement about "freedom" was fundamental. The Russians maintained that true freedom, including freedom of the press, existed only in the soviet union. When the 10,000th issue of the official Bolshevik party newspaper, *Pravda*, appeared on Sept. 24, 1945, an occasion on which the paper received from the government the Order of Lenin, its editor David Zaslavsky wrote: "What some countries of the West call freedom of speech is nothing but a rope on which a capitalist publisher keeps his journalists. If the rope is long enough, freedom of speech is relatively long. If the rope is short freedom of speech is short cropped. . . . The freedom of the soviet press is in service to the people. The Soviet journalist is free because no exterior opinions can influence him. The soviet journalist is a worker. He gets a salary for his work but does not work for money. He does not sell himself nor does he trade his ideas nor his news. Does any foreign correspondent have such freedom? Abroad the journalist's profession is a career. With us it is a combat post."

Similarly the Moscow monthly *Bolshevik* maintained: "In the conditions of bourgeois democracy the workers do not have the minimum material requirements for actual use of the rights that are proclaimed. They do not have at their disposal printing presses and paper. Newspapers, clubs, theatres—all are the property of private individuals or groups."

When, in the absence of Marshal Stalin who was resting in the Caucasus, Molotov delivered the great annual address in celebration of the anniversary of the Bolshevik Revolution of Nov. 1917, he stressed the point that only the soviet union represents "true democracy." He spoke of "a flourishing of true democracy of the people [in the U.S.S.R.] that they did not know in the old days and that cannot exist in any other states, divided as they are into classes of oppressors and oppressed, a thing that soviet power has long put an end to in our country. . . . Unlike parliamentary democracy, the democracy of the soviets is a true democracy of the people."

**Nation and Party.**—Though Molotov in his speech mentioned the patriotic character of World War II, he stressed emphatically that it was the soviet government and the Bolshevik Revolution which gave to Russia and the Russian people the strength for their great victories. "The soviet people called its war . . . the great patriotic war. By the example of the soviet people, patriots of other states learned how one must fight for one's motherland, for its liberty and independence." This Russian strength was in Molotov's opinion due to "the leadership of the party of Lenin and Stalin," above all to "the great Stalin, the far-seeing and tried leader of the soviet union." He regarded the Bolshevik Revolution of Nov. 1917 as a great patriotic feat which had saved Russia from "being degraded to the status of a second rate power."

Accordingly the efforts of communist indoctrination and of teaching the pure doctrine of Marx and Lenin in the official interpretation were intensified by the end of the year. The strict unity and regimentation of the soviet state rested on the monolithic unity and discipline of the Communist party, of which Marshal Stalin was general secretary. With the end of the war the emphasis seemed to shift again to party doctrine and party leadership.

**Economic Reconstruction.**—In Sept. 1945 the fourth Five Year plan was announced. As in former plans, the emphasis was on heavy capital goods, steel production and armaments, especially also on a great increase in navy and naval bases. Labour productivity and industrial efficiency were to be improved as a condition "for expanding the soviet economy and developing its great new frontier" in Asia. To fulfil the requirements, the competitive methods in wages and other incentives known to capitalist society were developed in the soviet economy. Russia

intended to become also an export centre of machines for all the countries in eastern and southeastern Europe where Russia wished to replace Germany as the chief supplier of industrial goods. At the same time new constructions were to continue to shift eastward beyond the Urals; from these Asiatic centres Russia could supply the markets of Asia.

Consumers' goods continued to be subordinate to the production of heavy capital goods. Yet the soviet government hoped to raise slowly the very low standard of living of the Russian people to the much higher standard of the masses in the democracies. Efforts were made to meet the constantly rising demand for better living conditions, and by the end of the year there had been a noticeable improvement in the food situation and in the supply of consumers' goods. Living conditions were eased. The eight-hour working day was restored and the payment of increased wages for overtime was reintroduced. The special war tax on workers was repealed on Jan. 1, 1946, which saved about 15% for the worker.

Throughout the soviet union the reconstruction of the devastated provinces was progressing with great energy. Production increased in all fields. Progress was in no way confined to the economic field. Cultural activities had not been neglected even during the most critical periods of the war. The resumption and reinvigoration of all fields of education showed conspicuous success. The Academy of Sciences of the U.S.S.R., founded in 1725, celebrated in July 1945 its 220 years' anniversary with many British and U.S. scientists present. The academy counted 140 full and 200 corresponding members. Sergei I. Vavilov, professor of physics, was elected the new president.

**Education.**—The school system throughout the soviet union was based in 1945 upon uniform text books and the same syllabus, though in the non-Russian schools a number of hours were allowed for the native language, literature and history. All schools were state schools. The growing emphasis was on a firm and conscious discipline in the classroom and on military training. Coeducation, formerly accepted in the U.S.S.R., was being abolished and separate schools for boys and girls were established; the boys' curriculum stressing military education, the girls' curriculum, housework. Under the people's Commissariat of Defense were the newly established Suvorov military schools, residential secondary schools for the training of future officers. In the academic year 1945-46, 772 colleges and institutions of higher learning were functioning in the U.S.S.R. with a student body of 560,000. The number was almost equal to that in the last prewar year (1940-41) with 782 institutions and 564,573 students.

**Religion.**—On Feb. 2 Metropolitan Alexei, the acting patriarch after the death of Sergius on May 15, 1944, was unanimously elected patriarch of the Russian Orthodox Church. Under his leadership the church not only wholeheartedly co-operated with the soviet government but also tried to unite the Orthodox Churches throughout the world in loyalty to the Russian Orthodox Church and under its discipline.

**Trade.**—In 1938 the five principal countries from which Russia imported were: the United States (405,800,000 rubles), Britain (240,800,000), Netherlands (102,500,000), China (68,000,000) and Germany (67,000,000). The five principal countries to which Russia exported were Britain (375,000,000), Belgium (116,800,000), United States (96,700,000), Netherlands (92,800,000) and Germany (88,000,000).

The U.S.S.R. share in world exports amounted to 1.3% in 1936 and 1937 and to 1.1% in 1938; its share in world imports was 1.2% in 1936, 0.9% in 1937 and 1.2% in 1938. From June 22, 1941, on large supplies (armaments, raw materials and equipment) arrived from Britain and from Canada, and from Oct. 1, 1941, on from the United States and continued until the end of the war in 1945.

**Agriculture, Manufacturing, Mineral Production.**—In 1938 there were in the soviet union 17,500,000 horses, 63,200,000 cattle, 102,500,000 sheep and goats and 30,600,000 pigs. Production of the most important raw materials and goods amounted in 1938 in short tons: wheat 46,062,000; rye 23,071,000; oats 18,728,000; barley 9,039,000; maize 2,965,000; rice 349,000; potatoes 46,252,000; beet sugar (1940) 2,365,000; tea (1940) 14,220; cotton (1940) 882,000; cotton seed (1940) 1,896,000; wool (1938) 151,000; flax (1939) 698,000; hemp (1939) 121,000; raw silk (1940) 1,900; rayon (1940) 8,000; wood pulp (1938) 11,905,000; crude petroleum (1940) 32,738,000; natural gas 2,600,000,000 cu.ft.; coal (1940) 165,818,000; iron ore (metal content) (1940) 15,432,000; pig iron and ferroalloys (1940) 16,479,000; steel ingots and castings (1940) 21,054,000; manganese ore (metal content) (1940) 1,433,000; bauxite (1938) 276,000; aluminum (1940) 61,000; chrome ore (1940) 106,000; silver (1938) 240,000; gold (1937) c. 5,291,000 oz.

In 1945 the production of gold rose considerably in the soviet union. Though no figures were published after 1933, the gold reserves of the U.S.S.R. were estimated at \$2,000,000,000 to \$10,000,000,000. New extremely rich fields were discovered in 1923 in the Nizhne Kolymsk region near the sea of Okhotsk, where a great construction program known as Dalstroy was under way in 1945, controlled by the Russian

state secret police, the N.K.V.D.

**Unitarian Church.** The outstanding development in Unitarian history during 1945 was the great expansion of the work of the Unitarian Service committee which necessitated the securing of new headquarters at 9 Park street, Boston, Mass. The personnel was tripled and was at work in 15 countries on five continents. The committee was registered with the president's War Relief Control board so that its work was integrated with U.N.N.R.A., Red Cross, etc., avoiding any duplication.

Sample operations of the committee were medical clinic, Marseilles; medical mission to Italy to study mass malnutrition, called by U.N.R.R.A. "the most significant proposal for the relief of suffering in Europe yet made to us by a private relief agency"; children's home, Côte Basque, France; school kits, tools, etc., sent to Europe, besides 17,000 outfits of clothes for children; continuous clothing collection; youth workcamps; Paris workshop and sewing room; Polish medical mission; aid to refugees in Lisbon; hundreds of thousands of issues of publications showing war needs and conditions. A drive for 100 tons of canned food for Europe by Jan. 1, was opened Dec. 9, throughout the Unitarian denomination.

Half of this quota was filled in the first two weeks. The food was distributed by the service committee personnel to known persons among the neediest and was thus kept out of the black market.

The Unitarian denomination showed a marked increase in membership both in the U.S. and abroad. With the strengthening of liberal movements, Unitarianism increased in Belgium, Czechoslovakia, England, Denmark, Estonia, France, Germany, Holland, Hungary, India, Norway, the Philippines, Rumania, South Africa, Sweden and Switzerland, where the International Association for Liberal Christianity and Religious Freedom had branches.

Dr. Herbert Hitchen, director of the Department of Foreign Churches received requests from liberals all over the world for co-operation and help and was to go to Europe for conferences.

Publication by the denomination greatly increased. Its publishing organ, the Beacon Press, had an output 33% above that of 1944. The official magazine of the American Unitarian association, the *Christian Register*, gained 20% in circulation. Likewise there was a large increase in pamphleteering in the effort to make the denomination more widely known throughout the country. Dr. Winfred Overholser, superintendent of St. Elizabeth's hospital, Washington, D.C., and professor of psychiatry at George Washington School of Medicine was nominated as moderator of the American Unitarian association to succeed Justice Harold H. Burton of the supreme court. (J. H. L.)

**United Church of Canada.** The United Church of Canada, which in 1925 united the Presbyterian Church in Canada, the Methodist Church (Canada) and the Congregational Churches of Canada, reported for 1944 a membership of 739,079, with 1,738,510 persons under pastoral oversight, a Sunday school enrolment of 473,736 and 6,892 preaching places. The church owned prop-

erty worth more than \$87,053,089 and raised a total of \$15,018,052 for all purposes.

The missionary and maintenance givings of the church in 1944 showed an increase of \$155,825 over those of the year 1943. Because of inflation in China, it was agreed that the extra financial needs of the board of overseas missions be met out of any available surplus in the missionary and maintenance receipts for the year 1945.

Among the important features in the life of the United Church during 1945 was the launching of a crusade for Christ and His Kingdom, under the leadership of the moderator, to enable the church to cultivate more evangelistic earnestness through all its varied ministrations; the beginning of conversations with the Church of England in Canada and the Canada conference of the Evangelical church covering the problem of union; the appointment of Miss Harriet Christie to bring greetings and confer with women in Great Britain serving in the Canadian armed forces; the raising of more than \$100,000 as an aid to the restoration of Protestant churches in Europe; the setting up of a commission for the guidance of the church on the international control of atomic power and the preparation and presentation of an important brief, in association with other Canadian Protestant churches, covering the problem of Roman Catholic separate schools, to the royal commission on education appointed by the province of Ontario. (G. A. St.)

Those marked \* were signatories to the original declaration of the United Nations Jan. 1, 1942. Ethiopia, Mexico and the Philippines adhered subsequently in 1942; Bolivia, Brazil, Colombia, Iran and Iraq in 1943; France and Liberia in 1944; Arabia, Chile, Ecuador, Egypt, Lebanon, Paraguay, Peru, Syria, Turkey, Uruguay and Venezuela in 1945. Argentina, Byelorussia, Denmark and the Ukraine also joined in 1945. All were signatories to the United Nations charter.

**United Nations Charter for World Security:** see UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION.

## United Nations Conference on International Organization.

Following the publication of the Dumbarton Oaks proposals for international organization in Sept. 1944 it was generally understood that a full conference of the United Nations would be convoked after the other United Nations would have had time to study the proposals. Another necessary preliminary measure was a solution to the troublesome problem of voting arrangements in the new Security council, a matter which the Dumbarton Oaks conferees had been unable to settle. This last difficulty was cleared away by an agreement reached at the Crimea conference in Jan. 1945, and it was officially announced in the final Crimea communiqué that the full conference of the United Nations, sponsored by

Great Britain, the United States and the soviet union (and by France and China, also, if they would agree), would open in San Francisco on April 25, 1945.

**The Organization of the Conference.**—Although the organizational plan which had been drafted in the state department had been submitted to the other sponsoring powers, there had been no time for extensive negotiation on the matter before the opening date. Consequently, it was necessary, at the outset, to bring the heads of delegations together to consider the proposed plan and the suggested rules of procedure. The general scheme as approved by the heads of delegations was as follows: Under the final authority of the conference in plenary session, there was a steering committee consisting of the chairmen of all delegations. This committee made general policy and procedural decisions concerning the work of the conference. Technically, it was not the final authority, but in view of its composition, its decisions were of very great weight. Thus, as an example, if a delegation objected to a decision which had been taken against its will in one of the technical committees, it could bring the matter before the steering committee, and the decision of that body in the form of a recommendation was then brought to the attention of the technical committee for re-examination.

More limited in size was the executive committee composed of the heads of delegations of the four sponsoring governments, China, Great Britain, the soviet union and the United States, together with ten other delegation heads chosen by the steering committee. These were: Australia, Brazil, Canada, Chile, Czechoslovakia, France, Iran, Mexico, Netherlands and Yugoslavia. The primary stated function of this executive committee was to prepare recommendations to be submitted to the steering committee. In view of the restricted membership of this committee it was inevitable that many of the most important procedural decisions of the conference were in fact made by it.

To assist the executive committee there was created a co-ordination committee consisting of representatives from the same 14 countries. The primary function of this group was to determine the general outline and type of the charter to be drafted, to examine the drafts of sections of the charter as they emanated from the technical committees in order to eliminate inconsistencies in phraseology and substance and to recommend to the executive committee a final charter draft. In order to provide expert assistance to this co-ordination committee there was set up a small advisory committee of jurists to make recommendations on the precise terminology of the final draft.

Finally, a credentials committee, consisting of representatives from Ecuador, Luxembourg, Nicaragua, Saudi Arabia, Syria and Yugoslavia, was created to examine official credentials.

The substantive work of the conference was assigned to an entirely different set of conference organs. The subject matter of the Dumbarton Oaks proposals was separated into four large divisions: the over-all purposes, powers and principles of the organization; the general assembly, its composition, functions and powers; the Security council, its composition, functions and powers; and the international court of justice. Each of these segments of the work was placed under the jurisdiction of a commission composed of a representative of each participating state. Under the authority of each commission there were two or more technical committees each of which likewise had representation from each national delegation. Thus, under the first commission there were two committees: (1) preamble, purposes and principles of the charter; and (2) membership, amending procedure and the secretariat. Under the second commission four committees were established: (1) structure and procedures of the assembly; (2) political and security functions of the assembly; (3) economic and social co-operation; and (4) the trusteeship system. The third commission had four committees:

(1) structure and procedures of the Security council; (2) pacific settlement of international disputes; (3) enforcement arrangements; and (4) regional security arrangements. The fourth commission had two committees: (1) the international court of justice and (2) legal problems.

Some difficulties were experienced in making satisfactory arrangements for the officerships of these organizational and substantive organs of the conference. The original proposal that the plenary sessions, the steering committee and the executive committee should be presided over by the chairman of the host delegation, the United States, did not meet with the favour of the soviet delegation which argued that the chairmanship should rotate among the heads of the four sponsoring delegations. Eventually, a compromise was reached whereby the four presided in rotation over the plenary sessions, but Edward R. Stettinius, Jr., as head of the U.S. delegation, presided in the name of his colleagues over the steering and executive committees. Another, but less troublesome, difficulty developed over the selection of presiding officers for the commissions and the technical committees. The underlying theory was that, in order to distribute positions as widely as possible, most of the committee chairmanships should be assigned to representatives of the smaller states. The political advantage thus gained was to some extent offset procedurally by the fact that this system resulted in the selection of presiding officers who, in some instances, were by no means familiar with the generally practised rules of parliamentary procedure. Also, committee sessions were prolonged by the extra translations of speeches made by committee chairmen who were unfamiliar with either English or French.

The membership of the conference was another matter which had to be dealt with at this initial organizational stage. Originally, invitations were issued by the United States on behalf of the other sponsors to the other 42 United Nations. During the period of the conference invitations were extended to Argentina, the Byelorussian S.S.R., Denmark and the Ukrainian S.S.R. Delegates from these four states attended the later sessions and signed the final charter. The reorganization of the Polish government, projected at the Yalta conference, had not been completed satisfactorily at the time of the conference, so there were no Polish delegates in attendance. Poland, however, did sign the charter later and thus became an original member of the organization.

The language problem also presented numerous difficulties. The conference agreed that the final charter should be drafted in five languages, English, French, Russian, Spanish and Chinese, each of which should be equally authentic, but it rejected the original proposal that English should be the sole working language. Consequently, it was agreed that English and French would be the working languages on a basis of full equality with each other. In the plenary sessions, a speech in a third language would be interpreted into either English or French at the choice of the speaker. In many cases, interpretation was made into both languages. In committee sessions, all remarks made in a third language were interpreted into both English and French. This was a time-consuming but necessary procedure.

The records of the conference consisted of the verbatim reports of the commission and plenary sessions, the digests of committee meetings, the printed daily *Journal* and a brief daily *Précis* containing the skeletonized summary of action taken in the various conference organs.

At the Dumbarton Oaks conversations, the press had been excluded from all meetings, and publicity consisted only of daily communiqués. Clearly, such a restricted publicity procedure would not suffice for the San Francisco conference and, after some discussion, agreement was reached that the press repre-

sentatives would be admitted to all plenary sessions and commission meetings.

The press was excluded from committee meetings of all categories but the secretariat prepared a brief communiqué for each technical committee meeting. This was given to the press after it had been approved by the chairman of the committee. In addition, committee chairmen frequently held press conferences in a large room, prepared for that purpose, at the conclusion of committee sessions.

Voting arrangements were adopted after prolonged discussion. Each delegation had one vote in all bodies on which it was represented. Decisions on procedural matters required a majority of the votes of the delegations present and voting. Substantive decisions required a two-thirds vote, and the executive committee was authorized to make the decision in case of disagreement as to whether a particular question was procedural or substantive. Votes were regularly taken by a show of hands, but a standing vote was occasionally taken in commission and plenary sessions, and a roll-call vote was taken in committee meetings on issues of unusual importance.

**The Procedure of the Conference.**—The conference opened on April 25 with an address of welcome from President Truman, who spoke from Washington.

During the first eight plenary sessions the heads of 37 delegations addressed the conference, stating the general views of their respective states concerning the nature and functions which should be possessed by the future United Nations organization. Many of these delegates took the opportunity to point out what they believed to be basic shortcomings of the League of Nations which must be corrected if the new organization were to achieve its stated goal of maintaining international peace and security.

In view of the international political and military situation, it was recognized that the foreign ministers of 50 states could not remain for any great length of time in San Francisco. It was also clear that much time would be lost in communication with the various capitals if these luminaries left the conference and placed their delegations in charge of persons who did not have sufficient discretionary authority. Consequently, when the long period of initial statements drew to a close, the steering committee decided that, except for an initial organization meeting, the four commissions would not function until after the conclusion of the committee phase of the conference. Consequently, the 12 technical committees began their work on May 4, and the conference settled down to active work.

The basic documentation for the committees was of three categories: the Dumbarton Oaks draft proposals; the thick volume of comments and alternative proposals from the other United Nations, which had been printed and distributed by the secretariat; and the amendments to the Dumbarton Oaks draft which had been agreed upon by the four sponsoring powers. Since each committee had been assigned the task of examining certain sections of the Dumbarton draft, the various committee secretaries prepared special cross-referenced summaries of the other United Nations' comments and proposals relating to their work. In order to avoid endless confusion and delay, it was decided that after the May 4 deadline no new proposals could be presented by a delegation except with the approval of the executive committee. Actually, the existing proposals were so numerous and varied, that this prohibition did not prove irksome to anyone.

Except for the assignment of work to be covered and the stipulations concerning voting arrangements, the 12 technical committees received little or no procedural direction from the steering committee. In consequence, there was no uniformity in the methods followed. Some decided to examine all the pro-

posed amendments and changes to their sections of the Dumbarton Oaks draft before they voted any final texts. Others examined all the proposals relating to a particular paragraph of the Dumbarton draft, reached a decision and voted a final text of that paragraph before passing on to the next one. Still others began their work by requesting the committee *rapporteur* to prepare a preliminary report, setting forth the chief problems before the committee and an analysis of the major proposals suggested by the other states. In some committees, single sentences and paragraphs of the approved text were sent on to the co-ordination committee; in others, no report of any kind was made until after all the parts of the text had been considered in their relation to each other, and a comprehensive final report had been agreed upon.

The formal deliberations of the conference, as distinguished from outside group negotiations, were largely confined to the committee sessions where the debates were protracted and, at times, heated. In all, this committee stage covered the period from May 4 until June 19, the date on which the last committee held its last formal meeting. This was a long period, much longer, in fact, than had been anticipated by the sponsoring powers at the opening of the conference.

As the committees plunged into their work, it soon became apparent that the major line of cleavage on issues was between the sponsoring powers and their smaller satellites, on the one hand, and those small and middle-sized states which, having no political ties such as to limit their freedom of action, were vocal in criticizing the draft charter because of its substantial departures from the principle of state equality. Australia and New Zealand assumed strong positions of leadership in the latter group, but the Netherlands, Belgium, Norway and many others joined vigorously in the fray. The sponsoring powers followed the general policy of trying to reach agreement on controversial issues outside the committee rooms, so as to present a united front in defense of the Dumbarton draft, or at least in defense of a compromise offer to which they could agree.

The position of France was somewhat equivocal. Though not a participant in the Dumbarton Oaks conversations or the Yalta conference, France was assured a permanent seat on the Security council. In a sense, therefore, the French were torn between a desire to go along with the other great powers and the desire to force a greater recognition of their status of equality by taking an independent stand on debatable issues. The policy which they generally followed was that of supporting the great powers' positions but indicating at the same time that they had made their decisions entirely for individual reasons. The Latin-American states, for the most part, vacillated between approval of the United States positions and support of the small-power stand. Czechoslovakia, Yugoslavia, the Byelorussian S.S.R. and the Ukrainian S.S.R. generally sided with the U.S.S.R.

The sponsoring powers did not always find it easy to reach agreement among themselves in the matter of making concessions to the small-state group. Most widely publicized of their difficulties was that of deciding how far the Yalta voting formula for the Security council extended to decisions relating to the pacific settlement of disputes. For a time it seemed as if this attempt to agree on the limits of the much publicized "veto" power of the permanent members of the Security council might actually wreck the conference, but an eventual compromise was reached. The method of reaching a solution to this problem may serve to illustrate the way in which the conference moved through the committee stage. This particular issue arose as a result of questions, or, rather, requests for interpretation concerning the meaning of the Yalta formula, directed from a number of smaller powers to the sponsors. A tentative reply was given in a committee session by a representative of one of the

PRES. TRUMAN delivering the address which closed the final session of the United Nations Conference on International Organization at San Francisco on June 26, 1945

sponsors who apparently had not consulted the other members of the Big Four. As a procedural step, the critic states were asked then to submit all their requests for interpretation to the secretariat where they were compiled into a formal questionnaire. This document was submitted to the representatives of the sponsoring powers through a special subcommittee established for the purpose. After long negotiation among the Big Four, agreement was reached on a general statement concerning replies to some, but not all, of the questions raised. Allegedly, the others were answered by implication. In handing this statement to the other members of the subcommittee, the sponsor representatives indicated that it would be useless to press them further for explanations as the statement represented their final answer. When the subcommittee transmitted this reply to the full committee, debate was short because it was generally recognized that a refusal to accept the statement, incomplete though it was, might doom the conference to failure. Consequently, the committee voted, with numerous abstentions, to approve the report.

This was to some extent typical of committee procedure. Where debate indicated substantial support of a proposed change in the Dumbarton draft, the sponsors consulted among themselves in an effort to decide whether they should (1) accept the changed wording, (2) propose a substitute draft of their own which might present an acceptable compromise, or (3) stand firmly on the original draft and indicate to the other powers

that if they failed to approve it they would take on themselves the responsibility for the possible failure of the conference. Thus, in matters of fundamental importance the final decision was determined by the sponsors to a far greater extent than by the voting processes in the committees. In matters of lesser moment, the sponsors allowed themselves at times to be outvoted, and they were often divided in their own voting, but the victories thus obtained by the critics were usually of secondary importance.

Technically, the committees were subordinate to the four commissions and were required to report to them. In reality, in order to save time, sections of the final text were in most cases forwarded directly in piece-meal fashion to the co-ordination committee as soon as they were approved by the committees. Substantial difficulties developed at this point because the co-ordination committee, whose duty it was to prepare the final draft in charter language, frequently altered phraseology, in the interests of consistency or smoothness, which had been adopted by the committee after prolonged debate as the precise textual expression which was desired. Eventually, the difficulty was met by asking the secretary of the technical committee to sit with the co-ordination committee when his own committee texts were under examination.

As the committee stage began to draw to a close, the *rapporteurs* prepared their reports to the commission, analyzing the nature of the conclusions reached by the committees and appending the final texts as reported to the co-ordination committee. Once these reports were approved, the final task of the

technical committees was completed.

When the co-ordination committee had finished its difficult and exacting task, the final step was to have the completed text and the reports of the *rapporteurs* of the four commissions approved by the conference in plenary session.

When the final printed texts in the five official languages of the charter and the new statute of the court of international justice were officially signed on June 26, the day President Truman addressed the closing session of the conference, the delegates also placed their signatures on another document, the Interim agreement, which set forth the subsequent procedure to be followed in establishing the United Nations organization. This agreement established a new executive committee, consisting of the same states as those which had served on the executive committee of the conference and a preparatory commission, composed of one representative of each national delegation. The new executive committee was directed to assist the preparatory commission in making arrangements for the holding of the first general assembly meeting of the U.N.O., to make plans for the secretariat of the organization and to canvass the whole problem of taking over those properties and functions of the League of Nations which were desired by the new organization. These bodies were directed to make their temporary headquarters in London. As a result of their work during the months of November and December it was agreed that the first general assembly meeting should be held in London in Jan. 1946.

**BIBLIOGRAPHY.**—The official records of the conference were declassified and, eventually, were to be published under the auspices of the United Nations Information service. (See also SOCIAL SECURITY.) (G. L. Kk.)

**Charter of the United Nations.**—The full texts of the charter of the United Nations and the statute of the International Court of Justice are set out below.

## CHARTER OF THE UNITED NATIONS

**We the peoples of the United Nations determined**

to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and

to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and

to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained, and

to promote social progress and better standards of life in larger freedom, **and for these ends**

to practice tolerance and live together in peace with one another as good neighbors, and

to unite our strength to maintain international peace and security, and to ensure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and

to employ international machinery for the promotion of the economic and social advancement of all peoples,

**have resolved to combine our efforts to accomplish these aims.**

Accordingly, our respective Governments, through representatives assembled in the city of San Francisco, who have exhibited their full powers found to be in good and due form, have agreed to the present Charter of the United Nations and do hereby establish an international organization to be known as the United Nations.

### CHAPTER I Purposes and Principles

#### Article 1

The Purposes of the United Nations are:

1. To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace;

2. To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace;

3. To achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion; and

4. To be a center for harmonizing the actions of nations in the attainment of these common ends.

#### Article 2

The Organization and its Members, in pursuit of the Purposes stated in Article 1, shall act in accordance with the following Principles.

1. The Organization is based on the principle of the sovereign equality of all its Members.

2. All Members, in order to ensure to all of them the rights and benefits resulting from membership, shall fulfil in good faith the obligations assumed by them in accordance with the present Charter.

3. All Members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

4. All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the Purposes of the United Nations.

5. All Members shall give the United Nations every assistance in any action it takes in accordance with the present Charter, and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action.

6. The Organization shall ensure that states which are not Members of the United Nations act in accordance with these Principles so far as may be necessary for the maintenance of international peace and security.

7. Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the Members to submit such matters to settlement under the present Charter; but this principle shall not prejudice the application of enforcement measures under Chapter VII.

## CHAPTER II

### Membership

#### Article 3

The original Members of the United Nations shall be the states which, having participated in the United Nations Conference on International Organization at San Francisco, or having previously signed the Declaration by United Nations of January 1, 1942, sign the present Charter and ratify it in accordance with Article 110.

#### Article 4

1. Membership in the United Nations is open to all other peace-loving states which accept the obligations contained in the present Charter and, in the judgment of the Organization, are able and willing to carry out these obligations.

2. The admission of any such state to membership in the United Nations will be effected by a decision of the General Assembly upon the recommendation of the Security Council.

#### Article 5

A Member of the United Nations against which preventive or enforcement action has been taken by the Security Council may be suspended from the exercise of the rights and privileges of membership by the General Assembly upon the recommendation of the Security Council. The exercise of these rights and privileges may be restored by the Security Council.

#### Article 6

A Member of the United Nations which has persistently violated the Principles contained in the present Charter may be expelled from the Organization by the General Assembly upon the recommendation of the Security Council.

## CHAPTER III

### Organs

#### Article 7

1. There are established as the principal organs of the United Nations: a General Assembly, a Security Council, an Economic and Social Council, a Trusteeship Council, an International Court of Justice, and a Secretariat.

2. Such subsidiary organs as may be found necessary may be established in accordance with the present Charter.

#### Article 8

The United Nations shall place no restrictions on the eligibility of men and women to participate in any capacity and under conditions of equality in its principal and subsidiary organs.

## CHAPTER IV

### The General Assembly

#### COMPOSITION

#### Article 9

1. The General Assembly shall consist of all the Members of the United Nations.

2. Each Member shall have not more than five representatives in the General Assembly.

#### FUNCTIONS AND POWERS

#### Article 10

The General Assembly may discuss any questions or any matters within the scope of the present Charter or relating to the powers and functions of any organs provided for in the present Charter, and, except as provided in Article 12, may make recommendations to the Members of the United Nations or to the Security Council or to both on any such questions or matters.

#### Article 11

1. The General Assembly may consider the general principles of cooperation in the maintenance of international peace and security, including the principles governing disarmament and the regulation of armaments, and may make recommendations with regard to such principles to the Members or to the Security Council or to both.

2. The General Assembly may discuss any questions relating to the

maintenance of international peace and security brought before it by any Member of the United Nations, or by the Security Council, or by a state which is not a Member of the United Nations in accordance with Article 35, paragraph 2, and, except as provided in Article 12, may make recommendations with regard to any such questions to the state or states concerned or to the Security Council or to both. Any such question on which action is necessary shall be referred to the Security Council by the General Assembly either before or after discussion.

3. The General Assembly may call the attention of the Security Council to situations which are likely to endanger international peace and security.

4. The powers of the General Assembly set forth in this Article shall not limit the general scope of Article 10.

#### Article 12

1. While the Security Council is exercising in respect of any dispute or situation the functions assigned to it in the present Charter, the General Assembly shall not make any recommendation with regard to that dispute or situation unless the Security Council so requests.

2. The Secretary-General, with the consent of the Security Council, shall notify the General Assembly at each session of any matters relative to the maintenance of international peace and security which are being dealt with by the Security Council and shall similarly notify the General Assembly, or the Members of the United Nations if the General Assembly is not in session, immediately the Security Council ceases to deal with such matters.

#### Article 13

1. The General Assembly shall initiate studies and make recommendations for the purpose of:

a. promoting international cooperation in the political field and encouraging the progressive development of international law and its codification;

b. promoting international cooperation in the economic, social, cultural, educational, and health fields, and assisting in the realization of human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

2. The further responsibilities, functions, and powers of the General Assembly with respect to matters mentioned in paragraph 1 (b) above are set forth in Chapters IX and X.

#### Article 14

Subject to the provisions of Article 12, the General Assembly may recommend measures for the peaceful adjustment of any situation, regardless of origin, which it deems likely to impair the general welfare or friendly relations among nations, including situations resulting from a violation of the provisions of the present Charter setting forth the Purposes and Principles of the United Nations.

#### Article 15

1. The General Assembly shall receive and consider annual and special reports from the Security Council; these reports shall include an account of the measures that the Security Council has decided upon or taken to maintain international peace and security.

2. The General Assembly shall receive and consider reports from the other organs of the United Nations.

#### Article 16

The General Assembly shall perform such functions with respect to the international trusteeship system as are assigned to it under Chapters XII and XIII, including the approval of the trusteeship agreements for areas not designated as strategic.

#### Article 17

1. The General Assembly shall consider and approve the budget of the Organization.

2. The expenses of the Organization shall be borne by the Members as apportioned by the General Assembly.

3. The General Assembly shall consider and approve any financial and budgetary arrangements with specialized agencies referred to in Article 57 and shall examine the administrative budgets of such specialized agencies with a view to making recommendations to the agencies concerned.

#### VOTING

##### Article 18

1. Each member of the General Assembly shall have one vote.

2. Decisions of the General Assembly on important questions shall be made by a two-thirds majority of the members present and voting. These questions shall include: recommendations with respect to the maintenance of international peace and security, the election of the nonpermanent members of the Security Council, the election of the members of the Economic and Social Council, the election of members of the Trusteeship Council in accordance with paragraph 1 (c) of Article 86, the admission of new Members to the United Nations, the suspension of the rights and privileges of membership, the expulsion of Members, questions relating to the operation of the trusteeship system, and budgetary questions.

3. Decisions on other questions, including the determination of additional categories of questions to be decided by a two-thirds majority, shall be made by a majority of the members present and voting.

##### Article 19

A Member of the United Nations which is in arrears in the payment of its financial contributions to the Organization shall have no vote in the General Assembly if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. The General Assembly may, nevertheless, permit such a Member to vote if it is satisfied that the failure to pay is due to conditions beyond the control of the Member.

#### PROCEDURE

##### Article 20

The General Assembly shall meet in regular annual sessions and in such special sessions as occasion may require. Special sessions shall be convoked by the Secretary-General at the request of the Security Council or of a majority of the Members of the United Nations.

##### Article 21

The General Assembly shall adopt its own rules of procedure. It shall elect its President for each session.

##### Article 22

The General Assembly may establish such subsidiary organs as it

deems necessary for the performance of its functions.

#### CHAPTER V

### The Security Council

#### COMPOSITION

##### Article 23

1. The Security Council shall consist of eleven Members of the United Nations. The Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America shall be permanent members of the Security Council. The General Assembly shall elect six other Members of the United Nations to be non-permanent members of the Security Council, due regard being specially paid, in the first instance to the contribution of Members of the United Nations to the maintenance of international peace and security and to the other purposes of the Organization, and also to equitable geographical distribution.

2. The non-permanent members of the Security Council shall be elected for a term of two years. In the first election of the non-permanent members, however, three shall be chosen for a term of one year. A retiring member shall not be eligible for immediate re-election.

3. Each member of the Security Council shall have one representative.

#### FUNCTIONS AND POWERS

##### Article 24

1. In order to ensure prompt and effective action by the United Nations, its Members confer on the Security Council primary responsibility for the maintenance of international peace and security, and agree that in carrying out its duties under this responsibility the Security Council acts on their behalf.

2. In discharging these duties the Security Council shall act in accordance with the Purposes and Principles of the United Nations. The specific powers granted to the Security Council for the discharge of these duties are laid down in Chapters VI, VII, VIII, and XII.

3. The Security Council shall submit annual and, when necessary, special reports to the General Assembly for its consideration.

##### Article 25

The Members of the United Nations agree to accept and carry out the decisions of the Security Council in accordance with the present Charter.

##### Article 26

In order to promote the establishment and maintenance of international peace and security with the least diversion for armaments of the world's human and economic resources, the Security Council shall be responsible for formulating, with the assistance of the Military Staff Committee referred to in Article 47, plans to be submitted to the Members of the United Nations for the establishment of a system for the regulation of armaments.

#### VOTING

##### Article 27

1. Each member of the Security Council shall have one vote.

2. Decisions of the Security Council on procedural matters shall be made by an affirmative vote of seven members.

3. Decisions of the Security Council on all other matters shall be made by an affirmative vote of seven members including the concurring votes of the permanent members; provided that, in decisions under Chapter VI, and under paragraph 3 of Article 52, a party to a dispute shall abstain from voting.

#### PROCEDURE

##### Article 28

1. The Security Council shall be so organized as to be able to function continuously. Each member of the Security Council shall for this purpose be represented at all times at the seat of the Organization.

2. The Security Council shall hold periodic meetings at which each of its members may, if it so desires, be represented by a member of the government or by some other specially designated representative.

3. The Security Council may hold meetings at such places other than the seat of the Organization as in its judgment will best facilitate its work.

##### Article 29

The Security Council may establish such subsidiary organs as it deems necessary for the performance of its functions.

##### Article 30

The Security Council shall adopt its own rules of procedure, including the method of selecting its President.

##### Article 31

Any Member of the United Nations which is not a member of the Security Council may participate, without vote, in the discussion of any question brought before the Security Council whenever the latter considers that the interests of that Member are specially affected.

##### Article 32

Any Member of the United Nations which is not a Member of the Security Council or any state which is not a Member of the United Nations, if it is a party to a dispute under consideration by the Security Council, shall be invited to participate, without vote, in the discussion relating to the dispute. The Security Council shall lay down such conditions as it deems just for the participation of a state which is not a Member of the United Nations.

#### CHAPTER VI

### Pacific Settlement of Disputes

##### Article 33

1. The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, enquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice.

2. The Security Council shall, when it deems necessary, call upon the parties to settle their dispute by such means.

##### Article 34

The Security Council may investigate any dispute, or any situation

which might lead to international friction or give rise to a dispute, in order to determine whether the continuance of the dispute or situation is likely to endanger the maintenance of international peace and security.

#### Article 35

1. Any Member of the United Nations may bring any dispute, or any situation of the nature referred to in Article 34, to the attention of the Security Council or of the General Assembly.

2. A state which is not a Member of the United Nations may bring to the attention of the Security Council or of the General Assembly any dispute to which it is a party if it accepts in advance, for the purposes of the dispute, the obligations of pacific settlement provided in the present Charter.

3. The proceedings of the General Assembly in respect of matters brought to its attention under this Article will be subject to the provisions of Articles 11 and 12.

#### Article 36

1. The Security Council may, at any stage of a dispute of the nature referred to in Article 33 or of a situation of like nature, recommend appropriate procedures or methods of adjustment.

2. The Security Council should take into consideration any procedures for the settlement of the dispute which have already been adopted by the parties.

3. In making recommendations under this Article the Security Council should also take into consideration that legal disputes should as a general rule be referred by the parties to the International Court of Justice in accordance with the provisions of the Statute of the Court.

#### Article 37

1. Should the parties to a dispute of the nature referred to in Article 33 fail to settle it by the means indicated in that Article, they shall refer it to the Security Council.

2. If the Security Council deems that the continuance of the dispute is in fact likely to endanger the maintenance of international peace and security, it shall decide whether to take action under Article 36 or to recommend such terms of settlement as it may consider appropriate.

#### Article 38

Without prejudice to the provisions of Articles 33 to 37, the Security Council may, if all the parties to any dispute so request, make recommendations to the parties with a view to a pacific settlement of the dispute.

### CHAPTER VII

#### Action With Respect to Threats to the Peace, Breaches of the Peace, and Acts of Aggression

#### Article 39

The Security Council shall determine the existence of any threat to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken in accordance with Articles 41 and 42, to maintain or restore international peace and security.

#### Article 40

In order to prevent an aggravation of the situation, the Security Council may, before making the recommendations or deciding upon the measures provided for in Article 39, call upon the parties concerned to comply with such provisional measures as it deems necessary or desirable. Such provisional measures shall be without prejudice to the rights, claims, or position of the parties concerned. The Security Council shall duly take account of failure to comply with such provisional measures.

#### Article 41

The Security Council may decide what measures not involving the use of armed force are to be employed to give effect to its decisions, and it may call upon the Members of the United Nations to apply such measures. These may include complete or partial interruption of economic relations and of rail, sea, air, postal, telegraphic, radio, and other means of communication, and the severance of diplomatic relations.

#### Article 42

Should the Security Council consider that measures provided for in Article 41 would be inadequate or have proved to be inadequate, it may take such action by air, sea, or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea, or land forces of Members of the United Nations.

#### Article 43

1. All Members of the United Nations, in order to contribute to the maintenance of international peace and security, undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements, armed forces, assistance, and facilities, including rights of passage, necessary for the purpose of maintaining international peace and security.

2. Such agreement or agreements shall govern the numbers and types of forces, their degree of readiness and general location, and the nature of the facilities and assistance to be provided.

3. The agreement or agreements shall be negotiated as soon as possible on the initiative of the Security Council. They shall be concluded between the Security Council and Members or between the Security Council and groups of Members and shall be subject to ratification by the signatory states in accordance with their respective constitutional processes.

#### Article 44

When the Security Council has decided to use force it shall, before calling upon a Member not represented on it to provide armed forces in fulfillment of the obligations assumed under Article 43, invite that Member, if the Member so desires, to participate in the decisions of the Security Council concerning the employment of contingents of that Member's armed forces.

#### Article 45

In order to enable the United Nations to take urgent military measures, Members shall hold immediately available national air-force contingents for combined international enforcement action. The strength and degree of readiness of these contingents and plans for their combined action shall be determined, within the limits laid down in the special agreement or

agreements referred to in Article 43, by the Security Council with the assistance of the Military Staff Committee.

#### Article 46

Plans for the application of armed force shall be made by the Security Council with the assistance of the Military Staff Committee.

#### Article 47

1. There shall be established a Military Staff Committee to advise and assist the Security Council on all questions relating to the Security Council's military requirements for the maintenance of international peace and security, the employment and command of forces placed at its disposal, the regulation of armaments, and possible disarmament.

2. The Military Staff Committee shall consist of the Chiefs of Staff of the permanent members of the Security Council or their representatives. Any Member of the United Nations not permanently represented on the Committee shall be invited by the Committee to be associated with it when the efficient discharge of the Committee's responsibilities requires the participation of that Member in its work.

3. The Military Staff Committee shall be responsible under the Security Council for the strategic direction of any armed forces placed at the disposal of the Security Council. Questions relating to the command of such forces shall be worked out subsequently.

4. The Military Staff Committee, with the authorization of the Security Council and after consultation with appropriate regional agencies, may establish regional subcommittees.

#### Article 48

1. The action required to carry out the decisions of the Security Council for the maintenance of international peace and security shall be taken by all the Members of the United Nations or by some of them, as the Security Council may determine.

2. Such decisions shall be carried out by the Members of the United Nations directly and through their action in the appropriate international agencies of which they are members.

#### Article 49

The Members of the United Nations shall join in affording mutual assistance in carrying out the measures decided upon by the Security Council.

#### Article 50

If preventive or enforcement measures against any state are taken by the Security Council, any other state, whether a Member of the United Nations or not, which finds itself confronted with special economic problems arising from the carrying out of those measures shall have the right to consult the Security Council with regard to a solution of those problems.

#### Article 51

Nothing in the present Charter shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a Member of the United Nations, until the Security Council has taken the measures necessary to maintain international peace and security. Measures taken by Members in the exercise of this right of self-defense shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present Charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security.

### CHAPTER VIII

#### Regional Arrangements

#### Article 52

1. Nothing in the present Charter precludes the existence of regional arrangements or agencies for dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action, provided that such arrangements or agencies and their activities are consistent with the Purposes and Principles of the United Nations.

2. The Members of the United Nations entering into such arrangements or constituting such agencies shall make every effort to achieve pacific settlement of local disputes through such regional arrangements or by such regional agencies before referring them to the Security Council.

3. The Security Council shall encourage the development of pacific settlement of local disputes through such regional arrangements or by such regional agencies either on the initiative of the states concerned or by reference from the Security Council.

4. This Article in no way impairs the application of Articles 34 and 35.

#### Article 53

1. The Security Council shall, where appropriate, utilize such regional arrangements or agencies for enforcement action under its authority. But no enforcement action shall be taken under regional arrangements or by regional agencies without the authorization of the Security Council, with the exception of measures against any enemy state, as defined in paragraph 2 of this Article, provided for pursuant to Article 107 or in regional arrangements directed against renewal of aggressive policy on the part of any such state, until such time as the Organization may, on request of the Governments concerned, be charged with the responsibility for preventing further aggression by such a state.

2. The term enemy state as used in paragraph 1 of this Article applies to any state which during the Second World War has been an enemy of any signatory of the present Charter.

#### Article 54

The Security Council shall at all times be kept fully informed of activities undertaken or in contemplation under regional arrangements or by regional agencies for the maintenance of international peace and security.

### CHAPTER IX

#### International Economic and Social Cooperation

#### Article 55

With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, the United Nations shall promote:

- a. higher standards of living, full employment, and conditions of economic and social progress and development;
- b. solutions of international economic, social, health, and related problems; and international cultural and educational cooperation; and
- c. universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

*Article 56*

All Members pledge themselves to take joint and separate action in cooperation with the Organization for the achievement of the purposes set forth in Article 55.

*Article 57*

1. The various specialized agencies, established by intergovernmental agreement and having wide international responsibilities, as defined in their basic instruments, in economic, social, cultural, educational, health, and related fields, shall be brought into relationship with the United Nations in accordance with the provisions of Article 63.

2. Such agencies thus brought into relationship with the United Nations are hereinafter referred to as specialized agencies.

*Article 58*

The Organization shall make recommendations for the coordination of the policies and activities of the specialized agencies.

*Article 59*

The Organization shall, where appropriate, initiate negotiations among the states concerned for the creation of any new specialized agencies required for the accomplishment of the purposes set forth in Article 55.

*Article 60*

Responsibility for the discharge of the functions of the Organization set forth in this Chapter shall be vested in the General Assembly and, under the authority of the General Assembly, in the Economic and Social Council, which shall have for this purpose the powers set forth in Chapter X.

## CHAPTER X

## The Economic and Social Council

## COMPOSITION

*Article 61*

1. The Economic and Social Council shall consist of eighteen Members of the United Nations elected by the General Assembly.

2. Subject to the provisions of paragraph 3, six members of the Economic and Social Council shall be elected each year for a term of three years. A retiring member shall be eligible for immediate re-election.

3. At the first election, eighteen members of the Economic and Social Council shall be chosen. The term of office of six members so chosen shall expire at the end of one year, and of six other members at the end of two years, in accordance with arrangements made by the General Assembly.

4. Each member of the Economic and Social Council shall have one representative.

## FUNCTIONS AND POWERS

*Article 62*

1. The Economic and Social Council may make or initiate studies and reports with respect to international economic, social, cultural, educational, health, and related matters and may make recommendations with respect to any such matters to the General Assembly, to the Members of the United Nations, and to the specialized agencies concerned.

2. It may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all.

3. It may prepare draft conventions for submission to the General Assembly, with respect to matters falling within its competence.

4. It may call, in accordance with the rules prescribed by the United Nations, international conferences on matters falling within its competence.

*Article 63*

1. The Economic and Social Council may enter into agreements with any of the agencies referred to in Article 57, defining the terms on which the agency concerned shall be brought into relationship with the United Nations. Such agreements shall be subject to approval by the General Assembly.

2. It may coordinate the activities of the specialized agencies through consultation with and recommendations to such agencies and through recommendations to the General Assembly and to the Members of the United Nations.

*Article 64*

1. The Economic and Social Council may take appropriate steps to obtain regular reports from the specialized agencies. It may make arrangements with the Members of the United Nations and with the specialized agencies to obtain reports on the steps taken to give effect to its own recommendations and to recommendations on matters falling within its competence made by the General Assembly.

2. It may communicate its observations on these reports to the General Assembly.

*Article 65*

The Economic and Social Council may furnish information to the Security Council and shall assist the Security Council upon its request.

*Article 66*

1. The Economic and Social Council shall perform such functions as fall within its competence in connection with the carrying out of the recommendations of the General Assembly.

2. It may, with the approval of the General Assembly, perform services at the request of Members of the United Nations and at the request of specialized agencies.

3. It shall perform such other functions as are specified elsewhere in the present Charter or as may be assigned to it by the General Assembly.

## VOTING

*Article 67*

1. Each member of the Economic and Social Council shall have one vote.

2. Decisions of the Economic and Social Council shall be made by a majority of the members present and voting.

## PROCEDURE

*Article 68*

The Economic and Social Council shall set up commissions in economic and social fields and for the promotion of human rights, and such other commissions as may be required for the performance of its functions.

*Article 69*

The Economic and Social Council shall invite any Member of the United Nations to participate, without vote, in its deliberations on any matter of particular concern to that Member.

*Article 70*

The Economic and Social Council may make arrangements for representatives of the specialized agencies to participate, without vote, in its deliberations and in those of the commissions established by it, and for its representatives to participate in the deliberations of the specialized agencies.

*Article 71*

The Economic and Social Council may make suitable arrangements for consultation with non-governmental organizations which are concerned with matters within its competence. Such arrangements may be made with international organizations and, where appropriate, with national organizations after consultation with the Member of the United Nations concerned.

*Article 72*

1. The Economic and Social Council shall adopt its own rules of procedure, including the method of selecting its President.

2. The Economic and Social Council shall meet as required in accordance with its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

## CHAPTER XI

## Declaration Regarding Non-Self-Governing Territories

*Article 73*

Members of the United Nations which have or assume responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government recognize the principle that the interests of the inhabitants of these territories are paramount, and accept as a sacred trust the obligation to promote to the utmost, within the system of international peace and security established by the present Charter, the well-being of the inhabitants of these territories, and, to this end:

a. to ensure, with due respect for the culture of the peoples concerned, their political, economic, social, and educational advancement, their just treatment, and their protection against abuses;

b. to develop self-government, to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each territory and its peoples and their varying stages of advancement;

c. to further international peace and security;

d. to promote constructive measures of development, to encourage research, and to cooperate with one another and, when and where appropriate, with specialized international bodies with a view to the practical achievement of the social, economic, and scientific purposes set forth in this Article; and

e. to transmit regularly to the Secretary-General for information purposes, subject to such limitation as security and constitutional considerations may require, statistical and other information of a technical nature relating to economic, social, and educational conditions in the territories for which they are respectively responsible other than those territories to which Chapters XII and XIII apply.

*Article 74*

Members of the United Nations also agree that their policy in respect of the territories to which this Chapter applies, no less than in respect of their metropolitan areas, must be based on the general principle of goodneighborliness, due account being taken of the interests and well-being of the rest of the world, in social, economic, and commercial matters.

## CHAPTER XII

## International Trusteeship System

*Article 75*

The United Nations shall establish under its authority an international trusteeship system for the administration and supervision of such territories as may be placed thereunder by subsequent individual agreements. These territories are hereinafter referred to as trust territories.

*Article 76*

The basic objectives of the trusteeship system, in accordance with the Purposes of the United Nations laid down in Article 1 of the present Charter, shall be:

a. to further international peace and security;

b. to promote the political, economic, social, and educational advancement of the inhabitants of the trust territories, and their progressive development towards self-government or independence as may be appropriate to the particular circumstances of each territory and its peoples and the freely expressed wishes of the peoples concerned, and as may be provided by the terms of each trusteeship agreement;

c. to encourage respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion, and to encourage recognition of the interdependence of the peoples of the world; and

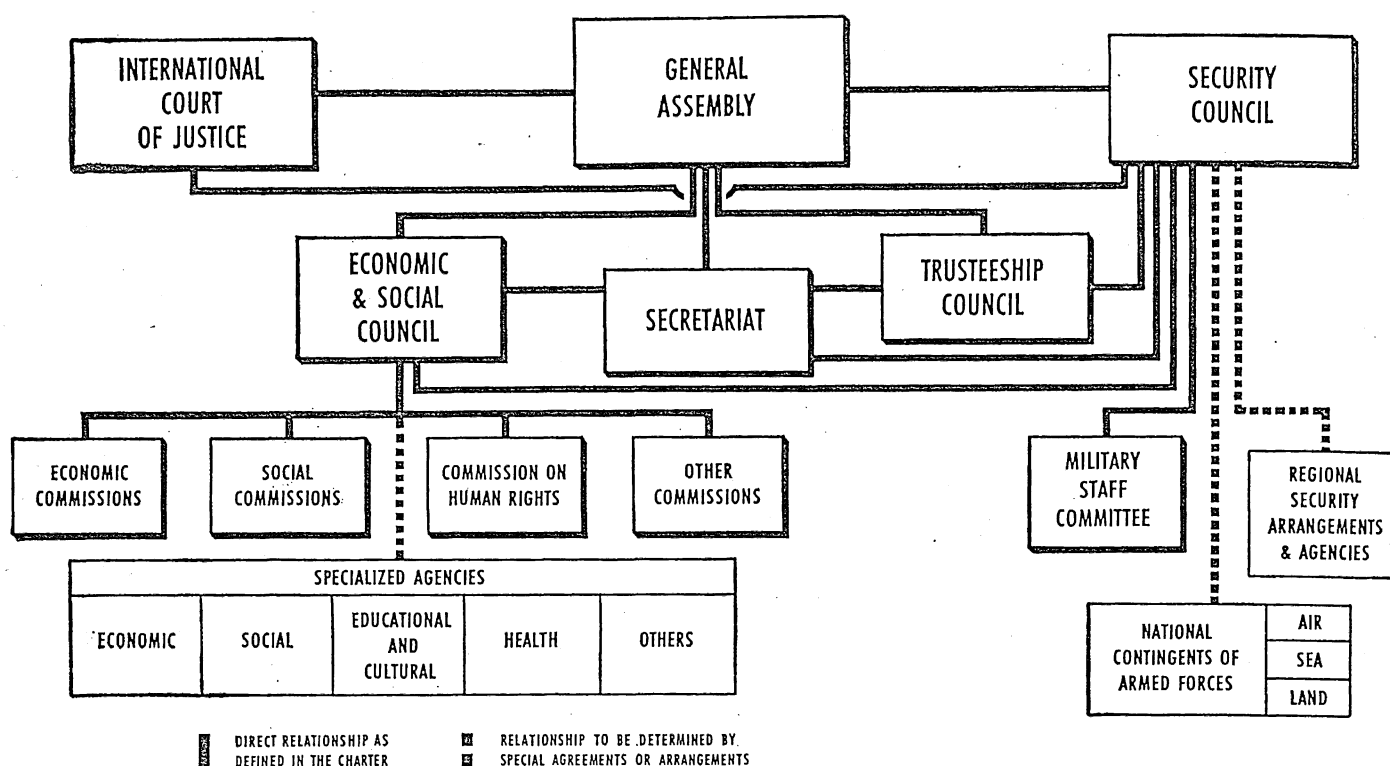

d. to ensure equal treatment in social, economic, and commercial matters for all Members of the United Nations and their nationals, and also equal treatment for the latter in the administration of justice, without prejudice to the attainment of the foregoing objectives and subject to the provisions of Article 80.

*Article 77*

1. The trusteeship system shall apply to such territories in the following categories as may be placed thereunder by means of trusteeship agreements:

- a. territories now held under mandate;
- b. territories which may be detached from enemy states as a result of the Second World War; and

# UNITED NATIONS CONFERENCE ORGANIZATION OF THE UNITED NATIONS

c. territories voluntarily placed under the system by states responsible for their administration.

2. It will be a matter for subsequent agreement as to which territories in the foregoing categories will be brought under the trusteeship system and upon what terms.

#### Article 78

The trusteeship system shall not apply to territories which have become Members of the United Nations, relationship among which shall be based on respect for the principle of sovereign equality.

#### Article 79

The terms of trusteeship for each territory to be placed under the trusteeship system, including any alteration or amendment, shall be agreed upon by the states directly concerned, including the mandatory power in the case of territories held under mandate by a Member of the United Nations, and shall be approved as provided for in Articles 83 and 85.

#### Article 80

1. Except as may be agreed upon in individual trusteeship agreements, made under Articles 77, 79, and 81, placing each territory under the trusteeship system, and until such agreements have been concluded, nothing in this Chapter shall be construed in or of itself to alter in any manner the rights whatsoever of any states or any peoples or the terms of existing international instruments to which Members of the United Nations may respectively be parties.

2. Paragraph 1 of this Article shall not be interpreted as giving grounds for delay or postponement of the negotiation and conclusion of agreements for placing mandated and other territories under the trusteeship system as provided for in Article 77.

#### Article 81

The trusteeship agreement shall in each case include the terms under which the trust territory will be administered and designate the authority which will exercise the administration of the trust territory. Such authority, hereinafter called the administering authority, may be one or more states or the Organization itself.

#### Article 82

There may be designated, in any trusteeship agreement, a strategic area or areas which may include part or all of the trust territory to which the agreement applies, without prejudice to any special agreement or agreements made under Article 43.

#### Article 83

1. All functions of the United Nations relating to strategic areas, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the Security Council.

2. The basic objectives set forth in Article 76 shall be applicable to the people of each strategic area.

3. The Security Council shall, subject to the provisions of the trusteeship agreements and without prejudice to security considerations, avail itself of the assistance of the Trusteeship Council to perform those functions of the United Nations under the trusteeship system relating to political, economic, social, and educational matters in the strategic areas.

#### Article 84

It shall be the duty of the administering authority to ensure that the trust territory shall play its part in the maintenance of international peace and security. To this end the administering authority may make use of volunteer forces, facilities, and assistance from the trust territory in carrying out the obligations towards the Security Council undertaken in this

regard by the administering authority, as well as for local defense and the maintenance of law and order within the trust territory.

#### Article 85

1. The functions of the United Nations with regard to trusteeship agreements for all areas not designated as strategic, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the General Assembly.

2. The Trusteeship Council, operating under the authority of the General Assembly, shall assist the General Assembly in carrying out these functions.

### CHAPTER XIII

## The Trusteeship Council

### COMPOSITION

#### Article 86

1. The Trusteeship Council shall consist of the following Members of the United Nations:

- a. those Members administering trust territories;
  - b. such of those Members mentioned by name in Article 23 as are not administering trust territories; and
  - c. as many other Members elected for three-year terms by the General Assembly as may be necessary to ensure that the total number of members of the Trusteeship Council is equally divided between those Members of the United Nations which administer trust territories and those which do not.
2. Each member of the Trusteeship Council shall designate one specially qualified person to represent it therein.

### FUNCTIONS AND POWERS

#### Article 87

The General Assembly and, under its authority, the Trusteeship Council, in carrying out their functions, may:

- a. consider reports submitted by the administering authority;
- b. accept petitions and examine them in consultation with the administering authority;
- c. provide for periodic visits to the respective trust territories at times agreed upon with the administering authority; and
- d. take these and other actions in conformity with the terms of the trusteeship agreements.

#### Article 88

The Trusteeship Council shall formulate a questionnaire on the political, economic, social, and educational advancement of the inhabitants of each trust territory, and the administering authority for each trust territory within the competence of the General Assembly shall make an annual report to the General Assembly upon the basis of such questionnaire.

### VOTING

#### Article 89

1. Each member of the Trusteeship Council shall have one vote.
2. Decisions of the Trusteeship Council shall be made by a majority of the members present and voting.

### PROCEDURE

#### Article 90

1. The Trusteeship Council shall adopt its own rules of procedure, including the method of selecting its President.
2. The Trusteeship Council shall meet as required in accordance with

its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

#### Article 91

The Trusteeship Council shall, when appropriate, avail itself of the assistance of the Economic and Social Council and of the specialized agencies in regard to matters with which they are respectively concerned.

### CHAPTER XIV

#### The International Court of Justice

#### Article 92

The International Court of Justice shall be the principal judicial organ of the United Nations. It shall function in accordance with the annexed Statute, which is based upon the Statute of the Permanent Court of International Justice and forms an integral part of the present Charter.

#### Article 93

1. All Members of the United Nations are *ipso facto* parties to the Statute of the International Court of Justice.

2. A state which is not a Member of the United Nations may become a party to the Statute of the International Court of Justice on conditions to be determined in each case by the General Assembly upon the recommendation of the Security Council.

#### Article 94

1. Each Member of the United Nations undertakes to comply with the decision of the International Court of Justice in any case to which it is a party.

2. If any party to a case fails to perform the obligations incumbent upon it under a judgment rendered by the Court, the other party may have recourse to the Security Council, which may, if it deems necessary, make recommendations or decide upon measures to be taken to give effect to the judgment.

#### Article 95

Nothing in the present Charter shall prevent Members of the United Nations from entrusting the solution of their differences to other tribunals by virtue of agreements already in existence or which may be concluded in the future.

#### Article 96

1. The General Assembly or the Security Council may request the International Court of Justice to give an advisory opinion on any legal question.

2. Other organs of the United Nations and specialized agencies, which may at any time be so authorized by the General Assembly, may also request advisory opinions of the Court on legal questions arising within the scope of their activities.

### CHAPTER XV

#### The Secretariat

#### Article 97

The Secretariat shall comprise a Secretary-General and such staff as the Organization may require. The Secretary-General shall be appointed by the General Assembly upon the recommendation of the Security Council. He shall be the chief administrative officer of the Organization.

#### Article 98

The Secretary-General shall act in that capacity in all meetings of the General Assembly, of the Security Council, of the Economic and Social Council, and of the Trusteeship Council, and shall perform such other functions as are entrusted to him by these organs. The Secretary-General shall make an annual report to the General Assembly on the work of the Organization.

#### Article 99

The Secretary-General may bring to the attention of the Security Council any matter which in his opinion may threaten the maintenance of international peace and security.

#### Article 100

1. In the performance of their duties the Secretary-General and the staff shall not seek or receive instructions from any government or from any other authority external to the Organization. They shall refrain from any action which might reflect on their position as international officials responsible only to the Organization.

2. Each Member of the United Nations undertakes to respect the exclusively international character of the responsibilities of the Secretary-General and the staff and not to seek to influence them in the discharge of their responsibilities.

#### Article 101

1. The staff shall be appointed by the Secretary-General under regulations established by the General Assembly.

2. Appropriate staffs shall be permanently assigned to the Economic and Social Council, the Trusteeship Council, and, as required, to other organs of the United Nations. These staffs shall form a part of the Secretariat.

3. The paramount consideration in the employment of the staff and in the determination of the conditions of service shall be the necessity of securing the highest standards of efficiency, competence, and integrity. Due regard shall be paid to the importance of recruiting the staff on as wide a geographical basis as possible.

### CHAPTER XVI

#### Miscellaneous Provisions

#### Article 102

1. Every treaty and every international agreement entered into by any Member of the United Nations after the present Charter comes into force shall as soon as possible be registered with the Secretariat and published by it.

2. No party to any such treaty or international agreement which has not been registered in accordance with the provisions of paragraph 1 of this Article may invoke that treaty or agreement before any organ of the United Nations.

#### Article 103

In the event of a conflict between the obligations of the Members of

the United Nations under the present Charter and their obligations under any other international agreement, their obligations under the present Charter shall prevail.

#### Article 104

The Organization shall enjoy in the territory of each of its Members such legal capacity as may be necessary for the exercise of its functions and the fulfillment of its purposes.

#### Article 105

1. The Organization shall enjoy in the territory of each of its Members such privileges and immunities as are necessary for the fulfillment of its purposes.

2. Representatives of the Members of the United Nations and officials of the Organization shall similarly enjoy such privileges and immunities as are necessary for the independent exercise of their functions in connection with the Organization.

3. The General Assembly may make recommendations with a view to determining the details of the application of paragraphs 1 and 2 of this Article or may propose conventions to the Members of the United Nations for this purpose.

### CHAPTER XVII

#### Transitional Security Arrangements

#### Article 106

Pending the coming into force of such special agreements referred to in Article 43 as in the opinion of the Security Council enable it to begin the exercise of its responsibilities under Article 42, the parties to the Four-Nation Declaration, signed at Moscow, October 30, 1943, and France, shall, in accordance with the provisions of paragraph 5 of that Declaration, consult with one another and as occasion requires with other Members of the United Nations with a view to such joint action on behalf of the Organization as may be necessary for the purpose of maintaining international peace and security.

#### Article 107

Nothing in the present Charter shall invalidate or preclude action, in relation to any state which during the Second World War has been an enemy of any signatory to the present Charter, taken or authorized as a result of that war by the Governments having responsibility for such action.

### CHAPTER XVIII

#### Amendments

#### Article 108

Amendments to the present Charter shall come into force for all Members of the United Nations when they have been adopted by a vote of two thirds of the members of the General Assembly and ratified in accordance with their respective constitutional processes by two thirds of the Members of the United Nations, including all the permanent members of the Security Council.

#### Article 109

1. A General Conference of the Members of the United Nations for the purpose of reviewing the present Charter may be held at a date and place to be fixed by a two-thirds vote of the members of the General Assembly and by a vote of any seven members of the Security Council. Each Member of the United Nations shall have one vote in the conference.

2. Any alteration of the present Charter recommended by a two-thirds vote of the conference shall take effect when ratified in accordance with their respective constitutional processes by two thirds of the Members of the United Nations including all the permanent members of the Security Council.

3. If such a conference has not been held before the tenth annual session of the General Assembly following the coming into force of the present Charter, the proposal to call such a conference shall be placed on the agenda of that session of the General Assembly, and the conference shall be held if so decided by a majority vote of the members of the General Assembly and by a vote of any seven members of the Security Council.

### CHAPTER XIX

#### Ratification and Signature

#### Article 110

1. The present Charter shall be ratified by the signatory states in accordance with their respective constitutional processes.

2. The ratifications shall be deposited with the Government of the United States of America, which shall notify all the signatory states of each deposit as well as the Secretary-General of the Organization when he has been appointed.

3. The present Charter shall come into force upon the deposit of ratifications by the Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America, and by a majority of the other signatory states. A protocol of the ratifications deposited shall thereupon be drawn up by the Government of the United States of America which shall communicate copies thereof to all the signatory states.

4. The states signatory to the present Charter which ratify it after it has come into force will become original Members of the United Nations on the date of the deposit of their respective ratifications.

#### Article 111

The present Charter, of which the Chinese, French, Russian, English, and Spanish texts are equally authentic, shall remain deposited in the archives of the Government of the United States of America. Duly certified copies thereof shall be transmitted by that Government to the Governments of the other signatory states.

IN FAITH WHEREOF the representatives of the Governments of the United Nations have signed the present Charter.

DONE at the city of San Francisco the twenty-sixth day of June, one thousand nine hundred and forty-five.

## STATUTE OF THE INTERNATIONAL COURT OF JUSTICE

## Article 1

THE INTERNATIONAL COURT OF JUSTICE established by the Charter of the United Nations as the principal judicial organ of the United Nations shall be constituted and shall function in accordance with the provisions of the present Statute.

## CHAPTER I

## Organization of the Court

## Article 2

The Court shall be composed of a body of independent judges, elected regardless of their nationality from among persons of high moral character, who possess the qualifications required in their respective countries for appointment to the highest judicial offices, or are juris-consults of recognized competence in international law.

## Article 3

1. The Court shall consist of fifteen members, no two of whom may be nationals of the same state.

2. A person who for the purposes of membership in the Court could be regarded as a national of more than one state shall be deemed to be a national of the one in which he ordinarily exercises civil and political rights.

## Article 4

1. The members of the Court shall be elected by the General Assembly and by the Security Council from a list of persons nominated by the national groups in the Permanent Court of Arbitration, in accordance with the following provisions.

2. In the case of Members of the United Nations not represented in the Permanent Court of Arbitration, candidates shall be nominated by national groups appointed for this purpose by their governments under the same conditions as those prescribed for members of the Permanent Court of Arbitration by Article 44 of the Convention of The Hague of 1907 for the pacific settlement of international disputes.

3. The conditions under which a state which is a party to the present Statute but is not a Member of the United Nations may participate in electing the members of the Court shall, in the absence of a special agreement, be laid down by the General Assembly upon recommendation of the Security Council.

## Article 5

1. At least three months before the date of the election, the Secretary-General of the United Nations shall address a written request to the members of the Permanent Court of Arbitration belonging to the states which are parties to the present Statute, and to the members of the national groups appointed under Article 4, paragraph 2, inviting them to undertake, within a given time, by national groups, the nomination of persons in a position to accept the duties of a member of the Court.

2. No group may nominate more than four persons, not more than two of whom shall be of their own nationality. In no case may the number of candidates nominated by a group be more than double the number of seats to be filled.

## Article 6

Before making these nominations, each national group is recommended to consult its highest court of justice, its legal faculties and schools of law, and its national academies and national sections of international academies devoted to the study of law.

## Article 7

1. The Secretary-General shall prepare a list in alphabetical order of all the persons thus nominated. Save as provided in Article 12, paragraph 2, these shall be the only persons eligible.

2. The Secretary-General shall submit this list to the General Assembly and to the Security Council.

## Article 8

The General Assembly and the Security Council shall proceed independently of one another to elect the members of the Court.

## Article 9

At every election, the electors shall bear in mind not only that the persons to be elected should individually possess the qualifications required, but also that in the body as a whole the representation of the main forms of civilization and of the principal legal systems of the world should be assured.

## Article 10

1. Those candidates who obtain an absolute majority of votes in the General Assembly and in the Security Council shall be considered as elected.

2. Any vote of the Security Council, whether for the election of judges or for the appointment of members of the conference envisaged in Article 12, shall be taken without any distinction between permanent and non-permanent members of the Security Council.

3. In the event of more than one national of the same state obtaining an absolute majority of the votes both of the General Assembly and of the Security Council, the eldest of these only shall be considered as elected.

## Article 11

If, after the first meeting held for the purpose of the election, one or more seats remain to be filled, a second and, if necessary, a third meeting shall take place.

## Article 12

1. If, after the third meeting, one or more seats still remain unfilled, a joint conference consisting of six members, three appointed by the General Assembly and three by the Security Council, may be formed at any time at the request of either the General Assembly or the Security Council, for the purpose of choosing by the vote of an absolute majority one name for each seat still vacant, to submit to the General Assembly and the Security Council for their respective acceptance.

2. If the joint conference is unanimously agreed upon any person who fulfils the required conditions, he may be included in its list, even though he was not included in the list of nominations referred to in Article 7.

3. If the joint conference is satisfied that it will not be successful in procuring an election, those members of the Court who have already been elected shall, within a period to be fixed by the Security Council, proceed to fill the vacant seats by selection from among those candidates who have obtained votes either in the General Assembly or in the Security Council.

4. In the event of an equality of votes among the judges, the eldest judge shall have a casting vote.

## Article 13

1. The members of the Court shall be elected for nine years and may be re-elected; provided, however, that of the judges elected at the first election, the terms of five judges shall expire at the end of three years and the terms of five more judges shall expire at the end of six years.

2. The judges whose terms are to expire at the end of the above-mentioned initial periods of three and six years shall be chosen by lot to be drawn by the Secretary-General immediately after the first election has been completed.

3. The members of the Court shall continue to discharge their duties until their places have been filled. Though replaced, they shall finish any cases which they may have begun.

4. In the case of the resignation of a member of the Court, the resignation shall be addressed to the President of the Court for transmission to the Secretary-General. This last notification makes the place vacant.

## Article 14

Vacancies shall be filled by the same method as that laid down for the first election, subject to the following provision: the Secretary-General shall, within one month of the occurrence of the vacancy, proceed to issue the invitations provided for in Article 5, and the date of the election shall be fixed by the Security Council.

## Article 15

A member of the Court elected to replace a member whose term of office has not expired shall hold office for the remainder of his predecessor's term.

## Article 16

1. No member of the Court may exercise any political or administrative function, or engage in any other occupation of a professional nature.

2. Any doubt on this point shall be settled by the decision of the Court.

## Article 17

1. No member of the Court may act as agent, counsel, or advocate in any case.

2. No member may participate in the decision of any case in which he has previously taken part as agent, counsel, or advocate for one of the parties, or as a member of a national or international court, or of a commission of enquiry, or in any other capacity.

3. Any doubt on this point shall be settled by the decision of the Court.

## Article 18

1. No member of the Court can be dismissed unless, in the unanimous opinion of the other members, he has ceased to fulfil the required conditions.

2. Formal notification thereof shall be made to the Secretary-General by the Registrar.

3. This notification makes the place vacant.

## Article 19

The members of the Court, when engaged on the business of the Court, shall enjoy diplomatic privileges and immunities.

## Article 20

Every member of the Court shall, before taking up his duties, make a solemn declaration in open court that he will exercise his powers impartially and conscientiously.

## Article 21

1. The Court shall elect its President and Vice-President for three years; they may be re-elected.

2. The Court shall appoint its Registrar and may provide for the appointment of such other officers as may be necessary.

## Article 22

1. The seat of the Court shall be established at The Hague. This, however, shall not prevent the Court from sitting and exercising its functions elsewhere whenever the Court considers it desirable.

2. The President and the Registrar shall reside at the seat of the Court.

## Article 23

1. The Court shall remain permanently in session, except during the judicial vacations, the dates and duration of which shall be fixed by the Court.

2. Members of the Court are entitled to periodic leave, the dates and duration of which shall be fixed by the Court, having in mind the distance between The Hague and the home of each judge.

3. Members of the Court shall be bound, unless they are on leave or prevented from attending by illness or other serious reasons duly explained to the President, to hold themselves permanently at the disposal of the Court.

## Article 24

1. If, for some special reason, a member of the Court considers that he should not take part in the decision of a particular case, he shall so inform the President.

2. If the President considers that for some special reason one of the members of the Court should not sit in a particular case, he shall give him notice accordingly.

3. If in any such case the member of the Court and the President disagree, the matter shall be settled by the decision of the Court.

## Article 25

1. The full Court shall sit except when it is expressly provided otherwise in the present Statute.

2. Subject to the condition that the number of judges available to constitute the Court is not thereby reduced below eleven, the Rules of the Court may provide for allowing one or more judges, according to circumstances and in rotation, to be dispensed from sitting.

3. A quorum of nine judges shall suffice to constitute the Court.

## Article 26

1. The Court may from time to time form one or more chambers, composed of three or more judges as the Court may determine, for dealing with particular categories of cases; for example, labor cases and cases relating to transit and communications.

2. The Court may at any time form a chamber for dealing with a particular case. The number of judges to constitute such a chamber shall be determined by the Court with the approval of the parties.

3. Cases shall be heard and determined by the chambers provided for in this Article if the parties so request.

## Article 27

A judgment given by any of the chambers provided for in Articles 26 and 29 shall be considered as rendered by the Court.

## Article 28

The chambers provided for in Articles 26 and 29 may, with the consent of the parties, sit and exercise their functions elsewhere than at The Hague.

## Article 29

With a view to the speedy despatch of business, the Court shall form annually a chamber composed of five judges which, at the request of the parties, may hear and determine cases by summary procedure. In addition, two judges shall be selected for the purpose of replacing judges who find it impossible to sit.

## Article 30

1. The Court shall frame rules for carrying out its functions. In particular, it shall lay down rules of procedure.

2. The Rules of the Court may provide for assessors to sit with the Court or with any of its chambers, without the right to vote.

## Article 31

1. Judges of the nationality of each of the parties shall retain their right to sit in the case before the Court.

2. If the Court includes upon the Bench a judge of the nationality of one of the parties, any other party may choose a person to sit as judge. Such person shall be chosen preferably from among those persons who have been nominated as candidates as provided in Articles 4 and 5.

3. If the Court includes upon the Bench no judge of the nationality of the parties, each of these parties may proceed to choose a judge as provided in paragraph 2 of this Article.

4. The provisions of this Article shall apply to the case of Articles 26 and 29. In such cases, the President shall request one or, if necessary, two of the members of the Court forming the chamber to give place to the members of the Court of the nationality of the parties concerned, and, failing such, or if they are unable to be present, to the judges specially chosen by the parties.

5. Should there be several parties in the same interest, they shall, for the purpose of the preceding provisions, be reckoned as one party only. Any doubt upon this point shall be settled by the decision of the Court.

6. Judges chosen as laid down in paragraphs 2, 3, and 4 of this Article shall fulfil the conditions required by Articles 2, 17 (paragraph 2), 20, and 24 of the present Statute. They shall take part in the decision on terms of complete equality with their colleagues.

## Article 32

1. Each member of the Court shall receive an annual salary.

2. The President shall receive a special annual allowance.

3. The Vice-President shall receive a special allowance for every day on which he acts as President.

4. The judges chosen under Article 31, other than members of the Court, shall receive compensation for each day on which they exercise their functions.

5. These salaries, allowances, and compensation shall be fixed by the General Assembly. They may not be decreased during the term of office.

6. The salary of the Registrar shall be fixed by the General Assembly on the proposal of the Court.

7. Regulations made by the General Assembly shall fix the conditions under which retirement pensions may be given to members of the Court and to the Registrar, and the conditions under which members of the Court and the Registrar shall have their traveling expenses refunded.

8. The above salaries, allowances, and compensation shall be free of all taxation.

## Article 33

The expenses of the Court shall be borne by the United Nations in such a manner as shall be decided by the General Assembly.

CHAPTER II  
Competence of the Court

## Article 34

1. Only states may be parties in cases before the Court.

2. The Court, subject to and in conformity with its Rules, may request of public international organizations information relevant to cases before it, and shall receive such information presented by such organizations on their own initiative.

3. Whenever the construction of the constituent instrument of a public international organization or of an international convention adopted thereunder is in question in a case before the Court, the Registrar shall so notify the public international organization concerned and shall communicate to it copies of all the written proceedings.

## Article 35

1. The Court shall be open to the states parties to the present Statute.

2. The conditions under which the Court shall be open to other states shall, subject to the special provisions contained in treaties in force, be laid down by the Security Council, but in no case shall such conditions place the parties in a position of inequality before the Court.

3. When a state which is not a Member of the United Nations is a party to a case, the Court shall fix the amount which that party is to contribute towards the expenses of the Court. This provision shall not apply if such state is bearing a share of the expenses of the Court.

## Article 36

1. The jurisdiction of the Court comprises all cases which the parties

refer to it and all matters specially provided for in the Charter of the United Nations or in treaties and conventions in force.

2. The states parties to the present Statute may at any time declare that they recognize as compulsory *ipso facto* and without special agreement, in relation to any other state accepting the same obligation, the jurisdiction of the Court in all legal disputes concerning:

- a. the interpretation of a treaty;
- b. any question of international law;
- c. the existence of any fact which, if established, would constitute a breach of an international obligation;
- d. the nature or extent of the reparation to be made for the breach of an international obligation.

3. The declarations referred to above may be made unconditionally or on condition of reciprocity on the part of several or certain states, or for a certain time.

4. Such declarations shall be deposited with the Secretary-General of the United Nations, who shall transmit copies thereof to the parties to the Statute and to the Registrar of the Court.

5. Declarations made under Article 36 of the Statute of the Permanent Court of International Justice and which are still in force shall be deemed, as between the parties to the present Statute, to be acceptances of the compulsory jurisdiction of the International Court of Justice for the period which they still have to run and in accordance with their terms.

6. In the event of a dispute as to whether the Court has jurisdiction, the matter shall be settled by the decision of the Court.

## Article 37

Whenever a treaty or convention in force provides for reference of a matter to a tribunal to have been instituted by the League of Nations, or to the Permanent Court of International Justice, the matter shall, as between the parties to the present Statute, be referred to the International Court of Justice.

## Article 38

1. The Court, whose function is to decide in accordance with international law such disputes as are submitted to it, shall apply:

- a. international conventions, whether general or particular, establishing rules expressly recognized by the contesting states;
- b. international custom, as evidence of a general practice accepted as law;
- c. the general principles of law recognized by civilized nations;
- d. subject to the provisions of Article 59, judicial decisions and the teachings of the most highly qualified publicists of the various nations, as subsidiary means for the determination of rules of law.

2. This provision shall not prejudice the power of the Court to decide a case *ex aequo et bono*, if the parties agree thereto.

## CHAPTER III

## Procedure

## Article 39

1. The official languages of the Court shall be French and English. If the parties agree that the case shall be conducted in French, the judgment shall be delivered in French. If the parties agree that the case shall be conducted in English, the judgment shall be delivered in English.

2. In the absence of an agreement as to which language shall be employed, each party may, in the pleadings, use the language which it prefers; the decision of the Court shall be given in French and English. In this case the Court shall at the same time determine which of the two texts shall be considered as authoritative.

3. The Court shall, at the request of any party, authorize a language other than French or English to be used by that party.

## Article 40

1. Cases are brought before the Court, as the case may be, either by the notification of the special agreement or by a written application addressed to the Registrar. In either case the subject of the dispute and the parties shall be indicated.

2. The Registrar shall forthwith communicate the application to all concerned.

3. He shall also notify the Members of the United Nations through the Secretary-General, and also any other states entitled to appear before the Court.

## Article 41

1. The Court shall have the power to indicate, if it considers that circumstances so require, any provisional measures which ought to be taken to preserve the respective rights of either party.

2. Pending the final decision, notice of the measures suggested shall forthwith be given to the parties and to the Security Council.

## Article 42

1. The parties shall be represented by agents.

2. They may have the assistance of counsel or advocates before the Court.

3. The agents, counsel, and advocates of parties before the Court shall enjoy the privileges and immunities necessary to the independent exercise of their duties.

## Article 43

1. The procedure shall consist of two parts: written and oral.

2. The written proceedings shall consist of the communication to the Court and to the parties of memorials, counter-memorials and, if necessary, replies; also all papers and documents in support.

3. These communications shall be made through the Registrar, in the order and within the time fixed by the Court.

4. A certified copy of every document produced by one party shall be communicated to the other party.

5. The oral proceedings shall consist of the hearing by the Court of witnesses, experts, agents, counsel, and advocates.

## Article 44

1. For the service of all notices upon persons other than the agents, counsel, and advocates, the Court shall apply direct to the government of the state upon whose territory the notice has to be served.

2. The same provision shall apply whenever steps are to be taken to procure evidence on the spot.

#### Article 45

The hearing shall be under the control of the President or, if he is unable to preside, of the Vice-President; if neither is able to preside, the senior judge present shall preside.

#### Article 46

The hearing in Court shall be public, unless the Court shall decide otherwise, or unless the parties demand that the public be not admitted.

#### Article 47

1. Minutes shall be made at each hearing and signed by the Registrar and the President.

2. These minutes alone shall be authentic.

#### Article 48

The Court shall make orders for the conduct of the case, shall decide the form and time in which each party must conclude its arguments, and make all arrangements connected with the taking of evidence.

#### Article 49

The Court may, even before the hearing begins, call upon the agents to produce any document or to supply any explanations. Formal note shall be taken of any refusal.

#### Article 50

The Court may, at any time, entrust any individual, body, bureau, commission, or other organization that it may select, with the task of carrying out an enquiry or giving an expert opinion.

#### Article 51

During the hearing any relevant questions are to be put to the witnesses and experts under the conditions laid down by the Court in the rules of procedure referred to in Article 30.

#### Article 52

After the Court has received the proofs and evidence within the time specified for the purpose, it may refuse to accept any further oral or written evidence that one party may desire to present unless the other side consents.

#### Article 53

1. Whenever one of the parties does not appear before the Court, or fails to defend its case, the other party may call upon the Court to decide in favor of its claim.

2. The Court must, before doing so, satisfy itself, not only that it has jurisdiction in accordance with Articles 36 and 37, but also that the claim is well founded in fact and law.

#### Article 54

1. When, subject to the control of the Court, the agents, counsel, and advocates have completed their presentation of the case, the President shall declare the hearing closed.

2. The Court shall withdraw to consider the judgment.

3. The deliberations of the Court shall take place in private and remain secret.

#### Article 55

1. All questions shall be decided by a majority of the judges present.

2. In the event of an equality of votes, the President or the judge who acts in his place shall have a casting vote.

#### Article 56

1. The judgment shall state the reasons on which it is based.

2. It shall contain the names of the judges who have taken part in the decision.

#### Article 57

If the judgment does not represent in whole or in part the unanimous opinion of the judges, any judge shall be entitled to deliver a separate opinion.

#### Article 58

The judgment shall be signed by the President and by the Registrar. It shall be read in open court, due notice having been given to the agents.

#### Article 59

The decision of the Court has no binding force except between the parties and in respect of that particular case.

#### Article 60

The judgment is final and without appeal. In the event of dispute as to the meaning or scope of the judgment, the Court shall construe it upon the request of any party.

#### Article 61

1. An application for revision of a judgment may be made only when it is based upon the discovery of some fact of such a nature as to be a decisive factor, which fact was, when the judgment was given, unknown to the Court and also to the party claiming revision, always provided that such ignorance was not due to negligence.

2. The proceedings for revision shall be opened by a judgment of the Court expressly recording the existence of the new fact, recognizing that it has such a character as to lay the case open to revision, and declaring the application admissible on this ground.

3. The Court may require previous compliance with the terms of the judgment before it admits proceedings in revision.

4. The application for revision must be made at latest within six months of the discovery of the new fact.

5. No application for revision may be made after the lapse of ten years from the date of the judgment.

#### Article 62

1. Should a state consider that it has an interest of a legal nature which may be affected by the decision in the case, it may submit a request to the Court to be permitted to intervene.

2. It shall be for the Court to decide upon this request.

#### Article 63

1. Whenever the construction of a convention to which states other than those concerned in the case are parties is in question, the Registrar shall notify all such states forthwith.

2. Every state so notified has the right to intervene in the proceedings;

but if it uses this right, the construction given by the judgment will be equally binding upon it.

#### Article 64

Unless otherwise decided by the Court, each party shall bear its own costs.

### CHAPTER IV

### Advisory Opinions

#### Article 65

1. The Court may give an advisory opinion on any legal question at the request of whatever body may be authorized by or in accordance with the Charter of the United Nations to make such a request.

2. Questions upon which the advisory opinion of the Court is asked shall be laid before the Court by means of a written request containing an exact statement of the question upon which an opinion is required, and accompanied by all documents likely to throw light upon the question.

#### Article 66

1. The Registrar shall forthwith give notice of the request for an advisory opinion to all states entitled to appear before the Court.

2. The Registrar shall also, by means of a special and direct communication, notify any state entitled to appear before the Court or international organization considered by the Court, or, should it not be sitting, by the President, as likely to be able to furnish information on the question, that the Court will be prepared to receive, within a time limit to be fixed by the President, written statements, or to hear, at a public sitting to be held for the purpose, oral statements relating to the question.

3. Should any such state entitled to appear before the Court have failed to receive the special communication referred to in paragraph 2 of this Article, such state may express a desire to submit a written statement or to be heard; and the Court will decide.

4. States and organizations having presented written or oral statements or both shall be permitted to comment on the statements made by other states or organizations in the form, to the extent, and within the time limits which the Court, or, should it not be sitting, the President, shall decide in each particular case. Accordingly, the Registrar shall in due time communicate any such written statements to states and organizations having submitted similar statements.

#### Article 67

The Court shall deliver its advisory opinions in open court, notice having been given to the Secretary-General and to the representatives of Members of the United Nations, of other states and of international organizations immediately concerned.

#### Article 68

In the exercise of its advisory functions the Court shall further be guided by the provisions of the present Statute which apply in contentious cases to the extent to which it recognizes them to be applicable.

### CHAPTER V

### Amendment

#### Article 69

Amendments to the present Statute shall be effected by the same procedure as is provided by the Charter of the United Nations for amendments to that Charter, subject however to any provisions which the General Assembly upon recommendation of the Security Council may adopt concerning the participation of states which are parties to the present Statute but are not Members of the United Nations.

#### Article 70

The Court shall have power to propose such amendments to the present Statute as it may deem necessary, through written communications to the Secretary-General, for consideration in conformity with the provisions of Article 69.

**United Nations Food and Agriculture Organization:**  
see AGRICULTURE.

## United Nations Information Organization.

During the one-hundredth meeting of the United Nations Information board on Jan. 4, 1945, a resolution of organization and statutes were formally signed in Washington, D.C., on behalf of the ranking information officers of 19 governments. The organization had been in existence and had worked for four years to develop the means of co-operation in the essential task of keeping public opinion informed about matters of common interest to the United Nations.

In line with the organization's objective to further understanding of the United Nations concept, its activities during 1945 were primarily devoted to active participation in the United Nations Conference on International Organization at San Francisco through the loan of several officers to the international secretariat of the conference, and to information work on behalf of or about United Nations agencies. The United Nations Information organization published, in co-operation with the Library of Congress, the complete documentation of

the conference in 15 volumes. It made available for research purposes the only complete set then in the United States of the documents of the executive committee of the preparatory commission of the United Nations.

In Nov. 1945, the secretary general was appointed special assistant for overseas services within the secretariat of the preparatory commission in London, and the United Nations Information organization was publishing and distributing in the U.S. the documentation of the preparatory commission. The organization also handled certain phases of information on behalf of the Food and Agriculture organization of the United Nations, of U.N.R.R.A. and of the Provisional International Civil Aviation organization. (W. B. M.)

## United Nations Monetary and Financial

**Program.** On Dec. 28, 1945, the representatives of 28 nations, meeting at the state department in Washington, D.C., signed documents confirming ratifications by their governments of the Bretton Woods agreements. The ratifying nations were Belgium, Bolivia, Brazil, Canada, China, Colombia, Costa Rica, Ecuador, Egypt, Ethiopia, France, Greece, Guatemala, Honduras, Iceland, India, Iraq, Luxembourg, the Netherlands, Norway, Paraguay, the Philippine commonwealth, Poland, Union of South Africa, United Kingdom, United States of America, Uruguay and Yugoslavia. The combined quotas of these nations in the fund and their subscriptions to the bank exceeded the 65% requirements, hence the two institutions formally came into existence. Their headquarters were to be in the United States.

Before Dec. 31, seven additional countries, Mexico, Cuba, Czechoslovakia, Peru, Chile, the Dominican Republic and Iran, signed the necessary documents, thus becoming charter members. Nine of the 44 governments who had participated in the Bretton Woods conference allowed the deadline to pass without signing. They included Australia, New Zealand and the U.S.S.R.

The new international institutions had their origin in two proposals, the White plan, a memorandum prepared in 1941 by Harry D. White, head of the division of monetary research, U.S. department of the treasury, and a British counterpart of this plan prepared by Lord Keynes, acting as adviser to the British treasury. After both plans had been circulated privately among a limited number of government officials and expert advisers, the U.S. treasury in April 1943 published its plan for an International Stabilization fund of the United and Associated Nations, and on the same day the British plan for an International Clearing union was made public. A supplementary U.S. project for a Bank for Reconstruction and Development was published in Nov. 1943. All these proposals were then submitted to the ministers of finance of the United Nations. Extended discussions followed on the technical level among the experts of 30 countries. In April 1944 a joint statement of experts was issued, recommending the establishment of an International Monetary fund. This statement formed the basis for discussion at the Bretton Woods conference (July 1944) at which delegations of 44 nations drafted Articles of Agreement of the Fund and of a Bank for Reconstruction and Development. The final step was the submission of the articles to the various national legislatures for ratification.

Before this took place, however, there ensued a vigorous discussion in the U.S. press, on the radio and in public meetings. The American Bankers association strongly opposed the Monetary fund; the Business and Industry committee in Bretton Woods and a group of 200 economists, including the acknowledged leaders of the profession, gave it their support. An important factor in securing action by congress was the favourable

tone of the report issued by the Committee on Economic Development in March 1945. The bill ratifying the agreements, without amendment but with some interpretative clarifications, passed the house of representatives on June 7, 1945, by a vote of 345 to 18, was approved by the senate on July 19, 61 to 16, and signed by President Truman on July 31. British ratification was delayed until Dec. 27, pending the outcome of protracted negotiations for a loan from the U.S. France undertook a radical devaluation of its currency immediately before ratification. In ratifying the fund the U.S. undertook to supply its quota, \$2,750,000,000 of the total resources of \$8,800,000,000.

The fund and the bank are two separate, but supplementary, institutions. A primary purpose of the fund was to bring about a high degree of stability in the relative values of the dollar, the pound, the franc, and other national currencies, and thus to avoid the disastrous unilateral and competitive depreciations which followed World War I. An exchange rate for each country was to be fixed in terms of gold when it entered the fund. Day-to-day exchange rate fluctuations were to be kept within rather narrow limits, and no country was to be allowed to change its exchange parity value more than 10% without first consulting the fund. Substantial changes in exchange parities, each member agreed, were to be made only to correct a fundamental disequilibrium in its balance of payments. All members renounced discriminatory currency practices.

A second objective of great importance was freeing international trade from exchange control. The framers of the agreement recognized that capital transfers should be subject to national controls but sought to free payments on current account, thus making it possible for exporters of any country to convert freely their credits in foreign countries into their own national currencies. This objective would not be accomplished at once. The fund would not require countries suffering from wartime destruction of export industries to remove controls during a five-year postwar transitional period. They would be obligated, however, to "have continuous regard in their exchange policies to the purposes of the fund" and to take all possible measures to restore freedom of payments.

Underlying all other objectives in the establishment of the fund was the expansion of international trade on a multilateral basis. The pooling of currencies was the means by which the fund would aid countries which were having temporary difficulties in balancing their payments to avoid exchange depreciation, as well as restrictions on imports and other species of economic warfare. In simple terms, membership in the fund would give a country, within specified limits, the privilege of exchanging its own currency for that of other members. Thus, temporary pressures in exchange rates could be relieved.

The fund was not intended to correct chronic shortages of foreign exchange, such as result from a permanent disequilibrium in a country's accounts with the rest of the world. This, among others, was one of the principal objectives of the International Bank for Reconstruction and Development. The subscribed capital of the bank was fixed at \$9,100,000,000; of this the United States, the largest stockholder, was to subscribe \$3,175,000,000, but of this amount only \$635,000,000, or 20%, had to be paid in. A surety fund would constitute 80% of the bank's capital.

The purpose of the bank was to facilitate long-term productive investment for the replacement of capital goods destroyed in countries ravaged by war, and to supply the needs of industrially undeveloped areas, such as the Latin American republics. The bank was also authorized to grant long-term stabilization loans. The bank would not displace, but would supplement, private lending. Its principal business would be the guarantee of private loans, as to interest and principal, after adequate inves-

tigation. The bank was to undertake, also, the supervision of guaranteed loans to make sure that the funds were used for the purposes intended. Direct loans might be made, either by selling the bank's obligations in a member country and lending the proceeds directly to borrowers or by loaning directly out of capital assets. The total volume of such loans, however, was limited to 20% of the bank's assets. Like guaranteed loans, direct loans might be made only for productive purposes; they were to be endorsed by a member government. A further condition was that private capital was not available at reasonable terms.

Only countries holding membership in the International Monetary fund might subscribe to the bank and obtain loans through the use of its facilities. Thus the close interdependence of the functions of the two institutions was effectively recognized. The stability of exchange rates and freedom of international payments, which were the objectives of the fund, were essential conditions for the expansion of international investment; on the other hand the fund could not successfully operate, as its opponents pointed out, unless fundamental causes of economic imbalance were removed. For this purpose large and well-advised long-term investments were essential. (P. W. BL.)

The text of the Articles of Agreement of the International Monetary Fund and the International Bank for Reconstruction and Development, as set forth in the final act of the United Nations Monetary and Financial conference, held at Bretton Woods, N.H., July 1-22, 1944, follows:

### Articles of Agreement of the International Monetary Fund

The Governments on whose behalf the present Agreement is signed agree as follows:

#### INTRODUCTORY ARTICLE

The International Monetary Fund is established and shall operate in accordance with the following provisions:

#### ARTICLE I

##### PURPOSES

The purposes of the International Monetary Fund are:

- (i) To promote international monetary cooperation through a permanent institution which provides the machinery for consultation and collaboration on international monetary problems.
- (ii) To facilitate the expansion and balanced growth of international trade, and to contribute thereby to the promotion and maintenance of high levels of employment and real income and to the development of the productive resources of all members as primary objectives of economic policy.
- (iii) To promote exchange stability, to maintain orderly exchange arrangements among members, and to avoid competitive exchange depreciation.
- (iv) To assist in the establishment of a multilateral system of payments in respect of current transactions between members and in the elimination of foreign exchange restrictions which hamper the growth of world trade.
- (v) To give confidence to members by making the Fund's resources available to them under adequate safeguards, thus providing them with opportunity to correct maladjustments in their balance of payments without resorting to measures destructive of national or international prosperity.
- (vi) In accordance with the above, to shorten the duration and lessen the degree of disequilibrium in the international balances of payments of members.

The Fund shall be guided in all its decisions by the purposes set forth in this Article.

#### ARTICLE II

##### MEMBERSHIP

#### Section 1. *Original members*

The original members of the Fund shall be those of the countries represented at the United Nations Monetary and Financial Conference whose governments accept membership before the date specified in Article XX, Section 2 (e).

#### Section 2. *Other members*

Membership shall be open to the governments of other countries at such times and in accordance with such terms as may be prescribed by the Fund.

#### ARTICLE III

##### QUOTAS AND SUBSCRIPTIONS

#### Section 1. *Quotas*

Each member shall be assigned a quota. The quotas of the members represented at the United Nations Monetary and Financial Conference which accept membership before the date specified in Article XX, Section 2 (e), shall be those set forth in Schedule A. The quotas of other members shall be determined by the Fund.

#### Section 2. *Adjustment of quotas*

The Fund shall at intervals of five years review, and if it deems it

appropriate propose an adjustment of, the quotas of the members. It may also, if it thinks fit, consider at any other time the adjustment of any particular quota at the request of the member concerned. A four-fifths majority of the total voting power shall be required for any change in quotas and no quota shall be changed without the consent of the member concerned.

#### Section 3. *Subscriptions: time, place, and form of payment*

(a) The subscription of each member shall be equal to its quota and shall be paid in full to the Fund at the appropriate depository on or before the date when the member becomes eligible under Article XX, Section 4 (c) or (d), to buy currencies from the Fund.

(b) Each member shall pay in gold, as a minimum, the smaller of

- (i) twenty-five percent of its quota; or
- (ii) ten percent of its net official holdings of gold and United States dollars as at the date when the Fund notifies members under Article XX, Section 4 (a) that it will shortly be in a position to begin exchange transactions.

Each member shall furnish to the Fund the data necessary to determine its net official holdings of gold and United States dollars.

(c) Each member shall pay the balance of its quota in its own currency.

(d) If the net official holdings of gold and United States dollars of any member as at the date referred to in (b) (ii) above are not ascertainable because its territories have been occupied by the enemy, the Fund shall fix an appropriate alternative date for determining such holdings. If such date is later than that on which the country becomes eligible under Article XX, Section 4 (c) or (d), to buy currencies from the Fund, the Fund and the member shall agree on a provisional gold payment to be made under (b) above, and the balance of the member's subscription shall be paid in the member's currency, subject to appropriate adjustment between the member and the Fund when the net official holdings have been ascertained.

#### Section 4. *Payments when quotas are changed*

(a) Each member which consents to an increase in its quota shall, within thirty days after the date of its consent, pay to the Fund twenty-five percent of the increase in gold and the balance in its own currency. If, however, on the date when the member consents to an increase, its monetary reserves are less than its new quota, the Fund may reduce the proportion of the increase to be paid in gold.

(b) If a member consents to a reduction in its quota, the Fund shall, within thirty days after the date of the consent, pay to the member an amount equal to the reduction. The payment shall be made in the member's currency and in such amount of gold as may be necessary to prevent reducing the Fund's holdings of the currency below seventy-five percent of the new quota.

#### Section 5. *Substitution of securities for currency*

The Fund shall accept from any member in place of any part of the member's currency which in the judgment of the Fund is not needed for its operations, notes or similar obligations issued by the member or the depository designated by the member under Article XIII, Section 2, which shall be non-negotiable, non-interest bearing and payable at their par value on demand by crediting the account of the Fund in the designated depository. This Section shall apply not only to currency subscribed by members but also to any currency otherwise due to, or acquired by, the Fund.

#### ARTICLE IV

##### PAR VALUES OF CURRENCIES

#### Section 1. *Expression of par values*

(a) The par value of the currency of each member shall be expressed in terms of gold as a common denominator or in terms of the United States dollar of the weight and fineness in effect on July 1, 1944.

(b) All computations relating to currencies of members for the purpose of applying the provisions of this Agreement shall be on the basis of their par values.

#### Section 2. *Gold purchases based on par values*

The Fund shall prescribe a margin above and below par value for transactions in gold by members, and no member shall buy gold at a price above par value plus the prescribed margin, or sell gold at a price below par value minus the prescribed margin.

#### Section 3. *Foreign exchange dealings based on parity*

The maximum and the minimum rates for exchange transactions between the currencies of members taking place within their territories shall not differ from parity

- (i) in the case of spot exchange transactions, by more than one percent; and
- (ii) in the case of other exchange transactions, by a margin which exceeds the margin for spot exchange transactions by more than the Fund considers reasonable.

#### Section 4. *Obligations regarding exchange stability*

(a) Each member undertakes to collaborate with the Fund to promote exchange stability, to maintain orderly exchange arrangements with other members, and to avoid competitive exchange alterations.

(b) Each member undertakes, through appropriate measures consistent with this Agreement, to permit within its territories exchange transactions between its currency and the currencies of other members only within the limits prescribed under Section 3 of this Article. A member whose monetary authorities, for the settlement of international transactions, in fact freely buy and sell gold within the limits prescribed by the Fund under Section 2 of this Article shall be deemed to be fulfilling this undertaking.

#### Section 5. *Changes in par values*

(a) A member shall not propose a change in the par value of its currency except to correct a fundamental disequilibrium.

(b) A change in the par value of a member's currency may be made only on the proposal of the member and only after consultation with the Fund.

(c) When a change is proposed, the Fund shall first take into account the changes, if any, which have already taken place in the initial par

value of the member's currency as determined under Article XX, Section 4. If the proposed change, together with all previous changes, whether increases or decreases,

- (i) does not exceed ten percent of the initial par value, the Fund shall raise no objection,
- (ii) does not exceed a further ten percent of the initial par value, the Fund may either concur or object, but shall declare its attitude within seventy-two hours if the member so requests,
- (iii) is not within (i) or (ii) above, the Fund may either concur or object, but shall be entitled to a longer period in which to declare its attitude.

(d) Uniform changes in par values made under Section 7 of this Article shall not be taken into account in determining whether a proposed change falls within (i), (ii), or (iii) of (c) above.

(e) A member may change the par value of its currency without the concurrence of the Fund if the change does not affect the international transactions of members of the Fund.

(f) The Fund shall concur in a proposed change which is within the terms of (c) (ii) or (c) (iii) above if it is satisfied that the change is necessary to correct a fundamental disequilibrium. In particular, provided it is so satisfied, it shall not object to a proposed change because of the domestic social or political policies of the member proposing the change.

#### Section 6. Effect of unauthorized changes

If a member changes the par value of its currency despite the objection of the Fund, in cases where the Fund is entitled to object, the member shall be ineligible to use the resources of the Fund unless the Fund otherwise determines; and if, after the expiration of a reasonable period, the difference between the member and the Fund continues, the matter shall be subject to the provisions of Article XV, Section 2 (b).

#### Section 7. Uniform changes in par values

Notwithstanding the provisions of Section 5 (b) of this Article, the Fund by a majority of the total voting power may make uniform proportionate changes in the par values of the currencies of all members, provided each such change is approved by every member which has ten percent or more of the total of the quotas. The par value of a member's currency shall, however, not be changed under this provision if, within seventy-two hours of the Fund's action, the member informs the Fund that it does not wish the par value of its currency to be changed by such action.

#### Section 8. Maintenance of gold value of the Fund's assets

(a) The gold value of the Fund's assets shall be maintained notwithstanding changes in the par or foreign exchange value of the currency of any member.

(b) Whenever (i) the par value of a member's currency is reduced, or (ii) the foreign exchange value of a member's currency has, in the opinion of the Fund, depreciated to a significant extent within that member's territories, the member shall pay to the Fund within a reasonable time an amount of its own currency equal to the reduction in the gold value of its currency held by the Fund.

(c) Whenever the par value of a member's currency is increased, the Fund shall return to such member within a reasonable time an amount in its currency equal to the increase in the gold value of its currency held by the Fund.

(d) The provisions of this Section shall apply to a uniform proportionate change in the par values of the currencies of all members, unless at the time when such a change is proposed the Fund decides otherwise.

#### Section 9. Separate currencies within a member's territories

A member proposing a change in the par value of its currency shall be deemed, unless it declares otherwise, to be proposing a corresponding change in the par value of the separate currencies of all territories in respect of which it has accepted this Agreement under Article XX, Section 2 (g). It shall, however, be open to a member to declare that its proposal relates either to the metropolitan currency alone, or only to one or more specified separate currencies, or to the metropolitan currency and one or more specified separate currencies.

### ARTICLE V

#### TRANSACTIONS WITH THE FUND

##### Section 1. Agencies dealing with the Fund

Each member shall deal with the Fund only through its Treasury, central bank, stabilization fund or other similar fiscal agency and the Fund shall deal only with or through the same agencies.

##### Section 2. Limitation on the Fund's operations

Except as otherwise provided in this Agreement, operations on the account of the Fund shall be limited to transactions for the purpose of supplying a member, on the initiative of such member, with the currency of another member in exchange for gold or for the currency of the member desiring to make the purchase.

##### Section 3. Conditions governing use of the Fund's resources

(a) A member shall be entitled to buy the currency of another member from the Fund in exchange for its own currency subject to the following conditions:

- (i) The member desiring to purchase the currency represents that it is presently needed for making in that currency payments which are consistent with the provisions of this Agreement;
- (ii) The Fund has not given notice under Article VII, Section 3, that its holdings of the currency desired have become scarce;
- (iii) The proposed purchase would not cause the Fund's holdings of the purchasing member's currency to increase by more than twenty-five percent of its quota during the period of twelve months ending on the date of the purchase nor to exceed two hundred percent of its quota, but the twenty-five percent limitation shall apply only to the extent that the Fund's holdings of the member's currency have been brought above seventy-five percent of its quota if they had been below that amount;
- (iv) The Fund has not previously declared under Section 5 of this Article, Article IV, Section 6, Article VI, Section 1, or Article

U.S. LOAN of about \$4,400,000,000 to Great Britain on Dec. 6, 1945 (subject to approval by Congress), was seen by Werner of the *Chicago Sun*, in the cartoon, "Ice Breaker," as a means of trade expansion between the two nations and a step toward the Bretton Woods goal of ending commercial nationalism

XV, Section 2 (a), that the member desiring to purchase is ineligible to use the resources of the Fund.

(b) A member shall not be entitled without the permission of the Fund to use the Fund's resources to acquire currency to hold against forward exchange transactions.

##### Section 4. Waiver of conditions

The Fund may in its discretion, and on terms which safeguard its interests, waive any of the conditions prescribed in Section 3 (a) of this Article, especially in the case of members with a record of avoiding large or continuous use of the Fund's resources. In making a waiver it shall take into consideration periodic or exceptional requirements of the member requesting the waiver. The Fund shall also take into consideration a member's willingness to pledge as collateral security gold, silver, securities, or other acceptable assets having a value sufficient in the opinion of the Fund to protect its interests and may require as a condition of waiver the pledge of such collateral security.

##### Section 5. Ineligibility to use the Fund's resources

Whenever the Fund is of the opinion that any member is using the resources of the Fund in a manner contrary to the purposes of the Fund, it shall present to the member a report setting forth the views of the Fund and prescribing a suitable time for reply. After presenting such a report to a member, the Fund may limit the use of its resources by the member. If no reply to the report is received from the member within the prescribed time, or if the reply received is unsatisfactory, the Fund may continue to limit the member's use of the Fund's resources or may, after giving reasonable notice to the member, declare it ineligible to use the resources of the Fund.

##### Section 6. Purchases of currencies from the Fund for gold

(a) Any member desiring to obtain, directly or indirectly, the currency of another member for gold shall, provided that it can do so with equal advantage, acquire it by the sale of gold to the Fund.

(b) Nothing in this Section shall be deemed to preclude any member from selling in any market gold newly produced from mines located within its territories.

##### Section 7. Repurchase by a member of its currency held by the Fund

(a) A member may repurchase from the Fund and the Fund shall sell for gold any part of the Fund's holdings of its currency in excess of its quota.

(b) At the end of each financial year of the Fund, a member shall repurchase from the Fund with gold or convertible currencies, as determined in accordance with Schedule B, part of the Fund's holdings of its currency under the following conditions:

- (i) Each member shall use in repurchases of its own currency from the Fund an amount of its monetary reserves equal in value to one-half of any increase that has occurred during the year in the Fund's holdings of its currency plus one-half of any increase, or minus one-half of any decrease, that has occurred during the year in the member's monetary reserves. This rule

ARTICLE VII  
SCARCE CURRENCIES

shall not apply when a member's monetary reserves have decreased during the year by more than the Fund's holdings of its currency have increased.

- (ii) If after the repurchase described in (i) above (if required) has been made, a member's holdings of another member's currency (or of gold acquired from that member) are found to have increased by reason of transactions in terms of that currency with other members or persons in their territories, the member whose holdings of such currency (or gold) have thus increased shall use the increase to repurchase its own currency from the Fund.
- (c) None of the adjustments described in (b) above shall be carried to a point at which
- (i) the member's monetary reserves are below its quota, or
  - (ii) the Fund's holdings of its currency are below seventy-five percent of its quota, or
  - (iii) the Fund's holdings of any currency required to be used are above seventy-five percent of the quota of the member concerned.

Section 8. *Charges*

(a) Any member buying the currency of another member from the Fund in exchange for its own currency shall pay a service charge uniform for all members of three-fourths percent in addition to the parity price. The Fund in its discretion may increase this service charge to not more than one percent or reduce it to not less than one-half percent.

(b) The Fund may levy a reasonable handling charge on any member buying gold from the Fund or selling gold to the Fund.

(c) The Fund shall levy charges uniform for all members which shall be payable by any member on the average daily balances of its currency held by the Fund in excess of its quota. These charges shall be at the following rates:

- (i) *On amounts not more than twenty-five percent in excess of the quota:* no charge for the first three months; one-half percent per annum for the next nine months; and thereafter an increase in the charge of one-half percent for each subsequent year.
- (ii) *On amounts more than twenty-five percent and not more than fifty percent in excess of the quota:* an additional one-half percent for the first year; and an additional one-half percent for each subsequent year.
- (iii) *On each additional bracket of twenty-five percent in excess of the quota:* an additional one-half percent for the first year; and an additional one-half percent for each subsequent year.

(d) Whenever the Fund's holdings of a member's currency are such that the charge applicable to any bracket for any period has reached the rate of four percent per annum, the Fund and the member shall consider means by which the Fund's holdings of the currency can be reduced. Thereafter, the charges shall rise in accordance with the provisions of (c) above until they reach five percent and failing agreement, the Fund may then impose such charges as it deems appropriate.

(e) The rates referred to in (c) and (d) above may be changed by a three-fourths majority of the total voting power.

(f) All charges shall be paid in gold. If, however, the member's monetary reserves are less than one-half of its quota, it shall pay in gold only that proportion of the charges due which such reserves bear to one-half of its quota, and shall pay the balance in its own currency.

ARTICLE VI  
CAPITAL TRANSFERS

Section 1. *Use of the Fund's resources for capital transfers*

(a) A member may not make net use of the Fund's resources to meet a large or sustained outflow of capital, and the Fund may request a member to exercise controls to prevent such use of the resources of the Fund. If, after receiving such a request, a member fails to exercise appropriate controls, the Fund may declare the member ineligible to use the resources of the Fund.

(b) Nothing in this Section shall be deemed

- (i) to prevent the use of the resources of the Fund for capital transactions of reasonable amount required for the expansion of exports or in the ordinary course of trade, banking or other business or
- (ii) to affect capital movements which are met out of a member's own resources of gold and foreign exchange, but members undertake that such capital movements will be in accordance with the purposes of the Fund.

Section 2. *Special provisions for capital transfers*

If the Fund's holdings of the currency of a member have remained below seventy-five percent of its quota for an immediately preceding period of not less than six months, such member, if it has not been declared ineligible to use the resources of the Fund under Section 1 of this Article, Article IV, Section 6, Article V, Section 5, or Article XV; Section 2 (a), shall be entitled, notwithstanding the provisions of Section 1 (a) of this Article, to buy the currency of another member from the Fund with its own currency for any purpose, including capital transfers. Purchases for capital transfers under this Section shall not, however, be permitted if they have the effect of raising the Fund's holdings of the currency of the member desiring to purchase above seventy-five percent of its quota, or of reducing the Fund's holdings of the currency desired below seventy-five percent of the quota of the member whose currency is desired.

Section 3. *Controls of capital transfers*

Members may exercise such controls as are necessary to regulate international capital movements, but no member may exercise these controls in a manner which will restrict payments for current transactions or which will unduly delay transfers of funds in settlement of commitments, except as provided in Article VII, Section 3 (b), and in Article XIV, Section 2.

Section 1. *General scarcity of currency*

If the Fund finds that a general scarcity of a particular currency is developing, the Fund may so inform members and may issue a report setting forth the causes of the scarcity and containing recommendations designed to bring it to an end. A representative of the member whose currency is involved shall participate in the preparation of the report.

Section 2. *Measures to replenish the Fund's holdings of scarce currencies*

The Fund may, if it deems such action appropriate to replenish its holdings of any member's currency, take either or both of the following steps:

- (i) Propose to the member that, on terms and conditions agreed between the Fund and the member, the latter lend its currency to the Fund or that, with the approval of the member, the Fund borrow such currency from some other source either within or outside the territories of the member, but no member shall be under any obligation to make such loans to the Fund or to approve the borrowing of its currency by the Fund from any other source.
- (ii) Require the member to sell its currency to the Fund for gold.

Section 3. *Scarcity of the Fund's holdings*

(a) If it becomes evident to the Fund that the demand for a member's currency seriously threatens the Fund's ability to supply that currency, the Fund, whether or not it has issued a report under Section 1 of this Article, shall formally declare such currency scarce and shall thenceforth apportion its existing and accruing supply of the scarce currency with due regard to the relative needs of members, the general international economic situation and any other pertinent considerations. The Fund shall also issue a report concerning its action.

(b) A formal declaration under (a) above shall operate as an authorization to any member, after consultation with the Fund, temporarily to impose limitations on the freedom of exchange operations in the scarce currency. Subject to the provisions of Article IV, Sections 3 and 4, the member shall have complete jurisdiction in determining the nature of such limitations, but they shall be no more restrictive than is necessary to limit the demand for the scarce currency to the supply held by, or accruing to, the member in question; and they shall be relaxed and removed as rapidly as conditions permit.

(c) The authorization under (b) above shall expire whenever the Fund formally declares the currency in question to be no longer scarce.

Section 4. *Administration of restrictions*

Any member imposing restrictions in respect of the currency of any other member pursuant to the provisions of Section 3 (b) of this Article shall give sympathetic consideration to any representations by the other member regarding the administration of such restrictions.

Section 5. *Effect of other international agreements on restrictions*

Members agree not to invoke the obligations of any engagements entered into with other members prior to this Agreement in such a manner as will prevent the operation of the provisions of this Article.

ARTICLE VIII  
GENERAL OBLIGATIONS OF MEMBERS

Section 1. *Introduction*

In addition to the obligations assumed under other articles of this Agreement, each member undertakes the obligations set out in this Article.

Section 2. *Avoidance of restrictions on current payments*

(a) Subject to the provisions of Article VII, Section 3 (b), and Article XIV, Section 2, no member shall, without the approval of the Fund, impose restrictions on the making of payments and transfers for current international transactions.

(b) Exchange contracts which involve the currency of any member and which are contrary to the exchange control regulations of that member maintained or imposed consistently with this Agreement shall be unenforceable in the territories of any member. In addition, members may, by mutual accord, cooperate in measures for the purpose of making the exchange control regulations of either member more effective, provided that such measures and regulations are consistent with this Agreement.

Section 3. *Avoidance of discriminatory currency practices*

No member shall engage in, or permit any of its fiscal agencies referred to in Article V, Section 1, to engage in, any discriminatory currency arrangements or multiple currency practices except as authorized under this Agreement or approved by the Fund. If such arrangements and practices are engaged in at the date when this Agreement enters into force the member concerned shall consult with the Fund as to their progressive removal unless they are maintained or imposed under Article XIV, Section 2, in which case the provisions of Section 4. of that Article shall apply.

Section 4. *Convertibility of foreign held balances*

(a) Each member shall buy balances of its currency held by another member if the latter, in requesting the purchase, represents

- (i) that the balances to be bought have been recently acquired as a result of current transactions; or
- (ii) that their conversion is needed for making payments for current transactions.

The buying member shall have the option to pay either in the currency of the member making the request or in gold.

(b) The obligation in (a) above shall not apply

- (i) when the convertibility of the balances has been restricted consistently with Section 2 of this Article, or Article VI, Section 3; or
- (ii) when the balances have accumulated as a result of transactions effected before the removal by a member of restrictions main-

- (iii) tained or imposed under Article XIV, Section 2; or
- (iv) when the balances have been acquired contrary to the exchange regulations of the member which is asked to buy them; or
- (v) when the currency of the member requesting the purchase has been declared scarce under Article VII, Section 3 (a); or
- (v) when the member requested to make the purchase is for any reason not entitled to buy currencies of other members from the Fund for its own currency.

## Section 5. *Furnishing of information*

(a) The Fund may require members to furnish it with such information as it deems necessary for its operations, including, as the minimum necessary for the effective discharge of the Fund's duties, national data on the following matters:

- (i) Official holdings at home and abroad, of (1) gold, (2) foreign exchange.
- (ii) Holdings at home and abroad by banking and financial agencies, other than official agencies, of (1) gold, (2) foreign exchange.
- (iii) Production of gold.
- (iv) Gold exports and imports according to countries of destination and origin.
- (v) Total exports and imports of merchandise, in terms of local currency values, according to countries of destination and origin.
- (vi) International balance of payments, including (1) trade in goods and services, (2) gold transactions, (3) known capital transactions, and (4) other items.
- (vii) International investment position, *i. e.*, investments within the territories of the member owned abroad and investments abroad owned by persons in its territories so far as it is possible to furnish this information.
- (viii) National income.
- (ix) Price indices, *i. e.*, indices of commodity prices in wholesale and retail markets and of export and import prices.
- (x) Buying and selling rates for foreign currencies.
- (xi) Exchange controls, *i. e.*, a comprehensive statement of exchange controls in effect at the time of assuming membership in the Fund and details of subsequent changes as they occur.
- (xii) Where official clearing arrangements exist, details of amounts awaiting clearance in respect of commercial and financial transactions, and of the length of time during which such arrears have been outstanding.

(b) In requesting information the Fund shall take into consideration the varying ability of members to furnish the data requested. Members shall be under no obligation to furnish information in such detail that the affairs of individuals or corporations are disclosed. Members undertake, however, to furnish the desired information in as detailed and accurate a manner as is practicable, and, so far as possible, to avoid mere estimates.

(c) The Fund may arrange to obtain further information by agreement with members. It shall act as a centre for the collection and exchange of information on monetary and financial problems, thus facilitating the preparation of studies designed to assist members in developing policies which further the purposes of the Fund.

## Section 6. *Consultation between members regarding existing international agreements*

Where under this Agreement a member is authorized in the special or temporary circumstances specified in the Agreement to maintain or establish restrictions on exchange transactions, and there are other engagements between members entered into prior to this Agreement which conflict with the application of such restrictions, the parties to such engagements will consult with one another with a view to making such mutually acceptable adjustments as may be necessary. The provisions of this Article shall be without prejudice to the operation of Article VII, Section 5.

## ARTICLE IX

### STATUS, IMMUNITIES AND PRIVILEGES

#### Section 1. *Purposes of Article*

To enable the Fund to fulfill the functions with which it is entrusted, the status, immunities and privileges set forth in this Article shall be accorded to the Fund in the territories of each member.

#### Section 2. *Status of the Fund*

The Fund shall possess full juridical personality, and, in particular, the capacity:

- (i) to contract;
- (ii) to acquire and dispose of immovable and movable property;
- (iii) to institute legal proceedings.

#### Section 3. *Immunity from judicial process*

The Fund, its property and its assets, wherever located and by whomsoever held, shall enjoy immunity from every form of judicial process except to the extent that it expressly waives its immunity for the purpose of any proceedings or by the terms of any contract.

#### Section 4. *Immunity from other action*

Property and assets of the Fund, wherever located and by whomsoever held, shall be immune from search, requisition, confiscation, expropriation or any other form of seizure by executive or legislative action.

#### Section 5. *Immunity of archives*

The archives of the Fund shall be inviolable.

#### Section 6. *Freedom of assets from restrictions*

To the extent necessary to carry out the operations provided for in this Agreement, all property and assets of the Fund shall be free from restrictions, regulations, controls and moratoria of any nature.

#### Section 7. *Privilege for communications*

The official communications of the Fund shall be accorded by members the same treatment as the official communications of other members.

#### Section 8. *Immunities and privileges of officers and employees*

All governors, executive directors, alternates, officers and employees of the Fund

- (i) shall be immune from legal process with respect to acts performed by them in their official capacity except when the Fund waives this immunity.
- (ii) not being local nationals, shall be granted the same immunities from immigration restrictions, alien registration requirements and national service obligations and the same facilities as regards exchange restrictions as are accorded by members to the representatives, officials, and employees of comparable rank of other members.
- (iii) shall be granted the same treatment in respect of travelling facilities as is accorded by members to representatives, officials and employees of comparable rank of other members.

## Section 9. *Immunities from taxation*

(a) The Fund, its assets, property, income and its operations and transactions authorized by this Agreement, shall be immune from all taxation and from all customs duties. The Fund shall also be immune from liability for the collection or payment of any tax or duty.

(b) No tax shall be levied on or in respect of salaries and emoluments paid by the Fund to executive directors, alternates, officers or employees of the Fund who are not local citizens, local subjects, or other local nationals.

(c) No taxation of any kind shall be levied on any obligation or security issued by the Fund, including any dividend or interest thereon, by whomsoever held

- (i) which discriminates against such obligation or security solely because of its origin; or
- (ii) if the sole jurisdictional basis for such taxation is the place or currency in which it is issued, made payable or paid, or the location of any office or place of business maintained by the Fund.

## Section 10. *Application of Article*

Each member shall take such action as is necessary in its own territories for the purpose of making effective in terms of its own law the principles set forth in this Article and shall inform the Fund of the detailed action which it has taken.

## ARTICLE X

### RELATIONS WITH OTHER INTERNATIONAL ORGANIZATIONS

The Fund shall cooperate within the terms of this Agreement with any general international organization and with public international organizations having specialized responsibilities in related fields. Any arrangements for such cooperation which would involve a modification of any provision of this Agreement may be effected only after amendment to this Agreement under Article XVII.

## ARTICLE XI

### RELATIONS WITH NON-MEMBER COUNTRIES

#### Section 1. *Undertakings regarding relations with non-member countries*

Each member undertakes:

- (i) Not to engage in, nor to permit any of its fiscal agencies referred to in Article V, Section 1, to engage in, any transactions with a non-member or with persons in a non-member's territories which would be contrary to the provisions of this Agreement or the purposes of the Fund;
- (ii) Not to cooperate with a non-member or with persons in a non-member's territories in practices which would be contrary to the provisions of this Agreement or the purposes of the Fund; and
- (iii) To cooperate with the Fund with a view to the application in its territories of appropriate measures to prevent transactions with non-members or with persons in their territories which would be contrary to the provisions of this Agreement or the purposes of the Fund.

#### Section 2. *Restrictions on transactions with non-member countries*

Nothing in this Agreement shall affect the right of any member to impose restrictions on exchange transactions with non-members or with persons in their territories unless the Fund finds that such restrictions prejudice the interests of members and are contrary to the purposes of the Fund.

## ARTICLE XII

### ORGANIZATION AND MANAGEMENT

#### Section 1. *Structure of the Fund*

The Fund shall have a Board of Governors, Executive Directors, a Managing Director and a staff.

#### Section 2. *Board of Governors*

(a) All powers of the Fund shall be vested in the Board of Governors, consisting of one governor and one alternate appointed by each member in such manner as it may determine. Each governor and each alternate shall serve for five years, subject to the pleasure of the member appointing him, and may be reappointed. No alternate may vote except in the absence of his principal. The Board shall select one of the governors as chairman.

(b) The Board of Governors may delegate to the Executive Directors authority to exercise any powers of the Board, except the power to:

- (i) Admit new members and determine the conditions of their admission.
- (ii) Approve a revision of quotas.
- (iii) Approve a uniform change in the par value of the currencies of all members.
- (iv) Make arrangements to cooperate with other international organizations (other than informal arrangements of a temporary or administrative character).
- (v) Determine the distribution of the net income of the Fund.
- (vi) Require a member to withdraw.

- (vii) Decide to liquidate the Fund.
- (viii) Decide appeals from interpretations of this Agreement given by the Executive directors.

(c) The Board of Governors shall hold an annual meeting and such other meetings as may be provided for by the Board or called by the Executive Directors. Meetings of the Board shall be called by the Directors whenever requested by five members or by members having one quarter of the total voting power.

(d) A quorum for any meeting of the Board of Governors shall be a majority of the governors exercising not less than two-thirds of the total voting power.

(e) Each governor shall be entitled to cast the number of votes allotted under Section 5 of this Article to the member appointing him.

(f) The Board of Governors may by regulation establish a procedure whereby the Executive Directors, when they deem such action to be in the best interests of the Fund, may obtain a vote of the governors on a specific question without calling a meeting of the Board.

(g) The Board of Governors, and the Executive Directors to the extent authorized, may adopt such rules and regulations as may be necessary or appropriate to conduct the business of the Fund.

(h) Governors and alternates shall serve as such without compensation from the Fund, but the Fund shall pay them reasonable expenses incurred in attending meetings.

(i) The Board of Governors shall determine the remuneration to be paid to the Executive Directors and the salary and terms of the contract of service of the Managing Director.

### Section 3. Executive Directors

(a) The Executive Directors shall be responsible for the conduct of the general operations of the Fund, and for this purpose shall exercise all the powers delegated to them by the Board of Governors.

(b) There shall be not less than twelve directors who need not be governors, and of whom

- (i) Five shall be appointed by the five members having the largest quotas;
- (ii) Not more than two shall be appointed when the provisions of (c) below apply;
- (iii) Five shall be elected by the members not entitled to appoint directors, other than the American Republics; and
- (iv) Two shall be elected by the American Republics not entitled to appoint directors.

For the purposes of this paragraph, members means governments of countries whose names are set forth in Schedule A, whether they become members in accordance with Article XX or in accordance with Article II, Section 2. When governments of other countries become members, the Board of Governors may, by a four-fifths majority of the total voting power, increase the number of directors to be elected.

(c) If, at the second regular election of directors and thereafter, the members entitled to appoint directors under (b) (i) above do not include the two members, the holdings of whose currencies by the Fund have been, on the average over the preceding two years, reduced below their quotas by the largest absolute amounts in terms of gold as a common denominator, either one or both of such members, as the case may be, shall be entitled to appoint a director.

(d) Subject to Article XX, Section (3) (b) elections of elective directors shall be conducted at intervals of two years in accordance with the provisions of Schedule C, supplemented by such regulations as the Fund deems appropriate. Whenever the Board of Governors increases the number of directors to be elected under (b) above, it shall issue regulations making appropriate changes in the proportion of votes required to elect directors under the provisions of Schedule C.

(e) Each director shall appoint an alternate with full power to act for him when he is not present. When the directors appointing them are present, alternates may participate in meetings but may not vote.

(f) Directors shall continue in office until their successors are appointed or elected. If the office of an elected director becomes vacant more than ninety days before the end of his term, another director shall be elected for the remainder of the term by the members who elected the former director. A majority of the votes cast shall be required for election. While the office remains vacant, the alternate of the former director shall exercise his powers, except that of appointing an alternate.

(g) The Executive Directors shall function in continuous session at the principal office of the Fund and shall meet as often as the business of the Fund may require.

(h) A quorum for any meeting of the Executive Directors shall be a majority of the directors representing not less than one-half of the voting power.

(i) Each appointed director shall be entitled to cast the number of votes allotted under Section 5 of this Article to the member appointing him. Each elected director shall be entitled to cast the number of votes which counted towards his election. When the provisions of Section 5 (b) of this Article are applicable, the votes which a director would otherwise be entitled to cast shall be increased or decreased correspondingly. All the votes which a director is entitled to cast shall be cast as a unit.

(j) The Board of Governors shall adopt regulations under which a member not entitled to appoint a director under (b) above may send a representative to attend any meeting of the Executive Directors when a request made by, or a matter particularly affecting, that member is under consideration.

(k) The Executive Directors may appoint such committees as they deem advisable. Membership of committees need not be limited to governors or directors or their alternates.

### Section 4. Managing Director and staff

(a) The Executive Directors shall select a Managing Director who shall not be a governor or an executive director. The Managing Director shall be chairman of the Executive Directors, but shall have no vote except a deciding vote in case of an equal division. He may participate in meetings of the Board of Governors, but shall not vote at such meetings. The Managing Director shall cease to hold office when the Executive Directors so decide.

(b) The Managing Director shall be chief of the operating staff of the Fund and shall conduct, under the direction of the Executive Directors, the ordinary business of the Fund. Subject to the general control of the Executive Directors, he shall be responsible for the organization, appointment and dismissal of the staff of the Fund.

(c) The Managing Director and the staff of the Fund, in the discharge of their functions, shall owe their duty entirely to the Fund and to no other authority. Each member of the Fund shall respect the international character of this duty and shall refrain from all attempts to influence any of the staff in the discharge of his functions.

(d) In appointing the staff the Managing Director shall, subject to the paramount importance of securing the highest standards of efficiency and of technical competence, pay due regard to the importance of recruiting personnel on as wide a geographical basis as possible.

### Section 5. Voting

(a) Each member shall have two hundred fifty votes plus one additional vote for each part of its quota equivalent to one hundred thousand United States dollars.

(b) Whenever voting is required under Article V, Section 4 or 5, each member shall have the number of votes to which it is entitled under (a) above, adjusted:

- (i) by the addition of one vote for the equivalent of each four hundred thousand United States dollars of net sales of its currency up to the date when the vote is taken, or
- (ii) by the subtraction of one vote for the equivalent of each four hundred thousand United States dollars of its net purchases of the currencies of other members up to the date when the vote is taken

provided, that neither net purchases nor net sales shall be deemed at any time to exceed an amount equal to the quota of the member involved.

(c) For the purpose of all computations under this Section, United States dollars shall be deemed to be of the weight and fineness in effect on July 1, 1944, adjusted for any uniform change under Article IV, Section 7, if a waiver is made under Section 8 (d) of that Article.

(d) Except as otherwise specifically provided, all decisions of the Fund shall be made by a majority of the votes cast.

### Section 6. Distribution of net income

(a) The Board of Governors shall determine annually what part of the Fund's net income shall be placed to reserve and what part, if any, shall be distributed.

(b) If any distribution is made, there shall first be distributed a two percent non-cumulative payment to each member on the amount by which seventy-five percent of its quota exceeded the Fund's average holdings of its currency during that year. The balance shall be paid to all members in proportion to their quotas. Payments to each member shall be made in its own currency.

### Section 7. Publication of reports

(a) The Fund shall publish an annual report containing an audited statement of its accounts, and shall issue, at intervals of three months or less, a summary statement of its transactions and its holdings of gold and currencies of members.

(b) The Fund may publish such other reports as it deems desirable for carrying out its purposes.

### Section 8. Communication of views to members

The Fund shall at all times have the right to communicate its views informally to any member on any matter arising under this Agreement. The Fund may, by a two-thirds majority of the total voting power, decide to publish a report made to a member regarding its monetary or economic conditions and developments which directly tend to produce a serious disequilibrium in the international balance of payments of members. If the member is not entitled to appoint an executive director, it shall be entitled to representation in accordance with Section 3 (j) of this Article. The Fund shall not publish a report involving changes in the fundamental structure of the economic organization of members.

## ARTICLE XIII

### OFFICES AND DEPOSITORIES

#### Section 1. Location of offices

The principal office of the Fund shall be located in the territory of the member having the largest quota, and agencies or branch offices may be established in the territories of other members.

#### Section 2. Depositories

(a) Each member country shall designate its central bank as a depository for all the Fund's holdings of its currency, or if it has no central bank it shall designate such other institution as may be acceptable to the Fund.

(b) The Fund may hold other assets, including gold, in the depositories designated by the five members having the largest quotas and in such other designated depositories as the Fund may select. Initially, at least one-half of the holdings of the Fund shall be held in the depository designated by the member in whose territories the Fund has its principal office and at least forty percent shall be held in the depositories designated by the remaining four members referred to above. However, all transfers of gold by the Fund shall be made with due regard to the costs of transport and anticipated requirements of the Fund. In an emergency the Executive Directors may transfer all or any part of the Fund's gold holdings to any place where they can be adequately protected.

#### Section 3. Guarantee of the Fund's assets

Each member guarantees all assets of the Fund against loss resulting from failure or default on the part of the depository designated by it.

## ARTICLE XIV

### TRANSITIONAL PERIOD

#### Section 1. Introduction

The Fund is not intended to provide facilities for relief or reconstruction or to deal with international indebtedness arising out of the war.

## Section 2. *Exchange restrictions*

In the post-war transitional period members may, notwithstanding the provisions of any other articles of this Agreement, maintain and adapt to changing circumstances (and, in the case of members whose territories have been occupied by the enemy, introduce where necessary) restrictions on payments and transfers for current international transactions. Members shall, however, have continuous regard in their foreign exchange policies to the purposes of the Fund; and, as soon as conditions permit, they shall take all possible measures to develop such commercial and financial arrangements with other members as will facilitate international payments and the maintenance of exchange stability. In particular, members shall withdraw restrictions maintained or imposed under this Section as soon as they are satisfied that they will be able, in the absence of such restrictions, to settle their balance of payments in a manner which will not unduly encumber their access to the resources of the Fund.

## Section 3. *Notification to the Fund*

Each member shall notify the Fund before it becomes eligible under Article XX, Section 4 (c) or (d), to buy currency from the Fund, whether it intends to avail itself of the transitional arrangements in Section 2 of this Article, or whether it is prepared to accept the obligations of Article VIII, Sections 2, 3, and 4. A member availing itself of the transitional arrangements shall notify the Fund as soon thereafter as it is prepared to accept the above-mentioned obligations.

## Section 4. *Action of the Fund relating to restrictions*

Not later than three years after the date on which the Fund begins operations and in each year thereafter, the Fund shall report on the restrictions still in force under Section 2 of this Article. Five years after the date on which the Fund begins operations, and in each year thereafter, any member still retaining any restrictions inconsistent with Article VIII, Sections 2, 3, or 4, shall consult the Fund as to their further retention. The Fund may, if it deems such action necessary in exceptional circumstances, make representations to any member that conditions are favorable for the withdrawal of any particular restriction, or for the general abandonment of restrictions, inconsistent with the provisions of any other articles of this Agreement. The member shall be given a suitable time to reply to such representations. If the Fund finds that the member persists in maintaining restrictions which are inconsistent with the purposes of the Fund, the member shall be subject to Article XV, Section 2 (a).

## Section 5. *Nature of transitional period*

In its relations with members, the Fund shall recognize that the post-war transitional period will be one of change and adjustment and in making decisions on requests occasioned thereby which are presented by any member it shall give the member the benefit of any reasonable doubt.

## ARTICLE XV

### WITHDRAWAL FROM MEMBERSHIP

#### Section 1. *Right of members to withdraw*

Any member may withdraw from the Fund at any time by transmitting a notice in writing to the Fund at its principal office. Withdrawal shall become effective on the date such notice is received.

#### Section 2. *Compulsory withdrawal*

(a) If a member fails to fulfill any of its obligations under this Agreement, the Fund may declare the member ineligible to use the resources of the Fund. Nothing in this Section shall be deemed to limit the provisions of Article IV, Section 6, Article V, Section 5, or Article VI, Section 1.

(b) If, after the expiration of a reasonable period the member persists in its failure to fulfill any of its obligations under this Agreement, or a difference between a member and the Fund under Article IV, Section 6, continues, that member may be required to withdraw from membership in the Fund by a decision of the Board of Governors carried by a majority of the governors representing a majority of the total voting power.

(c) Regulations shall be adopted to ensure that before action is taken against any member under (a) or (b) above, the member shall be informed in reasonable time of the complaint against it and given an adequate opportunity for stating its case, both orally and in writing.

#### Section 3. *Settlement of accounts with members withdrawing*

When a member withdraws from the Fund, normal transactions of the Fund in its currency shall cease and settlement of all accounts between it and the Fund shall be made with reasonable despatch by agreement between it and the Fund. If agreement is not reached promptly, the provisions of Schedule D shall apply to the settlement of accounts.

## ARTICLE XVI

### EMERGENCY PROVISIONS

#### Section 1. *Temporary suspension*

(a) In the event of an emergency or the development of unforeseen circumstances threatening the operations of the Fund, the Executive Directors by unanimous vote may suspend for a period of not more than one hundred twenty days the operation of any of the following provisions:

- (i) Article IV, Sections 3 and 4 (b)
- (ii) Article V, Sections 2, 3, 7, 8 (a) and (f)
- (iii) Article VI, Section 2
- (iv) Article XI, Section 1

(b) Simultaneously with any decision to suspend the operation of any of the foregoing provisions, the Executive Directors shall call a meeting of the Board of Governors for the earliest practicable date.

(c) The Executive Directors may not extend any suspension beyond one hundred twenty days. Such suspension may be extended, however, for an additional period of not more than two hundred forty days, if the Board of Governors by a four-fifths majority of the total voting power so decides, but it may not be further extended except by amendment of this Agreement pursuant to Article XVII.

(d) The Executive Directors may, by a majority of the total voting power, terminate such suspension at any time.

#### Section 2. *Liquidation of the Fund*

(a) The Fund may not be liquidated except by decision of the Board of Governors. In an emergency, if the Executive Directors decide that liquidation of the Fund may be necessary, they may temporarily suspend

all transactions, pending decision by the Board.

(b) If the Board of Governors decides to liquidate the Fund, the Fund shall forthwith cease to engage in any activities except those incidental to the orderly collection and liquidation of its assets and the settlement of its liabilities, and all obligations of members under this Agreement shall cease except those set out in this Article, in Article XVIII, paragraph (c), in Schedule D, paragraph 7, and in Schedule E.

(c) Liquidation shall be administered in accordance with the provisions of Schedule E.

## ARTICLE XVII

### AMENDMENTS

(a) Any proposal to introduce modifications in this Agreement, whether emanating from a member, a governor or the Executive Directors, shall be communicated to the chairman of the Board of Governors who shall bring the proposal before the Board. If the proposed amendment is approved by the Board the Fund shall, by circular letter or telegram, ask all members whether they accept the proposed amendment. When three-fifths of the members, having four-fifths of the total voting power, have accepted the proposed amendment, the Fund shall certify the fact by a formal communication addressed to all members.

(b) Notwithstanding (a) above, acceptance by all members is required in the case of any amendment modifying

- (i) the right to withdraw from the Fund (Article XV, Section 1);
- (ii) the provision that no change in a member's quota shall be made without its consent (Article III, Section 2);
- (iii) the provision that no change may be made in the par value of a member's currency except on the proposal of that member (Article IV, Section 5 (b)).

(c) Amendments shall enter into force for all members three months after the date of the formal communication unless a shorter period is specified in the circular letter or telegram.

## ARTICLE XVIII

### INTERPRETATION

(a) Any question of interpretation of the provisions of this Agreement arising between any member and the Fund or between any members of the Fund shall be submitted to the Executive Directors for their decision. If the question particularly affects any member not entitled to appoint an executive director it shall be entitled to representation in accordance with Article XII, Section 3 (j).

(b) In any case where the Executive Directors have given a decision under (a) above, any member may require that the question be referred to the Board of Governors, whose decision shall be final. Pending the result of the reference to the Board the Fund may, so far as it deems necessary, act on the basis of the decision of the Executive Directors.

(c) Whenever a disagreement arises between the Fund and a member which has withdrawn, or between the Fund and any member during liquidation of the Fund, such disagreement shall be submitted to arbitration by a tribunal of three arbitrators, one appointed by the Fund, another by the member or withdrawing member and an umpire who, unless the parties otherwise agree, shall be appointed by the President of the Permanent Court of International Justice or such other authority as may have been prescribed by regulation adopted by the Fund. The umpire shall have full power to settle all questions of procedure in any case where the parties are in disagreement with respect thereto.

## ARTICLE XIX

### EXPLANATION OF TERMS

In interpreting the provisions of this Agreement the Fund and its members shall be guided by the following:

(a) A member's monetary reserves means its net official holdings of gold, of convertible currencies of other members, and of the currencies of such non-members as the Fund may specify.

(b) The official holdings of a member means central holdings (that is, the holdings of its Treasury, central bank, stabilization fund, or similar fiscal agency).

(c) The holdings of other official institutions or other banks within its territories may, in any particular case, be deemed by the Fund, after consultation with the member, to be official holdings to the extent that they are substantially in excess of working balances; provided that for the purpose of determining whether, in a particular case, holdings are in excess of working balances, there shall be deducted from such holdings amounts of currency due to official institutions and banks in the territories of members or non-members specified under (d) below.

(d) A member's holdings of convertible currencies means its holdings of the currencies of other members which are not availing themselves of the transitional arrangements under Article XIV, Section 2, together with its holdings of the currencies of such non-members as the Fund may from time to time specify. The term currency for this purpose includes without limitation coins, paper money, bank balances, bank acceptances, and government obligations issued with a maturity not exceeding twelve months.

(e) A member's monetary reserves shall be calculated by deducting from its central holdings the currency liabilities to the Treasuries, central banks, stabilization funds, or similar fiscal agencies of other members or non-members specified under (d) above, together with similar liabilities to other official institutions and other banks in the territories of members, or non-members specified under (d) above. To these net holdings shall be added the sums deemed to be official holdings of other official institutions and other banks under (c) above.

(f) The Fund's holdings of the currency of a member shall include any securities accepted by the Fund under Article III, Section 5.

(g) The Fund, after consultation with a member which is availing itself of the transitional arrangements under Article XIV, Section 2, may deem holdings of the currency of that member which carry specified rights of conversion into another currency or into gold to be holdings of convertible currency for the purpose of the calculation of monetary reserves.

(h) For the purpose of calculating gold subscriptions under Article III, Section 3, a member's net official holdings of gold and United States

dollars shall consist of its official holdings of gold and United States currency after deducting central holdings of its currency by other countries and holdings of its currency by other official institutions and other banks if these holdings carry specified rights of conversion into gold or United States currency.

(i) Payments for current transactions means payments which are not for the purpose of transferring capital, and includes, without limitation:

- (1) All payments due in connection with foreign trade, other current business, including services, and normal short-term banking and credit facilities;
- (2) Payments due as interest on loans and as net income from other investments;
- (3) Payments of moderate amount for amortization of loans or for depreciation of direct investments;
- (4) Moderate remittances for family living expenses.

The Fund may, after consultation with the members concerned, determine whether certain specific transactions are to be considered current transactions or capital transactions.

#### ARTICLE XX

#### FINAL PROVISIONS

##### Section 1. Entry into force

This Agreement shall enter into force when it has been signed on behalf of governments having sixty-five percent of the total of the quotas set forth in Schedule A and when the instruments referred to in Section 2 (a) of this Article have been deposited on their behalf, but in no event shall this Agreement enter into force before May 1, 1945.

##### Section 2. Signature

(a) Each government on whose behalf this Agreement is signed shall deposit with the Government of the United States of America an instrument setting forth that it has accepted this Agreement in accordance with its law and has taken all steps necessary to enable it to carry out all of its obligations under this Agreement.

(b) Each government shall become a member of the Fund as from the date of the deposit on its behalf of the instrument referred to in (a) above, except that no government shall become a member before this Agreement enters into force under Section 1 of this Article.

(c) The Government of the United States of America shall inform the governments of all countries whose names are set forth in Schedule A, and all governments whose membership is approved in accordance with Article II, Section 2, of all signatures of this Agreement and of the deposit of all instruments referred to in (a) above.

(d) At the time this Agreement is signed on its behalf, each government shall transmit to the Government of the United States of America one one-hundredth of one percent of its total subscription in gold or United States dollars for the purpose of meeting administrative expenses of the Fund. The Government of the United States of America shall hold such funds in a special deposit account and shall transmit them to the Board of Governors of the Fund when the initial meeting has been called under Section 3 of this Article. If this Agreement has not come into force by December 31, 1945, the Government of the United States of America shall return such funds to the governments that transmitted them.

(e) This Agreement shall remain open for signature at Washington on behalf of the governments of the countries whose names are set forth in Schedule A until December 31, 1945.

(f) After December 31, 1945, this Agreement shall be open for signature on behalf of the government of any country whose membership has been approved in accordance with Article II, Section 2.

"REPLANTING WORLD TRADE." Bishop in the *St. Louis Star Times* comments on the merits of the Bretton Woods arrangements, which congress accepted in a bill approved on July 20, 1945

(g) By their signature of this Agreement, all governments accept it both on their own behalf and in respect of all their colonies, overseas territories, all territories under their protection, suzerainty, or authority and all territories in respect of which they exercise a mandate.

(h) In the case of governments whose metropolitan territories have been under enemy occupation, the deposit of the instrument referred to in (a) above may be delayed until one hundred eighty days after the date on which these territories have been liberated. If, however, it is not deposited by any such government before the expiration of this period the signature affixed on behalf of that government shall become void and the portion of its subscription paid under (d) above shall be returned to it.

(i) Paragraphs (d) and (h) shall come into force with regard to each signatory government as from the date of its signature.

##### Section 3. Inauguration of the Fund

(a) As soon as this Agreement enters into force under Section 1 of this Article, each member shall appoint a governor and the member having the largest quota shall call the first meeting of the Board of Governors.

(b) At the first meeting of the Board of Governors, arrangements shall be made for the selection of provisional executive directors. The governments of the five countries for which the largest quotas are set forth in Schedule A shall appoint provisional executive directors. If one or more of such governments have not become members, the executive directorships they would be entitled to fill shall remain vacant until they become members, or until January 1, 1946, whichever is the earlier. Seven provisional executive directors shall be elected in accordance with the provisions of Schedule C and shall remain in office until the date of the first regular election of executive directors which shall be held as soon as practicable after January 1, 1946.

(c) The Board of Governors may delegate to the provisional executive directors any powers except those which may not be delegated to the Executive Directors.

##### Section 4. Initial determination of par values

(a) When the Fund is of the opinion that it will shortly be in a position to begin exchange transactions, it shall so notify the members and shall request each member to communicate within thirty days the par value of its currency based on the rates of exchange prevailing on the sixtieth day before the entry into force of this Agreement. No member whose metropolitan territory has been occupied by the enemy shall be required to make such a communication while that territory is a theater of major hostilities or for such period thereafter as the Fund may determine. When such a member communicates the par value of its currency the provisions of (d) below shall apply.

(b) The par value communicated by a member whose metropolitan territory has not been occupied by the enemy shall be the par value of that member's currency for the purposes of this Agreement unless, within ninety days after the request referred to in (a) above has been received, (i) the member notifies the Fund that it regards the par value as unsatisfactory, or (ii) the Fund notifies the member that in its opinion the par value cannot be maintained without causing recourse to the Fund on the part of that member or others on a scale prejudicial to the Fund and to members. When notification is given under (i) or (ii) above, the Fund and the member shall, within a period determined by the Fund in the light of all relevant circumstances, agree upon a suitable par value for that currency. If the Fund and the member do not agree within the period so determined, the member shall be deemed to have withdrawn from the Fund on the date when the period expires.

(c) When the par value of a member's currency has been established under (b) above, either by the expiration of ninety days without notification, or by agreement after notification, the member shall be eligible to buy from the Fund the currencies of other members to the full extent permitted in this Agreement, provided that the Fund has begun exchange transactions.

(d) In the case of a member whose metropolitan territory has been occupied by the enemy, the provisions of (b) above shall apply, subject to the following modifications:

(i) The period of ninety days shall be extended so as to end on a date to be fixed by agreement between the Fund and the member.

(ii) Within the extended period the member may, if the Fund has begun exchange transactions, buy from the Fund with its currency the currencies of other members, but only under such conditions and in such amounts as may be prescribed by the Fund.

(iii) At any time before the date fixed under (i) above, changes may be made by agreement with the Fund in the par value communicated under (a) above.

(e) If a member whose metropolitan territory has been occupied by the enemy adopts a new monetary unit before the date to be fixed under (d) (i) above, the par value fixed by that member for the new unit shall be communicated to the Fund and the provisions of (d) above shall apply.

(f) Changes in par values agreed with the Fund under this Section shall not be taken into account in determining whether a proposed change falls within (i), (ii), or (iii) of Article IV, Section 5 (c).

(g) A member communicating to the Fund a par value for the currency of its metropolitan territory shall simultaneously communicate a value, in terms of that currency, for each separate currency, where such exists, in the territories in respect of which it has accepted this Agreement under Section 2 (g) of this Article, but no member shall be required to make a communication for the separate currency of a territory which has been occupied by the enemy while that territory is a theater of major hostilities or for such period thereafter as the Fund may determine. On the basis of the par value so communicated, the Fund shall compute the par value of each separate currency. A communication or notification to the Fund under (a), (b) or (d) above regarding the par value of a currency, shall also be deemed, unless the contrary is stated, to be a communication or notification regarding the par value of all the separate currencies referred to above. Any member may, however, make a communication or notification relating to the metropolitan or any of the separate currencies alone. If the member does so, the provisions of the preceding paragraphs (including (d) above, if a territory where a sepa-

rate currency exists has been occupied by the enemy) shall apply to each of these currencies separately.

(h) The Fund shall begin exchange transactions at such date as it may determine after members having sixty-five percent of the total of the quotas set forth in Schedule A have become eligible, in accordance with the preceding paragraphs of this Section, to purchase the currencies of other members, but in no event until after major hostilities in Europe have ceased.

(i) The Fund may postpone exchange transactions with any member if its circumstances are such that, in the opinion of the Fund, they would lead to use of the resources of the Fund in a manner contrary to the purposes of this Agreement or prejudicial to the Fund or the members.

(j) The par values of the currencies of governments which indicate their desire to become members after December 31, 1945, shall be determined in accordance with the provisions of Article II, Section 2.

DONE at Washington, in a single copy which shall remain deposited in the archives of the Government of the United States of America, which shall transmit certified copies to all governments whose names are set forth in Schedule A and to all governments whose membership is approved in accordance with Article II, Section 2.

Guatemala	5	Venezuela	15
Haiti	5	Yugoslavia	60
Honduras	2.5		
Iceland	1		
India	400		

\*The quota of Denmark shall be determined by the Fund after the Danish Government has declared its readiness to sign this Agreement but before signature takes place.

## SCHEDULE B

### PROVISIONS WITH RESPECT TO REPURCHASE BY A MEMBER OF ITS CURRENCY HELD BY THE FUND

1. In determining the extent to which repurchase of a member's currency from the Fund under Article V, Section 7 (b) shall be made with each type of monetary reserve, that is, with gold and with each convertible currency, the following rule, subject to 2 below, shall apply:

- If the member's monetary reserves have not increased during the year, the amount payable to the Fund shall be distributed among all types of reserves in proportion to the member's holdings thereof at the end of the year.
- If the member's monetary reserves have increased during the year, a part of the amount payable to the Fund equal to one-half of the increase shall be distributed among those types of reserves which have increased in proportion to the amount by which each of them has increased. The remainder of the sum payable to the Fund shall be distributed among all types of reserves in proportion to the member's remaining holdings thereof.
- If after all the repurchases required under Article V, Section 7 (b), had been made, the result would exceed any of the limits specified in Article V, Section 7 (c), the Fund shall require such repurchases to be made by the members proportionately in such manner that the limits will not be exceeded.

2. The Fund shall not acquire the currency of any non-member under Article V, Section 7 (b) and (c).

3. In calculating monetary reserves and the increase in monetary reserves during any year for the purpose of Article V, Section 7 (b) and (c), no account shall be taken, unless deductions have otherwise been made by the member for such holdings, of any increase in those monetary reserves which is due to currency previously inconvertible having become convertible during the year; or to holdings which are the proceeds of a long-term or medium-term loan contracted during the year; or to holdings which have been transferred or set aside for repayment of a loan during the subsequent year.

4. In the case of members whose metropolitan territories have been occupied by the enemy, gold newly produced during the five years after the entry into force of this Agreement from mines located within their metropolitan territories shall not be included in computations of their monetary reserves or of increases in their monetary reserves.

## SCHEDULE C

### ELECTION OF EXECUTIVE DIRECTORS

1. The election of the elective executive directors shall be by ballot of the governors eligible to vote under Article XII, Section 3 (b) (iii) and (iv).

2. In balloting for the five directors to be elected under Article XII, Section 3 (b) (iii), each of the governors eligible to vote shall cast for one person all of the votes to which he is entitled under Article XII, Section 5 (a). The five persons receiving the greatest number of votes shall be directors, provided that no person who received less than nineteen percent of the total number of votes that can be cast (eligible votes) shall be considered elected.

3. When five persons are not elected in the first ballot, a second ballot shall be held in which the person who received the lowest number of votes shall be ineligible for election and in which there shall vote only (a) those governors who voted in the first ballot for a person not elected, and (b) those governors whose votes for a person elected are deemed under 4 below to have raised the votes cast for that person above twenty percent of the eligible votes.

4. In determining whether the votes cast by a governor are to be deemed to have raised the total of any person above twenty percent of the eligible votes the twenty percent shall be deemed to include, first, the votes of the governor casting the largest number of votes for such person, then the votes of the governor casting the next largest number, and so on until twenty percent is reached.

5. Any governor part of whose votes must be counted in order to raise the total of any person above nineteen percent shall be considered as casting all of his votes for such person even if the total votes for such person thereby exceed twenty percent.

6. If, after the second ballot, five persons have not been elected, further ballots shall be held on the same principles until five persons have been elected, provided that after four persons are elected, the fifth may be elected by a simple majority of the remaining votes and shall be deemed to have been elected by all such votes.

7. The directors to be elected by the American Republics under Article XII, Section 3 (b) (iv) shall be elected as follows:

- Each of the directors shall be elected separately.
- In the election of the first director, each governor representing an American Republic eligible to participate in the election shall cast for one person all the votes to which he is entitled. The person receiving the largest number of votes shall be elected provided that he has received not less than forty-five percent of the total votes.
- If no person is elected on the first ballot, further ballots shall be held, in each of which the person receiving the lowest number of votes shall be eliminated, until one person receives a number of votes sufficient for election under (b) above.
- Governors whose votes contributed to the election of the first director shall take no part in the election of the second director.
- Persons who did not succeed in the first election shall not be ineligible for election as the second director.
- A majority of the votes which can be cast shall be required for election of the second director. If at the first ballot no person receives a majority, further ballots shall be held in each of which the person receiving the lowest number of votes shall be eliminated, until some person obtains a majority.
- The second director shall be deemed to have been elected by all the votes which could have been cast in the ballot securing his election.

## SCHEDULE D

### SETTLEMENT OF ACCOUNTS WITH MEMBERS WITHDRAWING

1. The Fund shall be obligated to pay to a member withdrawing an amount equal to its quota, plus any other amounts due to it from the Fund, less any amounts due to the Fund, including charges accruing after the date of its withdrawal; but no payment shall be made until six months after the date of withdrawal. Payments shall be made in the currency of the withdrawing member.

2. If the Fund's holdings of the currency of the withdrawing member are not sufficient to pay the net amount due from the Fund, the balance shall be paid in gold, or in such other manner as may be agreed. If the Fund and the withdrawing member do not reach agreement within six months of the date of withdrawal, the currency in question held by the Fund shall be paid forthwith to the withdrawing member. Any balance due shall be paid in ten half-yearly installments during the ensuing five years. Each such installment shall be paid, at the option of the Fund, either in the currency of the withdrawing member acquired after its withdrawal or by the delivery of gold.

3. If the Fund fails to meet any installment which is due in accordance with the preceding paragraphs, the withdrawing member shall be entitled to require the Fund to pay the installment in any currency held by the Fund with the exception of any currency which has been declared scarce under Article VII, Section 3.

4. If the Fund's holdings of the currency of a withdrawing member exceed the amount due to it, and if agreement on the method of settling accounts is not reached within six months of the date of withdrawal, the former member shall be obligated to redeem such excess currency in gold or, at its option, in the currencies of members which at the time of redemption are convertible. Redemption shall be made at the parity existing at the time of withdrawal from the Fund. The withdrawing member shall complete redemption within five years of the date of withdrawal, or within such longer period as may be fixed by the Fund, but shall not be required to redeem in any half-yearly period more than one-tenth of the Fund's excess holdings of its currency at the date of withdrawal plus further

acquisitions of the currency during such half-yearly period. If the withdrawing member does not fulfill this obligation, the Fund may in an orderly manner liquidate in any market the amount of currency which should have been redeemed.

5. Any member desiring to obtain the currency of a member which has withdrawn shall acquire it by purchase from the Fund, to the extent that such member has access to the resources of the Fund and that such currency is available under 4 above.

6. The withdrawing member guarantees the unrestricted use at all times of the currency disposed of under 4 and 5 above for the purchase of goods or for payment of sums due to it or to persons within its territories. It shall compensate the Fund for any loss resulting from the difference between the par value of its currency on the date of withdrawal and the value realized by the Fund on disposal under 4 and 5 above.

7. In the event of the Fund going into liquidation under Article XVI, Section 2, within six months of the date on which the member withdraws, the account between the Fund and that government shall be settled in accordance with Article XVI, Section 2, and Schedule E.

#### SCHEDULE E

##### ADMINISTRATION OF LIQUIDATION

1. In the event of liquidation the liabilities of the Fund other than the repayment of subscriptions shall have priority in the distribution of the assets of the Fund. In meeting each such liability the Fund shall use its assets in the following order:

- (a) the currency in which the liability is payable;
- (b) gold;
- (c) all other currencies in proportion, so far as may be practicable, to the quotas of the members.

2. After the discharge of the Fund's liabilities in accordance with 1 above, the balance of the Fund's assets shall be distributed and apportioned as follows:

- (a) The Fund shall distribute its holdings of gold among the members whose currencies are held by the Fund in amounts less than their quotas. These members shall share the gold so distributed in the proportions of the amounts by which their quotas exceed the Fund's holdings of their currencies.
- (b) The Fund shall distribute to each member one-half the Fund's holdings of its currency but such distribution shall not exceed fifty percent of its quota.
- (c) The Fund shall apportion the remainder of its holdings of each currency among all the members in proportion to the amounts due to each member after the distributions under (a) and (b) above.

3. Each member shall redeem the holdings of its currency apportioned to other members under 2 (c) above, and shall agree with the Fund within three months after a decision to liquidate upon an orderly procedure for such redemption.

4. If a member has not reached agreement with the Fund within the three-month period referred to in 3 above, the Fund shall use the currencies of other members apportioned to that member under 2 (c) above to redeem the currency of that member apportioned to other members. Each currency apportioned to a member which has not reached agreement shall be used, so far as possible, to redeem its currency apportioned to the members which have made agreements with the Fund under 3 above.

5. If a member has reached agreement with the Fund in accordance with 3 above, the Fund shall use the currencies of other members apportioned to that member under 2 (c) above to redeem the currency of that member apportioned to other members which have made agreements with the Fund under 3 above. Each amount so redeemed shall be redeemed in the currency of the member to which it was apportioned.

6. After carrying out the preceding paragraphs, the Fund shall pay to each member the remaining currencies held for its account.

7. Each member whose currency has been distributed to other members under 6 above shall redeem such currency in gold or, at its option, in the currency of the member requesting redemption, or in such other manner as may be agreed between them. If the members involved do not otherwise agree, the member obligated to redeem shall complete redemption within five years of the date of distribution, but shall not be required to redeem in any half-yearly period more than one-tenth of the amount distributed to each other member. If the member does not fulfill this obligation, the amount of currency which should have been redeemed may be liquidated in an orderly manner in any market.

8. Each member whose currency has been distributed to other members under 6 above guarantees the unrestricted use of such currency at all times for the purchase of goods or for payment of sums due to it or to persons in its territories. Each member so obligated agrees to compensate other members for any loss resulting from the difference between the par value of its currency on the date of the decision to liquidate the Fund and the value realized by such members on disposal of its currency.

#### Articles of Agreement of the International Bank for Reconstruction and Development

The Governments on whose behalf the present Agreement is signed agree as follows:

##### INTRODUCTORY ARTICLE

The International Bank for Reconstruction and Development is established and shall operate in accordance with the following provisions:

#### ARTICLE I

##### PURPOSES

The purposes of the Bank are:

- (i) To assist in the reconstruction and development of territories of members by facilitating the investment of capital for productive purposes, including the restoration of economies destroyed or disrupted by war, the reconversion of productive facilities to peacetime needs and the encouragement of the development of productive facilities and resources in less developed countries.
- (ii) To promote private foreign investment by means of guarantees or participations in loans and other investments made by private investors; and when private capital is not available on reasonable terms, to supplement private investment by providing, on suitable conditions, finance for productive purposes out of its own capital, funds raised by it and its other resources.
- (iii) To promote the long-range balanced growth of international trade and the maintenance of equilibrium in balances of payments by encouraging international investment for the development of the productive resources of members, thereby assisting in raising productivity, the standard of living and conditions of labor in their territories.
- (iv) To arrange the loans made or guaranteed by it in relation to international loans through other channels so that the more useful and urgent projects, large and small alike, will be dealt with first.
- (v) To conduct its operations with due regard to the effect of international investment on business conditions in the territories of members and, in the immediate post-war years, to assist in bringing about a smooth transition from a wartime to a peacetime economy.

The Bank shall be guided in all its decisions by the purposes set forth above.

#### ARTICLE II

##### MEMBERSHIP IN AND CAPITAL OF THE BANK

###### Section 1. Membership

(a) The original members of the Bank shall be those members of the International Monetary Fund which accept membership in the Bank before the date specified in Article XI, Section 2 (c).

(b) Membership shall be open to other members of the Fund, at such times and in accordance with such terms as may be prescribed by the Bank.

###### Section 2. Authorized capital

(a) The authorized capital stock of the Bank shall be \$10,000,000,000, in terms of United States dollars of the weight and fineness in effect on July 1, 1944. The capital stock shall be divided into 100,000 shares having a par value of \$100,000 each, which shall be available for subscription only by members.

(b) The capital stock may be increased when the Bank deems it advisable by a three-fourths majority of the total voting power.

###### Section 3. Subscription of shares

(a) Each member shall subscribe shares of the capital stock of the Bank. The minimum number of shares to be subscribed by the original members shall be those set forth in Schedule A. The minimum number of shares to be subscribed by other members shall be determined by the Bank, which shall reserve a sufficient portion of its capital stock for subscription by such members.

(b) The Bank shall prescribe rules laying down the conditions under which members may subscribe shares of the authorized capital stock of the Bank in addition to their minimum subscriptions.

(c) If the authorized capital stock of the Bank is increased, each member shall have a reasonable opportunity to subscribe, under such conditions as the Bank shall decide, a proportion of the increase of stock equivalent to the proportion which its stock theretofore subscribed bears to the total capital stock of the Bank, but no member shall be obligated to subscribe any part of the increased capital.

###### Section 4. Issue price of shares

Shares included in the minimum subscriptions of original members shall be issued at par. Other shares shall be issued at par unless the Bank by a majority of the total voting power decides in special circumstances to issue them on other terms.

###### Section 5. Division and calls of subscribed capital

The subscription of each member shall be divided into two parts as follows:

- (i) twenty percent shall be paid or subject to call under Section 7 (i) of this Article as needed by the Bank for its operations;
- (ii) the remaining eighty percent shall be subject to call by the Bank only when required to meet obligations of the Bank created under Article IV, Sections 1 (a) (ii) and (iii).

Calls on unpaid subscriptions shall be uniform on all shares.

###### Section 6. Limitation on liability

Liability on shares shall be limited to the unpaid portion of the issue price of the shares.

###### Section 7. Method of payment of subscriptions for shares

Payment of subscriptions for shares shall be made in gold or United States dollars and in the currencies of the members as follows:

- (i) under Section 5 (i) of this Article, two percent of the price of each share shall be payable in gold or United States dollars, and, when calls are made, the remaining eighteen percent shall be paid in the currency of the member;
- (ii) when a call is made under Section 5 (ii) of this Article, payment may be made at the option of the member either in gold, in United States dollars or in the currency required to discharge the obligations of the Bank for the purpose for which the call is made;

- (iii) when a member makes payments in any currency under (i) and (ii) above, such payments shall be made in amounts equal in value to the member's liability under the call. This liability shall be a proportionate part of the subscribed capital stock of the Bank as authorized and defined in Section 2 of this Article.

## Section 8. *Time of payment of subscriptions*

- (a) The two percent payable on each share in gold or United States dollars under Section 7 (i) of this Article, shall be paid within sixty days of the date on which the Bank begins operations, provided that
  - (i) any original member of the Bank whose metropolitan territory has suffered from enemy occupation or hostilities during the present war shall be granted the right to postpone payment of one-half percent until five years after that date;
  - (ii) an original member who cannot make such a payment because it has not recovered possession of its gold reserves which are still seized or immobilized as a result of the war may postpone all payment until such date as the Bank shall decide.
- (b) The remainder of the price of each share payable under Section 7 (i) of this Article shall be paid as and when called by the Bank, provided that
  - (i) the Bank shall, within one year of its beginning operations, call not less than eight percent of the price of the share in addition to the payment of two percent referred to in (a) above;
  - (ii) not more than five percent of the price of the share shall be called in any period of three months.

## Section 9. *Maintenance of value of certain currency holdings of the Bank*

- (a) Whenever (i) the par value of a member's currency is reduced, or (ii) the foreign exchange value of a member's currency has, in the opinion of the Bank, depreciated to a significant extent within that member's territories, the member shall pay to the Bank within a reasonable time an additional amount of its own currency sufficient to maintain the value, as of the time of initial subscription, of the amount of the currency of such member which is held by the Bank and derived from currency originally paid in to the Bank by the member under Article II, Section 7 (i), from currency referred to in Article IV, Section 2 (b), or from any additional currency furnished under the provisions of the present paragraph, and which has not been repurchased by the member for gold or for the currency of any member which is acceptable to the Bank.
- (b) Whenever the par value of a member's currency is increased, the Bank shall return to such member within a reasonable time an amount of that member's currency equal to the increase in the value of the amount of such currency described in (a) above.
- (c) The provisions of the preceding paragraphs may be waived by the Bank when a uniform proportionate change in the par values of the currencies of all its members is made by the International Monetary Fund.

## Section 10. *Restriction on disposal of shares*

Shares shall not be pledged or encumbered in any manner whatever and they shall be transferable only to the Bank.

## ARTICLE III

### GENERAL PROVISIONS RELATING TO LOANS AND GUARANTEES

#### Section 1. *Use of resources*

- (a) The resources and the facilities of the Bank shall be used exclusively for the benefit of members with equitable consideration to projects for development and projects for reconstruction alike.
- (b) For the purpose of facilitating the restoration and reconstruction of the economy of members whose metropolitan territories have suffered great devastation from enemy occupation or hostilities, the Bank, in determining the conditions and terms of loans made to such members, shall pay special regard to lightening the financial burden and expediting the completion of such restoration and reconstruction.

#### Section 2. *Dealings between members and the Bank*

Each member shall deal with the Bank only through its Treasury, central bank, stabilization fund or other similar fiscal agency, and the Bank shall deal with members only by or through the same agencies.

#### Section 3. *Limitations on guarantees and borrowings of the Bank*

The total amount outstanding of guarantees, participations in loans and direct loans made by the Bank shall not be increased at any time, if by such increase the total would exceed one hundred percent of the unimpaired subscribed capital, reserves and surplus of the Bank.

#### Section 4. *Conditions on which the Bank may guarantee or make loans*

The Bank may guarantee, participate in, or make loans to any member or any political sub-division thereof and any business, industrial, and agricultural enterprise in the territories of a member, subject to the following conditions:

- (i) When the member in whose territories the project is located is not itself the borrower, the member or the central bank or some comparable agency of the member which is acceptable to the Bank, fully guarantees the repayment of the principal and the payment of interest and other charges on the loan.
- (ii) The Bank is satisfied that in the prevailing market conditions the borrower would be unable otherwise to obtain the loan under conditions which in the opinion of the Bank are reasonable for the borrower.
- (iii) A competent committee, as provided for in Article V, Section 7, has submitted a written report recommending the project after a careful study of the merits of the proposal.
- (iv) In the opinion of the Bank the rate of interest and other charges are reasonable and such rate, charges and the schedule for repayment of principal are appropriate to the project.
- (v) In making or guaranteeing a loan, the Bank shall pay due regard to the prospects that the borrower, and, if the borrower is not a member, that the guarantor, will be in position to meet its obligations under the loan; and the Bank shall act prudently in the interests both of the particular member in whose territories the project is located and of the members as a whole.

- (vi) In guaranteeing a loan made by other investors, the Bank receives suitable compensation for its risk.
- (vii) Loans made or guaranteed by the Bank shall, except in special circumstances, be for the purpose of specific projects of reconstruction or development.

## Section 5. *Use of loans guaranteed, participated in or made by the Bank*

- (a) The Bank shall impose no conditions that the proceeds of a loan shall be spent in the territories of any particular member or members.
- (b) The Bank shall make arrangements to ensure that the proceeds of any loan are used only for the purposes for which the loan was granted, with due attention to considerations of economy and efficiency and without regard to political or other non-economic influences or considerations.
- (c) In the case of loans made by the Bank, it shall open an account in the name of the borrower and the amount of the loan shall be credited to this account in the currency or currencies in which the loan is made. The borrower shall be permitted by the Bank to draw on this account only to meet expenses in connection with the project as they are actually incurred.

## ARTICLE IV

### OPERATIONS

#### Section 1. *Methods of making or facilitating loans*

- (a) The Bank may make or facilitate loans which satisfy the general conditions of Article III in any of the following ways:
  - (i) By making or participating in direct loans out of its own funds corresponding to its unimpaired paid-up capital and surplus and, subject to Section 6 of this Article, to its reserves.
  - (ii) By making or participating in direct loans out of funds raised in the market of a member, or otherwise borrowed by the Bank.
  - (iii) By guaranteeing in whole or in part loans made by private investors through the usual investment channels.
- (b) The Bank may borrow funds under (a) (ii) above or guarantee loans under (a) (iii) above only with the approval of the member in whose markets the funds are raised and the member in whose currency the loan is denominated, and only if those members agree that the proceeds may be exchanged for the currency of any other member without restriction.

#### Section 2. *Availability and transferability of currencies*

- (a) Currencies paid into the Bank under Article II, Section 7 (i), shall be loaned only with the approval in each case of the member whose currency is involved; provided, however, that if necessary, after the Bank's subscribed capital has been entirely called, such currencies shall, without restriction by the members whose currencies are offered, be used or exchanged for the currencies required to meet contractual payments of interest, other charges or amortization on the Bank's own borrowings, or to meet the Bank's liabilities with respect to such contractual payments on loans guaranteed by the Bank.
- (b) Currencies received by the Bank from borrowers or guarantors in payment on account of principal of direct loans made with currencies referred to in (a) above shall be exchanged for the currencies of other members or reloaned only with the approval in each case of the members whose currencies are involved; provided, however, that if necessary, after the Bank's subscribed capital has been entirely called, such currencies shall, without restriction by the members whose currencies are offered, be used or exchanged for the currencies required to meet contractual payments of interest, other charges or amortization on the Bank's own borrowings, or to meet the Bank's liabilities with respect to such contractual payments on loans guaranteed by the Bank.
- (c) Currencies received by the Bank from borrowers or guarantors in payment on account of principal of direct loans made by the Bank under Section 1 (a) (ii) of this Article, shall be held and used, without restriction by the members, to make amortization payments, or to anticipate payment of or repurchase part or all of the Bank's own obligations.
- (d) All other currencies available to the Bank, including those raised in the market or otherwise borrowed under Section 1 (a) (ii) of this Article, those obtained by the sale of gold, those received as payments of interest and other charges for direct loans made under Sections 1 (a) (i) and (ii), and those received as payments of commissions and other charges under Section 1 (a) (iii), shall be used or exchanged for other currencies or gold required in the operations of the Bank without restriction by the members whose currencies are offered.
- (e) Currencies raised in the markets of members by borrowers on loans guaranteed by the Bank under Section 1 (a) (iii) of this Article, shall also be used or exchanged for other currencies without restriction by such members.

#### Section 3. *Provision of currencies for direct loans*

- The following provisions shall apply to direct loans under Sections 1 (a) (i) and (ii) of this Article:
  - (a) The Bank shall furnish the borrower with such currencies of members, other than the member in whose territories the project is located, as are needed by the borrower for expenditures to be made in the territories of such other members to carry out the purposes of the loan.
  - (b) The Bank may, in exceptional circumstances when local currency required for the purposes of the loan cannot be raised by the borrower on reasonable terms, provide the borrower as part of the loan with an appropriate amount of that currency.
  - (c) The Bank, if the project gives rise indirectly to an increased need for foreign exchange by the member in whose territories the project is located, may in exceptional circumstances provide the borrower as part of the loan with an appropriate amount of gold or foreign exchange not in excess of the borrower's local expenditure in connection with the purposes of the loan.
  - (d) The Bank may, in exceptional circumstances, at the request of a member in whose territories a portion of the loan is spent, repurchase with gold or foreign exchange a part of that member's currency thus spent but in no case shall the part so repurchased exceed the amount by which the expenditure of the loan in those territories gives rise to an increased need for foreign exchange.

Section 4. *Payment provisions for direct loans*

Loan contracts under Section 1 (a) (i) or (ii) of this Article shall be made in accordance with the following payment provisions:

(a) The terms and conditions of interest and amortization payments, maturity and dates of payment of each loan shall be determined by the Bank. The Bank shall also determine the rate and any other terms and conditions of commission to be charged in connection with such loan.

In the case of loans made under Section 1 (a) (ii) of this Article during the first ten years of the Bank's operations, this rate of commission shall be not less than one percent per annum and not greater than one and one-half percent per annum, and shall be charged on the outstanding portion of any such loan. At the end of this period of ten years, the rate of commission may be reduced by the Bank with respect both to the outstanding portions of loans already made and to future loans, if the reserves accumulated by the Bank under Section 6 of this Article and out of other earnings are considered by it sufficient to justify a reduction. In the case of future loans the Bank shall also have discretion to increase the rate of commission beyond the above limit, if experience indicates that an increase is advisable.

(b) All loan contracts shall stipulate the currency or currencies in which payments under the contract shall be made to the Bank. At the option of the borrower, however, such payments may be made in gold, or subject to the agreement of the Bank, in the currency of a member other than that prescribed in the contract.

(i) In the case of loans made under Section 1 (a) (i) of this Article, the loan contracts shall provide that payments to the Bank of interest, other charges and amortization shall be made in the currency loaned, unless the member whose currency is loaned agrees that such payments shall be made in some other specified currency or currencies. These payments, subject to the provisions of Article II, Section 9 (c), shall be equivalent to the value of such contractual payments at the time the loans were made, in terms of a currency specified for the purpose by the Bank by a three-fourths majority of the total voting power.

(ii) In the case of loans made under Section 1 (a) (ii) of this Article, the total amount outstanding and payable to the Bank in any one currency shall at no time exceed the total amount of the outstanding borrowings made by the Bank under Section 1 (a) (ii) and payable in the same currency.

(c) If a member suffers from an acute exchange stringency, so that the service of any loan contracted by that member or guaranteed by it or by one of its agencies cannot be provided in the stipulated manner, the member concerned may apply to the Bank for a relaxation of the conditions of payment. If the Bank is satisfied that some relaxation is in the interests of the particular member and of the operations of the Bank and of its members as a whole, it may take action under either, or both, of the following paragraphs with respect to the whole, or part, of the annual service:

- (i) The Bank may, in its discretion, make arrangements with the member concerned to accept service payments on the loan in the member's currency for periods not to exceed three years upon appropriate terms regarding the use of such currency and the maintenance of its foreign exchange value; and for the repurchase of such currency on appropriate terms.
- (ii) The Bank may modify the terms of amortization or extend the life of the loan, or both.

Section 5. *Guarantees*

(a) In guaranteeing a loan placed through the usual investment channels, the Bank shall charge a guarantee commission payable periodically on the amount of the loan outstanding at a rate determined by the Bank. During the first ten years of the Bank's operations, this rate shall be not less than one percent per annum and not greater than one and one-half percent per annum. At the end of this period of ten years, the rate of commission may be reduced by the Bank with respect both to the outstanding portions of loans already guaranteed and to future loans if the reserves accumulated by the Bank under Section 6 of this Article and out of other earnings are considered by it sufficient to justify a reduction. In the case of future loans the Bank shall also have discretion to increase the rate of commission beyond the above limit, if experience indicates that an increase is advisable.

(b) Guarantee commissions shall be paid directly to the Bank by the borrower.

(c) Guarantees by the Bank shall provide that the Bank may terminate its liability with respect to interest if, upon default by the borrower and by the guarantor, if any, the Bank offers to purchase, at par and interest accrued to a date designated in the offer, the bonds or other obligations guaranteed.

(d) The Bank shall have power to determine any other terms and conditions of the guarantee.

Section 6. *Special reserve*

The amount of commissions received by the Bank under Sections 4 and 5 of this Article shall be set aside as a special reserve, which shall be kept available for meeting liabilities of the Bank in accordance with Section 7 of this Article. The special reserve shall be held in such liquid form, permitted under this Agreement, as the Executive Directors may decide.

Section 7. *Methods of meeting liabilities of the Bank in case of defaults*

In cases of default on loans made, participated in, or guaranteed by the Bank:

(a) The Bank shall make such arrangements as may be feasible to adjust the obligations under the loans, including arrangements under or analogous to those provided in Section 4 (c) of this Article.

(b) The payments in discharge of the Bank's liabilities on borrowings or guarantees under Sections 1 (a) (ii) and (iii) of this Article shall be charged:

- (i) first, against the special reserve provided in Section 6 of this Article.
- (ii) then, to the extent necessary and at the discretion of the Bank,

against the other reserves, surplus and capital available to the Bank.

(c) Whenever necessary to meet contractual payments of interest, other charges or amortization on the Bank's own borrowings, or to meet the Bank's liabilities with respect to similar payments on loans guaranteed by it, the Bank may call an appropriate amount of the unpaid subscriptions of members in accordance with Article II, Sections 5 and 7. Moreover, if it believes that a default may be of long duration, the Bank may call an additional amount of such unpaid subscriptions not to exceed in any one year one percent of the total subscriptions of the members for the following purposes:

- (i) To redeem prior to maturity, or otherwise discharge its liability on, all or part of the outstanding principal of any loan guaranteed by it in respect of which the debtor is in default.
- (ii) To repurchase, or otherwise discharge its liability on, all or part of its own outstanding borrowings.

Section 8. *Miscellaneous operations*

In addition to the operations specified elsewhere in this Agreement, the Bank shall have the power:

- (i) To buy and sell securities it has issued and to buy and sell securities which it has guaranteed or in which it has invested, provided that the Bank shall obtain the approval of the member in whose territories the securities are to be bought or sold.
- (ii) To guarantee securities in which it has invested for the purpose of facilitating their sale.
- (iii) To borrow the currency of any member with the approval of that member.
- (iv) To buy and sell such other securities as the Directors by a three-fourths majority of the total voting power may deem proper for the investment of all or part of the special reserve under Section 6 of this Article.

In exercising the powers conferred by this Section, the Bank may deal with any person, partnership, association, corporation or other legal entity in the territories of any member.

Section 9. *Warning to be placed on securities*

Every security guaranteed or issued by the Bank shall bear on its face a conspicuous statement to the effect that it is not an obligation of any government unless expressly stated on the security.

Section 10. *Political activity prohibited*

The Bank and its officers shall not interfere in the political affairs of any member; nor shall they be influenced in their decisions by the political character of the member or members concerned. Only economic considerations shall be relevant to their decisions, and these considerations shall be weighed impartially in order to achieve the purposes stated in Article I.

## ARTICLE V

## ORGANIZATION AND MANAGEMENT

Section 1. *Structure of the Bank*

The Bank shall have a Board of Governors, Executive Directors, a President and such other officers and staff to perform such duties as the Bank may determine.

Section 2. *Board of Governors*

(a) All the powers of the Bank shall be vested in the Board of Governors consisting of one governor and one alternate appointed by each member in such manner as it may determine. Each governor and each alternate shall serve for five years, subject to the pleasure of the member appointing him, and may be reappointed. No alternate may vote except in the absence of his principal. The Board shall select one of the governors as Chairman.

(b) The Board of Governors may delegate to the Executive Directors authority to exercise any powers of the Board, except the power to:

- (i) Admit new members and determine the conditions of their admission;
- (ii) Increase or decrease the capital stock;
- (iii) Suspend a member;
- (iv) Decide appeals from interpretations of this Agreement given by the Executive Directors;
- (v) Make arrangements to cooperate with other international organizations (other than informal arrangements of a temporary and administrative character);
- (vi) Decide to suspend permanently the operations of the Bank and to distribute its assets;
- (vii) Determine the distribution of the net income of the Bank.

(c) The Board of Governors shall hold an annual meeting and such other meetings as may be provided for by the Board or called by the Executive Directors. Meetings of the Board shall be called by the Directors whenever requested by five members or by members having one-quarter of the total voting power.

(d) A quorum for any meeting of the Board of Governors shall be a majority of the Governors, exercising not less than two-thirds of the total voting power.

(e) The Board of Governors may by regulation establish a procedure whereby the Executive Directors, when they deem such action to be in the best interests of the Bank, may obtain a vote of the Governors on a specific question without calling a meeting of the Board.

(f) The Board of Governors, and the Executive Directors to the extent authorized, may adopt such rules and regulations as may be necessary or appropriate to conduct the business of the Bank.

(g) Governors and alternates shall serve as such without compensation from the Bank, but the Bank shall pay them reasonable expenses incurred in attending meetings.

(h) The Board of Governors shall determine the remuneration to be paid to the Executive Directors and the salary and terms of the contract of service of the President.

Section 3. *Voting*

(a) Each member shall have two hundred fifty votes plus one addi-

tional vote for each share of stock held.

(b) Except as otherwise specifically provided, all matters before the Bank shall be decided by a majority of the votes cast.

#### Section 4. *Executive Directors*

(a) The Executive Directors shall be responsible for the conduct of the general operations of the Bank, and for this purpose, shall exercise all the powers delegated to them by the Board of Governors.

(b) There shall be twelve Executive Directors, who need not be governors, and of whom:

- (i) five shall be appointed, one by each of the five members having the largest number of shares;
- (ii) seven shall be elected according to Schedule B by all the Governors other than those appointed by the five members referred to in (i) above.

For the purpose of this paragraph, "members" means governments of countries whose names are set forth in Schedule A, whether they are original members or become members in accordance with Article II, Section 1 (b). When governments of other countries become members, the Board of Governors may, by a four-fifths majority of the total voting power, increase the total number of directors by increasing the number of directors to be elected.

Executive directors shall be appointed or elected every two years.

(c) Each executive director shall appoint an alternate with full power to act for him when he is not present. When the executive directors appointing them are present, alternates may participate in meetings but shall not vote.

(d) Directors shall continue in office until their successors are appointed or elected. If the office of an elected director becomes vacant more than ninety days before the end of his term, another director shall be elected for the remainder of the term by the governors who elected the former director. A majority of the votes cast shall be required for election. While the office remains vacant, the alternate of the former director shall exercise his powers, except that of appointing an alternate.

(e) The Executive Directors shall function in continuous session at the principal office of the Bank and shall meet as often as the business of the Bank may require.

(f) A quorum for any meeting of the Executive Directors shall be a majority of the Directors, exercising not less than one-half of the total voting power.

(g) Each appointed director shall be entitled to cast the number of votes allotted under Section 3 of this Article to the member appointing him. Each elected director shall be entitled to cast the number of votes which counted toward his election. All the votes which a director is entitled to cast shall be cast as a unit.

(h) The Board of Governors shall adopt regulations under which a member not entitled to appoint a director under (b) above may send a representative to attend any meeting of the Executive Directors when a request made by, or a matter particularly affecting, that member is under consideration.

(i) The Executive Directors may appoint such committees as they deem advisable. Membership of such committees need not be limited to governors or directors or their alternates.

#### Section 5. *President and staff*

(a) The Executive Directors shall select a President who shall not be a governor or an executive director or an alternate for either. The President shall be Chairman of the Executive Directors, but shall have no vote except a deciding vote in case of an equal division. He may participate in meetings of the Board of Governors, but shall not vote at such meetings. The President shall cease to hold office when the Executive Directors so decide.

(b) The President shall be chief of the operating staff of the Bank and shall conduct, under the direction of the Executive Directors, the ordinary business of the Bank. Subject to the general control of the Executive Directors, he shall be responsible for the organization, appointment and dismissal of the officers and staff.

(c) The President, officers and staff of the Bank, in the discharge of their offices, owe their duty entirely to the Bank and to no other authority. Each member of the Bank shall respect the international character of this duty and shall refrain from all attempts to influence any of them in the discharge of their duties.

(d) In appointing the officers and staff the President shall, subject to the paramount importance of securing the highest standards of efficiency and of technical competence, pay due regard to the importance of recruiting personnel on as wide a geographical basis as possible.

#### Section 6. *Advisory Council*

(a) There shall be an Advisory Council of not less than seven persons selected by the Board of Governors including representatives of banking, commercial, industrial, labor, and agricultural interests, and with as wide a national representation as possible. In those fields where specialized international organizations exist, the members of the Council representative of those fields shall be selected in agreement with such organizations. The Council shall advise the Bank on matters of general policy. The Council shall meet annually and on such other occasions as the Bank may request.

(b) Councillors shall serve for two years and may be reappointed. They shall be paid their reasonable expenses incurred on behalf of the Bank.

#### Section 7. *Loan committees*

The committees required to report on loans under Article III, Section 4, shall be appointed by the Bank. Each such committee shall include an expert selected by the governor representing the member in whose territories the project is located and one or more members of the technical staff of the Bank.

#### Section 8. *Relationship to other international organizations*

(a) The Bank, within the terms of this Agreement, shall cooperate with any general international organization and with public international organizations having specialized responsibilities in related fields. Any

arrangements for such cooperation which would involve a modification of any provision of this Agreement may be effected only after amendment to this Agreement under Article VIII.

(b) In making decisions on applications for loans or guarantees relating to matters directly within the competence of any international organization of the types specified in the preceding paragraph and participated in primarily by members of the Bank, the Bank shall give consideration to the views and recommendations of such organization.

#### Section 9. *Location of offices*

(a) The principal office of the Bank shall be located in the territory of the member holding the greatest number of shares.

(b) The Bank may establish agencies or branch offices in the territories of any member of the Bank.

#### Section 10. *Regional offices and councils*

(a) The Bank may establish regional offices and determine the location of, and the areas to be covered by, each regional office.

(b) Each regional office shall be advised by a regional council representative of the entire area and selected in such manner as the Bank may decide.

#### Section 11. *Depositories*

(a) Each member shall designate its central bank as a depository for all the Bank's holdings of its currency or, if it has no central bank, it shall designate such other institution as may be acceptable to the Bank.

(b) The Bank may hold other assets, including gold, in depositories designated by the five members having the largest number of shares and in such other designated depositories as the Bank may select. Initially, at least one-half of the gold holdings of the Bank shall be held in the depository designated by the member in whose territory the Bank has its principal office, and at least forty percent shall be held in the depositories designated by the remaining four members referred to above, each of such depositories to hold, initially, not less than the amount of gold paid on the shares of the member designating it. However, all transfers of gold by the Bank shall be made with due regard to the costs of transport and anticipated requirements of the Bank. In an emergency the Executive Directors may transfer all or any part of the Bank's gold holdings to any place where they can be adequately protected.

#### Section 12. *Form of holdings of currency*

The Bank shall accept from any member, in place of any part of the member's currency, paid in to the Bank under Article II, Section 7 (i), or to meet amortization payments on loans made with such currency, and not needed by the Bank in its operations, notes or similar obligations issued by the Government of the member or the depository designated by such member, which shall be non-negotiable, non-interest-bearing and payable at their par value on demand by credit to the account of the Bank in the designated depository.

#### Section 13. *Publication of reports and provision of information*

(a) The Bank shall publish an annual report containing an audited statement of its accounts and shall circulate to members at intervals of three months or less a summary statement of its financial position and a profit and loss statement showing the results of its operations.

(b) The Bank may publish such other reports as it deems desirable to carry out its purposes.

(c) Copies of all reports, statements and publications made under this section shall be distributed to members.

#### Section 14. *Allocation of net income*

(a) The Board of Governors shall determine annually what part of the Bank's net income, after making provision for reserves, shall be allocated to surplus and what part, if any, shall be distributed.

(b) If any part is distributed, up to two percent non-cumulative shall be paid, as a first charge against the distribution for any year, to each member on the basis of the average amount of the loans outstanding during the year made under Article IV, Section 1 (a) (i), out of currency corresponding to its subscription. If two percent is paid as a first charge, any balance remaining to be distributed shall be paid to all members in proportion to their shares. Payments to each member shall be made in its own currency, or if that currency is not available in other currency acceptable to the member. If such payments are made in currencies other than the member's own currency, the transfer of the currency and its use by the receiving member after payment shall be without restriction by the members.

### ARTICLE VI

#### WITHDRAWAL AND SUSPENSION OF MEMBERSHIP: SUSPENSION OF OPERATIONS

##### Section 1. *Right of members to withdraw*

Any member may withdraw from the Bank at any time by transmitting a notice in writing to the Bank at its principal office. Withdrawal shall become effective on the date such notice is received.

##### Section 2. *Suspension of membership*

If a member fails to fulfill any of its obligations to the Bank, the Bank may suspend its membership by decision of a majority of the Governors, exercising a majority of the total voting power. The member so suspended shall automatically cease to be a member one year from the date of its suspension unless a decision is taken by the same majority to restore the member to good standing.

While under suspension, a member shall not be entitled to exercise any rights under this Agreement, except the right of withdrawal, but shall remain subject to all obligations.

##### Section 3. *Cessation of membership in International Monetary Fund*

Any member which ceases to be a member of the International Monetary Fund shall automatically cease after three months to be a member of the Bank unless the Bank by three-fourths of the total voting power has agreed to allow it to remain a member.

Section 4. *Settlement of accounts with governments ceasing to be members*

(a) When a government ceases to be a member, it shall remain liable for its direct obligations to the Bank and for its contingent liabilities to the Bank so long as any part of the loans or guarantees contracted before it ceased to be a member are outstanding; but it shall cease to incur liabilities with respect to loans and guarantees entered into thereafter by the Bank and to share either in the income or the expenses of the Bank.

(b) At the time a government ceases to be a member, the Bank shall arrange for the repurchase of its shares as a part of the settlement of accounts with such government in accordance with the provisions of (c) and (d) below. For this purpose the repurchase price of the shares shall be the value shown by the books of the Bank on the day the government ceases to be a member.

(c) The payment for shares repurchased by the Bank under this section shall be governed by the following conditions:

(i) Any amount due to the government for its shares shall be withheld so long as the government, its central bank or any of its agencies remains liable, as borrower or guarantor, to the Bank and such amount may, at the option of the Bank, be applied on any such liability as it matures. No amount shall be withheld on account of the liability of the government resulting from its subscription for shares under Article II, Section 5 (ii). In any event, no amount due to a member for its shares shall be paid until six months after the date upon which the government ceases to be a member.

(ii) Payments for shares may be made from time to time, upon their surrender by the government, to the extent by which the amount due as the repurchase price in (b) above exceeds the aggregate of liabilities on loans and guarantees in (c) (i) above until the former member has received the full repurchase price.

(iii) Payments shall be made in the currency of the country receiving payment or at the option of the Bank in gold.

(iv) If losses are sustained by the Bank on any guarantees, participations in loans, or loans which were outstanding on the date when the government ceased to be a member, and the amount of such losses exceeds the amount of the reserve provided against losses on the date when the government ceased to be a member, such government shall be obligated to repay upon demand the amount by which the repurchase price of its shares would have been reduced, if the losses had been taken into account when the repurchase price was determined. In addition, the former member government shall remain liable on any call for unpaid subscriptions under Article II, Section 5 (ii), to the extent that it would have been required to respond if the impairment of capital had occurred and the call had been made at the time the repurchase price of its shares was determined.

(d) If the Bank suspends permanently its operations under Section 5 (b) of this Article, within six months of the date upon which any government ceases to be a member, all rights of such government shall be determined by the provisions of Section 5 of this Article.

Section 5. *Suspension of operations and settlement of obligations*

(a) In an emergency the Executive Directors may suspend temporarily operations in respect of new loans and guarantees pending an opportunity for further consideration and action by the Board of Governors.

(b) The Bank may suspend permanently its operations in respect of new loans and guarantees by vote of a majority of the Governors, exercising a majority of the total voting power. After such suspension of operations the Bank shall forthwith cease all activities, except those incident to the orderly realization, conservation, and preservation of its assets and settlement of its obligations.

(c) The liability of all members for uncalled subscriptions to the capital stock of the Bank and in respect of the depreciation of their own currencies shall continue until all claims of creditors, including all contingent claims, shall have been discharged.

(d) All creditors holding direct claims shall be paid out of the assets of the Bank, and then out of payments to the Bank on calls on unpaid subscriptions. Before making any payments to creditors holding direct claims, the Executive Directors shall make such arrangements as are necessary, in their judgment, to insure a distribution to holders of contingent claims ratably with creditors holding direct claims.

(e) No distribution shall be made to members on account of their subscriptions to the capital stock of the Bank until

(i) all liabilities to creditors have been discharged or provided for, and

(ii) a majority of the Governors, exercising a majority of the total voting power, have decided to make a distribution.

(f) After a decision to make a distribution has been taken under (e) above, the Executive Directors may by a two-thirds majority vote make successive distributions of the assets of the Bank to members until all of the assets have been distributed. This distribution shall be subject to the prior settlement of all outstanding claims of the Bank against each member.

(g) Before any distribution of assets is made, the Executive Directors shall fix the proportionate share of each member according to the ratio of its shareholding to the total outstanding shares of the Bank.

(h) The Executive Directors shall value the assets to be distributed as at the date of distribution and then proceed to distribute in the following manner:

(i) There shall be paid to each member in its own obligations or those of its official agencies or legal entities within its territories, insofar as they are available for distribution, an amount equivalent in value to its proportionate share of the total amount to be distributed.

(ii) Any balance due to a member after payment has been made under (i) above shall be paid, in its own currency, insofar as it is held by the Bank, up to an amount equivalent in value to such balance.

(iii) Any balance due to a member after payment has been made under (i) and (ii) above shall be paid in gold or currency acceptable to the member, insofar as they are held by the Bank, up to an amount equivalent in value to such balance.

(iv) Any remaining assets held by the Bank after payments have been made to members under (i), (ii), and (iii) above shall be distributed *pro rata* among the members.

(i) Any member receiving assets distributed by the Bank in accordance with (h) above, shall enjoy the same rights with respect to such assets as the Bank enjoyed prior to their distribution.

## ARTICLE VII

## STATUS, IMMUNITIES AND PRIVILEGES

Section 1. *Purposes of Article*

To enable the Bank to fulfill the functions with which it is entrusted, the status, immunities and privileges set forth in this Article shall be accorded to the Bank in the territories of each member.

Section 2. *Status of the Bank*

The Bank shall possess full juridical personality, and, in particular, the capacity:

- (i) to contract;
- (ii) to acquire and dispose of immovable and movable property;
- (iii) to institute legal proceedings.

Section 3. *Position of the Bank with regard to judicial process*

Actions may be brought against the Bank only in a court of competent jurisdiction in the territories of a member in which the Bank has an office, has appointed an agent for the purpose of accepting service or notice of process, or has issued or guaranteed securities. No actions shall, however, be brought by members or persons acting for or deriving claims from members. The property and assets of the Bank shall, wheresoever located and by whomsoever held, be immune from all forms of seizure, attachment or execution before the delivery of final judgment against the Bank.

Section 4. *Immunity of assets from seizure*

Property and assets of the Bank, wherever located and by whomsoever held, shall be immune from search, requisition, confiscation, expropriation or any other form of seizure by executive or legislative action.

Section 5. *Immunity of archives*

The archives of the Bank shall be inviolable.

Section 6. *Freedom of assets from restrictions*

To the extent necessary to carry out the operations provided for in this Agreement and subject to the provisions of this Agreement, all property and assets of the Bank shall be free from restrictions, regulations, controls and moratoria of any nature.

Section 7. *Privilege for communications*

The official communications of the Bank shall be accorded by each member the same treatment that it accords to the official communications of other members.

Section 8. *Immunities and privileges of officers and employees*

All governors, executive directors, alternates, officers and employees of the Bank

(i) shall be immune from legal process with respect to acts performed by them in their official capacity except when the Bank waives this immunity;

(ii) not being local nationals, shall be accorded the same immunities from immigration restrictions, alien registration requirements and national service obligations and the same facilities as regards exchange restrictions as are accorded by members to the representatives, officials, and employees of comparable rank of other members;

(iii) shall be granted the same treatment in respect of travelling facilities as is accorded by members to representatives, officials and employees of comparable rank of other members.

Section 9. *Immunities from taxation*

(a) The Bank, its assets, property, income and its operations and transactions authorized by this Agreement, shall be immune from all taxation and from all customs duties. The Bank shall also be immune from liability for the collection or payment of any tax or duty.

(b) No tax shall be levied on or in respect of salaries and emoluments paid by the Bank to executive directors, alternates, officials or employees of the Bank who are not local citizens, local subjects, or other local nationals.

(c) No taxation of any kind shall be levied on any obligation or security issued by the Bank (including any dividend or interest thereon) by whomsoever held—

(i) which discriminates against such obligation or security solely because it is issued by the Bank; or

(ii) if the sole jurisdictional basis for such taxation is the place or currency in which it is issued, made payable or paid, or the location of any office or place of business maintained by the Bank

(d) No taxation of any kind shall be levied on any obligation or security guaranteed by the Bank (including any dividend or interest thereon) by whomsoever held—

(i) which discriminates against such obligation or security solely because it is guaranteed by the Bank; or

(ii) if the sole jurisdictional basis for such taxation is the location of any office or place of business maintained by the Bank.

Section 10. *Application of Article*

Each member shall take such action as is necessary in its own territories for the purpose of making effective in terms of its own law the principles set forth in this Article and shall inform the Bank of the detailed action which it has taken.

# ARTICLE VIII AMENDMENTS

(a) Any proposal to introduce modifications in this Agreement, whether emanating from a member, a governor or the Executive Directors, shall be communicated to the Chairman of the Board of Governors who shall bring the proposal before the Board. If the proposed amendment is approved by the Board the Bank shall, by circular letter or telegram, ask all members whether they accept the proposed amendment. When three-fifths of the members, having four-fifths of the total voting power, have accepted the proposed amendment, the Bank shall certify the fact by a formal communication addressed to all members.

(b) Notwithstanding (a) above, acceptance by all members is required in the case of any amendment modifying

- (i) the right to withdraw from the Bank provided in Article VI, Section 1;
  - (ii) the right secured by Article II, Section 3 (c);
  - (iii) the limitation on liability provided in Article II, Section 6.
- (c) Amendments shall enter into force for all members three months after the date of the formal communication unless a shorter period is specified in the circular letter or telegram.

# ARTICLE IX INTERPRETATION

(a) Any question of interpretation of the provisions of this Agreement arising between any member and the Bank or between any members of the Bank shall be submitted to the Executive Directors for their decision. If the question particularly affects any member not entitled to appoint an executive director, it shall be entitled to representation in accordance with Article V, Section 4 (h).

(b) In any case where the Executive Directors have given a decision under (a) above, any member may require that the question be referred to the Board of Governors, whose decision shall be final. Pending the result of the reference to the Board, the Bank may, so far as it deems necessary act on the basis of the decision of the Executive Directors.

(c) Whenever a disagreement arises between the Bank and a country which has ceased to be a member, or between the Bank and any member during the permanent suspension of the Bank, such disagreement shall be submitted to arbitration by a tribunal of three arbitrators, one appointed by the Bank, another by the country involved and an umpire who, unless the parties otherwise agree, shall be appointed by the President of the Permanent Court of International Justice or such other authority as may have been prescribed by regulation adopted by the Bank. The umpire shall have full power to settle all questions of procedure in any case where the parties are in disagreement with respect thereto.

# ARTICLE X APPROVAL DEEMED GIVEN

Whenever the approval of any member is required before any act may be done by the Bank, except in Article VIII, approval shall be deemed to have been given unless the member presents an objection within such reasonable period as the Bank may fix in notifying the member of the proposed act.

# ARTICLE XI FINAL PROVISIONS

## Section 1. Entry into force

This Agreement shall enter into force when it has been signed on behalf of governments whose minimum subscriptions comprise not less than sixty-five percent of the total subscriptions set forth in Schedule A and when the instruments referred to in Section 2 (a) of this Article have been deposited on their behalf, but in no event shall this Agreement enter into force before May 1, 1945.

## Section 2. Signature

(a) Each government on whose behalf this Agreement is signed shall deposit with the Government of the United States of America an instrument setting forth that it has accepted this Agreement in accordance with its law and has taken all steps necessary to enable it to carry out all of its obligations under this Agreement.

(b) Each government shall become a member of the Bank as from the date of the deposit on its behalf of the instrument referred to in (a) above, except that no government shall become a member before this Agreement enters into force under Section 1 of this Article.

(c) The Government of the United States of America shall inform the governments of all countries whose names are set forth in Schedule A, and all governments whose membership is approved in accordance with Article II, Section 1 (b), of all signatures of this Agreement and of the deposit of all instruments referred to in (a) above.

(d) At the time this Agreement is signed on its behalf, each government shall transmit to the Government of the United States of America one one-hundredth of one percent of the price of each share in gold or United States dollars for the purpose of meeting administrative expenses of the Bank. This payment shall be credited on account of the payment to be made in accordance with Article II, Section 8 (a). The Government of the United States of America shall hold such funds in a special deposit account and shall transmit them to the Board of Governors of the Bank when the initial meeting has been called under Section 3 of this Article. If this Agreement has not come into force by December 31, 1945, the Government of the United States of America shall return such funds to the governments that transmitted them.

(e) This Agreement shall remain open for signature at Washington on behalf of the governments of the countries whose names are set forth in Schedule A until December 31, 1945.

(f) After December 31, 1945, this Agreement shall be open for signature on behalf of the government of any country whose membership has been approved in accordance with Article II, Section 1 (b).

(g) By their signature of this Agreement, all governments accept it both on their own behalf and in respect of all their colonies, overseas

territories, all territories under their protection, suzerainty, or authority and all territories in respect of which they exercise a mandate.

(h) In the case of governments whose metropolitan territories have been under enemy occupation, the deposit of the instrument referred to in (a) above may be delayed until one hundred and eighty days after the date on which these territories have been liberated. If, however, it is not deposited by any such government before the expiration of this period, the signature affixed on behalf of that government shall become void and the portion of its subscription paid under (d) above shall be returned to it.

(i) Paragraphs (d) and (h) shall come into force with regard to each signatory government as from the date of its signature.

## Section 3. Inauguration of the Bank

(a) As soon as this Agreement enters into force under Section 1 of this Article, each member shall appoint a governor and the member to whom the largest number of shares is allocated in Schedule A shall call the first meeting of the Board of Governors.

(b) At the first meeting of the Board of Governors, arrangements shall be made for the selection of provisional executive directors. The governments of the five countries, to which the largest number of shares are allocated in Schedule A, shall appoint provisional executive directors. If one or more of such governments have not become members, the executive directorships which they would be entitled to fill shall remain vacant until they become members, or until January 1, 1946, whichever is the earlier. Seven provisional executive directors shall be elected in accordance with the provisions of Schedule B and shall remain in office until the date of the first regular election of executive directors which shall be held as soon as practicable after January 1, 1946.

(c) The Board of Governors may delegate to the provisional executive directors any powers except those which may not be delegated to the Executive Directors.

(d) The Bank shall notify members when it is ready to commence operations.

DONE at Washington, in a single copy which shall remain deposited in the archives of the Government of the United States of America, which shall transmit certified copies to all governments whose names are set forth in Schedule A and to all governments whose membership is approved in accordance with Article II, Section 1 (b).

## SCHEDULE A SUBSCRIPTIONS

	(millions of dollars)		(millions of dollars)
Australia	200	Iraq	6
Belgium	225	Liberia	.5
Bolivia	7	Luxembourg	10
Brazil	105	Mexico	65
Canada	325	Netherlands	275
Chile	35	New Zealand	50
China	600	Nicaragua	.8
Colombia	35	Norway	50
Costa Rica	2	Panama	.2
Cuba	35	Paraguay	.8
Czechoslovakia	125	Peru	17.5
*Denmark		Philippine Common- wealth	15
Dominican Republic	2	Poland	125
Ecuador	3.2	Union of South Africa	100
Egypt	40	Union of Soviet Socialist Republics	1,200
El Salvador	1	United Kingdom	1,300
Ethiopia	3	United States	3,175
France	450	Uruguay	10.5
Greece	25	Venezuela	10.5
Guatemala	2	Yugoslavia	40
Haiti	2		
Honduras	1		
Ireland	1		
India	400	Total	9,100
Iran	24		

\* The quota of Denmark shall be determined by the Bank after Denmark accepts membership in accordance with these Articles of Agreement.

## SCHEDULE B ELECTION OF EXECUTIVE DIRECTORS

1. The election of the elective executive directors shall be by ballot of the Governors eligible to vote under Article V, Section 4 (b).

2. In balloting for the elective executive directors, each governor eligible to vote shall cast for one person all of the votes to which the member appointing him is entitled under Section 3 of Article V. The seven persons receiving the greatest number of votes shall be executive directors, except that no person who receives less than fourteen percent of the total of the votes which can be cast (eligible votes) shall be considered elected.

3. When seven persons are not elected on the first ballot, a second ballot shall be held in which the person who received the lowest number of votes shall be ineligible for election and in which there shall vote only (a) those governors who voted in the first ballot for a person not elected and (b) those governors whose votes for a person elected are deemed under 4 below to have raised the votes cast for that person above fifteen percent of the eligible votes.

4. In determining whether the votes cast by a governor are to be deemed to have raised the total of any person above fifteen percent of the eligible votes, the fifteen percent shall be deemed to include, first, the votes of the governor casting the largest number of votes for such person, then the votes of the governor casting the next largest number, and so on until fifteen percent is reached.

5. Any governor, part of whose votes must be counted in order to raise the total of any person above fourteen percent, shall be considered as casting all of his votes for such person even if the total votes for such

person thereby exceed fifteen percent.

6. If, after the second ballot, seven persons have not been elected, further ballots shall be held on the same principles until seven persons have been elected, provided that after six persons are elected, the seventh may be elected by a simple majority of the remaining votes and shall be deemed to have been elected by all such votes.

**United Nations Organization:** see UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION.

## United Nations Relief and Rehabilitation

**Administration.** The United Nations Relief and Rehabilitation Administration was established on Nov. 9, 1943, as the first service agency of the United Nations. By the end of 1945 it was composed of 51 member governments, each of which participated in U.N.R.R.A.'s policy-making council, while six governments—the United States, the United Kingdom, the Soviet Union, China, France and Canada—were represented on its central committee, which makes emergency policy decisions between sessions of the council. Herbert H. Lehman continued as director general in 1945.

U.N.R.R.A.'s basic shift of emphasis in 1945 was from planning to operations. Prior to undertaking field activities, it had analyzed relief requirements, recruited and trained an international staff, arranged for the procurement of supplies from contributing countries, concluded agreements for assisting the military and the governments of receiving countries, and accepted administrative contributions for which all member governments are obligated and operating contributions from those nations which had not been invaded by the enemy.

During the first quarter of 1945, U.N.R.R.A. assisted the military in carrying out relief operations in Greece and Yugoslavia, then took over responsibility in the former country on April 1, and in the latter on April 15. V-E day paved the way for increasing supplies and shipping to help meet the needs of those liberated countries in Europe which did not possess foreign exchange resources, and were therefore dependent upon U.N.R.R.A. assistance. V-J day made relief and rehabilitation operations possible on a global basis. By the end of 1945 U.N.R.R.A. was providing full-scale assistance to Greece, Albania, Yugoslavia, Poland and Czechoslovakia, while its operations were accelerating in newly-liberated China. A limited program of aid was

being provided to Italy, chiefly in the form of supplemental food for children and nursing and expectant mothers. More than 4,000 trained personnel were assisting the military in Germany and Austria in the assembling and care of millions of displaced persons. The acceleration of U.N.R.R.A.'s operations was seen in the cumulative statistics of supplies shipped overseas:

1. End of first quarter, 1945: 37,000 long tons.
2. End of second quarter, 1945: 1,304,000 long tons.
3. End of third quarter, 1945: 2,126,000 long tons.
4. End of fourth quarter, 1945: 4,071,000 long tons (approximate).

At the end of 1945, U.N.R.R.A. had delivered approximately the following amounts of supplies (in long tons): to Greece 1,747,000; Yugoslavia 980,000; Czechoslovakia 432,000; Poland 369,000; Albania 67,000; Italy 133,000; China 261,000; Byelorussia 23,000; Ukraine 43,000; other operations 16,000.

The U.N.R.R.A. council in its third session, held in London in August, determined that Austria, Korea and Formosa were countries qualified to receive relief aid; admitted Denmark and the Ukrainian and Byelorussian Soviet Socialist Republics to membership on the council; and recommended a second contribution of 1% of the national income of each of the uninvaded nations, to raise about \$1,800,000,000 in additional funds in order to finance U.N.R.R.A.'s operations in Europe until the end of 1946, and in the far east until the first quarter of 1947. Further funds were urgently required in view of the fact that by the late fall U.N.R.R.A. had committed all available resources.

In Dec. 1945, the U.S. congress appropriated \$550,000,000, completing its first contribution of \$1,350,000,000, and enacted legislation authorizing a second contribution of equal amount. Before congress recessed at the end of the year, it had appropriated \$750,000,000 against its second contribution. Meanwhile the British parliament had also approved its second contribution and Canada had inaugurated similar legislation.

U.N.R.R.A. concentrated upon relief supplies to assist liberated peoples to survive the critical winter of 1945-46. During 1946, increasing emphasis was to be placed upon agricultural and industrial rehabilitation supplies and services, in order to help restore war-shattered economies to a self-sustaining basis. (See also RECONSTRUCTION PLANNING; REFUGEES.)

(H. H. L.)

## United Nations War Crimes Commission.

The war crimes procedure of the United Nations, confined mainly during 1944 to the investigation and collection of evidence by the United Nations War Crimes commission in London, entered a new stage in 1945. Major developments included an announcement by the commission on April 1 that a first list of German war criminals had been drawn up in Dec. 1944 containing the names of such obvious criminals as Adolf Hitler, and that four other lists had later been drawn up: a second list of German war criminals; a list of Italians; a list of Japanese; and a list of Albanian, Bulgarian, Hungarian and Rumanian criminals. Further lists were stated to be in preparation. Up to Oct. 25, 15 such lists were compiled, the last containing 465 Bulgarian and Italian names. The commission also announced in April that after May 1944 a subcommission was at work in Chungking, under the chairmanship of Dr. Wang Ching-hui to investigate war crimes committed in the far east and the Pacific area, and had held four meetings between Nov. 1944 and April 1945 with representatives of Australia, Belgium, China, Czechoslovakia, France, India, Luxembourg, the Netherlands, Poland, the United Kingdom and the United States.

Early in its work, the commission had assumed that no immunity attached to heads of states and it had decided that the plea of superior orders did not of itself constitute justification of a war crime. It promised to publish the lists it had drawn up when the problems of apprehension and reprisals by the

BREAD SUPPLIED by the U.N.R.R.A. being distributed to a hungry but orderly crowd of displaced persons at Weimar station in Germany during July 1945

enemy were less acute.

Each of the 16 nations then represented on the commission had its own war crimes office which detected, investigated and recorded evidence. When these national offices felt there was adequate evidence for declaring a person a war criminal, the names were forwarded to the War Crimes commission as a whole which, if agreeing that sufficient evidence existed, placed those names on its list.

While Allied territories were still occupied by the enemy, only a limited amount of information was made available to the commission, but as these countries were liberated the number of cases transmitted by the national war crimes offices steadily increased.

After the surrender of Germany the United Nations War Crimes commission collaborated actively with military authorities to secure the apprehension and arrest of war criminals. Thus, at Gen. Dwight D. Eisenhower's invitation, members of the commission visited the Buchenwald concentration camp and, at the invitation of Allied military authorities in Germany, the commission arranged for certain European governments to send war crimes investigation officers to Germany to assist military authorities in collecting evidence of war crimes in concentration camps and elsewhere.

From May 31 to June 4 a conference of representatives of the national war crimes offices of 16 member governments of the War Crimes commission was held in London under the chairmanship of Lord Wright, Australian representative on the commission, who on Jan. 31 had succeeded Sir Cecil Hurst as chairman. The soviet union was not represented because it was not a member of the commission but had its own extraordinary state war crimes commission.

Denmark subsequently joined the commission thus bringing the number of governments represented to 17.

The first U.S. representative on the commission, Herbert C. Pell, who had resigned in Jan. 1945, was succeeded by Lieut. Col. Joseph V. Hodgson. At the direction of Henry L. Stimson, secretary of war, a war crimes section had been set up in the war department headed by Brig. Gen. John M. Weir, to compile dossiers on crimes committed against U.S. troops and U.S. and Filipino nationals.

Early in May 1945 the U.S. suggested to the United Kingdom, the soviet union and France that the four powers should join in a protocol establishing an international military tribunal, defining its jurisdiction and powers, naming the categories of acts declared to be crimes and describing those individuals and organizations to be placed on trial.

At the same time the appointment by Pres. Harry S. Truman of Justice Robert H. Jackson of the supreme court as chief U.S. counsel in preparing charges against major axis war criminals under the terms of the Moscow declaration of Nov. 1, 1943, was announced. Four weeks later, after conferring in Europe with Gen. Eisenhower and other high-ranking officers and officials of the U.S. zone in Germany, Lord Wright, chairman of the United Nations War Crimes commission, and Sir David Maxwell Fyfe, who had been named on May 29 as chief British counsel in preparing the case against major axis criminals, in London, Justice Jackson submitted an important statement in the form of a letter to Pres. Truman. The proposals contained in it constituted a blueprint for the trial of war criminals. It was recommended that at the same time German leaders from army and state, industry and finance be put in the dock to be tried for conspiring to subjugate mankind by waging an aggressive war. Once the major offenders had been dealt with, the trial of the lesser criminals was to be handled on a local basis and in the countries directly concerned in each case.

A meeting in London, beginning June 26, of legal experts of

the United States, the United Kingdom, the soviet union and France to determine the organization and methods of procedure for the trial of major war criminals led to the Four-Power agreement of Aug. 8 setting up an international military tribunal for the trial of war criminals whose offenses had no precise geographical location. The agreement was signed by Sir William A. Jowitt, the lord chancellor, for the United Kingdom, Justice Jackson for the U.S., Robert Falco, counsellor of the *Cour de Cassation*, for France, I. T. Nikitchenko, vice-president of the soviet supreme court and A. Trainin, international law expert, for the soviet union. It was supplemented by a charter comprising 30 articles setting forth the constitution of the tribunal and the principles governing its operation.

Three categories of offenses were stated to be within the jurisdiction of the tribunal: 1. crimes against peace; 2. war crimes; 3. crimes against humanity. Each of the four powers is represented on the tribunal by a judge and a chief prosecutor. A committee of the latter, appointed for the investigation and prosecution of major war crimes, issued in London on Aug. 29 a first list of criminals to be tried before the tribunal.

The indictment of 24 major war criminals, naming Hermann Wilhelm Goering, Rudolf Hess, Joachim von Ribbentrop, Robert Ley, Wilhelm Keitel, Ernst Kaltenbrunner, Alfred Rosenberg, Hans Frank, Wilhelm Frick, Julius Streicher, Walter Funk, Hjalmar Schacht, Gustav Krupp von Bohlen und Halbach, Karl Doenitz, Erich Raeder, Baldur von Schirach, Fritz Sauckel, Alfred Jodl, Martin Bormann, Franz von Papen, Arthur Seyss-Inquart, Albert Speer, Constantin von Neurath and Hans Fritzsche, individually and as members of any of the following groups: the reich cabinet, the leadership corps of the nazi party, the "SS," the "SD," the "gestapo," the "SA" and the general staff and high command of the German armed forces, was handed up to the tribunal on Oct. 18. The trial of the leading nazi war criminals with Lord Justice Sir Geoffrey Lawrence of the United Kingdom presiding, began on Nov. 20 in the Nuernberg court house.

In the meantime, special military tribunals of various Allied powers had been dealing with war criminals in countries where the crimes were committed. Such was the trial of Japanese Gen. Yamashita by a U.S. military court at Manila. At Hamburg, a British tribunal convicted members of a German submarine crew who murdered survivors from the torpedoed Greek merchant vessel "Peleus." Another British tribunal at Lueneburg sentenced those responsible for the atrocities at the Belsen concentration camp. In Rome, a U.S. military tribunal convicted the German Gen. Anton Dostler for having ordered the execution of 15 U.S. soldiers without a trial. Soviet tribunals in Poland and Czechoslovakia convicted and sentenced to death several hundred Germans responsible for prison camp atrocities or the murder of civilians in occupied territory. (W. B. M.)

**United Service Organizations.** The United Service Organizations, Inc., (U.S.O.) was formed Feb. 4, 1941, by the following member agencies: Young Men's Christian association, National Catholic Community service, the Salvation Army, Young Womens Christian association, National Jewish Welfare board and National Travelers Aid association. Its purpose was to provide off-duty recreational, spiritual and welfare services to the armed forces of World War II, and to workers in overburdened war production centres, as requested by the government. From its inception, more than 1,000,000,000 persons had been served by U.S.O. in some manner. This figure includes attendance at U.S.O.-Camp Shows, clubs, troops-in-transit services and mobile and manoeuvres services.

On Sept. 1, 1945, there were 2,461 U.S.O. clubs and other

services, of which 1,308 were operated by the U.S.O. member agencies and 997 by local communities in affiliation with U.S.O. These services fell into the following principal classifications:

Clubs in continental United States including those conducted by member agencies and local communities in affiliation with U.S.O. Clubs both in the U.S. and abroad totalled 1,645 on Sept. 1, 1945, and were located in 48 states and 16 overseas areas. Standard equipment included lounges, writing rooms, showers, snack bars, game rooms, libraries, musical instruments and auditoriums.

Troops-in-transit service operated 148 lounges in rail and bus terminals, supplemented by 126 U.S.O.-Travelers Aid services.

Mobile service units numbered 105. They served men on outpost duty along Atlantic and Pacific coasts, as well as troops on manoeuvres.

The overseas division maintained 156 clubs, smaller centres and mobile units in western hemisphere bases from Alaska and Newfoundland to Brazil, and overseas in Hawaii and the Philippines.

U.S.O.-Camp Shows, Inc., an affiliate, sent out a total of 4,276 entertainers in 677 units after its inception in Nov., 1941. Camp Shows units toured army camps, navy posts and service hospitals in continental United States, western hemisphere bases and zones of military occupation throughout the world.

Attendance at U.S.O. facilities averaged 26,000,000 a month. U.S.O.-Camp Shows performed before an average monthly audience of 2,000,000.

Service to returning veterans and to men in military general hospitals was an important part of U.S.O. work in 1945. At home, U.S.O. workers were helping discharged servicemen adjust to civilian life. Overseas, U.S.O. continued to serve troops waiting to go home or changing from combat to occupation status. Everywhere the redeployment and reassignment of troops emphasized the need for troops-in-transit lounges and other Travelers Aid services. Special programs were continued in U.S.O. clubs for the benefit of wives and families of servicemen.

The work of 800,000 volunteers in 1945 was indispensable at clubs and lounges, not only in assisting professional staffs but also in providing companionship at programs and social events to men and women in service.

A vital part of U.S.O. work was service to war workers and their families in certain overcrowded war production centres. Programs were patterned after those for the armed forces, with emphasis on classes for women similar to those for wives of servicemen.

U.S.O. officers in 1945 were: Dr. Lindsley F. Kimball, president; C. Frank Kramer, Jr., secretary. National headquarters were in the Empire State building, 350 Fifth Ave., New York 1, N.Y.

(C. I. B.)

## United States.

According to an interim census report of Nov. 20, 1945, the continental population of the United States had passed the 140,000,000 mark. This represented a gain of some 8,330,000 or 6.1% over the figure of 131,669,275 in the census of 1940, but a slight decline from the gain in the decade 1930-40. Including outlying territories and possessions the population exceeded 152,000,000. Since the area of the United States is 3,022,387 sq.mi., the population of 140,000,000 means a density of 46.3 inhabitants per square mile. For the population of the states *see* articles on the separate states.

*See also* BIRTH STATISTICS; CENSUS DATA, 1945; CHURCH MEMBERSHIP; DEATH STATISTICS; INDIANS, AMERICAN; NEGROES (AMERICAN).

**History.**—The year 1945 was fraught with events of tremendous import for the United States and for the world at large. It would probably go down in history as one of those periods which mark the end of an era and present momentous problems of readjustment to the demands of a new age. The fateful year saw the almost simultaneous collapse of the two great military despotisms which had threatened the total subjugation of the continents and oceans of the eastern hemisphere. It witnessed the meeting at San Francisco of the delegates of 50 countries, representing three quarters of the world's population, to frame a United Nations charter for the future peace and security of mankind. It produced the most miraculous and portentous discovery of all time in the release of nuclear energy from the fissure of the atom of uranium, a discovery rich with the possibilities of the total destruction or the infinite enhancement of civilization, according to whether the folly of mankind should employ it for war or the wisdom of man for peace. The year also saw the sudden death of President Roosevelt, less than three months after his inauguration for a fourth term, and the consequent reorganization under President Truman of the executive branch of the government, leaving Secretary Ickes of the interior as the sole surviving member of the original Roosevelt cabinet. And finally the year was filled with bitter strife between management and labour, growing more intense as the months passed and resulting, in spite of repeated efforts for compromise, in an epidemic of strikes which threatened to wreck the indispensable program for the reconversion of U.S. industries from a wartime to a peacetime operation.

**Congress.**—The first session of the 79th congress met on Jan. 4 with 243 Democrats (a gain of 28 in the autumn elections of 1944) to 190 Republicans in the house, while the Democratic majority in the senate (57 to 38) remained virtually unchanged. Except for a brief recess from the end of July to Sept. 6, congress remained in session until Dec. 21. President Roosevelt's message sent in on Jan. 6 declared that ultimate victory over the axis powers was in sight, but urged all-out effort, since the most critical phase of the war had been reached. He advocated legislation to use the services of the 4,000,000 men classified as IV-F, the induction of nurses into the armed forces, and universal military training. He exhorted Americans to stay on their war jobs, and discussed various problems of the war and of the postwar era which confronted congress: lend-lease, the reciprocal trade pacts, price control, social security, farm subsidies, housing, education, medical care, unemployment benefits and fair economic practices. Congress had made but little progress in this program by midsummer, when events of great importance (the Potsdam conference, the dropping of the atomic bomb on Hiroshima, the Russian declaration of war on Japan, and the surrender of the last of the axis powers) led President Truman to call the legislators back to Washington a month before the end of their intended recess. He met them with a 16,000-word message containing a 21-point program for the reconversion of U.S. industries, the insurance of full employment, the reorganization of the government agencies, the redeployment of manpower, care for the returning soldiers and sailors, housing, health, price control, co-operation between management and labour, and a number of other matters.

The achievements of the more than 11 months' session of congress were disappointing, though some prominent members expressed themselves as "fairly well pleased with the record." Of the 640 public and private laws passed the most important were the ratification of the San Francisco charter and approval of the delegates to the United Nations organization; adherence to the Bretton Woods monetary agreement; the authorization of a second \$1,350,000,000 contribution to the U.N.R.R.A.; the extension of the reciprocal trade agreements; reduction of corpora-

tion and individual taxes; the extension of the draft law to May 15 and of price control to June 30, 1946. However, the measures which congress failed to enact, in spite of repeated messages from President Truman, presented a formidable list. Among them were the enlargement of the social security program, full employment legislation, the merger of the armed services, universal military training, the solution of labour-management disputes by a fact-finding board, establishment of a fair economic practices commission, increased unemployment compensation, the setting up of domestic control over atomic energy, and action on the \$4,400,000,000 loan to Great Britain.

One of the reasons for the dilatoriness of congress was a stiffening opposition to the president, in anticipation of Republican gains in the mid-term elections of 1946. Another cause was the unprecedented number of hearings and investigations which absorbed the attention of committees and subcommittees, to the detriment of the devotion of many of the leading members of both houses to their legislative duties. Already by May more than 25 hearings had produced more than 16,000,000 words of testimony, enough to fill 30 volumes the size of *Gone With the Wind*. By the time congress finally adjourned, six weeks of testimony by more than 60 witnesses on the responsibility for the catastrophe at Pearl Harbor had produced a mass of material equal to the *Congressional Record*, and the end was not yet in sight. Many days there was no quorum on the floor, and there were only 15 members of the house present when the adjournment came. Immediately after the adjournment President Truman announced that he would address the nation on the record of the session, which he did in a half-hour talk from the White House on Jan. 3, 1946, appealing to the people of the country to bring pressure to bear on their representatives in congress to speed legislation on the important domestic measures which he had recommended in his September message. (See also ELECTIONS; LAW.)

**The Budget and Finance.**—President Roosevelt's fourth war-time budget was submitted to congress on Jan. 6, 1945. It called for an appropriation of \$83,000,000,000 for the fiscal year 1945-46, as contrasted with \$99,800,000,000 for the preceding year, the first decrease after 1938. A tentative figure of \$70,000,000,000 was allocated for military expenses, though in view of the uncertainty of the duration of the war this figure might be raised to \$80,000,000,000 or reduced to \$60,000,000,000. And of the remaining \$13,000,000,000 by far the largest part was to go for expenses due to war, such as pensions, benefits and interest on the public debt. After 1941 the debt had multiplied six-fold, reaching a per capita figure of \$2,116 (as against \$242 in World War I), and entailing an annual interest charge of \$4,500,000,000, or more than the total cost of the government in 1932. Government receipts for the fiscal year were estimated at \$41,000,000,000, and the deficit at approximately the same figure. Between 1942 and 1945 the treasury had raised \$135,000,000,000 in six war bond issues. The Seventh War Loan (May-June 1945) called for \$14,000,000,000 and was oversubscribed by 75%; the eighth, or Victory Loan (Nov.-Dec. 1945), asked for \$11,000,000,000, and on the fourth anniversary of Pearl Harbor it passed the goal with subscriptions of \$12,470,000,000. When the final figures were in at the close of the year it was found that the Victory Loan had yielded \$21,144,000,000, or 192% of the quota; while sales to individuals, which had lagged in the earlier part of the drive, eventually reached \$6,776,000,000, or 169% of the quota.

President Roosevelt had recommended that no change be made in the tax structure; but when the end of hostilities came in August there was a public demand for the lightening of the tax burden, especially on people in the lower brackets. Accordingly, the house sent to the senate early in October a bill calling for

SALUTE to the victorious armed forces of the United States portrayed in "H.R.H." by Jerry Costello of the *Knickerbocker News* (Albany, N.Y.) in 1945

a tax cut of \$5,350,000,000, thereby eliminating from the rolls about 12,000,000 tax payers. Surtaxes were lowered 4%, corporation and excess profits taxes were reduced from 85.5% to 60%, and an over-all cut of 10% was allowed on all incomes. The bill as finally passed carried a reduction of some \$5,930,000,000, abolishing the excess profits tax. Many believed that it was unwise, in view of the enormous debt, to reduce taxes at this time, especially since they were a check on inflation by drawing off some of the swollen savings of people of the U.S., estimated at more than \$125,000,000,000.

A novel suggestion was made by Senator James E. Murray of Montana to the effect that a supplementary budget be prepared to relieve unemployment. When from a nation-wide report on the conditions of labour it should appear that the jobs available were inadequate to furnish a satisfactory standard of living, the federal government should supply the deficiency by the creation of public works programs. Altogether the 13 Roosevelt budgets had totalled \$461,000,000,000, a sum almost four times as large as the combined budgets of all his 30 predecessors in office. (See also BANKING; BUDGET, NATIONAL; BUSINESS REVIEW; DEBT, NATIONAL; INCOME AND PRODUCT, U.S.; PRICES; STOCKS AND BONDS; TAXATION; WEALTH AND INCOME, U.S. DISTRIBUTION OF.)

**The Presidential Succession.**—On the afternoon of April 12 President Roosevelt died suddenly of a cerebral haemorrhage while on a brief vacation at Warm Springs, Ga. He was the seventh president to die in office, all of them except Taylor and Harding in the first few months of the term for which they had been elected. Vice-President Harry S. Truman was presiding over a session of the senate when the news of the president's death reached Washington, and early the same evening he was sworn into office by Chief Justice Stone. An act of congress in 1792 had prescribed that in case of the vacancy of the offices of

both president and vice-president through death, resignation or inability to perform their duties the presidency should devolve first upon the president pro tem of the senate and then upon the speaker of the house. But since either or both of these officials might be of the antiadministration party or faction (as was the case when President Johnson was impeached in 1868), a new act of 1886 fixed the succession in the members of the cabinet in the order of the creation of their departments by congress. But again, since the president appoints the members of his cabinet, the act of 1886 obviously gives him the power to name his own successor when there is no vice-president (as was the case in 1945).

Fortunately, there had been no occasion in U.S. history to invoke either the act of 1792 or that of 1886; but the greater risk taken by the presidents in later days in long journeys across the continent or overseas revived the question of the presidential succession.

Various schemes were proposed, such as the reconvening of the electoral colleges to choose a new vice-president whenever that office becomes vacant, or the election of a vice-president by the senate (*see* Const. Amendment XII) or by a joint ballot of the two houses of congress.

**Industry.**—Three major problems faced U.S. industry in the year 1945: namely, the relation of business to the government, to the community and to labour. These three were not separate problems, but rather diverse aspects of the same problem of the conversion of the war industry to civilian production. The relation of business to labour shall be treated in the next section. Here note is taken of its relation to the government and to the consumer. The government was the greatest business corporation in the country. It owned 20% of the industrial plants, representing an investment of more than \$15,000,000,000 and producing war material to the amount of \$50,000,000,000 a year. And its control over the operation and production of private plants through the government agencies of the Office of War Mobilization and Reconversion, the War Labor board and the War Manpower commission was extensive. Accepting such control as an emergency war policy, industry became impatient when V-E day and V-J day arrived to resume its normal amount of freedom from government "interference" or "dictation," and to step up civilian production.

With cutbacks of billions of dollars in war contracts the way seemed open to industry to reconvert its plants for peacetime operation without government control of manpower, materials or products.

The consuming public too was eager for the lifting of restrictions on the production of civilian goods. With a vast accumulation of savings due to high wages, it was ready to spend lavishly for automobiles, radios, refrigerators, ranges, vacuum cleaners and scores of other luxuries and conveniences of which it had been deprived for many months. Despite sabotage by black markets, the Office of Price Administration had done a job in keeping prices to a rise of a little more than 30% after the beginning of the war, as against a rise of 107% in the period immediately following World War I. Only four months after V-J day the reconversion of industry had proceeded at a rapid rate, and the figures of unemployment were far below the pessimistic anticipations of the government forecasts. One by one commodities were removed from the rationed lists until by the end of the year sugar alone remained rationed, though the public was warned that shortages in many other lines would require continued moderation in buying.

**Labour.**—The greatest hindrance to the progress of industrial reconversion came from the persistent strife between management and labour, waged chiefly over the demands of labour for higher wages. When the war was over labour felt itself relieved

from the no-strike pledge given immediately after Pearl Harbor, but even then occasionally violated. Profiting by the favourable legislation of the New Deal, the two great labour organizations, the American Federation of Labor and the Congress of Industrial Organizations, had attained a membership close to 14,000,000 and, well supplied with funds, were prepared to fight for the retention of the high wages which they had enjoyed during the war. They saw the possibility of an inflated labour market in the new millions of job seekers who would be released by the demobilization of the armed forces and the discharge of many government agencies. They saw in the curtailment of working hours and the consequent stoppage of overtime pay a threat to the "take-home" wages they had been receiving, and at the same time they maintained that the cost of living had risen some 20% higher than the government statistics showed.

During the entire year there were strikes and threats of strikes in one industry after another, accompanied by futile attempts at settlement either by conferences between management and labour or by coercive measures on the part of the government. When John L. Lewis, head of the United Mine Workers, presented 21 demands (including a royalty of 10 cents a ton on all soft coal mined) and the miners supported him by an eight to one vote to strike unless a satisfactory contract were signed to replace the one which was to expire on March 31, and 72,000 hard coal miners quit work in April, causing a loss of 1,000,000 tons of coal a week, the situation was so serious that Secretary Ickes advocated government operation of the mines. On March 28 Eric Johnston, president of the American Chamber of Commerce, joined with William Green of the A.F. of L. and Philip Murray of the C.I.O. in publishing a proposed labour-management code, which was hailed as an expression of good will, but failed to be implemented by conciliatory measures. A bill of May 27, sponsored by senators Joseph H. Ball, Harold H. Burton, Carl A. Hatch, and Lister Hill (the B<sub>2</sub>H<sub>2</sub> bill), proposed a drastic revision of the Wagner act of 1935, called the Magna Carta of labour. The B<sub>2</sub>H<sub>2</sub> bill would bar strikes and make arbitration compulsory in all public utilities and services, such as coal, oil, electricity; it would apply the sanctions of the Wagner act to unions as well as to management; and would allow the closed shop only if 60% of a 75% union membership in the plant asked for it. Both the great labour organizations quite naturally opposed this Federal Industrial Relations bill, especially the provision for compulsory arbitration which they declared robbed them of their only effective weapon, the right to strike which was guaranteed to them in the Smith-Connally act which empowered the National Labor Relations board to conduct strike votes. Little had been done to carry out the recommendation of President Roosevelt in his budget message at the beginning of the year to make U.S. administrative machinery adequate for the adjustment of labour disputes which were bound to come in the reconversion period. Jurisdictional conflicts were not confined to the unions, but characterized the overlapping agencies of the government (the NLRB, the WMC, the United States Employment service, the WLB, the Conciliation service) as well. The new secretary of labour, Lewis B. Schwellenbach of Washington, was eager to merge a number of agencies concerned with labour (the WPB, the USES, the WMC) into his department.

Hardly a day passed in the autumn of 1945 without the notice in the press of new demands of labour for increased wages and new rejections of the same by the big industries. One after another, like a house of falling cards, came news of strikes or warnings of strikes in the auto industry, steel, oil, coal, lumber, traction, radio, telephone, telegraph, packing houses, building trades, electrical service, and so on. In the three months from October through December the NLRB conducted as many strike

votes under the Wagner act as it had done in the first two years of the law. President Truman called a labour-management conference at Washington on Nov. 5, but it failed to bring the disputants any nearer together. In December he appointed a fact-finding commission of three men to investigate the claims of labour and the ability of industry to meet such claims; but since congress failed to give the commission power of subpoena, neither labour nor management was legally bound to furnish the commission with the "facts" which it sought. The most dramatic of the labour-management contests was that between the General Motors corporation and the United Automobile Workers (the largest union of the C.I.O.), which began on Nov. 21 with the walkout of 180,000 G.M. workers on the refusal of the company to grant a 30% raise in wages. In the closing weeks of the year the dispute developed far beyond the question of reaching a compromise on the percentage of wage increase into a bitter controversy over the "freedom" of industry. Repeated conferences between the union officials and the G.M. representatives served only to strengthen each side in its determination to win. Walter Reuther of the U.A.W. insisted that the company could afford to pay the 30% increase (it had offered 10%) without raising the price of its products. He accused it of being under the control of economic reactionaries in Wall street and charged it with a plot to "smash the unions." The company, on the other hand, denied the union (and the government too) the competence to decide on its capacity to pay or the right to infringe on the management's responsibility for the determination of costs, prices, wages, profits and investments. It would tolerate no "fishing" expedition into its accounts. In a large type half-page advertisement published on Dec. 31 by President C. E. Wilson and Chairman A. P. Sloan, and entitled "Here is the Issue," G.M. declared that if business were to surrender responsibility for its management to any government agency or labour union it would mean "the death of the American system of competitive enterprise." General Motors, they said, would not assume the role of initiating such a policy. When the year 1946 came in the prospects for industrial peace were dim indeed. Nearly 400,000 workers were already on strike, and strike votes had been held or were ordered which would add more than 2,000,000 to the number of idle workers in the first month of the new year. With the most elaborate machinery in U.S. history for the settlement of labour disputes the government and the people seemed powerless to achieve industrial peace. (See also AMERICAN FEDERATION OF LABOR; CONGRESS OF INDUSTRIAL ORGANIZATIONS; EMPLOYMENT; LABOUR UNIONS; RELIEF; SOCIAL SECURITY; STRIKES AND LOCK-OUTS; WAGES AND HOURS.)

**Transportation.**—With an ever increasing load of business put upon them in the year 1945 the railroads maintained their reputation for efficient operation which they had earned throughout the war. Fortunately, they were spared the labour conflicts which hampered so many industries, but they were embarrassed by the inadequacy of materials allotted to them by the WPB for the construction of new rolling stock, and by the transfer of about 300,000 of their 1,600,000 workers to the armed forces. All through the year the strain on the roads was heavy, with the need to transport great numbers of soldiers and sailors to and from camps and embarkation ports and to carry millions of tons of supplies to be shipped abroad. But it was after V-E day and V-J day that the severest test came, when each month brought increasing numbers of men back from the battle areas, either to be mustered out of service or to be redeployed. For example, it was planned after V-E day to bring 3,110,000 men from the continent of Europe to be sent across the U.S. for embarkation for the Pacific area. And after V-J day the ports on the western coast began to be crowded with service men

FUNERAL CORTEGE accompanying the body of President Franklin Delano Roosevelt to the White House for services on April 14, 1945

seeking transportation eastward. Yet the seven transcontinental lines available had long stretches of single track which had to serve for two-way freight and passenger traffic. Office of Defense Transportation chief, J. Monroe Johnson, asked the public to refrain from unnecessary travel by rail, and when the jam was at its worst accommodations on sleeping cars were denied for trips under 450 mi. Toward the close of the year the railroads purchased the Pullman cars, which had always been owned by the company and rented to the roads.

The end of the year found the United States in possession of by far the largest merchant fleet in the world. After Jan. 1942 the merchant marine had increased 400%, from 6,800,000 to 27,000,000 tons, at an expense of \$18,000,000,000. More than 60% of the Allied tonnage was represented by U.S. ships in 1945, as against 17% in the decade 1930-40. For the United States to use its supremacy in merchant ships in an attempt to monopolize world trade would be to repudiate the United States repeated endorsement of the right of all nations to access to the world's markets and sources of raw materials. At the close of World War I millions of dollars worth of merchant ships were sold for a song or tied up to rust and rot in river basins. Some way had to be found to avert another such sacrifice.

Though the needs of the army and navy came first in the construction of planes so long as the termination of the war was uncertain, civil aviation made important gains in 1945. Travel by air, as well as by rail and ship, was limited by strict priorities; but with the coming of peace and the reconversion of the aeroplane factories plans were made for a great expansion of civilian aviation. Whereas in 1940 the average speed of the civilian plane had been 140 mi. an hour and the carrying capacity 20 passengers, planes were designed to carry from 60 to 100 passengers at the rate of more than 300 mi. an hour, and the flight time from New York to London was cut from 23 to 11½ hours, to Rome from 30 to 14½ hours and to Bombay

from 58 to 30 hours. Work was begun on the Idlewild airport on Jamaica bay, L.I., which was expected to make it the "air hub of the world" with arrivals and departures of more than 1,100 a day by the year 1950. Two remarkable feats of the year were the nonstop flight of the B-29 Superfortress "Dreamboat" on Nov. 21 from Guam to Washington, 8,193 mi. in 35 hours and 5 minutes, and the cross-country flight of the same plane on Dec. 12 from Burbank, Calif., to Floyd Bennett field in 5 hours and 28 minutes. There was some uneasiness among foreign nations, especially Great Britain, lest the United States gain a monopoly of the air routes of the world, and negotiations were entered upon between Washington and London for the "rationing" of air traffic. (See also AVIATION, CIVIL; RAILROADS.)

**Agriculture.**—In 1945 the United States had 6,100,000 farms, 4,300,000 of them between 50 and 175 ac. President Roosevelt's budget message of Jan. 9 allotted \$512,000,000 for the agricultural agencies and the government was pledged to support farm prices for two years following the war. Though handicapped by shortages in harvest labourers, mechanical equipment, storage space and transportation facilities, the farms, ranges, orchards and dairies not only produced immense quantities of food for shipment abroad, but provided the people at home with a standard of living unequalled in any other country of the world. The farm income reached the highest figure in more than a score of years, nearly five times the meagre \$4,000,000,000 of 1932. The department of agriculture's estimate of 1,085,000,000 bu. of wheat and 3,250,000,000 bu. of corn was surpassed, and the yield of vegetables and fruits was far above the 1934-44 averages. The new secretary of agriculture Clinton P. Anderson of New Mexico, gave a roseate picture of the food

situation for 1946 in an address in New York on Dec. 6. He predicted that the meat supply, for example, would exceed 6,000,000,000 lb. in the first quarter of 1946, and that, after satisfying the demands of U.S. foreign commitments, such as feeding U.S. occupation troops abroad and U.N.R.R.A. relief, there would be left a per capita balance of 150 lb. To be sure, there were shortages in one commodity or another throughout the year, leading to black market operations and frequent complaint against the OPA for maintaining ceiling prices; but the hardships imposed on the U.S. people were as dust in the balance compared with the acute suffering among other peoples of the world.

**Housing.**—Next to food the most indispensable need of a people is shelter. From the beginning to the end of the year 1945 the problem of adequate housing appeared as a "must" item in the presidential messages to congress. The high cost of labour and materials had virtually put a stop to the building of homes within the purchasing power of the great majority of U.S. citizens. Hundreds of thousands of families were being added to the population yearly, and more than 1,000,000 people were living in "doubled up" quarters. Hotels were crowded to the roof and apartments were sought for in vain. President Truman in his address of Jan. 3, 1946, to the nation declared that no less than 5,000,000 new homes were necessary to provide adequate housing for the people. The situation was aggravated by the return to civil life of the servicemen from overseas and the discharge of hundreds of thousands of workers from the liquidated government agencies. The impatience of the soldiers to get home after the fighting was over in Europe and the Pacific was encouraged by pressure put by their families on the government for reduction of the points necessary for mustering out. By the end of the year U.S. troops of occupation in Germany, the Philippines and other lands were staging hostile demonstrations against the war department for keeping them in the service while the jobs which they wanted at home would be snapped up before they had a chance to compete, and every month that passed seemed to reduce their prospects of finding a living place. The government meanwhile was making an effort to accommodate the ever increasing number of returning servicemen by converting barracks and camps into temporary living quarters and plans were being made for the construction of low-cost homes to relieve the housing congestion. Much remained to be done in clearing the slums of the cities and improving living conditions in the rural areas, where 4,700,000 of the houses still had no electric light and 5,500,000 no running water.

**Social Security.**—The Wagner-Murray-Dingell bill proposed early in 1945, and pending during the year, contained drastic amendments to the Social Security act of 1934, which President Roosevelt had called the most important legislation of the New Deal. It advocated a ten-year program of federal grants and loans to hospitals, sanitariums and health centres, with the government paying up to 50% of the costs according to the ability of the states; the extension of security benefits to 15,000,000 agricultural labourers, domestic servants, seamen and employees of nonprofitmaking institutions; increased aid to the blind, the aged and dependent mothers and children; credit for military service on insurance coverage; and an increase of contribution to 4% from employer and employee. In a message to congress on July 5, President Truman urged the increase of benefit payments to a uniform upper limit of \$25 a week and the extension of payments to 26 weeks in any one year. He also advocated the coverage of 3,000,000 federal employees. Organized labour was heartily in favour of the enlarged social security program, estimating that with 2,000,000 men demobilized and 4,500,000 losing jobs in war plants, the unemployed would

"THE PASSENGERS ARE BEGINNING TO SIT BACK AND RELAX." Darling of the *New York Herald Tribune* recorded some early changes in public sentiment following Truman's accession to the presidency in April 1945

reach the number of 6,000,000 in 1946. The government's estimate of 2,500,000 unemployed seemed to be better justified by the beginning of 1946.

**Latin America.**—Important events of the year 1945 contributed to the solidarity of the American republics. A meeting of the foreign ministers at Mexico City in March resulted in the Act of Chapultepec, which guaranteed the political independence and territorial inviolability of the American states, barred war criminals and axis influence, and established procedure by which hostile acts or threats might be met with force. In December plans were announced for a special conference of all the American republics at Rio de Janeiro in March 1946, to incorporate the proposals of Chapultepec in a treaty. A second event was a proposal by Uruguay on Nov. 28 that collective action be taken against any nation in the western hemisphere that denied to its citizens essential rights or defaulted on its international obligations—a proposal aimed obviously at Argentina and approved both by Secretary of State Byrnes and U.S. ambassador to Argentina, Spruille Braden. Argentina continued to be the obstructionist to the harmony of the American republics. Ever since the coup d'état of Gen. Edelmiro Farrell and Juan Perón had established the government of the "colonels" at Buenos Aires in the summer of 1943, and secured control of the army, the police and the influential press, the country had been virtually a satellite of the axis. It was but a third the size of Brazil (which had wholeheartedly supported the Allies) and contained but a tenth of the population of South America; but, with one-half the railroad mileage and one-half the trade of the continent, and with a larger proportion of white inhabitants than even the United States had, it was the most influential of the Latin American countries. Ambassador Braden was convinced that a majority of the population of Argentina was in favour of republican government and a good understanding with the democracies; but they were repressed by the gestapo methods of the colonels. However, at the eleventh hour Argentina declared war on the nazis on March 27, 1945, in order to gain a seat at the San Francisco conference, and a coalition party was expected to contest the election of Perón to the presidency in the poll scheduled for Feb. 24, 1946.

**International Affairs.**—During the year 1945 several important international conferences were held, some between the chiefs of state and some between the foreign ministers. In all of them the United States was represented. At a meeting between Roosevelt, Churchill and Stalin at Yalta on the Black sea in February plans were discussed for the most effective co-operation of the Allies in bringing about the unconditional surrender of Germany and the treatment of that country in respect to occupation and reparations when the victory should be won. On his return from Yalta President Roosevelt addressed the nation (March 1), reporting the close accord of the Allies and declaring, "this time we are not making the mistake of waiting until the end of the war to set up the machinery of peace." Four days later the governments of the United States, Great Britain and Russia, with the concurrence of China, issued invitations to 39 nations (later increased to 51) to attend a United Nations conference at San Francisco to draft a Security charter on the basis of the Dumbarton Oaks proposals of Oct. 1944. The president died (April 12) two weeks before the opening of the San Francisco conference; and before the conference had finished its work Germany surrendered (May 8). On July 28 the senate ratified the Security charter by a vote of 89 to 2, and on Oct. 24 Secretary Byrnes announced that the soviet union had deposited the last of the 29 ratifications necessary to give the charter the force of law—"a memorable day," the secretary said, "for the peace-loving peoples of all nations." Meeting at Potsdam (Berlin) in July, President Truman, Prime

THE NEW FLAG for the president of the United States which was first shown in Oct. 1945. It differs from the previous presidential flag in that the white star in each corner has been eliminated, and the eagle faces right, toward the olive branch of peace, held in the right talon

Minister Attlee and Stalin agreed to the division of Germany into four zones of occupation by the United States, Great Britain, Russia and France, and provided for periodical conferences of the foreign ministers of those powers and China. The first of such meetings at London in September ended in a deadlock between Russia and the western powers, but a second meeting at Moscow late in December resulted in encouraging agreements on all points discussed, including the European treaties, the far east, and the reference of the control of atomic energy to a proper commission of the United Nations. On Dec. 5 the U.S. senate passed the United Nations Participation act by a vote of 65 to 7, after defeating amendments to prevent the Security council from pledging U.S. military aid against an aggressor without the senate's authorization in the form of a treaty. With the United States a full participant in the Security council, the assembly, the Economic council and the International Court of the United Nations, a relapse into the isolationism of the 1920s seemed well nigh impossible. President Truman appointed Secretary Byrnes, Edward R. Stettinius, Senators Tom Connally and Arthur H. Vandenberg, and Mrs. Franklin Roosevelt as the U.S. delegates to the U.N.O., whose opening in London was scheduled for Jan. 10, 1946. The prophetic words of Theodore Roosevelt 40 years previously were now fulfilled: "The question is no longer whether the United States shall play a great part in world affairs, but whether it shall play that part well or ill." (See also BERLIN CONFERENCE; INTER-AMERICAN CONFERENCE ON PROBLEMS OF WAR AND PEACE; MOSCOW CONFERENCE OF FOREIGN MINISTERS; RECONSTRUCTION PLANNING; UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION; UNITED NATIONS MONETARY AND FINANCIAL PROGRAM; YALTA CONFERENCE.)

*Foreign Trade*.—In September the U.S. department of commerce resumed publication of its monthly summary of U.S. foreign commerce, which had been interrupted on Oct. 31, 1941, by World War II. Table I shows U.S. foreign trade in merchandise by continents (1941-42) and Table II shows U.S. imports and exports of merchandise (1932-42).

For such information as was available in 1945, see BUSINESS REVIEW; EXPORT-IMPORT BANK OF WASHINGTON; FOREIGN ECONOMIC ADMINISTRATION; INTERNATIONAL TRADE.

*Communication*.—For statistics, see the articles AIR TRANSPORT COMMAND; AVIATION, CIVIL; CANALS AND INLAND WATERWAYS; ELECTRIC TRANSPORTATION; MOTOR TRANSPORTATION; POST OFFICE; RADIO; RAILROADS; ROADS AND HIGHWAYS; SHIPBUILDING; SHIPPING, MERCHANT MARINE; TELEGRAPHY; TELEPHONE; TELEVISION.

*Agriculture*.—Statistical material pertaining to this subject may be found under AGRICULTURE; also in the articles on separate crops and agricultural products.

*Mineral Production*.—Preliminary estimates prepared by the U.S. bureau of mines valued the 1945 mineral production in the U.S. and Alaska at \$8,067,000,000. This represented a decrease of 4.6% from the 1944 all-time high of \$8,452,000,000, resulting largely from a 19% decline in the output of metals, which was due to lessened military demands. The other two major classes of mineral products, mineral fuels and nonmetallic minerals, both showed an increase in production in 1945. Studies by mining engineers and geologists of the department of the interior revealed the advanced stage of depletion of many of the important mineral reserves of the U.S.

Table III.—Leading Mineral Products of the U.S., 1944 and 1943

Mineral	Value, 1944	Value, 1943
Petroleum	\$2,030,500,000	\$1,812,560,000

**U.S. Investments Abroad.** The role of the government in the export of U.S. capital to foreign countries, already enhanced by World War II developments, became even more prominent in 1945. With the complete termination of lend-lease after V-J day, the government began extending large credits to foreign countries to finance the import of essential materials from the United States, and the groundwork was completed for a continued outflow of official capital in the postwar period.

Among events of importance the first in order of time was

Table I.—U.S. Foreign Trade in Merchandise, by Continents, 1941 and 1942

imports	217,647,032	1,116,331,376	337,542,405	638,941,492	203,564,528	230,834,690

the signing of agreements with certain lend-lease countries early in the year providing for a continued flow of lend-lease goods on a credit basis, in the event of the termination of the war. In the principal case, France, the terms were to be 20% cash, the balance payable over a 30-year period with interest at 2.375%. These agreements covered only goods in the "pipelines" on V-J day; goods requisitioned under lend-lease but not contracted for on V-J day were, in some instances, being financed with Export-Import bank loans on the same terms.

On July 31, 1945, President Truman signed a bill expanding the lending power of the Export-Import bank to \$3,500,000,000, thus putting the bank in a position to make large loans to meet the needs of the transition period, particularly until the International Bank for Reconstruction and Development began to function. At the end of 1945, the bank had outstanding loans or guarantees of \$252,000,000; an additional amount of \$1,308,000,000 had been committed but not yet disbursed. New loans announced in the last half of the year included \$20,000,000 to Denmark, \$50,000,000 to Norway, \$50,000,000 to the Netherlands, \$100,000,000 to Belgium and \$550,000,000 to France.

Agreements with Great Britain announced Dec. 6 provided for extensions of credit totalling \$4,400,000,000, repayable over a 50-year period beginning in 1951, with interest at 2% beginning in that year. Of the total, \$650,000,000 covered lend-lease and surplus property settlement. This credit was within the power of the administration to grant and did not require congressional ratification. The agreement for a new credit of \$3,750,000,000 awaited congressional action at the year's end with strongly divided opinion on the subject in evidence.

The United States ratified the Bretton Woods agreements during 1945 and by the end of the year a sufficient number of countries, including France and Great Britain but excluding Russia, had ratified to ensure the inauguration of the International Bank for Reconstruction and Development and the International Monetary fund in 1946. The existence of these institutions, especially the bank, encouraged and facilitated the investment of private U.S. capital abroad, a development in line with the official policy of the United States administration in this field.

There were no significant changes in private U.S. investments abroad during 1945 except, of course, the restoration to their owners of a large amount of property in formerly enemy-occupied areas. The only new adjustment plan for defaulted bonds offered was that of the province of Alberta, Canada, which paid up its defaulted maturities and issued new bonds at lower interest rates in exchange for unmatured securities. After 1936 the province had been in default on principal payments and had been paying only 50% of the interest due on most of its outstanding bonds.

About \$95,000,000 of new Canadian issues were floated in the United States market in 1945, almost entirely in connection with refunding operations. On the other hand, the dominion government called for redemption prior to maturity, bonds having a par value of \$155,000,000 at premiums of 3% and 4%, evidence of the favourable fiscal position of the Canadian government and of a favourable exchange situation. The latter arose partly out of continued purchases of Canadian outstanding securities by U.S. investors in the open market. According to official Canadian statistics, such purchases amounted to \$134,000,000 (Canadian dollars) net during the first nine months of 1945, as compared with \$90,000,000 (Canadian) during the entire year of 1944.

The kingdom of the Netherlands was the only other country to raise a large amount of capital from private United States sources during 1945. In February it was announced that a line of credit of \$100,000,000 had been secured from a group of

Sources: American Direct Investments in Foreign Countries, U.S. Department of Commerce, 1942; The Balance of International Payments of the United States in 1940, U.S. Department of Commerce, 1941; "Status of United States Investments in Foreign Dollar Bonds, End of 1940," in *Foreign Commerce Weekly*, July 19, 1941, p. 3; "U.S. Investments in Foreign Dollar Bonds," in *Foreign Commerce Weekly*, Sept. 26, 1942, p. 8; *Bulletin of the Treasury Department*, March 1941.

New York banks, running for three years with interest at 1.5%. The unwillingness of the private capital market to engage in large-scale credit operations with foreign countries other than Canada was evidenced by the fact that the Dutch had to pledge gold to the full amount of the credit obtained.

The repatriation by the Spanish government of the telephone system of that country formerly owned by the International Telephone and Telegraph corporation was the largest single direct-investment transaction of the year. In part payment for these properties the company accepted \$50,000,000 in 4% bonds which were to be amortized over a period of 16 years.

According to a release of the department of commerce during the year United States investments abroad were valued at \$11,100,000,000 in Sept. 1944. This total was not significantly different from that at the end of 1940, as shown in detail in the accompanying table. No more recent statistics on a detailed basis had been published up to the end of 1945.

Total income from U.S. investments abroad was estimated by the department of commerce at \$516,000,000 in 1945, only about 15% below the prewar (1940) figure. Wartime prosperity brought increased earnings to U.S.-controlled companies in the western hemisphere, thus serving to maintain income receipts on a high level despite enemy control of many countries where large U.S. investments existed.

Two reciprocal tax conventions were concluded during the year. One with Great Britain was submitted to the senate but not ratified; the other with the Union of South Africa was not submitted for ratification (Jan. 1, 1946). The British treaty was most important, involving as it did the two principal capital-investing nations of the world. It was to have the effect of eliminating the existing high burden of double taxation on income received from one of the two countries by a resident of the other. Moreover, it was open to adherence by all parts of the British empire except the self-governing dominions. The treaty, if ratified, was to be an effective step in encouraging the investment of additional private U.S. capital abroad. (See also UNITED NATIONS MONETARY AND FINANCIAL PROGRAM.)

**Uranium:** see ATOMIC BOMB; CHEMISTRY; METALLURGY.

**Urology.** During 1945 the increased importance of antibiotic agents in combating infection in the genito-urinary tract was amply demonstrated. Particular reference is made to penicillin and streptomycin. Penicillin was in 1945 being produced in tremendous quantities, and as a result, it became widely available and at a reasonable cost. The generally accepted method of administration of penicillin was by intermittent intramuscular injection. A simpler method of application was employed by combining penicillin with a solution of beeswax and peanut oil. A single intramuscular injection of this preparation would sustain a high level of penicillin in the blood for from 24 to 48 hours. Oral administration of penicillin was tried with a variable degree of success. It should be emphasized that self-administration of these antibiotic agents is inadvisable. Careful supervision by a physician is essential to their successful employment.

The other antibiotic agent which was used with success in combating infection during 1945 was streptomycin. Preliminary clinical use showed that streptomycin was of particular value in that it affected bacteria against which penicillin was not of value. This is true particularly in infections with certain gram-negative bacilli. Streptomycin was found to have almost a specific effect against infection of the genito-urinary tract with *Proteus ammoniae*. Heretofore, urinary infections with this organism were difficult to control, but streptomycin eliminated it from the urine in many cases when nothing else could. Streptomycin was also of value in treating urinary infection with other forms of gram-negative bacilli, such as *Aerobacter aerogenes*. It was not quite as efficient in the elimination of *Escherichia coli*.

Of particular interest was the effect of streptomycin on infections in the urinary tract with *Mycobacterium tuberculosis*. It was shown in several cases that it has a distinctly deterrent action on the activity of this bacillus. In a few cases of renal tuberculosis in which it was administered, it temporarily eliminated this organism from the urine. Unfortunately, the quantities of this antibiotic agent which were produced in 1945 were so limited that its clinical application was insufficient to make final conclusions. Thus far the workers with this preparation emphasized that patients should not abandon accepted methods of treatment for tuberculosis.

Although it had long been known that dysfunction of the muscles of the neck of the bladder would often be the cause of a variable degree of urinary obstruction, the importance of transurethral removal of the obstructing tissue was not fully appreciated as applied to patients with paralysis of the bladder following injury to the spinal cord. During World War II many soldiers suffered from spinal injuries of this type which caused paralysis of the bladder. As a result atrophy of the muscles of the bladder developed, together with spastic dysfunction of the muscles at the neck of the bladder, and urinary retention resulted. Following wide transurethral resection of the obstructing tissue at the neck of the bladder, many of these patients who were unable to empty the bladder without the use of a catheter had the function of this organ restored to normal. This method of treatment, together with orthopaedic care and physical therapy, proved to be of great benefit to the hundreds of unfortunate persons who were so afflicted. (W. F. Br.)

**Uruguay.** A republic in the southeastern part of South America, bounded by the Atlantic on the east, the Rio

de la Plata on the south, Argentina on the west and Brazil on the north. Area, 72,172 sq.mi. (the smallest of any South American republic); pop. est., Jan. 1, 1943, 2,202,936; pop. density, 30.28 per sq.mi. Racial distribution was estimated at 90% white and most of the rest mestizo. The capital and chief port is Montevideo (1943 pop. est., 708,233); other important cities with 1942 pop. est. are Paysandú (46,000), Salto (46,000), Minas (32,000), Mercedes (30,000), San José (30,000), Durazno (27,000), Santa Lucía (27,000), Rocha (25,000). Uruguay is a unitary republic headed by a popularly elected president and with the congress and cabinet filled on a basis of proportional representation. The chamber of deputies has 99 members and the senate 30. President in 1945: Juan José Amézcaga.

**History.**—Development in 1945 continued to be influenced largely by Uruguay's location between Argentina and Brazil. The General Workers' Union (U.G.T.) held a 15-min. general strike Jan. 9 in protest against the Argentine regime. Foreign Minister Eduardo Rodríguez Larreta on Nov. 22 proposed, supposedly with Argentina in mind, that the principle of collective intervention be adopted in case of "the notorious and repeated violation by any republic of the elementary rights of man and of the citizen"; the suggestion aroused great interest elsewhere in the hemisphere and several other foreign ministries gave qualified endorsement, most notably U.S. Secretary of State James F. Byrnes on Nov. 27. The Uruguayan congress on Feb. 21 approved a war declaration against Germany and Japan; Juan Carlos Blanco, ambassador to the U.S., signed the United Nations pact on Feb. 24. The Uruguayan delegation at the Mexico City inter-American conference in Feb.-March took a leading role in urging a plan for a pact of peace and mutual guarantees. A newly formed Latin Republican union urged at Montevideo on March 22 that democratic governments be established in Italy, Spain, France and Portugal. A serious diplomatic crisis developed with Spain late in September. Serious labour unrest, accompanied by strikes, prevailed in September, caused by the high cost of living.

**Education and Religion.**—Statistics for 1942 showed 220,833 pupils enrolled in 1,768 primary schools, 27,000 in 98 intermediate schools and 2,670 in the one university. The predominant religion is Roman Catholicism.

**Finance.**—The monetary unit is the peso, valued in Dec. 1945 at 52.63 cents U.S. Government revenues in the first nine months of 1945 increased 26.5% over the corresponding period in 1944; expenditures increased 15.9%. The government reduced its floating debt in 1944 by more than 23,000,000 pesos but deficit spending continued for the sixth successive year and caused serious concern in business and financial circles. Presence of large amounts of foreign capital resulted in the large total of 8,471,000 pesos in Montevideo building permits in the first quarter of 1945, a gain of 93.6% over the same period in 1944; total Montevideo building permits in 1945 were 25,853,000 pesos as against 14,423,000 in 1944. Public works expenditures in the first quarter of 1945 totalled 14,888,000 pesos as against 11,245,000 in the same period of 1944. With prices continuing to increase in 1945, the government's anti-inflation program, led by the Bank of the Republic, involved the issuing of monetary defense bonds against deposits; the government imposed an excess profits tax but rejected an income tax. Export-Import bank dealings with Uruguay, as of June 15, 1945, involved total commitments of \$32,100,000, including an undisbursed balance of \$25,000,000.

**Trade and Communication.**—Large wool exports in the crop year ending Sept. 30, 1945, led to the expectation that the calendar year might show a record foreign trade total. Exports for the first eight months of 1945 totalled \$90,529,899 and imports \$59,510,867, a favourable trade balance of \$31,019,032. Exports for 1944 were valued at \$97,558,653 (1943: \$100,021,697) and imports at \$72,446,471 (1943: \$63,807,357). Trade in 1944 showed large gains with Uruguay's South American neighbours;

Sweden and South Africa also notably increased their proportion of trade with Uruguay. U.S. purchases of Uruguayan wool were 85% of the total in the year ending Sept. 30, 1945, and amounted to 201,826 bales of 420 kg.; this figure represented a 60% increase over the preceding year. New purchases of Uruguayan wool in 1944-45 included France, Belgium, the Netherlands, Norway, Spain and Switzerland. Wool prospects for 1945-46 were regarded as favourable.

The government's five-year public works program contemplated large expenditures for highway construction and improvement. Highways and railway mileage were listed in 1945 as 8,514 and 1,810 respectively.

**Agriculture.**—Wheat and linseed acreages were increased in 1945 over 1944; production was uncertain because of a bad threat from locusts. About 45% of the 1945 summer (Nov.-Jan.) potato crop was lost because of cryptogamic disease (tuber rot) and insect attacks; 23,736 ac. had been planted and the estimated 1945 crop was 20,000 metric tons as against 56,593 tons in 1944; the annual consumption is between 60,000 and 70,000 tons. Production of hides and skins in the first half of 1945 included 434,858 cattle, 30,179 calf and 489,194 sheep and lamb.

(R. H. FN.)

**U.S.O.:** see UNITED SERVICE ORGANIZATIONS.

**U.S.S.R.:** see UNION OF SOVIET SOCIALIST REPUBLICS.

**Utah.** A Rocky mountain state, admitted to the union in 1896, popularly known as the "Beehive state." Area 84,916 sq.mi. (82,346 sq.mi. land; 2,570 sq.mi. water); pop. (Dec. 1, 1945) 620,000; (U.S. census 1940) 550,310. The rural (nonfarm) population was 150,465 in 1940; (farm) 94,352; urban 305,493; with the following origins: white (native) 510,662; (foreign-born) 32,298; Negro (native) 1,225; (foreign-born) 10. Farm population decreased considerably after 1940, and urban population increased about 13%, because of war conditions. Capital, Salt Lake City (pop. est. 1945, 176,000). Other principal cities with 1945 est. pop.: Ogden (66,000), Provo (23,500) and Logan (12,000). In 1944 the Mormon Church gave its membership total as 917,715, about one-half in Utah.

**History.**—In 1945 the administration of the Democratic governor Herbert B. Maw, co-operated with federal authorities in essential war measures, while aiding business and industrial interests in the expansion of manufacturing, mining and metallurgical and transportation industries which were stimulated by war exigencies.

In 1945 E. E. Monson continued as secretary of state; Ferrell H. Adams was auditor; Reese M. Reese, treasurer; Grover A. Giles, attorney-general; and Dr. E. Allen Bateman, superintendent of public instruction.

**Education.**—There were 149,915 children of school age in Utah in 1944, only 122,414 actually enrolling in the public schools. The total cost of education was \$15,520,930.03, with \$13,192,113.43 devoted to operating expenses. There were 4,168 teachers and 444 principals.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Total obligations of \$8,502,276.69 incurred in 1944 for public assistance were distributed as follows: old-age assistance, \$5,875,441.66; aid to dependent children, \$1,602,069.22; aid to blind, \$63,265.57; aid to employables, \$28,992.92; aid to unemployables, \$673,720.85; other assistance, \$258,786.47. A total of 14,990 households were receiving assistance in June 1944, as compared with 15,780 households in June 1943. From Jan. 1 to June 30, 1945, \$4,275,646.32 was distributed for public assistance.

**Communication.**—Highway mileage in 1944 was as follows: state, 5,438; county, 18,037; city, 2,547; federal, 3,888; total, 29,910. There were 1,835 mi. of steam railway and 239 mi. of electric railway in 1945. State expenditures for roads in 1944 were \$5,989,557.29 from gas tax and federal aid, and \$627,093.49 from motor vehicle registration fees, a total of \$6,616,650.78. These funds were administered only by the state road commission, and were distributed to cities and counties for the maintenance of city and county roads. Utah had 45 airports and fields in 1945.

**Banking and Finance.**—The 57 banks, 45 state and 12 national, had total assets of \$491,515,906.91 on June 30, 1945, and total bank deposits

reached \$465,376,336.82. On June 30, 1944, the state's 19 building and loan associations had aggregate assets of \$41,300,146.47. State receipts for the year ending June 30, 1945, were \$50,264,618.32; expenditures were \$47,414,699.60. The total of outstanding bonds in 1945 was \$1,495,000, with this amount available from the state liquor control fund for retirement of all outstanding bonds. Thus the state was out of debt.

**Agriculture.**—Cash income from farm marketings in 1944 was \$35,028,000 for crops and \$75,342,000 for livestock and livestock products, as compared with \$29,721,000 for crops and \$72,114,000 for livestock and livestock products in 1943. Preliminary value of 1945 truck and canning crops was \$6,649,000 as of Dec. 18, 1945; for 1944, \$6,280,000. Preliminary value of canning tomatoes in 1945 was \$1,366,000, and shipping tomatoes, \$112,000.

Table I.—Principal Agricultural Products of Utah, 1945 and 1944

Crop	Preliminary 1945	1944
Hay (tame and wild), tons . . . . .	1,178,000	1,234,000
Potatoes, bu. . . . .	3,366,000	2,765,000
Sugar beets, short tons . . . . .	452,000	396,000
Celery, crates . . . . .	287,000	204,000
Tomatoes, fresh, bu. . . . .	45,000	66,000
"    processing, tons . . . . .	56,200	69,700
Onions, 100-lb. sacks . . . . .	850,000	1,056,000
Peas, tons . . . . .	24,020	24,300

To offset partly the loss of agricultural workers, 950 Mexican farm labourers and 1,250 Italian and German prisoners of war were being used as of July 15, 1945.

**Manufacturing.**—The average employment in 1945 (total wages paid and total value of products) remained substantially the same as in 1944. War production was maintained at a high level. The average monthly workers numbered about 24,376 in 1944 as compared with 28,739 as of Dec. 31, 1943. This reduction resulted from the suspension of operation of the small-arms plant in the environs of Salt Lake City.

Total pay rolls in manufacturing were \$51,345,876 in 1944 as compared with \$66,959,696 in 1943.

It was estimated there would be employment for 10,000 more people in the postwar period than immediately preceding the prewar period.

**Mineral Production.**—The United States war program served to emphasize the production of copper, lead, zinc and iron in Utah. Deposits of alumite were exploited; a new bismuth mine was operated; arsenic mines were re-opened; tungsten and manganese mines and fluorite deposits continued in commercial production; and molybdenum production was increased. The peak production year for copper was 1943. In 1944 labour shortages were made up partly by the employment of women and the use of labour-saving machines, but nevertheless, critical labour shortages materially curtailed mineral production. In 1944 the state had a production of 344,223 fine oz. of gold and 7,593,075 fine oz. of silver, as compared with 390,470 fine oz. of gold and 9,479,340 fine oz. of silver in 1943.

Table II.—Mineral Production of Utah, 1944 and 1943

Mineral	1944	1943
Copper, lb. . . . .	565,150,000	647,978,000
Lead, lb. . . . .	105,038,000	130,514,000
Zinc, lb. . . . .	77,988,000	93,792,000
Value of all ores . . . . .	\$111,036,247	\$160,935,000

The 1944 coal production was 7,206,107 tons; the estimated 1944 coke production was 699,768 tons. (J. C. A.R.)

**Utilities, Public:** see PUBLIC UTILITIES.

**Valéry, Paul** (1871-1945), French poet and philosopher, born at Cette Oct. 30. Up to the age of 45 he was chiefly a mathematician. He then devoted himself to poetry. After *Les Charmes*, a series of firm, short poems published in 1922, he gave himself almost entirely to prose, particularly aphorisms and brief pieces on a variety of critical subjects. His essays were collected into four volumes entitled *Variétés*.

During the German occupation of France in World War II he aided the resistance movement. He survived the occupation safely and continued to write. He died aged 73 after a short illness on July 20, in Paris. Général de Gaulle and most of his ministers, together with the diplomatic corps, paid a last tribute to him on July 26. The funeral ceremony took place at the Palais Chaillot, where students had kept an all-night watch by torchlight. The poet was buried at Cette.

Despite a long and retiring life, he left a slender body of work in which everything had a condensed economical quality, displaying his disregard for facile writing as well as his bold and sensitive nature. Valéry was also known as a delightful companion and an enchanting conversationalist. (See *Encyclopædia Britannica*.) (P. B.N.)

**Vanadium.** The trend of the vanadium industry in the United States during World War II is indicated by the following data, in short tons of vanadium content.

	1940	1941	1942	1943	1944
Mine shipments . . . . .	1,081	1,257	2,220	2,793	1,764
Imports . . . . .	1,287	1,069	1,288	1,058	662

Domestic ore received at mills and government stock piles through Sept. 1945 totalled 1,345 short tons of contained vanadium. Imports during the same period were 610 tons, and consumption 2,151 tons. The chief source of outside supply for the U.S. is Peru, where production capacity was increased by construction of a new plant at Junasha, capable of handling 5,000 tons of ore monthly, against 2,500 tons in the old plant. In 1945 the new plant worked at a rate of 1,000 tons monthly, producing 25,000 lb. of concentrates.

Production by other important world sources is given below, so far as available, in short tons of contained vanadium.

	1940	1941	1942	1943	1944
Northern Rhodesia . . . . .	406	377	386	413	?
Peru . . . . .	1,338	1,121	1,119	942	568
South-West Africa . . . . .	472	297	499	636	424
World total . . . . .	3,310	3,100	4,200	4,750	?

Several other countries produce minor amounts, figures for which are lacking. (G. A. Ro.)

**Vandegrift, Alexander A.** (1887- ), commandant of the U.S. marine corps, was born March 13 in Charlottesville, Va. He entered the corps as a second lieutenant in 1909, took part in the landing in Nicaragua in 1912 and at Veracruz in 1914. In World War I, however, it was his fate not to fight against Germany but to stay in Haiti, helping keep peace there. In 1942, a major general and assistant commandant of the marine corps, Vandegrift directed the Solomon Islands campaign. His victories won for him the congressional medal of honour and promotion to lieutenant general. On Nov. 1, 1943, he led the marines again in their first landing at Bougainville. Shortly afterward he was recalled to Washington to succeed Lt. Gen. Thomas Holcomb, retired, as commandant of the marine corps on Jan. 1, 1944, and he was raised to the rank of a full general, March 29, 1945. Vandegrift proposed (Sept. 28) that the marine corps become the shock troops for the United Nations organization to preserve the peace and suggested that the postwar marine corps consist of 100,000 men and 9,200 officers.

**Varnishes:** see PAINTS AND VARNISHES.

**Vasconcellos Mottas, Carlo Carmelo de**

(1896- ), cardinal archbishop of São Paulo, Brazil, was born in the state of Minas Gerais on July 16. Ordained in 1918, he became auxiliary bishop of Diamantina in 1932, and was elevated to the metropolitan see of São Luiz de Maranhão in 1936. When the second largest see in South America became vacant through the death in an aeroplane of Archbishop de Affonseca e Silva, the Holy See transferred his excellency from São Luiz de Maranhão to São Paulo. He was installed in his new see, which ranked next to Rio de Janeiro in importance, in Oct. 1944. He was nominated to the Sacred College of Cardinals in Dec. 1945, and was created and proclaimed a cardinal on Feb. 18, 1946.

**Vassar College.** A college for women at Poughkeepsie, N.Y., founded by Matthew Vassar in 1861. During 1945 Vassar continued, as an experiment in

education for the future, the three-year course for the bachelor's degree originally adopted in 1943 as an emergency measure to train women more quickly for war and reconstruction work. A four-year course remained available for students who thought it better suited to their needs. The faculty carried on studies for curriculum revision that would keep the course of study in line with Vassar's traditional objective of education for social usefulness. Both academic work and the social organization of the college, including the co-operative system of household work, are designed to prepare each student for helping to create a democratic society and a world where men can live in peace. A new interdepartmental program of study for first-year students in the third term was offered under the title "Today's Cities." Taking the city as a dominant form of culture, students who elected this program studied the physical, social, psychological and artistic forces shaping life in modern centres of population. The chief co-operating departments were physics, economics, sociology, psychology, political science and English. (For statistics of the faculty, student enrolment, endowment, etc., see UNIVERSITIES AND COLLEGES.)

(H. N. MacC.)

### Vatican City State.

A sovereign independent state, established by the Lateran treaty between the Holy See and the royal Italian government on Feb. 11, 1929. The treaty is recognized in international law, and the reigning pope is the sovereign. The area of Vatican City is 108.7 ac., excluding the papal estate of Castel Gandolfo and certain basilicas in Rome which are extraterritorial. It has its own railroad station, radio station and aerial system and currency. Total issue of bronze, nickel, silver and gold coins is not to exceed 1,000,000 lire. Executive powers are exercised by the governor, responsible only to the pope; administrative power is exercised by a commission of cardinals.

The bombing of Vatican City on Nov. 5, 1943, was in 1945 viewed as having been deliberate, presumably by an Italian plane "in connivance" with German troops. A declaration to that effect was made on July 1, 1945, by Harold Tittman, assistant to Myron C. Taylor, special U.S. representative to the Vatican.

The *Osservatore Romano*, semiofficial Vatican daily newspaper, on Jan. 2 published a statement reiterating the incompatibility of Catholicism and communist doctrine, mentioning specifically the Christian Left party of Italy, a new name for the Catholic Communist party. In February the paper declared the soviet charges against Pope Pius XII to be false and inimical to the restoration of peace. The Russian Orthodox Church, it said, was being used as a political tool by the Kremlin. Mourning the death of President Roosevelt, the paper stated editorially that his passing marked the loss of a great statesman and a positive force for world peace.

On Aug. 7 the official Vatican press office let it be known that "the use of atomic bombs in Japan has created an unfavourable impression on the Vatican." Commenting on the event, *Osservatore Romano* observed that "this incredible destructive instrument remains a temptation to posterity."

The Vatican normally maintains diplomatic relations with 44 states. Unofficial relations are maintained with other countries by means of apostolic delegates. In February Jacques Maritain, noted author and lecturer, was appointed by the French government as ambassador to the Vatican. The Japanese diplomats, who had voluntarily decided to remain within the Vatican after the Germans surrendered Rome, were recalled to Japan on U.S. orders. Receiving the new Argentine ambassador to the Vatican, Pope Pius XII expressed the hope that the Argentine government would continue to guarantee the church freedom neces-

sary to carry on her work. Most Rev. Joseph Hurley, bishop of St. Augustine, Fla., was named interim regent of the papal nunciature in Belgrade, Yugoslavia. On Dec. 14 Mgr. Carlo Grano was announced chief of protocol of the Vatican secretariat of state.

During 1945 no further war damage was experienced by the Vatican City. Allied soldiers continued to be visitors in great numbers. In June a concert was held in the Vatican courtyard for the first time in 380 years. The same month a papal relief convoy left the Vatican for Austria and Germany, carrying supplies for refugees.

Documents released by the Vatican in 1945 revealed that the Holy See had rebuffed nazi attempts to control episcopal appointments in seized nations and had rebuked the nazis for protests they made against Cardinal Mundelein. A Vatican memorandum of 1939 was made public, listing nazi acts against the church. It was also shown that the Vatican had exerted tireless efforts to ease the plight of the Poles under the German occupation.

On Feb. 13 Israele Anton Zolli, Grand Rabbi of Rome, and his wife were baptized into the Catholic Church, after he had resigned his post and declined the presidency of the Rabbinical college. Previously, the rabbi had expressed the gratitude of the Italian Jews for the protection and assistance given them by the Vatican during the months of occupation. (See also PRUS XII; ROMAN CATHOLIC CHURCH.)

**Veal:** see MEAT.

**V-E Day:** see BUSINESS REVIEW; WAR MANPOWER COMMISSION; WAR PRODUCTION, U.S.; WAR PRODUCTION BOARD.

**Vegetable Oils and Animal Fats.** The output of fats and oils in the United States in 1945 was estimated at 9,370,000,000 lb. compared with 10,849,000,000 lb. produced from domestic materials in 1944 and a prewar average of 8,230,000,000 lb. in 1937-41. The smaller output by more than 1,000,000,000 lb. was offset to some extent by the large stocks of lard, linseed oil and other fats at the beginning of 1945. By the middle of the year stocks were down to the minimum and in late summer were very low. The increase in the production of lard and smaller military purchases were bringing relief to consumers by the end of the year.

Exports of fats and oils to the Allies were large in the first half of 1945 but dropped off rapidly as U.S. stocks shrank. Imports were the smallest in many years. Net exports totalled only about 300,000,000 lb. compared with about 650,000,000 lb. exported in 1944. Before the war the United States usually imported about 1,500,000,000 lb. of soap fats, drying oils, olive oil and fish oils.

The shrinkage of the U.S. production was in lard and pork fat, butter and linseed oil. Civilian consumption of all fats and oils was estimated to be 65 lb. per capita compared with 70 lb. in 1944 and a prewar average of 74 lb. Food fats and oils were the smallest per capita for more than 20 years. Butter consumption was about 10.7 lb. per capita compared with 11.9 lb. in 1944 and a prewar average of 16.7 lb. Lard was down to 11.6 lb. per capita compared with 13.9 lb. in 1944 and soap fats were scarce all during 1945. Until July the government requirements took 50% of the butter, then 20% until September when the government returned nearly 100,000,000 lb. for civilian use. Total lard production was 35% below the high record output of 1944 and about 135,000,000 lb. was used in soap and other nonfood products.

Price incentives were continued on domestic oil-seed crops to maintain production of soybeans, peanuts and flaxseed. The

## U.S. Production of Principal Fats and Oils, 1942-1945

	(Millions of pounds)			
	1945	1944	1943	1942
Butter . . . . .	1,700	1,816	2,015	2,130
Lard . . . . .	2,100	3,215	3,056	2,469
Edible tallow, etc. . . . .	220	198	259	277
Corn oil . . . . .	220	211	237	248
Cottonseed oil . . . . .	1,240	1,132	1,313	1,386
Peanut oil . . . . .	100	108	153	77
Soybean oil . . . . .	1,330	1,246	1,234	762
Linseed oil . . . . .	450	729	715	699
Inedible tallow and grease . . . . .	1,750	1,943	1,650	1,742
Marine oils . . . . .	220	215	175	158
Other . . . . .	40	37	40	35
Total domestic . . . . .	9,370	10,849	10,848	9,983

flaxseed crop was 59% above the output of 1944 and 69% above the ten-year average. Another big crop was called for as a goal for 1946. The peanut crop was large, 41% above the 1934-43 average. The soybean crop was the second largest on record, almost two and a fourth times the prewar average. The consumption of all domestic vegetable oils except flax was somewhat smaller in 1945 than in 1944.

Imports of oil-bearing materials did not increase in 1945 but were expected to grow rapidly in 1946. Imports were sharply reduced after 1942 when the Japanese occupied the far eastern area. Supplies of fats and oils available to the U.S. and Europe in 1945 were approximately 4,300,000,000 lb. compared with 9,600,000,000 lb. in prewar years. This reduction was the loss of supplies from Asia, the Philippines, Netherlands Indies and the curtailment of fishing and whaling in the northern waters.

Household fat salvage was continued through 1945 and declined during the spring and summer as the pork supply declined. The saving of fats was stimulated Oct. 1 by the increase from two to four red points for each pound of fat turned in at meat stores. (See also BUTTER; COCO-NUTS; COTTON; MARGARINE; PEANUTS; SOYBEANS.) (J. C. Ms.)

**Vegetables.** Total production of vegetable crops in the United States, for sale fresh and for commercial processing made a new high record in 1945. The increase in tonnage of the 25 fresh market crops exceeded 1944 by 6% and more than offset the 4% loss of vegetables for processing. The great increase in vegetable production is shown by the fact that both of these groups of crops exceeded the average of 1934-43 by more than 30%. The total acreage of vegetables was 3,813,000 in 1945 compared with 3,830,000 in 1944, but a better average yield brought a larger total crop in 1945.

**Commercial Truck Crops for the Fresh Market.**—The total production of fresh vegetables in 1945 reached another new high record over the record of 1944. The total tonnage of 25 commercial truck crops was estimated by the U.S. department of agriculture at 8,458,100 tons compared with 7,995,400 tons in 1944 and 6,517,000 tons as the ten-year average 1934-43. The

1945 acreage was 1,900,600, 1% more than the 1,879,800 of 1944 and the average of 1,710,600. Yields were about 5% more than 1944 and 17% more than average. The greatest gain was in the fall group where the benefit of a good season brought high yields and a 22% larger tonnage on an acreage only 9% larger. The spring crops were 11% above 1944, and while summer acreage was larger the output was 3% below 1944. The new-record crops included cabbage, cauliflower, celery, lettuce, peppers, tomatoes, lima beans, cantaloupes, sweet corn, cucumbers and melons. The season was generally favourable except in mid-summer.

Prices of fresh vegetables were as a whole above 1944 with few notable exceptions. The composite level of prices as indicated by index numbers was more than 240 compared with 212 for 1944 and 102 for 1935-39. The cabbage crop was large and the demand for kraut increasing. Prices were lower than a year earlier because of the large supplies. The government purchased considerable amounts to support prices.

Carrots were in large supply and prices were below those of a year earlier. Lettuce prices were near the ceiling with a record production.

Civilian consumption of fresh vegetables in 1945 exclusive of supplies from towns and city gardens was estimated at 264 lb. per capita, which is slightly more than 1944 and 12% more than the average of 1935-39.

**Commercial Truck Crops for Processing.**—Total production of all 11 crops for canning, drying or otherwise processing was estimated at 5,251,000 tons in 1945, compared with 5,488,480 tons raised in 1944 and a ten-year average of 4,011,000 tons 1934-43. The acreage was 1,913,310 compared with 1,951,000 in 1944 and an average of 1,497,000. Yields were generally good. A record acreage of green peas was planted and early rains favoured the crop so that yields were very high. In Wisconsin 2,270 lb. per ac. was the best in 20 years. Late spring

Table II.—U.S. Production, Acreage and Price per Ton of 11 Truck Crops for Commercial Processing, 1945 and 1944

Crop	Acres		Production		Price per ton	
	1945	1944	1945 tons	1944 tons	1945	1944
Asparagus . . . . .	49,230	45,930	53,170	53,740	\$168.00	\$153.30
Beans, lima . . . . .	58,160	58,410	34,100	30,200	111.91	124.11
Beans, snap . . . . .	146,910	154,400	235,600	225,200	102.22	96.77
Beets . . . . .	16,870	17,730	176,300	161,500	19.76	20.59
Cabbage (sauerkraut) . . . . .	18,000	16,720	182,500	117,900	13.99	14.83
Corn . . . . .	474,800	489,920	1,126,800	1,043,500	19.33	19.33
Cucumbers . . . . .	97,700	99,000	185,420	183,860	48.33	45.83
Peas . . . . .	453,860	437,150	490,150	387,200	83.18	83.14
Pimentos . . . . .	8,720	6,460	12,470	8,560	60.00	55.13
Spinach . . . . .	35,960	44,100	89,300	106,900	49.98	49.91
Tomatoes . . . . .	581,180	448,800	2,665,200	3,169,900	26.59	27.22

crops were delayed by rains and tomatoes suffered, the acreage of sweet corn and snap beans was reduced below the high record of 1943. The tonnage of sweet corn was exceeded only in 1941 and 1942. Beets made a record crop but lima beans were 10% below the record.

The 1945-46 pack of canned vegetables was about 8% larger than that of 1944. About four-fifths consisted of green beans, corn, peas and tomatoes. Civilians received only about 34 lb. of canned vegetables per capita in 1945 because about one-fourth of the supply was taken for military needs. The government ceased reserving supplies in October and all canned vegetables were removed from the ration lists August 15, 1945.

The pack of commercially frozen vegetables was increased to a per capita consumption of about one and a half pounds. The pack was 14% larger than in 1944, a total of 267,000,000 lb. Dehydrated vegetables reached the wartime peak of about 196,000,000 lb. in 1945 and were expected to decrease considerably in 1946. Military requirements were reduced rapidly.

Prices of truck crops for processing were at high levels through the year. With government purchases reduced and general buying power declining, growers felt that 1945 was the last

Table I.—U.S. Production of Truck Crops for Fresh Market, 1945 and 1944

of a period of unusually profitable years. Better supplies of fresh vegetables and other foods would offer more competition in 1946. (See also AGRICULTURE; CORN; HORTICULTURE; LETTUCE; POTATOES; TOMATOES.) (J. C. Ms.)

**Venereal Diseases.** Injection methods of treating gonorrhoea with penicillin have made it possible for an increasing number of private physicians to treat gonorrhoea in their offices within a few minutes to three hours.

The network of special hospitals, known as rapid treatment centres, established as a wartime expedient for the intensive treatment of infectious venereal disease patients subject to public care, became a part of the long-range control program when congress appropriated \$5,000,000 to subsidize maintenance of existing centres.

During the first three years of their operation, these centres admitted approximately 160,000 patients. At the end of 1945 the centres were admitting patients at a rate of about 170,000 a year—almost a quarter of the number of venereal disease cases reported annually in the United States. The proportion of gonorrhoea admissions had been reduced to about one case to every four cases of syphilis; this reflected the trend toward returning the control of gonorrhoea to the private physician and outpatient clinic, and the increased emphasis on intensive, inpatient treatment of early syphilis.

Contract proposals for a total of 52 individual rapid treatment centres in 31 states had been approved by the U.S. public health service by Oct. 1, 1945. In addition, bed rental contracts had been made with more than 300 hospitals in ten states, to provide intensive treatment facilities in areas where rapid treatment centres do not exist.

All together, the rapid treatment hospitals, special wards and rented beds form a network which could provide inpatient facilities for the intensive treatment of all cases of infectious syphilis reported each year. Of the 182,000 infectious or potentially infectious cases of syphilis reported during 1945, 52,000 were treated at rapid treatment centres and the remaining 130,000 were treated elsewhere; an increasing proportion of these cases was expected to be treated in rapid treatment facilities in the future.

The average costs of treating patients in the centres had been reduced to \$55 for syphilis patients and \$12 for gonorrhoea patients, and the average patient stays had been reduced to 11 days for syphilis cases and 2 or 3 days for gonorrhoea patients.

High rates of cure have been obtained in the treatment of gonorrhoea with 150,000 to 200,000 units of penicillin administered intramuscularly. Single-injection doses are administered in an oil-wax mixture. Aqueous solutions of penicillin are administered in four doses injected an hour apart.

The schedule of intensive therapy most widely used for treatment of syphilis during the year consisted of five injections of an arsenical drug, 1,200,000 units of penicillin and three injections of bismuth. The penicillin is given intramuscularly in the amount of 16,667 units in 2 cc. of solution every three

hours for 72 injections, over a period of nine days. The arsenical drug is administered intravenously at the rate of one mg. per kilogram of bodyweight, but not to exceed 60 mg. per injection, on the first, third, fifth and ninth days of treatment. A total dosage of 200 mg. of bismuth subsalicylate is administered intramuscularly, in three equal doses on the first, fifth and ninth days of treatment. Probably further studies of this schedule of therapy might suggest more nearly optimal time-dosage relationships, and the schedule might be modified.

The 373,288 cases of syphilis and the 301,828 cases of gonorrhoea reported by all sources to state health departments during the fiscal year 1945 represented 21% and 3% decreases, respectively, compared with cases reported in 1944. Clinic admissions for syphilis were 278,369, a decrease of 22%; clinics admitted 200,176 gonorrhoea cases, 36% more than were admitted in 1944. Included in these clinic admissions were rapid treatment centre admission of 61,898 cases of syphilis and 67,326 cases of gonorrhoea, increases of 407% and 318% respectively.

The number of cases of primary and secondary syphilis reported was 78,015, and the number admitted to clinics was 51,631, including 22,985 admitted to rapid treatment centres; the number of early latent cases reported for the first time was 104,752, and the number admitted to clinics was 98,438 including 29,825 admitted to rapid treatment centres. (Cases reported to state health departments are cases reported for the first time. Clinic admissions and rapid treatment centre admissions include cases which may have been reported previously.)

The number of clinics receiving federal, state and local financial assistance during 1945 was 3,477, which was 230 fewer clinics than in the previous year.

Funds budgeted by the states in the venereal disease control program totalled \$22,282,067 from federal, state and local sources, an increase of 9.8% over 1944. This included budgets of \$10,555,308 of federal funds, a 3.9% decrease compared with 1944, and \$11,726,759 of state and local funds, an increase of 26%.

The value of public education in intensive mass case finding was shown in several communities. In a demonstration program in New Orleans, La., a concentrated campaign of public information and education brought to treatment 4,000 cases of gonorrhoea which was more than the total number of cases reported during 1943 and 1944. Approximately 40% of the patients were treated by 152 physicians in private practice. Free penicillin was provided to both private physicians and clinics.

A comparable campaign was conducted in the city of Birmingham and Jefferson county, Ala., where more than 30,000 persons with evidence of syphilis were discovered as a result of the 45-day blood testing program. During the course of the blood testing program 3,000 persons were treated for gonorrhoea. About 271,000 persons, or about 92% of the population of Jefferson county between the ages of 14 and 50 presented themselves for blood testing. A state law in Alabama requires blood testing of all persons between these ages. The success of the Birmingham program was, in part at least, attributable to intensified public education and information activity, for in no case was it necessary to invoke the law directly in order to obtain the blood test.

Another demonstration, including a tuberculosis survey as well as syphilis case finding, was completed Nov. 30, in the city of Savannah and Chatham county, Ga. More than 71,000 persons—from a population of 150,000 of all ages in the county—voluntarily received chest X-rays and blood tests during the 45-day Savannah-Chatham demonstration. The results of blood serologic tests were positive for about 11,000 of the persons

tested. As a by-product of the blood testing program, 285 cases of gonorrhoea also were discovered. The survey discovered in 45 days a number of cases of syphilis which ordinarily would not be discovered in months or years, and in the opinion of the health officers who participated in this program represents a most economical method of case finding. It is estimated that the survey cost approximately \$70,000 which would represent an individual cost of about 50 cents each blood test and each chest X-ray.

During World War II, mass blood testing on an enormous scale was utilized as a syphilis case finding device in connection with the mobilization and demobilization of the armed forces. Blood testing of selective service registrants resulted in the discovery of about 750,000 young men whose physical examinations indicated they were infected with syphilis. As a result of follow-up and treatment by state and local health departments approximately 273,000 of these men were reclaimed and made available for service in the armed forces if called and otherwise acceptable.

Early in the war, plans were made by the army, the navy, the coast guard and the public health service for assuring the return of demobilized servicemen to civilian life without venereal disease in an infectious stage. As the rate of demobilization increased, representatives of the U.S. public health service were stationed in army separation centres throughout the country to interview separatees whose blood serologic tests for syphilis showed positive or doubtful results, and to direct these men to private physicians, clinics or rapid treatment centres for further diagnosis and treatment if necessary. (*See also* EPIDEMICS AND PUBLIC HEALTH CONTROL.) (J. R. H.R.)

**Venezuela.** A north-coast South American republic, bounded on the west, south, east and north, respectively, by Colombia, Brazil, British Guiana and the Caribbean sea. Area: 352,143 sq.mi.; pop. (1941 census): 3,850,771, excluding an estimated 100,600 forest-dwelling Indians; pop. density: 10.90 per sq.mi. The Venezuelan census does not classify the population racially, but important fractions are Indian, mestizo, Negro and mulatto; about 80% of the population is rural. The capital is Caracas (1941 pop., 269,030); other important cities are Maracaibo (112,519), Valencia (53,938), Barquisimeto (54,176), San Cristóbal (31,447), Maracay (32,992) and Cumaná (25,893). Venezuela is a federal union composed of 20 states, a federal district and two territories. The president is elected by the congress, which is composed of two houses, a senate of 40 members and a chamber of deputies of 85. Gen. Isaías Medina Angarita was president in 1945 until ousted by revolution on Oct. 19; he was succeeded by Rómulo Betancourt as provisional president on Oct. 21.

**History.**—The outstanding event of 1945 was the October revolution which overthrew the administration. Revolt broke out in Caracas and the nearby military city of Maracay on Oct. 18, staged by the rank and file of the army, led by younger army officers of or below the rank of major, and joined soon afterward by the liberal Acción Democrática party. After fierce fighting for three days Pres. Medina was forced out and Dr. Betancourt, 40-year-old lawyer, became provisional president. The new regime announced that it would hold elections, as previously scheduled, in April 1946. Order was soon restored and popular support apparently gained. Oil companies were reassured with regard to their property. The revolt was allegedly caused by the belief of younger army officers that the election of Gen. Medina's candidate as successor, Angel Biaggini, would be engineered under any circumstances and the regime of recent years thus continued. Medina, ex-Pres. López Contreras, and others were exiled to Miami. The new regime promised a new

VENEZUELAN REBELS who took part in the military coup at Caracas on Oct. 18-20, 1945, overthrowing the regime of Pres. Isaías Medina Angarita. A revolutionary junta, headed provisionally by Socialist leader Dr. Rómulo Betancourt, was recognized by the U.S. on Oct. 30

constitution within six months. Recognition by the United States and many other governments was granted before the end of October.

The pro-administration Venezuelan Democratic party won an overwhelming victory in congressional elections Jan. 19, 1945. The government on Feb. 15 declared belligerency against Germany and Japan; Ambassador Diógenes Escalante on Feb. 20 signed the United Nations pact at Washington, D.C. The government on April 6 announced plans for liberal monthly quotas for admission of Spanish republicans and other immigrants. The third Inter-American Press congress met at Caracas May 11-17. Constitutional amendments legalizing communist activity, granting women a municipal vote, etc., became effective May 5.

**Education and Religion.**—School enrolment in 1944 exceeded 300,000. A convention of state governors at Caracas in November recommended a system of school lunchrooms, the immediate beginning of an anti-illiteracy campaign (illiteracy was estimated in 1943 at 70%), increased pay for teachers, construction of new colleges and technical schools, redistribution of rural schools and construction of new ones.

Venezuela is predominantly Roman Catholic. Pope Pius XII on June 22 reportedly asked the resignation of Enrique María Dubuc, bishop of Barquisimeto.

**Finance.**—The monetary unit is the bolívar, valued in Dec. 1945 at 29.85 cents (U.S.). The proposed budget for 1945-46 totalled 506,311,173 bolívares; the chief expected revenues were petroleum royalties (expected to increase 37%) and income taxes (expected to increase 120%). Actual budget appropriations for 1944-45 reached 465,000,000 bolívares by June 1945; revenues, through April, were 388,600,000. Total gold and foreign exchange holdings June 30, 1945, were \$200,326,077. The treasury surplus April 15, 1945, was 238,499,000 bolívares as against a national domestic debt of 24,952,000 bolívares; Venezuela has no foreign debt. Government revenues in 1944 were

532,000,000 bolívares as against 306,000,000 in 1943. The index of stock prices Jan. 1, 1945, was 163.9 as against 100 in 1938.

**Trade and Communications.**—Venezuela, with an overwhelming export trade balance, exchanges mineral and agricultural products for manufactured goods. Leading exports include petroleum, gold, hides, livestock, coffee and cocoa; chief imports are metals and manufactures, machinery, prepared food products, textiles, chemicals. In 1944 petroleum exports were more than 90% by value of total exports. Most petroleum goes to the U.S., much of it via Curaçao and Aruba for refining. About 35% of exports other than petroleum go to the U.S. The U.S. share in the import trade rose from 53% in 1939 to 86% in 1944. Petroleum exports in the first quarter of 1945 were: crude, 62,551,930 bbl.; refined, 4,765,065 bbl. Coffee exports in the first seven months of the 1944-45 crop year were 252,101 sacks of 60 kg. as against 226,481 sacks in the same period of 1943-44. Cocoa exports in 1944 were 15,869 metric tons as against 14,989 in 1943.

Highway mileage includes 3,750 mi. of all-weather and 1,600 mi. of unimproved, dry-weather roads. Railway mileage is about 500 mi., in largely unconnected short lines. Railways in 1943 carried 1,529,000 passengers and 527,000 metric tons of freight. Venezuela had 38 airports (with several more under construction in 1945) serving Pan American airways, K.L.M. (Royal Netherlands line), the government-owned Línea Aeropostal Venezolana, Aerovías Venezolanas and the newly organized Línea Aérea T.A.C.A. (Transportes Aéreos Central Americanos) de Venezuela, which began operations Jan. 9, 1945. Construction of a national airport at Caracas was approved; it would partially obviate use of the airport of La Guaira on the coast. Vehicle registration Jan. 1, 1945, included 15,095 automobiles, 12,573 trucks, 1,288 buses and 696 motorcycles.

**Agriculture.**—The 1944-45 coffee crop was estimated at 950,000 sacks of 60 kg. Other agricultural production in 1944 (in metric tons) included refined sugar (38,000), crude sugar (80,000), rice (9,000), cotton (3,000), tobacco (3,300), sesame (3,000). Livestock population was estimated at 4,000,000 cattle, 750,000 calves, 60,000 sheep and lambs, and 1,400,000 goats and kids; cattle hide production in 1944 was 9,600 metric tons.

**BIBLIOGRAPHY.**—Olga Briceño, *Cocks and Bulls in Caracas* (1945); Alfred Kidder, *Archaeology of Northwestern Venezuela* (1944).

**FILMS.**—*Colombia and Venezuela* (Encyclopædia Britannica Films Inc.). (R. H. FN.)

**Vermiculite.** Sales of vermiculite in the United States increased from 46,645 short tons in 1943 to 54,116 tons in 1944. New uses were being developed as a fire retardant in building construction, as an admixture in plaster for walls and ceilings, and in concrete flooring. Used in this way vermiculite is found to increase materially the time required for a fire to pass from one room to another, through walls, ceiling or floor. (G. A. Ro.)

**Vermont.** A north Atlantic state of the United States of America, the only one of the New England states without a sea coast; popularly known as the "Green Mountain state"; admitted to the union in 1791. Area, 9,609 sq.mi. (9,278 sq.mi. land; 331 sq.mi. water). Population (1940), 359,231 (including 235,992 rural, 123,239 urban); 327,079 native white, 31,727 foreign-born, 384 Negro, 41 of other races. On July 1, 1944, the U.S. bureau of the census estimated the civilian population of the state at 310,941. Montpelier is the capital city, with a population (1940) of 8,006. The chief cities are Burlington (27,686), and Rutland (17,082).

**History.**—The general assembly met in 1945, from Jan. 3 to April 18. Legislation enacted or amended included bills relating to the establishment of a minimum salary for teachers, provision for the regulation of air commerce, provision for standard nonforfeiture and valuation laws respecting life insurance and establishment of a state veterans' board. State officers in 1945 were Mortimer R. Proctor, governor; Lee E. Emerson, lieutenant governor; Rawson C. Myrick, secretary of state; and Levi R. Kelley, state treasurer.

**Education.**—There were 932 elementary schools in the state in 1945, with a teaching staff of 1,750 and enrolment of 38,800; of these schools, 640 were one-room rural schools. There were 87 approved public high schools, with a teaching staff of 678 and enrolment of 14,196. The four teacher training institutions had a total enrolment of 251 and a teaching staff of 43. State superintendent of schools in 1945 was the commissioner of education, Ralph E. Noble.

**Social Insurance and Assistance, Public Welfare and Re-**

**lated Programs.**—Relief in general was administered by the overseer of the poor in each town. A total of \$1,406,092 was expended by the old-age assistance department; the total number of recipients in Dec. 1945 was 5,149. Dependent children receiving aid from state funds numbered 1,481 in 576 cases; 1,125 children were committed as state wards. Blind assistance funds were distributed to 144 persons. There were seven state institutions with a total of 2,032 inmates. Payments of unemployment compensation benefits were made amounting to \$326,782.45; 2,159 individuals received their first checks in 1945.

**Communication.**—Total mileage of the public highway system (state, state-aid and town highways) as of Jan. 1, 1945, was 14,307.2, of which 1,802.7 mi. were in the state highway system, and 2,696.1 mi. in the state-aid highway system. Maintenance expenditures for state highways amounted to \$1,504,424.36 during the fiscal year ending June 30, 1945, and for state-aid highways in the same period, \$452,507.16.

There were 954.79 mi. of steam railroads and 4.25 mi. of electric Dec. 31, 1944 (est. to be the same Dec. 18, 1945). A total of 12 airports were in use for the public in 1945. The two airways were on routes from Boston to Montreal and New York to Montreal. Telephone subscribers were estimated at 64,500, Dec. 18, 1945.

**Banking and Finance.**—The number of state and national banks as of June 30, 1945, was 80, of which 41 were state banks with total deposits of \$171,383,594.15; of the 41 state banks, the eight mutual savings banks showed total deposits amounting to \$71,330,204.41. There were ten co-operative building, savings, and loan associations with total assets of \$2,975,009.93, and four credit unions with total assets of \$4,546.64.

Total receipts of the state as of June 30, 1945, were \$19,259,525.15; disbursements \$18,116,476.90; outstanding obligations \$3,374,031.90; unappropriated surplus \$1,585,855.28.

**Agriculture.**—The value of crop production in 1945, based on prices prevailing up to Jan. 5, 1946, was \$30,167,000, a decrease from the amount of \$30,309,000 in 1944. Total acreage harvested, all crops, was 1,013,750 in 1945, compared with 1,021,960 in 1944. Weather conditions were unfavourable for nearly all crops in 1945, except hay, because of excessive moisture and rainfall for every month except August from April to October. The apple crop was almost a complete failure and maple sugar, because of extended warm weather in March, was only 38% of the previous year's production. It was estimated that there were 463,000 head of cattle in the state in 1945, of which 308,000 were cows and heifers two years of age and older.

Leading Agricultural Products of Vermont, 1945 and 1944

Crop	1945 (est.)	1944	Value, 1945 (est.)
All corn, bu. . . . .	2,442,000	2,590,000	\$ 3,633,771
Potatoes, bu. . . . .	1,375,000	1,656,000	1,660,780
Oats, bu. . . . .	1,302,000	1,395,000	1,082,374

**Manufacturing.**—Output value for the fiscal year ending June 30, 1945, for manufacturing, quarrying, mining and processing industries was more than \$350,000,000. Total employees were nearly 44,000; wages more than \$80,000,000. Principal industries were machines, machine tools and foundries and textile manufacturing.

**Mineral Production.**—Principal mineral products of the state were granite, marble, asbestos, clay, limestone and dolomite, and talc. (C. E. FE.)

**Veterans' Administration.** **Insurance.**—As of June 30, 1945, there were 567,934 United States government life (converted) insurance policies in

force representing \$2,454,855,781 of insurance. Monthly payments were being made to 10,841 policyholders for permanent and total disabilities. Disbursements for this type of insurance during the fiscal year 1945 totalled \$32,273,258.28. On June 30, 1945, monthly payments of yearly renewable term insurance policies were being made to 9,301 permanently and totally disabled veterans and to the beneficiaries of 2,042 deceased veterans. Monthly payments on automatic insurance policies were being made to 215 veterans and the beneficiaries of 11 deceased veterans. Disbursements for term and automatic insurance during the fiscal year totalled \$19,756,071.97, including \$12,941,477.28 transferred to the U.S. Government Life Insurance Trust fund for cases traceable to hazards of war. As of June 30, 1945, there had been approved 17,492,388 applications for national service life insurance aggregating \$135,021,405,000. Benefits had been awarded as of June 30, 1945, in 223,626 cases on insurance valued at \$2,039,255,100. The average contract insurance in force at the time of the veteran's death was \$9,191.42. Widows were the sole beneficiary in 22% and parents in 68% of the awarded cases. An act approved Oct. 17, 1940, provided for suspension of enforcement of certain civil liabilities of persons serving in the armed forces of the United States. Article IV of the act provided that the government would, on application by the insured, guarantee to commercial insurance companies premiums on insurance carried with such companies by policyholders while in active service. Through June 30, 1945, 103,227 applications for this benefit had been received, of which 87,037 representing \$216,993,141.30 of insurance had been approved.

**Medical Treatment and Domiciliary Care.**—On June 30, 1945, the Veterans' administration was operating hospital facilities at 97 locations in 45 states and the District of Columbia. There were 81,133 beds for hospital treatment and 14,078 for domiciliary care. In addition, 5,438 hospital beds in other government facilities were being utilized. The hospital load of the Veterans' administration at that time was 71,439 patients, of whom 71,229 were United States veterans, 47 were Allied veterans of World War I, and 163 were miscellaneous beneficiaries. Of the United States veterans, 66,818 were in Veterans' administration facilities, 2,958 in other government hospitals and 1,453 in state or civil institutions. Approximately 67.24% of

NUMBER OF VETERANS remaining in all hospitals from 1920-45 by types of disability, as compiled by the Veterans' administration

these United States veterans were receiving treatment for disabilities not of service origin. During the fiscal year 1945, 13,979 United States veterans were admitted for observation and treatment of tuberculosis, 25,492 for psychotic or mental diseases, 19,973 for other neurological disorders and 181,569 for general medical and surgical conditions. The veteran population in domiciliary status on June 30, 1945, totalled 8,779. Of this number, 5,520 veterans were disabled by general medical and surgical conditions, 3,133 by neuropsychiatric diseases and 125 by tubercular ailments. During the fiscal year 1945, an average of 4,159 veterans eligible for care in Veterans' administration facilities was cared for in state or territorial homes. These homes were reimbursed by the federal government at not to exceed \$300 a year for each of such veterans domiciled therein. During the year, dental care was provided for 35,111 hospital patients, 4,725 domiciliary members and 6,371 out-patients in clinics maintained by the Veterans' administration.

**Pensions and Compensation.**—Table I shows the number of cases on the rolls as of June 30, 1945, and the disbursements during the fiscal year 1945 from appropriations "Army and Navy Pensions."

**Vocational Rehabilitation and Education.**—During the year ending June 30, 1945, an expanding program was carried on under the provisions of Public Law 16, 78th congress, approved March 24, 1943, for eligible disabled veterans with handicaps removable by training; also the first year of a program of education and training under the provisions of Title II, Public Law 346, 78th congress, approved June 22, 1944, for eligible nondisabled veterans in need of educational or occupational readjustment. As of June 30, 1945, 22,232 veterans had entered into training under Public Law 16. Of these, 14,986 were still in training, 5,013 had interrupted training, 1,469 had discontinued training and 764 had been rehabilitated. Under Title II, Public Law 346, 22,335 veterans were in training on June 30, 1945, and 990 veterans had completed courses of education

or training.

**Readjustment Allowances.**—Operations under Title V of Public Law 346, 78th congress, were begun on a nation-wide basis on Sept. 4, 1944. The Readjustment Allowance program provides assistance to both unemployed veterans and those in self-employment.

During the period from Sept. 4, 1944, through June 30, 1945, a total of 180,798 veterans filed applications for determination of entitlement for allowances; 159,886 veterans submitted claims for unemployment allowances; and 15,221 filed claims for self-employment allowances. Weekly claims for unemployment numbering 1,062,481, and 51,856 monthly claims covering self-employment were filed. Veterans paid allowances for unemployment received an average of approximately six weekly payments to June 30, 1945.

Disbursements for the fiscal year 1945 totalled \$23,512,150 of which \$20,123,525 represented payments to unemployed veterans and \$3,388,625 payments to self-employed veterans.

During the month of June 1945, a weekly average of 31,832 veterans received unemployment allowances aggregating \$3,200,312 while \$1,069,512 was paid to 11,926 self-employed veterans.

**Loan Guarantee Activities.**—Title III of Public Law 346, 78th congress, provided for the guarantee of loans by the Veterans' administration for the purchase or construction of homes, farms and business property for any person who shall have served in the active military or naval service of the United States at any time on or after Sept. 16, 1940, and prior to the terminations of World War II and who shall have been discharged or released therefrom under conditions other than dishonourable after active service of 90 days or more, or by reason of an injury or disability incurred in service in line of duty. As of June 30,

National service life insurance . . . . .	136,846,767.35
Adjusted service certificate fund . . . . .	11,223,396.84
General post fund . . . . .	96,462.50
General post fund auxiliary account, Veterans' administration . . . . .	270,931.49
Funds due incompetent beneficiaries . . . . .	185,223.06
Personal funds of patients, Veterans' administration . . . . .	5,754,543.87
Total . . . . .	\$2,271,318,333.42

\*Represents net amount transferred by voucher to national service life insurance for payment of claims traceable to the extra hazards of military or naval service.

†Credit—the amount shown for the appropriation "Salaries and expenses" includes net disbursements of \$27,036.39 from allotments made to other government agencies.

1945, the total applications received for guarantee of loans was 15,455.

Of this number 12,228 were guaranteed for a total of \$19,644,824.90, distributed by types as follows: home loans 11,220; farm loans 270; and business loans 738.

**Guardianship.**—The guardianship load of the Veterans' administration, June 30, 1945, was 87,346 wards, of whom 45,097 were incompetents and 42,249 minors. The value of estates of these wards approximated \$163,158,552.78.

**Finance.**—The actual net disbursements from appropriations and trust funds of the Veterans' administration (including adjustment on lapsed appropriations) during the fiscal year 1945 are shown in Table II.

(See also PHYSICAL MEDICINE AND OCCUPATIONAL THERAPY FOR THE WOUNDED.) (O. N. B.)

## Veterans of Foreign Wars.

The first postwar "United Nations Veterans Victory Conference" highlighted the 46th national encampment, Veterans of Foreign Wars of the United States, Chicago, Oct. 1-2-3-4, 1945. Representatives of 22 countries, mainly combat veterans of World War II, were brought to Chicago from all parts of the world as guests of the Veterans of Foreign Wars for a two-day meeting. The following nations were represented:

Australia, Belgium, Brazil, Canada, China, Czechoslovakia, Denmark, Dominican Republic, France, Great Britain, Greece, India, Lebanon, the Netherlands, Norway, Philippines, Russia, Yugoslavia, Turkey, Ecuador, Guatemala and the United States.

The delegates adopted resolutions in which they pledged themselves to call upon the veterans of their respective countries to help mobilize public opinion in support of the objectives of the United Nations charter. They also voted to establish an information centre in Washington, D.C., which would serve as a clearinghouse for communications between the veterans of the United Nations. They further recommended that the use of the atomic bomb be placed at the disposal of the Security commission of the United Nations.

The delegates to the V.F.W. 46th national encampment endorsed peacetime compulsory military training; advocated government control of the atomic power research; urged the establishment of an independent agency for foreign intelligence and espionage; reiterated endorsement of the United States participation in an international association of nations to prevent future wars; urged prompt return of enemy prisoners of war and temporary alien war refugees to their homeland.

On internal affairs, the V.F.W. urged congress to seek a high level of full employment through use of the free enterprise system and incentive taxation, rather than by government guarantee of jobs and spending. The construction of self-liquidating superhighways was also urged.

On veteran welfare, the V.F.W. reaffirmed its recommendation that the government should grant adjusted service pay to all World War II veterans, in recognition of the basic fact that an estimated 8,000,000 World War II veterans would not benefit by the G.I. Bill of Rights. Congress was also urged to liberalize existing provisions of the G.I. bill, particularly those dealing with the loan clause and educational aid. Early and orderly demobilization of the armed forces, with preference and priority based on length and type of service, was also urged.

The annual reports of officers indicated the growth of the organization. In 1941 the membership strength of the V.F.W. was less than 250,000. In 1945 the membership exceeded 1,000,000, which included approximately 750,000 World War II veterans. The total number of local units reached 4,500 in 1945, a new high in V.F.W. history. In 1945, 900 new posts were chartered. The expansion program of the organization had a total of 12,000 posts for its goal by the close of 1946.

The following national officers were elected for 1946: Joseph M. Stack, Pittsburgh, Pa., commander in chief; Louis E. Starr, Portland, Ore., senior vice-commander in chief; Ray H. Brannan, Denver, Colo., junior vice-commander in chief; Robert B. Handy, Jr., Kansas City, Mo., adjutant general-quartermaster general; Lyall T. Beggs, Madison, Wis., judge advocate general; Dr. Clarence R. Rungee, New Haven, Conn., surgeon general; Reverend Clarence G. Hall, Catlin, Ill., national chaplain. (B. Y.)

**Veterinary Medicine.** Change in Poultry Meat Inspection.—In the United States the marketing of fowl plucked and refrigerated with head, legs and viscera intact, leaving the actual "butchering" to the retail meat dealer or the housewife was disapproved in strong terms by

hygienists of the food industries as a common practice to be corrected in the interest of poultry production and public health. The uneviscerated carcass loses its delectable flavour and meat inspectors are best able to detect the presence of disease and evidence of unfitness for human food by inspecting the internal organs at the time of slaughter as is done in farm mammals. But, until quick and continuous freezing of poultry carcasses was developed, there was no economical plan of conducting meat inspection in the poultry dressing plants. Even under ordinary refrigeration, drawn poultry decomposes in a matter of hours. Specially constructed equipment comparable with the production line of a factory and the quick freezing refrigeration developed in 1944 and 1945 brought poultry meat inspection up to the same practical level as that of other farm animals.

**Hog-Cholera Vaccination.**—From the time the War Food administration urged the livestock farmers to accelerate swine production, there was a keen controversy over the relative, over-all merits of the three methods of vaccinating against hog cholera: (1) The original, 35-year-old serum-virus method of Marion Dorset, W. B. Niles and C. N. McBryde which confers immediate, solid, lifetime immunity (with rare exceptions) continued to be charged with spreading the disease under U.S. system of unregulated sale, distribution and reckless use of the elusive, disease-producing virus, without concurrent resort to the usual sanitary measures employed by livestock sanitarians, and (2) the crystal-violet vaccine or (3) tissue vaccine which were charged with conferring immunity of too short duration—from three weeks after vaccination to fade within the year—but was credited with the property of immunizing hogs sufficiently up to market age without risk of spreading the infection or of causing depressing vaccinogenic reaction. The trends of the controversy were toward a more general understanding of the preventable dangers of the serum-virus method and the known limitations of the others.

**The Veterinary Service of World War II.**—During 1944, the veterinary corps, of the U.S. army inspected, in round numbers, 8,000,000,000 lb. of meat, meat-food products and dairy products in addition to 1,000,000,000 lb. for the navy, marine corps and other government agencies. Of these amounts, 300,000,000 lb. were rejected prior to purchase or offer for delivery for failing to meet the contract specifications in respect to type, class or grade. About 60,000,000 lb. were rejected as insanitary or unsound. The figures reported were three times those of 1943, and 155% more than those of 1942. Losses from spoilage and unfitness from source to destination were small in the far-flung theatres and negligible in the zone of the interior.

While the number of transport animals was smaller than in former wars in which the U.S. participated, their use in some of the theatres was indispensable and their usefulness in all theatres was generally acknowledged by army commanders. In the Burma-India-China theatre, successful military operations were not possible without them. In southern China, from before the U.S. declaration of war, officers of the veterinary corps, U.S. army, were on duty training the native armies in horsemanship, horseshoeing, animal procurement and military veterinary medicine.

The new antitrypanosome developed by the U.S. public health service for the treatment of human trypanosomiasis was tried with promising results on animals suffering from surra, the grave protozoan disease of the oriental tropics.

**Bovine Infectious Keratitis.**—The bacteriological studies of infectious keratitis, or pink eye, of cattle which had been pursued for years terminated in 1945 on discovery of the specific organism—*Haemophilus bovis*, a plump, gram-negative, nonsporulating, nonmotile bacillus 1.5 to 2.0 microns long and 0.5 to 1.0 micron in diameter, regularly found end to end, with a tendency to bipolar staining. Along with other micro-organisms critically examined in the past, *H. bovis* appears to have escaped isolation because culture mediums containing blood were not used in examining the bacteria found in infected eyes. Tests for pathogenicity were positive in cattle but negative in sheep, a nonsusceptible species.

Although pink eye of cattle is rarely fatal, its morbidity is ubiquitous and effects grave. The stricken animals may be temporarily blind, unable to find water and subsistence on pasture or escape injury (falling into ditches, drowning, etc.) during the period of impaired vision. Feeders lose flesh, and milk secretion of dairy cows declines. The ulcerative form destroys the sight of one or both eyes completely. The economic value of the discovery depends upon the development of a protective vaccination.

**Equine Periodic Ophthalmia.**—Considerable advance was made in 1945 on the aetiology of the serious, ocular disease of horses commonly designated as periodic ephthalma or moon blindness. Officers of the veterinary research laboratory, Remount Depot, Front Royal, Va., in a series of controlled experiments were able to classify the disease as a nutrition disorder involving riboflavin and ascorbic acid. Though long suspected of being oecological or nutritional in nature, or both combined, proof to that effect was lacking prior to this investigation. The disease is a vicious photophobic iridocyclitis leading to lenticular cataract and other intraocular debacle that strikes the eyes of horses at the prime of life throughout several years of exacerbations and remissions. Arrest of the morbid process is rarer than complete loss of vision and unsightly eyeballs. It is a common affliction of solipeds and of wide geographic distribution. The veterinary corps investigation attached the cause to deficiency of the equine ration, specifically, to the interrelation (antagonism) between riboflavin and ascorbic acid concentration within the eyeball. Though all bars against error were closed as the research proceeded, the authors declared that the investigation was not complete.

**Artificial Insemination of Farm Animals.**—The popularity and use of artificial breeding in farm animals, especially in cows, made notable gains during 1944-45 in the U.S. The Purebred Dairy Cattle association and the American Dairy Science association, co-operating with state extension services, continued to participate in the development of local projects by dispersing information on methods and costs that encourage the organization of breeding units. A unit, or society, comprises a group of dairy farmers and a centre where bulls of the different breeds of the community are kept ready for the collection of semen to be conveyed and inseminated to waiting cows at distant points. Directions for increasing the longevity of spermatozoa were improved, methods of shipping semen, based on experience, were changed and the insemination of more cows from a given ejaculation was made possible by the use of new formulas for the dilution of semen.

**Treatment of Grubby Cattle Accelerated.**—Because the damage to cattle hides caused by heel flies (*Hypoderma bovis* and *Hypoderma lineatum*) fluctuates from \$50,000,000 to \$100,000,000 annually in the U.S. and was held responsible, in part, for the shortage of leather, new and more vigorous control measures were employed among range cattle during 1944 and 1945. The damage is done by the grub (maggot) of the fly when it settles in the thick skin of the back to develop to maturity. It builds a nut-sized nest of formative tissue (a warble), punctures a hole in the hide for air and for exit when mature. The number varies from few to many, scattered over the loins. The dimensions of the grub at maturity are 0.5 in. thick and 1.25 in. long. The damage to the hide corresponds to the number of holes made. The grub escapes from the warble in the spring months, falls to the ground, moults and becomes an insect with the first warm weather. Extermination depends upon killing the grub during its sojourn in the back. In gentle, stabled cattle the treatment consisted of squeezing out the grubs manually or applying an active larvicide to each of the warbles. But since that was not feasible in cattle of the open range, no treatment was attempted until entomologists of the U.S. bureau of animal industry determined the larvicide property of derris or cube, containing 5% rotenone, mixed with wettable sulphur and rubbed in to the infected skin in the form of a powder or sprayed in aqueous suspension. Cattle were treated while passing through chutes equipped with elevated platforms for the operators. The spraying was done under high enough pressure (400 lb.) to drive the suspension around the warble. The powder method though more cumbersome, was equally reliable provided the powder was thoroughly rubbed into the skin. The spray suspension used consisted of 5 lb. of derris or cube (containing 5% of rotenone) and 10 lb. of wettable sulphur to each 100 gal. of water. The powder was diluted in the same proportions with an inert clay.

(L. A. M.)

**Victoria.** A state of the Australian commonwealth, area 87,884 sq.mi.; pop. (est. Dec. 31, 1943) 1,997,804. Chief cities (pop. Dec. 31, 1943): Melbourne (cap. 1,107,000); Geelong (40,250); Ballarat (38,600); Bendigo (30,200). Governor in 1945: Maj. Gen. Sir W. J. Dugan.

**History.**—A. A. Dunstan's composite Country party Liberal government remained in office in 1945 until late September when, following a dramatic political crisis, the state government was refused supply and Dunstan tendered his resignation. The governor, by proclamation, dissolved parliament and called on the Labour leader, John Cain, the Liberal leader, T. T. Holloway and the Country party deputy leader, A. E. Lind, in turn to form a stopgap government. Each was unable to obtain the necessary assurance of support and eventually Ian MacFarlan, the attorney general, was successful in forming a government which obtained two months' supply from parliament. At the general election held on Nov. 10 the Labour party was returned to power and Cain became premier. Among the defeated members was MacFarlan, the stopgap premier. Earlier in the year the government decided to confer much wider activities on the agent general in London and in September appointed the minister for agriculture, Norman Martin, to the post. His new duties included finding additional markets in

postwar Europe, the active encouragement of migration and an expansion of Victoria's tourist traffic.

Drought conditions during 1945 seriously affected agricultural production, the wheat crop amounting to less than 120,000 tons compared with 600,000 tons in 1944 and a wartime average of 1,200,000 tons. Every effort was made to sow an extra 400,000 ac. during 1945 and, with good winter rains ending the drought, prospects were considered better for the 1945-46 crops.

**Education.**—In 1941: number of schools (state) 2,640, (private) 518; teachers (state) 8,868, (private) 2,744; scholars (state) 225,023, (private) 81,308; average attendance (state) 187,316, (private) 76,305.

**Finance.**—In 1943-44: revenue \$113,740,000; expenditure \$111,757,000; debt outstanding (June 30, 1944) \$559,242,000. (Conversion rate: £A1=\$3.2 U.S.).

**Communication.**—Roads (1941) 110,000 mi.; railways (1942-43) 4,758 mi. Motor vehicles licensed (March 31, 1945): cars 137,122, commercial vehicles 94,361, cycles 19,115. Wireless receiving set licences (June 30, 1944) 409,325. Telephones (June 30, 1941) 228,936.

**Agriculture, Manufacturing, Mineral Production.**—(In short tons) Wheat (1944-45) 120,000; wool (1943-44) 99,900; coal, brown (1942) 5,526,000; gold (1942) 101,497 fine oz. Industry and labour (1943-44): factories 9,317; employees 261,331; gross value of output \$910,874,000; unemployment (trade union returns) (Feb. 1945) 0.8%. (W. D. MA.)

**Victory Gardens:** see HORTICULTURE.

## Vinson, Frederick Moore

(1890- ), U.S. politician, was born Jan. 22 at Louisa, Ky. He was graduated from Kentucky Normal college, 1908, received his B.A., 1909, and his law degree, 1911, from Centre college and practised law in Louisa in 1911. He served seven terms in the national house of representatives, and was a key man in congress during the early days of the Roosevelt administration. In 1937, he accepted Pres. Roosevelt's offer of the post of associate justice in the U.S. court of appeals for the District of Columbia. Vinson was named director of the Office of Economic Stabilization in May 1943. He vetoed the 8-cent per hour increase asked for by 1,100,000 nonoperating employees of the railroad brotherhoods and warned that the "little steel" wage formula would be destroyed if the 8-cent increase was approved by congress. In Nov. 1944, he again declared that the administration was not contemplating an upward revision of the "little steel" formula but added that the rise in living costs "must stop." Vinson changed posts three times in 1945. Pres. Roosevelt made him federal loan administrator in charge of the Reconstruction Finance corporation, March 5, and director of the Office of War Mobilization and Reconversion, April 2. Pres. Truman appointed him secretary of the treasury, after Morgenthau's resignation, and Vinson was sworn in office, July 23. He signed the Anglo-American agreement, Dec. 6, under which Britain was to secure loans from the U.S. totalling about \$4,400,000,000.

## Virginia.

One of the 13 original United States, Virginia is known as the "Old Dominion" and as the "Mother of Presidents." It is southernmost of the middle Atlantic states, with an area of 40,815 sq.mi. including 916 sq.mi. of water. Pop. (1940) 2,677,773, 35.3% urban and 64.7% rural. On July 1, 1944, the bureau of the census estimated the civilian population of the state at 3,199,115. Capital, Richmond (193,042 in 1940 and 225,000 in July 1944). Other cities include Norfolk (144,332 and 167,900), Roanoke (69,287 and 66,641) and Portsmouth (50,745 and 59,472).

**History.**—The general assembly convened in extraordinary session in March 1945, following a referendum on March 6 in which the people voted 54,515 to 30,341 in favour of a constitutional convention to be restricted solely to providing means for Virginia servicemen to vote in state and local elections. In addition to arranging for the election of delegates to this convention, the legislature at this session provided a substantial increase in the state contribution to salaries of public school teachers, appropriated more than \$1,200,000 for visual education equipment and paved the way for study of election laws by

WILLIAM M. TUCK, Democrat, was elected governor of Virginia on Nov. 6, 1945

an interim commission. The constitutional convention in April added a new section to the state constitution to validate a plan for war voting. A general election in Nov. 1945 saw William Munford Tuck elected governor by a two-to-one margin over S. Floyd Landreth, Republican, and Howard Carwile, Independent. The 1945 governor was Colgate W. Darden, Jr.; Tuck was lieutenant governor that term. Dr. Dabney S. Lancaster was superintendent of public instruction.

**Education.**—In 1944-45, elementary school enrolment was 425,574 with a teaching staff of 11,064; secondary school enrolment 124,081 with a teaching staff of 4,240.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the year ended June 30, 1945, 11,338 persons received \$830,783.87 in general relief; 18,026 received \$2,463,212.38 in old-age assistance; 4,814 families with 13,881 dependent children, \$1,181,164.45; 1,107 blind, \$200,898.20; and in 1945 from January through Dec. 22, 74,139 unemployment compensation checks were written for \$1,095,068. This represented an increase of nearly 300% over the same period in 1944. An average daily population of 4,298 was in five penal institutions for adults, and of 589 in four industrial schools for juveniles at the end of the fiscal year in June 1945.

**Communication.**—On Jan. 1, 1945, there were 9,176.33 mi. of highway in the state's primary system; on July 1, 1945, there were 37,576.29 mi. in the secondary system. During the year ended June 30, 1945, the state spent \$23,839,412.32 on its highways. Total railroad mileage was 4,093.93 on Jan. 1, 1945. There were 346,244 telephones in Virginia on Nov. 30, 1945.

**Banking and Finance.**—On June 30, 1945, Virginia had 183 state banks with 62 branches and five "facilities" and 130 national banks and branches. On June 30, 1945, deposits in state banks totalled \$647,724,179 and assets, \$697,515,677. On June 30, 1945, deposits of national banks were \$1,015,857,242 and assets, \$1,082,702,067. Resources on Dec. 31, 1944, of 18 industrial loan associations were \$7,975,317; of 58 building and loan associations, \$36,416,006; of 28 credit unions, \$1,285,980. The state budget for the fiscal year ended June 30, 1945, showed receipts of \$170,407,655, some 23% more than the previous year. The gross debt on June 30 was \$16,908,076; there was no net debt, since a sinking fund of \$18,588,222 left an excess of \$1,680,145. The fiscal year ended with a general fund surplus of \$17,936,100.

**Agriculture.**—The value of Virginia's principal crops in 1945 was estimated at \$237,000,000, a decrease of 2% from 1944. Acreage harvested declined slightly from the 1944 figure to 3,874,000 ac. Severe shortages of farm labour persisted during the year, and a killing freeze on April 6 destroyed the great bulk of peach and apple blossoms which had appeared during an unseasonably warm March. Prolonged rains during the latter part of July added to the generally unfavourable growing season and contributed to some of the lean crops. In spite of these factors, yield per acre of corn and oats was the highest on

record, and the combined production of all tobacco crops was the highest from 1923. Cash receipts to Virginia farmers in 1945 from the sale of crops and livestock products were estimated at 5% more than 1944, when receipts were \$314,905,000.

Table I.—Leading Agricultural Products of Virginia, 1945 and 1944

Crop	1945	1944
Tobacco, lb.	154,077,000	148,827,000
Cotton, lint, bales.	17,000	29,000
Corn, bu.	40,359,000	34,272,000
Oats, bu.	3,780,000	3,672,000
Barley, bu.	1,836,000	2,124,000
Apples, commercial, bu.	3,145,000	14,580,000
Peaches, bu.	536,000	2,150,000
Wheat, winter, bu.	8,192,000	11,275,000
Hay, all tame, tons	1,711,000	1,357,000
Lespedeza seed, lb.	8,900,000	6,800,000
Potatoes, bu.	8,568,000	5,976,000
Sweet potatoes, bu.	3,441,000	3,960,000
Peanuts for nuts, lb.	152,100,000	191,180,000
Soybeans for beans, bu.	1,360,000	945,000

**Manufacturing.**—The total value of manufactured products for the year ended Dec. 31, 1944, was \$2,273,281,756. Wage earners were paid \$339,626,866 in this period, while total salaries amounted to \$79,208,569; an estimated 246,518 persons were engaged in manufacturing at the end of this period. The principal industries were tobacco products, food and kindred products, transportation equipment, textiles, paper and printing and chemical products.

Table II.—Principal Industries of Virginia, 1944 and 1943

Industry	Value of products 1944	1943
Tobacco products.	\$760,800,542	\$774,150,411
Food and kindred products.	298,882,246	176,109,103
Textiles and their products.	377,549,300	345,892,442
Wood products.	105,860,200	99,690,579
Paper and printing.	142,556,943	136,067,049
Chemical products.	111,694,596	95,117,022
Metals and machinery.	70,437,607	70,224,486
Transportation equipment.	244,324,461	251,903,591

**Mineral Production.**—The production value of raw mineral resources in the year ending Dec. 31, 1944, reached an all-time peak of \$88,528,000 compared with \$85,825,000 in 1943 and \$50,003,672 in 1940. Coal production in 1944 was valued at \$64,476,000 as compared with \$59,923,217 in 1943, an increase of more than 7%. About 3,000 bbl. of petroleum and 55,000,000 cu.ft. of natural gas were produced. The nonmetallic minerals had a production value in 1944 of \$16,955,450. The value of metallic ores, chiefly zinc, titanium and manganese, was about \$7,096,500.

(J. J. Kt.)

**Virginia, University of.** A state institution for higher education at Charlottesville, Va. Throughout the period of World War II, the university provided facilities for the school of military government, for various other military and naval units, and for experimental work in several scientific fields. Perhaps the most extensive research conducted was that carried on in connection with the atomic bomb project. The college department added during 1945 an Institute of Foreign Service and International Affairs, and Jesse H. Jones of Houston, Tex., gave the university \$300,000 to create the Woodrow Wilson School of International Affairs. (For statistics of student enrolment, faculty members, endowment, library volumes, etc., see UNIVERSITIES AND COLLEGES.)

(J. L. N.)

**Virgin Islands.** A United States dependency in the West Indies, east of Puerto Rico, comprising St. Croix (pop. 12,902); St. Thomas (11,265) and St. John (722) islands. Area, 133 sq.mi.; pop. (1940) 24,889, 13.1% more than in 1930 with whites 9%, Negroes 69% (1930: 78.3%), "mixed and other races" 22% (1930: 12½%). The chief cities are: Charlotte Amalie, the capital on St. Thomas, 9,801 (1930: 7,036); Christiansted 4,495 (1930: 3,767) and Frederiksted, 2,498 (1930: 2,698) on St. Croix. The governor

in 1945 was Charles Harwood.

**History.**—Ending of World War II construction and a sharp decrease in the sale of rum seriously affected the economy of the islands during 1945. However, the profits from the heavy rum shipments at high prices in 1944 prevented any immediate effect upon governmental operations, and a generally increased harbour activity at St. Thomas promised to help conditions in the future. Popularity of some of the island resorts among service personnel indicated that attractions of the islands to tourists could well be emphasized in the future.

As a backlog against postwar unemployment there was the \$10,028,420 authorization by congress in 1944 for the construction of public works, including hospital facilities, sanitation, roads, docks, markets, schools, communications and other improvements. In Dec. 1945 congress appropriated \$1,216,210 to start the program which was designed to extend over a five-year period.

**Education.**—Public and private elementary and secondary schools had an enrolment of 5,585 in 1945 (St. Thomas and St. John, 3,047; St. Croix, 2,538). Of the total Charlotte Amalie high school had 643 students.

**Finance.**—The monetary unit is the U.S. dollar. Government of St. Croix receipts during the fiscal year 1945 were \$515,383.28; budgeted expenditures, \$589,588; U.S. subsidy, \$100,000 (of which \$51,000 was unexpended). Government of St. Thomas and St. John receipts were \$1,257,416.53; budgeted expenditures, \$1,152,496.82; no U.S. subsidy (for fourth year).

**Trade.**—Shipping was slightly improved over 1944 and 204 vessels entered St. Thomas harbour. Exports from the islands in 1944, last year for which statistics were available in 1945, totalled \$6,657,669 (including \$5,715,480 which represented 2,661,248 gal. of rum) while imports totalled \$3,726,484. In 1943 exports only totalled \$3,456,235 (including \$2,457,301 which represented 1,725,533 gal. of rum) as compared with imports of \$3,861,055.

**Communication.**—External communication is by steamer and Pan American Airways through Charlotte Amalie. Inter-island traffic is by boat and aeroplane.

**Agriculture.**—Agriculture supplements shipping to support St. Thomas. St. Croix and St. John are largely agricultural. In 1940 (census) there were 828 farms of 3 ac. or more totalling 55,228 ac. St. Croix produced practically the entire sugar crop of the islands, amounting to 4,040 short tons of raw sugar in 1945 (2,687 short tons in 1944). Grazing was encouraged by a government-built abattoir on St. Croix and a cold storage market on St. Thomas. Vegetables, orchard products (guava, coco-nuts, limes, lemons and oranges) and livestock comprised the principal agricultural products other than sugar. The Virgin Island Co., a government corporation, mills the sugar and operates one of the two rum distilleries on St. Croix.

**Vital Statistics:** see BIRTH STATISTICS; CENSUS DATA, 1945; DEATH STATISTICS; INFANT MORTALITY; MARRIAGE AND DIVORCE; SUICIDE STATISTICS.

**Vitamins.** A "Lactobacillus casei factor" was synthesized by R. B. Angier and found effective in macrocytic anaemia and sprue. *L. casei* factor(s) belong to a group of substances variously known as "folic acid," "norit eluate factor," "growth factor for *Streptococcus lactis*," "vitamin M," "vitamin Bc," etc. They are parts of the B-complex vitamins and have been associated with the growth of certain micro-organisms and the prevention of an anaemia in the monkey and in the chick. Many of these substances are probably identical.

Neither the method of synthesis nor the structure was given. Absorption spectra, crystals and biologic activities of the synthetic product and natural compound are the same. T. D. Spies and associates reported haematologic responses following the administration of the synthetic *L. casei* factor to several cases of unspecified macrocytic anaemia. W. J. Darby and T. Jones reported the response of two cases of sprue to the intramuscular administration of the synthetic *L. casei* factor. Several as yet unpublished accounts reported a favourable haematologic response in pernicious anaemia following therapy with this material.

Outstanding advances were made in the understanding of the mechanism of action of pyridoxine or vitamin B<sub>6</sub>. A deficiency of this vitamin causes a dermatitis in the rat, a microcytic anaemia in the dog, swine and duck, and neurologic disturbances in all three species. The manifestations of pyridoxine deficiency in man have not been clearly defined. It was shown that pyridoxine deficiency results in a defect in the metabolism of protein, specifically in the metabolism of the amino acids tryptophane and tyrosine. Pyridoxal and pyridoxamine are naturally occurring derivatives of pyridoxine, closely related to it chemically, but varying in biologic activity. E. E. Snell and A. N. Rannefeld reported a detailed study of the three compounds which showed in general that pyridoxal and pyridoxamine are equal in activity or greater than pyridoxine, supporting the belief that they are more closely related chemically to the active catalytic form of pyridoxine. It was shown by H. C. Lichstein, I. C. Gunsalus and W. W. Umbreit that pyridoxal phosphate, previously shown to function as the coenzyme of several amino acid decarboxylases, also functions in certain transamination reactions. Thus it can be said that the mechanism of action of the vitamin B<sub>6</sub> compounds in protein metabolism is partially explained by coenzyme activity in amino acid decarboxylation and in transamination.

Several of the vitamins assume a different chemical form in the tissues before their functional or catalytic role in metabolism is possible. This functional form is usually a coenzyme; conceivably in certain conditions, the functional form of a vitamin may be lacking in spite of adequate amounts of the free vitamin. It was reported by W. M. Govier that the functional form of thiamin (cocarboxylase) and of niacin (coenzyme I) were greatly reduced in heart muscle made anoxic by an experimental technique designed to approximate the conditions following a common type of heart disease known as coronary occlusion.

Antivitamins, vitamin inhibitors or antimetabolites are substances whose chemical structures are similar (analogues and homologues) to those of essential cellular catalysts. There are known antimetabolites for several of the vitamins and amino acids. Galactoflavin, an analogue of the B-vitamin riboflavin, was found by G. A. Emerson, E. Wurtz and O. H. Johnson to interfere with the ability of riboflavin to support growth in rats and a similar phenomenon by a homologue of thiamin was reported by G. A. Emerson and P. L. Southwick. W. Shive and E. E. Snell reported inhibition of bacterial growth by a number of analogues of pantothenic acid. A thorough review of this important subject was published by A. D. Welch. P. R. Burkholder and Ilda McVeigh reported studies on several varieties of peas and beans which showed that during germination niacin, pantothenic acid, inositol, biotin, riboflavin and ascorbic acid increased greatly. Thiamin and pyridoxine remain unchanged and the vitamin B<sub>6</sub> content decreased. E. Stotz reported a variety of apple which is nearly as rich in ascorbic acid as an orange. An intensive study by K. C. Hammer, L. Bernstein and L. A. Maynard showed that the amount of sunlight previous to harvesting has a marked effect on the ascorbic acid content of tomatoes. **Wages and Hours.** During 1945 employment and pay rolls in manufacturing and nonmanufacturing industries of the U.S. experienced a progressive decline. The index numbers for January were about 15 points below the figures for the previous January (1944); and for August they were 25 points lower. Advance news releases of the United States bureau of labour statistics showed even more rapid decreases in September and October. The excessive amount of overtime hours declined rapidly after the Japanese surrender and discontent spread among wage earners when their "take-home" earnings decreased sharply because of both reduced hours per week and loss of overtime premiums.

Table I and the chart on page 808 show employment indexes for 1944 and the first eight months of 1945 in all manufactures, durable goods and nondurable goods. The table shows wage-earner employment and pay rolls in both durable and nondurable goods industries. These indexes were based upon 1939 as 100.

Table II shows the average hours and earnings in the two

Table I.—Employment and Weekly Wages Indexes for All Manufacturing Industries of the U.S. in 1945 (8 months) and 1944

Indexes are based on 1939 average and adjusted to census of manufacturers. They are not comparable to indexes published prior to Dec. 1942 by the bureau of labour statistics

This table compiled from statistics released by the Monthly Labor Review, United States bureau of labour statistics.

sample months of January and July 1945, in the principal manufacturing and nonmanufacturing industries. It is evident that a high level of wage-earners' weekly "take-home" continued through July 1945, as the result of high earnings and overtime pay.

Table II.—Average Weekly Earnings, Average Weekly Hours and Average Earnings per Hour in Major Industrial Classifications, January and July, 1945 in the U.S.

Industry	Average weekly earnings		Average weekly hours		Average hourly earnings	
	Jan.	July	Jan.	July	Jan. cents	July cents
ALL MANUFACTURING	\$47.50	\$45.42	45.4	44.0	104.6	103.2

\*Not available.

Compiled from Monthly Labor Review, United States bureau of labour statistics, Washington, D.C.

Incentive systems of wage payment were used extensively during World War II. This was another factor contributing to high weekly earnings in manufacturing.

Table III shows a steady rise in average hourly earnings from 1940 to 1945. The increase is greater than the rise in hourly rates since time-and-one-half and double-time overtime rates appreciably increased hourly average earnings. It was not possible to separate the increment added to hourly earnings by overtime work from the prevailing rates paid for standard hours of employment.

Table III.—Rise in Hourly Earnings Rates in U.S.A., 1940-45

Industry	Hourly earnings in August				
	1940	1941	1942	1943	1944
Manufactures in general	\$ .668	\$ .745	\$ .864	\$ .965	\$1.016
Durable goods manufactures	.731	.830	.966	1.060	1.111
Nondurable goods	.613	.658	.738	.811	.865
Iron and steel	.777	.871	.967	1.037	1.076
Machinery	.745	.844	.976	1.063	1.120
Lumber and products	.526	.588	.677	.744	.803
Food and kindred products	.615	.658	.732	.805	.844
Tobacco products	.492	.520	.587	.658	.715
Rubber products	.779	.861	.936	1.015	1.102
Anthracite mining	.926	.989	.992	1.073	1.179
Bituminous mining	.887	1.033	1.061	1.147	1.189
Wholesale trade	.736	.798	.861	.944	.939
Building	.956	1.001	1.174	1.246	1.323

Bureau of labour statistics figures showed a downward trend of hours in most industries from 1937 to 1939 because of reduction in hours-standards effected by union agreements. But in 1940 to 1945 average hours increased, particularly in the heavy industries. It was apparent during the closing months of 1945 that the industries generally were eliminating overtime and returning to prewar standards of normal working hours.

The much higher hourly earnings in some industries were due to one or more of the following factors: (1) character of the

labour supply employed, as to sex, age and skill, (2) productivity of the industry, principally determined by its degree of modernization, technical equipment and proportion of skilled workers, (3) degree to which union working conditions prevailed and (4) necessity of paying high wages to attract labour supply.

Weekly earnings measure wage-earner welfare better than do hourly rates. There were 12 industries of the 32 studied in which average weekly earnings exceeded \$50 per week in July 1945. The maximum was \$59.64 in transportation equipment industries. The lowest weekly earnings were in hotels: \$24.40. Of course, hotel earnings are supplemented by tips, and the statistics do not reveal this part of the employees' income. In July 1945, there were 21 industries in which average weekly earnings were between \$40 and \$59.64 and eight industries between \$30 and \$40. The average weekly earnings of durable goods manufacturers were \$50.60 in July 1945 compared with \$51.07 a year earlier.

The wages of farm labour, both monthly and daily wages varied little from 1944 levels, judging by the reports of the U.S. bureau of agricultural economics. Labour scarcity caused increased mechanization on farms. (See also AGRICULTURE; BUSINESS REVIEW; CANADA; CENSUS DATA, 1945; LAW.)

(D. D. L.)

Great Britain.—The latest comprehensive returns available relating to wages and hours in Great Britain showed the weekly earnings and the hours worked in January by approximately 5,500,000 wage earners and were believed to be reasonably representative of general conditions in the industries covered. These did not include coal mining, railways, docks, shipping, agriculture, distribution and commerce or domestic and other personal services. They were primarily representative of manufacturing industries. In this wide group average earnings had increased by 76% above the level of Oct. 1938, as compared with a rise of only about 30% in the official cost of living index, which however underestimated the real increase as it was much affected by the keeping down of the prices of a limited range of necessary articles by means of subsidies. It has also to be borne in mind that most working-class incomes, except those of juveniles, were subject to fairly heavy direct taxation. The average rise of 76% included all workers: the rise was 73% for men, 69% for youths and boys, 94% for women and 82% for girls. The higher figure for women of course reflects the extensive movement of women into more highly paid industries and into jobs previously done by men. In the case of men, these earnings were for a longer working week than those of 1938, 49.4 hours for men as against 47.7; but for boys, women and girls there was a slight fall in the hours worked. For all workers together there was a slight rise, from 46½ hours to 47 hours.

It is a notable fact that in January both average earnings and average hours were less than those shown by previous inquiries. For men earnings fell below the averages shown in all previous inquiries from early in 1943 and for women from the beginning of 1944. Average hours were lower than those shown in any inquiry after the beginning of the war. For both men and women earnings reached their peak in July 1944. After then they fell, up to Jan. 1945, for men from 124s.4d. to 119s.3d. and for women from 64s.3d. to 63s.2d. These falls were in spite of a number of advances in wage-rates and were due to decreased overtime, week-end and piecework earnings. After Jan. 1945 there were further increases in weekly rates, but it was certain that average earnings fell further after the cessation of hostilities in Europe.

Earnings naturally differed widely from trade to trade. The highest averages for men were in metal, engineering and shipbuilding (131s.2d.) and in government factories (131s.6d.) and for women in the same two groups (70s.4d. and 84s.10d.) and in transport (78s.7d.). The lowest for men were in metal mining and quarrying (93s.8d.) and in public utility services (98s.3d.) and for women in bricks, pottery and glass (49s.9d.) and public utility services (50s.6d.). Of industries not covered by the main inquiry coal mining showed a rise, as against 1939, from 11s.5d. to 22s.5d. a shift, or in terms of weekly earnings from 60s.8d. to 114s.6d., or 89% (adult males only 86%). There were no up-to-date figures for the remaining industries.

The official cost of living index (July 1914=100), which stood at 200

EMPLOYMENT and pay rolls for all manufacturing industries, 1919 to 1946, as compiled by the U.S. bureau of labour statistics (1939=100)

throughout the first half of 1944, was afterwards allowed to rise slowly to 202 in January and 207 in July 1945. This increase was deliberately allowed by the Churchill government, which refrained from raising food subsidies by the full amount necessary to meet higher costs. An inquiry by the Oxford university institute of statistics showed that up to June 1944 nutritional standards had been well maintained, but that over a period of a year the cost of an adequate diet had risen by 3% or 4%. A further inquiry into the cost of an inexpensive "human needs" diet showed practically no change up to April 1945, the main price increases having been in goods not required for such a diet, if the less expensive items could be obtained in adequate amounts. Towards the end of the year, for international reasons, the food position became somewhat tighter; but the change up to September had not been great. On the other hand, the prices of nonfood articles rose much more sharply.

The future of wages seemed in September highly uncertain. New machinery for adjusting wage-rates was being set up under Ernest Bevin's Wage Councils act of 1944, and a number of important wage negotiations were pending. Only the railwaymen, among important groups, had so far concluded postwar wage agreements, bringing the minimum weekly wage up to 84s. in rural areas, 85s. in industrial areas and 87s. in London (Aug. 1945).

The future position in respect of working hours seemed in September also uncertain. The Trades Union congress put forward a demand for a general concession of the 40 hour week, without reductions in wages, as against a prewar week usually of 48 or 47 hours. Employers who were approached on this issue said that they regarded it as a matter to be settled centrally by legislation and not by sectional negotiations. The attitude of the new Labour government was at that date still unknown. (See also LABOUR UNIONS; PRICES.) (G. D. H. C.)

**Wainwright, Jonathan Mayhew** (1883— ), U.S. army officer, was born Aug. 23 in Walla Walla, Wash. He was graduated from West Point, N.Y., in 1906 and served in the Philippines during the Moro uprisings, 1909, and also saw service in France in World War I. During World War II, he was stationed in the Philippines and was second in command to General MacArthur when the Japanese invaded the islands in Dec. 1941. When MacArthur was sent to Australia, Wainwright assumed command (March 17, 1942) of the U.S.-Filipino armies in the Bataan peninsula. Wainwright retired from Bataan to Corregidor in April. He held out under a concentrated air and artillery bombardment until May 6, 1942, when he was compelled to surrender because his exhausted forces were no longer able to fight. He was confined in a prison camp in the Philippines, thence moved to three camps in Formosa and finally to two in Manchuria. Shortly after Hirohito's surrender broadcast (Aug.

15, 1945), a U.S. detachment in Manchuria released Wainwright from captivity and he was brought to Chungking, Aug. 28. The general participated in the Japanese surrender ceremonies aboard the battleship "Missouri" in Tokyo bay, Sept. 2. His nomination to the rank of a full general was approved Sept. 6.

Wainwright returned to the United States, Sept. 8, and was given an ovation in San Francisco, Calif., that day and in Washington, D.C., Sept. 10. On Sept. 28, Gen. Wainwright was named commanding general, eastern defense command, with headquarters at Governors Island, N.Y.

**Wallace, Henry Agard** (1888— ), U.S. statesman. (See *Encyclopædia Britannica*.) Wallace was secretary of agriculture in the cabinet of Franklin D. Roosevelt from March 4, 1933, until Sept. 5, 1940, when he resigned to campaign for the vice-presidency, to which he was elected the following Nov. 5.

President Roosevelt appointed him head of the Economic Defense board (later the Board of Economic Warfare) on July 31, 1941, and chairman of the Supply Priorities and Allocations board on Aug. 28. Following a dispute between Wallace and Jesse Jones, chairman of the Reconstruction Finance corporation, from which the BEW obtained funds to purchase war materials abroad, President Roosevelt abolished the BEW in July 1943, and transferred all subsidiaries of the RFC engaged in financing foreign purchases to a new Office of Economic Warfare (later the Foreign Economic administration). At the Democratic national convention in July 1944, Wallace was defeated for renomination as Roosevelt's running mate, but he played an active part in the campaign for the president's reelection. On Jan. 22, 1945, Roosevelt nominated Wallace to succeed Jesse Jones as secretary of commerce and directing head of the RFC and its affiliated lending agencies. Jones criticized Wallace's fitness for the two posts. The senate com-

merce committee rejected Wallace as head of the RFC; his nomination for secretary of commerce, however, was confirmed March 1. Wallace advocated full postwar employment, and his book, *Sixty Million Jobs* (1945), was a best-seller. In the commerce department, Wallace championed the cause of small business, urged extension of the Reciprocal Trade agreements, and asked for strict regulation of international cartels. In foreign affairs, Wallace stressed the need of U.S.-Russian amity.

**War Bonds.** Bond-selling drives of the United States treasury to finance World War II ended with 1945. In the Seventh War Loan of the year's spring months and the culminating Victory Loan of November-December more than \$47,000,000,000 was added to the sales total of the 1942-43-44 drives. For all eight loans of the series, spaced over a period of 36 months—from Dec. 1942, through Dec. 1945—sales totalled \$156,900,000,000. Goals set by the treasury for the eight loans aggregated \$106,000,000,000 so that the drives yielded an aggregate oversubscription of about 50%.

The results of each of the eight loans were as follows: First, goal \$9,000,000,000, sales \$12,900,000,000; Second, goal \$13,000,000,000, sales \$18,600,000,000; Third, goal \$15,000,000,000, sales \$18,900,000,000; Fourth, goal \$14,000,000,000, sales \$16,700,000,000; Fifth, goal \$16,000,000,000, sales \$20,600,000,000; Sixth, goal \$14,000,000,000, sales \$21,600,000,000; Seventh, goal \$14,000,000,000, sales \$26,300,000,000; Victory, goal \$11,000,000,000, sales \$21,100,000,000.

With the discontinuance of the drives, Secretary Vinson announced that the treasury would continue energetically the sale of United States savings bonds of the E-F-G series, through the pay roll deduction plan and otherwise. The treasury converted its war finance division into a savings bond division to direct this peacetime activity.

At the close of 1945, Series E savings bonds amounting to \$30,700,000,000 (current redemption value) were outstanding. Sales of this bond in 1945, inclusive of sales credited to the Seventh and Victory loans, totalled \$10,100,000,000. From May 1, 1941, when E bonds were first offered, through 1945, sales were \$39,700,000,000 and redemptions were \$9,600,000,000.

Two persons out of every three, approximately, in the U.S. entire population—men, women, children—bought E bonds. These bonds were responsible for \$20,000,000,000 of the receipts from all eight war loans.

The treasury placed on sale for the Victory Loan a new E bond denomination of \$200, bearing the portrait of President Franklin Roosevelt. The issue price of this bond is \$150. Sales of this denomination in the Victory Loan were reported as 950,000 pieces.

Securities offered in the Seventh and Victory loans followed in general the pattern of those sold in earlier drives. Sales by issues in the two loans were:

Series E savings bonds: Seventh \$3,976,000,000; Victory \$2,204,000,000.

Series F and G savings bonds: Seventh \$991,000,000; Victory \$657,000,000.

Savings notes, Series C: Seventh \$2,707,000,000; Victory \$1,682,000,000.

$\frac{7}{8}$ % certificates of indebtedness: Seventh \$4,784,000,000; Victory \$3,737,000,000.

$1\frac{1}{2}$ % bonds, short term: Seventh \$1,690,000,000.

$2\frac{1}{4}$ % bonds, medium term: Seventh \$5,077,000,000; Victory \$3,045,000,000.

$2\frac{1}{2}$ % bonds, long term: Seventh \$7,088,000,000; Victory \$9,819,000,000.

Aggregate sales by issues in all eight loans were: Series E savings bonds \$19,900,000,000, Series F and G savings bonds \$6,000,000,000, Series C savings notes \$17,100,000,000,  $\frac{7}{8}$ %

"THEY PUT HIM ACROSS." Jerry Costello in the *Knickerbocker News* (Albany, N.Y.), praised the U.S. press for its support in government war bond drives.

certificates of indebtedness \$35,900,000,000,  $1\frac{1}{4}$ % notes \$3,500,000,000,  $1\frac{1}{2}$ % bonds \$1,700,000,000,  $1\frac{3}{4}$ % bonds \$3,100,000,000, 2% bonds \$22,400,000,000,  $2\frac{1}{4}$ % bonds \$11,400,000,000,  $2\frac{1}{2}$ % bonds \$34,200,000,000, treasury bills \$1,700,000,000.

Emphasis on sales to individuals was continued in the two 1945 drives, and successfully so. In the Seventh Loan, individuals were assigned half of the loan's \$14,000,000,000 goal and their subscriptions reached \$8,700,000,000, exceeding the goal by 24%. This was a peak, for all eight loans, in the response of individuals. Sales of Series E bonds amounted to \$3,976,000,000 of the \$4,000,000,000 E bond goal in the Seventh Loan, and to \$2,204,000,000 against the \$2,000,000,000 E bond goal in the Victory Loan.

Quotas for the eight loans were based on analysis which measured the treasury's financial needs against available investment resources in the hands of the public. It took into account the importance of lessening inflationary pressure on commodity prices by converting surplus purchasing power into bond investments to the greatest possible extent. **War Committees, Joint** (U.S. and Canada): see CANADIAN-U.S. WAR COMMITTEES.

**War Communications, Board of.** During 1945 the U.S. Board of War Communications (created by executive order, Sept. 1940, as the Defense Communications board) issued seven orders cancelling or lessening restrictions imposed by previously issued orders deemed necessary for the national security and defense and the successful conduct of World War II. Eight orders and three supplemental orders remained operative.

Paul A. Porter, chairman of the Federal Communications commission, continued as chairman of the board in 1945. Other members were Rear Admiral Joseph R. Redman, director of naval communications; Major General Harry C. Ingles, chief signal officer of the army; Hon. William L. Clayton, assistant secretary of state; and Hon. Herbert E. Gaston, assistant secretary of the treasury and BWC secretary. The board had no paid personnel or appropriations. It operated through a coordinating committee and a law committee staffed by personnel from the five agencies represented on the BWC. Several committees made up of industry, government and labour representatives, experts in all fields of wire and radio communications, served the board as advisers. **War Department, U.S.:** see GOVERNMENT DEPARTMENTS AND BUREAUS.

**Warfare, Incendiary.** With the close of World War II it became possible to evaluate the incendiary weapon in the light of military operations under widely differing conditions in the European and in the Pacific theatres. Incendiaries had been used but sparingly by Germany and Japan. This was due in part to the fact that the axis nations lacked the air power requisite to large-scale incendiary bombing. Moreover neither Germany nor Japan succeeded in producing technically adequate incendiary bombs. It was clear that the leadership of the Allies in incendiary warfare contributed largely to their military victory.

Employment of the incendiary bomb by air force overshadowed other usage of fire-producing weapons. The U.S.

chemical warfare service manufactured during the war some 250,000,000 incendiary bombs. At the same time the flame thrower proved itself an unexpectedly important ground force weapon. Use by artillery of incendiary loaded shell was negligible although German incendiary rockets were discovered in 1945.

Solid incendiary agents such as magnesium and thermit which found favour early in the war were largely replaced by gelatinous and viscous materials for loading into Allied aerial bombs. Gasoline thickened with "napalm" to lengthen burning and ensure adherence to walls and ceilings was an important innovation. By further thickening gelled gasoline with addition of magnesium powder, liquid asphalt and oil ingredients, a "pyrogel" mixture was obtained which proved highly effective in holding intense heat for extended periods against fire-vulnerable surfaces.

A type of incendiary bomb adopted by both Germany and Japan incorporated a large number (70 or more) of separate components charged with solid incendiary material which ignited and scattered on detonation. On the evidence of rather limited use these bombs could not be rated as outstandingly successful.

The most widely employed U.S. incendiary bombs were small units weighing less than 10 lb., "clustered" into packages having the ballistic characteristics of 500-lb. aerial bombs, thus permitting accurate aiming. Clusters were designed to open and release individual bombs at predetermined altitudes, usually within 1,000 ft. of the target.

Of all aerial bombs dropped on Germany approximately 15% were incendiary, 85% high explosive. In early bombings the proportion of incendiary was much smaller; the U.S. army air force used no incendiary bombs on initial operations. The demonstrated effectiveness of fire bombing as practised by the royal air force led to increased interest in incendiaries so that by 1945 bomber loadings of 80% incendiaries were not unusual for operations against fire-vulnerable targets. However conditions encountered in Europe necessitated liberal use of explosive bombs in conjunction with incendiary attacks. When the right balance between explosive and properly selected incendiary bombs was attained the destructive efficiency of the incendiary proved to be high. This was clearly demonstrated following examination of German cities captured during 1945 and which had been subjected to brief but intensive incendiary attack.

Against Japan the over-all proportion of incendiary bombs employed was much greater than was the case in Europe, the figure running in the neighbourhood of 60%. In these operations the use of explosive bombs was frequently dispensed with altogether, because of the generally more combustible nature of the targets encountered. The dropping of more than 100,000 tons of incendiary bombs accounted for the elimination of 150 sq.mi. of Japanese industrial areas. Fire destruction had brought the industry of Japan virtually to a standstill when atomic bombs delivered the *coup de grace*.

Incendiary bombs were used primarily against industrial targets, seldom against tactical targets. The fire bomb, however, was of considerable tactical importance. The term "fire bomb" was reserved in U.S. practice to designate a jettisonable aeroplane fuel tank filled with napalm-thickened gasoline and equipped with detonating fuzes. The fire bomb came into regular use in 1943 by U.S. and British airmen but was classed as a secret weapon until 1945.

The flame thrower found but limited employment in European operations because tactical situations in that theatre seldom developed important opportunities for the use of flame. This weapon is of greatest value in reducing stubbornly held positions which can only be overcome by direct assault. Such ac-

FLAME-THROWING tanks directing a barrage at "Skyline Ridge," southern Okinawa. Japanese offered stiff resistance in this area and had to be burned out of caves during the campaign of April-June 1945

tion was characteristic of campaigns in the Western Pacific; consequently flame throwers appeared importantly in every island action from the Marianas to Okinawa.

Replacing early bunker oils which produced short-range (25 yd.) flame accompanied by black bellowing smoke, napalm-thickened gasoline provided much more satisfactory fuel. Characteristic flame jet in 1945 extended 60 yd., maintaining a compact fire rod along a rather flat trajectory. By 1945 development of the portable flame thrower weighing 60 lb. had extended in two directions: toward a much lighter one-shot model to be carried by a running soldier; and toward a much heavier apparatus for installation inside tanks. Experimental designs of both types had proved sufficiently satisfactory to justify general standardization by 1945. (G. J. B. F.)

**War Food Administration.** In June 1945, after the surrender of Germany but before the surrender of Japan, the War Food administration at its own request became merged by executive order with the United States department of agriculture. Marvin Jones, war food administrator from June 23, 1943, to June 30, 1945, resumed his duties as judge of the U.S. court of claims, from which he had been on leave from Jan. 15, 1943. Subsequently, Clinton P. Anderson, the secretary of agriculture, directed the nation's food program, which even after V-J day required huge production for military and civilian needs and for relief and other export shipments.

It had been evident from the beginning of the war period that food would be one of the most vital war materials, since the U.S. required vast quantities for its own armed forces and civilians and also for those of other United Nations. Accordingly, the WFA urged and aided farmers to reach the highest possible

goals. It offered and administered price supports, strove to obtain materials, transportation and labour for agriculture and co-operated with farmers and with state agencies in co-ordinating the war food effort, farm by farm throughout the country. Nevertheless, the country needed many things in addition to food, some of which had the first call on labour, materials and other facilities.

Price supports encouraged farmers to produce crops in the kinds and quantities desired. Main features of the price-support system were loan programs; purchases of some commodities direct from farmers; purchases of other commodities from dealers, with the middlemen required to pay minimum prices to farmers; and special payments to dairy and other producers, either directly or through processors. Meantime, the WFA co-operated with other government agencies in the program for stabilizing prices and preventing inflation.

On June 29, 1945, by executive order no. 9577, the president abolished the WFA and transferred its functions to the department of agriculture. This order took effect on June 30. Subsequently, the secretary of agriculture appointed a committee on reorganization to work out means for preventing overlapping of functions in the department. On this committee's recommendation the secretary issued a memorandum on Aug. 18, 1945 which announced the establishment of a Production and Marketing administration by consolidation of the following agencies: office of basic commodities, office of supply, office of the president of the Commodity Credit corporation, offices of the manager and of the secretary of the Federal Crop Insurance corporation, office of marketing services, Agricultural Adjustment agency, office of requirements and allocations, Office of Price Administration, office of transportation, office of materials and facilities, office of labour, office of home food supply, office of investigatory services and the liquidating of the Federal Surplus Commodities corporation. (See also AGRICULTURE.) (A. P. Cw.)

**War Frauds:** see FEDERAL BUREAU OF INVESTIGATION.

**War Information, Office of.** The overseas branch of the Office of War Information distributed general information about the United States and information about the war effort of the U.S. to Allied, neutral and occupied nations throughout the world, and in conjunction with the military establishment directed psychological warfare activities against enemy countries. While hostilities continued in 1945 against Germany and Japan, the operations of the overseas branch included radio broadcasting on a 24-hour schedule in virtually every language to every nation in the world, the distribution of news, pamphlets and leaflets, motion pictures, magazines, photographs and other materials.

The domestic branch during 1945 continued its activities of co-ordinating the many informational campaigns reaching the public through press, radio, magazines, posters and other media, providing centralized facilities for scheduling radio time, advertising space and the co-operation of advertisers who assisted in carrying these campaigns to the public.

On Aug. 31 the Office of War Information was directed to discontinue most of its domestic operations. The same order established in the state department an Interim International Information service (I.I.I.S.) to continue temporarily the world-wide distribution of information concerning the United States carried on by the overseas branch, and to assume jurisdiction of the information functions of the Office of Inter-American Affairs. On Dec. 31, 1945, the I.I.I.S. went out of existence and its functions were absorbed by the Office of International Information and Cultural Affairs of the state department, which was to continue a permanent world-wide information program under the direction of Assistant Secretary of State William Benton. The activities of the domestic branch were terminated with the exception of the bureau of special services and the inter-agency publications committee unit, which were transferred to the bureau of the budget.

The former bureau of special services of the domestic branch operated in 1945 in the bureau of the budget as the government information service. (M. Mw.)

**War Labor Board, National.** The year 1945 saw the operations of the National War Labor board reach full and fairly stable maturity during the first six months but, following the August victory over Japan, brought a gradual liquidation of the board's activities and final termination of the agency on Dec. 31 under executive order 9672. The executive order ended a four-year program for peaceable settlement of labour-management disputes by government arbitration, but transferred the modified wage stabilization program—second of the WLB's two wartime assignments—to a newly-created National Wage Stabilization board.

Probably the major action of the board during the initial six months, while the agency was in active operation, was a report of public members to the president on Feb. 20 recommending that no change be made in the Little Steel formula, a basic wage stabilization device under which general wage increases were permitted for groups of employees up to a limit of 15% above the level of Jan. 1, 1941, to offset advances in the cost of living.

Other significant developments of the early part of the year included the board's decision of Feb. 21 ordering 55-cent minimum wages for the New England and southern textile industries to correct substandards of living and calling, as well, for "balanced and properly aligned" wage structures; the Feb. 21

denial of general wage increases to packing house workers (but with an order for the parties to negotiate well-balanced wage structures), and a July 21 decision holding the War Labor Disputes act superior to any state law in connection with a contested maintenance of membership clause in a union contract with a Port St. Joe, Fla., paper company case.

A court test of the power of the president to seize a nonwar establishment (Montgomery Ward & Co.) for defiance of board orders resulted in a decision of the Chicago district federal court on Jan. 27, holding such seizure illegal, but the decision was reversed by a U.S. circuit court of appeals on June 8. (A final adjudication of this legal point appeared unlikely in view of subsequent refusal of the U.S. supreme court to review the case on the ground that the issue was "moot" because seizure of the property had been terminated).

With the collapse of Japan on Aug. 14 and sudden shift of economic trends there started, however, a succession of changes in the disputes and wage stabilization programs and in the War Labor board itself. In his statement of Aug. 16 the president announced a relaxation of wage controls consistent with a loosening of the labour market and also a program to terminate the War Labor board as a disputes-settling agency "as soon after conclusion of the forthcoming industry-labour conference as the orderly disposition of the work of the board, and the provision of the War Labor Disputes act permit; and after facilities have been provided to take care of the wage stabilization functions under the act of Oct. 2, 1942."

Two days later, on Aug. 18, the broad plans announced by the president were more carefully defined in executive order 9599 directing the War Labor board to continue wage controls with such modifications as were necessary to prevent either inflation or deflation, and to move as rapidly as possible toward the removal of controls and toward the restoration of collective bargaining. In the field of wage stabilization, the board acted promptly with adoption of general order 40, which—for the first time from Oct. 1942—permitted employers to make wage increases not affecting prices without prior approval of the board. An exception was made in the case of the building and construction industry, in which controls were continued on the former footing. In the field of industrial relations, the board urged the parties in some 3,000 pending disputes to renew collective bargaining and to settle the issues without further recourse to the government. New dispute cases were accepted by the board and its agencies only upon joint agreement of the parties.

On Sept. 19, executive order 9617 was issued transferring the War Labor board, and certain other war agencies, to the department of labour. This, however, did not tangibly alter the character of the board inasmuch as the agency was preserved as an entity within the department of labour, with autonomy over its powers, personnel, funds and other administrative operations.

In November, as requested by the president, the board moved toward providing facilities for continuance of the wage stabilization program by setting up within the framework of the board a six-member wage stabilization division of tripartite composition to rule upon voluntary wage applications involving "price relief," to rule upon all wage decrease cases (all wage decreases continued to require prior approval of the board) and to deal with other phases of the program.

The final step in the liquidation of the board came on Dec. 31, 1945, when executive order 9672 terminated the agency and created a National Wage Stabilization board to carry on the wage control functions. Physically, the members and staff of the new board were drawn from those of the previously-operating wage stabilization division and the expired War Labor board. W. Willard Wirtz, chairman of the division, was named

chairman of the NWSB. (See also LAW; NATIONAL LABOR RELATIONS BOARD; STRIKES AND LOCK-OUTS.) (J. R. St.)

**War Manpower Commission.** April 18, 1945, marked the completion of the War Manpower commission's third year of service in recruiting manpower for the U.S. World War II effort. The commission's activities in 1945 were directed toward a more effective use of the national pattern of labour controls than had been established in 1944. The principal programs maintained were employment stabilization, priority referral, employment ceilings and the 48-hour week.

The United States Employment service functioned as the main operating arm of the WMC. During the three-year period April 1942 to April 1945, the USES made a total of 29,400,000 nonagricultural placements. For the year beginning July 1, 1944, when a nation-wide priority referral system was instituted as a basis for placements, the USES made 12,000,000 nonagricultural placements, more than 5,000,000 of which were in top-priority jobs. Although the over-all labour demand had been satisfied at the beginning of 1945, a lack of skilled labour in certain vital industries throughout the country caused a lag in the production of some critical items. Interregional recruitment played an important part in supplying labour for these "spot" shortages particularly since the over-all labour supply was still tight and relatively inflexible. There were 300,000 workers recruited by the USES for the vital atomic bomb projects alone. Of these, 179,000 were brought in through interregional recruitment from nearly every state in the U.S. From January through June, more than 221,800 placements were made in top-priority jobs through interregional recruitment.

Within the USES, and through its Veterans' Employment service, the program of job counselling and placement of veterans expanded as the number of returning service men and women increased. Functions of the Veterans' Employment service are carried out by a veterans' representative who is himself a veteran, qualified to handle veterans' problems. A Veterans' Employment representative is located in each of the 1,725 permanent USES offices. After Jan. 1945, USES representatives were also located in each of the army separation centres throughout the country to provide occupational and employment information. Special tools developed to expedite the proper placement of veterans in jobs include "Special Aids for Placing Military Personnel in Civilian Jobs" and "Special Aids for Placing Navy Personnel in Civilian Jobs." As of July 1945, 1,400,000 veterans of World War II had sought employment or job counselling at USES offices. There were 600,000 World War II veterans placed as of June 1945. A total of 2,000,000 placements for veterans of World Wars I and II were made by the USES in the period Jan. 1, 1942 to Jan. 1, 1945.

The handicapped worker received special assistance through the USES by means of a selective placement technique through which the physical demands of each job are carefully matched against the physical abilities of each applicant. There were 220,500 handicapped placements made in 1945 through July. Selective placement techniques are explained in the manual "Selective Placement for the Handicapped."

Training programs for workers and supervisors in war plants were developed by the constituent training agencies of the commission, the apprentice training service and the training-within-industry service. The apprentice training program, which in January operated in 32,000 establishments throughout the country, also had its responsibility for the development of new programs greatly increased by the enactment of the Servicemen's Readjustment act of 1944.

With the coming of V-E day, areas of labour stringency de-

creased rapidly. From V-E day to Aug. 1, Group I (acute shortage) areas dropped from 74 to 46. Intensive recruiting was still necessary, however, for industries which were vital to the Pacific campaign.

Immediately following the surrender of Japan, the WMC instituted the following seven-point reconversion program: (1) all manpower controls lifted; (2) number of unemployed in each community to be determined in co-operation with local management labour groups and action taken by WMC and local USES offices to speed re-employment; (3) labour channelled by voluntary methods into civilian industry, especially where reconversion bottlenecks threatened to develop; (4) full facilities of the USES made available to all employers; (5) veterans' services expanded; (6) increased emphasis placed on job counselling and other personalized services; (7) displaced war workers, including migrants, assisted in locating work in communities expanding civilian production.

All War Manpower commission functions, with the exception of the Procurement and Assignment service, were transferred to the department of labour on Sept. 19, 1945, by executive order No. 9617. (See also BUSINESS REVIEW; SELECTIVE SERVICE, U.S.; WAR PRODUCTION, U.S.) (P. V. M.)

## War Mobilization and Reconversion, Office of.

The United States Office of War Mobilization and Reconversion was established by an act of congress approved Oct. 3, 1944, to provide a national program for war mobilization and reconversion.

By the terms of public law 458, 78th congress, which set up the agency, the OWMR became responsible for: (1) developing unified programs and establishing policies to adjust the natural and industrial resources and manpower of the United States to war needs; and (2) co-ordinating government planning for reconversion of the same resources and manpower to peace.

During 1945 the agency was directed by: James F. Byrnes, former associate justice of the United States supreme court, who was succeeded April 7, 1945, by Fred M. Vinson, former federal loan administrator and director of the Office of Economic Stabilization. He was succeeded July 23, 1945, by John W. Snyder, former federal loan administrator and vice-president

"IS THERE A SCREWDRIVER IN THE HOUSE?" Crawford of the *Newark Evening News* illustrated the problem of gearing the world's industrial machine to a peacetime economy after the surrender of Japan in Aug. 1945

of Defense Plants corporation, of the Reconstruction Finance corporation.

The OWMR included the following agencies which exercised their functions under the supervision of the director:

(1) Office of Contract Settlement, created by the Contract Settlement act of 1944,

(2) the Surplus Property administration, successor (Sept. 18, 1945) to the three-man Surplus Property board, which under the Surplus Property act of 1944 succeeded the Surplus War Property administration, created by executive order 9425, in Feb. 1944.

The functions of the Office of Economic Stabilization, established Oct. 3, 1942, by executive order 9250, were transferred to OWMR Sept. 20, 1945, by executive order 9620.

The Retraining and Reemployment Administration, established by Title III of the act creating the OWMR, functioned within the OWMR until Sept. 19, 1945, when it was transferred to the department of labour by executive order 9617.

To represent the public interest and the general public the act establishing OWMR also created an advisory board comprised of three public members, three experienced in business management, three in agriculture and three in matters relating to labour. Members of the board in 1945 were: (public) O. Max Gardner, chairman, Mrs. Anna M. Rosenberg, Chester C. Davis; (agriculture) Albert F. Goss, Edward A. O'Neal, James G. Patton; (labour) T. C. Cashen, William L. Green, Philip Murray; (business) Nathaniel Dyke, Jr., Eric A. Johnston and George H. Mead.

During 1945, the OWMR co-ordinated the efforts of the U.S. to produce war requirements and to bring critical war programs into increased production; and supervised the work of government agencies so as to develop uniform and orderly procedures for handling the cancellation of war contracts, prompt settlement of terminated war contracts and the disposal of surplus property. With the capitulation of Japan, the agency became increasingly responsible for government planning for reconversion, including:

- (1) the issuance of orders and regulations necessary to obtain the full co-ordination of federal agencies,
- (2) the recommendation of appropriate legislation to congress,
- (3) the promotion and development of demobilization plans and procedures,
- (4) the settlement of controversies between federal agencies in the development of plans and procedures for transition from war to peace,
- (5) the simplification, consolidation or elimination of war agencies as the need for these agencies disappeared,
- (6) the determination of the possibilities of relaxing emergency war controls,
- (7) the consultation and co-operation with state and local governments, industry, labour, agricultural and other groups concerning problems of transition from war to peace, and
- (8) the submission of quarterly reports to the president, senate and house of representatives covering the progress of these activities.

Publications of the office during 1945 included:

*First Report*, "Problems of Mobilization and Reconversion" (Jan. 1); *Second Report*, "War Production and VE-Day" (April 1), "The War: Phase Two" (May 10); *Third Report*, "The Road to Tokyo and Beyond" (July 1), "From War to Peace, A Challenge" (Aug. 14), "The Transition, Phase One" (Sept. 4); *Fourth Report*, "Three Keys to Reconversion—Production, Jobs, Markets" (Oct. 1); *Fifth Report*, "Battle for Production" (Jan. 1, 1946). (See also STABILIZATION ADMINISTRATOR, OFFICE OF.) (Jo. W. S.)

**War Prisoners:** see PRISONERS OF WAR AND DISPLACED PERSONS.

**War Production, U.S.** Following the break-through of "battle of the Bulge," the first months of 1945 found but little elasticity left for expanding U.S. war production. Four key indicators of the nation's capacity to expand, namely: goods and services, industrial production, steel ingot production, and the civilian labour force, had either reached a plateau or started down.

Despite drawbacks the war production agencies had shown gains from the preceding September in important items, which

ranged from 12% for trucks to 130% for aeroplanes and 200% for mortars. Restrictive measures had been applied to save manpower, coal, electric power, transportation and other services. Critical reviews of the military programs resulted during January in reducing less important war procurement programs thereby affording manpower and materials for the more urgent war needs.

The construction of military facilities was brought under review, with considerable reductions. A proposed program for construction of 142 additional Liberty ships was abandoned. Measures were taken to reduce deliveries of munitions for shipment to the Pacific in view of ultimate victory in Europe, and anticipated post-V-E-day filling of Pacific pipelines with war material from the European front.

Anticipation of V-E day and attendant cancellations of munitions contracts led to close integration during the first quarter between the procurement agencies and the WPB, in order to place contract cutbacks in such a way as to ease the impact upon employment. Through an inter-agency Production Readjustment committee an improved cutback system was established, acquainting personnel of the WPB, War Manpower commission, army, navy and other agencies of problems as they arose.

By V-E day, May 8, the military commenced a vast transfer of men and supplies half way around the world, involving the movement out of Europe of 3,000,000 troops, together with the necessary matériel. This program included the building of new airfields, fuel depots, road and rail lines; the clearing and building of harbours; construction of power plants and power lines; provision of barracks, and a prodigious building and equipping of hospital facilities.

The army service force and the army air forces demanded for the Japanese campaign heavier ammunition and bomb supplies than had been used in the war in Europe, with concentration of enormous firepower. This called for munitions production schedules for total output of \$61,000,000,000 in 1945, about equal to the 1944 program. But a series of progressive cuts, which began shortly before V-E day, reduced the 1945 program to about \$50,000,000,000. It was found that total procurement of aircraft and related equipment for the army and navy in 1945 could be reduced at least one-sixth below the plans that had been based on a two-front war.

In six years, the U.S. navy had been multiplied by 32 times, to a total of 46,130 ships, excluding smaller craft. In July and prior to V-J day, it was planned to terminate the merchant shipbuilding program by mid-1946, after delivery of 55,000,000 deadweight tons of ships in the six-year period. The schedules for munitions production were then being planned a year ahead at a rate of nearly \$40,000,000,000 a year, or twice the estimated production of Germany at its peak.

Because of the Japanese suicide planes, and because U.S. ships were operating close to the Japanese mainland, ship maintenance and repair rose rapidly. The urgency for military orders incidental to the general decline in volume of military procurement still occasioned shortages of materials and component parts, labour shortages, and production difficulties accompanying new production and design changes in old products. Lack of shipyard labour was delaying the return of battle-damaged ships to action. Munitions schedules remained one-quarter above those of 1942.

The coming of V-E day had little immediate effect in reducing U.S. production. But once European stocks began to move in large volume to the Japanese front, the draft on U.S. factories declined rapidly. From July on, the drop in munitions schedules was rapid. In the three months following March, peak month of the year, production fell by only 10%; but for

the second quarter it was down to \$4,200,000,000 from the March level of \$4,900,000,000; as calculated in July, by the end of the year it would be down about one-third, as compared with March. As a result, productive capacity—materials and manpower—was being rapidly released in the durable goods industries throughout the list of basic raw materials and component parts.

In the interim, between V-E day and V-J day, occupations such as farming, transportation, public utility work, printing and publishing, retail trade, mining, government employment (except in the war agencies) were not directly affected by physical reconversion. But for the sudden ending of the war in the Pacific in mid-August, the full productive resources of the country might have been utilized during the retooling process, by a steady shift to civilian output, without danger of serious unemployment.

The facts seemed to support this view. The jobs not directly affected by physical reconversion embraced 44,600,000 of the 51,200,000 workers. Those most likely to be affected by military cutbacks were in aircraft production, shipbuilding, ordnance and signal equipment, war chemicals, and the federal war agencies—only 6,600,000 in all.

But the unexpected arrival of V-J day, with sudden termination of the major portion of war contracts, involved an immediate and rather large dislocation of the economy. The U.S. had to undergo the shock of considerable—albeit temporary—unemployment.

The policy laid down by congress was opposed to cushioning the shock by continued manufacture of useless armaments. It was paramount policy not to keep the soldiers and sailors in uniform longer than was necessary, and the industries bent to the task of achieving plant reconversion with all speed.

In all more than \$186,000,000,000 worth of planes, ships, guns and other matériel had been produced in the U.S. during the war against the axis powers. The production total for aircraft amounted to \$44,442,000,000; for ships, both naval and maritime, \$44,694,000,000; for guns and fire control, \$10,801,000,000; ammunition \$19,734,000,000; combat and motor vehicles, \$21,529,000,000; communication and electronic equipment, \$10,659,000,000; the atomic bomb, more than \$2,000,000,000; and other equipment and supplies, \$38,148,000,000.

The rate at which war production climbed from the prewar level is of interest. During the last half of 1940, the munitions output totalled only \$2,000,000,000. This rate was more than doubled in 1941, still in the defense period, when production totalled more than \$8,320,000,000. With the attack on Pearl Harbor, on Dec. 7, 1941, production soared. During the first half of 1942 more munitions were produced than during the preceding year and a half. In December, a year after Pearl Harbor, output for that month alone about equalled half of the 1941 production, or double that of the last half of 1940. Maximum monthly output was reached in late 1943, in excess of the entire half-year's production prior to the Japanese attack. In that period U.S. civilian economy was receiving commodities and services at a greater rate than during the "good" peacetime years 1937 and 1939. But by that time the factories of the nation were also sending against the enemy an air fleet of 297,000 military planes, including 97,000 bombers, and 71,060 warships that outnumbered all other navies of the world combined.

Included in the total of U.S. munitions, besides the 297,000 aeroplanes, were 86,338 tanks; 5,400 cargo ships and transports; 64,000 landing vessels; 6,500 other navy ships; 17,400,000 rifles, carbines and other sidearms; 315,000 pieces of field artillery and mortars; 4,200,000 tons of artillery shells; and 41,400,000,000 rounds of small arms ammunition.

**Reconversion.**—It was impossible to turn around overnight from production for war to peacetime production. During the war, businessmen and farmers of the U.S. had had but one customer for some 40% of the nation's output. The government not only constituted the market, but specified exactly what kind, shape and size its share of the output should be. Now that peace had come, the U.S. citizens as individual customers were to determine what businessmen and farmers were to produce.

Many governmental controls suitable for war were not suitable for the transition. The goal was to be one of expanded civilian production. Wherever removal of controls might help achieve this goal they were to be removed. At the same time, wherever removal of controls would bring a chaotic condition or cause "bottlenecks," or produce a disruptive scramble for goods, the controls were retained. It was understood that as production increased the remaining controls were to be as promptly abolished.

Settlement of terminated contracts had been hastened. Plants were being cleared of wartime equipment. Businessmen summarily readied their plans for peacetime expansion. In the three months following the victory in Europe, U.S. industry had gone a long way toward shifting its resources to peacetime purposes. Some peacetime manufacture had recommenced following release of plants from war contracts. The nation was thus in some measure prepared when faced with situations that involved making millions of sudden job shifts, cutting off thousands of millions of dollars in war contracts and radically changing the character of the national output.

Manufacture of many articles underway for the military such as bulldozers and other construction machinery, lumber, drainage pipe and plumbing and heating equipment, etc., was continued for peacetime. Mining, smelting and processing of raw materials—iron and steel, copper, aluminum—needed no reconversion. Many industries, such as commercial refrigeration and air conditioning and textiles, largely used by the military, had continued to produce some peacetime products, and readily

PROPELLER BLADE for a Liberty ship nearing completion in 1945. The propeller was made of manganese-bronze which was extracted from reclaimed shell cases

GERMAN HEINKEL-162 fuselages for jet planes, in the assembly room of an underground plant discovered near Egelu by troops of the U.S. 9th army on April 15, 1945. Operating in a salt mine 950 ft. deep, the plant's output was estimated at up to four fuselages per day

expanded peacetime production. Plant reconversion, it was estimated, could be accomplished before the end of 1945, although 12 to 18 months would be required to reach the expanded peacetime economy needed for full employment. The construction industry required an even longer time in order to organize manpower, planning, equipment and supplies, and to reach the anticipated \$15,000,000,000 level needed annually for a prosperous economy.

The necessity of a sudden switchover from war to peace was urgent. In four years the war economy had been built up to a high pitch of production and employment. Now the task was to reconstruct a large part of it for peacetime use, and in a much shorter period. It seemed barely possible to expand output rapidly to 40% or 50% above former peacetime levels.

Despite all difficulties the goals and strategy were clear and simple; they were: a rapid expansion of peacetime production, jobs for those willing and able to work, and stable markets for business and agriculture.

Cash, bank deposits and government bonds in the hands of individuals were estimated at more than \$140,000,000,000, or three times the highest prewar figure. Statistics indicated that, in 1944, had goods been available, the people of the U.S. could have spent \$120,000,000,000, but they had actually spent \$98,000,000,000. Back in 1943 and 1942, consumers similarly had been unable to use their incomes in normal measure. It was known that foreign countries would be in the market for U.S. goods of all kinds—food, clothing, industrial equipment and raw materials. The stifled wartime demand was huge, with great need for housing, automobiles, washing machines, refrigerators and all the "consumer durable" goods that had not been

available for several years. Industry needed to put millions of dollars into new plants and deferred maintenance, and had the funds for these purposes.

But savings were not evenly distributed and many families had spent their income during the war with little or no savings. The steady market needed by business and agriculture had to come in large part from current wages and salaries.

In the face of substantial unemployment, occasioned by the sudden ending of the war, the task of sustaining mass purchasing power was undertaken through rapid absorption into peacetime industry of workers and returned veterans looking for work. The president appealed to congress to provide necessary legislation, looking to extended unemployment pay. The executive branch set about fixing policies and programs to solve the peacetime problems and besought management and labour to consult their long-run interest in more production, more sales and more jobs.

Durable goods had been largely removed from civilian markets during the war, and rationing of gasoline and oil, footwear and foodstuffs was continued during most of 1945, as in preceding years, to eke out scarce supplies of consumer goods. Annoyance, but little real hardship, was suffered by the people of the U.S. during this last part of the war. In 1939, one-tenth of total consumer expenditures had been for durable goods; by 1944, war restrictions on durable goods production had cut this expenditure by only one-third, largely because production of repair and maintenance parts and of health and safety supplies was at record levels. Meanwhile the increase in nondurable goods had more than compensated for the drop in production of hard goods. The textile "squeeze" did not seriously affect U.S. consumers until 1945, and its duration was brief. There was a normal supply of food, though not of the preferred kinds, and as large a volume of services and miscel-

laneous goods as before the war. Moreover, because the supply of durable goods at the start in large degree outlasted the war, the deprivation was less serious than it appeared. Automobiles developed rattles, but most of them remained on the road. Furniture became shabby, but continued to serve its purpose.

During the war U.S. citizens never had to submit to regimentation in the measure endured by their enemies and by their allies. But to an extent unprecedented in U.S. history, even in previous wars, the national economy had been guided by Washington. Every industrial plant built in the U.S. during the war years had been by government authorization, and two out of three dollars of the cost was provided by the national treasury. Hardly a ton of steel or copper or aluminum could be fabricated without government approval. Prices, wages and labour had been controlled by the government. Enforcement of government controls would have been impossible without cheerful compliance by the majority of the people who co-operated wholeheartedly to make the system work, in order to recover as soon as possible their traditional liberty of action.

Under this regime several new industries had been built, virtually from scratch, not the least of them being the \$2,000,000,000 of atomic energy, with its incalculable influence upon future correlations of industrial power. Before the war the U.S. had no synthetic rubber or aviation gasoline plants of any size, no development of radar, and its manufactures of explosives, guns and ammunition, aircraft and ships were pygmies when measured against modern wartime needs. In other industries, however, expansions took place, as in aluminum, magnesium and certain plastics and plasticizers.

Some \$25,000,000,000 had been added to the nation's facilities during the five years from 1939 through 1944. There had been all-time peaks in production of raw materials. During the five years industrial production in the U.S. more than doubled, rising at the rate of more than 15% a year. Even in the recovery from the deep depression of the 1930s, previously the most rapid on record, the gain was only 12% a year. That was merely recovering lost ground, while this war effort pushed forward to successive new highs.

From the end of the Civil War in 1865 until 1939 when Hitler's army marched into Poland, the average rate of industrial expansion in the U.S. had been only 4% a year, and the rise during World War I had been only 7% annually. Had the country's industries maintained the long-term average rate of increase, its production in 1944 for both war and civilian uses would have been only 60% of what was actually achieved.

Manufacturing employment in the U.S. had increased from 10,151,000 in 1939 to 16,558,000 in 1944, and it had expanded its share of the labour force from 19% to 26%. Its manufacturing industries as a group had provided almost one-third of all civilians gainfully employed in 1944, compared with less than one-fourth in 1939. A good part of the increase was achieved by inducing more women to take factory jobs. The number of female factory workers had almost doubled between 1939 and 1944, while the number of male workers was increasing by only 35%. As a result the proportion of women on U.S. factory payrolls had increased from one-fourth in 1939 to one-third in 1944.

These comparisons are by industry rather than by product, and it is difficult to segregate employment directly related to the war effort from that contributing to the support of the civilian economy. The best estimates indicate that about 57% of manufacturing employment in 1944 was in war work, compared with 1% or 2% in 1939. That means that the number of factory workers producing for civilians declined by something like 30% in the five years of war and preparation for war.

A better picture of the diversion of U.S. effort to the war is

indicated by the fact that in 1939, the year following Munich, the nation devoted less than 2% of its total national output to war, and about 70% to satisfying immediate civilian orders; the remaining 28% went to civilian government expenditures, capital formation and exports. But by 1944 war outlays had mounted to 40%, and the civilian share—though just as large in physical quantity as in 1939—represented only one-half of U.S. total output.

A study by the War Production board of 1,222 selected end-product industries of the U.S. of their production solely for civilian uses during Aug. 1945, indicated that they had by that time reached 51% of their production as of the average month of 1939.

This study included a civilian production estimate of 60% of the 1939 rate for Sept. 1945; and forecasts of 153% for Dec. 1945, and 238% for June 1946. The estimates represented what the responsible heads of these industries felt they should be able to do in peacetime production within the year following V-J day. The estimates could not take into account many possible complications which might be involved in postwar price and wage settlements. These could retard accomplishment of the production levels as indicated. (See also *AUTOMOBILE INDUSTRY IN RECONVERSION*; *BUDGET, NATIONAL*; *BUSINESS REVIEW*; *CONTRACT TERMINATIONS*; *INCOME AND PRODUCT, U.S.*; *PRICE ADMINISTRATION, OFFICE OF*; *PRIORITIES AND ALLOCATIONS*; *UNITED STATES*; *WAR LABOR BOARD, NATIONAL*; *WAR MANPOWER COMMISSION*; *WAR PRODUCTION BOARD*; *WORLD WAR II.*) (J. A. K.)

**War Production Board.** Recession in the activities of the U.S. War Production board commenced shortly after munitions production achieved high 1945 levels in March. Following V-E day, May 8, and V-J day, Aug. 14, the board in its committees and staff personnel began to dwindle as the controls for war production gave place to private initiative in active reconversion of industry to peacetime production.

During 1945, Clinton P. Anderson, secretary of agriculture, succeeded Claude R. Wickard as member of the board. Jesse H. Jones, outgoing secretary of commerce, gave place on the board to Fred M. Vinson, federal loan administrator; Vinson, in turn, on being transferred to the secretaryship of the treasury, was succeeded by John W. Snyder, who served as federal loan administrator until his appointment as director of the Office of War Mobilization and Reconversion, guiding the policies of all the emergency agencies. Charles B. Henderson, acting federal loan administrator, succeeded Snyder as board member.

Upon the resignation of Henry L. Stimson as secretary of war, Robert P. Patterson, who succeeded him, became board member in his stead. Resigning from the board during 1945 were Harry L. Hopkins, who retired from his post as special assistant to the president; Marvin Jones, war food administrator, and Leo T. Crowley, federal economic administrator. The other members of the board during 1945 were Paul V. McNutt, director of the War Manpower commission; James Forrestal, secretary of the navy; Colonel J. M. Johnson, director of the Office of Defense Transportation; Harold L. Ickes, petroleum administrator for war; Chester Bowles, director of the Office of Price Administration; Lewis Schwellenbach, secretary of labour, and Robert H. Hinckley, director of contract settlement.

The War Production board was terminated on Nov. 3, 1945, by order of the president, on his acceptance of the resignation of J. A. Krug, its chairman. Several international boards had until then served under William L. Batt, vice-chairman (international supply) by decision of the president and the prime ministers of Canada and the United Kingdom, in order that critical supply

questions might be resolved following the surrender of the axis.

Following the order of the president on Oct. 4, creating the Civilian Production administration as successor to the WPB, John D. Small became chairman of the new body. Small had served successively as chairman of the Production Readjustment committee of the WPB and as its chief of staff. John H. Martin followed Small as chairman of the Production Readjustment committee, resigning in Sept. During the year Henry P. Nelson was appointed director of the aircraft division, and John L. Collyer became special director of rubber programs. Robert Wilson succeeded Collyer when he resigned. Philip D. Wilson was succeeded by William C. Keeley as vice-chairman for metals and minerals. Lincoln Gordon became program vice-chairman, succeeding Samuel W. Anderson, and Laurence M. Lombard succeeded Frederick M. Eaton as general counsel. Hiland G. Batcheller, chief of operations, resigned during the summer of 1945.

The following divisions were terminated at the close of World War II: The war production drive, which had functioned with labour-management committees; and the conservation and salvage and the management consultant divisions.

On V-J day the salaried employees of the WPB numbered 10,800, of whom 6,200 were in Washington and 4,600 in the field offices. In September, the rolls fell below 8,000, and a yet smaller group was thereafter transferred to the Civilian Production administration.

Among those named by J. D. Small, administrator of CPA, to assist him in handling the transition problems concerned with shifting the United States economy from war to peacetime production were the following: U.S. member of the combined boards, William L. Batt; chairman of smaller war plants, Maury Maverick; deputy administrator, Philip Maguire; general counsel, Laurence M. Lombard; Office of Labor Requirements, Ralph Hetzel; review and analysis division, Robert Johnson; director of information, Maxey Morrison; and the directors of the five operating bureaus of CPA.

The five operating bureaus of CPA and their directors were: bureau of reconversion operations, director, Fred Glover; bureau of reconversion priorities, director, Lincoln Gordon; bureau of international supply, director, Robert Turner; bureau of field operations, director, Clarence A. Woodruff; bureau of demobilization, director, G. Lyle Belsley. (See also BUSINESS REVIEW; HOUSING; PRIORITIES AND ALLOCATIONS.) (J. A. K.)

**War Relief, U.S.** The president's War Relief Control board was established by executive order No. 9205 July 25, 1942, to further, for the duration of World War II and six months thereafter, the productive use of voluntary contributions for the relief of war sufferers in foreign countries, or for the welfare of the personnel of the armed forces and the merchant marine of the United States.

The solicitation and collection of public contributions were controlled by the registration or licensing of agencies authorized to administer foreign war relief and national military welfare programs approved by the board. Approval was based upon these major considerations: the necessity for the specific relief or welfare; whether the purpose to be served was adequately fulfilled or could be adequately fulfilled by existing programs and organizations; whether it could be carried out under existing political, economic and military limitations; the estimated costs and the relationship to accepted budgets; the appropriateness of the suggested means of financing; considerations of foreign policy, including export of commodities and transfer of funds; character and scope of the relief and welfare programs of the U.N.R.R.A., the Allied military authorities and the American Red Cross, as well as lend-lease supply programs; avail-

ability of supplies and shipping; and the protection of normal home charities.

Violation of conditions and regulations, or undue costs of administration, were made grounds for the suspension or revocation of the licence to operate.

The major voluntary agencies registered with the board came together in 1943 as a federation of war philanthropies financed through community war chests. The federation, known as the National War fund, was organized with the co-operation of the President's War Relief Control board. The programs of the member agencies were co-ordinated, after budget hearings, to permit one annual country-wide appeal for funds to support war charities other than those of the American Red Cross.

Registered organizations numbered 115 by June 1945 of which 90 were for foreign war relief activities. During the year June 1944-June 1945 there was contributed to registered agencies for foreign war relief a total of \$90,423,119.57 in cash, and \$182,798,080.62 as the value of goods in kind. Of the cash received, \$79,197,431.27 was transmitted abroad and goods in kind valued at \$145,677,752.39 were shipped. The chief beneficiaries were the people of the liberated areas, including those in exile. It should be understood that the totals do not include the value of shipments of food, medicines and clothing provided through the operations of lend-lease, the American Red Cross and the U.N.R.R.A.

In addition to the 90 agencies registered with the board for foreign war relief, there were 25 registered agencies engaged in domestic welfare on behalf of the armed forces and the merchant marine. Their total contributions were not available, but approximately \$66,000,000 was included in the National War fund budgets of 1945 for these services. (See also PRISONERS OF WAR AND DISPLACED PERSONS; RED CROSS; RELIEF.)

(J. E. Ds.)

**War Relocation Authority.** The U.S. War Relocation authority announced that it would close its eight relocation centres within a year of Jan. 2, 1945, the date on which the army lifted its three-year wartime exclusion of persons of Japanese ancestry from the west coast.

Only 35,000 of the 111,000 originally evacuated had resettled throughout the country in the two years before the west coast

A JAPANESE-AMERICAN family leaving the relocation centre at Poston, Ariz., in Jan. 1945 after being evacuated from the Pacific coast for 2½ years. Restrictions on the return of the Japanese had been lifted on their home area in Santa Ana, Calif.

ban was revoked. By Nov. 30, 1945, WRA had relocated twice that number from the eight barracks camps and was on its way to liquidating the agency by June 30, 1946, when final disposition was scheduled for property and records.

About 45,000 evacuees returned to the west coast from the far-western barracks camps. Others joined evacuees who had settled in the east and midwest before the coast was reopened to Japanese Americans. Of those who relocated eastward earlier, at least 5,000 went back to former coast homes during 1945.

Opposition to the return of evacuees to coast states came from a small but frequently vehement minority. Hostility took the form of terrorism in May and June 1945 when substantial numbers of evacuees started returning. Shootings, arson, property damage and threats brought nation-wide condemnation. Aroused public opinion eventually helped curb this lawlessness.

Federal public housing projects accommodated some Nisei servicemen's families on the Pacific coast. But by the end of the year several hundred other returnees were still housed in temporary shelters such as private, nonprofit hostels, Federal Public Housing authority wartime trailer camps and converted army barracks. To secure more permanent housing, WRA gave the problem top priority in the last months of 1945, and extended closing dates for field offices in crowded localities to June 1, 1946.

WRA named a late winter deadline in 1946 for the relocation of all eligible evacuees from the Tule Lake, Newell, Calif., segregation centre. Meanwhile the department of justice continued processing Tule Lake aliens and citizens who had requested transfer to Japan.

No final decision had been reached by the close of 1945 regarding which of 1,000 refugees could be returned to their homelands from the emergency refugee shelter in Fort Ontario, Oswego, N.Y., which WRA also administered during the year. (See also ALIENS.) (D. S. MR.)

**War Risk Insurance:** see INSURANCE.

**War Savings Stamps:** see POST OFFICE.

**War Shipping Administration.** The War Shipping administration, created by executive order in Feb. 1942, was given broad powers over ocean shipping of the United States. Its authority covered the requisitioning of existing vessels and the strategic control of all ocean shipping except that under jurisdiction of the armed services.

The chairman of the Maritime commission was also made War Shipping administrator and was the U.S. member of the Combined Shipping Adjustment board, which controlled Allied shipping during World War II.

Actual operation of U.S. vessels was by private shipping companies, acting as agents of the WSA. More than 100 shipping companies were WSA agents in 1944, some of them operating as many as 80 vessels.

Not all the vessels built by the Maritime commission were under WSA control. In addition to those transferred to military jurisdiction, many were transferred temporarily to other Allied nations. Losses of U.S. shipping were 1,567 vessels to the time of Japan's surrender.

The personnel of the U.S. merchant marine on Nov. 1, 1945, was 240,000 officers and men. Until the Normandy invasion, losses of merchant marine personnel exceeded in proportion the losses of the armed services. To Nov. 1, 1945, the losses were 807 dead, 4,830 missing and 112 prisoners of war, making a total of 5,749.

Of the 83,000,000 long tons of cargo that left the U.S. in 1945, three-quarters was carried in WSA ships.

At the beginning of Nov. 1945, there were 4,442 ships under control of the WSA. They constituted three-fifths of all the vessels available to the United Nations and the U.S. merchant marine had more tonnage than the rest of the world combined.

The principal concern of the U.S. merchant fleet in the fall of 1945 was the return of armed forces to the United States. It was estimated that 6,000,000 men would be returned to the U.S. by April 1946. (E. S. L.)

**Washington.** A state in the extreme northwest United States, popularly known as the "Evergreen state," admitted to the union Nov. 11, 1889. Total area, 68,192 sq.mi. of which 66,977 sq.mi. are land; pop. (1940) 1,736,191; native 1,525,812; foreign born 210,379. On Nov. 1, 1943, the bureau of the census estimated the civilian population of the state at 1,905,239. Capital, Olympia (13,254). According to 1945 estimates the three largest cities had grown perceptibly after 1940; Seattle from 368,302 to 470,000 (est.); Spokane from 122,001 to 144,000 (est.); Tacoma from 109,308 to 139,000 (est.). The urban population in 1940 was 921,969 or 53.1%; in 1945 it was 1,370,134 (est.) or 67.4%.

**History.**—The 29th legislature of the state of Washington was in session from Jan. 8 to March 8, 1945. Breaking paths for new state policies were measures regulating aeronautics, authorizing the establishment of public hospital districts, declaring the ground waters of the state to be public ground waters, and appropriating state funds for public libraries. Other significant enactments included a uniform food and drug act, a measure creating a contingent receipts fund and an appropriation of \$100,000 for the conduct of a survey of the entire public educational system of the state. Dr. George D. Strayer, of Columbia university teachers college, was employed to make the survey during 1946. The state supreme court refused to recognize the emergency clauses in three acts of this legislature and ordered the secretary of state to file referendum petitions submitted against them, thereby delaying their promulgation. One act provided for primary elections for candidates for municipal officers of cities having a population of 100,000 to 150,000; another created a timber resources board, and the other made game commissioners subject to appointment and removal by the governor. The court, furthermore, declared an act liberalizing for veterans the admission to the bar unconstitutional on the score that admission to the practice of law was a judicial function. It sustained a law which permitted county officers who served on employment statistics commissions to receive compensation in addition to their regular salaries.

During August it was revealed that atomic bombs had been manufactured at the mysterious war project at Hanford on the Columbia river. Recognition that the state's school system ranked first in educational efficiency came from the National Educational association. Landowners in the Columbia basin voted overwhelmingly to share with the federal government the cost of placing the Columbia Basin Irrigation project into operation. On Sept. 23 the northwest loggers and timber workers went on strike and stayed out until Dec. 3-4. A walkout of the typographical workers of the three largest Seattle newspapers on Nov. 17 closed their plants for the rest of the year.

State officers for 1946: governor, Mon C. Wallgren; lieutenant governor, Victor A. Meyers; secretary of state, Belle Reeves; treasurer, Russell M. Fluent; attorney general, Smith Troy; state superintendent of public instruction, Pearl A. Wanamaker (elected on nonpartisan basis); chief justice of the state supreme court, Samuel M. Driver.

**Education.**—During the school year 1944-45, average daily attendance in elementary and secondary schools was 288,112; the number of teachers was 12,666. Total expenditures were

\$45,869,857 and the cost per pupil in attendance was \$121. Salaries of teachers, including superintendents, averaged \$2,265.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During the period of Oct. 1944 to Sept. 1945 inclusive, the total amount spent for public assistance in the state, including federal direct expenditures and state aid, was \$48,764,800. An average of 23,989 persons per month received a total of \$5,954,426 for general assistance. An average number of 60,657 old persons received a total of \$35,394,944. An average number of 14,564 children received a total of \$4,357,555. An average number of 597 blind persons received a total of \$322,769. In 1945 there were 11 state charitable institutions, with a total population of 10,500 (est.) and four state correctional institutions, with a population of 2,400.

**Communication.**—In 1944 there were 50,337 mi. of highways (state and county) in the state and 5,215 mi. of railroad.

**Banking and Finance.**—The total assessed valuation of all real and personal property subject to tax for the year 1945 was \$1,204,469,845; the bonded indebtedness was \$7,019,000, easily covered by various bond retirement funds. The state cash balance (gross) on Nov. 30, 1945, was \$120,296,742. Total revenue receipts during 1944 amounted to \$214,138,045, and total disbursements were \$186,512,220. One hundred and twenty-six banks in the state reported a total capital of \$35,447,000; capital surpluses and undivided profits of \$65,932,000; deposits of \$2,041,543,000 and assets of \$2,133,850,000.

**Agriculture.**—Total farm income in 1944 was \$490,900,000; from crops \$292,676,000; from livestock \$157,225,000; from governmental payments \$13,655,000.

Table I.—Leading Agricultural Products of Washington, 1945 and 1944

Crop	1945 (est.)	1944
Wheat, bu. . . . .	68,427,000	64,030,000
Apples, bu. . . . .	25,840,000	31,100,000
Hay (tame), tons . . . . .	2,073,000	1,916,000
Pears, bu. . . . .	7,922,000	8,665,000
Potatoes, bu. . . . .	12,255,000	10,340,000
Hops, lb. . . . .	21,060,000	16,975,000
Peas (100-lb. bags) . . . . .	2,726,000	4,699,000
Cherries, tons . . . . .	34,500	29,000
Barley, bu. . . . .	7,175,000	8,550,000
Oats, bu. . . . .	7,200,000	7,728,000

**Manufacturing.**—In 1939, the latest year for which figures were available in 1945, the total value of products was \$636,649,809; 101,136 salaried persons and wage earners received a total of \$143,412,064. During every year after 1940, including 1945, the building of steel ships and aeroplanes together exceeded in amount the annual totals of all manufactures of the period prior to World War II. In 1944 the six basic industries were general manufacturing, food products manufacturing, logging, mining and construction. There were 869,200 salaried workers and wage earners; all industry employed labour for 1,003,431,670 man-hours; and the pay roll for all industry was \$1,270,266,000. In 1945 a record haul of 55,000,000 lb. of halibut represented the largest catch from 1931, the year preceding the promulgation of regulation by the Canadian-American International Fisheries commission.

Table II.—Principal Industries of Washington, 1939 and 1937

Industry	Value of products	
	1939	1937
(Sawmill and sawmill products . . . . .	\$123,604,988	\$186,201,508
Lumber and timber (not classified elsewhere) . . . . .		
Pulp mills . . . . .	37,288,183	48,411,890

Meat packing (wholesale) . . . . .	26,124,641	28,175,069
Flour and other grain mill products . . . . .	25,108,207	31,774,606
(Canned and dried fruits . . . . .	19,700,116	
(Canned and dried fruits (etc.) . . . . .		24,667,198
Plywoods . . . . .	17,907,465	
Planing mill products . . . . .	17,332,812	19,507,717

**Mineral Production.**—Mineral production in 1943 amounted to \$37,593,000. Increases in metals after 1940 were offset by decreases in non-metals. At the order of the War Production board, magnesium production at the Mead plant (near Spokane) was stopped, and in 1945 aluminum production was appreciably curtailed throughout the state. Revival of the light metals industry awaited the disposition of government-owned plants.

(H. J. DE.)

**Washington,** DISTRICT OF COLUMBIA, national capital of the U.S.A. and 11th largest of U.S. cities; pop. (1940) 663,091. On June 30, 1945, the population had increased to 926,260. Appropriations for the fiscal year 1945-46, up to Dec. 31, 1945, totalled \$66,385,984, of which \$6,000,000 was contributed by the federal government, an amount which did not meet an equitable proportion of the entire budget, as measured by area of land or value of land and improvements owned by the federal government in the District of Columbia. The district government has no bonded indebtedness. During the period of World War II it accumulated about \$10,000,000

reserve which was to be expended in the estimated \$80,000,000 budget for 1946-47. This would make possible the acquisition of sites, the erection of school buildings and libraries, highways and other needed improvements, all neglected during the war years. The 1946-47 budget was approved by the bureau of the budget in 1945, and then had to be included in appropriation bills of congress, as, under the constitution, congress has exclusive legislative control over the District of Columbia. The bureau of the budget continued to study in 1945 the provisions which should be included in a bill to reorganize the National Capital Park and Planning commission, in accordance with recommendations contained in a report by the bureau in 1944.

Washington was congested throughout 1945. There were very few vacant houses and surveys revealed deplorable overcrowding in a good many occupied dwellings. The number of federal employees in June 1945 was 257,000, a decline from the peak reached in 1943. Of these some 156,000 worked in permanent office buildings owned by the federal government, 110,000 within the district and 46,000 outside its boundaries. More than 100,000 federal employees worked in temporary buildings and leased quarters. At the end of 1945 a bill was pending in congress to authorize a nation-wide federal building program. This would permit a start on much needed federal buildings in the district, with the objective of housing all federal employees in permanent public buildings located according to the master plan.

The McCarran-Capper-Burton bill for urban redevelopment and housing in the District of Columbia passed the senate and was pending in the house on Dec. 31, 1945. The National Capital Housing authority on June 30, 1945, was operating 8,178 dwellings. Of these 2,707 were provided as low-rent housing, 800 as permanent war housing and 3,819 as temporary war housing. It was expected that temporary housing units, as well as temporary office units, would be removed as soon as sufficient permanent accommodations could be provided.

In April 1945 the board of engineers for rivers and harbours announced an adverse report on the proposed power development on the Potomac, in line with the prevailing public opinion of the residents of Washington and those living in the Potomac basin. This left the way clear to resume work on the George Washington Memorial parkway along the banks of the river to Great falls.

**Water Supply:** see PUBLIC HEALTH ENGINEERING.

**Wavell, Archibald Percival,** VISCOUNT (1883- ), British soldier, born in May, was the son of Maj. Gen. A. G. Wavell. Following his father's career, he enlisted in the Black Watch in 1901 after studying at the Royal Military college and the staff college and saw action in the Boer War, in India and in World War I. In 1938 he was promoted to lieutenant general. From 1937 to 1938 he commanded the British troops in Palestine and Trans-Jordan, and in 1940 he became commander in chief of the British forces in the middle east. His small force of empire soldiers swept the Italians out of Cyrenaica in Libya, and he supervised the operations in East Africa which recaptured British Somaliland and took Italian Somaliland, Eritrea and Ethiopia from the Italians. He suffered serious reverses at the hands of the Germans, however, in Libya, Greece and Crete, and on July 1, 1941, he was succeeded as middle east commander by Gen. Sir Claude Auchinleck, whose post as commander of the British forces in India Wavell thereupon took over. On Jan 3, 1942, Sir Archibald was named supreme commander of Allied armies in the far east, but in March of the same year, he was returned to command of his former post, the India-Burma area. On June 19,

VISCOUNT WAVELL (second from left) chatting with Mahomed Ali Jinnah (third from right) and other leaders of the All-India Muslim League who attended the conference at Simla during June 1945

1943, he was appointed viceroy of India and on July 1, was elevated to the peerage as Viscount Wavell. At the Simla conference at which further proposals for Indian independence were discussed, Wavell appealed (June 25, 1945) to the Indians for assistance in advancing India "toward prosperity, political freedom and greatness." The conferees came to no agreement and Wavell accepted responsibility for failure of the conference, July 14. Following Prime Minister Clement Attlee's pledge of self-rule for India, Wavell declared Sept. 19, that he had been authorized to confer with the provincial assemblies on whether the original Cripps plan, or some alternative proposal was acceptable as a basis of discussion. (See also INDIA.)

**WAVES:** see WOMEN'S RESERVE OF THE NAVY.

## Wealth and Income, U. S. Distribution of.

The term, distribution of income, is usually taken to designate the apportionment of income among individuals or families according to size of income, thereby showing the number of individuals or families in the various income brackets. While interest in this subject had been growing in the U.S., due to the many practical applications of such statistical information in government and business policy formulation, no regular program for collecting data on the size distribution of income had been developed up to 1945.

The most complete body of data made available up to 1945 was that issued by the National Resources committee, providing statistics on both the distribution of income and the distribution of consumers' expenditures by income class for the year 1935-36. These data were contained in the reports entitled *Consumers' Income in the United States*, *Consumers' Expenditures in the United States* and *Family Expenditures in the United States*. Information covering the year 1941 and the early part of 1942 was issued by the bureaus of labour statistics and home economics on the basis of small field studies made by those organizations. Summary tables on the size distribution of income and expenditures from these reports were published in the 1944 *Britannica Book of the Year*. No additional information on this subject became available in 1945.

**State Distribution of Income Payments.**—Estimates of income payments to individuals by states are summarized for the years 1939, 1943 and 1944 in the accompanying table.

State income payments increased 7% between 1943 and 1944, the smallest year-to-year gain from 1939. The large majority of the states shared in the rise of income payments to the record amount of \$148,090,000,000 for the continental U.S., but a few

states experienced declines for the first time in six years.

In general, the 1943-44 changes in state income payments exhibited a tendency toward uniformity, as contrasted with the wide disparities in other war years. Thus, the former trend of income redistribution in favour of the south and west, accelerated by the country's economic mobilization for war, was retarded, if not completely arrested, in 1944. This development stemmed from the general stability of the economy as war production levelled off at the peak rates established the previous year.

The states that scored the largest percentage gains in total income payments from 1939 to 1944 were concentrated in the southeast, southwest, far west and northwest. Income received by residents of these four regions in 1944 was from 128% to 164% above prewar levels. In contrast, income payments in the New England and middle eastern areas rose by little more than 80%. The slightly more-than-doubling of income payments in the central states from 1939 to 1944 closely paralleled the experience of the country as a whole. The largest wartime relative shifts were, therefore, from New England and the middle east to the south and west.

The major aspects of this striking pattern of change were in accord with 1929-39 trends, so that war-period developments should not be dismissed as distortions. The easy assumption of a return to the 1939 geographic income pattern in the postwar years discounts persistent, underlying trends that prevailed over the 16-year period 1929-44 embracing prosperity and depres-

Distribution of Income Payments by States

sion, peace and war. Although analysis of geographic differences in the sources of war-period income expansion indicated that the far west's, southeast's and southwest's 1944 shares of the country's income payments were boosted by war spending and might be readjusted at somewhat lower levels in the immediate post-war period, war spending did not explain all of the relative gains by the south and west; marketing analysts very probably could continue to look to these areas for the country's most rapidly expanding markets. The long-term relative growth in total income payments in these areas was the result of more rapid population growth, as well as of larger increases in per capita income. Over the period 1929-44, it may be noted, the total population of the southeast, southwest and far west expanded 21%, in contrast to the 3% rise in the other four regions.

Despite a tendency toward reduction of inequality among the states in per capita income—accelerated by war developments—broad differentials still existed, as shown by the table. In 1944, states in which per capita income was less than that of the country as a whole had a composite average two-fifths below the comparable average of states where per capita income exceeded the nation-wide average.

Underlying the differentials in per capita income were significant geographic differences in industrial structure. In general, states with per capita income above the national average showed relatively large proportions of the labour force employed in manufacturing, mining, construction, and the distributive and service industries; relatively small proportions were in agriculture and domestic service. Characteristics of the low-income states were exhibited in marked degree by the southeastern states, where average incomes were the lowest in the country. The southeast placed heavy dependence upon agriculture and domestic service as sources of income. On the other hand, it had relatively fewer workers in the manufacturing and distributive and service industries, where average earnings were considerably higher than in agriculture and domestic service. This "unprofitable" distribution of the southeast's working population explained in large measure the lowness of the region's per capita income. Furthermore, the level of farm income in this region was substantially lower than elsewhere. (See also BUDGET, NATIONAL; CENSUS DATA, 1945; INCOME AND PRODUCT, U.S.)

**Weather:** see METEOROLOGY.

**Wedemeyer, Albert Coady** (1897- ), U.S. army officer, was born at Omaha, Neb., July 9. He was commissioned a second lieutenant in the United States army on Nov. 1, 1918, and advanced through the grades to the rank of major general in Sept. 1943. He was graduated from the Command and General Staff school in 1936, and attended Krieg's academy in Berlin during the succeeding two years. He was on the war department general staff from 1941 to 1943.

In Oct. 1943 he was appointed deputy chief of staff of Admiral Lord Mountbatten, United Nations commander in the southeast Asia theatre.

When Gen. Stilwell was summarily relieved of his command and duties in the far east on Oct. 27, 1944, Maj. Gen. Wedemeyer was placed in command of the U.S. forces in China and was named chief of staff of the China theatre. Wedemeyer, who was promoted to the temporary rank of lieutenant general (Jan. 25, 1945), stated Sept. 13 that U.S. troops would be brought into the coastal areas of China to help the Chinese maintain order. He disclosed Dec. 1 that the Chungking government was continuing to receive U.S. arms and munitions under the extension of lend-lease.

**Wellesley College.** A four-year liberal arts college for women, founded in 1870 by Henry Fowle Durant and located in Wellesley, Mass. Wellesley college had in 1945 an enrolment of approximately 1,500 students with 200 faculty members. Pre-eminently for candidates for the B.A. degree, Wellesley offers also the degrees of M.A., M.A. in education, M.S. and a certificate in hygiene and physical education. At the opening of the academic year 1945-46, President Mildred McAfee Horton, maintaining her position as director of the women's reserve of the United States naval reserve, on extended leave, again took up full-time residence at the college. The college calendar year, which had been adjusted to meet special war-time needs, returned to the regular schedule from September to June.

Committee groups of trustees, faculty, students and alumnae had under advisement plans for the college, both for the immediate future and the later postwar years. Preliminary reports of these committees included a consideration of curriculum changes and plans for the physical growth of the college.

Under the auspices of the Mayling Soong foundation, an institute on Japan was held at the college, in order that undergraduates might better understand the problems facing the United Nations in the far east. Economic, social and political phases of present day Japan were studied.

(For statistics of enrolment, endowment, library volumes, etc., see UNIVERSITIES AND COLLEGES.) (M. M. H.)

**Werfel, Franz** (1890-1945), German-Czech writer, was born Sept. 10 in Prague. He was educated at the Universities of Prague and Leipzig. He published, while in his early 20s, his first book of poems, *The World Friend*. More works in verse followed and before long he became leader of Germany's young literary iconoclasts. Werfel served with the Austrian army in Russia during World War I, and following that war went to Vienna where he made his home. After the advent of Hitler, Werfel was expelled from the Prussian Academy of Art in 1933 and his books were banned. He moved to Paris, from there to the Mediterranean coast and thence to Lourdes. At Lourdes he received the inspiration to write one of his most successful novels, *The Song of Bernadette* (1942), which was produced in motion pictures. He was the author of *Verdi* (1925), which was filmed in Italy, and he rewrote Verdi's opera *Simon Boccanegra*, which was successfully produced in Vienna in 1930. Werfel also wrote *The Forty Days of Musa Dagh* (1934), a best seller in the United States, and *The Eternal Road*, a pageant produced by Max Reinhardt in New York in 1935. Other of his works published in the United States include *Class Reunion* (1929), *The Pure in Heart* (1931), *Twilight of a World* (1937), *Harken Unto the Voice* (1938) and *Embezzled Heaven* (1940). Werfel's plays include *The Mirror Man*, *Schweiger*, *Paul Among the Jews*, *The Kingdom of God in Bohemia*, *In One Night*, *The Trojan Women*, *The Goat Song*, *Juarez and Maximilian* and in collaboration with S. N. Behrman, *Jacobowsky and the Colonel*. He died in Hollywood, Calif., Aug. 26. (See *Encyclopædia Britannica*.)

**West Africa, British:** see BRITISH WEST AFRICA.

**Western Australia.** A state of the Australian commonwealth; area 975,920 sq.mi.; pop. (est. Dec. 31, 1943) 485,407. Chief city: Perth (pop. Dec. 31, 1943) 263,000. Governor: (vacant in 1945); lieutenant governor in 1945: Sir James Mitchell.

**History.**—In Aug. 1945 Frank Joseph Scott Wise, minister for lands and agriculture in the Western Australia government, was elected by the state Labour party to be premier in succes-

sion to John Willcock, who had resigned because of ill-health. There was a further decline in gold production during 1945, but agricultural returns were again satisfactory, Western Australia having been fortunate to escape the almost continent-wide drought conditions. The government planned to overcome the water shortage in many rural areas in a bold postwar scheme to raise the height of the Mundaring and Wellington weirs and by laying reticulation pipes to service 11,000,000 ac. and some 35 country towns. The estimated cost was \$27,500,000.

**Education.**—In 1943: state primary schools 748; average attendance 48,337. State secondary schools 6; average attendance 1,770.

**Finance.**—Revenue (1943-44) \$43,500,000; expenditure (1943-44) \$43,400,000; debt outstanding (June 30, 1944) \$308,730,000. (Conversion rate: £1=\$3.22 U.S.)

**Communication.**—Roads (1940) 29,722 mi.; railways (1942-43) government 4,381 mi. Motor vehicles licensed (Sept. 30, 1944): cars 29,596; commercial vehicles 22,177; cycles 3,771. Wireless receiving set licences (Nov. 1943) 98,220.

**Agriculture and Manufacturing.**—Production (in short tons): wheat (1944-45) 412,500; wool (1943-44) 50,000; gold (1943) 546,576 fine oz. Industry and labour (1942-43): factories 1,799; employees 25,813; gross value of output \$85,560,000; unemployment (trade union returns) (Feb. 1945) 1.0%. (W. D. MA.)

**West Indies.** An archipelago between Florida and the South American coast opposite the mouth of the Orinoco river. The West Indies include the Greater Antilles (in order of size, Cuba, Haiti, Jamaica and Puerto Rico), the Lesser Antilles between Puerto Rico and the Venezuelan coast, the Bahama group northeast of Cuba, and certain more distant islands, including Curaçao and Aruba near the mouth of Lake Maracaibo in Venezuela. The land area is approximately 92,000 sq.mi. Population, estimated in 1944 at about 13,000,000, is approximately 75% white and 25% Negro and mulatto in Cuba and Puerto Rico, and from 80% to 100% Negro and mulatto elsewhere, except that in Trinidad about 40% are of East Indian origin. Religion: predominantly Roman Catholic. Languages: Spanish, English, French and Dutch in addition to various African dialects. Politically, the West Indies include the three independent republics of Cuba, Haiti and the Dominican Republic, two United States territories, and six British, two French and one Dutch colonies. In addition to prewar bases, the West Indies are the location of five U.S. naval bases the sites for which were obtained from Great Britain in 1940.

**History.**—The principal general problem of the West Indies in 1945 was readjustment after World War II. Economic dislocation was general and considerable and on many of the islands unemployment was serious, due either to the cessation of work on U.S. naval base construction or to the return of persons previously employed in the U.S. Consequences of the disastrous hurricane of Aug. 20, 1944, said to have been the worst in 40 years in some parts of the Caribbean, were still being felt in the early months of 1945. The British West Indies were granted a liberalized franchise and increased autonomy on a provisional five-year basis as an experiment beginning in 1945. The project of West Indian federation was still being considered, but with opposition in some quarters.

**Trade and Production.**—West Indian islands are predominantly agricultural, with sugar, raised primarily for export, as the principal crop. Oil refining in Curaçao and Aruba and petroleum and asphalt production in Trinidad are the only important exceptions to the chiefly agricultural economy. Sugar production in most West Indian areas declined notably in the 1944-45 season; that in Martinique, for example, was only 3,000 metric tons as against a 1939 production of 65,000 metric tons. Other agricultural production suffered materially in 1945. Parts of the area were adversely affected by a drought early in 1945 although rains were more abundant later. Most trade relations are with the U.S. and Canada and, on the part of the respective European colonies, with the various mother countries. Trade showed im-

provement because of easier shipping conditions. The single unit of Cuba outranked all other Latin American countries in the early part of 1945 as a supplier to the U.S.; trade by other parts of the West Indies with the U.S. improved notably at the same time. Serious discussion of a British West Indies customs union continued from 1944 into 1945 but no specific action was taken.

**Communications.**—Principal developments in 1945 were in aviation. British West Indies airways at the beginning of the year opened a new passenger express service from Port of Spain, Trinidad, to Kingston, Jamaica. Both K.L.M. (Royal Netherlands air line) and T.A.C.A. (Transportes Aéreos de Centro América) took steps in 1945 to expand their West Indian services. The principal network of air lines continued to be operated by Pan American World airways. Cuba maintains the largest mileage both in highways and railroads of any of the West Indian units. Highway mileage at the beginning of 1945 was 2,140 mi. of paved and 255 mi. of improved road. Railroad mileage was 4,880 mi. in main lines. The chief West Indian cable services are furnished by Western Union Telegraph company, West Indies Cable and Wireless, Ltd., and All America Cables. (See also BAHAMAS; CUBA; CURAÇAO; DOMINICAN REPUBLIC; FRENCH COLONIAL EMPIRE; HAITI; PUERTO RICO; VIRGIN ISLANDS; WEST INDIES, BRITISH.)

(R. H. FN.)

**West Indies, British.** Single islands and groups in the Caribbean sea, which include six political units: Bahama Islands (*q.v.*), Barbados, Jamaica and dependencies, the Leeward Islands, Trinidad and Tobago and the Windward Islands. Jamaica is the third in size of the four islands comprising the Major Antilles. The Leeward Islands and the Windward Islands (and Barbados) form a large part of the Lesser Antilles. Trinidad is a single island just north of the Orinoco river delta. (Areas and populations are given in the table.) The total area, excluding the Bahamas, is approximately 8,065 sq.mi. and the total estimated population 2,366,949. No census had been taken, except in 1943 in Jamaica and dependencies, after 1931 (in some cases earlier); the British government late in 1945 was completing plans to take early censuses in the remaining units. The racial composition of the population is from three-fourths to almost 100% Negro, although the population of Trinidad is estimated to include 180,509 East Indians.

Area and Population Estimates, British West Indies, 1945

Colony	Area (sq. mi.)	Pop. (latest est.)	Capital (with est. pop.)
Barbados	166	202,588	Bridgetown (14,000)
Jamaica and dependencies	4,677	1,250,209*	
Jamaica	4,470	1,237,391*	Kingston (109,056*)
Cayman Islands	93	6,670*	Georgetown (1,400)
Turks and Caicos	202	6,148*	Grand Turk (1,668)
Leeward Islands	422	100,497	
Antigua (including Barbuda, 62 sq. mi., and Redonda)	170½	41,024	St. John's (10,000)
Montserrat	32½	14,522	Plymouth (1,893)
St. Kitts-Nevis (St. Christopher, 68 sq. mi., pop. 17,895; Nevis, 50 sq. mi., pop. 14,817; Anguilla, 34 sq. mi., pop. 5,034)	152	37,746	Basseterre (19,895*)
Virgin Islands	67	7,205	Road Town (900)
Trinidad and Tobago (Tobago, 116 sq. mi., pop. 31,100)	1,980	535,499	Port of Spain (103,155)
Windward Islands	820	278,156	
Dominica	304	53,899	Roseau (9,000)
Grenada (including Carriacou, 13 sq. mi., pop. 9,358, and lesser islands)	133	90,085	St. George's (6,500)
St. Lucia	233	73,770	Castries (9,000)
St. Vincent (including 5 of the Lesser Grenadines)	150	60,402	Kingstown (4,269*)

\*1943 census; all other population figures are estimates.

The political organization of the various islands reflected no uniformity and various anomalies. Each of the colonies had

a royally appointed governor. (For names, see BRITISH EMPIRE.) Barbados additionally had an executive council, an executive committee, an appointive legislative council and a house of assembly. Jamaica was governed under a new constitution (in force Nov. 20, 1944) providing for an elective house of representatives, a legislative council (the upper house) and an executive council. The Leeward Islands possessed a royally appointed executive council and a legislative council; Trinidad and Tobago had similar bodies. The Windward Islands had a common governor but otherwise each island had its own political institutions; there was no joint legislature.

English was the principal language used.

**History.**—The chief concerns of the British West Indies in 1945 were the restoration of a peacetime economy and steps toward possible federation and toward greater self-government. The important Economic Policy committee rendered its report (the "Benham Report") for Jamaica early in 1945, proposing a comprehensive plan for the economic rehabilitation of the island. The incorporated chambers of commerce of the British Caribbean area met at Barbados early in 1945 to consider economic problems in view of the imminent end of World War II. Discussion continued throughout 1945 (centring in Jamaica) of the possibility of a West Indian federation with interisland free trade. A Caribbean Labour conference met at Barbados in September with representatives of various labour groups and progressive political parties present. The Anglo-American Caribbean commission held an important series of meetings in Washington at the end of July to consider political and economic problems of the area as conditioned by the cessation of the war in Europe. Consideration was subsequently given to the holding of a second West Indian conference, the first such conference having been held at Bridgetown, Barbados, in March 1944. Considerable numbers of Barbadians and some from other islands were recruited for work in the United States, especially in the second quarter of 1945, although other island residents were at the same time returning after periods of employment in the United States. Remittances from those in the United States formed an important item in the total income of some of the islands. Officials in Trinidad announced preliminary plans for a comprehensive scheme of land allocation for purposes of conserving land and the water supply.

**Education and Religion.**—Partial education statistics showed 1,320 elementary schools with an enrolment of 241,073 (Trinidad and some of the Windward Islands omitted). Higher education was provided by Codrington college in Barbados (affiliated with Durham university in England) and Queen's Royal college, St. Mary's college and the Imperial College of Tropical Agriculture, all in Trinidad. Agitation continued throughout 1945 for the establishment of a general university for the British West Indies.

No established church existed in the islands. The principal churches were the Anglican, Baptist, Methodist, Presbyterian, Roman Catholic and Moravian. Many of the churches operated schools and a substantial portion of the whole number of elementary schools was denominational.

**Finance.**—The pound sterling was standard except in Trinidad where the West Indian or Trinidad dollar was the unit; the latter was equivalent to 4s. 2d. and exchanged in 1945 at approximately 83 cents U.S. British subsidiary coinage circulated widely. A serious effort was being made in 1945 to make the various colonies financially self-supporting; the British government indicated, for example, that it would gradually cease extending subsidies to Jamaica over a five to ten year period. The islands consequently sought new sources of revenue. Jamaica, the largest of the islands, proposed a 1945-46 budget of £7,120,700 (1944-45: £6,277,842). Jamaica's debt on April 1, 1945, was £7,901,265. The Barbados budget for 1945-46 estimated revenue at £1,007,000 and expenditures at £1,170,000. Several of the islands late in 1945 gave consideration to inclusive public works programs to tide over the period of readjustment from World War II; Trinidad, for example, planned a five-year program, stressing water supply and antimalarial control, to cost \$12,000,000.

**Communication.**—Wartime disruption of normal steamship service to various British West Indian ports continued through 1945 and air service gained relatively in consequence. Plane service was furnished by British West Indian Airways, Pan American World Airways and K.I.M. (Royal Dutch Airways). The British government in 1945 refused to authorize service by two local air lines which wanted to begin operations, thus emphasizing a policy of favouring a monopoly (for British air service) by British West Indian Airways. Interisland communications, chiefly by motorboat, continued to be inadequate in 1945. The most extensive highway sys-

tems were in Jamaica, Trinidad and Barbados, which had respectively 2,525, 1,067 and 545 mi. Trinidad had a 1945 road budget of \$2,000,000. The longest railway mileage was found in Jamaica and Trinidad, 299 and 123 mi., respectively. Antigua and St. Kitts had narrow-gauge sugar-company railways. The largest numbers of post offices were in Jamaica (308) and Trinidad (132).

**Trade.**—The year 1945 was characterized by some relaxation of wartime shipping restrictions and amelioration of the disruptions of the previous few years. One of the most cheering signs was the resumption on Dec. 15, 1945, of Jamaican banana shipments to Great Britain. Statistics for foreign trade for 1943 were not completely tabulated in 1945; imports and exports for Barbados for 1943 were £2,888,349 and £2,338,539, respectively; for the Leeward Islands in 1943 they were £1,009,649 and £1,005,978, respectively; for Trinidad in the same year they were \$59,788,779 and \$42,030,774, respectively. Great Britain's position as chief prewar purchaser was inevitably lost during World War II because of lack of shipping, especially for bulk products. Only toward the end of 1945 was Great Britain beginning to gain relatively in purchases. Jamaican imports and exports for the first half of 1945 were respectively £4,233,971 and £2,417,593. Imports and exports of Barbados for the same period were respectively £1,186,589 and £1,344,173. Banana shipments from Jamaica, the chief West Indian producer, in the first ten months of 1945 totalled 1,227,229 stems compared with 971,759 in the same period in 1944.

**Agriculture.**—Agricultural production was by far the most important type in all of the islands with the partial exception of Trinidad. Sugar production assumed added importance during World War II. Great Britain in 1945 offered Trinidad a subsidy of \$20 an acre (although the amount was double that in 1944). The British food ministry was committed to buy the entire Jamaican exportable surpluses of sugar for 1945 and 1946. Sugar production in Jamaica in 1945 was 152,226 long tons compared with 151,882 tons in 1944. Sugar production in Trinidad had declined, chiefly because of a labour shortage. Sugar production in Barbados for 1944 was 104,501 long tons; it was estimated that the 1945 production would reach 130,000 tons. The Barbadian legislature in 1945 appropriated £172,000 for agricultural development, much of it earmarked for the sugar industry. The annual Jamaican production of rum, one of the most important sugar derivatives, was about 2,000,000 imperial liquid gallons, about 30% of which was consumed locally. The important Jamaican banana industry was still affected in 1945 by the disastrous hurricane of Aug. 1944, which destroyed a considerable fraction of the trees. The citrus fruit crop in Jamaica was expected to register about a 15% increase more than the 800,000 boxes produced in 1944. Coconut and vegetable production declined either relatively or absolutely in most of the islands in 1945. Rubber production in Trinidad continued to increase under the encouragement of the United States Rubber Development corporation, which contracted for the entire output; production for 1945 was estimated at 600,000 lb. compared with 450,000 lb. in 1944 and 300,000 lb. in 1943. The greater part of the copra production was in the southern islands; annual averages included: Trinidad, 14,000 long tons; St. Lucia, 1,800 tons; St. Vincent, 1,600 tons; Dominica, 540 tons; Grenada, 300 tons. Jamaica in 1945 began a program of experimentation and research on soybeans. A livestock census in Jamaica June 30, 1945, showed 172,922 cattle in that island.

**Minerals.**—The only important British West Indian mineral resources are the petroleum and asphalt deposits in Trinidad. Wartime security regulations precluded release of production figures but the oil industry continued on a high level in 1945. Relatively little asphalt was produced or shipped, however, and the world-famous asphalt lake was of much less economic importance than it was earlier.

**BIBLIOGRAPHY.**—*West Indies Year Book* (1944); *South American Handbook* (1945); *Canada-West Indies Magazine* (Montreal, monthly); *Foreign Commerce Weekly* (Washington); *Crown Colonist* (London, monthly). (R. H. FN.)

**West Virginia.** A state in the Appalachian mountain region in the eastern part of the United States. West Virginia was formed from Virginia during the Civil War and admitted to the union June 20, 1863. Area, 24,282 sq.mi. (including 150 sq.mi. of water); population (1940) 1,901,974, of which 1,742,320 were white (41,782 foreign born). Its total urban population was 534,292. On July 1, 1944, the bureau of census estimated the civilian population of the state at 1,715,984. Its capital is Charleston (pop. 67,914). Its other chief cities are Huntington (78,836) and Wheeling (61,099).

**History.**—In 1945, the chief state officers were: governor, Clarence W. Meadows; secretary of state, William S. O'Brien; treasurer, R. E. Talbott; auditor, Edgar B. Sims; attorney-general, Ira J. Parthlow; state superintendent of schools, W. W. Trent. All except Meadows and Parthlow had been re-elected in 1944.

**Education.**—The pupil enrolment (net) in the 4,308 state elementary schools for 1944-45 was 279,205. In the 385 state high schools it was (net) 126,366. The number of teachers was 10,059 in the elementary schools and 4,994 in the high schools. The total state appropriation for elementary and secondary education in 1944-45 was \$18,963,158. The state supports seven teacher-training colleges which in 1944-45 had a total student enrolment of 3,437 and a total instructional membership of 290. It also supports West Virginia university, Morgantown, W.Va.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the year ending July 1, 1945, the total expenditure for old-age assistance was \$4,004,968; for the blind, \$216,769; for dependent children, \$2,698,840. Including the cost of administration, the total cost of public assistance was \$7,388,521. The total general relief fund was \$1,158,463. The state supported eight correctional institutions with 532 inmates at a cost of \$122,500.

**Communications.**—In 1944-45, the state had about 3,229 mi. of steam railway (about 6,135 mi. including second main track and all sidings), 120 mi. of electric railway and an extensive system of improved highways (approximately 17,090 mi., of which more than 15,479 mi. were hard-surfaced). The total mileage of air lines in the state was 239. The total number of telephones was 211,091 (Bell 183,790 and connecting lines 27,300) excluding 2,960 of local unconnected lines.

**Banking and Finance.**—On June 30, 1945, the total deposits of the 102 state banks and trust companies were \$357,010,963. The total deposits of the 76 national banks in the state were \$445,278,203.

**Resources of 22 federal savings and loan associations** were \$24,125,531. **Resources of 36 state building and loan associations** were \$9,487,767. **Resources of 18 industrial savings and loan associations**, \$8,608,037.

**State receipts for 1944-45** were \$146,159,366; **disbursements**, \$142,139,691; **balance, June 30, 1945**, \$30,065,958. On July 1, 1945, the total state funded indebtedness was \$64,754,000. Total state debt, gross, \$64,754,000 (net \$59,578,622).

**Agriculture.**—Total cash income from farm crops and livestock in 1944 was \$84,621,000; income from government payments was \$4,417,000. The number of farms by the census of 1945 was 101,234 (acreage 8,949,701), valued at \$269,827,285.

#### Principal Agricultural Products of West Virginia, 1944

	Yield, 1944	Value, 1944
Corn, bu. . . . .	10,426,000	\$16,994,000
Wheat, bu. . . . .	1,680,000	2,587,000
Oats, bu. . . . .	1,430,000	1,344,000
Buckwheat, bu. . . . .	185,000	240,000
Hay (Tame), tons. . . . .	805,000	20,019,000
Apples, bu. . . . .	4,356,000	6,830,000
Potatoes (Irish), bu. . . . .	2,040,000	4,080,000
Barley, bu. . . . .	225,000	288,000

**Manufacturing.**—In 1940 the state had 3,188 reporting industrial establishments, which employed 230,726 persons and paid \$396,884,878.99 in wages. These plants had a total production of about \$898,722,285.80. The chief industries were steel, glass, chemicals, petroleum refining, stone, potteries and porcelain, cement, lumbering, woodworking and flour. In 1941-42 the monthly average of persons employed was 456,721 and the total amount of pay roll was \$727,592,000. Later figures were not available in 1945.

**Mineral Production.**—In 1944 oil production was 3,070,000 bbl.; natural gas production was 200,000,000 cu.ft.; coal production was 163,845,000 short tons. Total coke production (both beehive and by-product) was estimated at 3,016,548 short tons in 1944. Total value of mineral production (est.) was more than \$600,000,000.

**BIBLIOGRAPHY.**—*West Virginia Bluebook* and various official departmental reports. (J. M. Ca.)

**Whaling:** see FISHERIES.

**Wheat.** Another record wheat crop was harvested in the United States during 1945, exceeding the record crop of 1944 by 7% or 71,000,000 bu. The acreage was increased almost 10% which more than offset the lower yields. The goal for 1945 was set at 67,700,000 ac. and 64,961,000 ac. was harvested. Weather was generally very favourable for harvesting and an unusually high percentage of the crop was saved in good condition.

The total wheat crop of all types in 1945 was 1,149,825,000 bu. compared with 1,078,647,000 bu. in 1944 and an average of 789,080,000 bu. 1934-43. The total acreage 64,961,000 ac. compared with 59,309,000 ac. harvested in 1944 and an average of 53,829,000 ac. 1934-43. The average yield of all wheat was 17.7 bu. per acre in 1945, 18.2 bu. in 1944 and 14.7 bu. during the ten-year period 1934-43.

The winter wheat crop was 836,969,000 bu. in 1945, 767,073,000 bu. in 1944 compared with an average of 585,994,000 bu. in 1934-43. Winter wheat yields were 18 bu. per ac. compared with 18.8 bu. in 1944 and 15.3 bu. average 1934-43. The acreage of winter wheat produced all of the increase in the total crop for the year, since it amounted to more than 6,000,000 ac. Total winter wheat acreage was 46,434,000 ac. in 1945 compared with 40,714,000 ac. in 1944, an increase of 14%.

The spring wheat crop in 1945 was estimated at 312,856,000 bu., slightly less than the 314,574,000 bu. harvested in 1944 but twice the prewar average of 203,085,000 bu. 1934-43. Spring wheat yields in 1945 were 16.9 bu. per ac., exactly the same as

Table I.—U.S. Production of Wheat by States, 1945 and 1944

State	1945 bu.	1944 bu.	State	1945 bu.	1944 bu.
Kansas . . . . .	207,961,000	191,669,000	Maryland . . . . .	6,864,000	8,906,000
North Dakota . . . . .	161,888,000	161,630,000	Utah . . . . .	6,858,000	7,361,000

New York . . . . .	9,365,000	8,932,000	Maine . . . . .	36,000	40,000
Virginia . . . . .	8,192,000	11,275,000			

in 1944 but well above the average of 13.2 bu. per ac. in 1934-43.

The durum wheat crop was 35,020,000 bu. in 1945, above the 31,933,000 bu. produced in 1944, and the average of 29,330,000 bu. 1934-43. The acreage of durum wheat was 10% less in 1945 than in 1944 but the yield was high, 17.4 bu. per ac. compared with 15.1 bu. in 1944 and an average of 12.1 bu. per ac. Other spring wheat was grown on about the same acreage in 1945 as in 1944 with yields of 17.2 bu. per ac. compared with an average of 13.3 bu. The higher yields of durum than other spring wheats in the Dakotas by 1½ bu. per ac. was an unusual development. In Minnesota, the other important durum-producing state, the yield of durum was 2½ bu. less than other spring wheat.

Production of wheat by classes in 1945 was: hard red winter 524,000,000 bu.; soft red winter 243,065,000 bu.; hard red spring 243,397,000 bu.; durum 35,020,000 bu.; and white wheat 106,579,000 bu. The supply of wheat for the 1945-46 year was exceeded only by supplies in 1942 and 1943. The carry-over of old wheat on July 1, 1945, was 281,000,000 bu. compared with 319,000,000 bu. in 1944; 622,000,000 bu. in 1943 and 632,000,000 bu. in 1942.

Farm stocks on Oct. 1, 1945, were 539,217,000 bu. compared with 532,270,000 bu. a year earlier. This total for 1945 was larger than any year other than 1942 but was low as percentage of production. The movement of wheat from farms was the highest on record for the first quarter of the marketing year, August-September, indicating a favourable transportation and storage situation.

The distribution of the 1944 wheat supply of 1,438,000,000 bu. (carry-over plus production and imports) was 1,017,000,000 bu. for domestic use, 140,000,000 bu. exports, and 281,000,000 bu. carry-over on July 1, 1945. For the 1945 crop the total supply was expected to be 1,427,000,000 bu. Very small imports were anticipated and exports were expected to increase, while domestic use would be about 800,000,000 bu. Large quantities of wheat were used for animal feed and in industrial alcohol which reduced the large carry-over of 1942 and 1943, and even with the large crops of 1944 and 1945 left no burdensome surplus. With the recovery of wheat production in other countries, however, export surpluses were expected to reappear as soon as the relief demand ended.

The price of wheat continued to advance through 1945 to the end of World War II. A general advance had taken place after 1938. The government price-supporting loans were increased each year after 1941 and prices ranged above the loan rates most of the time. The price of No. 2 hard winter wheat at Kansas City advanced from \$1.63 per bu. in Jan. 1945 to \$1.68 per bu. in June, while the loan rate stood at \$1.50. Strong industrial and export demand were the principal market-supporting factors. The domestic price after harvest in September was about

28 cents per bushel above the export price of U.S. wheat, supported by a subsidy paid by the government. In order to permit the price of wheat to reach parity and at the same time not to raise the price of bread, millers were given a differential payment. About \$86,000,000 was paid out during 1944. The average price of wheat received by growers was \$1.41 per bu. for the year 1944 and had advanced to \$1.53 per bu. by the end of the year 1945. Heavy buying for export for postwar relief was the supporting factor. While farm stocks were high the amount placed under loan was relatively small.

**World Wheat Production.**—The total world wheat production, excluding U.S.S.R., China and Manchuria, in 1945 was estimated by the U.S. department of agriculture at about 3,780,000,000 bu. compared with 4,040,000,000 bu. in 1944 and an average of 4,010,000,000 bu. 1935-39. Decreased production in Europe, Canada and North Africa about offset the increases in the United States, India and southern hemisphere countries.

The Canadian wheat crop of 321,000,000 bu. in 1945 was much below the 436,000,000 bu. crop of 1944 but was above the average of 312,000,000 bu. 1935-39. The acreage in 1945 was about the same as in 1944 but the yields were much lower than a year earlier. The Mexican crop was about 14,000,000 bu., 1,000,000 bu. less than a year earlier. In Europe, excluding Russia, wheat production was below the small crop of 1944 and much below the average. Reduced acreage in northern and western Europe, lack of fertilizers and difficulties at harvest time reduced the wheat output to the smallest in many years.

Table II.—World Wheat Production, Estimates, Average 1935-39, 1941-45  
(In million bushels)

	Average 1935-39	1941	1942	1943	1944	1945
United States . . . . .	759	943	974	841	1,079	1,150
Canada . . . . .	312	315	557	284	436	321
Mexico . . . . .	14	16	18	13	15	14
Europe . . . . .	1,562	1,323	1,193	1,354	1,327	999
Britain . . . . .	70	92	115	146	138	101
North Africa . . . . .	119	134	110	108	86	68
Asia . . . . .	529	522	498	583	500	501

Australia . . . . .	170	167	156	110	53	135
Union South Africa . . . . .	16	14	20	18	14	15
Total (45 countries) . . . . .	3,773	3,764	3,876	3,707	3,798	3,504
World total, excluding U.S.S.R., China and Manchuria . . . . .	4,010	3,950	4,106	3,930	4,040	3,780

In Italy, Spain and North Africa a severe general drought reduced the crop to the smallest in years. In the Danube basin the crop was barely sufficient for local consumption and the usual surplus from this area was lacking. In Denmark and Sweden the crop was about normal. Altogether the wheat crop of Europe was estimated at 999,000,000 bu. compared with 1,327,000,000 bu. in 1944 and a prewar average of 1,562,000,000 bu. in 1935-39.

The Indian crop was estimated at 392,000,000 bu. or 8% above 1944. The prospects in Argentina indicated an average crop of about 225,000,000 bu. Conditions in Australia were better than in 1944 and the crop was estimated at 135,000,000 bu. compared with the small crop of 53,000,000 bu. in 1944 and the prewar average of 170,000,000 bu. 1935-39.

World trade in wheat began to expand toward prewar proportions with the larger crops of 1944 and 1945. United States wheat exports in the 1944-45 year ending July 1 amounted to 97,000,000 bu., the largest in four years. In the calendar year 1945 exports reached 300,000,000 bu. Canada had about 325,000,000 bu. available for export. In the first half of 1945 Argentina exported about 60,000,000 bu. of wheat and had a considerable amount of the old crop still available for export. Australia also had a small surplus of about 25,000,000 bu.

The import requirements of the United Kingdom were estimated at 175,000,000 bu. of wheat and Europe as a whole needed at least 500,000,000 bu. to maintain a minimum consumption. With a total exportable supply of about 700,000,000

bu. world wheat trade was the largest in 15 years. Delays in transportation due to the end of World War II and the use of ships to return the armies retarded the movement of grain toward the end of the year.

The Combined Food board continued to manage the distribution of grain through 1945 and the World Wheat agreement did not come into full operation. The pool of 100,000,000 bu. of relief wheat was moved into foreign countries under the direction of the International Wheat council. (See also FLOUR AND FLOUR MILLING.)

(J. C. Ms.)

**Wholesale Trade:** see BUSINESS REVIEW.

**Wickard, Claude Raymond** (1893- ), U.S. secretary of agriculture, was born near Delphi, Ind., on Feb. 28. After his graduation from Purdue university in 1915 he took over management of a farm near his birthplace. In 1933 he was appointed to the staff of the Agricultural Adjustment administration as assistant chief of the corn-hog division. On Feb. 1, 1940, he was appointed undersecretary of agriculture, and on Aug. 19, after the resignation of Henry A. Wallace, President Roosevelt nominated him secretary of agriculture. On Dec. 6, 1942, President Roosevelt made Wickard war food administrator. On March 25, 1943, however, the president named Chester C. Davis to the position, stipulating that he report to Wickard. The arrangement was not satisfactory, and Davis resigned three months later. In Oct. 1943, Wickard was named "neutral chairman" of the United Nations' war food board. On May 23, 1945, President Truman replaced Wickard with Clinton P. Anderson as secretary of agriculture. Later, July 2, Wickard was sworn into office as head of the Rural Electrification administration.

**Wildlife Conservation.** Activities in Wildlife Conservation in the United States reached the low point in World War II in the early part of 1945 but by the end of the year were increasing. For the first time the annual North American Wildlife conference (scheduled for New York Feb. 26-28) failed to meet because of a government ban on all conventions. Yet before the year's end committees were at work in preparation for the 1946 convention. The American Wildlife institute, sponsor of these conferences, did, however, publish as *Transactions of the Tenth North American Wildlife Conference* the major portions of the papers that had been planned for the conference.

The "most serious effect of the war on the conservation of United States animal resources," according to the Fish and Wildlife service annual report, "has been the loss of trained personnel to federal and state agencies."

During the fiscal year ended June 30, 1945, six areas totalling in size more than 1,000,000 ac. (in Wash., Mo., Calif., Fla., N.D. and Ky.) were established as national wildlife refuges, bringing the total to 285, with between 18,500,000 and 19,000,000 ac. in all.

The service during the year took custody of about 1,000,000 ac. of land and water in the Florida Everglades, administering the area as a refuge as "a step toward the possible creation of a national park."

The program under the Federal Aid to Wildlife Restoration act of 1937, as in the preceding war years, was carried on by the states under federal guidance on a reduced scale because of shortages in personnel, equipment and materials. The total federal grant for the year ended June 30, 1945, was only \$900,000. In accordance with the law, the revenue from the federal tax on firearms, shells and cartridges was set aside as the

Federal Aid to Wildlife Restoration fund for this program, and there thus had developed a considerable accumulation for post-war programs. By June 30, 1945, this accumulation was almost \$11,000,000, and it was expected that with an anticipated 30% increase in hunting licence sales the accumulation would continue. The International Association of Game, Fish and Conservation commissioners recommended at a meeting in June that the accumulated funds be appropriated over a period of five years.

Available statistics confirmed other indications that hunting had not greatly declined during the war but had perhaps increased following an early war-years' recession. The sale of federal migratory bird hunting stamps (required of all waterfowl shooters over 16) showed by Sept. 30, 1945, a considerable increase over a record 1944 sale, though the 1943-44 sales had declined. During the 1943-44 season, the latest year for which comparable data on hunting and fishing were available, hunters in the states and territories spent \$13,547,152 for 7,505,258 hunting licences—a decrease of \$51,271 and 585,929 licences as compared with the preceding year—and fresh-water anglers paid \$9,857,299 for 7,846,168 fishing licences—a decrease of \$167,100 and 182,506 licences. These tabulated totals included some duplications, notably the inclusion of 1,555,356 sales of combined hunting and fishing licences. During this 1943-44 season the federal migratory bird-hunting stamp sales totalled 1,164,191—a decrease from the preceding year of 215,901. This so-called "duck stamp," selling for \$1, was required of all waterfowl hunters over 16, in addition to the state licence.

In the number of hunting licences issued for 1943-44, Michigan led all other states with a total of 732,479, followed by New York with 589,864, Pennsylvania with 582,242, Ohio with 490,533, Indiana with 341,818, Minnesota with 332,476, Wisconsin with 291,832, California with 282,693, Washington with 278,544 and Illinois with 268,375. Michigan also led in the sale of fishing licences (701,310) with other leading states as follows: Ohio 587,429; Indiana 461,369; Illinois 452,301; California 446,568; Minnesota 419,341; New York 403,814; Wisconsin 352,223; Missouri 336,868 and Pennsylvania 331,336.

Migratory game birds—the only wildlife resource for which reliable estimates of the 1945 conditions were available—were not in as good condition as in 1944. In Sept. 1945, at the opening of the duck-hunting seasons (80 days as in the preceding year but without the former additional daily bag of five mallards, pintails or widgeons) the Fish and Wildlife service described a prospect of "fewer birds on the southward flight than last year." In January of 1945 the annual waterfowl inventory conducted by the service indicated a drop of 20,000,000 birds from the preceding year. Reports from 327 strategically stationed observers during the northward spring migrations in almost every case confirmed the population figures obtained during this winter inventory, and results of the breeding season were also indicative of decreases. There were floods and high waters noted during the summer breeding time in New Brunswick and Nova Scotia, affecting the black ducks especially, and drought in the prairie provinces of Canada, affecting the mallards and pintails especially—species that account for the largest takes by hunters.

Highly valuable information regarding big game animals became available during the year, although the most recent year to which the data related was 1943. *Big-Game Resources of the United States, 1937-1942* by Hartley H. T. Jackson of the biological survey's unit in the Fish and Wildlife service, issued as Research Report 8, not only summarized the results of big game inventories during these years but also discussed the big game conditions of the country. Early in 1946 the later tabulation of the 1943 reports was made available. This latest inventory of 15 groups and races of big game animals led to an estimate of 7,148,422 for the entire United States.

Intensive investigations of DDT (dichloro-diphenyl-trichloroethane), sensational new insecticide, led during the year to a Fish and Wildlife service warning that the chemical is "capable of considerable damage" to wildlife and beneficial insects. There is evidence, said the service, that a single concentrated application is destructive to birds and even dilute applications are dangerous to fishes. In experimental sprayings on tracts near Scranton, Pa., and at the Patuxent research refuge near Bowie, Md., applications were made by aeroplane late in May and early in June at the rates of one, two and five pounds per acre on different units, each area receiving a single dosage. In these tests no immediate detrimental effects on bird life were noted with the lighter treatments of one and two pounds per acre, but definite effects on birds were found at the five-pound rate. Within two days after the heavy dosage treatment, dead and dying birds were found. For a month thereafter a very low population indicated that most of the adult birds had either been killed or had left the area. Furthermore, even at the two-pound rate considerable mortality occurred among fishes.

The results of repeated sprayings were still being investigated, and pending further fact finding the Fish and Wildlife service was following the bureau of entomology and plant quarantine in recommending that in forest areas DDT spray be applied in concentrations of one pound per acre or less.

A remarkable new rodenticide was also developed—sodium fluoroacetate, known as "1,080" because it was the 1,080th chemical tested in a two-year search for an effective rat killer to replace red squill and strychnine during war shortages. Strict governmental control of its distribution was recommended by the Fish and Wildlife service because of its destructive possibilities.

**BIBLIOGRAPHY.**—Among the significant publications of 1945 were *Extinct and Vanishing Mammals of the Old World* by Francis Harper, an 850-page authoritative and systematic work published by the American Committee for International Wildlife Protection as a companion volume to the 1942, 600-page *Extinct and Vanishing Mammals of the Western Hemisphere* by Glover M. Allen; *The Nature of the Beast: A Popular*

*Account of Animal Psychology from the Point of View of a Naturalist* by Ruth Crosby Noble; *Son of the Wilderness: The Life of John Muir* by Linnie Marsh Wolfe; *Behold Our Green Mansions: A Book About Forests* by Richard H. D. Boerker (University of North Carolina press); "Hearings Before the Select Committee on Conservation of Wildlife Resources, House of Representatives, 78th Congress, Second Session, November 17, 27, 28, and 29, 1944" (Government Printing Office), a 500-page document with statements not only from federal agencies but from the states as well; *Modern Bird Study* by Ludlow Griscom (Harvard University Press); *Cooking Wild Game* by Frank G. Ashbrook and Edna N. Sater (Orange Judd Publishing Co.); "Fishery Resources of the United States," a report on a survey by the Fish and Wildlife service (Government Printing Office); and *The Ring-Necked Pheasant and Its Management in North America* by 17 specialists under the editorship of W. L. McAtee (American Wildlife Institute).

Best source of information regarding publications on wildlife management continued to be the Fish and Wildlife service's mimeographed periodical *Wildlife Review* prepared by W. L. McAtee as a listing and critical annotation of books, articles in journals and other publications.

The principal source for other information on wildlife in the United States was the Fish and Wildlife service (both a research and an administrative agency) Merchandise Mart, Chicago, Ill., which had available lists of Federal publications and compilations including a list of national, international and state officials and organizations concerned with wildlife conservation. Among private organizations were the American Nature association, 1214 Sixteenth street, Washington, D.C., publisher of *Nature Magazine*; the American Wildlife institute, Investment bldg., Washington, D.C., sponsor of research projects, special investigations, the annual continental wildlife conferences and monographs; the Izaak Walton league, 31 North State St., Chicago 2, Ill., concerned with conservation in general but particularly active in promoting improved streams and waters; and the National Audubon society, 1006 Fifth Ave., New York, sponsor of nature education programs, publications, an annual Christmas bird census and sanctuaries. Scientific periodicals published included *The Journal of Wildlife Management*, *The Journal of Mammalogy* and *The Auk: A Quarterly Journal of Ornithology*, organs respectively of the Wildlife society, the American Society of Mammalogists and the American Ornithologists' Union. (H. Z.)

**Wilhelmina** (WILHELMINA HELENA PAULINE MARIA OF ORANGE-NASSAU) (1880— ), queen of the Netherlands, daughter of William III, king of the Netherlands, and Queen Emma, was born Aug. 31, 1880. She succeeded to the throne in 1890, under the regency of her mother, and was enthroned in 1898. She married Henry, duke of Mecklenburg-Schwerin (d. 1934), in 1901, and in 1909 Princess Juliana, heiress to the throne, was born. When the Netherlands was invaded on May 10, 1940, the royal family with members of the government sought refuge in London. On May 13, 1940, Queen Wilhelmina proclaimed that the seat of government of the Netherlands had been transferred to London, and the war was carried on from there, in co-operation with the Allies, until the liberation of the Netherlands. On March 13, 1945, Queen Wilhelmina set foot once more on Netherlands soil and paid a ten-days' visit to the liberated area. On April 27 it was announced that she had taken up residence in Holland, near Breda, and on June 21 she moved to Het Loo, the royal palace near Apeldoorn. On July 7 she returned to the royal palace at The Hague. After an inspection of the war-damaged areas of the Betuwe district she broadcast on June 28 to the Dutch people, calling upon them to work together for the reconstruction of their country. On July 19 it was made known that Queen Wilhelmina had for some days been suffering from an acute lung infection. Though there was no cause for anxiety it was thought advisable that she should rest for some time. The queen's birthday was made the occasion for special rejoicings throughout the Netherlands.

(G. J. R.)

**Wilkinson, Ellen C.** (1891— ), British member of parliament, was born in Manchester, England, the daughter of a millworker. She won a scholarship at the University of Manchester where she obtained her M.A. degree and after leaving college she became a trade union organizer. In 1912, Miss Wilkinson started to agitate for women's suffrage, and the following year she organized the National Union of Women's Suffrage. In 1924, she was elected Labour member for the industrial constituency of Middlesbrough, one of the few women ever to be elected to the British parliament. In 1935, Miss Wilkinson was returned to commons as labour

member for Jarrow. When that shipbuilding town sent a band of hunger marchers to London to request more effective relief, Miss Wilkinson headed the marchers on their 300-mi. trek to the capital. In May 1940, when Labour entered Winston Churchill's coalition government, Miss Wilkinson was made parliamentary secretary to the ministry of pensions. A few months later, she left this post to join the ministry of home security, aiding in the provision of food and shelter for bombed Londoners. Early in 1945 she was made a member of the privy council, and in April she attended the San Francisco conference of the United Nations as a member of the British delegation. After Prime Minister Attlee formed the Labour government (July 26), he appointed Miss Wilkinson to the post of minister of education.

## Wilson, Sir Henry Maitland

(1881- ), British army officer, was educated at Eton and commissioned in the rifle brigade in 1900. Before he was 20 he was on active service in south Africa. During World War I he fought in France and Belgium, serving both with his regiment and on the staff and winning the D.S.O. and the French war cross. After the war, he was an instructor at the Royal Military college, Sandhurst, and the Staff college, Camberley. In 1939 he was sent to command Britain's army of the Nile. After this campaign General Wilson was made G.O.C.-in-C. and military governor of Cyrenaica. In April 1941, he led the United Kingdom and empire troops under orders of General Papagos in Greece. After this, in June-July 1941, in a campaign lasting only five weeks, he led the Allied forces which took Damascus and Beirut and thwarted a projected nazi coup d'état in Syria. In Aug. 1942 he was appointed the first commander in chief, Persia-Iraq. In Feb. 1943 he succeeded General Alexander as commander in chief, middle east, and in December was appointed supreme Allied commander in the Mediterranean theatre. On Nov. 26, 1944, he was appointed head of the British joint staff mission in Washington, British member of the Allied chiefs of staff committee and the prime minister's personal representative on military matters with President Roosevelt to succeed Field Marshal Sir John Dill, who had died on Nov. 4. General Wilson was promoted field marshal in Dec. 1944. He was one of the high military advisers who attended the decisive conferences of Allied war leaders held during 1945 at Yalta and Potsdam.

**Windward Islands:** see WEST INDIES, BRITISH.

## Wines.

France, the largest wine producing country of the world, reported vintages in the various districts of outstanding quality but of small quantity. In the Bordeaux region, for instance, the yield was just under 1,500,000 hectolitres (about 35,000,000 gal.) as against 4,600,000 hectolitres (110,000,000 gal.) in 1944, 3,250,000 hectolitres (77,000,000 gal.) in 1943 and more than 6,000,000 hectolitres (143,000,000 gal.) in 1939.

In the Cote d'Or, where Burgundy is produced, only a small half crop was obtained, and in the Champagne area the yield was also small with the result that the total stocks of wine in casks and in bottles on hand in the Champagne district at the end of the year, including both old and new wines, was equivalent to only 168,000,000 bottles as against more than 230,000,000 in 1939.

Taking France as a whole, the production fell in 1945 to about 28,000,000 hectolitres (666,000,000 gal.) as against 68,000,000 hectolitres (1,618,000,000 gal.) in 1939.

Formerly, Algeria could be counted on to supplement the wine crop of France. However, conditions in Algeria were, if

anything, worse than in France. The 1945 yield was about 12,000,000 hectolitres (285,000,000 gal.) against a normal crop of 500,000,000 gal. In the meantime, a huge amount of planting of more than 1,000,000 hectares (2,500,000 ac.) was reported in the Crimea and in the Caucasus in soviet Russia. Italy's vineyards too suffered tremendously so that the Italian crop was less than one-half of the production of normal prewar years.

In Spain, as in other European countries, the vintage was far below normal, the production being only about 60% of the average.

In Argentina, where the consumption of wine is more than 12 gal. per capita as against less than 1 gal. in the U.S., the production in 1945, because of early frost and mildew, brought about by excessive rain, was 20% below normal, approximately 191,000,000 gal. Since the consumption in Argentina was more than 232,000,000 gal., the reserve stocks fell from 353,000,000 gal. to 317,000,000 gal., which was less than the supply required for a year and a half. The quality was normal.

In Chile, where favourable conditions as to climate, sun, vinestocks and viticulture technique make the country one favoured by nature for the development of its wines, the 1945 vintage was just more than 100,000,000 gal. as against 127,000,000 gal. in 1944, a decline of more than 20%, although the 1944 production was the largest in Chile's history.

In California figures would indicate a grape crop of from 1,200,000 to 1,300,000 tons. This heavy increase in California's wine crop over 1944 is somewhat offset by the below-normal crop in other U.S. wine producing states, but since all of the other states put together only produce some 10,000,000 to 15,000,000 gal. annually, the total was expected to show approximately 125,000,000 gal., as against approximately 90,000,000 gal. in 1944. Unofficial figures for consumption in the U.S. in 1945 were 105,000,000 to 110,000,000 gal. (See also LIQUORS, ALCOHOLIC.) (O. J. W.)

## Wisconsin.

One of the north-central states, Wisconsin, popularly called the "Badger state," entered the union as the 30th state in 1848. Area, 56,154 sq.mi. of which 1,439 sq.mi. are water. The federal census of 1940 gave its population as 3,137,587, an increase of 6.8% over 1930. The urban population in 1940 was 1,679,144 and the rural 1,458,443. Only 24,835 were nonwhite. Foreign-born whites numbered 288,774. On July 1, 1944, the bureau of the census estimated the civilian population of the state at 2,975,910. Capital, Madison (pop. 1940, 67,447). Milwaukee is the largest city with a population of 587,472, and other large cities are Racine (67,195), Kenosha (48,765), Green Bay (46,235), La Crosse (42,707) and Sheboygan (40,638).

**History.**—The legislature met on Jan. 10, 1945, recessed on June 20 until Sept. 5, and adjourned on Sept. 6, having passed 590 acts. Though overwhelmingly Republican, it engaged in considerable controversy with the Republican governor. He presented the largest budget in state history and it was adopted in substantially the same form. He advocated a building program for state educational and welfare institutions calling for \$23,193,050 to be financed from the balance on hand and the high yield of existing taxes. But the advocates of highway construction passed a bill over the governor's veto segregating motor vehicle tax yields in a separate fund to be used for highway purposes only. The legislature then trimmed the building program to \$16,473,500 which included \$8,000,000 for the university, \$4,600,000 for the department of public welfare and \$3,150,000 for the teachers colleges.

The legislature approved a rather strict antigambling bill, strengthened laws against lobbying, but failed to pass over the

governor's veto a bill to prevent candidates changing parties readily.

The state elections in April witnessed an exciting race for justice of the supreme court between Elmer Barlow, the incumbent, and F. R. Zimmerman, secretary of state, who was not an attorney. Barlow won by more than 70,000 votes. John Callahan, 79, superintendent of public instruction from 1921, defeated Arthur Jorgensen by about 60,000.

The state officers in 1945 were all Republican: W. S. Goodland, governor; Oscar Rennebohm, lieutenant governor; F. R. Zimmerman, secretary of state; J. M. Smith, treasurer; J. E. Martin, attorney general, and John Callahan, superintendent of public instruction. The chief justice of the supreme court was M. B. Rosenberry.

**Education.**—There were 6,477 elementary schools, 460 secondary schools, 25 county normal schools and nine teachers colleges in 1943-44. The enrolment was 348,774 in elementary schools and 142,022 in secondary schools. There were 14,245 elementary school teachers and 6,162 secondary school teachers. The teachers colleges had faculties of 405 teaching 3,481 college and 2,125 training school students.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The number of cases receiving public assistance as of June 1945 was as follows: general relief 5,235; old-age assistance 44,923; aid to dependent children 5,475; aid to blind 1,400—a total of 49,126 households. Expenditures for public assistance in the year ending June 30, 1945, were as follows: general relief \$2,598,812; old-age assistance \$16,537,915; aid to dependent children, \$4,196,102; aid to the blind \$539,661—a total of \$23,872,490. Unemployment benefit payments in 1944 were \$1,249,693 as against \$880,512 in 1943. The contributions for 1944 were \$42,081,693; for 1943, \$32,600,000.

Wisconsin's 20 charitable, penal and allied institutions were operated in the year ending June 30, 1945, at a cost of \$5,210,498. The average daily population for June 1945 was 8,113.

**Communications.**—The number of miles of highways as of Jan. 1, 1945, was 84,315 (towns), 2,372 (villages) and 5,952 (cities). The total was 92,639 mi. The expenditures on highways during July 1944-June 1945 was \$31,347,023. The total railway mileage on Jan. 1, 1945, was 6,479. The number of airports was 58. There were 664,037 telephones.

**Banking and Finance.**—At the end of 1944 there were 463 state and 96 national banks. The number of credit unions was 550. The deposits in state banks totalled \$1,106,779,055; the assets were \$1,182,076,145. National banks had deposits of \$1,262,942,000 and assets of \$1,334,614,000. The credit unions listed assets of \$16,869,030. There were 115 building and loan associations with assets of \$120,266,280.

The state receipts during the fiscal year ending June 30, 1945, were \$144,178,418. The disbursements were \$165,254,172, of which \$36,033,454 were taxes collected by the state and returned to local subdivisions, \$887,503 were agency collections returned to counties and \$49,803,640 were state aids. There was no state debt.

**Agriculture.**—The total acreage harvested in 1944 was 10,367,200. The gross farm income excluding government payments was estimated at \$774,153,000, consisting of \$101,108,000 from crops and \$673,045,000 from livestock and its products, including \$382,890,000 from milk. The total was an increase of 1.4% over 1943, which was the highest previous year, and 47% above the World War I peak. Physical production fell slightly, but a 2% rise in prices which were 201% of the 1910-14 average increased the gross income figure. The land used in producing cash crops was small compared with the land used for feed crops, a result of the state's great dairy industry.

Table I.—Leading Agricultural Products of Wisconsin, 1945 and 1944

Crop	1945 (est.)	1944	Value, 1945 (est.)
Corn (bu.)	109,839,000	116,536,000	\$124,118,000
Oats (bu.)	152,337,000	118,938,000	102,066,000
Canning peas (lb.)	336,420,000	243,200,000	13,474,000
All tame hay (ton)	7,564,000	6,549,000	93,037,000
All clover and timothy (ton)	5,101,000	4,473,000	...
Alfalfa (ton)	2,101,000	1,730,000	...

**Manufacturing.**—The total value of Wisconsin manufactured products in 1939 was \$1,604,507,356. The wages paid were \$251,946,993. The number of wage earners was 200,897. (average for the year). Wisconsin, with an extremely diversified industry, ranked first in the manufacture of cheese, milk products, malt and canned peas in 1939.

Between June 1940 and Sept. 1944, Wisconsin manufacturers received \$4,559,261,000 in major war supply and facility contracts. In 1944 the estimated average number of wage earners in Wisconsin manufacturing establishments was 364,700 and the estimated weekly pay rolls, \$17,233,000.

Table II.—Value of Mineral Products of Wisconsin, 1944 and 1943

Mineral	1944	1943
Stone	\$7,741,499	\$6,677,382
Iron ore	4,190,380	3,822,025
Zinc	3,545,172	3,107,592
Sand and gravel	4,128,434	2,595,531

**Mineral Production.**—The value of all mineral production in Wisconsin for 1943 was \$18,930,000 as compared with \$17,998,036 in 1942. (E. P. A.)

**Wisconsin, University of.** An institution of higher education at Madison, Wis. A total of 753 students received degrees at Wisconsin's fourth wartime commencement in May 1945, the 92nd in the university's 96-year history.

At the close of World War II in 1945, 12,500 students and alumni were serving in the U.S. armed forces, 429 had given their lives for their country, and the university had given special training to 20,000 men and women for the armed services. The university won the navy award, the army air forces award, and its medical school the navy award, for wartime work.

The close of the war also found the university rapidly on the road to reconversion for its faculty and students to peacetime pursuits in education, science research and public service. The 1945 fall-winter semester saw the civilian enrolment climb to 9,209, with a freshman class of 3,318, an all-time record high, and a faculty of 1,489 professors and teaching-research assistants.

Of the total fall-winter enrolment, 1,200 were war veterans returning to their educational pursuits, and faced with housing shortages, the university installed 91 trailer homes on the campus in the first emergency trailer city for veterans and their families in the U.S. As the year 1945 ended, another 100 trailer homes for veterans were being installed. The university was one of the first three rehabilitation centres established for veterans in the U.S.

The university's 12th president, Dr. Edwin Broun Fred, internationally known scholar and scientist, assumed office in Feb. 1945, and began the task of enlarging and improving the university's 2,500-ac. campus under an \$8,000,000 construction fund appropriated by Wisconsin's 1945 legislature. (For statistics of enrolment, faculty, library volumes, etc., see UNIVERSITIES AND COLLEGES.) (R. Fs.)

**Withholding Tax:** see TAXATION.

**WLB:** see WAR LABOR BOARD, NATIONAL.

**Woman's Christian Temperance Union, National:** see SOCIETIES AND ASSOCIATIONS.

**Women's Army Corps.** The Women's Army corps (WAC) became part of the army of the United States when public law 110 was signed by the president on July 1, 1943. Originally it was created an auxiliary organization by an act of congress, which became law over the president's signature on May 15, 1942.

The purpose of the corps is to make available to the national defense when needed, the knowledge, skill and special training of the women of the United States.

Col. Oveta Culp Hobby, former Texas newspaperwoman, became first director of the corps and was succeeded on July 12, 1945, by Col. Westray Battle Boyce of Rocky Mount, N.C.

At its top strength, the WAC numbered 100,000, of which about 18,000 served overseas in 21 different countries. The WACs within the United States served at more than 400 installations; members were engaged in 239 noncombatant army jobs.

Enlistments in the WAC were closed on Aug. 29, 1945. The third WAC training centre at Fort Oglethorpe, Ga., was moved to Fort Des Moines first WAC training centre, Des Moines, Ia., in July 1945. Des Moines, in its turn, was named sixth WAC separation centre on Sept. 26, 1945, signalling the end of training.

Demobilization of the WAC was being carried out on a proportionate basis with that of the men of the army. As of Nov. 1, 1945, the discharge point score for enlisted women had been

OVERSEAS WACs parade down the Champs Élysées in Paris on the occasion of the third anniversary of the Women's Army corps, May 1945

reduced to 34; for officers, 37. The over-all plan was to reduce the corps to 30,000 or fewer by July 1, 1946. It also was expected that all members in overseas theatres would have been returned to the United States by April 1, 1946.

Under public law 110 WACs are entitled to the same rights and privileges as male soldiers, such as free postage, government insurance, allowance for dependents and provisions of the G.I. Bill of Rights and Veterans' administration assistance. They are entitled to wear medals, decorations and ribbons they have earned. Overseas veterans wear the same ribbons as the men, with battle stars for various campaigns. Members of the original auxiliary wear the WAAC service ribbon. Those who never served beyond the continental limits of the United States are entitled to wear the American theatre ribbon after one year of honourable service.

As of Sept. 1, 1945: Fourteen women had been awarded the Legion of Merit; 143, Bronze Star; 14, Purple Heart; 5, Soldier's Medal; 1, Air Medal; 1, Navy's Letter of Commendation; 2, French Legion of Honour; 1, French Croix de Guerre. Twenty-one units had been awarded the Meritorious Service Unit Plaque.

WACs were present at many of the historic moments of the war. Twenty-seven operated the switchboard at the Berlin conference; 432 worked on the atomic bomb project; others were present at meetings of the Big Three, at the surrender of Germany, at one of the Japanese surrender ceremonies.

The insignie of the corps is the head of Pallas Athena, goddess of wisdom and victory; members, however, wear the insignie of the branch of service to which they were permanently assigned after completion of basic training. (W. B. BE.)

**Women's Clubs, General Federation of:** see SOCIETIES AND ASSOCIATIONS.

## Women's Reserve of the Navy.

830

The women's reserve reached its

peak strength in 1945 with 86,000 women in the naval service at the time of its third anniversary, July 30, 1945. At that time approximately 8,000 officers and 70,000 enlisted women were on duty at 900 shore activities throughout the continental United States and in the territory of Hawaii. An additional 8,000 women were in training schools or awaiting call to duty. WAVES had released 50,500 men for duty afloat or overseas and had taken over 27,000 other jobs in the shore establishments.

WAVES were on duty in nearly every type of shore activity and they composed 18% of the total naval personnel assigned to the shore establishments in the continental United States. Almost 20,000 WAVES were serving in Washington, D.C., in the navy department and the Potomac river naval command.

WAVES had during 1945 been assigned in large numbers to duty overseas in Hawaii. By August there were approximately 4,000 WAVES on duty at air stations, hospitals, the navy yard and other activities in Hawaii. Legislation establishing the women's reserve permitted volunteers to serve outside the continental United States in the American area and in the territories of Hawaii and Alaska. Although WAVES had been on temporary duty to such places as the Aleutians and Bermuda, no women had been assigned to permanent duty overseas other than to Hawaii.

With the defeat of Japan, procurement for the women's reserve was discontinued and WAVES in training schools completed their training and were assigned to duty. No new classes were assigned to training schools and, with the graduation of a class of hospital corps WAVES in early Jan. 1946, the training program for WAVES which at its peak was carried on in more than 40 activities was to be closed.

WAVES were demobilized in accordance with the point system which determined their priority of release from the service. Critical scores lower than those for navy men were assigned to WAVE personnel because only a small number received benefit of dependency credit and the women's reserve had not been in existence long enough for WAVES to have been on active duty a length of time proportionate to male personnel. These lower scores were designed to permit the release of WAVES at the

same relative rate as the men. In late 1945, plans called for the completion of demobilization of naval reserve personnel including the women's reserve by Sept. 1, 1946.

In addition certain provisions were made for the discharge, upon their request, after one year of service of married WAVES. WAVES may be discharged upon their request if they are married to a veteran of World War II, a former member of the merchant marine who is disabled or a serviceman of World War II who has been medically surveyed for limited duty or who is hospitalized awaiting survey to limited duty or separation from the service.

All WAVES were released from the service at designated separation activities which placed them as close as possible to their homes before they were discharged. WAVES in Hawaii were being returned to the United States as they became eligible for discharge and as transportation was available. (M. M. H.)

**Women's Reserve of the United States Coast Guard Reserve:** *see* COAST GUARD, U.S.

**Women's Reserve of the U.S. Marine Corps Reserve:** *see* MARINE CORPS.

**Wool.** The quantity of wool shorn in the United States in 1945 was estimated at 322,621,000 lb. This quantity was 24,473,000 lb. or 7% smaller than shorn wool production in 1944 and 69,752,000 lb. or 18% below the record production in 1942. It was the smallest production after 1928. The reduction in shorn wool in 1945, compared with 1944, was a result of the number of sheep shorn, since the average weight per fleece was a little larger. The estimated number of sheep shorn was 40,670,000, a decrease of 3,654,000 or 8% from 1944 and 18% from 1942. The estimated weight per fleece in 1945 was 7.93 lb. compared with 7.83 lb. in 1944 and a ten-year average (1934-43) of 7.99 lb. Pulled wools were estimated at 65,000,000 lb.

The 1945 world production fell to about the prewar level. Decreased production, however, was more than offset by the wartime accumulation of stocks. Production in 1945 was estimated at 3,760,000,000 lb., a decrease of 5% compared with 1944 and about 12% less than the record output in 1941.

Wool production in the southern hemisphere in 1945 totalled 2,200,000,000 lb., or 65% of the world's output exclusive of the soviet union and Cuba. Southern hemisphere production was approximately 2,500,000,000 lb. annually during the four years 1940-43, an increase of 19% above the prewar average. Production decreased 7% in 1944 and a further 4% in 1945.

Production in the northern hemisphere, excluding the soviet union and China, in 1945 fell to 1,200,000,000 lb., 7% less than the prewar average. The decline in the northern hemisphere was chiefly the result of the sharp reduction in the United States from the high level reached in 1941-42 and of a more gradual reduction on continental Europe throughout the war period. Production in North Africa in 1944 was larger than the prewar average, but a decrease was reported in 1945. The trend in the important Asiatic carpet wool producing countries appeared to be upward as compared with the early war years.

Severe drought in southeast Australia caused a decline of approximately 15% to 20% in the 1945 wool clip as compared with 1944. The Australian News and Information bureau, basing its information on official estimates, indicated that the 1944 clip of 1,080,000,000 lb. would therefore be reduced to approximately 900,000,000 lb. in 1945. Final appraisal of the New Zealand clip showed an increase of 10% over the previous year.

The First National Bank of Boston reported that the Argen-

tinian wool clip approximated 518,000,000 lb. From Aug. 1945 the United States government resumed issuing import permits for liberal amounts of Argentine wools and exports became very active due to the improved shipping situation. Total shipments during the 1944-45 wool year amounted to 142,000 tons compared with 128,500 in the previous season. The United States took 70% of the tonnage and the balance went to France, Belgium, Switzerland, Sweden, the Netherlands and to some South American countries.

A conference of officials and experts from the United Kingdom, the commonwealth of Australia, the dominion of New Zealand and the Union of South Africa was held in London between April 16 and May 28, 1945. The purpose of the conference was to discuss matters arising out of the accumulation of wool purchased by the United Kingdom from the dominions under wartime arrangements, and the disposal of stocks concurrently with future clips of dominion wool. It was shown that as of June 30, 1945, there were approximately 3,315,000,000 lb. of United Kingdom owned wool on hand, of which 3,245,000,000 lb. were of dominions origin. Auction sales were recommended as the best medium of marketing this accumulation and it was expected the dominions would begin theirs soon after July 1, 1946, and in London, prior to that date. On Nov. 5 cable advice was received from the British Wool control, Bradford, England, of approximate reductions in price, namely Australian, 5% in merino and 10% in 50s and coarser; New Zealand, 5% in finer than 50s, 10% in 50s and coarser; South African, approximately unchanged.

The surplus stock of wool owned by the United States government at the end of 1945 amounted to approximately 425,000,000 lb. This accumulation was purchased by and sold only to the Commodity Credit corporation and consisted of the unsold portions of the 1943, '44 and '45 clips. These were purchased and resold at established ceiling prices. During the week beginning Nov. 26, a new price schedule took effect, lowering these prices 15 to 20 cents clean basis from the old schedule, with 1943 wools at 3 cents below these prices. It was believed that the new schedule of prices on domestic grown wools would then be able to compete with imported wools of similar grades. (*See also* SHEEP; TEXTILE INDUSTRY.)

(C. M. AN.)

**Woolsey, John Munro** (1877-1945), U.S. jurist, was born Jan. 3 in Aiken, S.C. He was graduated from Yale university, 1898, and from Columbia university's law school, 1901. He practised law in New York city and was an instructor in equity at Columbia, 1905-06. An authority on admiralty law, Judge Woolsey was an American associate editor (1920-29) of *La Revue de Droit Maritime Comparé*, a French maritime law publication. He was nominated to a federal judgeship by President Hoover and was sworn in as judge of the U.S. district court, Southern New York district, in 1929. Judge Woolsey won more fame for his rulings in cases relating to plagiarism and to obscenity in literature than in his primary field of maritime law. In 1933 he ruled that James Joyce's novel *Ulysses*, which had been banned by U.S. customs officials on grounds of potential "impurity," was not obscene in a legal sense; he further declared it a work of genuine literary merit. As a result of his decision, publication and sale of the work in the United States was permitted. Earlier (1931), he had ruled that Dr. Marie C. Stopes' book *Contraception*, a work on birth control, was neither obscene nor immoral and that it did not violate the U.S. customs laws. Judge Woolsey also arbitrated a suit brought by Miss Georges Lewis, who sought to collect \$2,000,000 damages from Eugene O'Neill and his publishers on the ground that the O'Neill play *Strange Inter-*

*lude* had been plagiarized from one of her works. He decided against Miss Lewis in this case. Judge Woolsey, who retired from the bench in 1943, died at his home in New York city, May 4.

**Words and Meanings, New.** The most certain characteristic of a living language is its tendency to change. New conditions of all kinds, new ideas, new inventions—all must be described by new words, by extensions of old words, or by new combinations of words. English thus adds some new words to its permanent vocabulary every year; these are but a small residue of the several hundred which are coined but die.

If a war is in progress, the new words are likely to be determined in large part by the new ideas and developments stemming from that war. Thus most of the words below are connected in some way with World War II, even though that war was concluded in Aug. 1945. A few represent inventions that came to light only with the cessation of hostilities; others give a glimpse of the postwar world.

These words became prominent or were seemingly used for the first time during the years 1944 and 1945. Dates indicate the first recorded use of the new word or new meaning. A preceding hyphen means that the word or meaning may be older than the date given. If no date is given, the first recorded use is 1945.

**A-bomb.** See *atomic bomb*.  
**abort.** To fail to complete a mission or flight; said of an aeroplane. (1944)  
**ABSD.** (Advance Base Sectional Dock.) A prefabricated dock where battleships can be repaired.  
**Abbie.** From the initials of the American Broadcasting Station in Europe, which operated from April 30, 1944, to July 4, 1945. (1944)  
**Admiral of the Fleet.** (U.S.) A five-star admiral. (1944; older in British usage.)  
**airbrasive method.** Drilling of teeth by an abrasive subjected to high pressure and pinpointed on the area to be drilled.  
**airedale.** One who handles a plane on an aircraft carrier; a "plane-pusher."  
**air-sea rescue.** Recovery of air crew after they have bailed out over water. Rescue is effected by a patrol plane which radios the position of the survivors to a station. The station, in turn, sends out a rescue boat. (1944)  
**Alsib.** Air route from Montana to Moscow so named because it passes over Alaska and Siberia.  
**Amvets.** The American Veterans of World War II. (1944)  
**Anti-G suit.** See *G-suit*.  
**ANTU.** A poison, harmless to human beings, so powerful that  $\frac{1}{8}$  lb. will destroy 100,000 rats.  
**Ascender.** An experimental fighter aeroplane (XP-55) with the propeller in the rear. Made by Curtiss-Wright Corp.  
**atobomb, atom bomb.** See *atomic bomb*.  
**atom bombing.** See *atomic bomb*.  
**Atomic(Age).** The new age dominated by atomic energy, ushered in with the dropping of the first atomic bomb, Aug. 6, 1945.  
**atomic bomb.** A bomb releasing atomic energy with explosive force estimated to exceed that produced by 20,000 tons of T.N.T. The first such bomb to be publicly used was dropped on Hiroshima, Japan, Aug. 6, 1945. Variants include *a-bomb, atobomb, atom bomb*, the last the verb form. The bomb was at least once described as a world-buster. *Atom-bombing, n.*  
**atomic bomber.** Bomber carrying an atomic bomb.  
**atomobile.** Future automobile driven by atomic energy.  
**Azon bomb.** Bomb regulated by radio waves which can be guided by the bombardier of plane. Developed by U.S. air forces.  
**baka bomb.** (Jap. "foolish.") Rocket plane driven by a Japanese suicide pilot.  
**bamboo telegraph, bamboo wireless.** Native grapevine.  
**banzai.** Desperate, fanatical, suicidal; usually applied to a frenzied attack of Japanese soldiers accompanied by shouts (*banzai*) and indifference to cost in life. (—1943)  
**B.A.R.** Browning automatic rifle. (—1943) **barman.** One who operates such a rifle.  
**belly tank.** Auxiliary gasoline tank under the belly or wing of a plane. It can be released if necessary to lighten the load. (—1945)  
**blow job.** *Aviation slang.* A jet-propelled plane.  
**BMB.** (Broadcast Measurement Bureau.) An organization composed of advertisers, advertising agencies and radio stations to discover a reliable index of broadcasting effectiveness.  
**bobby soxer.** A teen-aged girl addicted to adolescent fads and crazes. (1944)  
**bogey, bogie.** Aeroplane whose identity is unknown. (1944)  
**bomber's moon.** Moon favourable for bombing. (—1943)  
**bug bomb.** A spray employing aerosol. (1944)  
**butcherette.** Female butcher.  
**butterfly bomb.** A small anti-personnel bomb dropped from a plane. (1944)  
**carpet bombing, carpet raid.** A bombing attack which attempts to clear the way for advancing ground troops. Such attacks lay *bomb carpets*.  
**chosen instrument.** A government-authorized air line to represent a country in the international skyways. (—1945)  
**cloak and dagger.** Office of Strategic Services; pertaining to OSS.

**Conestoga.** A large cargo plane made by Edward G. Budd Mfg. Co. (1944)  
**dead end kid.** A hard, unyielding, driving individual with a suggestion of the original "Dead End Kids." (—1945)  
**De Gink Hotel.** Name given to the hotels built along the air transport command routes. (—1944)  
**dehumidification.** Method developed by U.S. navy bureau of ships for keeping materials from rusting. (1944)  
**de-nazification.** Eradication of nazi influence. *de-nazify, v.* (1944)  
**de-requisition.** Release from government occupation.  
**de-vacuee.** (*British.*) A returned evacuee.  
**disintegrator.** Secret weapon to oppose Kamikaze attacks.  
**displaced person (DP).** A slave-labourer brought into Germany from conquered countries to aid in the war effort. (1944)  
**doggy.** *Slang.* Infantryman.  
**downgrading.** Classifying of a job to a lower grade with less pay. (1944)  
**DP.** Displaced person.  
**dumbo.** Plane used in air-sea rescue (*q.v.*). (1944)  
**Electric Blanket.** Blanket made by General Electric Co. electrically heated and automatically controlled.  
**Electronic Rat Trap.** A trap made by Electronic Traps, Inc. After being entrapped, the rat electrocutes itself, following which a mechanism ejects the rat and resets itself for the next victim.  
**EMIC.** Emergency Maternity and Infant Care Program. (1944)  
**Ercoupe.** Trade name of a small passenger plane manufactured by Engineering and Research Corp. for civilian use. (1944)  
**F.A.S.** Federation of Atomic Scientists.  
**fibrin film.** A material made from blood plasma, promising to be effective in averting the convulsions following head wounds. (1944)  
**FIDO.** From the initial letters of Fog Investigating Dispersion Operation, used by the British to disperse fog long enough for planes to land safely.  
**fighter bomber.** A fighter plane equipped to carry a bomb, after the dropping of which the plane can operate as a fighter. (1942)  
**flash gear.** Outfit to protect the wearer from the flames thrown by the explosion of shells and bombs. (—1945)  
**Fleet Admiral.** Admiral of the fleet.  
**flight test.** To test a plane in flight.  
**flying boxcar bomb.** U.S. name for the 700-lb., 5-ft. long spigot mortar of the Japanese.  
**foo-fighter.** Strange fire ball of undetermined origin (possibly controlled by radio) which followed United Nations planes early in 1945.  
**formation stick.** An electronically operated control stick which makes manipulation of a plane much easier and thus decreases fatigue to pilots. A joint development of the air technical service command and the Minneapolis-Honeywell Regulator Co.  
**Fortisan.** A very strong yarn made by Celanese Corporation of America, especially for use in flare parachutes. Trade-mark. (—1944)  
**foxhole circuit.** A circuit comprising theatres at the various fighting fronts at which U.S. troupes entertain U.S. fighting forces. (1944)  
**Foxhole university.** The United States Armed Forces institute.  
**fraternize.** To deal socially with members of an enemy nation, especially with women; and, *specifically*, sexually. *fraternization, n.*  
**fringe wage.** Term used by the War Labor board to describe wages the raising of which does not appreciably increase the cost of production and would not, therefore, challenge the Little Steel formula.  
**Gammexane.** An insecticide (named from its being the gamma isomer of hexachlorene benzene) more powerful than DDT. Its discovery was made by scientists of the Imperial Chemical Industries.  
**General of the Army.** (U.S.) A five-star general, one rank above a full general. (1944)  
**genocide** (Gr. *genos*, "race" + *cide* "killing"). A coinage of Professor Raphael Lemkin, of Duke university, Durham, N.C., to describe "the extermination of racial and national groups."  
**G.I. Jill.** A WAC. (—1944)  
**Globester.** Name of plane used by army air transport command in test flights looking toward passenger service extending around the world.  
**Goop Bomb.** The M-76 incendiary bomb. (1944)  
**G-Suit** (*G* for gravity). A suit designed by the armed services to prevent an airman from blacking out when making quick turns or precipitous dives.  
**homing pigeon.** Button to identify discharged servicemen.  
**hubba, hubba.** Exclamation of enthusiastic approval. (From earlier *haba, haba*—1940)  
**Image Orthicon.** A camera tube made by Radio Corporation of America for use in television. It is so sensitive that it can take pictures by moonlight, by the light of a match.  
**inspectoscope.** An X-ray device used by the armed forces to discover illegal objects in packages sent home by servicemen.  
**island-hopping.** Going from one island to another; especially military advance by seizing one island after another as a base. Used in the Pacific area. (1944)  
**Jato.** From the initial letters of "jet-assisted take-off." (1944)  
**jet-.** Combining form for jet-propelled or relating to jet-propulsion, as *jet-booster, jet car, jet crew, jet engine.* (1944)  
**jungle rot.** *Slang.* Any of several tropical skin diseases.  
**Kamikaze** (Jap. "divine wind"). (Pron. *kámakazē*). A suicide attack by a Japanese plane. Sometimes applied to the plane and also to the pilot.  
**Kriegie** (Ger. *Kriegsgefangene*). Prisoner of war. (1944)  
**Lanaset.** Trade-mark of a resin put out by the American Cyanamid Co. to make material shrink-resistant.  
**liberee.** One liberated from a prisoner of war camp.  
**Lily.** The pontoon-floated airstrip developed by the British.  
**loafer.** A shoe for informal occasions. (—1944)  
**Loran.** A device employing radar which acts as a Long Range Aid to Navigation.  
**Manhattan Project.** The atomic bomb project.  
**May Day** (Fr. *M'aidez*, "help"). Call for help.  
**meateasy.** Place where black market meat can be bought.  
**Mickey Mouse money.** Valueless Japanese money in the Philippines.  
**Micky.** U.S. nickname for a radar bombsight which makes accurate bombing through the clouds possible. (1944)  
**Mixmaster.** Army bomber propelled by two rear counter-revolving propellers. Made by Douglas Aircraft Co., Inc.  
**Mulberry Harbour or Port.** Artificial harbour used on D-day. (1944)

**MVA.** Proposed Missouri Valley authority. (1944)  
**narco-synthesis.** A method of treating a neurosis by working with a patient while he is under the influence of an injection of sodium pentathol. (1943)  
**Neptunium** (after the planet Neptune. Cf. *Century Dictionary and Cyclo-pedia*, 1911, s.v. *neptunium*: "A supposed new element announced by Hermann in 1877 as present in columbite and ferro-illemite. Its existence has not been confirmed."). Element Number 93, produced when uranium 238 takes on a bombarding neutron. This absorption causes the uranium to emit an electron, the emission changing a neutron into a proton. The element is not found naturally.

**PCAU.** Philippine Civil Affairs Unit.  
**pedal pusher.** Knee-length trousers for girls. (1944)  
**Periston.** Ersatz blood plasma, developed by the Germans.  
**pinpoint.** To determine precisely; to give highly specialized training to, as, "to pinpoint the training of students." (Probably an extension of *pin-point*, as in "to pinpoint bombs.")

**PLUTO.** From the initial letters of Pipe Line under the Ocean, a gasoline line under the English channel.

**Plutonium** (after the planet Pluto). Element Number 94, which results when the radioactive neptunium breaks down with the emission of an electron which changes one of its neutrons into a proton. The element is not found naturally.

**pre-atomic.** Before Aug. 6, 1945, the date of the atomic bombing of Hiroshima.

**Precipitron.** Trade name of a machine made by Westinghouse Electric and Manufacturing companies for purifying air by the electronics principle. (1942)  
**PRECO.** United Nations Preparatory commission.

**PREWI.** Press Wireless, Inc. (1944)  
**Projected Books, Inc.** A nonprofit group formed to furnish books on films to veterans and patients unable to use their hands. (-1944)

**proximity fuse.** A radio-operated fuse built in the tip of a projectile which explodes the projectile at that distance from the target where its flying fragments will do most damage. Developed by the army and the navy.

**Red Ball Highway.** A system of highways set up in France to expedite the movement of war materials to the fighting fronts. (1944: *red-ball* is an old railroad term for a fast freight.)

**redeploy.** To move fighting men from one front to another, used to describe the shifting of U.S. troops from Europe to the Pacific. *Redeployment, n.*

**returnee.** One who has returned, as from a fighting front. (1944)  
**ruptured duck.** Identification button for discharged servicemen.

**Schnorkel** (also *Snort*). Device of the Germans which enabled them to keep their submarines under water for many weeks. An air pipe, when extended above the surface of the water, enabled the submarine to recharge its batteries and exhaust its fumes while remaining submerged. (1944)  
**selevision.** The selling of citrus fruits by telegraph.

**separate.** To discharge or release from active duty in the armed services. Construed with *from*. (-1944)

**separatee.** One who has been separated from the armed services. (1944)

**separation centre.** A centre where servicemen are sent for discharge or release from active duty. Sometimes separation is accomplished by sending only the individual's records to the centre. (1944)

**set-aside, n.** Materials, such as meat, canned goods and vegetables, set-aside by order of the government for its use.

**Shooting Star.** Trade-mark of the Lockheed P-80 jet plane. (1944)

**Silicones.** A new group of synthetic resins developed by Dow-Corning Corp., which resist water and high temperatures. (1944)

**sitting duck.** Something extremely easy; as easy to hit as a sitting duck. (-1944)

**Skycoupe.** A pusher-type monoplane for two occupants planned by Piper Aircraft Corp.

**Skycycle.** A monoplane for a single occupant planned by Piper Aircraft Corp.

**sky-hook.** Apparatus for dropping packages from planes by spinning them and thus controlling where they fall. (1944)

**skymarker bomb.** Bomb dropped to locate targets hard to find. It leaves a trail of coloured smoke which lasts five minutes and which can be seen by a plane five miles away. (1944)

**Skymaster.** A giant four-motored transport (C-54) made by Douglas Aircraft Co., Inc.

**Skysedan.** Plane for four occupants planned by Piper Aircraft Corp.

**squawk box.** Loud speaker on board a ship. (1944)

**Stateside.** Pertaining to the United States; in or toward the U.S. (1944)

**Stratocruiser.** Trade-mark of a four-motored plane built by Boeing Airplane Co., designed either for passengers or freight. It can cruise at 340 m.p.h. at a ceiling of 30,000 ft. It can carry 80 or more passengers or 35,000 lb. of freight. (1944)

**Strato-suit.** A suit, pressurized and heated by electricity, which makes it possible for flyers to be comfortable at altitudes as high as 80,000 ft. Oxygen is supplied through a special headpiece. Major John B. Kearby and the B. F. Goodrich Co. developed the suit.

**Stratovision.** Method worked out by Westinghouse Electric and Manufacturing Companies and Glenn Martin of using planes in the stratosphere to broadcast television.

**streptomycin.** A drug related to penicillin which is of great promise in the treatment of typhus, cholera, and perhaps tuberculosis. (1944)

**sub-sonic.** Speeds ranging from 0 to 550 m.p.h.

**suicider.** A suicide. (1943)

**super-dumbo.** A B-29 used in air-sea rescue work.

**superseniority.** Job seniority for veterans which supersedes all other seniority except that of another veteran in the same class. (1944)

**talking book.** A recording of a reading of a book; for use by the blind.

**TCP.** Trichlorophenoxyacetic acid; a weed killer.

**1080.** Sodium fluoroacetate, the 1,080th substance examined in a search for a new rat poison.

**terminal leave.** Accumulated leave given an officer in the services immediately prior to his release from active duty. During this period he may wear civilian clothes and engage in any legal gainful employment outside of the government.

**terror bombing.** Deliberate bombing for terror effects with hope of shortening a war.

**test-fly.** Make a test-flight of a plane. (-1944)

**top secret.** A security classification used by the armed forces and the

diplomatic corps to denote material of the utmost secrecy.

**trans-sonic.** Speeds ranging from 550 to 760 m.p.h.

**trusteeship plan.** A plan for handling the old mandated territories and those newly acquired territories which may need to be controlled internationally after World War II. A council composed of nations which formerly held mandates and a like number of those which did not, would exercise control over territories voluntarily submitted to trusteeship. (1939)

**TWI.** (Training within Industry.) A War Production board program. (1944)  
**2-4-D.** Laboratory designation of a synthetic hormone which destroys weeds without hurting the grass. Developed by the U.S. department of agriculture and others.

**UNCIO.** United Nations Conference for International Organization.

**under wraps.** Censored, secret.

**UNO.** United Nations Organization, formed at the San Francisco conference in April 1945.

**USAFI.** (United States Armed Forces Institute.) This institute supplies war department correspondence courses for service personnel, sending the courses even to remote areas. It also assists service men and women in getting extension courses from the college or university of their choice. (-1943)

**USFET.** United States Forces in the European Theatre, with headquarters at Frankfurt.

**USIBA.** United States International Book Association, set up to aid in the distribution of U.S. books abroad.

**V-E day.** *Specific.* May 8, 1945, the date of Germany's surrender.

**VIP** (also *Viper*). Very Important People. (1943)

**Viper.** A rocket-propelled plane designed by the Germans to break up formations of U.S. bombers. The pilot, after having directed the plane, would parachute to safety.

**Vista Dome.** A glass-enclosed section, slightly raised above the top of a railway coach to enable its occupants to see in any direction. It is a General Motors design.

**V-J day.** *Specific.* Aug. 14, 1945, date of Japan's surrender; also Sept. 2, 1945, the date of the formal surrender.

**volcano bomb.** An 11-ton bomb made and used by the British. Also called *town-buster*.

**Volkssturm** (Ger. *Volks*, "of the people" + *Sturm*, "troop"). Army made up from the people; home guard. (-1943)

**VT fuse.** *See* proximity fuse.

**war-weary.** A plane beyond repair; also, one whose great damage at the front requires it to be sent home for repairs.

**werewolf.** Member of a German underground organization opposing the Allies.

**wingman.** The second of two planes, to one side and behind the leader, to protect the latter's tail. (-1945)

**Zaibatsu** (Jap. *zai*, "wealth" + *batzu*, "clique"). The group which controls most of Japan's industry.

**zeroed in, to be.** To be under direct fire as a result of the range having been found. (1944; *to zero*, -1925)

(I. W. R.)

**Works Agency, Federal:** *see* FEDERAL WORKS AGENCY.

**World Bank:** *see* UNITED NATIONS MONETARY AND FINANCIAL PROGRAM.

**World Charter of the United Nations:** *see* UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION.

**World Commerce:** *see* INTERNATIONAL TRADE.

**World Council of Churches:** *see* CHRISTIAN UNITY.

**World Federation of Trade Unions.** In Feb. 1945 a world trade union conference was convened in London by the British Trades Union congress. It was attended by representatives of 46 countries and 15 international trade union organizations.

The conference adopted declarations on the furtherance of the Allied war effort, the trade union attitude to the peace settlement and on the establishment of a World Federation of Trade Unions. An administrative committee was appointed to draft a constitution for the world federation and this was accomplished at meetings in London, Paris, Washington and Oakland, California. The draft constitution was circulated to the bodies represented in the London conference, and with some amendment was ratified at a further conference in Paris in September. The first congress of the world federation was held immediately afterwards.

The constitution provided for a congress every two years, and for the election of a general council, an executive committee and an executive bureau. The general council embraced all national trade union centres on a scale which would balance the larger against the smaller and take account of their geographical distribution, and normally would meet once every year. The executive bureau, which would have responsibility for the detailed direction of affairs, would meet as often as required. This executive bureau appointed by the executive committee consisted of the president of the federation (Sir Walter Citrine) and seven

elected vice-presidents, namely, Sidney Hillman (U.S.A.); V. V. Kuznetsov (U.S.S.R.); L. Toledano (Latin America); E. Kuypers (the Netherlands); Chu Hseuh Fan (China); Léon Jouhaux (France); and G. di Vittorio (Italy). During the first two years plenary powers were to be vested in the general council and the executive committee, including the power to alter the constitution (without violation of its fundamental principles) to enable the organization to meet the needs of a changing world situation. Difficult problems of organization confronted the world federation, arising from the existence in some countries of more than one national centre: e.g., the American Federation of Labor and the Congress of Industrial Organizations. The American Federation of Labor declined any connection with the world federation.

Progress was made toward assimilating existing international trade union organizations such as the International Federation of Trade Unions and some of the international trade secretariats to the world federation. There are strong attachments between the trade unions in many countries and these bodies, and the leadership of the world federation found its first test in adjusting these relationships.

The headquarters of the world federation were established in Paris. Its secretary general in 1945 was Louis Saillant; assistant secretaries were: W. Schevenels, Michael Falin and John Brophy. (W. M. Cr.)

## I.—INTRODUCTION

In 1945, the most terrible war in the history of mankind came to an end with the axis powers decisively and crushingly defeated by the United Nations. While final judgment on the factors that enabled the United Nations to emerge victorious must be left to the historian of the future, one broad hypothesis advanced as to why the United Nations won seems to stand without too much fear of challenge. This is that the combination of superior industrial capacity, greater access to raw materials and larger populations of the United States, the soviet union and Great Britain and the close co-operation, military as well as political, of these three great powers in the critical phases of the war were the most vital factors in the defeat of the axis nations.

As an axiom, the theory of the "biggest battalions" stood the test in World War II; whether it would do so in future conflicts appeared to be questionable and proof of its validity hinged on the development of the atomic bomb. The destructive power of this weapon seemed to indicate that future wars might be waged between technicians 5,000 to 10,000 miles apart.

## II.—THE WAR IN EUROPE

### 1. The Western Front.—The Battle of the Bulge.—On Jan.

1, 1945, the Allied armies on the western front were engaged in a desperate struggle to contain the German counterblow in the Ardennes forest. This counterattack had been started over a 40-mi. front some two weeks earlier (Dec. 16, 1944) by Marshal Karl Gerd von Rundstedt, one of Germany's ablest strategists. The terrain selected for the blow was only lightly held by some four divisions (about 60,000 men) of the U.S. 1st army. Von Rundstedt in turn employed some 24 divisions, of which eight were panzer divisions. Launching diversionary attacks in other sectors to keep the Allies off balance, Von Rundstedt focused his drive north and south of St. Vith in Belgium. In the first 24 hours, the German armies, spearheaded by the panzer divisions, opened three gaps in the Allied line through which were poured the supporting wehrmacht infantrymen. In the first four days of their offensive, the Germans came within two and one-half miles of Liège where they were forced to halt because of lack of transport and fuel. This Allied communications centre was Von Rundstedt's immediate objective. He had expected that the impetus of his surprise blow would carry the wehrmacht to nearby Malmédy and Spa where he hoped to seize the large Allied munitions and gasoline dumps.

Meanwhile, Gen. Dwight D. Eisenhower threw all available reserves of the 12th army group against the German bulge. The U.S. 1st and 9th armies and the British 30th corps were deployed along the north flank under Field Marshal Sir Bernard Montgomery while the 3rd army and some additional divisions were brought up along the south flank. As Gen. George S. Patton's 3rd army attacked the enemy line, Gen. Jacob L. Dever's U.S. 6th army group shifted northward to cover the positions vacated by Patton.

During the first week of battle, the weather favoured the Germans. Then on Dec. 23, 1944, the skies cleared and for two days the Allied tactical air force, taking off in support of the ground troops, swarmed over the crowded wehrmacht's supply roads destroying tanks and trucks moving up to the front. On the first day, 4,500 Allied planes turned out to the attack; on the second, 11,000.

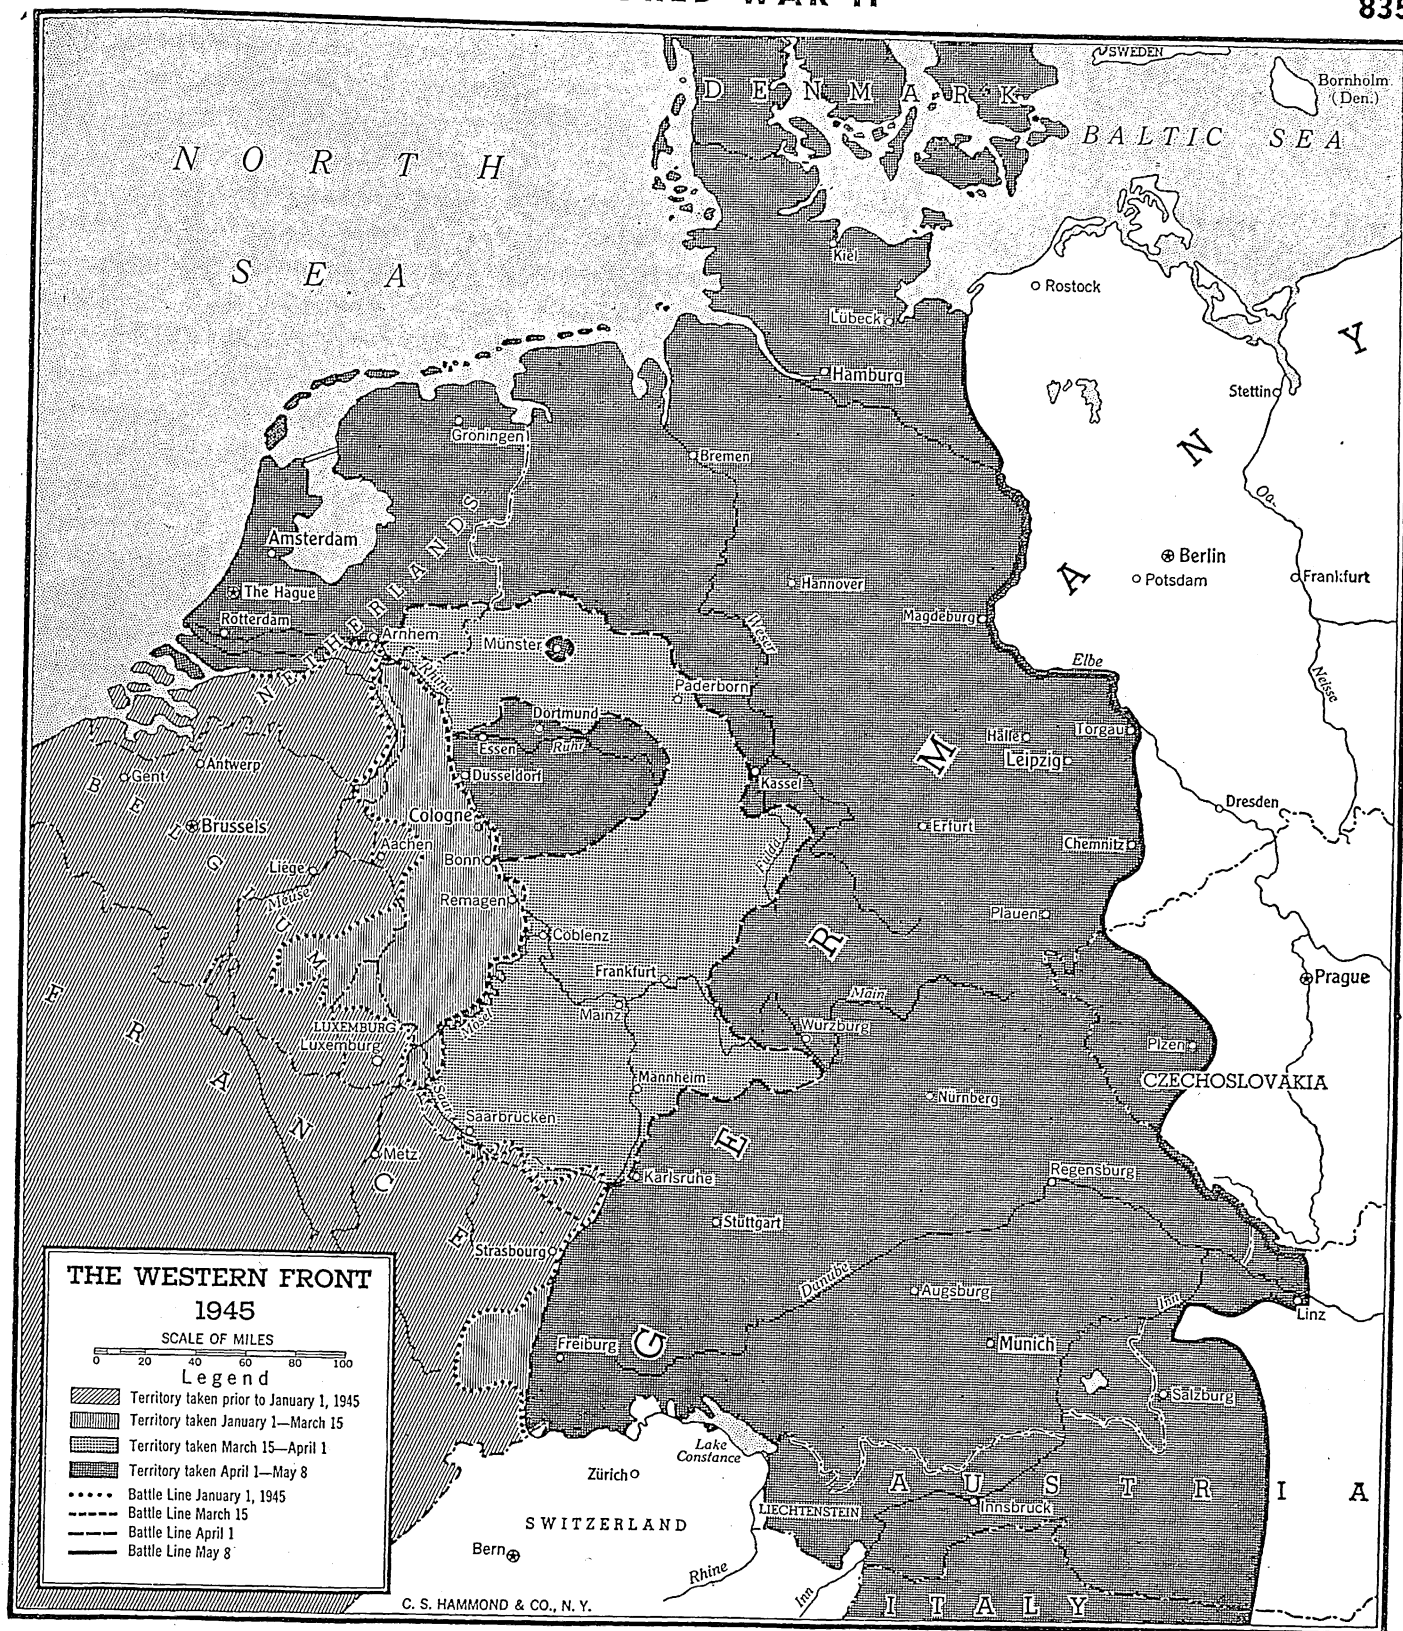

By Dec. 26, the Allied crisis had passed. The Germans who had gained more than 50 mi. at the point of deepest penetration and had laid siege to the U.S. units holding Bastogne were unable to proceed further. While units of the 3rd army had lifted the Bastogne siege, the Allied forces reorganized and, solidified with reserves, turned to the attack and started to hammer the walls of the German bulge.

The Germans had seized a network of interlocking roads in the bulge area; its main communication nerve was the LaRoche-Houffalize-St. Vith road. The U.S. 3rd army, based at recaptured Bastogne, started a drive up toward Houffalize, Jan. 1, 1945, and pinched the German line on the south while the U.S. 1st and British 2nd armies exerted pressure from the north. Wehrmacht pressure at the tip of the bulge was contained meanwhile by U.S. 1st army elements. The German gains were gradually whittled away and soon Von Rundstedt's armies found themselves crammed into a shrinking pocket with the only escape route along the Houffalize-St. Vith road. By Jan. 12, the Germans started a withdrawal from this "coffin corner." As they retreated down the Houffalize-St. Vith road, they were subjected to heavy bombardment from Allied guns lined up on both sides of the road.

The danger of entrapment was now critical and Von Rundstedt hastened the removal of his remaining armour and better infantry out of the impasse. But the process of extricating troops from the pocket resulted in heavy German casualties. On Jan. 15, U.S. 1st army troops drove into Houffalize. Eight days later (Jan. 23), St. Vith fell.

The German pocket was slowly ironed out and by Jan. 27,

the Battle of the Bulge was officially declared ended; at that date the 1st and 3rd armies were virtually in the same positions they had occupied 42 days earlier when the battle had started.

The completeness with which the Allied armies had been caught off guard by the German blow suggested that the Allies had become careless and overconfident and that they were inclined to weigh the enemy's power too lightly. The fact that the Germans were able to mass secretly 24 divisions without being spotted was regarded as a grave reflection on the Allied patrolling and intelligence services, although later it was said that a heavy fog which had blanketed the area enabled the

Germans to conceal their movements.

Gen. Omar N. Bradley's explanation that he had weakened his line, at the point where the Germans made their breakthrough, to take a "calculated risk"—that is to draw troops from one sector to concentrate forces at what he considered more vital areas—was harshly criticized in some quarters and defended in others. Generally, the Allied thesis was that the Battle of the Bulge turned out badly for Von Rundstedt in the end and helped shorten the war.

The German strategy seemed to be superior in so far as they massed their tanks for an all-out blow while Allied tank units

were spread out over the entire front. Moreover, front dispatches indicated that the German tanks excelled their Allied equivalents in all-around performance. Outweighing the wehrmacht advantage in tank equipment was Allied supremacy in the air. The concentrated aerial blitzkrieg on German rail and road systems was so intense that it prevented Von Rundstedt from continuing his war of movement. The German marshal later admitted, in an interview after his capture, that his ultimate defeat in the Ardennes battle was caused by the aerial attacks against his communications.

The Allied losses in the Ardennes battle were considerable. While complete figures were not available, the Allied casualties from Dec. 15 to Jan. 7 were put at nearly 40,000. German losses were put at 220,000, which included 110,000 prisoners. Some Allied sources were inclined to regard the German casualty figures (which were advanced by the Allies) as exaggerated.

*The Drive to the Rhine.*—After the German bulge was reduced, the Allied armies were drawn up on the western front in the following order, running from north to south: Gen. H. D. G. Crerar's Canadian 1st army was at the extreme upper tip facing the Meuse river in the Nijmegen sector of Holland. The British 2nd army, under Gen. Sir Miles Dempsey, was placed immediately below the Canadian 1st and the bulk of its forces was north of München-Gladbach. The U.S. 9th army, under Lt. Gen. William H. Simpson, was battling toward the Roer river below München-Gladbach. On the right flank of the 9th army was Gen. Courtney H. Hodges' U.S. 1st army whose main forces were pointed at the area between Düren and Schmidt. South of the 1st army came Gen. Patton's 3rd, deployed in the hilly terrain between Prüm and Trier. The U.S. 7th army, commanded by Lt. Gen. Alexander M. Patch, was to the right of Patton and was moving slowly into the Saar. The French 1st army, under Gen. Jean de Lattre de Tassigny, faced the Colmar pocket on the extreme southern end of the line.

Eisenhower again resumed his offensive to break through the German lines and reach the Rhine. After the U.S. 1st army captured the Erft and Schwammenauel dams on the Roer river, Feb. 10, the Canadian 1st army launched an attack on the German right flank in the Emmerich-Kleve-Calcar sector. British 2nd army troops joined the operation and soon the entire northern sector of the Nazi line between the Maas and the Rhine was overrun.

The stage was now set for the execution of the Allied drive to the Rhine. Facing the Allies was a German force, weak in reserves and air support. The Russian offensive on the east, which had been under way from Jan. 12, was gaining momentum and the wehrmacht command was compelled to divert a large force from the west, estimated at 20 divisions, to bolster its defenses in eastern Prussia and Silesia.

The big Allied blow from the west was preceded by an aerial attack (Feb. 22) of unparalleled strength. Carried out by both the strategic and tactical air forces, which flew almost 10,000 sorties the first day, this aerial assault disrupted the entire German rail system in and far behind the immediate battle area. The destruction of Reich communications was so complete that not only was the wehrmacht prevented from transferring troops from rear to front line areas, but they were also balked in their efforts to shuttle troops from one front to another.

The following day (Feb. 23), the U.S. 1st and 9th armies led the general assault and established bridgeheads across the Roer river. The Canadian 1st army joined the offensive Feb. 24. The three forces broke through the German lines with surprising ease and raced for the Rhine. Slicing through the German defenses, the 9th army was the first to reach the river at Neuss, opposite Duesseldorf, March 2. On March 6, the 1st army occupied the ruins of Cologne. The following day (March 7), sev-

eral units of the 1st army, finding a bridge intact at Remagen, immediately crossed, thus establishing the first Allied bridgehead on the east bank of the Rhine. This narrow rail span, strained by constant crossing of heavy equipment, collapsed shortly afterward, but not before other and more stable bridgeheads had been established over the river.

While Hodges expanded his bridgehead, the U.S. 3rd and 7th and the French 1st armies were filtering into the Saar pocket. Suddenly, three 3rd army tank divisions started a rapid thrust along the west bank of the Rhine in an operation designed to cut off all possible exits for German troops in the Saar. These bold armored drives created confusion among the defenders, and Allied forces, pouring through the thinned wehrmacht lines, surrounded the enemy on all sides.

Against this action, the once-powerful and once-flexible wehrmacht was helpless. Communications between German units were severed and lack of liaison rendered impossible the organization of a cohesive stand. As the German high command could not rescue the isolated units, it decided to withdraw to the east bank the few units which had eluded the Allied pocket. The remainder was left to be mopped up by the Allied armies. In a desperate effort to stave off defeat, the wehrmacht chiefs replaced Von Rundstedt, the hero of the Ardennes, with Marshal Albert Kesselring, noted for his skilful defensive operations in Italy.

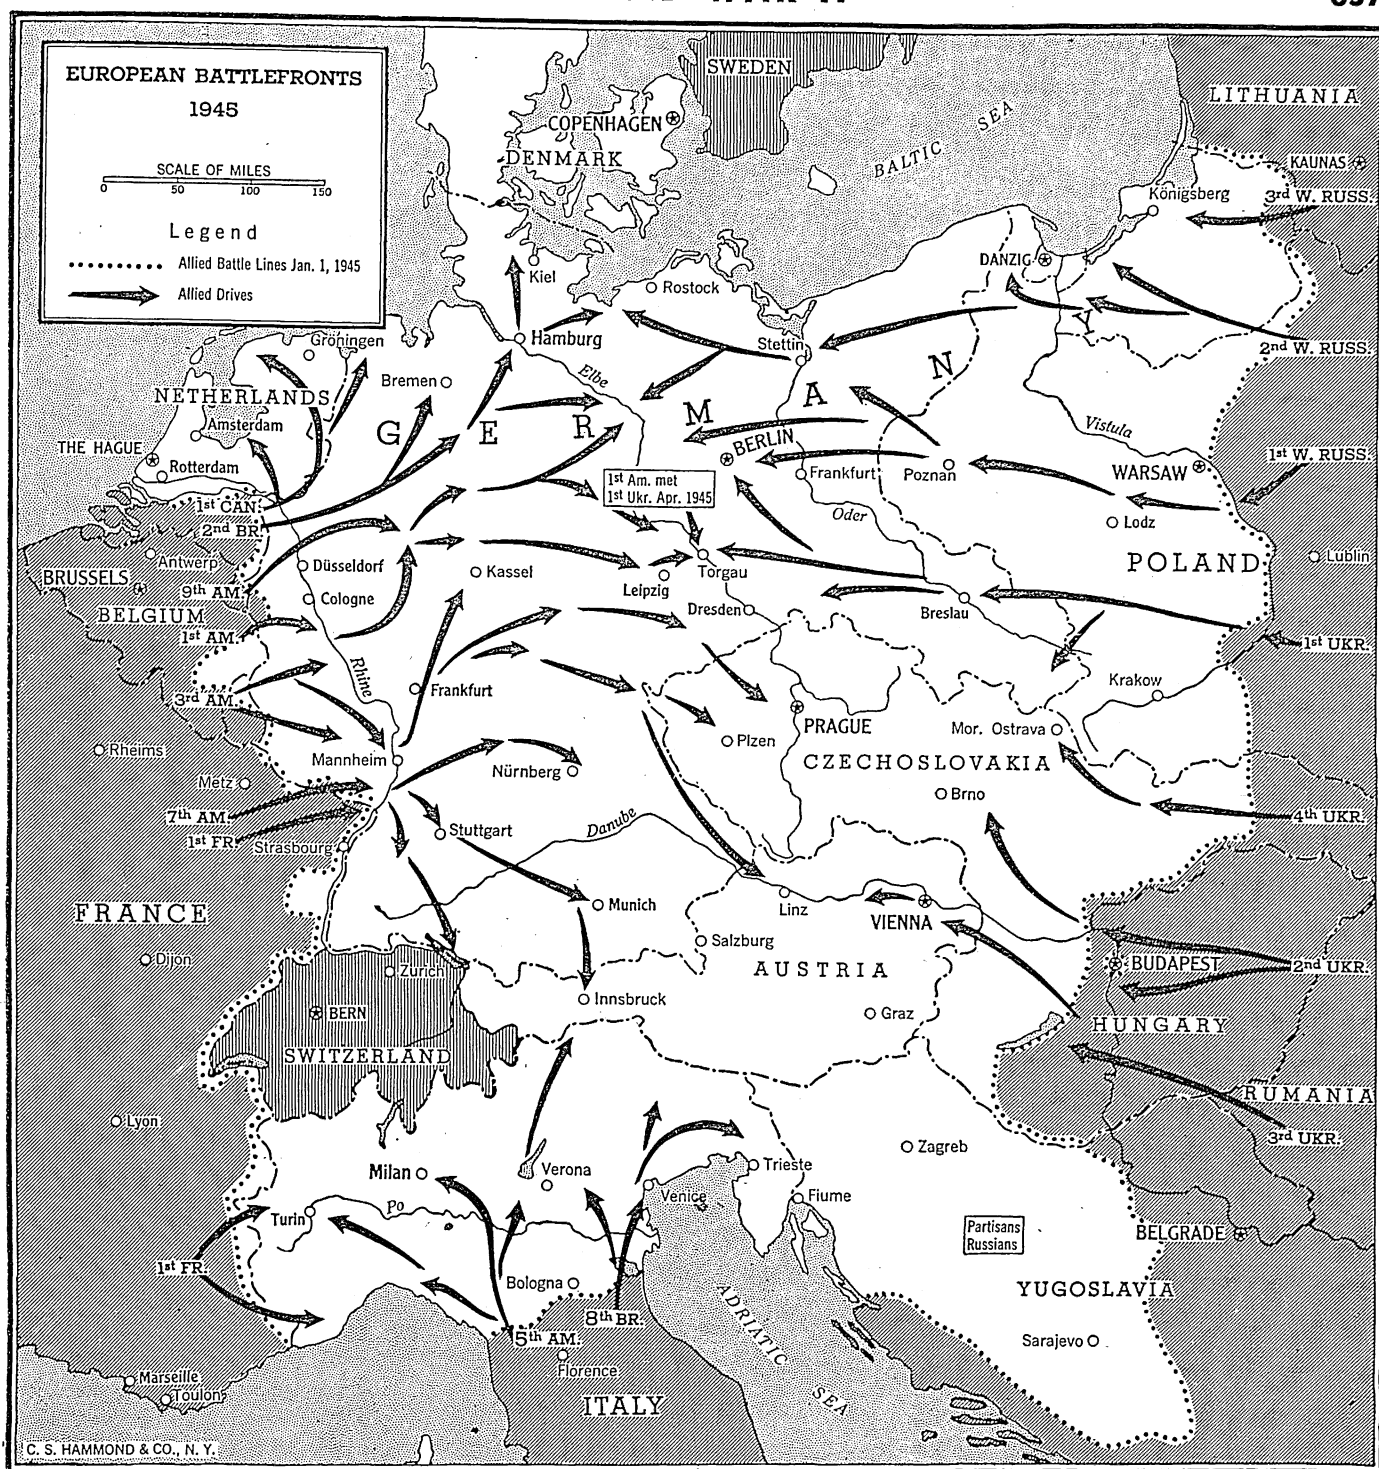

The Allies, having no intention of letting Kesselring gain time to throw up strong defensive positions, prepared to cross the Rhine en masse. The initial phase of the new crossing was carried out by advance units of Patton's 3rd army, which stormed the river, March 22. The next day (March 23), the Canadian 1st and British 2nd armies, covered by an extremely heavy barrage, hurdled the Rhine. They were followed March 24, by the U.S. 9th army. That same day two divisions of the Allied 1st airborne army were dropped behind the river by a large armada of troop-carrying aircraft and gliders.

The bridging of the Rhine, the last great defensive line of fortress Germany in western Europe, by five regular armies and airborne forces enabled Eisenhower to speed up the final campaign to crush organized German resistance in the west. With both of its flanks now protected, the U.S. 1st army was able to stage a "breakaway" drive from its Remagen bridgehead on March 26. One armored column streaked toward Limburg and raced down the superhighway toward Frankfurt on Main. Other armored units of the 1st, advancing as much as 40 mi. in a day, sped northward toward Kassel. Meanwhile, armored divisions of the 3rd army lunged toward Würzburg. On the extreme north, the British 2nd army, the Canadian 1st and the U.S. 9th were pressing harassed enemy forces in the German-held Netherlands and the Ruhr. To the extreme south, the U.S. 7th and the French 1st armies had made their crossings of the Rhine in the last week of March.

By April 1, all the Allied armies were not only on the east bank of the Rhine, but in many cases far beyond the shores of that river. The German army's main defensive line had been broken. The Nazi high command made several futile efforts to form a front, but the speed and liquid movement of the Allied armored forces prevented the Germans from fighting a hardened war of position and made them fight a war of movement in their own territory.

With open flat country before them, the Allied armored columns spilled through Germany with the force of a leaping torrent. The Canadian 1st army circled northward from Emmerich and Arnhem in the Netherlands, isolating a large force in the IJsselmeer (Zuider Zee) salient. The British 2nd army swept through Dülmen (March 30) and Osnabrück (April 4). The U.S. 9th fanned out in three directions. One section headed due

east toward Minden. Another turned off to the right below that city to form one blade of a pincers on Paderborn. (The other blade was formed by a unit of the U.S. 1st army coming in from the left. The blades came together at Paderborn, isolating a large body of German troops below them.) A third element of the 9th engaged in heavy fighting with reich forces guarding the Ruhr area about Duisburg.

The 1st and 9th armies spearheaded the Allied drive. After establishing contact at Paderborn, their advance units continued eastward toward the line of the Weser river. By April 5, the 9th crossed the Weser and captured Hannover (April 10). The armoured spearheads of the 1st army drove on Leipzig, which was taken April 19.

To the south, Patton's 3rd was engaged in a complex operation. After taking Frankfurt on Main (March 29), the 3rd swung northward and crossed the Fulda river. Then it veered

south, capturing Gotha (April 4) and Erfurt (April 12). Following this operation, the 3rd split into two wings, one heading for Asch, in Czechoslovakia, and the other toward Regensburg on the Danube. This advance was designed to establish solid contact with Red army forces in Austria and to prevent the enemy from retreating in order to the Bavarian mountains.

To the south of Patton's army was Gen. Patch's 7th army which had captured Mannheim (March 29), Heidelberg (March 30) and battled its way into Nuernberg, the city of the "nazi heroes," which fell after bitter fighting (April 20). The 7th then swung toward Munich, capturing that city by May 1. Below the U.S. 7th, the French 1st army took Stuttgart, April 22 and then skirted the German shore of Lake Bodan (Lake Constance).

By the end of April the British 2nd army was storming the approaches of Hamburg and Bremen. The U.S. 1st and 9th

armies had reached the line of the Elbe-Mulde rivers where they halted under a prearranged agreement with the Russians. The U.S. 1st army units and a contingent of Marshal Ivan S. Konev's 1st Ukrainian army formed a junction at Torgau (April 25), a village on the Elbe river, thus splitting the reich in two.

**2. The Italian Campaign.**—The great battles being fought on German soil in early 1945 diverted interest from the Italian front, where fighting was limited in extent, but not in intensity. In one respect the Italian campaign resembled the fighting on the western front during World War I—the gains made by the attacking forces were minimal in comparison with the effort expended. The Allies did most of the attacking and the Germans were content to hold the terrain, which heavily favoured the defense, as long as possible. Throughout the latter part of the Italian campaign, the Germans slowly retreated from one fortified belt to another strapped across the Italian peninsula. The Allied operations in Italy, ill-favoured by topography, were further obstructed by the fact that many veteran divisions of the 15th army group had been diverted to the western front.

During the winter months, ground operations were limited by the eccentric mountain weather in which snow and freezing cold alternated with driving rains. On April 1, when the weather began to improve, the Allies held a line starting below La Spezia on the west, and then weaving its way through valleys and hills eastward to a point above the Adriatic port of Ravenna. The U.S. 5th army held the western section of the line and the British 8th the eastern. Both forces were joined as the 15th army group under command of Gen. Mark W. Clark.

On April 9, the 15th army group launched its spring drive. Following a heavy air attack by tactical bombers in direct support of the ground troops, the British 8th, under Lt. Gen. Sir Richard L. McCreery, set off the offensive with a drive across the Senio river. A week later (April 16), the U.S. 5th army swung into the attack in a new effort to break out of the mountains southwest of Bologna, the Po valley city that had been converted into a major German citadel. As the U.S. 5th surged into the Po valley and marched up the Faenza-Bologna road, the 8th circled about the rear of Bologna. Applying steady pressure, the Allies threatened the escape routes of the German 10th and 14th armies. As their positions became untenable, the reich forces withdrew rapidly and Bologna fell to the Allied forces, April 21. The U.S. 5th army crossed the Po river (April 23); the British crossed the river in force two days later. Units of the U.S. 5th, north of Bologna, occupied Verona April 26. These forces then drove north into the foothills of the Alps toward Bolzano and the Brenner pass. The British 8th, meanwhile, circled eastward around the Italian arch to Venice and joined with the Yugoslav forces of Marshal Josip Brozovich (Tito) near Trieste (May 1).

Thenceforth, the disintegration of German resistance in northern Italy was rapid. The 5th took Genoa, April 27, the industrial city of Turin, April 30, and had entered Milan, April 29.

As German troops beat a retreat northward, they were harried on every side by Italian partisan units whose assistance to the Allied forces in the final days of the Italian campaign was invaluable.

**3. The Eastern Front.—Winter Campaign, 1945.**—At the beginning of 1945, Russian operations on the eastern front were localized to the Balkans and Hungary. The Russian objective was to clear this area of German troops, thus preventing possible counterattacks on their southern flank, when they opened the big drive into Germany. A vise had been clamped about Budapest by Marshal Fedor Tolbukhin's 3rd Ukrainian army while Marshal Rodion Y. Malinovsky's 2nd Ukrainian army

pressed a drive toward the Austro-Hungarian border, with Vienna as one of its major objectives.

While these operations were underway, the soviet high command marshalled five large armies for the offensive to break into fortress Germany from the east. Running from north to south these forces were: the 3rd White Russian army, commanded by Gen. Ivan D. Chernyakhovsky, which was massed on the frontiers of East Prussia; the 2nd White Russian army, led by Marshal Konstantin Rokossovsky, operated north of Warsaw; the 1st White Russian army commanded by Marshal Georgi K. Zhukov, was stationed south of Warsaw; the 1st Ukrainian army, under Marshal Ivan S. Konev, faced German forces in the Krakow sector; and the 4th Ukrainian army, under Marshal Ivan Y. Petrov, in southern Poland and Czechoslovakia.

For this blow, the Russians employed a vast number of men and an equally vast quantity of equipment. It was said that the five Red armies totalled 175 divisions (German over-all strength on the east was between 150 and 200 divisions). In addition, the Russians employed some 15 to 20 tank corps, thousands of rocket guns and a large force of tactical aircraft. In the van of the Russian attack were scores of the new Russian supertanks, the "Joseph Stalin," a heavily armoured, low-slung monster mounting a 122-mm. gun said to be superior to the German 88-mm. tank rifle.

The offensive began Jan. 12, 1945. The first of the Red armies to spring into action was Konev's 1st Ukrainian, which crossed the Vistula and sped toward the Silesian coal basin, and Chernyakhovsky's 3rd White Russian which battled into East Prussia. Two days later (Jan. 14), Rokossovsky's and Zhukov's armies opened a drive across the Vistula and joined behind Warsaw. The 4th Ukrainian under Petrov went on the offensive Jan. 15 into southern Poland; its aim was to ward off counterattacks on the Red army forces engaged in the main drive to the north.

The Russian blow was massive and powerful; it cracked the German Vistula river line—the best natural defense barrier outside of the reich to the east—in less than a week of fighting. The Red army seized Warsaw, Jan. 17, Lodz and Krakow fell Jan. 19. As the Russians entered the flat plains country, their heavy tanks scattered and rolled back the German armies.

On the north, the 3rd White Russian army's artillery battered holes in the German fortifications in East Prussia, through which long columns of tanks and infantrymen streamed. The 3rd White Russian army captured Tilsit, Jan. 20, and on the following day seized Tannenberg, the historic battleground where the czarist armies suffered their greatest defeat in World War I. As in the earlier war, the soviet strategy was to surround German forces in East Prussia. While it failed the first time, it succeeded the second. Soon two Red armies were driving into East Prussia. From the north, the 3rd White Russian army of Chernyakhovsky (who later died in battle and was replaced by Marshal Alexander M. Vasilevsky) was surging toward Koenigsberg, capital of the province. Cutting through the nazi defenses from the south was Rokossovsky's 2nd White Russian army. By Jan. 26, the latter force had reached the port of Elbing on the Baltic, thus completely isolating the northern "redoubt" that the Germans had hoped to convert into an impenetrable bastion.

Meanwhile, on the central front, Marshal Zhukov's 1st White Russian army was pacing the offensive. Plunging rapidly through the weakening German lines in western Poland, it reached the Oder river by Feb. 4, outflanking the town of Kuestrin some 34 mi. from Berlin. Below Zhukov's force was Konev's 1st Ukrainian army which advanced at great speed through southwestern Poland and reached Silesia. Konev's objective was to invest Silesia, Germany's richest industrial area, next to the

Ruhr and Rhineland. Petrov's 4th Ukrainian army, meanwhile, was filling the possible loopholes in the Carpathians from which the Germans might possibly spring a surprise counterblow.

By mid-February, both Zhukov's and Konev's armies were standing shoulder to shoulder on the east bank of the Oder. Except for a few isolated fortresses such as Kuestrin and Breslau, which were under siege, they controlled a considerable portion of the river bank running from a point across Schwedt on the north to Oppeln on the south. On Feb. 12, Konev's army

crossed the river and shooting out on a new offensive, plunged more than 35 mi. beyond, toward Dresden. This spectacular drive threatened to flank Berlin from the south. After nine days of incessant battle, the 1st Ukrainian army reached the confluence of the Oder and the Neisse rivers. There Konev slowed the advance of his army to consolidate his gains.

The drive into Germany reached its climactic point at Kuestrin, lying at the confluence of the Warthe and Oder rivers. Kuestrin, the principal guardian to the road to Berlin, had been

converted into a formidable fortress, protected by rows of stubby monolithic dragon's teeth built of concrete, deep anti-tank ditches, and numerous underground forts. Kuestrin and the surrounding area was manned by some ten German battalions as well as numerous artillery units.

The first Russian attacks on Kuestrin were bone-crushing. Soviet shelling cut wide swaths through the dragon's teeth and knocked out a number of the protective pillboxes in the first days of fighting. Russian shock troops then broke into the fortress, which fell March 12.

As the Red army drives on the central and southern sectors slackened, elements of Rokossovsky's 2nd White Russian army opened a drive through the middle of Pomerania. His intention was to slice the defending armies into isolated segments, reduce them one at a time, capture Stettin and reach the Baltic at the mouth of the Oder. Advancing up the Baltic coast, Rokossovsky's army captured Gdynia, March 28, and the former free port of Danzig, March 30. To the north, Koenigsberg, a Nazi stronghold, manned by Wehrmacht fanatics, resisted a long Russian siege but it was finally taken by Vasilevsky's 3rd White Russian army, April 9.

Meanwhile, Soviet armies in Hungary were meeting stiff German opposition. Budapest fell Feb. 13 to the Soviet forces but only after some 14 weeks of fierce street fighting. After the fall of Budapest, the armies of Tolbukhin and Malinovsky occupied the remainder of Hungary and, driving westward into Austria, captured Vienna, April 13. Occupation of the Austrian capital marked the close of the Soviet winter drive of 1945.

In the four months that elapsed after the beginning of the great offensive, the Russians had brought the war into the very heart of Germany. They had driven from the Vistula river line in Poland to within 34 mi. of Berlin. While the achievements were accomplished primarily by the enormous strength of the attacking forces, due credit must be given to the excellence of their strategy and the sturdiness of their equipment. Unable to mount a counteroffensive of sufficient strength to disrupt the Soviet attack, the Germans fought a persistent delaying action in order to protect their retiring forces. Substantial garrisons were left behind in Poznan and Breslau in the hope that these would compel the Soviets to divert some of their strength for the reduction of these bastions. But Soviet reserves in manpower were so ample that neither of these operations caused any appreciable delay in the Russian timetable. Poznan fell Feb. 23 and Breslau by May 7, after an 84-day siege. A factor militating against a successful German defense was the increasingly poor quality and sparse quantity of German reserve strength. The Volkssturm (home guard) units had been interlarded with veteran combat troops to make up for the deficiency of trained reserves but, comprising mostly over-age or physically infirm men, the Volkssturm proved a poor substitute for trained soldiers.

*The Drive on Berlin.*—After the fall of Kuestrin, Marshal Zhukov intensified preparations for the drive on Berlin. For this offensive, which proved to be the final blow of the war on the eastern front, Zhukov, who was field commander of the Soviet forces, employed four armies, totalling perhaps 2,000,000 men. These were deployed on a front running from Stettin bay on the Baltic to the Sudeten range in lower Saxony. Rokossovsky's 2nd White Russian army, reinforced by Vasilevsky's 3rd White Russian army held the sector extending from Stettin to Kuestrin. Below was Marshal Zhukov's 1st White Russian army holding a line from Kuestrin to Frankfurt on Oder. The lower wing was formed by Konev's 1st Ukrainian army which held the sector from the Neisse to the Czechoslovak border. Farther south, engaged in separate operations in central Europe and the Balkans were Tolbukhin's 3rd Ukrainian, Malinovsky's

2nd Ukrainian and the 4th Ukrainian given to Gen. Andrei I. Yeremenko who took over from Petrov.

The operation against Berlin was to be an enveloping drive by Zhukov's 1st White Russian and Konev's 1st Ukrainian armies. While expecting a manoeuvre of this sort, the Germans were surprised by its early execution. They apparently believed that Konev would first strike at Dresden to join with U.S. forces and then wheel toward Berlin. Instead, the 1st Ukrainian army veered northward toward Guben and Forst. Preceded by a heavy artillery barrage, Konev's attack opened April 14, according to German broadcasts, on the Neisse river front. The gains on the first two days were not large, but once the shell of resistance was broken, the 1st Ukrainian army moved forward in great strides, capturing Cottbus, April 23, and then wheeling toward the southern suburbs of Berlin. Soon afterward, the armies of Rokossovsky and Vasilevsky on the north opened powerful forward movements toward Stettin and the Baltic coast. Then came the principal blow—the attack on Berlin from the east by the 1st White Russian army.

The amount of technical equipment the Russians massed for this frontal assault on the German capital was enormous. Zhukov himself subsequently declared that for the decisive battle (opened on the night of April 15–16), some 22,000 guns and mortars, between 4,000 and 5,000 aircraft and more than 4,000 Red army tanks were employed.

Zhukov's strategy was to break through the German lines in the shortest possible time. The tanks, their paths illuminated by scores of powerful floodlights, opened the drive after the shelling and bombing had flattened the outer defenses of Berlin. The 1st White Russian army battled through the concentric defenses covering the western approaches to the city and by April 23, barely a week after the battle began, was in the streets of Berlin proper. Meanwhile, the main body of Konev's army to the south speared through Potsdam, and by April 25 the German capital was completely surrounded. The battle of Berlin had begun.

The fighting in Berlin was a Stalingrad in reverse but of shorter duration. To block the Red army drive, the Germans had erected improvised barricades of shattered masonry, overturned motor cars and wrecked streetcars. They converted dwellings and factories into fortresses and employed tanks and artillery from concealed positions. The Germans fought skilfully and with courage. The Wehrmacht commanders used the subways to transfer troops from point to point in the burning capital and the Red army had to burrow into the tubes to seal them off. Despite the stubborn German resistance, the Russians battled their way through the wreckage, seizing district after district. The climax of the battle was reached in the fighting for the ornate Reichstag building, taken by the Soviet troops only after exhausting close-quarter engagements. On May 2, the Germans, virtually bludgeoned into insensibility, surrendered and the battle for Berlin was over. Of the German garrison of 500,000 troops that defended the capital, Marshal Zhukov said 300,000 were captured and 150,000 killed. The remaining 50,000, he averred, "just ran away."

While German soldiery were dying by the thousands on the streets above, Adolf Hitler remained in the safety of his subterranean fortress under the Reich Chancellery. Convinced that he would get nothing but summary treatment if captured by the Red army, he apparently decided on suicide rather than submit to capture. On May 1, Grand Admiral Karl Doenitz announced that Hitler had died a "hero's death" in the defense of Berlin. This statement was greeted with skepticism, and subsequent evidence indicated that Hitler had taken his life. A few days earlier, his comrade-in-arms, Benito Mussolini, had been captured by Italian partisans and was executed after a drumhead

SCENE OF THE GERMAN SURRENDER at Reims, France, on May 7, 1945. Seated at the extreme left, and proceeding clockwise around the table, were: German representatives Maj. Gen. W. Oxenius, Col. Gen. A. Jodl, Gen. Adm. H. G. von Friedeburg; Allied officers Lieut. Gen. Sir F. E. Morgan, Maj. Gen. F. Sevez, Adm. Sir H. M. Burrough, Lieut. Gen. W. B. Smith, Lieut. Gen. I. Chermiaeff (at a distance from table), Maj. Gen. I. Susloparoff, Gen. C. A. Spaatz, Air Vice Marshal J. M. Robb, Maj. Gen. H. R. Bull and Senior Lieut. Col. Ivan Zenkovitch

trial, April 28.

**4. The Surrender of Germany.**—The death of Hitler, the fall of Berlin and the junction of the United States and soviet armies at Torgau were all factors that quickened the beginning of the end of the long German reign of terror on the continent. The armies of the western Allies and the soviet union were over-running the entire reich. German resistance was rapidly fading and failure of their military strategy to halt the invading armies led the nazi high command to lay greater stress on political tactics. Their hope was to divide the western Allies and the soviet union. Doenitz, who succeeded Hitler as fuehrer, said in a broadcast May 1 that as long as the western Allies obstructed achievement of his aim to save Germany from "bolshevik" destruction, his forces would carry on the "defensive" struggle against Britain and the United States as well as against the soviet union. This appeal was ignored by Churchill and Truman. They insisted on the full and unconditional surrender of the German armies to the soviet as well as the British and United States forces. Consequently the war dragged on.

But the defeat of Hitler's Germany was not far distant. In northern Germany, the British 2nd army captured Bremen (April 26), Luebeck (May 2) and Hamburg (May 3). Advancing toward a junction with the British, the 2nd White Russian army took Stettin (April 26) and Rostock and Warnemuende by May 2. The U.S. 1st and 9th armies were solidly joined

with the 1st Ukrainian army at the Elbe. One section of the U.S. 3rd army was moving into Czechoslovakia and a second had penetrated Austria. The 4th Ukrainian was also driving into Czechoslovakia, but from the east, while the 2nd and 3rd Ukrainian armies were cleaning up German remnants in central Europe. In south Germany, the U.S. 7th army had taken Munich (May 1) and the French 1st army had reached the Swiss frontier. The Allied armies in Italy were racing northward toward Bolzano and the Brenner pass.

The collapse of Germany came piecemeal. On May 2, the same day that Berlin fell, German and Italian fascist armies in northern Italy, estimated at about 1,000,000 men, surrendered to Gen. Mark W. Clark, commander of the Allied 15th army group. This surrender, secretly negotiated at Caserta on April 29, yielded some 20,000 sq.mi. of rugged territory to the Allies and opened the way for an unimpeded Allied march from the south to within 10 mi. of Berchtesgaden.

Two days later, May 4, another large force, also estimated to total 1,000,000 men, capitulated. This comprised the German armies in Denmark, Holland and northwestern Germany which surrendered to Field Marshal Montgomery. The following day (May 5), the wehrmacht commanders in eastern Austria ordered their troops to lay down their arms. These three major capitulations were made to the armies of the western Allies, while the bulk of the German armies facing the Russians continued fighting. Significantly, in the final months of the battle of Germany, most of the major fighting was carried on against the soviet forces. After the crossing of the Rhine, German resistance to the armies of the western Allies was relatively light.

With German resistance now virtually nonexistent, Doenitz

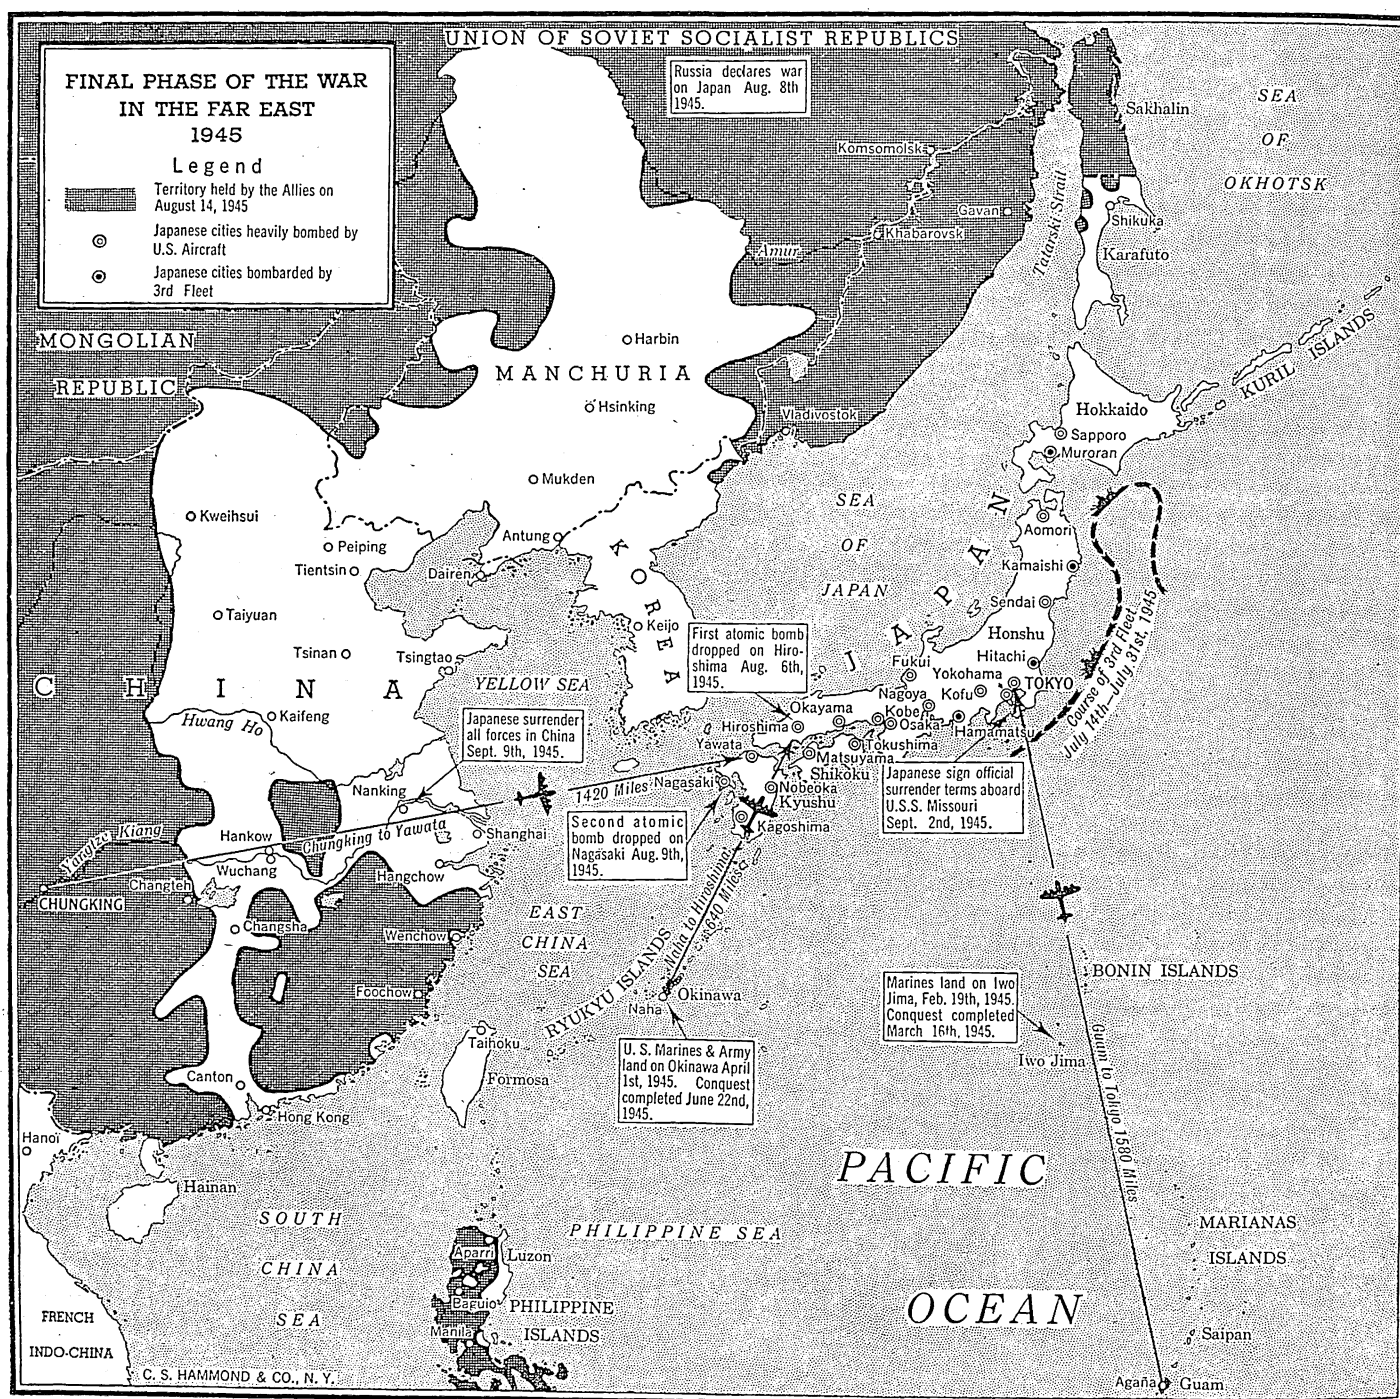

had no choice but to accept the Allied ultimatum that he surrender to all three forces—United States, British and Russian—simultaneously. He dispatched two emissaries, Gen. Adm. Hans Georg von Friedeburg and Col. Gen. Alfred Jodl, to Gen. Eisenhower's headquarters in Reims, France, where Jodl signed (May 7) the final surrender document. The following day (May 8), Friedeburg, Field Marshal Gen. Wilhelm Keitel, chief of staff of the German high command and Gen. Hans Jürgen Stumpff signed similar documents in Berlin in the presence of Marshal Zhukov. While the cease-fire order was given May 8, the actual signing of the Berlin document did not take place until shortly after midnight May 9.

Some fighting continued in Czechoslovakia after the prescribed surrender date but by May 12, all fighting in Europe had ended and peace was restored to the continent.

### III. THE WAR IN THE FAR EAST

I. Introduction.—At the start of 1945, there was little question that the defeat of Japan was merely a matter of time.

Its forces had been ejected from a score of strategic island bases in the central and southwestern Pacific, its fleet had been battered into virtual impotence and its air force, with the exception of the Kamikaze corps (which was to make its full-dress appearance later), was reduced to nuisance value only. Still, the task confronting the Allies—conquest of new stepping-stone islands and finally invasion of Japan itself—was not one which lent itself to facile solution. For most of the territory wrested from the Japanese the Allied armies had to pay a stiff cost in casualties. The Japanese had shown, by their sacrificial resistance in the Gilberts, Marianas and Palaus, that they were tough, determined soldiers, ready to die if necessary for "the glory of the emperor"; it could not be expected that their opposition would lessen if the homeland itself were invaded. However, Allied military leaders were convinced that an invasion of Japan proper, no matter how costly, was unavoidable if the war in the Pacific were to be brought to a victorious conclusion. Accordingly, Allied strategy was adjusted to this goal.

Resolved to complete the conquest of Japan as quickly as possible, the United States amassed large military, naval and air forces in its newly conquered Pacific bases and the flow of men and materials to the Pacific area was greatly accelerated after the collapse of Germany.

The U.S. Pacific fleet, one of the principal offensive instruments, had grown to huge size. By the summer of 1945, it comprised 23 battleships, 26 aircraft carriers, 64 escort carriers, 52 light and heavy cruisers and 323 destroyers, as well as hundreds of other small craft. In addition, it was equipped with nearly 15,000 combat aircraft and six excellently trained marine divisions. The U.S. army had some 20 divisions in the Pacific islands by the summer of 1945 as well as a very large air force, comprising tactical and strategic aircraft; the latter included the B-29 "super-bombers."

While the United States, because of geographical factors and superior industrial strength, carried the burden of the war in the Pacific, it received valuable assistance from the other Allied nations. The British had a force estimated at 1,000,000 men on the Asiatic mainland, two large fleets, one of which fought under the U.S. Pacific fleet, and a substantial air force. The Chinese army had some 300 divisions, but only a few of these were adequately equipped with arms and material and were, accordingly, not overly effective. During the Manchurian campaign, the Russians employed at least three large armies and an adequate air force. Although the Allies greatly outnumbered the Japanese in men and material, even the most sanguine optimists could not foresee the defeat of Japan before 1946. The general consensus was that the Pacific war would end perhaps before 1947.

**2. The Philippines Campaign.**—The invasion of Luzon highlighted the Philippines campaign in early 1945. Strategically, this operation was designed to strike at the heart of Japanese strength in the Philippines. Gen. Douglas MacArthur's goals were to reconquer the islands, sever Japanese communications to the Netherlands Indies and provide a sizable land mass for the invasion of Japan. The Luzon landings also made possible an invasion or neutralization of Taiwan (Formosa), a prime requisite for landings on the China coast, then under consideration by Allied strategists.

The invasion of Luzon was skillfully handled. While a large troop convoy escorted by the U.S. Pacific fleet wound its way through the heart of the Philippine archipelago, Allied air forces staged several feints over Batangas and Tayabas, farther south. Not knowing exactly where the blow would come, Lt. Gen. Tomoyuki Yamashita, commander of Japanese forces, shifted troops to those areas, thus dispersing his available forces. Then when the blow did fall, Yamashita was unable to gather together enough troops for counterattacks at the critical moment. The U.S. landings on Luzon were made Jan. 9, 1945, at the Lingayen gulf, the same site chosen by the Japanese for their invasion in Dec. 1941. By nightfall, some 68,000 troops had gone ashore. After the first 24 hours, the U.S. forces controlled a beachhead 3 mi. deep and 15 mi. wide. Exploiting the advantage gained by the scattering of the enemy forces, the U.S. 6th army under Gen. Walter Krueger, moved toward Manila, a little more than 100 mi. to the southeast. It met little opposition until it reached the vicinity of Clark field where it was brought to a halt by a strong Japanese line of defense. This temporary stalemate was broken by the landing, Jan. 29, of U.S. 8th army units at Subic bay. Two days later (Jan. 31), a U.S. airborne division made an amphibious landing at Nasugbu, south of Manila. These two operations flanked and isolated the Japanese in the Manila area who were now in a dangerous position. Meanwhile, the Japanese troops at Clark field fell back to the capital, where they fought stubbornly. The U.S. forces penetrated the Intramuros quarter of Manila and by Feb. 24 all organized resistance in that city had ended. Those Japanese forces outside of Manila, or those who had escaped entrapment in the city, fled to the Cagayan valley of north-eastern Luzon.

Auxiliary to the assault on Manila was the operation to reopen Manila bay to U.S. shipping which began Feb. 16, with the invasion of Corregidor by a combined force of paratroopers and ground troops. After a two-week battle, this force reconquered "the Rock," and U.S. naval and merchant ships were able to enter Manila bay by March 1945.

With the fall of the Philippines capital the 260,000 Japanese troops scattered throughout the islands were in an unenviable plight. Their water links with the main Japanese bases were cut off and they received supplies only in dribbles from vessels that succeeded in slipping through the U.S. naval blockade. MacArthur then proceeded to expand his holdings in the islands. In late Feb. 1945, U.S. forces invaded Palawan. The following month they landed on Mindanao (March 10). During March, landings were also made on Panay, Cebu and Negros, while reconnaissance groups to the south invaded Jolo, Tawitawi and other islands in the Sulu archipelago, bringing the U.S. forces to within 40 mi. of Borneo.

Then, on May 1, an amphibious force of Australian and Netherlands East Indies troops landed on the island of Tarakan, one of the richest sources of oil in the Indies. Tarakan, which lies off the northeast coast of Borneo, was taken by the Allies by the end of the month. The Tarakan operation was followed June 10 by an unopposed landing of Australian forces on Brunei bay in northwest Borneo. Three weeks later (July 1), the Australians effected a new landing, this time at Balikpapan in the southeastern part of the island. These Allied forces cleared the Japanese from Balikpapan harbour which was opened to Allied shipping by mid-July.

Meanwhile, the campaign in the Philippines was drawing to a close. In mid-April, units of Gen. Robert L. Eichelberger's U.S. 8th army launched a drive to clean up Mindanao. Davao City was captured May 4 and by the end of June little organized resistance was left on the island. On

Luzon, Gen. Krueger opened final operations against the Japanese entrenched in the Cagayan valley. Caught in a pincers drive from the north and south, Yamashita's forces were sliced into isolated pockets and by the end of June most of the Cagayan valley was under control of U.S. forces, thus terminating the Luzon campaign. On July 5, MacArthur announced that the Philippines campaign could be regarded as closed, but admitted some guerrilla forces still operated in many of the islands. At that time, Japanese casualties in the Philippines operation were put at 317,000 dead and 7,236 captured. The U.S. casualties were 60,268 killed, wounded and missing.

**3. The Invasion of Iwo.**—A position of prime importance in the Allied "stepping-stone" strategy was accorded Iwo, a small oyster-shaped island, some five miles in length, that lay midway between Tokyo and Saipan. Geographically, it was an unattractive, water-locked knob in the Pacific, sparsely vegetated and covered with volcanic ash. Nevertheless, it had strategic value and the Japanese had built an airbase on Iwo from which their aircraft made persistent attacks on B-29 bases in the Marianas. In U.S. hands Iwo could become an advanced airfield from which fighter planes could escort Superfortress missions and also provide tactical air support for ground troops in the scheduled invasion of Japan.

Iwo became a major target for almost daily Allied air attacks from December until the day it was invaded, Feb. 19, 1945. Several days before the invasion, a special naval task force, consisting of battleships and carriers, shelled and bombed Iwo and the Bonin Islands to the north. The attack on the Bonins was to prevent Japanese garrisons there from coming to the aid of their compatriots on Iwo, once the invasion was underway. Together with the attacks on the "doorstep" islands were heavy raids on Tokyo, Feb. 16-17, by an estimated 1,200 naval aircraft, also designed to block shipment of possible Japanese reinforcements to Iwo.

The purpose of the intensive air and sea bombardment of Iwo clearly was to soften the Japanese defenses on the island and facilitate the actual landings. The pre-invasion bombardment, however, failed to "soften" to any appreciable extent either the Japanese defenses or the garrison. This became evident when the first marine units landed on the island, Feb. 19. Their arrival drew from the defenders a combination of machine-gun, mortar and artillery fire, so murderous that the first wave of marines was nearly decimated before it reached the beach.

Obviously the pattern of battle set at Tarawa and Saipan—bloody, costly, no-quarter fighting—was to be repeated at Iwo. The men of the 4th and 5th marine divisions, who were in the initial landings, had no illusions that Iwo was to be plucked easily from the bough. That first terrible burst of gunfire indicated that they were in for an all-out fight with the Japanese garrison, which consisted of more than 20,000 picked troops. The Japanese defenses were excellent. The hilly, volcanic crags and steep 90-degree slopes, broken only by narrow and tortuous defiles, were employed as natural breastworks, behind which artillery, mortars and rockets were artfully concealed. The Japanese were committed to a suicide stand and intended to make the attackers pay as high a price as possible for possession of the forlorn isle. Their actions presumably were based on the assumption that exorbitant casualties might discourage and

A U.S. CARRIER slacks its oil lines to reduce tension on them while refuelling a wave-tossed destroyer during 1945 operations in the China sea

deter the United States from repeating the experiment in Japan proper.

The marines did suffer terrible casualties in the first hours as they waded from their landing boats to the beach; nevertheless, they continued onward and succeeded in establishing a beachhead on the island's south-east coast. Then the 4th marine division moved across the narrow southern tip of Iwo and cut back to the north. The 5th headed for Mt. Suribachi.

If the initial beachhead landings were extremely difficult, the ensuing land operations were even more hazardous. The advances were measured in yards. Marine casualties were so heavy that in the first 47 hours of fighting, they lost 3,650 men in dead, wounded and missing. As a result, the 3rd marine division, which had been held in reserve, was thrown into action by Feb. 22.

Meanwhile, the marines in their advance to Mt. Suribachi had to brave shelling from 115 heavy guns fitted into concrete emplacements on the slopes of the hill. After bitter fighting, the marines captured the mount itself by Feb. 23. By March 6, the marines had also taken the three major airfields. Thereafter, the Japanese gave ground slowly. The worse their plight, the more active they became and the more furiously they fought. When their counterattacks failed, they fell back on effective defensive tactics, planting mines and booby-traps in the path of the advancing forces. When torn loose from their ground positions, the foe holed up in caves, bored in the rock bluffs, from which they had to be blasted with dynamite.

This exhausting battle continued without any perceptible letup for almost 26 straight days. Finally, by March 16, the entire Japanese garrison of 21,000 troops had been exterminated almost to a man. Conquest of the island cost the marines 23,827 men, of whom 4,275 were killed.

At Iwo, the marines had won one of the most savage and sanguinary engagements in their history. Their valour and skill were never in doubt and as the heated passions of war subsided after the defeat of Japan, it was acknowledged that the defending force, too, fought well and courageously.

**4. The Okinawa Campaign.**—As the Iwo campaign was drawing to a close, the U.S. command had marshalled strong army, air and naval forces for an invasion of Okinawa. The largest island of the Ryukyu archipelago, Okinawa is about 65 mi. long and is not more than 15 mi. across at its widest point. The capital is Shuri, nearby is Naha (Nawa), the largest city. The distance from Naha to Nagasaki on Kyushu island is only 471 mi. Okinawa, many times larger than Iwo, would become in U.S. possession an important base of operations for the invasion of the Japanese homeland. For its defense, the Japanese had garrisoned on the island a force of 120,000 seasoned troops and employed for the first time, en masse, the Kamikaze corps.

The customary air and sea attacks preceded the ground assault on Okinawa and the beaches selected for landing sites were given a thorough "going-over" by Allied aircraft and warships. The land invasion itself got underway April 1, when a contingent of U.S. ground troops landed on the Hagushi beaches on the southern part of the island. Before night-fall, some 50,000 men of the U.S. 10th army, under command of Lt. Gen. Simon Bolivar Buckner, Jr., had gone ashore and had established a beachhead some five miles long.

Japanese resistance to the beach landings was deceptively weak and by April 4, U.S. regular army troops and marines had cut the island in two. One section of the 10th army drove cautiously to the north and conquered the entire northern two-thirds of the island by April 22. However, that part of the 10th army that drove southward toward Naha and Shuri encountered the strongest kind of resistance. As on Iwo, the Japanese fought with great tenacity and succeeded in making the 10th expend heavy casualties for small gains. The Japanese force defending the Naha-Shuri section numbered about 60,000. By May 1, these troops were locked up in an area of 90 sq.mi. at the island's southern tip. They had been forced to give ground, but only after making the U.S. troops pay for every yard gained.

The fighting was positional. Both sides used fixed lines and, as in the Italian campaign, the defenders had the advantage of prepared positions. In some respects, the Japanese defenses were an improvement over the German variety. The Japanese utilized nearly all of Okinawa's numerous caves, which afforded good shelter against heavy land and sea bombardments.

Tactically, the 10th army relied heavily on the superior quantity and quality of its equipment. Making frontal assaults on the enemy positions, the U.S. army and marine forces would advance in waves by day with heavy artillery support. Flame-throwing tanks led infantrymen against the Japanese-held caves, which had to be destroyed one by one. At night, ground activities were limited to patrolling operations and artillery bombardment. As the Japanese refused to take prisoners, the close-quarter fighting on Okinawa was savage and waged to the death.

Okinawa became another Iwo, many times magnified. The Japanese fought with suicidal frenzy. The intensity of the campaign was reflected in the battle for "Chocolate Drop Hill," a fortified Japanese mound guarding the approaches to Shuri. The U.S. forces fought their way around this 130-ft. mound three times in five days and were thrown back each time. In one six-hour period, land and naval guns smothered the hill with 30,000 shells while bombers blanketed it with additional tons of explosives. These long-range efforts to dislodge the defenders were futile and the ground troops had to exterminate each Japanese fortification singly. This operation was tedious, costly and dangerous. On one side of the hill alone the Japanese had some 500 entrances to their underground positions and dynamite charges were used to close these openings. The hill was finally taken by the U.S. forces by May 16.

The heavily fortified Japanese line, running through Naha on the western coast through Shuri and to Yonabaru on the eastern coast, repelled most of the attacks. But on May 12, U.S. forces broke into Naha's suburbs and then proceeded to enter the city, fighting from house to house. Even more intense was the battle for Shuri, keystone of the enemy fortifications. The most important of the Japanese citadels on southern Okinawa, Shuri fell June 1, and the important Naha airfield was in U.S. hands by June 6. Despite the breaking of its main fortified line, Japanese opposition did not weaken and the enemy gave ground grudgingly. However, Japanese manpower was being rapidly used up. By far the

largest part of the defending garrison had been killed in action and on June 21, the battle of Okinawa had ended.

The Japanese had lost Okinawa simply because they had run out of caves and boulders from which to fight and had also run out of men to do the fighting. The stiffness of their opposition is reflected in the following timetable: from April 4 to May 26, the U.S. forces on southern Okinawa had advanced only 4 mi. It took them from May 26 to June 21 to cover the remaining 10 mi. to the southern tip of the island.

To the Americans, Okinawa was regarded as the greatest U.S. victory of the Pacific campaign. For possession of this invaluable island base, the U.S. paid heavily. By the end of June, its total casualties were about 39,000 men; Japanese losses at that date were 109,629 killed and 7,871 taken prisoner.

At Okinawa, the Kamikaze aircraft, which had first appeared at Leyte in Oct. 1944, made their peak effort against U.S. warships and troop transports. Strategically, the Kamikaze plane was a zero-hour weapon which the Japanese hoped would at least cripple the Allied fleet and prevent the scheduled invasion of their homeland. Tactically, the Kamikaze aircraft was, for all general purposes, a human-guided bomb which was aimed directly at a target—generally a warship. The pilot knew that on hitting the target, he would meet inevitable death.

Pilots for the Kamikaze ("Divine Wind") aircraft were especially trained for their suicide missions. They were, moreover, indoctrinated for their task to go down in "glorious death" with their planes. The best equipped of the Kamikaze aircraft was the "Baka bomb," a small high-speed plane fitted with a ton of T.N.T. in its nose. When lacking Bakas, the Japanese would use any ancient aircraft that could be rigged with an explosive charge that would go off on contact.

At first many high U.S. naval officers minimized the effectiveness of the Kamikaze attacks. Adm. Marc A. Mitscher declared as late as June 5, that the attacks were not "too serious," and that only 1% reached their targets. This figure seemed to be an understatement. While other navy officials also belittled the effect of the Kamikaze attacks, they did admit that presence of this novel weapon would require some redesigning of equipment aboard ships. The Kamikaze, however, did cause extensive damage. By mid-June, at least 33 U.S. ships had been sunk and 45 damaged, principally by air attack. Naval personnel casualties caused by Kamikaze attacks were extremely heavy.

**5. The Burma Campaign.**—In 1945, the Burma campaign came into its own. Up to late 1944, Burma was virtually a "forgotten front." For example, a scheduled offensive early in 1944 was postponed because landing craft and other war material earmarked for the Southeast Asia command had been diverted to the European theatre for the invasion of France. Later that year, however, these critical materials began to arrive in sufficient quantity to enable the Allies to put into action their plan to expel the Japanese from Burma.

Having lost the strategic initiative during their disastrous campaign on the India-Burma frontier the previous year, the Japanese in 1945 were clearly on the defensive. In Arakan, they were fighting stubborn delaying actions and in northeast Burma, their intention was to block the reopening of Allied land communications with China. Their efforts met with little success in either sector. In Arakan, British amphibious forces invaded and captured Akyab, Jan. 3, 1945, and then established bridgeheads on the mainland. To the north, the Ledo road (later renamed the Stilwell road) was opened and the first Allied convoy crossed into China, Jan. 28.

Following the successful Akyab landings, the Allies prepared to launch a converging operation on Mandalay. Lt. Gen. Sir Oliver Leese, commander of Allied land forces in Burma, had three forces at his disposal. In the northeast, above Lashio, were four Chinese and one British division as well as the two brigades of the U.S. "Mars Task Force," under Lt. Gen. Daniel I. Sultan, U.S. army. In central Burma, above Mandalay, Gen. Sir William J. Slim commanded the British 14th army consisting of between 10 and 12 divisions. In southwest Burma, Gen. Sir Philip Christison commanded the 15th corps, consisting of three divisions of Indian and African troops. In mid-February of 1945, the drive on Mandalay, the main Japanese base and communications centre in central Burma, was underway. A strong armoured task force of the 14th army, based near Monywa, opened the attack. After a series of forced marches through the Chin hills, it captured Meiktila, headquarters of the Japanese 15th army, some 80 mi. below Mandalay, by March 3. This surprise manoeuvre severed the Japanese supply and escape routes in the Mandalay area. Then the main body of the British 14th army, whose strength was put at 250,000 men, bore down from their base of operations above Ye-u. At the same time, Gen. Sultan's units were moving toward Lashio and Mogok. The pressure of this three-way drive prevented the Japanese command from taking any effective counteraction for fear of dispersing its troops. Meanwhile, Gen. Slim's army broke into the northeastern outskirts of Mandalay and captured the ancient capital on March 20, after 12 days of battle.

Gen. Slim then set his sights on Rangoon, some 330 mi. to the south. In order to beat the monsoon, Slim set in motion a rapid drive powered by swift tank thrusts and by the end of April the 14th army was only 36 mi. from Rangoon. As Slim's forces descended on Rangoon from the north, a British amphibious force landed (May 2) on both banks of the Rangoon estuary, some 20 mi. south of the city. The Japanese in Rangoon pulled out rapidly to avoid the British net and the following day (May 3), the great Burmese port was taken by the Allied armies.

The capture of Rangoon virtually closed the Burma campaign, save for mopping-up operations of Japanese forces who had fled eastward toward Thailand (Siam). The British had recovered an area about as large as Germany and the Japanese casualties in the fighting between Feb. 1, 1944, and April 30, 1945, as estimated by the Southeast Asia command, were 347,000, of whom 97,000 were counted dead. During that period some three Japanese armies were said to have been wiped out.

**6. Air War Over Japan.**—In 1945, a U.S. aerial campaign was underway against the cities of Japan. The Allied goal was to destroy both Japan's industry and its air force. Up to March of 1945, the Superfortress raids on Japan were more exploratory and experimental than effective. The raids on Tokyo did not then compare in destructive effect with those on Berlin. However, the U.S. strategic air force in the Pacific

had not reached its full development. In the early part of the year, the B-29's based in the Marianas were staging attacks of limited effectiveness on Japanese targets, on the Asiatic mainland and on Pacific island bases.

The first raid of any real consequence on Japan occurred March 10, when a force of 300 Superfortresses struck Tokyo with a cargo of fire bombs and flattened central Tokyo's "Zone 1," an area so designated because of its high rating as a bombing objective. "Zone 1" included about 1,000,000 people and a number of military, industrial and business areas. This blow laid waste to an area of about 15 sq.mi. Maj. Gen. Curtis Le May, then head of the 21st bomber command, said the incendiary bombs destroyed eight identifiable industrial and urban targets.

This attack, hailed at the time as the single most devastating air raid of the Pacific war, was later dwarfed. The B-29 missions over Japan increased in frequency. City after city was systematically attacked. Destruction was widespread. Thousands of civilians were killed and tens of thousands injured. On May 14, upward of 500 Superfortresses, carrying more than 500,000 individual incendiary bombs, struck Nagoya. The bombs dropped in this raid, exceeding 3,000 tons, virtually destroyed that city.

After the end of the war in Europe, the heavy bombers of that theatre—now only of medium size in comparison with the B-29's—were transferred to the Pacific. The Allied strategy now focused on destruction of the remainder of Japan's air power and obliteration of Japanese aircraft factories. The Superfortress was the principal instrument used for achievement of this task. This giant bomber's design was improved so that it could carry larger bomb-loads, operate longer hours and return with fewer casualties. An advantage of Allied air operations in the far east was the lack of Japanese counterattacks. Over the reich, German ground and air defenses were exceedingly efficient; losses of 60 to 70 bombers in a single mission were not infrequent. In Japan, however, few enemy fighters challenged the big bombers and in proportion to the number of planes involved per mission, Superfortress losses were low.

In the summer of 1945, the U.S. air forces, undoubtedly impelled by the desire to spare civilians from the ravages of war, began to give the Japanese advance notice of the cities they intended to bomb. The first of these warnings occurred July 27, when the B-29 bombers showered some 60,000 leaflets on cities designated for attack. The leaflets instructed the populace to evacuate the cities or be burned out.

In July 1945, the 20th air force command, which directed the Superfortress attacks, was assisted in its mission of destroying Japanese industries by carrier-based aircraft attached to the U.S. Pacific fleet. Meanwhile, the U.S. 3rd fleet, later joined by the British Pacific fleet, bombarded targets on the Japanese mainland. While naval guns shelled steel mills and oil installations on northern Honshu and Hokkaido, large numbers of carrier-based aircraft struck the Tokyo area, the Inland sea (where remnants of the Japanese fleet were anchored) and other objectives causing heavy damage.

7. The Atomic Bombings.—The climactic point of the war in the Pacific was reached when the first atomic bomb was dropped on Japan. This terrible weapon, which had been developed secretly in the United States with the aid and co-operation of the British and Canadian governments, had

been given a preview testing at Los Alamos, N.Mex. It proved to be far more destructive than any known explosive. On Aug. 6, 1945, a lone Superfortress winging its way over Hiroshima unloosed an atomic bomb on that city without warning. The bomb, whose explosive force was estimated to equal 20,000 tons of T.N.T., wiped out an area of slightly more than four square miles or about 60% of the city. Three days later (Aug. 9) an atomic bomb was also dropped on Nagasaki, destroying about one-third of that city. The casualties were frightful. The Nagasaki toll (reported Dec. 30, 1945) was 23,753 dead, 40,464 wounded and 1,927 missing. At Hiroshima (reported at Supreme Allied headquarters in Tokyo, Feb. 3, 1946), 78,150 were killed, 37,425 were injured and 13,983 persons were listed as missing.

The first reaction in the United States to the use of the atomic weapon was elation. The popular impression was that it had brought the war that much nearer to its end. Subsequently, more sober appraisals lent strength to the view that the United States, in employing this dangerous explosive without warning, set a grave precedent fraught with risk in the event of future wars. It was pointed out that a future aggressor might justify use of atomic weapons against the United States, arguing that as the U.S. forces were the first to use it without advance notice, they were therefore deprived of the moral right to protest in the event it were turned against them under similar circumstances.

8. Russian Invasion of Manchuria.—The soviet union's failure to enter immediately the war against Japan evoked some criticism among the western Allies. The complaints were that while the Russians had received ample supplies from the United States and Britain to turn back the Germans in the critical days at Stalingrad, the Russians in turn refused to help the Allies with their difficult task of defeating Japan. Russian leaders, however, answered with the argument that the Red army had its hands full with the Germans and until this foe was decisively beaten, the soviet union could not enter the war against Japan. Both Roosevelt and Churchill concurred with this concept of global strategy.

At Yalta in Feb. 1945, the leaders of the Big Three recognized that Germany's defeat was a matter of months. When the question of eventual soviet participation in the Pacific war was brought up, Premier Stalin was said to have replied that his troops would be ready to move into Manchuria within three months after the defeat of Germany. In order to implement the strength of the soviet far eastern armies, the United States shipped increasingly large amounts of war materials to Siberia. Added to the soviet union's own shipment of military equipment to this far eastern theatre, these supplies formed the necessary stockpiles required for the eventual soviet entry into the war.

On Aug. 8, three months after the reich's surrender, the soviet union declared war on Japan. The Red armies starting the attack the following day (Aug. 9) at 12.10 A.M., launched a three-ply invasion of Japanese-held Manchuria. The over-all command of the soviet forces was vested in Marshal Alexander M. Vasilevsky, who concentrated his armies at strategic areas of the Soviet-Manchurian border. His plan was to drive four spearheads into Manchuria and encircle the Japanese Kwantung army, estimated variously at between 1,000,000 and 2,000,000 men. To accomplish this, Vasilevsky had three large armies. On the west was the Trans-Baikal army under Marshal Rodion Y. Malinovsky, which struck across the mountain passes of the Great Hingan range in a drive paralleling the Chinese Eastern railway. On the east, was the 1st Far Eastern

BLOOD PLASMA and whole blood being given to wounded marines in Feb. 1945 at a first aid station set up on Iwo Jima. Great quantities of the vital fluid were flown there from the U.S. because of the high casualty rate

army led by Marshal Kirill A. Meretskov; this force, based in the Vladivostok area, spearheaded a converging westward assault toward Harbin. In the centre and north, the 2nd Far Eastern army under Gen. Maxim Purkayev, with its base of operations in the Blagoveshchensk area, drove across the Amur river.

In the first phase of the Manchurian invasion, the greatest advances were rolled up by Malinovsky's forces. One section of his Trans-Baikal army sped down the Chinese Eastern railway and another to the south swept toward Tuchuan and Hsinking (Changchun). Meanwhile, Russian marines staged an amphibious landing in Korea, Aug. 12, capturing the naval base of Rashin and the nearby port of Yuki; this operation was intended to cut off the Kwantung army from its supply ports closest to home.

Heretofore regarded as one of Japan's best fighting units, the Kwantung army hardly put up the lively resistance expected of it. One explanation was that the troops of this force, while not lacking in courage, had little experience in mechanized warfare on a large scale and were poorly equipped for this kind of campaign. The Red army, on the other hand had four years of experience against the wehrmacht and was splendidly trained and equipped for mechanized battle. By Aug. 15, when Hirohito made his surrender broadcast, the Russians were deep in Manchuria. As the Japanese failed to comply immediately with Marshal Vasilevsky's order that they lay down their arms, the soviet armies did not halt their offensive. By Aug. 20, they captured Hsinking, Mukden and Harbin and a soviet communiqué said that almost all of Manchuria had been liberated. Thereafter, Japanese forces started to capitulate en masse and on Aug. 23, Premier Stalin announced that soviet armies had occupied all of Manchuria, Paramoshiri (Paramushiru) in the Kuriles and southern Sakhalin. Some desultory fighting continued as Russian forces occupied the northern half of Korea and completed occupation of the Kuriles by Sept. 1. After the conclusion of the fighting in Manchuria, there was some debate as to whether the Russian entry or the atomic bomb was the decisive factor in bringing about the downfall of Japan. This issue appeared to be purely academic and conjectural. Sober observers refused to measure the credit for victory by yardstick methods and emphasized that it was the combined efforts of the United Nations, large and small, that brought about the defeat of the axis powers.

9. End of World War II.—The atomic bombings and the soviet invasion of Manchuria convinced the Japanese that further resistance was futile and the Japanese government decided to accept the surrender offer as laid down at the Potsdam conference by Great Britain, the United States and China, July 26. Under these terms, Japan was to be stripped of its vast empire and reduced to the home islands. While Emperor Hirohito was permitted to retain his throne, he was made subject to the authority of the commander of the Allied occupation armies. Hirohito announced acceptance of the Potsdam terms, Aug. 14, and on Sept. 2, Japanese emissaries signed the formal surrender document in a ceremony aboard the U.S. battleship "Missouri" in Tokyo bay, thus concluding World War II, six years and one day after it was launched by the German invasion of Poland, Sept. 1, 1939. ### IV.—WORLD WAR II CASUALTIES

United States.—U.S. war casualties by the close of 1945 were still subject to final revision, but on Nov. 1, 1945, the army reported 217,569 killed, 571,442 wounded, 18,311 missing and 115,333 prisoners. The navy casualties were 56,261 killed, 80,260 wounded, 8,908 missing and 710 prisoners. On Jan. 18, 1946, the marine corps reported 19,940 dead, 55,409 wounded, 688 missing and 3 prisoners. On Oct. 1, 1945, the coast guard casualties were 808 dead, 213 wounded and 95 missing. On Dec. 26, 1945 there were 5,638 merchant seamen reported as dead or missing. Thus, the country's total war casualties were 1,068,794, the army accounting for 922,655 and the navy for 146,139 casualties.

Other United Nations.—The British commonwealth and empire armed forces suffered the following total casualties from Sept. 3, 1939, to Aug. 14, 1945, according to a statement by the prime minister in commons:

	Killed, including died of injuries	Missing	Wounded	Prisoners of war	Total
United Kingdom . . . . .	244,723	53,039	277,090	180,405	755,257
Canada . . . . .	37,476	1,843	53,174	9,045	101,538
Australia . . . . .	23,365	6,030	39,803	26,363	95,561
New Zealand . . . . .	10,033	2,129	19,314	8,453	39,929
South Africa . . . . .	6,840	1,841	14,363	14,589	37,633
India . . . . .	24,338	11,754	64,354	79,489	179,935
Colonies . . . . .	6,877	14,208	6,972	8,115	36,172
Total . . . . .	353,652	90,844	475,070	326,459	1,246,025

For the same period, war casualties of merchant seamen were:

Deaths . . . . .	30,189
Missing . . . . .	5,264
Wounded . . . . .	4,402
Internees . . . . .	5,556
Total . . . . .	45,411

Soviet war dead on the eastern battle fronts were estimated by a general of the Red army in Berlin as between 12,000,000 and 15,000,000, one-half of them soldiers and the other half civilians. The casualties in the short war with Japan were officially announced as 8,219 killed and 22,264 wounded. Civilian losses in the Ukraine alone amounted to 2,500,000-dead and 1,500,000 missing according to the *Red Star*, soviet army newspaper.

Official figures for Chinese military casualties during eight years of fighting the Japanese, as of July 1945, were:

Killed . . . . .	1,310,224
Wounded . . . . .	1,752,591
Missing . . . . .	115,248
Total . . . . .	3,178,063

French casualties from Sept. 1939, totalled 1,235,000 including 200,000

THE JAPANESE SURRENDER document was signed aboard the U.S.S. "Missouri" in Tokyo bay on Sept. 2, 1945 (Japanese time). Gen. Douglas MacArthur is shown broadcasting the ceremonies as Japanese Foreign Minister Mamoru Shigemitsu signs for the emperor. Behind him, Gen. Yoshijiro Umezu, chief of the imperial general staff awaits his turn to sign, and at the left stand a line of ranking U.S. army and navy officers

17,494 killed, 9,353 wounded and 17,647 missing. There were also 3,584 deaths in the navy. (See also ATOMIC BOMB.) (W. B. M.)

killed and 250,000 seriously wounded in the armed forces. About 100,000 civilian victims died from acts of war in France, 50,000 were executed by the enemy and 300,000 died in Germany; 208,000 were repatriated as invalids from Germany and 127,000 civilians were wounded in France.

Belgian casualty figures, as revised after its liberation, included 7,760 military deaths either in action in May 1940 or in captivity. 20,271 civilians were killed from Sept. 1939, to the end of the war.

Out of a total population of 3,706,349 (1935 census) Denmark lost 3,006 lives in the war. Of these, 1,500 were seamen in the Free Danish merchant navy and volunteers in Allied armies.

The war cost Greece 415,300 dead out of a population of 7,350,000. This included 23,700 deaths in action against Italians and Germans; 260,000 civilian deaths due to starvation; 7,000 deaths through bombings; 40,000 slain by Bulgarians; 30,000 executed by the enemy; 50,000 killed in guerrilla warfare; 1,100 killed in the middle east; 3,500 killed in the navy and the merchant marine. Of the 210,000 refugees in the middle east and the deported persons, 50% would probably never return to Greece, while the loss from reduced birth rate during four years of war amounted to 410,000.

Military casualties of the Netherlands for the entire war period were 6,238 killed and 87 missing. During the same period, 25,000 civilian underground workers were killed.

Norway, with a total population of 3,000,000, lost more than 10,000 lives in the war including 900 members of the naval and air forces and 3,200 merchant seamen.

Polish military casualties were 265,800 killed and wounded in the various campaigns of the war. About 5,000,000, or 14% of the population (including 3,000,000 Jews), were killed, starved or perished in concentration camps.

Yugoslavia had 1,685,000 civilian and military dead, 75% of them in battle with the Germans.

Axis Nations.—Estimated losses of the German armed forces in killed, permanently wounded and permanent medical cases between Sept. 1, 1939, and May 10, 1945, were placed at 7,400,000 by the British prime minister in commons on Oct. 11, 1945. A captured German document gave the total casualties for all services up to Nov. 30, 1944, as 4,064,438. However, Adolf Hitler was stated to have announced on Feb. 24, 1945, that total war losses were 12,500,000 including 6,300,000 killed, 3,000,000 seriously wounded and 3,200,000 captured. The medical branch of the U.S. Strategic Bombing survey stated on Dec. 10, 1945, that 500,000 civilians were killed in Germany by Allied bombs, while 700,000 were injured.

The Japanese government on Sept. 5, 1945, listed the army dead in action and from illnesses due to the war as 350,000, while navy dead were 158,795. Army wounded were given as 4,616,000. Civilians dead from air raids were given on Aug. 23, 1945, as 241,309 and civilians injured as 313,041.

Italian military casualties, while fighting on the axis side, were officially stated to be 60,000 dead, 200,000 missing and 500,000 captured. After the armistice, fighting on the Allied side, Italy suffered between Sept. 8, 1943, and April 30, 1945, a total of 44,494 army casualties including

## V.—COST IN MONEY OF WORLD WAR II

Statistical accuracy in the computation of the costs of World War II could not be obtained by the close of 1945. There was no precise date when the war costs began, nor when such costs would end, nor was it possible to distinguish the point where normal defense costs faded into preparedness costs, nor was the value of discarded supplies left over from World War I that were used throughout World War II determinable, and other unmeasurable costs were reduced to figures by sheer conjecture. The result of these factors had been widely varying tentative conclusions as to the costs of World War II.

In the president's budget message, Jan. 9, 1945, the cost of the war through the fiscal year 1946 was estimated at \$450,000,000,000, but this was based on the assumption that the war would end in 1946. For the United States, the cost of World War II as of V-E day had reached \$275,703,000,000 according to the secretary of treasury, who reported that the U.S. had spent during 1941 about \$6,700,000,000; 1942—\$28,300,000,000; 1943—\$75,100,000,000; 1944—\$89,700,000,000; 1945—\$75,900,000,000. Obviously these figures reflect only the monetary transactions of the treasury. Moreover, these monetary figures do not include costs of corporate conversion and reconversion, private voluntary efforts of bond sales, Red Cross voluntary assistance and gifts, nor the loss of irreplaceable natural resources, nor the losses suffered by the people through curtailment of civilian production or reduced consumption of normal imports, or the psychological costs of suffering and sorrow.

One of the most reliable estimates of the monetary costs of World War II to the people of the United States, submitted to the *United States News*,<sup>1</sup> showed the following breakdown of expenditures:

Munitions:	
Aircraft costs . . . . .	\$ 47,352,000,000
Navy and other ships . . . . .	41,287,000,000
Ammunition . . . . .	21,570,000,000
Tanks, jeeps and motor transport . . . . .	21,369,000,000
Guns and their precision instruments . . . . .	11,558,000,000
Radio, telephone and electronics . . . . .	11,442,000,000
Combat clothing, and munition supplies . . . . .	40,851,000,000
Total munitions . . . . .	\$195,429,000,000
Non-munitions:	
Pay, subsistence and travel . . . . .	\$ 69,122,000,000
War construction costs . . . . .	28,000,000,000
Other non-munition items . . . . .	48,940,000,000
Total non-munitions . . . . .	\$146,062,000,000
Total war costs, June 30, 1941, to Dec. 31, 1946 . . . . .	\$341,491,000,000

In contrast with the foregoing data, the research staff engaged in studying war costs at American university, Washington, D.C., concluded that the cost of World War II to the people of the United States between Dec. 7, 1941, and Aug. 14, 1945, had approximated \$317,600,000,000. This study also reported that the cost of the war to Russia had amounted to \$192,000,000,000; the United Kingdom \$120,000,000,000; Germany \$272,000,000,000; Italy \$94,000,000,000; and Japan \$56,000,000,000. Thus for the leading nations, the cost of the war exceeded a million

<sup>1</sup>Reprinted from *United States News*, an independent weekly newspaper on national affairs, published in Washington, D.C., copyright 1946 by United States News Publishing Corporation.

THIS COAST GUARD lookout aboard an L.S.T. kept sharp watch one morning in 1945 as dawn broke and threw into relief a U.S. armada moving toward Luzon

million dollars: \$1,051,600,000,000.

When other nations are included, greater uncertainties arise. The costs of the war to the Chinese peoples were immense but unfortunately no reliable data were available to indicate even a rough approximation of their war costs. Official reports of many countries do not include obvious war costs. The rate at which the monetary units of different countries may be converted into U.S. dollars had varied widely during the war and arbitrary judgment was required to reduce war costs to a common dollar basis. After making adequate allowance for probable error, the following table shows the minimum costs of World War II to other peoples:

Country	Cost
Canada . . . . .	\$15,680,000,000
France, 1935 to the capitulation . . . . .	9,000,000,000
After Normandy landings . . . . .	6,000,000,000
Belgium . . . . .	3,250,000,000
Poland—to fall of Warsaw . . . . .	1,550,000,000
Czechoslovakia, 1935 to invasion . . . . .	800,000,000
Netherlands—to invasion . . . . .	925,000,000
Greece—1935-1942 . . . . .	220,000,000
Yugoslavia, 1935-1942 . . . . .	200,000,000
South American countries . . . . .	8,000,000,000
Mexico . . . . .	200,000,000
China (estimates unreliable) . . . . .	.....
Estimated costs of World War II . . . . .	\$45,825,000,000

Unfortunately, inadequate data were available to indicate the war costs to the peoples of Finland, Norway, Latvia, Lithuania, Estonia, Hungary, Rumania, Bulgaria, and to such neutral nations as Turkey, Sweden and Iran. For the nations reporting reasonably accurate data, it appeared to be clear that the costs of World War II exceeded \$1,097,400,000,000. World War II was, indeed, a "million million dollar war!" (E. H. HE.)

**WPB:** see WAR PRODUCTION BOARD.

**Wrestling.** Three triple champions were crowned in the 1945 National A.A.U. wrestling championships, contested at Dallas, Tex. Dr. A. M. Northrup, San Francisco

veterinarian, won his third national title in as many years and his second straight in the 175-lb. division. In 1943 he won the 165-lb. crown. Richard Vaughan of Lancaster, Pa., repeated the heavyweight conquests he made in 1944 and 1937. Douglas Lee of Baltimore, winner of the 135-lb. class in 1941 and 1942, won the 155-lb. title in 1945. The Oklahoma City Y.M.C.A., with 34 points, won the team championship, followed by the Corpus Christi Naval Air Training base, 17, and San Francisco Olympic Club, 9. (M. P. W.)

**WSA:** see WAR SHIPPING ADMINISTRATION.

**Wyoming.** A Rocky mountain state, admitted to the union July 10, 1890, as the 44th state. Leadership in the extension of rights to women gave it the name "Equality state." Land area 97,506 sq.mi.; water area 408 sq.mi.; pop. (1940) 250,742. The rural population was 157,165; urban 93,577; 229,818 native white; 950 Negro; 17,107 foreign born. On July 1, 1944, the bureau of census estimated the population of the state at 257,108. Capital, Cheyenne (1940: 22,474). Other cities of 10,000 or more: Casper (17,964); Laramie (10,627); Sheridan (10,529).

**History.**—State officials for 1945 were: governor, Lester C. Hunt (D.); secretary of state, William Jack (D.); auditor, Carl Robinson (D.), who resigned Sept. 15, 1945; John J. McIntyre (D.) was appointed by the governor, Sept. 16, 1945, as state auditor; treasurer, Earl Wright (R.); superintendent of public instruction, Esther Anderson (R.). Wyoming supreme court justices for 1945 were: Fred H. Blume (R.), chief justice; Ralph

Kimball (R.) and William Riner (R.), associate justices.

**Education.**—The number of elementary schools in 1945 was 1,040, with an enrolment of 40,420, and with 1,016 teachers. There were 136 high schools and 20 permit high schools (two years only) with an enrolment of 14,103 students and with 750 high school teachers. Total salaries of teachers, superintendents, supervisors and principals was \$3,370,254.09.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Estimated expenditures for 1945 for social assistance and public welfare were as follows: aid to dependent children \$190,220 (380 cases); old-age assistance \$1,275,142 (580 cases); general relief \$150,320 (540 cases); aid to the blind \$53,600 (128 cases).

In 1945 Wyoming had three correctional institutions, one state training school, one industrial institute for boys and one industrial school for girls. Estimated expenditures for 1945 were as follows: penitentiary \$236,672 (223 inmates); industrial boys' school \$61,400 (84 inmates); industrial girls' school \$45,260 (85 inmates); state training school \$118,862 (386 inmates); hospital for insane \$140,622 (666 inmates). Other state institutions and their estimated expenditures for 1945 were: state children's home \$32,609 (41 inmates); Wyoming general hospital \$188,252 (140 beds); Hot Springs State park \$12,111; tuberculosis sanatorium \$36,118 (23 patients); soldiers' home \$30,622 (32 inmates).

**Communications.**—In Nov. 1945, state highways totalled 4,082 mi.; rural highways 20,012 mi.; railroads 1,996.2 mi. (main tracks, taxable).

**Banking and Finance.**—On June 30, 1945, there were 30 state banks with deposits of \$40,021,216 and resources of \$44,230,610. National banks numbered 26, with deposits of \$99,111,106.23 and resources of \$109,613,004.21. There were ten insured savings and loan associations.

Total receipts for the fiscal year were \$16,312,140.26; disbursements \$15,102,244.87; gross bonded debt \$2,520,000.

**Ranching and Agriculture.**—Wyoming livestock products sold for approximately between \$72,000,000 and \$79,000,000 in 1945, and other farm products sold at between \$15,000,000 and \$22,000,000 for the same period.

Table I.—Leading Ranch and Farm Products of Wyoming, 1945 and 1944

Product	1945 (prel.)	1944
Cattle . . . . .	1,109,000	1,052,000
Hogs . . . . .	136,000	164,000
Sheep . . . . .	3,898,000	3,521,000
Wool, lb. . . . .	30,110,000	29,118,000
Tame hay, tons . . . . .	792,000	761,000
Wheat, bu. . . . .	3,290,000	3,198,000
Sugar beets, tons . . . . .	310,000	305,000
Dry beans, cwt. . . . .	1,400,000	1,251,000
All corn, bu. . . . .	1,300,000	1,260,000
Potatoes, bu. . . . .	2,200,000	2,170,000

**Manufacturing.**—The value of manufactures, excluding oil refining and dairying, was estimated at \$27,000,000 for 1944. No figures were available for 1945.

**Mineral Production.**—The total value of Wyoming's principal mineral production in 1945 was estimated at \$55,140,000. Petroleum was the

Table II.—Principal Mineral Products of Wyoming, 1945 and 1944

Minerals	Taxable valuation	
	1945	1944
Petroleum . . . . .	\$30,892,000	\$28,850,108
Bituminous coal . . . . .	18,900,000	18,671,170
Iron . . . . .	2,600,000	2,316,244
Bentonite . . . . .	300,000	273,095
Natural gas . . . . .	1,900,000	1,359,368

principal mineral product. The largest producer among the numerous fields was Lance Creek. (M. H. E.)

**X-Ray.** The year 1945 was notable as the 50th anniversary of the discovery of X-rays. This event, which had such a far-reaching effect upon the practice of medicine and which revolutionized theories held concerning the nature of matter and energy, took place on Nov. 8, 1895, at the University of Würzburg. The discoverer, Wilhelm Konrad Roentgen, published his first paper on this great discovery, entitled "On a New Kind of Rays," in the *Sitzungsberichte* of the Würzburg Physical Medical society on Dec. 28, 1895. In that first paper and another later published in the same journal March 9, 1896, Roentgen set forth all of the properties of X-rays which are known with one exception, the ionization of gases.

Almost immediately after publication of these papers, beginnings were made in many countries to apply the new rays to the diagnosis and treatment of disease. Numerous historical articles published in medical journals during Nov. and Dec. of 1945 attest the widespread use of X-rays in medicine at the end of the first half-century following their discovery. Articles in the *American Journal of Roentgenology and Radium Therapy* and *Radiology* will serve to inform the interested reader of the de-

ITALIAN CHILD being X-rayed in Rome during the U.N.R.R.A. campaign against tuberculosis in 1945, as U.N.R.R.A. official looked on

velopment and present status of radiology in various fields of medical practice.

An important investigation carried on during 1945 was concerned with the prevalence and cause of pulmonary calcification. Because pulmonary calcification has long been considered evidence of healed tuberculosis many men were rejected for military service when excessive calcification was found by roentgenographic examination. An analysis of the incidence of pulmonary calcification shown by X-ray examination in conscripted men made early in World War II showed that the prevalence of calcified lesions varied widely in different parts of the United States from 6% in Oregon to 28% in Kentucky. There is a large area in the east central states where the incidence of lung calcifications was much higher than in surrounding areas and the remainder of the country. It was also noted that the prevalence of calcifications was generally much higher than that of positive reactions to tuberculin. These and other considerations led to an investigation of pulmonary calcification conducted co-operatively by the National Tuberculosis association, the U.S. public health service and a large number of specialists throughout the country. About 10,000 student nurses in 65 schools located in nine widely separated cities were the material for study.

The investigation confirmed by X-ray examination the regional differences in prevalence of pulmonary calcification and also the fact that the frequency of calcification is relatively high in the east central area of the country. It also established the fact that the majority with calcification have negative tuberculin reactions.

The possibility that pulmonary calcification might result from infection by *Histoplasma capsulatum* was then investigated.

Preliminary data were based on the results of chest roentgenograms, tuberculin tests and intradermal histoplasmin tests on 3,103 student nurses in four centres. The results indicated that infection with histoplasma, or an immunologically related organism, is common in some localities, and that it is probably the principal nontuberculous cause of pulmonary calcification.

The investigation was not completed, but if the final results turn out to be essentially the same as those given in the pre-

liminary report a number of implications were expected to be apparent. Histoplasmosis may be a much more common disease, especially in a central area of the U.S., than has been the conception in the past. Its nonrecognition may be because its clinical manifestations are so slight as not to have been recognized. A second result of the investigation is apparent proof that the high incidence of pulmonary calcification in certain areas is the result of infection with *Histoplasma capsulatum* or a related organism, and not to tuberculosis. (See also CANCER; PHOTOG-  
RAPHY; TUBERCULOSIS.)

BIBLIOGRAPHY.—Carroll E. Palmer, "Nontuberculous Pulmonary Calcification and Sensitivity to Histoplasmin," *Pub. Health Rep.*, 60:513-520 (May 11, 1945). (A. C. CH.)

**Yachting.** The ending of World War II in the European theatre in early May and the consequent lifting of restrictions on sailing off the east coast of the United States restored yachting to something of its prewar status. Thus the season of 1945 in all sections of the United States excepting the west coast, where the waters were restricted until the end of the war in the Pacific, was an active one with both the racing and the cruising men. While the racing was still confined to the classes of smaller yachts, without paid crews, toward the end of the season a number of the larger yachts and ocean racers came out and participated in the long-distance events. For the first time in four years, there was a limited amount of building, but this was confined chiefly to experimental and development jobs, using some of the new materials perfected during the war, such as moulded plywood and, in very small craft, some of the new plastics. A class of some 50 little racing boats known as the L 16's was built (16 ft. on the water line) as well as several boats for the junior sailors. Several cruisers of some 50 ft. in length over-all were also launched, which followed in general type and construction those built before World War II.

Several events of intersectional or international scope were sailed, but in most of these, because of transportation difficulties, the boats were provided by the club holding the race, and were sailed by crews representing the competing organizations. Chief of these was the 24th world's championship of the Star class, sailed on Long Island sound off Stamford, Conn., which brought entries from 21 fleets from all parts of the United States, from Cuba and Canada. The championship was taken by the San Diego (Calif.) Bay fleet, Malin Burnham, skipper, with 87 points; the Los Angeles entry, James Cowie, skipper, being the runner-up with 85 points. Among the college sailors, the U.S. coast guard academy crew won the McMillan trophy for the intercollegiate championship sailed on Shinnecock bay, and Massachusetts Institute of Technology took the college Star class title. In the sailing dinghy trophies, M.I.T. also took the Danmark and the Fowle trophies.

After a lapse of four years during the war, the Lake (Ontario) Yacht Racing association resumed its annual regatta and brought together 90 yachts from Canada and the United States, at Hamilton, Ont. Winners of principal classes and trophies: Freeman cup, "Tramp Royal," Col. L. Grant; 12- and 10-metre class, "Mitena," J. VanVoories; Class P and 30's, "Blue Moon," J. A. Williamson; 8 metres, "Bangalore," E. J. Doyle; Class R, "Shadow," N. and K. Casle; 6-metre, "Jill," Howard Klitgard.

Long-distance racing saw the Vineyard race (232 mi.) resumed by the Stamford Yacht club. Winners, Class A, "Revonoc," Harvey Conover; Class B, "Chanteyman," E. R. Raymond, Jr. The Chicago-Mackinac race (Lake Michigan) had 37 starters. Winners: racing division, "Cara Mia," L. L. Karas; cruising class, "Bangalore Too," Lombard and Kinsey. Port Huron-Mackinac race (Lake Huron) saw only six yachts finish out of 40 starters because of very severe weather. Winners:

"Blitzen," Grates-Knapp, in racing cruising division; "Shamrock," Wunsch-Kerr, in racing division. (H. L. St.)

**Yale University.** As 1945 drew to a close, Yale was in the midst of transition from war to peace. The army air force technical training school, which at one time occupied a third of the university buildings and graduated 13,000 officers, had left the university. Army, navy and marine students in college training programs were reduced sharply in number and a school for training officer specialists for Japan terminated when hostilities ceased.

The Yale studies for returning servicemen, under the direction of Professor Ralph H. Gabriel, became increasingly important as hundreds of applications were received from veterans desiring to resume college work. The returned serviceman was offered his choice of a standard program of studies in one of the schools or of a special course arranged to meet his needs and capacities. He was urged to participate in all university affairs.

A revised peacetime liberal arts course, designed to bring college students to increased intellectual maturity, was adopted. It was intended to provide an undergraduate with fundamental studies, acquaint him with the great fields of knowledge and make him a reasonably competent person in a limited field. The course had three essential features: a standard plan for the majority of students; an experimental, controlled educational program for selected students of demonstrated ability; and a program freeing men of exceptional merit from formal requirements. Assigned summer reading was to be required.

Three new research centres were established—a labour and management centre, an institute of occupational medicine and hygiene and a nutrition laboratory.

Emphasis on far eastern studies, brought into focus by the war, continued with a staff officers' school for Asiatic studies and a school in Chinese for U.S. religious and medical missionaries, educators and state department officials.

Reorganization of the work of the Sheffield Scientific school was completed and its faculty became the teaching body in mathematics and the sciences for the graduate school. Undergraduate courses in science were placed under the control of Yale college. The National Yale Alumni Placement service was prepared to give aid to several thousand younger graduates returning to civilian life from the armed forces. (For statistics of faculty, enrolment, endowment, library volumes, etc., see UNIVERSITIES AND COLLEGES.) (C. A. L.)

**Yalta Conference.** Yalta is a well-known Russian resort on the Crimean coast of the Black sea which became internationally famous as a result of the meeting of the original Big Three, Roosevelt, Stalin and Churchill in Feb. 1945. The meeting, popularly known as the Yalta conference, was held under conditions of extreme wartime secrecy. A communiqué issued on Feb. 12 stated that the conference had lasted eight days, gave the names of the participants and summarized the principal political conclusions which were reached. (The communiqué is set out below.)

There were also military conversations among high-ranking U.S., British and Russian officers; but the contents of these were naturally not disclosed. Among those who participated in the conference as members of the U.S. delegation were Secretary of State Edward R. Stettinius, Gen. George C. Marshall, Adm. Ernest J. King, Harry Hopkins, Adm. William D. Leahy and Averell W. Harriman, ambassador to the soviet union.

The policy of the participating powers toward Germany was defined, and one of the most important decisions of the conference concerned the government of Poland. A few weeks before the opening of the conference the soviet government had

recognized the Lublin committee, a communist-dominated and soviet-oriented political grouping, as the government of Poland. Great Britain and the United States maintained diplomatic relations with the Polish government-in-exile in London.

It was agreed that the new Soviet-Polish frontier should follow the Curzon line, "with digressions from it in some regions of five to eight kilometres in favour of Poland." This decision took away from Poland about two-fifths of its prewar territory with a mixed population of Poles, Ukrainians, White Russians and Jews, the Poles being the largest single ethnic group, according to the latest census figures. Poland was to "receive substantial accessions of territory in the north and west."

It was agreed that there should be joint action of the three powers to assist the peoples in countries liberated from axis rule and that "the establishment of order in Europe and the rebuilding of national economic life must be achieved by processes which will enable the liberated peoples to destroy the last vestiges of nazism and fascism and to create democratic institutions of their own choice."

In regard to Yugoslavia the conference decided that the agreement between Marshal Tito and Dr. Ivan Subasitch (Subasic) (representative of the Yugoslav government in London) should be put in effect and lead to the formation of a new government. It was also recommended that this new government should enlarge the anti-Fascist Assembly of National Liberation to include members of the last Yugoslav parliament who had not "compromised themselves by collaboration with the enemy." It was also agreed that "permanent machinery should be set up for regular consultation between the three foreign secretaries." (See also RECONSTRUCTION PLANNING; UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION; UNITED STATES.) (W. H. CH.)

#### REPORT OF THE CONFERENCE

For the past eight days, Winston S. Churchill, Prime Minister of Great Britain, Franklin D. Roosevelt, President of the United States of America, and Marshal J. V. Stalin, Chairman of the Council of People's Commissars of the Union of Soviet Socialist Republics, have met with the Foreign Secretaries, Chiefs of Staff, and other advisors in the Crimea.

The following statement is made by the Prime Minister of Great Britain, the President of the United States of America, and the Chairman of the Council of People's Commissars of the Union of Soviet Socialist Republics on the results of the Crimean Conference:

##### THE DEFEAT OF GERMANY

We have considered and determined the military plans of the three allied powers for the final defeat of the common enemy. The military staffs of the three allied nations have met in daily meetings throughout the Conference. These meetings have been most satisfactory from every point of view and have resulted in closer coordination of the military effort of the three allies than ever before. The fullest information has been interchanged. The timing, scope and coordination of new and even more powerful blows to be launched by our armies and air forces into the heart of Germany from the East, West, North and South have been fully agreed and planned in detail.

Our combined military plans will be made known only as we execute them, but we believe that the very close working partnership among the three staffs attained at this Conference will result in shortening the War. Meetings of the three staffs will be continued in the future whenever the need arises.

Nazi Germany is doomed. The German people will only make the cost of their defeat heavier to themselves by attempting to continue a hopeless resistance.

##### THE OCCUPATION AND CONTROL OF GERMANY

We have agreed on common policies and plans for enforcing the unconditional surrender terms which we shall impose together on Nazi Germany after German armed resistance has been finally crushed. These terms will not be made known until the final defeat of Germany has been accomplished. Under the agreed plan, the forces of the three powers will each occupy a separate zone of Germany. Coordinated administration and control has been provided for under the plan through a central control commission consisting of the Supreme Commanders of the three powers with headquarters in Berlin. It has been agreed that France should be invited by the three powers, if she should so desire, to take over a zone of occupation, and to participate as a fourth member of the control commission. The limits of the French zone will be agreed by the four governments concerned through their representatives on the European Advisory Commission.

It is our inflexible purpose to destroy German militarism and Nazism and to ensure that Germany will never again be able to disturb the peace of the world. We are determined to disarm and disband all German armed forces; break up for all time the German General Staff that has repeatedly

PRIME MINISTER CHURCHILL, President Roosevelt and Premier Stalin with members of their advisory staffs at the conference near Yalta in the Crimea during Feb. 1945

contrived the resurgence of German militarism; remove or destroy all German military equipment; eliminate or control all German industry that could be used for military production; bring all war criminals to just and swift punishment and exact reparation in kind for the destruction wrought by the Germans; wipe out the Nazi Party, Nazi laws, organizations and institutions, remove all Nazi and militarist influences from public office and from the cultural and economic life of the German people; and take in harmony such other measures in Germany as may be necessary to the future peace and safety of the world. It is not our purpose to destroy the people of Germany, but only when Nazism and militarism have been extirpated will there be hope for a decent life for Germans, and a place for them in the comity of nations.

##### REPARATION BY GERMANY

We have considered the question of the damage caused by Germany to the allied nations in this war and recognized it as just that Germany be obliged to make compensation for this damage in kind to the greatest extent possible. A commission for the compensation of damage will be established. The commission will be instructed to consider the question of the extent and methods for compensating damage caused by Germany to the allied countries. The commission will work in Moscow.

##### UNITED NATIONS CONFERENCE

We are resolved upon the earliest possible establishment with our allies of a general international organization to maintain peace and security. We believe that this is essential, both to prevent aggression and to remove the political, economic and social causes of war through the close and continuing collaboration of all peace-loving peoples.

The foundations were laid at Dumbarton Oaks. On the important question of voting procedure, however, agreement was not there reached. The present Conference has been able to resolve this difficulty.

We have agreed that a conference of United Nations should be called to meet at San Francisco in the United States on April 25, 1945, to prepare the charter of such an organization, along the lines proposed in the informal conversations at Dumbarton Oaks.

The Government of China and the Provisional Government of France will be immediately consulted and invited to sponsor invitations to the conference jointly with the Governments of the United States, Great Britain and the Union of Soviet Socialist Republics. As soon as the consultation with China and France has been completed, the text of the proposals on voting procedure will be made public.

##### DECLARATION ON LIBERATED EUROPE

The Premier of the Union of Soviet Socialist Republics, the Prime Minister of the United Kingdom, and the President of the United States of America have consulted with each other in the common interests of the peoples of their countries and those of liberated Europe. They jointly declare their mutual agreement to concert during the temporary period of instability in liberated Europe the policies of their three governments in assisting the peoples liberated from the domination of Nazi Germany and the peoples of the former Axis satellite states of Europe to solve by democratic means their pressing political and economic problems.

The establishment of order in Europe and the rebuilding of national economic life must be achieved by processes which will enable the liberated peoples to destroy the last vestiges of Nazism and Fascism and to create democratic institutions of their own choice. This is a principle of the Atlantic Charter—the right of all peoples to choose the form of government under which they will live—the restoration of sovereign rights and self-government to those peoples who have been forcibly deprived of them by the aggressor nations.

To foster the conditions in which the liberated peoples may exercise these rights, the three governments will jointly assist the people in any European liberated state or former Axis satellite state in Europe where in their judgment conditions require (A) to establish conditions of internal peace; (B) to carry out emergency measures for the relief of distressed peoples; (C) to form interim governmental authorities broadly representative of all democratic elements in the population and pledged to the earliest possible establishment through free elections of governments responsive to the will of the people; and (D) to facilitate where

necessary the holding of such elections.

The three governments will consult the other United Nations and provisional authorities or other governments in Europe when matters of direct interest to them are under consideration.

When, in the opinion of the three governments, conditions in any European liberated state or any former Axis satellite state in Europe make such action necessary, they will immediately consult together on the measures necessary to discharge the joint responsibilities set forth in this declaration.

By this declaration we reaffirm our faith in the principles of the Atlantic Charter, our pledge in the declaration by the United Nations, and our determination to build in cooperation with other peace-loving nations world order under law, dedicated to peace, security, freedom and general well-being of all mankind.

In issuing this declaration, the three powers express the hope that the Provisional Government of the French Republic may be associated with them in the procedure suggested.

#### POLAND

A new situation has been created in Poland as a result of her complete liberation by the Red Army. This calls for the establishment of a Polish provisional government which can be more broadly based than was possible before the recent liberation of Western Poland. The provisional government which is now functioning in Poland should therefore be re-organized on a broader democratic basis with the inclusion of democratic leaders from Poland itself and from Poles abroad. This new government should then be called the Polish Provisional Government of National Unity.

M. Molotov, Mr. Harriman and Sir A. Clark Kerr are authorized as a commission to consult in the first instance in Moscow with members of the present provisional government and with other Polish democratic leaders from within Poland and from abroad, with a view to the re-organization of the present government along the above lines. This Polish Provisional Government of National Unity shall be pledged to the holding of free and unfettered elections as soon as possible on the basis of universal suffrage and secret ballot. In these elections all democratic and anti-Nazi parties shall have the right to take part and to put forward candidates.

When a Polish Provisional Government of National Unity has been properly formed in conformity with the above, the government of the U.S.S.R., which now maintains diplomatic relations with the present provisional government of Poland, and the government of the United Kingdom and the government of the U.S.A. will establish diplomatic relations with the new Polish Provisional Government of National Unity, and will exchange ambassadors by whose reports the respective governments will be kept informed about the situation in Poland.

The three heads of government consider that the Eastern frontier of Poland should follow the Curzon line with digressions from it in some regions of five to eight kilometres in favour of Poland. They recognize that Poland must receive substantial accessions of territory in the North and West. They feel that the opinion of the new Polish Provisional Government of National Unity should be sought in due course on the extent of these accessions and that the final delimitation of the western frontier of Poland should thereafter await the peace conference.

#### YUGOSLAVIA

We have agreed to recommend to Marshal Tito and Dr. Subasic that the agreement between them should be put into effect immediately, and that a new government should be formed on the basis of that agreement.

We also recommend that as soon as the new government has been formed it should declare that:

(1) The anti-Fascist assembly of National Liberation (Avnoj) should be extended to include members of the last Yugoslav Parliament (Skupschina) who have not compromised themselves by collaboration with the enemy, thus forming a body to be known as a temporary Parliament; and,

(2) Legislative acts passed by the anti-Fascist Assembly of National Liberation will be subject to subsequent ratification by a constituent assembly.

There was also a general review of other Balkan questions.

#### MEETINGS OF FOREIGN SECRETARIES

Throughout the Conference, besides the daily meetings of the heads of governments and the Foreign Secretaries, separate meetings of the three Foreign Secretaries, and their advisors have also been held daily.

These meetings have proved of the utmost value and the Conference agreed that permanent machinery should be set up for regular consultation between the three Foreign Secretaries. They will, therefore, meet as often as may be necessary, probably about every three or four months. These meetings will be held in rotation in the three capitals, the first meeting being held in London, after the United Nations Conference on World Organization.

#### UNITY FOR PEACE AS FOR WAR

Our meeting here in the Crimea has reaffirmed our common determination to maintain and strengthen in the peace to come that unity of purpose and of action which has made victory possible and certain for the United Nations in this war. We believe that this is a sacred obligation which our Governments owe to our peoples and to all the peoples of the world.

Only with the continuing and growing cooperation and understanding among our three countries and among all the peace-loving nations can the highest aspiration of humanity be realized—a secure and lasting peace which will, in the words of the Atlantic Charter, “afford assurance that all the men in all the lands may live out their lives in freedom from fear and want.”

Victory in this war and establishment of the proposed international organization will provide the greatest opportunity in all history to create in the years to come the essential conditions of such a peace.

Signed: WINSTON S. CHURCHILL  
FRANKLIN D. ROOSEVELT  
J. STALIN

February 11, 1945.

**Yamashita, Tomoyuki** (? -1946), Japanese army officer, was a close student of German military tactics. An able strategist, he trained Japanese soldiers in the technique of jungle warfare and conceived the military plan for the Japanese invasion of Malaya, 1941-42. After a 10-week campaign, Singapore surrendered to Gen. Yamashita on Feb. 15, 1942. On March 9, Gen. Yamashita assumed command of the Philippines campaign. With a numerically superior army and air force, he won the battle of Bataan, April 9, and conquered the Corregidor island fortress, May 6, 1942. After the surprise landing of U.S. troops on Leyte, Oct. 20, 1944, Gen. Yamashita assumed personal command of the resisting enemy forces. His army was badly defeated in both the Leyte and Luzon campaigns.

Yamashita surrendered at Baguio, Luzon, to Lt. Gen. Jonathan M. Wainwright, Sept. 3, 1945, and was made a prisoner of war. Arraigned Oct. 8 in Manila before a military court on charges of being a war criminal, Yamashita pleaded not guilty and subsequently denied that he knew of atrocities committed in his command.

Although found guilty (Dec. 7) and sentenced to be hanged, he immediately filed an appeal through his counsels with the U.S. supreme court to contest the decision. The U.S. supreme court (Dec. 17), granted Yamashita a stay of his execution until a decision could be made on its intervention in the case. But on Feb. 4, 1946, the U.S. supreme court turned down his plea for it to intervene and he was hanged Feb. 23.

**Yeast.** During 1945 there was continued expansion in the United States of manufacturing facilities for the production of active dry yeast for baking, bringing to an unprecedented total the output of this product. Up until September, all active dry yeast produced was set aside by the government for use in baking by the armed services in World War II; thereafter civilian distribution of this product was resumed.

In Great Britain attention continued to be focused on production of food yeast as a source of protein and vitamins. The colonial office formed a company, Colonial Food Yeast, Ltd., to manufacture food yeast in Jamaica by growing on a substrate of sugar cane products the yeast *Torulopsis utilis*. Interest in yeast as a protein source, particularly as a rich source of the amino acid lysine, was also evidenced during 1945 in the United States.

From the scientific standpoint, an important advance was the work of Carl and Gertrude Lindegren of Washington university, St. Louis, Mo., in yeast genetics. Their theoretical studies of yeast reproduction and heredity found practical application in demonstrating that *Saccharomyces cerevisiae*, the common bakers' and brewers' yeast, could be given the ability to produce vitamins it ordinarily is unable to synthesize, by hybridizing with another species of yeast able to synthesize those particular vitamins.

## Young Men's Christian Association.

The Young Men's Christian association is a world-wide fellowship seeking to improve the spiritual, social, recreational and physical life of young people, particularly young men and boys. In 1945 the Y.M.C.A. reached the peak of its war services

and began rebuilding peacetime programs. As one of the six co-operating agencies in the United Service organizations, the Y.M.C.A. conducted 453 centres for military personnel and 57 for war production workers in the United States. In addition, civilian associations opened their program and dormitory facilities to servicemen. Through its world's committee the Y.M.C.A. provided religious, educational and recreational materials to prisoners of war in 33 different countries at a cost of more than \$9,000,000. Similar services were continued for displaced persons in Europe. The volume of Y.M.C.A. sponsored programs for children and adolescents in school and neighbourhood groups continued to expand. Campus programs were reorganized and strengthened. Co-educational activities increased in every age group.

Y.M.C.A.s also recognized their responsibility to the association movements in eastern Europe, the near and far east, which were developed with North American aid as part of a world service program instituted in 1889. Funds were raised to help nationals of these countries replace bombed out buildings, destroyed or stolen equipment and scattered leadership. In 1945, expenditures of the 1,267 Y.M.C.A.s in the United States totalled \$70,416,200 and capital investment \$224,398,200. Officers were Howard A. Coffin, president, and Eugene E. Barnett, general secretary.

Headquarters of the National Council of the Y.M.C.A. were at 347 Madison avenue, New York 17. (O. E. P.)

YUGOSLAV PARTISAN presenting a flag to a tankman of the 2nd New Zealand division, which entered Trieste on May 3, 1945. Their arrival was protested by Marshal Tito, but territorial claims to the city were temporarily settled in June by an agreement on joint Allied administration

## Young Womens Christian Association.

The Young Womens Christian association in the United States continued in 1945 to carry special war projects while at the same time adapting its program to help women and girls meet the problems brought about by the change from a wartime to a peacetime economy. Through the World Emergency and War Victims fund, Y.W.C.A.s in all parts of the world were assisted by grants of money and personnel in meeting the special needs of women and girls in uniform and those engaged in war production work. After the end of World War II the efforts of this fund were directed toward helping in the re-establishment of Y.W.C.A.s in war-devastated countries, in recruiting and training Christian leadership for postwar work, and in giving material aid to the victims of war. The closing of many U.S.O. centres for which the Y.W.C.A. was responsible brought demands for similar continuing services from the communities affected. This meant increasing emphasis during the latter part of 1945 on expansion and the organizing of new Y.W.C.A.s. The executive body of the Y.W.C.A. of the U.S.A. is the National Board, headquarters at 600 Lexington avenue, New York 22, N.Y. President in 1945: Mrs. Henry A. Ingraham; general secretary, Mrs. Harrison S. Elliott. Publication: *The Woman's Press*. (M. S. Ss.)

**Yugoslavia.** A federal republic in southeastern Europe. Yugoslavia was established after World War I as the kingdom of the Serbs, Croats and Slovenes, and received the name Yugoslavia officially in 1929. Under King Peter II in

1941 it rejected German demands for collaboration; as a result of German aggression it was defeated and partitioned in 1941. It was liberated in 1945 by Russian and British armies and by the partisans under leadership of Marshal Tito (Josip Brozovich). Area 95,558 sq.mi.; pop. (est. Jan. 1, 1940) 15,703,000. Capital (1931 census): Belgrade, 238,775. Other chief cities: Zagreb, 185,581; Subotica, 100,058; Ljubljana, 59,767; Sarajevo, 78,173. Religion: 6,785,501 Greek Orthodox; 5,217,910 Roman Catholic; 1,561,166 Mohammedans; 231,169 Protestants; 68,405 Jews.

**History.**—By the beginning of 1945 the royal Yugoslav government, which had left Yugoslavia after heroic resistance against the Germans in 1941 and was established in London, like all other anti-German European governments in exile, tried to come to an agreement with the Anti-Fascist Council of National Liberation (A.V.N.O.J. or Antifasisticko Vijeće Narodnog Oslobođenja Jugoslavije) under its leader Marshal Tito. King Peter II agreed to the formation of a regency. A coalition cabinet was established in Belgrade in March. Of its 28 members, 6 represented the London government. The two most prominent of these were Ivan Subasitch, a Croat who became minister of foreign affairs, and Milan Grol, a Serb democrat. But all the power remained in the hands of Marshal Tito and other members of the Communist party. The secret police, the O.Z.N.A. (Odelenje Zastite Narod—Department of Defense of the People), was responsible for the maintenance of order and of the right spirit. By the end of the summer Dr. Subasitch and Dr. Grol had resigned from the cabinet.

On April 11 Yugoslavia concluded a 20-years' treaty with Russia. Yugoslav policy was conducted throughout 1945 in complete agreement with Russian policy. The huge Yugoslav army had not been demobilized by the end of 1945. Very much in the country had been destroyed and the economic and transportation situation suffered heavily from losses inflicted by the German-Italian occupation. The government evolved far-reaching plans for the improvement of economic conditions of the country and went with great energy after their realization.

The nationality problem which had afflicted Yugoslavia for 20 years was solved by the government by the creation of a federation in which the various nationalities and regions were put on an equal basis.

Yugoslavia was divided into six federal districts, Bosnia-Herzegovina, Croatia, Macedonia, Montenegro, Serbia and Slovenia, each with its own administration, mostly under communists. The Croatian Peasant party which represented the overwhelming majority of the Croats was in opposition; its famous leader, Dr. Vladimir Matchek, the veteran democratic leader of the Yugoslavs, went into exile. In Macedonia, Macedonian was recognized as a separate Slav language and was made the official language of south Serbia. A special alphabet was evolved for the new language. The creation of this new national Macedonia was to serve as a centre of attraction for Greek and Bulgarian Macedonia, which were coveted by Yugoslavia. The ministry of national education in Skoplje, the capital of the new Macedonia, published on July 1, 1945, the first issue of *Prosvetno Delo* in the new alphabet, the central Macedonian dialect being used as the new literary language.

On Nov. 11 elections were held for the constituent assembly. Only candidates of Marshal Tito's Liberation Front which formed the government presented themselves. The electorate voted overwhelmingly for the unique list of candidates. On Nov. 29 the constituent assembly proclaimed the federal People's Republic of Yugoslavia and abolished the monarchy. King Peter protested against it as a violation of the agreement concluded between Subasitch and Tito under guarantees of the Allies, and charged that a totalitarian tyranny reigned in Yugoslavia.

In the field of foreign policy the Yugoslav government raised demands upon Italy and Austria. From the latter it demanded Klagenfurt and the southern part of Kärnten (Carinthia); from Italy, Venezia Giulia, the former Austrian Küstenland, with the important port of Trieste. The demands for the Italian territory led to international complications which were not settled by the end of 1945. (See TRIESTE.)

**Agriculture, Minerals and Industry.**—Yugoslavia is the principal producer of minerals in the Balkans. Of greatest importance are its large deposits of copper, lead, zinc, bauxite and chrome. In view of the many streams and waterfalls, the hydro-electric power could be developed to a great extent and thus help the exploitation of the many untapped mineral resources. Most Yugoslav industry has been financed and developed by foreign capital and enterprise. Northwestern Yugoslavia is most highly developed industrially, while the southern and southeastern parts preserve their often primitive agricultural character.

**Education.**—Education on the elementary level was compulsory and free. In 1938 there were 8,727 elementary schools with 1,393,422 pupils. In addition to a large number of professional, industrial and agricultural schools, there were 197 high schools with 116,655 pupils and 32 training colleges for teachers with 3,199 pupils. There were 3 universities in 1938 with 16,207 students, at Belgrade (with a law school at Subotica and a school for arts and sciences at Skoplje), Zagreb and Ljubljana.

**BIBLIOGRAPHY.**—Hal Lehrman, "Yugoslav Democracy, Limited," *The Nation* (Sept. 8, 1945); Sam Pope Brewer, "The Ordeal of Yugoslavia," *The American Mercury* (Nov. 1945); Temple H. Fielding, "Tito, A Portrait from Life," *Harper's* (Oct. 1945); A. Pomerantsev, "Yugoslav Democracy Combats Reactionary Intrigues," *New Times* (Oct. 15, 1945). (H. Ko.)

**Yukon Territory.** Yukon Territory lies in the extreme northwest of continental Canada, bounded by Alaska, British Columbia, the Northwest Territories and the Arctic ocean. Area, 207,076 sq.mi.; pop. (1941) 4,914. Seat of government, Dawson. Local administration is in the hands of a territorial legislative council composed of three members elected triennially, and a controller. The Yukon is represented at Ottawa by one member of the house of commons. The Yukon was created a separate territory by parliament in 1898. At the general elections in July 1945, the Yukon returned the Progressive Conservative candidate.

**Communications.**—Communications within the territory are maintained by aeroplane, and, during the season of navigation, by steamship. From June till October, steamships ply regularly between Whitehorse and Dawson. A railway from Whitehorse to Skagway gives access to the Pacific. With the completion of the Canada-Alaska highway, the Yukon was brought into direct road communication with the rest of Canada. Approximately 570 mi. of the highway lie in the Yukon. The pipeline of the Canol project from Fort Norman reached railhead at Whitehorse, where a petroleum refinery was being built.

**Natural Resources.**—The gross value of production in 1943 was \$11,166,898. Of this total, furs represented \$338,035; lumber \$25,950; fish \$2,495. In 1944, the estimated value of mineral production was \$3,067,135. In 1944, the available water-power was 731,000 h.p. Turbine installation of the same date was 19,719 h.p. The continued economic development of the territory, especially of the Whitehorse region awaited clarification of the Canol project. The Canadian government in November waived its right of purchase. According to Canadian Press report, the Imperial Oil company was carrying out investigations to discover whether enough oil was available to make it a profitable commercial enterprise. (See CANADA.) (J. I. C.)

**Zanzibar and Pemba:** see BRITISH EAST AFRICA.

**Zhukov, Georgi Konstantinovich** (1895— ), Russian army officer, joined the Russian imperial army as a private in 1915. After the revolution, he attended the Frunze military academy, where he received his military training under Gen. Boris Shaposhnikov, crack soviet strategist. He was named chief of the red army general staff and vice-commissar for defense, Feb. 1941. During the nazi drive on Moscow in the fall of 1941, Zhukov was given command of the capital's defense forces on Oct. 23. His armies launched a series of counterattacks; in December, German defenses cracked under the hammering Russian blows, and Hitler's armies were driven back. Zhukov directed the counteroffensive at Stalingrad, but did not remain to direct the last steps, for early in Jan. 1943 he was sent to Moscow to co-ordinate the forces for raising the siege of Leningrad. On March 4, 1944, Zhukov was put in command of the first Ukrainian army, replacing Gen. Nikolai Vatutin. Starting at Poland's 1939 border, Zhukov launched an offensive which reached the borders of Czechoslovakia. Zhukov received the highest award of the soviet union, the order of victory, on April 10. Early in Jan. 1945, Zhukov led the 1st White Russian army in the drive on Berlin, which fell to the Russians May 2. The Russian marshal headed the Allied delegation that accepted the German surrender in Berlin, May 8.

Zhukov, appointed head of the Russian occupation forces in the reich, asserted June 9 that he was determined to pursue a program of economic disarmament that would make it impossible for the reich ever to rise again as a military power. His scheduled visit to the United States, Oct. 5, was cancelled, officially, because of illness.

**Zinc.** There were still gaps in 1945 in the official data on zinc production in the important countries, but by adding estimates from various sources a fairly complete table was compiled.

Table I.—World Production of Zinc

	(Thousands of short tons)					
	1939	1940	1941	1942	1943	1944
Australia . . . . .	79.8	84.6	89.1	86.2	81.0	87.5
Belgium . . . . .	204.7	72.	44	44	33	?
Canada . . . . .	175.6	185.7	213.6	215.8	206.5	169.7
France . . . . .	67.3	41.7	28.6	25.2	19.6	9.2
Germany . . . . .	234.6	248	292	292	276	?
Great Britain . . . . .	55.6	66	72	74	72	?
Italy . . . . .	39.0	44	?	?	?	?
Japan . . . . .	?	60	72	?	?	?
Mexico . . . . .	39.0	36.8	42.6	57.0	60.0	51.4
Netherlands . . . . .	22.6	7	?	?	?	?
Northern Rhodesia . . . . .	14.2	14.8	15.2	?	?	?
Norway . . . . .	50.6	19.0	7.1	8.3	16.7	5
Poland . . . . .	130.0	132	132	138	138	?
Spain . . . . .	14.8	13.6	21.1	21.1	21.2	19.9
U.S.S.R. . . . .	99	105	105	110	132	?
United States . . . . .	507.2	675.3	822.0	891.9	942.3	869.3
Total . . . . .	1,806	1,802	?	?	?	?

The figures in Table I include so many gaps and estimates that it is not possible to arrive at any total that would be worth while. It is to be noted, however, that in most cases the 1944 outputs decreased below 1943.

**United States.**—The salient features of the zinc industry in the United States are indicated in Table II.

Although consumption continued to increase in 1944, produc-

Table II.—Data of Zinc Industry in the U.S., 1940-44

	(Thousands of short tons)				
	1940	1941	1942	1943	1944
Mine production . . . . .	655.1	749.1	768.0	744.2	718.6
Smelter production . . . . .	675.3	822.0	891.9	942.3	869.3
Domestic ores . . . . .	590.0	652.6	630.0	594.2	574.5
Foreign ores . . . . .	85.3	169.4	261.9	348.1	294.8
Imports . . . . .	196.8	323.8	404.8	593.2	486.3
In ore . . . . .	180.3	289.2	368.4	537.0	422.7
Metal . . . . .	16.5	34.6	36.4	56.2	63.6
Secondary recovery . . . . .	222.0	284.0	330.5	368.5	345.5
Consumption . . . . .	733.1	827.4	728.2	816.8	888.6
Stocks . . . . .	88.1	92.0	155.6	261.0	298.9
Producers' . . . . .	20.0	25.1	84.4	170.6	233.7
Consumers' . . . . .	68.1	66.9	71.2	90.4	65.2

tion, imports and secondary recovery all declined. Mine production, which had averaged 60,000 tons monthly during 1944 declined from 56,669 tons in Jan. 1945 to 46,249 tons in August, followed by increases to 50,053 tons in October, and totalled 512,346 tons for the ten months. The output of slab zinc declined from 71,855 tons in Jan. 1945 to 62,902 tons in September, with a nine months' total of 613,553 tons. Consumption dropped even more sharply, from 86,228 tons in January to 53,533 tons in September, with a total of 668,554 tons in the period.

**Canada.**—Mine production of zinc in Canada was 225,412 short tons in 1944, declining to 204,818 tons in 1945.

(G. A. Ro.)

**Zirconium.** The small output of zirconium in the United States is negligible as compared with requirements, which are supplied by imports, mainly from Australia and Brazil; shipments from India were discontinued in 1943 and 1944. Imports during World War II years were as shown in the table.

Imports of Zircon and Baddleyite, 1940-44

	(In short tons)				Baddleyite from Brazil
	Australia	Zircon from India	Brazil	Total	
1940 . . . . .	7,387	3,609	*	10,996	1,591
1941 . . . . .	14,689	963	*	15,652	5,002
1942 . . . . .	11,145	196	...	11,341	15,283
1943 . . . . .	11,472	...	110	11,582	8,821
1944 . . . . .	11,317	...	101	11,418	2,231

\*Included with baddleyite.

Zircon was being produced on a small scale in 1945 by the concentration of beach sands in Florida.

(G. A. Ro.)

**Zoology.** During 1945 in the United States the first signs of recovery from the effects of World War II were apparent in zoology: many professional zoologists returned from the armed forces or from war-connected research projects to their former positions; appreciable numbers of graduate students re-entered the graduate schools; exchange of books and research papers between Europeans (except those in former enemy countries) and investigators elsewhere was resumed; editors in the U.S. noted an increase in the number of papers submitted from foreign countries—an increase which may be ascribed partly to the limited opportunities for publication elsewhere.

**Research and Publications.**—From the vast mass of publications—thousands of papers and hundreds of books and monographs—it is impossible to do more than select a few for consideration here.

**Anatomy and Cytology.**—F. Wood Jones produced a companion volume to his masterly study of the human hand in his detailed account of the anatomy, function, development and phylogeny of the foot; F. J. Cole wrote an important history of comparative anatomy; W. E. L. Clark's book on tissues retained its fresh originality in its second edition. Among more specialized works, N. B. Everett reviewed the perennial problem of the origin of germ cells in vertebrates and E. Stauffer, using ingenious techniques developed by F. Baltzer, followed the development of axolotl embryos made haploid by removal of the egg nucleus. G. Fankhauser reviewed his important studies of the effect of polyploidy on amphibian development.

**Animal Behaviour.**—The advance in knowledge of embryonic behaviour was summarized in A. Gesell's book which centres its interest on man, but draws heavily on comparative studies. The classical approach to the analysis of behaviour was exemplified in J. E. Smith's investigations of the starfish in which defects of movement and co-ordination were correlated with particular surgical lesions in the nervous system. Analysis of the social order in animals, so largely stimulated by the work of W. C.

Allee and his students, continued to be represented by numerous papers; among these may be mentioned the studies of aggressive behaviour in the rat by J. P. Seward.

**Embryology.**—Active investigations of the feather and feather pigmentation continued: Mary E. Rawles reported her ingenious transplantation of wing buds of chick embryos to body cavities of other embryos. The pigment cells of the host embryo then migrated into the wing and pigmented the graft skin; the skin was removed and transplanted to a chick of the original donor breed.

The pigment cells of the temporary host persisted and supplied pigment to succeeding generations of feathers.

J. Pasteels, seeking to answer the vexatious question of the origin of primary entoderm in birds, concluded from his studies of duck embryos, that it was formed by progressive delamination from the surface layer of cells. This conclusion, in harmony with Peters' results and opposed to the long-accepted view that entoderm invaginated around a blastopore, led to a radical interpretation of the two-layered stage: Pasteels no longer regarded this as a gastrula, but as a blastula with its cavity (the blastocoel) between the two layers.

This was a memorable year in the history of human embryology: A. T. Hertig and J. Rock described two well-preserved embryos younger than any previously known; one about seven and one-half and one about nine days old. These, together with several other slightly older embryos recovered by the same investigators, would make it possible to revise the accounts of the early development of man. Two of the older embryos—about 13½ and 16½ days—were also described by C. T. Heuser,

Hertig and Rock.

J. Brachet of the University of Brussels, although handicapped by lack of access to British and U.S. publications during the war, published a new book on chemical embryology—a rapidly developing field founded by J. Needham in 1931.

**Natural History and Taxonomy.**—In response to the needs of servicemen stationed in the islands of the Southwest Pacific, E. Mayr prepared a handbook of the birds of that immense region with adequate keys and illustrations to permit identification in the field. The fifth volume of J. L. Peters' *Check-list of Birds of the World* and the posthumous work of F. C. Baker on planorboid snails appeared.

Of both literary and scientific interest were T. Barbour's personal reminiscences of Florida and W. Beebe's anthology of writings in natural history—from Pliny to Julian Huxley.

**General.**—Perhaps the most widely-reviewed book was G. L. Simpson's highly original study of evolution. Simpson did much to bridge the gulf between genetics and palaeontology. He drew on the evidence and theory of both sciences to aid in elucidating rates and patterns in evolution. Other books, among the many which might be of more than transitory interest, are L. Loeb's study of individuality; the physicist E. Schrödinger's speculations about life (in the biological, not the general, sense) and R. Hofstadter's scholarly study of the effect of Darwinism on social thought in the U.S. (See also ENDOCRINOLOGY; ENTOMOLOGY; GENETICS; MARINE BIOLOGY; PALAEONTOLOGY; PHYSIOLOGY.)

**BIBLIOGRAPHY.**—F. C. Baker, *The Molluscan Family Planorbidae* (1945); T. Barbour, *A Naturalist's Florida* (1945); W. Beebe, *The Book of Naturalists: An Anthology of the Best Natural History* (1944); J. Brachet, *Embryologie Chimique* (1944); W. E. LeGros Clark, *The Tissues of the Body, an Introduction to the Study of Anatomy* (1945); F. J. Cole, *A History of Comparative Anatomy from Aristotle to the Eighteenth Century* (1944); N. B. Everett, *Biological Reviews*, 20 (1945); G. Fankhauser, *Quarterly Reviews of Biology*, 20 (1945); A. Gesell, *The Embryology of Behavior* (1945); A. T. Hertig and John Rock, *Carnegie Institution of Washington, Publication 557* (1945); C. T. Heuser, John Rock and A. T. Hertig, *ibid.*, 557 (1945); R. Hofstadter, *Social Darwinism in American Thought* (1944); F. Wood Jones, *Structure and Function as Seen in the Foot* (1944); L. Loeb, *The Biological Basis of Individuality* (1945); E. Mayr, *Birds of the Southwest Pacific* (1945); J. Pasteels, *Anatomical Record*, 93 (1945); Mary E. Rawles, *Physiological Zoology*, 18 (1945); E. Schrödinger, *What is Life? The Physical Aspect of the Living Cell* (1945); J. P. Seward, *Journal of Comparative Psychology*, 38 (1945); G. L. Simpson, *Tempo and Mode in Evolution* (1944); J. E. Smith, *Biological Reviews*, 20 (1945); E. Stauffer, *Revue Suisse de Zoologie*, 52 (1945). (G. P. DuS.)

**Zoological Gardens.**—In the United States, the New York zoological park announced a new information and educational service for students of animal life and a new department of insect life, for which the curator appointed was Brayton Eddy, administrator of entomology and plant industry for Rhode Island. A new station for scientific research, under the direction of Dr. William Beebe was to be established at Rancho Grande, by courtesy of the Venezuelan government, 3,000 ft. above sea level in 300 sq.mi. of tropical jungle. At the Bronx zoo a kangaroo was born and the pelican, Old Jenny, who had been there from 1904, died.

The London zoo lost Ming, the giant panda, who was valued at £2,000 and had been brought from western China before World War II. Twelve black-footed Cape penguins were important new arrivals. The "Pets' Corner" was opened for the first peace-in-Europe Whitsun holiday. Flying bombs had caused damage and loss in gate receipts, but the loss was made up by August and postwar reconstruction schemes costing £250,000 were planned.

Sir Peter Chalmers Mitchell, secretary of the zoo from 1903 to 1935, died from an accident in July.

Antwerp zoo was presented with two elephants by Field Marshal Montgomery's army group. In the Zurich zoo an unusual event was a successful operation for rupture on a newly born yak calf.

# INDEX

The black type entries are article headings and cross references. These black type article entries do not show page notations because they are to be found in their alphabetical position in the body of the book, but they show the dates of the issues of the *Book of the Year* in which the articles appear. For example "Air Transport Command 46, 45, 44" indicates that the entry "Air Transport Command" is to be found in the 1946 *Book of the Year*, the 1945 *Book of the Year* and the 1944 *Book of the Year*. The reference "Agricultural Machinery: see Agriculture 46, 45, 44, 43. See Farm Machinery 42" indicates that the entry "Agricultural Machinery" is to be found in the article "Agriculture" in the 1946 *Book of the Year*, the 1945 *Book of the Year*, the 1944 *Book of the Year*, and the 1943 *Book of the Year*, and under the heading "Farm Machinery" in the 1942 *Book of the Year*. All black type entries without dates indicate that the same entries appear in all previous issues. Examples, not Advertising 46, 45, 44, 43, 42, but Advertising; not Abyssinia: see Ethiopia 46, 45, 44, 43, 42, but Abyssinia: see Ethiopia.

The light type headings which are indented under black type article headings and cross references refer to articles elsewhere in the text (of this issue only) related to the entry listed in black type. The light type headings which are not indented refer to information in the text (of this issue only) not given a special article. All the light type headings show page references.

All headings whether consisting of a single word or more are treated for the purpose of alphabetization as single complete headings. Names beginning with "Mc" and "Mac" are alphabetized as "Mac"; "St." is treated as "Saint." All references below show the exact quarter of the page by means of the letters *a*, *b*, *c*, and *d*, signifying respectively the upper and lower halves of the first column and the upper and lower halves of the second column.
